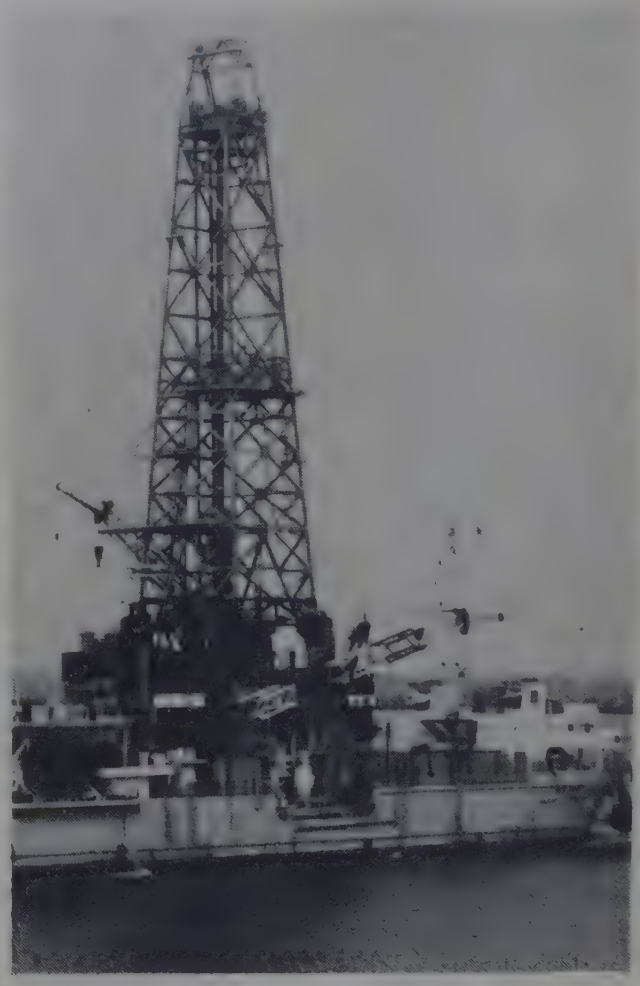
Slow start. This lack of awareness is due to the fact that exploratory drilling commenced in the Cauvery basin in earnest only in 1981. During the earlier phase of operations from 1959 to 1964, results were not particularly encouraging. This forced the ONGC to declare a drilling holiday until 1981. In 1985 the ONGC achieved a major breakthrough in the Cauvery basin when oil was struck at Nannilam and Kovil Kalappal, followed



Cauvery offshore drilling: more resources

discovery of a major pool, PY3-2 in the Cauvery offshore, 55 kms. off Nagapattinam, has also increased natural gas prospects. With this, availability of natural gas — both onshore and offshore — is likely to increase to 1.3 billion cubic metres by June 1990.

With these discoveries, the ONGC and the industry will have to take decisions on how to make best use of the enhanced resources of both oil and gas. Upto now, the crude produced in the Cauvery basin is brought by road to the Madras Refinery Limited (MRL) in the city, and it is not a cost effective exercise. There is a move to set up a refinery closer to the centre of production. MRL has made an application to do so and according to sources in the company, their application is likely to be considered favourably and cleared fast.

As far as the gas is concerned, there is good opportunity for the power sector and industry. But users in Tamil Nadu have yet to put in their bids with ONGC. "Earlier the ONGC was not sure of availability in that area. The estimates are being made available only now," says D. Manivannan, technical officer of Tamil Nadu Industrial Development Corporation Ltd (TIDCO). The corporation is now analysing the possibility of locating a few projects in the Cauvery basin area. The Tamil Nadu Electricity Board (TNEB) plans to set up a 5 MW plant at Ko-

4,000 cubic metres per day fr Narimanam. Small power projects uti ing 1 million cubic metres per day are a planned by the TNEB near other oper ing structures. The other beneficiary present is the Indian Steel Rolling M which consumes 4,000 cubic metres day from Narimanam. Two more sodi silicate plants will receive 1,000 cu metres per day shortly.
Individual studies needed. In order increase the awareness of industry, CEI held a conference with ONGC o cials. As a result of such efforts, " mands have been registered from parties involving a supply of 1.5 mill cubic metres per day." Nevertheless section of industry feels that it is too e to make definite plans. "There is trem dous scope for the development of ind tries in the region, provided the gas made available. Though the ONGC mea business, more studies have to be done companies individually, in order to ass potential," comments Amrik Singh, g eral manager of Factories Carborund Universal Limited. "This is only the beg ning," adds Manivannan.

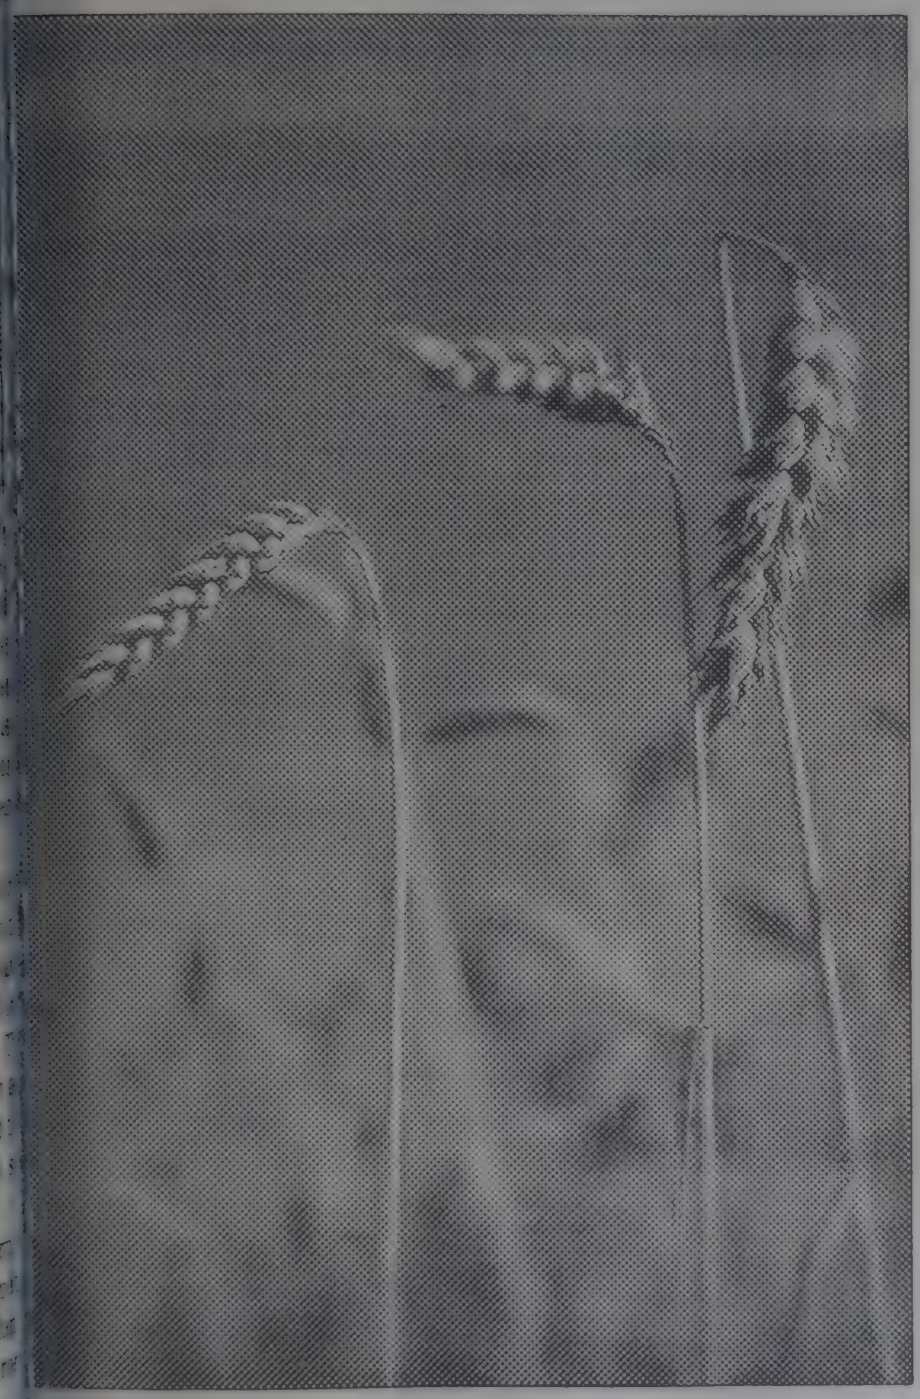
At present, another deterrent facto that the gas producing structures in t Cauvery basin are situated at a dista of 25 to 80 kms from each other and o associated gas is being produced. T means only those units with shorter g tation periods can benefit most and th too by putting up the units in the s rounding area.

"ONGC operations in the southern gion is on the increase. The anticipat expenditure during the Seventh Plan the southern region was Rs.1,191 cro but by the end of the Plan period, t spending is likely to increase to Rs.1,7 crores," says S.S. Paintal, regional dir tor, ONGC. During the Eighth Plan t spending in both the KG and Cauv basins is likely to be in the region Rs.1,500 to Rs.2,000 crores. In the Ca ery basin, the Russians have entered Rs.350-crore contract with the ONGC drilling in the Ariyalur-Pondicherry b Representatives of industry feel th ONGC should now urgently address its to the question of natural gas utilisati Th s would also involve studies on t infrastructure requirements in the sou ern region — pipeline, storage facilit etc. If this exercise is not undertak immediately, precious natural gas will wasted.

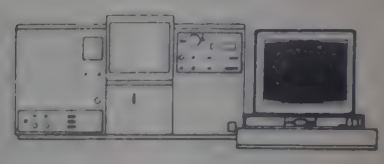
PHILIPS

PHILIPS IS AT THE HEART OF AGROCHEMICAL ANALYSIS

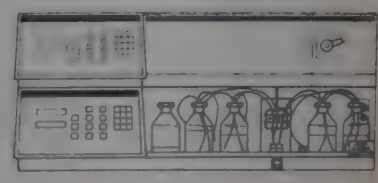
Philips Analytical



ATOMIC ABSORPTION/ INDUCTIVELY COUPLED PLASMA SPECTROMETRY – ideal for determining metals and semi-metals in soils and water even down to ultra-trace levels



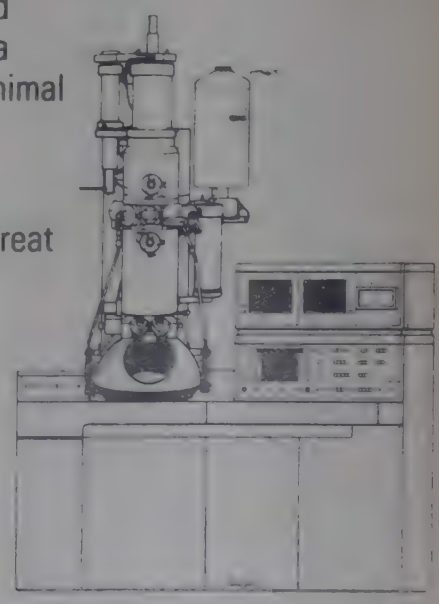
GAS AND LIQUID CHROMATOGRAPHY – for the determination of pesticide residues, herbicides and fungicides



UV/VIS AND INFRARED SPECTROPHOTOMETRY – techniques for the quality measurement of plant nutrients

X-RAY FLUORESCENCE – a rapid technique for the identification of a large number of elements with minimal sample preparation

ELECTRON MICROSCOPY – of great value for research into the effectiveness of pesticides and fertilizers



PHILIPS – YOUR PARTNER IN PROGRESS

In the fast-growing world of food production, effective analysis is vital. The wide choice of top quality equipment offered by Philips Analytical ensures your success.

HEPC

In trouble again

The Madras-based Handloom Export Promotion Council (HEPC) is in trouble again. At the end of September, the commerce ministry withdrew the council's powers to register members. The withdrawal of this power sharply affects the Council's income and renders it nearly toothless. At the same time, the council's secretary cum executive director, an IAS officer, was transferred to another post, within a year of his appointment to the job. Nor are these the only actions that the ministry has taken against the council. Earlier, it had decided to impound grants amounting to Rs.90 lakhs due to the council since 1982-83 as recommended by the textile ministry.

Dhanasekar with President Venkataraman: smiles all round, but the problems remain

Activities suspended. The HEPC, set up in 1965, was one of the first export promotion councils in the country. Because of wrangling among the members, all the activities of the council were suspended in April 1983. For several years the council did not have a chairman or vice-chairman or an executive committee formed of its own members. Eventually all the problems got sorted out, and in early 1987, after a gap of six years the council held an AGM in which V.S. Dhanasekar, a leading handloom exporter, was elected chairman.

There is a feeling among handloom exporters that the IAS officers heading the council do not have a real understanding of the handloom trade. For instance, N. Gokul Ram, the IAS officer who left the council recently, sent a critical report about the HEPC to the ministry. "It is this action which prompted the ministry to withdraw our registration powers," says Dhanasekar, who has obtained a stay against the order transferring the power of registration from the council to the Development Commissioner, Handlooms, Delhi.

Registration is an important function of the council and brings it an income of Rs.19 lakhs to Rs.20 lakhs. The council has 1,400 members and the membership fee is Rs.2,000 a year. Also the transfer of the power of registration to Delhi means that handloom exporters who are mostly from the south will have to run to Delhi to register themselves and it is likely that most of them may not do it. "It seems that the government wants to cripple our activities," says a member of the committee.

No explanation. Although the government has not offered any explanation for its rather sudden move, the members believe that it must be because a feeling has been created that the council is not functioning properly. The trouble really started with the government's announcement that the HEPC should accept the Fourth Pay Commission's recommendations. The HEPC has not been singled out by the government. The recommendations apply to all export promotion councils. The All India Export Promotion Employees Federation (AIEPEF) has been unwilling to accept them as it would mean a financial loss and the matter is being fought out in the courts. The president and the secretary of AIEPEF are from the HEPC. "As a result this council is always looked upon with suspicion," remarks Dhanasekar.

The executive committee of the HEPC has approved the payment of interim relief to its employees, the payment will be adjusted later when the DA due to them since January 1986 is paid. The commerce ministry regards this action as a financial irregularity and has suspended grants. The executive committee on its part has pointed out what it considers to be certain financial irregularities committed by a secretary who left the Council in 1987. "This has annoyed the IAS officers and the ministry," says the executive committee member quoted earlier.

The distrust between the elected body and the bureaucracy is mutual. The commerce ministry and the textile ministry did not consult either the chairman or the executive committee when Gokul Ram was appointed last year as secretary. The committee did approve his appo ment, but two exporters went to co against it. "Again, this act of two i vidual exporters has been held agai us," says Dhanasekar.

Apparently Gokul Ram (who refuse comment) has complained to the mi try that the council has not carried on export promotion activity in the last years. Dhanasekar feels that this is unfair accusation. "Even without Rs.90 lakhs in grants due from the ernment we have continued with our tivities," says Dhanasekar. "We h organised study tours and participate fairs, all with our own funds. We plan set up a sample library and a handlo museum. But, of course, thanks to government we are short of cash. council is ready to face a CBI enq which we are confident will vindicate stand."

Pointless squabbles. These squabb do seem pointless considering that va of handloom exports is expected to re an all-time high of over Rs.450 cro which far exceeds the target. Handlo exports do not come under quota rest tions and there is no import of raw ma rials. Although the chairman and executive committee of the HEPC h met everbody from Tamil Nadu Gover P.C. Alexander to President R. Venkata man, it is not likely that the problems be sorted out before a secretary an deputy secretary are appointed to textile ministry.

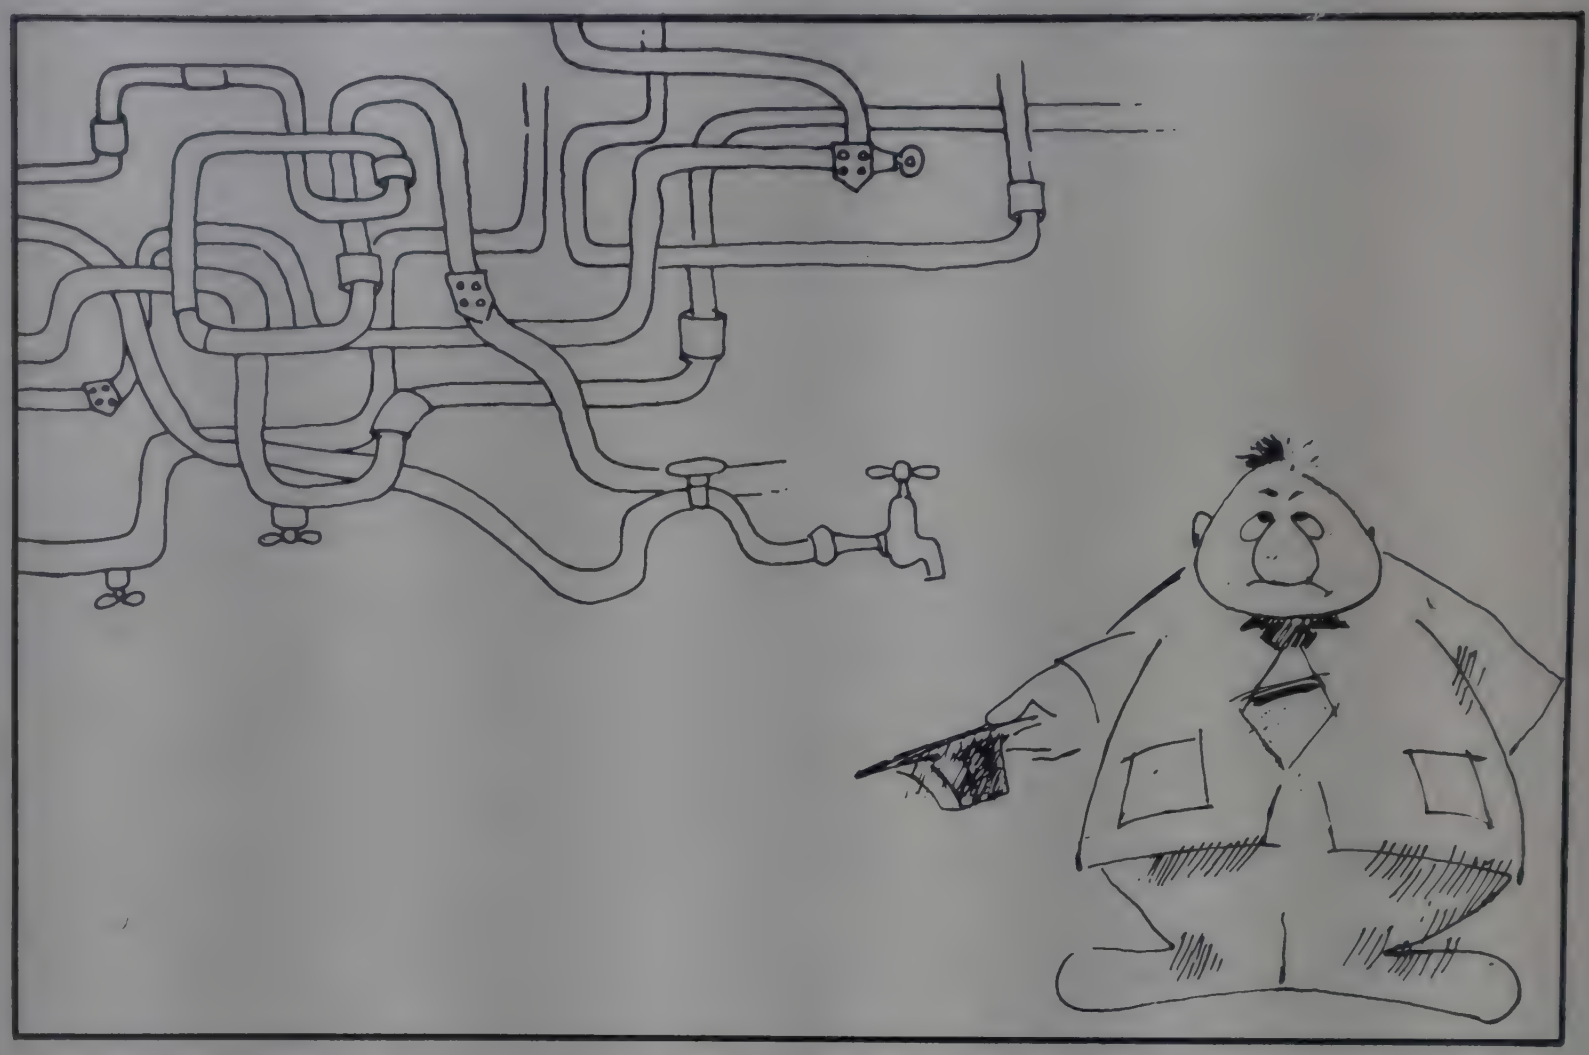
ARE YOUR FUNDS BEING BLOCKED BY HARD WATER SCALE?



COLLOID-A-TRON
BEST WATER TREATMENT AT MINIMUM COST

Now there is a new route to prevent hard water scale on water-cooled circuits of compressors, AC condensors, heat exchangers, generating sets, cooling towers and other such equipment.

Non-chemical COLLOID-A-TRON—the first water treatment equipment of its kind in India. Now being manufactured in India by Inteco-Colloids under technical collaboration with the Fluid Dynamics Group of Companies, U.K., the pioneers in the field.

COLLOID-A-TRON eleminates the use of expensive chemicals, has no moving parts and requires no maintenance.

It is easy to instal and does not involve any recurring costs, thereby paying for itself in a short time.

It works by galvanic action, and hence does not expend energy.

Plus, your equipment also consume less energy as they become more efficient due to its use.

What's more, the COLLOID-A-TRON is backed by a one-year money-back gurantee, a five-year replacement warranty and free after-sales service too.

Prevent hard-water scale in the safest and most economical way—non-chemical COLLOID-A-TRON.

Go in for the best there is!

FAROUK IRANI

The leasing industry revisited

Financial onlookers now are prepared at a moment's notice to furnish their "one minute" version of the "Decline and fall of the Indian leasing industry". India did witness an explosive growth of leasing companies during the early eighties. By the late eighties most of the 300 odd registered leasing companies had diversified their way out of the industry. To the "one minute" analyst, this pattern justifies the conclusion that the leasing industry in India had shallow roots.

This evaluation of the Indian leasing industry is far too facile. Discriminating observers of the industry were aware, during the early eighties, that apart from a handful of leasing and/or finance companies, the predominant number of new entrants who stormed the leasing arena had failed to do their homework on "cost of funds" versus the projected anaemic rental rates that would in all probability follow a period of intense competition.

Could any knowledgeable commentator realistically expect India, or any other country to grow 300 leasing executives overnight? It follows that the much-talked-about growth in the leasing industry was illusory. Discriminating observers were aware that the "real thing" did not number more than ten or 12 lessors of which some of the better recognised ones were First Leasing Company of India Limited, 20th Century, ICICI — Leasing Division, Sundaram Finance — Leasing Division, and Nagarjuna Finance, along with five or six other less known but effective lessors.

Financial observers adopted a position of "extremism" and talked about the development of a leasing industry, when all we had was a nucleus of promoters, consisting largely of the companies listed earlier.

INACCURATE ASSESSMENT

Right from the outset, the "maverick" group that entered leasing was not expected to "stay the distance". So it should not come as a surprise to those who understood and followed the leasing industry that the bulk of these lessors picked up their marbles and left.

The real leasing industry in India from the beginning upto the present has in fact consisted of the professional lessors referred to earlier.

These lessors or finance companies consistently reported good financial results, not just over one or two years, but over periods as long as 14 years. The company which has been in the business for the most number of years — First Leasing Company of India Limited — increased its profits from Rs.2.35 lakhs as of 30 November 1974, to Rs.2.8 crores as of 30 November 1987. First Leasing's performance is not exceptional.

The other significant companies such as 20th Century, Sundaram Finance mentioned above also reported outstanding results and increased profits, even in those years, when large industrial firms such as Reliance dropped profits because of environmental problems which they were unable to overcome in the short run.

The profit results of these companies, which essentially constitute the leasing industry, certainly do not seem to be those of a dying industry. I fail to understand how any observer could conclude from this that the leasing industry is about to drop dead.

Onlookers suggest that banks and financial institutions have begun denying funds to the leasing industry. This statement is inaccurate. For the first time in 14 years, the Industrial Development Bank of India (IDBI) and the Industrial Finance Corporation of India (IFCI) have provided substantial term loans to the leasing industry. Our company received more than Rs.13 crores in external credit from banks and financial institutions in 1988. This level of assistance far exceeds bank and financial institution advances made available to us in any one year during the past 13 years we have been in operation. Other strong lessors also received substantial assistance from financial institutions and banks during the current year.

MAJOR CONTRIBUTION

It is amazing to notice that financial onlookers go to the extent of suggesting that the leasing industry worldwide is dying. This observation is grossly incorrect. The leasing industry continues to be vibrant and is in a position to contribute significantly to job creation and commercial activity in general, as it has in the last two decades.

Consider the views of Peter K. Nevitt, perhaps the most respected international authority on leasing, a former president of Bank of America — Leasing, as also of First Chicago Leasing and currently president of Mitsui Nevitt Capital Corporation. At the Sixth World Leasing Convention, Sydney, in his address on 'The contribution of equipment leasing to the world economy", Nevitt observed, "I am sure that most of you are aware that in the US and in many countries of the world, about one-fourth of all business equipment is financed by leases, more than by any other method of financing except, perhaps, internally generated funds."

In the US the leasing industry has provided more assistance than even bank credit to enable companies to gain access to business equipment.

Peter Nevitt continues: "Today in the US, leas-

ing is by far the most popular method of financing automobiles both for individuals and for businesses. Lessors make leasing attractive by typically requiring no down payment and often by the assumption of large residual values. About one-third of all automobiles sold in the US are leased. In dollar terms, this is a market size in the range of $ 40 billion to 50 billion which is over and above the $ 100 billion in equipment annually leased in the United States."

Is it any wonder that the US automobile industry is able to thrive, sustained as it is by US $ 50 billion of lease assistance. If India were to permit funding of even a tenth of this magnitude to the leasing and hire purchase industry, there would be no periodic downturn in the demand for automobiles, trucks or two-wheelers, as there would be adequate funding to support increased offtake.

GROWING NEED

In my address at the Sixth World Leasing Convention, I estimated India's "big ticket" leasing requirements over the next ten years as approximating $ 18.9 billion. I considered this a large enough figure to attract the attention of international lessors until Peter Nevitt stole my thunder by referring to the US leasing industry's leasing volumes of $ 150 billion per year.

I said: "We estimate India's general-purpose equipment purchase needs to annualise at US $ 1.5 billion over the next decade. India's special-purpose specific project equipment needs on a partial estimation approximate $ 3.9 billion and relate to the following:

- India's steel mills, especially the Rourkela and Durgapur plants, are projected to require an outlay of $ 1.3 billion on modernisation and upgradation activities.
- The Oil and Natural Gas Commission of India (ONGC), the government agency entrusted with India's offshore and onshore oil exploration, anticipated a need to purchase equipment valued at US $ 1.4 billion for its southern Indian operations alone.
- Indian Airlines alone may purchase 32 commercial aircraft at approximately $ 1.2 billion over the next five or ten years. Indian Airlines' long-term perspective plan indicates that by AD 2001 Indian Airlines expects to move 40 million passengers annually, requiring 45,000 seats.
- India will unquestionably be in the market for super computers.

I could extend this shopping list ad nauseam, but even if I pause at this early stage to strike a sub-total, the emergent number, aggregates US $ 18.9 billion."

The US leasing industry's annual contribution to asset growth at $ 150 billion is 7.9 times my estimate of India's lease equipment requirements over ten years. This ratio is indicative of the magnitude of the leasing industry in the US and can hardly be said to pattern the turnover figure of an industry on death row.

The leasing industry has just begun its existence in India. I am confident that it will expand significantly over the years ahead. The growth pattern of most high-growth industries is not very different from that of the historical pattern of the Indian leasing industry. The first promoters of industry normally generate meaningful profits which attract others. Those with investible funds seek entry into what looks like a high profit opportunity. The immediate consequence of this upsurge in competition is a lowering of rental rates and a reduction of profit margins. Only the fittest survive the price battle which follows. Others diversify out of the industry into more promising profit opportunities.

The fierce battle also has an unintended benefit. The desperate marketing efforts of the combatants result in an expansion of the leasing market as the benefits of leasing are communicated to more companies. After the "shake-out", the few that remain have a larger market than they started out with. This is the point at which consolidation takes place. The market expands while prices stabilise and improve. I believe that we are on the threshold of consolidation and growth.

A FACILE VIEW

In India we have often looked upon leasing as a sinful activity. We adopt the facile view without stopping to reflect that a lessor is merely an intermediary who secures funds from A, and lends them to B. If a lessor is an "intermediary", so is every other financial institution and bank as each one of them borrows funds from the public and lends them to industry.

Says John Phillips, deputy governor, Reserve Bank of Australia: "Leasing at bottom is one way of bringing together investment potential and capital resources. It is the investment which is important. No particular form of financing has a God-given right to market dominance or to a particular market share in promoting investment and contributing to capital formation."

By raising funds from the banking system/ public deposits etc, the leasing industry, during the last 14 years, has most likely contributed approximately Rs.1,000 crores towards the creation of incremental investment or assets in India. Can anyone say that this investment of Rs.1,000 crores has not contributed towards the creation of jobs and economic opportunities? The record is quite clear. The Indian leasing industry has positively made its contribution to the economic growth of our country and continues to be alive and kicking.

NIPPON DENRO ISPAT

A multi-product multi-dimensional company that has brought the finest technologies to India

Nippon Denro Ispat. A company dedicated to bring the finest technologies to India. Pioneering the introduction of 100% import substitute products thereby saving substantial foreign exchange.

The saga of Nippon Denro Ispat's pioneering effort began in 1985 when India's first plant to manufacture thin gauge Galvanised Steel Sheets in technical collaboration with **Nippon Denro Manufacturing Co. Ltd., Japan,** commenced operations.

Nippon Denro Ispat has now collaborated with the renowned industrial giant – **Hitachi Ltd. of Japan** for installation of a sophisticated 6 Hi-Combination Reversible Cold Rolling Mill, which has already commenced operations ahead of schedule in October, 1988. The product range comprises of a wide variety of Cold Rolled Sheets including ultra thin gauge sheets for the first time in India. The operational and maintenance know-how is from **Taiyo Steel of Japan.** The modern computer controlled Continuous Pickling Line and Electrolytic Cleaning Line for the Cold Rolling Mill Complex incorporates technology from Nippon Denro of Japan

Yet another venture is the plant to manufacture PVC / Colour Coated Steel Sheets for the first time in India, in collaboration with Nippon Denro of Japan and operational assistance from **Daito Kogyo of Japan.** This plant is expected to commence operations by the first quarter of 1989.

Simultaneously the expansion and modernisation of the existing galvanizing line is being undertaken with technical know-how from **Stein-Heurtey of France** and **Ajax Magnethermic of U.K.** This would lower the investment cost per tonne of the Galvanizing plant and result in substantial savings in operational costs. In addition, a new range of coated steel sheets with diverse applications would be introduced.

Nippon Denro Ispat is indeed a successful synthesis of the best available advanced technologies to bring to the country innovative products conforming to international standards.

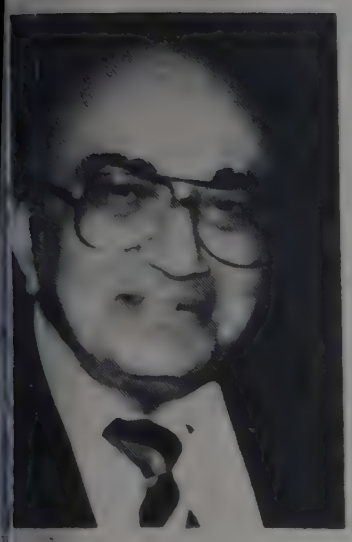
PRESSMAN



JUSTICE P.N. BHAGAWATI

Environment protection needs all-round participation

There is a growing awareness among all sections of society of the need to take urgent steps for preserving the environment and protecting the ecology — environmental protection as in a much wider range of activities than the mere prevention and control of air and water pollution. It includes within its compass, the maintenance and preservation of ecological balance and conservation of non-renewable resources, including proper and careful use of renewable resources.

In the light of such parameters, it becomes necessary to have a really comprehensive law which will take care of those aspects of environmental protection and prevention of what may be called ecological deficits. These include the loss of tree cover or of top soil, which often go unnoticed until they begin to produce negative economic effects. But by that time, excessive demand may have destroyed the resource itself, converting a renewable resource into a non-renewable one.

ACCELERATED DEPLETION

Ecological deficits occur when economic exploitation exceeds nature's carrying capacity and its delicate balance is disturbed. As demand on a system's resources continues to expand, there comes a time when the sustainable yield threshold is crossed. Thereafter, with each passing year, the pace of resource depletion will accelerate. This leaves future generations of society with few options for corrective action. This is unfortunately what is happening in most parts of the globe and India is no exception.

The degradation which is taking place is contrary to the cultural traditions of India — respect for the environment has been an integral part of our lives. Not for nothing have mountains, rivers, trees, flaura and fauna been worshipped as gods. These constituted a life-giving force sustaining the ecology; that is why they were looked upon with reverence. But what has been happening over many years now, in the name of development, is in defiance of this very practicable tradition.

Forest cover is fast vanishing and with it, important biological diversity is lost forever. Forests are dwindling due to excessive chemical stress, air pollution, acid precipitation and of course, man's insatiable greed. Most of the Himalayas, Western Ghats and Shivaliks are now devoid of forest cover, leading to gradual desertification. According to Satellite Imagery, India is losing forest cover at the rate of 1.5 million hectares a year. At this rate, there will virtually be no forests left to speak off by the turn of the century.

Perhaps the most worrisome loss is that of the topsoil at many places. Already, the difference between the rate of soil erosion over that of new soil formation is such that, within our own lifetime, it is bound to affect food production adversely. Efforts to offset such loss through increased use of chemical fertilisers only creates new problems of soil acidification and salinisation. In turn, this exacerbates water pollution. Then again, deforestation and loss of vegetation reduces rainfall and thereby the overall water supply.

VICIOUS CYCLE

With deforestation and increasing soil erosion, floods and droughts have increased in frequency, extent and severity leading to enormous losses and human suffering. There are acute shortages of fuel wood, fodder and drinking water. The poor are caught in a vicious downward cycle and are forced to overuse resources just to survive. The impoverishment of the environment has further impoverished the poor.

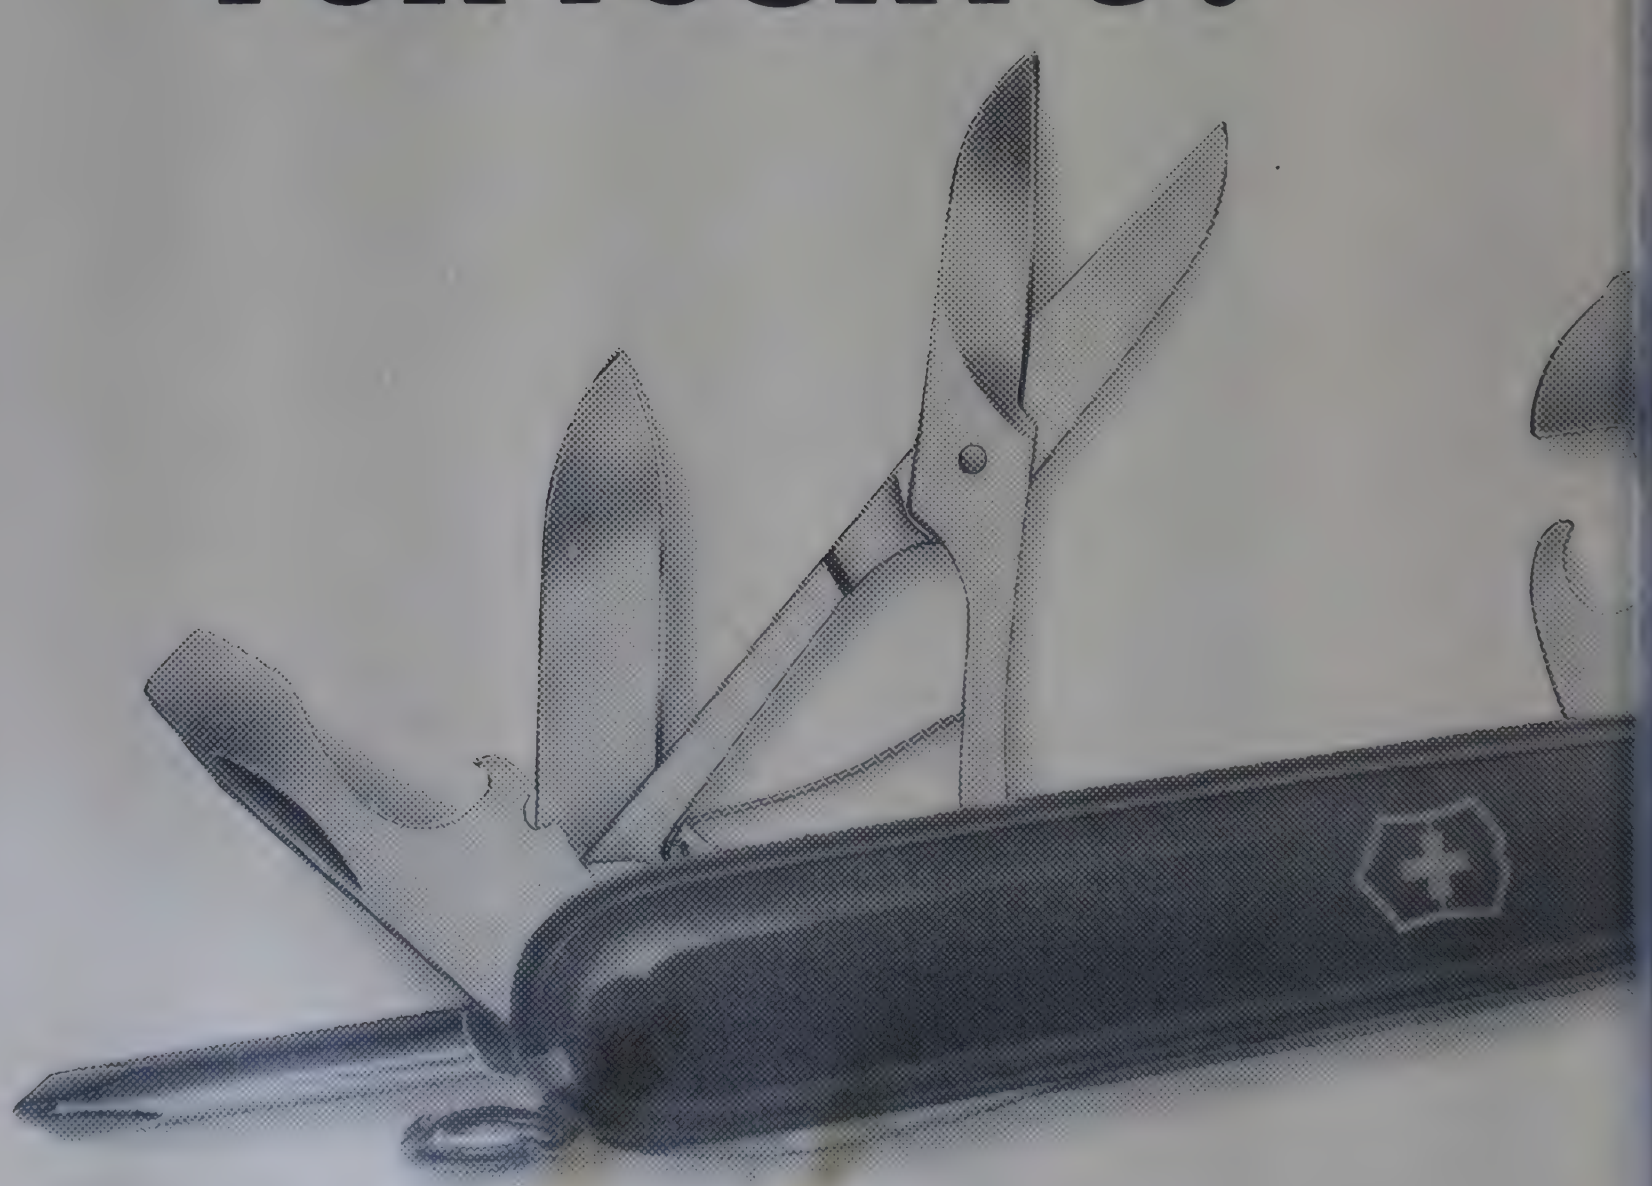
These are examples of environmental and ecological degradation which is threatening human life. It therefore becomes necessary to have comprehensive laws against such degradation. The process of making laws for environment, however, include inputs from environmental groups, representatives of industry, etc. Their comments and suggestions should be invited and taken into account. Social action groups must be involved not only in the drafting of such a law, but also in the implementation of its provisions. The government must recognise that an environment law cannot be enforced only through the bureaucracy; it is necessary to involve the people in the process of implementation and enforcement. That requirement is unfortunately absent in the new legislation.

FRAGMENTED UNDERSTANDING

Besides, no law can effectively grapple with the problematic relations between ecology and development, unless it adopts an integrated and holistic approach. Droughts, deforestation, floods, desertification, pollution of water and air, noise pollution, destruction of nature through large irrigation projects with abiding adverse environmental consequences and the unplanned growth of industries, including hazardous industries — all these are interrelated in more ways

The author was Chief Justice of India and ex-officio patron-in-chief of the Committee for Implementation of Legal Aid Schemes. He was also a recipient of the International Commission of Jurists' Human Rights Award

THE MAN ON THE SPOT. DOES HE HAVE THE RIGHT BACK UP SERVICE FOR YOUR PC ?



The small computer service down the road is a great chap to have around, when your computer is in trouble.

He responds, while the company that sold you the PC in the first place turns a deaf ear, now that the warranty period is over.

You have no choice but to go to the small shop. And make do with whatever resource available.

But is it good enough?

Now you can book the finest maintenance engineers. At Eiko.

Call Eiko. No matter what your brand of PC.

Get yourself a maintenance service reputed to be the best in the country.

The only maintenance service of its kind, offered by a computer company.

Eiko PC Care

Backed by a full-fledged computer manufacturing company. By a network of skilled service engineers.

By the facility to offer the best spares whenever you want it.

Everything to take on where the others left off.

Find out more.
Ask any Eiko PC Care customer

Ask Procter & Gamble, Nuware India, Kirloskar, C.D.O.T., Indian Organic Chemicals Ltd., Dabur India, Vedanta Printers, Chandan Auto Agencies, Mohini Wines...

Some names you know, others you don't know. But all satisfied Eiko clients. Because their PCs are the best maintained PCs in the country.

INTRODUCING

The best maintenance service for your PC

Yes, I want more details of Eiko PC Care.

Quality. Technology. Innovation.
Bharat Electronics' new 3-pronged identity.

A company synonymous with the state-of-the-art in electronics, we are now poised for accelerated growth. Through a series of new initiatives.

Starting with our vibrant new symbol. Embodying our commitment to excellence on many fronts :

Quality *in all our activities.*

Technology *of our products and production processes.*

Innovation *in our R & D, for greater self- reliance.*

This is the thrust our new symbol represents . . . ushering in an exciting future, taking off on our dynamic present.

Bharat Electronics Limited
(A Government of India Enterprise)

BANGALORE-560 001

than one. A plethora of separate legislations passed at different times in different contexts, fragment the understanding of environmental issues in their totality. Uncoordinated, ad hoc and patchwork legislation on an all-encompassing subjects like this is not going to be of much help.

The new Environment (Protection) Act 1986 is in force but is totally inadequate to deal with the many aspects of the problem. It is not comprehensive enough to cover all forms and causes of environmental destruction and degradation. For example, though the definition of 'environment' in Section (2) (a) of the Act emphasises the interrelationship between water, air and land on the one hand and 'human beings, other living creatures, plants, micro-organisms and property' on the other, Sections 7 and 8, which deal with the environmental impact of large dams and irrigation programmes, are in effect powerless to prevent deforestation, soil degradation and erosion, flood, drought or desertification. These forms of damage must also be covered as such acts or omissions which may prove injurious to the environment.

The standards for a quality of environment in its various aspects must be prescribed by the law in a reasonably practicable manner. They must be attainable from a practical point of view, with due regard to the stage of development of science and technology in the country, and be effective in eliminating existing or potential threats of environmental damage. Of course, when there is industrial activity, some injury to the environment is inevitable, but it must be acceptable to society as a price to be paid for development. Otherwise, the law should be strong enough to be able to stop the offending industrial or development activity.

FULL ACCESS

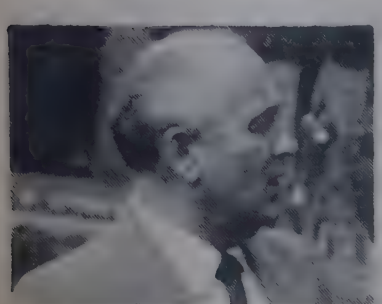
When environmental standards are fixed, they must have been arrived at after consideration of the widest possible solutions, and through a process where environmental experts and social action groups are involved. The government could set up an agency, possibly styled the Environmental Protection and Research Authority, with full access to all information on hazardous substances, their import, preparation or use, test reports, imports, etc. This information should form part of the public record.

The main functions of the authority should be:

- keep a record and disseminate information;
- undertake investigations into the hazardous character of enterprises;
- provide experts to the law courts;
- provide professional consultancy services for technology assessments and project evaluations done;
- help citizens and public interest groups by making evaluation reports on apparently hazardous projects and production processes;
- spread environmental awareness through programmes, books, periodicals, video cassettes and audio-visuals;
- undertake immediate techno-ecological analysis of ecological and environmental disasters to ascertain the causes of such disasters;
- instruct industry in disaster management techniques;
- identify areas which are endangering the environment and ecological balance for preventive action;
- assist in the formulation, development and drafting of environmental law, drawing on the Indian and international experience or the norms being evolved by the UN Environmental Programme (UNEP);
- and monitor the implementation and enforcement of the provisions of the environmental law.

In addition, the government would do well to set up environmental courts on a regional basis in order to adjudicate upon cases involving environmental and ecological issues. These courts should ideally be presided over by a high court judge and with two assessors to support him. The latter should be deputed from the Environment Authority referred to earlier. Such a set-up would considerably facilitate effective disposal of environmental cases. The environmental courts should have wide powers to grant such remedies as may be necessary for preventing environmental pollution and maintaining the ecological balance and also conservation of national resources such as forests, topsoil, water, air, etc. They may be empowered to entertain cases at the instance of environment groups and also deal with criminal cases arising out of the provisions of the Act and the rules.

Environmental protection is a complex question of control over a very baffling range of scientific, technological, industrial and economic activity. It requires a high degree of technocratic competance to assess the environmental impact of such activities. Thus, the presence of eminent environmentalists with specialisation in different branches of environment and ecology is crucial to the law making and keeping process. Also, feedback and constant inputs of information providing raw materials for policy decisions is crucial. The proposed Environmental Authority must have access to feedback from a comprehensive cross-section of society. This may mean the representation of workers' unions, consumer guidance groups, women's movements, etc, on the Authority itself. Only such a participatory structuring would make it really effective and meaningful.



Gorbachev returns The perestroika agenda

Gorbachev will soon be in India, just two years after his first visit. Much has changed in these two years. The Soviet Union has become a more open society. It has decided to give market forces freer play. And more important it is redefining its relationship with China. How will these changes affect Indo-Soviet diplomatic and trade relationship? A report

When Mikhail Gorbachev arrives in New Delhi on 18 November he creates history. India is the only country that the Soviet leader has chosen to visit twice. And with this unprecedented step Gorbachev sets to rest several rumours that had begun to trouble Indo-Soviet relations in recent times. The first is that in the era of *perestroika* and *glasnost*, India no longer merits the special relationship — economic and political — that it used to enjoy vis-a-vis the Soviet Union in earlier times. The second is that a liberalisation-oriented Rajiv Gandhi government has little use for the bear hug that Gorbachev guarantees when he arrives from Moscow. Considering the fact that Gorbachev himself arrived in November 1986, had Rajiv over in July 1987 and is back himself in November 1988, all these rumours seem clearly baseless. Says a secretary in the ministry of external affairs "The message clearly is that India matters".

Official statements are that Gorbachev, is visiting India to receive the Indira Gandhi award on 19 November, and to ring the curtain down on the Soviet festival in India. But clearly there is a great deal more than the purely ceremonial. Foreign ministry officials point out that a second visit by Gorbachev is the kind of public signal that has both global and bilateral significance which cannot be overlooked. Says an official, "While ceremony may seem to dominate, the substance is the bedrock of the visit."

RAPID GROWTH IN TRADE

And the foundation of the relationship is strong. Commerce ministry officials in Udyog Bhavan New Delhi are excited by the prospects of growing trade with the USSR. Says commerce secretary A.N. Verma, "The bilateral trade targets we had set for this year have been achieved. Growth is the order of the day." Officials in the commerce ministry point out that the trade turnover for the current year may well be over Rs.5,400 crores. The growth rate of "between 30 and 35 per cent" that officials in New Delhi are busy discussing, no longer seems unrealistic. Says Verma, "The two leaders, in their earlier summit, had proposed a two-and-a-half tim growth in trade by 1992. It sounds simple b gearing up for that kind of growth is an en mously complex exercise. But this year's figu show that we are headed in the right directio While the 1988 plan production had called fo figure of Rs.5,000 crores, the ministry is n pitching for well over Rs.6,000 crores in 19 Clearly, the bucks (whether they are in rupees roubles) are big and growing. Informed sourc in the finance ministry add that the target two-way trade at a level of Rs.10,000 crores ann ally three years from now may therefore not unrealistic.

Big bucks and brotherhood — the bedrock Indo-Soviet relationship also finds expression the high-level delegation that accompanies G bachev on this visit, which comes shortly aft the party chairman's revamping of his own par machinery. Gorbachev's team will encounter equally powerful array of cabinet ministers a officials from the Rajiv government. While fin details about who will constitute the Sovi leader's team were not available as we go press, observers in New Delhi suggest that the will be many heavyweights.

In fact, on the eve of Gorbachev's arrival, th steady stream of high-ranking Soviet officia closetted in confabulations with local ministe and officials suggest that the USSR is taking th "largely ceremonial" visit rather seriousl Among those in New Delhi to pave the way f Gorbachev was, of course, the Soviet defenc minister. Military equipment and co-operatio after all, even in this era of glasnost, will co tinue to figure prominently in the Soviet leade talks. Other prominent visitors included the S viet Minister for foreign economic relations, th deputy chairman of GOSPLAN (the Soviet pla ning agency) and Soviet economist Gennad Lisichkin.

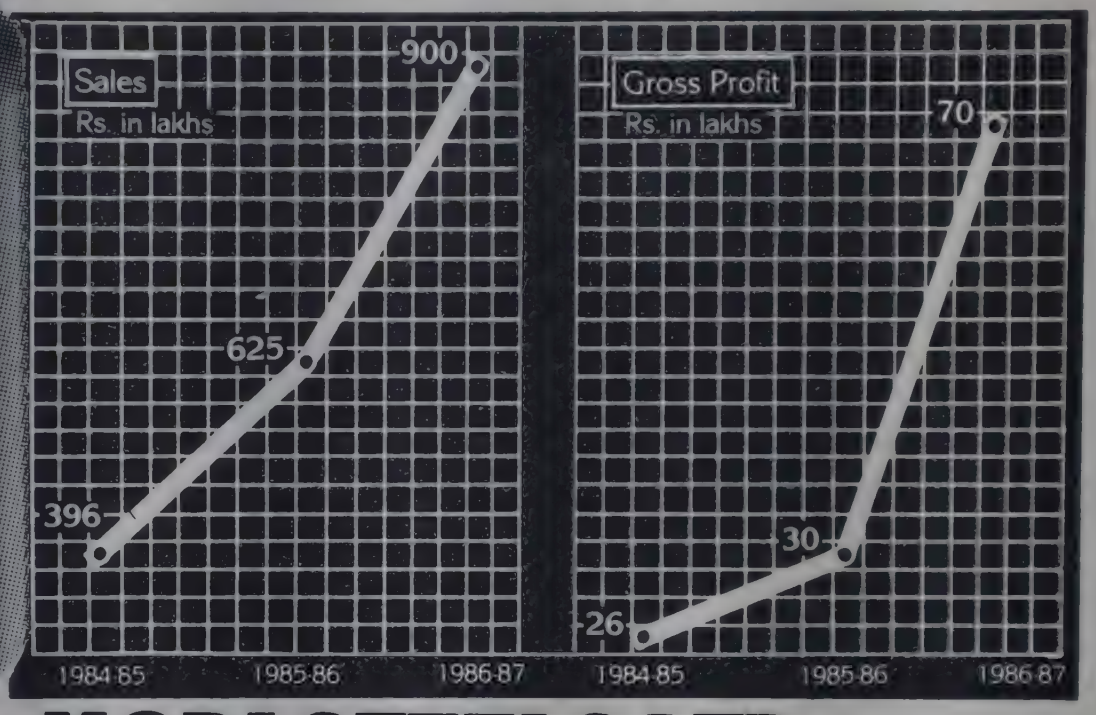
CONSOLIDATING TIES

But apart from the presence of point men mos insiders insist that the success of summit meet ings is determined by the personal chemistry

Gorbachev and Gandhi: personal chemistry

A Company is measured by the growth it achieves.

The Growth Story



A PREMIUM ISSUE

MODI STEELS LTD.

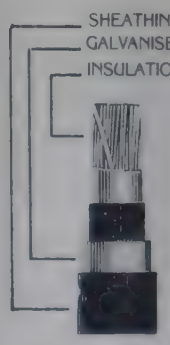
expands its existing operations and diversifies into

POLYMER COMPOUNDS-

vital for manufacturing

Jelly Filled Cables.

100% Import Substitution



THE TRACK RECORD

Take a look at the graphs. They tell the success story of Modi Steels Ltd. (MSL) —its dynamic growth, in terms of sales and profits. Adding up to a track record that spells healthy and rewarding returns to the investors in this Premium Issue. From a Company dedicated to the cause of its shareholders.

THE YEARS AHEAD

Now take a look at the future. MSL is modernising and expanding its existing unit at Patna and diversifying into Sheathing and Insulating Polymer Compounds essential for manufacturing Jelly Filled Telecommunication Cables. This diversification project at Surajpur in U.P. will manufacture products which are 100% import substitutes. MSL is assured of an ever-growing market from the jelly filled cable and power cable manufacturers. It will also make MSL the only Integrated Feeder Company for the Cable Industry... marking the beginning of another chapter in the MSL growth story.

THE ISSUE

To part-finance its investment plans, the Company is entering the capital market with a Premium Issue.

Indeed., an outstanding opportunity for you to share the benefits of MSL's 18 years experience and goodwill. Come, make the best investment decision of the time.

Welcome to the Modi Steels family of shareholders. Welcome to a growing family.

Public Issue of 9,00,000 Equity Shares of Rs. 10/- each for cash at a premium of Rs. 4/- per share aggregating Rs. 126 lacs.

Issue Opens :
12th November, 1988 for Non Resident Indians;
21st November, 1988 for the Indian Public.

PREMIUM ISSUE HIGHLIGHTS

- A premium issue from a profit-making, dividend-paying Company.
- The largest manufacturers of Cold-Rolled and Galvanised Steel Strips for the Cable Industry.
- Diversifying into Polymer Compounds — 100% Import Substitute; plant imported from world renowned Pomini Farrel SpA., Italy.
- Products in heavy demand, essential for the high priority, fast expanding Telecommunication Industry.
- The only Integrated Feeder Company for the Cable Industry.
- High value-added Insulating Compounds being produced first time indigenously.
- 80L, 80M and other Wealth Tax benefits.
- Easy liquidity — listing at the Patna, Ahmedabad, Bombay, Calcutta and Kanpur Stock Exchanges.

e two leaders. Says a key official in the ime minister's office, "Officials and en ministers are just there to fill airs". And going by the bonhomie that s already marked the Gorbachev-Gan- i meetings so far, the upswing in rela- nship is likely to persist. Says foreign inister Narasimha Rao, (speaking to viet media) about the forthcoming it, "I foresee a steadily rising graph in do-Soviet relations in the future"

Nudging the graph upwards is, how- er, no easy task in the new world that rbachev and Gandhi find themselves in w — a year after their last meeting. hile foreign ministry officials attempt to ficially paper over their worries about e future, *perestroika* and the accom- nying *glasnost* are likely to have far- aching consequences. Both in the realm economic relations and in the political here, key insiders agree that "there is use for concern". And they speculate, it possibly to reassure India that the rela- onship between the two countries will ntinue to be special that Gorbachev is aking this public spectacle of a second ate visit at this time. As if acknowledg- g this inherent tension, Gorbachev, in is curtain-raiser-to-India remarks, said the Soviet Union recently that he oped to consolidate "the unique, iendly interaction between two very dif- rent and influential countries". (Note e use of the word different).

FFECT OF PERESTROIKA

he "differences" between the two coun- ies are likely to increase in many ways – at least when compared to the cosy attern that the relationship had ac- uired over the last few decades. Today dia is concerned about two basic issues – how *perestroika* will affect the way the o countries will do business with each ther, and how their individual relation- hips with the rest of the world will affect ilateral relations.

In a sense, therefore, the Gorbachev isit seems to be carefully timed. "Seems" nly because, the ceremonial trappings of he visit — on account of the Festival of he USSR and the Indira award — were rdained much before the factors cur- ently at play, came into focus. The back- lrop of the latest Gorbachev-Gandhi ummit is therefore at least as important s the agenda that the two leaders have et out for themselves. In the realm of lobal politics, a new American president vill have been elected, Europe is heading owards its 1992 merger, Rajiv is going to China and so is Gorbachev. On the economic front, Gorbachev's party has re-endorsed *perestroika*; India is finalising its next plan strategy; for both countries exports and overseas markets are becoming crucial and Indian companies are now getting the first benefits of industrial and tax liberalisation.

Gorbachev's visit, unwittingly perhaps, gets played up more in India than back home. But, perhaps because everybody knows that elections in India are only a year away, Gorbachev has sent subtle hints that suggest he intends to play the visit at low key. Besides reports of denying curtain-raiser interviews to semi-official Indian media Gorbachev handlers in the Kremlin are also pushing for a written agenda. The message being, of course, that Gorbachev would prefer not to be part and parcel of any Rajiv governments political hype for local consumption.

THE GREAT RUSSIA OPPORTUNITY

Against this backdrop, the agenda for the two leaders seems almost cut out for them. Clearly, talks on their respective China policies will dominate, even if details remain unreported for obvious reasons. Most observers believe that the details available for public consumption will be a re-assertion of both nations' belief in a strife-free world with peaceful borders and amity between the people. And, as a consequence of the predictable diplomatese that permeates all such pronouncements, the nitty gritty of economic co-operation will get unwittingly highlighted. The advantage of all this as far as the Indian business community goes, is that it will once again help focus attention on the great Russia opportunity. The Russia opportunity, which an ecstatic Italian Prime Minister described last week as "the El-dorado of the nineties" is a significant one for Indian business. And the dynamics of *perestroika*, in the gospel according to Gorbachev, will determine whether India gets going in this area at the right moment.

Perestroika, however, is unlikely to enter the biggest deal that Gorbachev will swing in India this week. He will sign a protocol to supply two giant nuclear reactors of 1000 MW each. The nuclear reactors of the pressurised water variety are expected to open a whole new era in nuclear power co-operation between the two countries. The reactors that Gorbachev will sanction are enormously larger than the 440 MW reactors that India had originally opted for. The reactors which are estimated to cost Rs.5,000 crores and are at the centre of a controversy in nuclear circles here. The Russians, however, insist that fears about the technical aspects of the project are confounded since they have provided a five-year buffer stock of enriched uranium and agreed to take back spent fuel.

While the 1000 MW giant nuclear plants threaten to loom large on the agenda, the basic details of new areas of co-operation will find their way into the fine print of the summit minutes. The Soviet role in the power sector, as elsewhere, is seen as significant in the finance ministry. Says a key economic official in the government, "The Soviet power plant offer must be seen in the context of our need for resources in the Eighth Plan. The way they plan to finance these nuclear reactors allows us to use the funds we have elsewhere."

Indeed, as officials in the East Europe division of the finance ministry observe, "In May 1985 the Soviet Union granted 1000 million roubles worth of credit. This was followed, in the drought year of 1986 with a further credit of 1,500 million roubles". Clearly then, these credits and those that will be announced this time around will make a major impact on resources available with the makers of economic policy. Adds an official in Yojana Bhavan, "The advantage of rouble credits is that we are able to plan some sectors (eg, power) in a manner that ensures that free foreign exchange use is optimised. What the Russians can supply has been identified and will be supplied over a period of years. And, in most cases, once the leaders sign the protocols, little else needs to be done".

NEW AREAS OF CO-OPERATION

In a sense though, protocols and *perestroika* do not mix. That then is what this Gorbachev visit must mean. Says Alfred Gonsalves, secretary in the ministry of external affairs, "We still have a clearing system, as far as trade is concerned. But, in the long-term perspective all this is changing". And, it is this change that the latest summit could well be a harbinger of. Gonsalves points out that the Indian government as well as Indian industry "has begun to look at new areas of cooperation", because of the need to achieve the two-and-a-half times growth in trade that the leaders had already agreed upon.

Yogindar Alagh, member, Planning

THE FOREIGN HOLIDAY

But of course you must go. You've earned it. At your level you don't need to give reasons but it's impressive to let slip that you are going to check out the world's best continuous duty diesel generating sets.

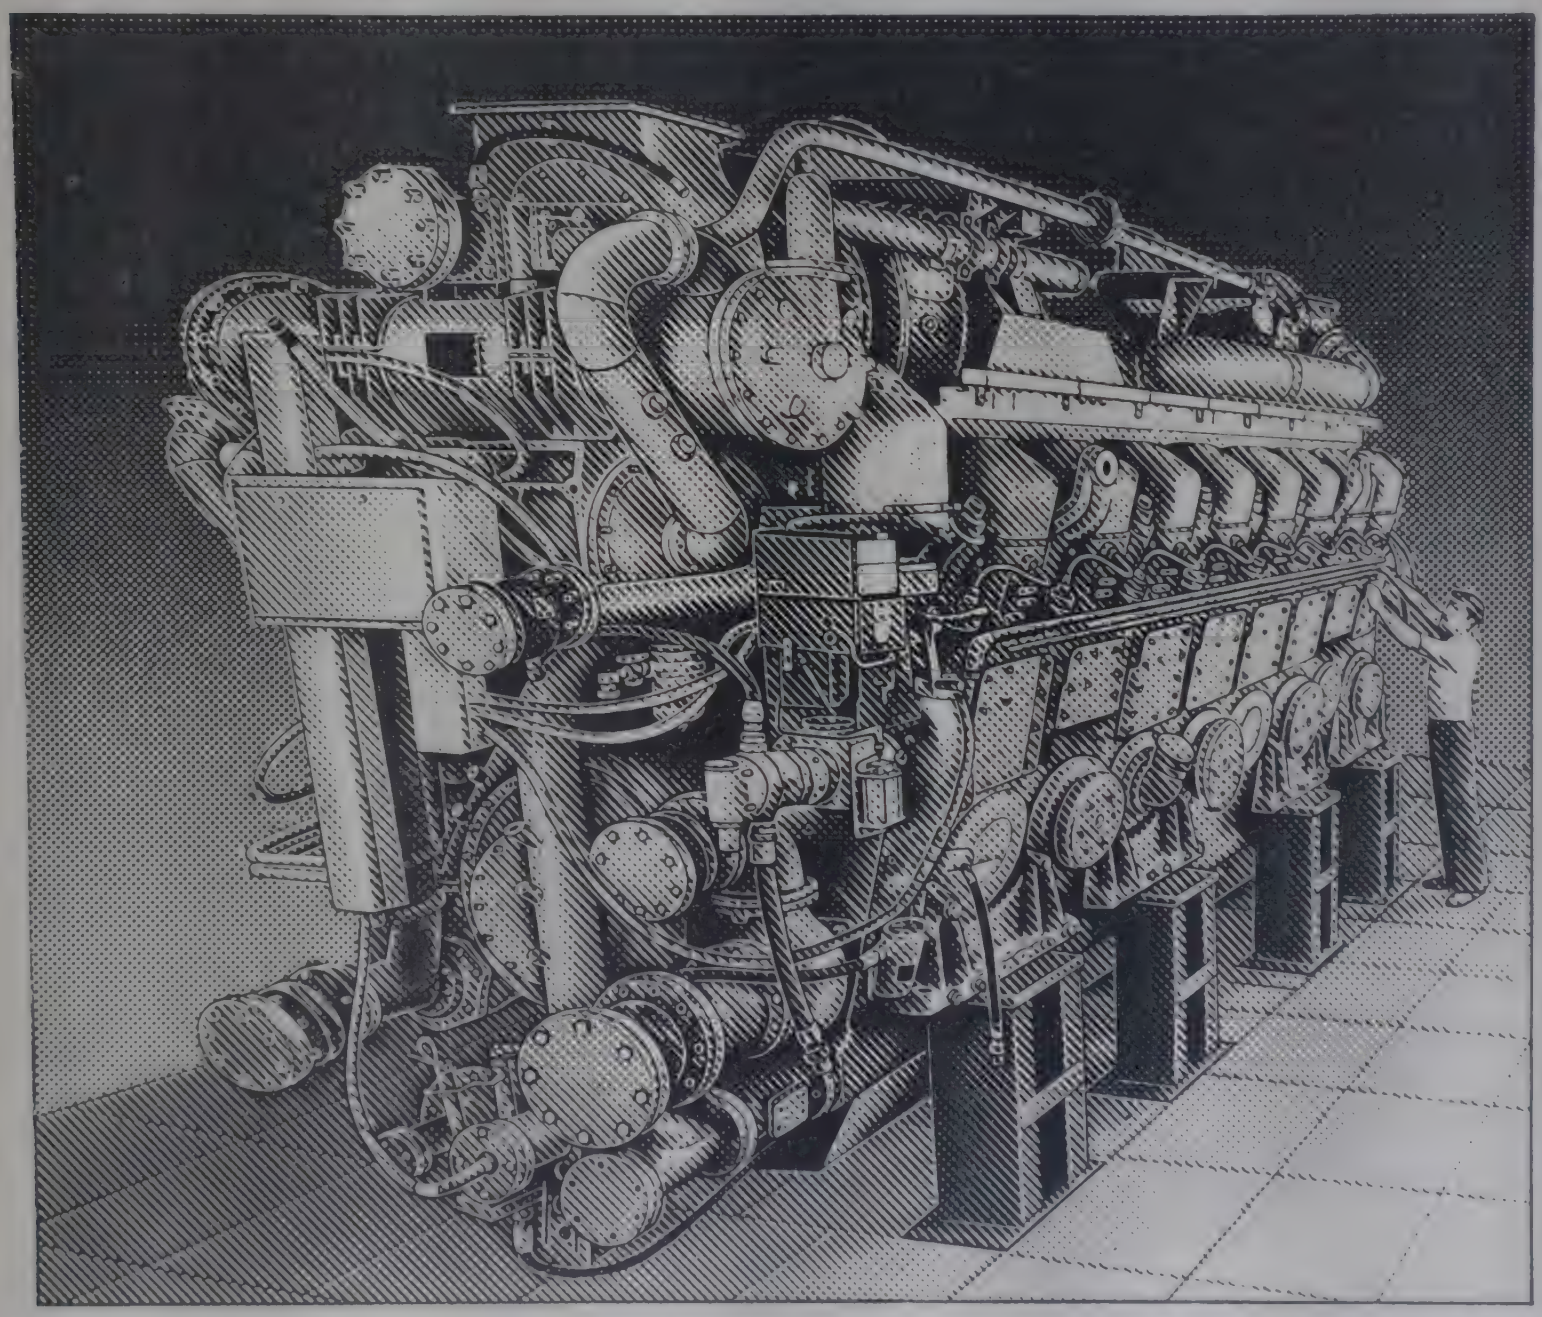
Buy your wife the Paloma Picasso perfume. And a print of the Matisse dancers for yourself. Splurge. After all when you get back you'll be buying the 2.2 to 4.5 MW Kirloskar Pielstick right here at home. And saving millions in foreign exchange. Not just on the engine but on spare parts too. And you may expect one other continuous thing from the Kirloskar Pielstick. Our after-sales service.

The Kirloskar Pielstick. A real warhorse. Ask the Indian Coast Guard. They've been flogging it in six off-shore patrol vessels day and night for years now. And the Indian Navy is installing it on several Corvettes and other naval vessels. So have a great number of the most advanced navies in the world. Now tell us, what better proof can you get of continuous duty operations?

And on land? You know what the power situation in the country's like. And it's not likely to improve for a long time to come. So a whole lot of industries like Andhra

Cement, Orissa Sponge Iron, BEML, Bihar Sponge Iron are picking it up as their prime mover. And discovering that they'll never be short of power again. Ever.

Why don't you call Mr. S. Goswami at (0212) 55341/ 56454? Or better still, kill two birds with one stone, have a cup of tea with us at Kirkee, Pune 411 003, and see this magnificent genset? That's if one is still left on the shelf.



Kirloskar Pielstick... you'll never be short of power again.

Kirloskar

KIRLOSKAR OIL ENGINES LIMITED

Print No. KOEL 161 88 BM

The rouble rolls over

"The political decision to make the rouble convertible has already been taken," says a senior official in the foreign ministry. And by all accounts, the ministry of external affairs is keeping a close watch on this process. Ministry officials, however, believe that discussions on the implications of such a shift for India may not yet figure prominently on any summit agenda. At the same time, they insist that the process of making the rouble convertible is proceeding faster than outside observers currently estimate.

External affairs economists have an inkling of the Soviet economy's creditworthiness — which inevitably is linked to a convertible currency — by the alacrity with which foreign banks have extended credit to the Soviet Union. Moscow watchers in New Delhi are paying particular attention to the loans — of over $ 10 billion — pledged to the USSR in the course of the last month. By all accounts, say experts, the Western economies' interest in China has waned. The disenchantment with China and the new hope in Gorbachev is causing western bankers to look at Russia with a gleam in their eyes. Moscow watchers believe that this optimism is enough at the moment for rouble convertibility to be a minor factor in any lending programme.

While the external affairs ministry believes that the rupee-rouble link may not be a forever bond, other arms of government in New Delhi think that this issue need not figure now in the domestic policy debate. As a senior commerce ministry economic analyst says, "Its still very far away. In any case, you cannot wipe away 70 years of history in one grand conversion. The process is more complex than just letting their currency float."

This view is echoed elsewhere in the finance ministry which also believes that the rupee-trade arrangement is likely to remain stable in the foreseeable future. Says an official, "In any case, given our political links, there is nothing that precludes an arrangement whereby the rupee and rouble continue to have a special relationship." For the moment, therefore, North Block and Yojana Bhavan have decided to maintain the rupee trade zone as inviolate and continue to treat the balance of payments problems within the region as merely a clearing exercise.

The market clearing exercise based on trade agreements is, however, bound for change. While Sino-Soviet clearing is in Swiss francs, Indo-Soviet clearing is in rupees; within the CMEA, it is in roubles. Over time, these differences, however, are likely to even out with a common denominator coming into force. For those who are looking for signals, Kremlin watchers suggest that several discreet stages are likely to precede a free floating rouble; for one, price reforms will continue.

It is expected that a wholesale price reform will be all that Gorbachev will attempt initially (specially given the turbulence in Poland over retail price reforms). That, in the medium term, will be accompanied by commodity support — to ensure that goods are available at stipulated prices. At this stage, the pressure on consumer goods imports is likely to be high. Therefore, say experts, the Soviet Union will probably attempt a national rate of exchange within the CMEA region. If this is successful, a further opening up will become possible.

As for a timetable for all this to happen? Indian officials doubt at the moment whether anything close to a convertible rouble will exist before the year 2000. So, one would do well to stick to the rupee system for the moment and work on making sure his export items figure in the trade protocols. Before the rouble really floats, everyone will have lots of notice.

■ DILIP CHERIAN

Commission, who led an Indian delegation that included Sam Pitroda to the USSR last month says, "We are discussing a whole new range of areas for co-operation. For example, we have talked of manufacturing the AN-28 (a 23-seater civilian aircraft in India.)" Officials in Yojana Bhavan and South Block advise caution in trying to detail the new joint venture areas, "They are so many and lots of them need to be explored further." One official cites with caution that after the three hotels currently being constructed by Indian companies in the USSR, seven more may be awarded for construction by 1990 and 30 more may be awarded in the 1990-1995 Five Year Plan." Other joint ventures in the area of newsprint, furniture and food processing may well be in the offing, they say.

Officials in the commerce ministry believe that "services" could well be a growing area. A think of experts from India. They suggest that besides the mini hotel boom there could be a hospital construction boom. Moreover, the officials say, management services including areas like marketing, finance and software are a boom area for the future.

SEVERAL OBSTACLES

The stumbling blocks in all this hectic hoping are many, concede officials in the foreign ministry. They agree that the Soviet Union is attempting to implement a joint venture law with hardly any previous experience with joint ventures. The other big block that officials in Udyog Bhavan highlight is that with *perestroika*, individual units in the USSR who now have freedom to operate, are seeking to balance their trade account. "Such balances are impossible and we have not accepted this new principle at all," say officials.

However, officials insist that such details of unit-level balances versus sectoral balances and wrinkles in joint venture legislation are unlikely to figure in tal at the Gorbachev-Gandhi level. This, th say, only sets a tone — if the leaders set path, the details fall into place.

The other area of concern is the repor currently doing the rounds that th rouble is turning convertible. While mo officials in the commerce, finance, a external affairs ministries agree that t matter is important, views on the urgen differ *(see box)*. They do, however, agr that Rajiv Gandhi will probably get better feel of the pace of Soviet refor from the current round of consultation And this "feel", they believe, will have finally influence the pace at which t Indian government and therefore Indi companies begin their plans of copi with the possibility of "rupee trade" tur ing into hard currency trade. The officia also believe that except for this visit pr viding an opportunity for such insights well as indications of what "specia terms (vis-a-vis the East Bloc) India c

Some of the most exquisite reasons for shopping in Hong Kong are made in Switzerland

You can see a few of them here. More persuasive, though, are Swissair's Excursion Fares between Bombay and Hong Kong and the three non-stop flights every week. Equally alluring is the service, perfected in Switzerland.

For travellers to Bangkok and Singapore, Swissair has a no less attractive offer: two flights every week to either city and the added bonus of Excursion Fares. All bearing the stamp of unmistakable Swiss quality.

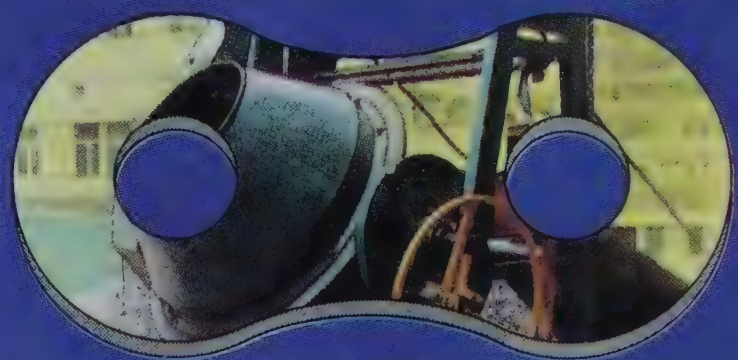
The Big.



The Small.

And hundred others in between have a common link.

Diamond Industrial Chains. From 3" to ¼" for hundreds of application areas...

From giant oil rigs to concrete mixers... paper mills, cement plants, textile mills, fertilizer plants and many, many more.

Diamond Industrial Chains is the one name that has chains in pitches varying from 3" to ¼" manufactured to both AS and BS specifications.

Widest range of transmission chains

☐ Single and multi-strand chains ☐ Leaf chains ☐ Carding chains ☐ Extended pin chains ☐ Heavy duty chains ☐ Conveyor chains ☐ Special purpose chains ☐ Standard application chains

A team of highly trained engineers, 17 warehouses around the country and hundreds of outlets give easy access to Diamond Industrial Chains.

Application Engineering Cell for special needs

Diamond Industrial Chains' Application Engineering Cell will innovate the perfect solution — with a custom-built chain for very specialised requirements.

TA 1204

X.1000 MW NUCLEAR POWER STATIONS

The pros and the cons

During this visit an agreement will be signed for two giant 1000 MW nuclear power stations. These will be located at the southern tip of India. These atomic power plants, as well as the Tehri dam, agreed on during Gorbachev's last visit (see Focus, p. 89) have stirred major controversies. *Business India* spoke to critics of the arrangement as well as key officials in the Department of Atomic Energy including the Secretary Dr.M.R. Srinivasan.

The arguments for and against these nuclear plants

PRO	CON
Balancing trade The sale of two turnkey nuclear plants at approximately Rs.5,000 crores each will help balance the huge export surplus (Rs.800 crores in 1986-87). Our government is not purchasing heavy industries and the private sector is unwilling to purchase Soviet capital goods or technology. The purchase terms also help our capital resources constraint.	This is not merely a trade transaction but will erode our sovereignty in the nuclear field, particularly our nuclear weapons option. In any case the trade gap and energy shortfall can be closed by importing huge conventional thermal power stations.
The Tarapur experience While Tarapur highlighted the danger of dependence on an outside source for enriched uranium fuel, contractual arrangements provide fuel for the full life of the reactor. Also a five-year stockpile of fuel is provided for.	This showed that we could be blackmailed into accepting full scope safeguards. Turning off the fuel supply would lead to a shortfall of 30 per cent in the southern grid.
Safeguards The tripartite agreement with the Soviets and the International Atomic Energy Agency (IAEA) specifically restricts safeguards to these two sites. Similar restricted safeguards apply to Tarapur and elsewhere.	These sites specific safeguards will enmesh us in the IAEA net by indirect means. Apart from fuel, the Soviets can hold back essential spares, supplies and services (like trading) on the excuse that we are going for nuclear weapons. Also since the safeguards are in perpetuity, we cannot develop indigenous fuels. USSR along with USA has been the strongest supporter of non-proliferation.
Spent fuel For the life of the reactors USSR will supply fuel and take back spent fuel.	Even its East European allies have not been permitted to construct enrichment or reprocessing units. East European power stations have fuel delivered to them and spent fuel transported to enrichment centres in USSR. The same system is being sought to be imposed on us.
Abandoning our nuclear programme Senior officials deny that acceptance of these two plants imply a deviation from the nuclear blue print drawn by Dr.Homi Bhabha in the 1950s. They argue that these plants are not outdated but on the contrary are an established design and continue to be produced. It is true that in the second stage fast breeder reactors are envisaged, but currently in spite of the large experience in USSR and France such fast breeder reactors are still not cost effective to produce power. It is denied that there is any abandoning of the earlier independent plans. Nor do we give up our weapons option, though there is no intention to go nuclear.	The Indian atomic energy establishment is progressive according to the Bhabha blue print, even though the first stage pressurised heavy water reactors have not been fully mastered, we need to persist with our plan to move to fast breeder reactors, which in turn will lead to the third stage of new generation of reactors based on uranium 233. In an effort to make the Soviet light water reactor program a success, the brightest and best of Indian scientists will be inducted into it and will garner disproportionate resources leading to a dilution of the effort to attain self reliance.

expect in such a situation, there is little that a summit will actually produce, on this front.

Hopes on joint ventures, the supply of nuclear technology and the impact of a convertible rouble aside, the China factor is probably the item highest on the minds of both Gandhi and Gorbachev at this point in time. Since Gandhi's planned visit to China precedes Gorbachev's visit there, detailed discussions on this subject are likely to result. While the politics that surrounds the border issue for all the three countries is the thorniest problem, by all accounts the Soviets seem to be far ahead of India in the area of border negotiations.

The border issue is not the only one that is likely to figure in the talks. In the area of trade too, China has become an important factor. Suddenly Indian trade and industry is worried silly that China is making an entry into Russia and East Europe. Says an official in the commerce ministry "The China card is being made into an unnecessarily big issue." What has made headlines set off officials worry, is that the Soviets have been making overtures that the Chinese have reciprocated readily to, in the area of consumer goods. This [illegible] external affairs officials that China is just another country which seeks to grab the Russia opportunity. Says Alfred Gonsalves, secretary external affairs, "Everybody from South Korea, Taiwan, Japan, Italy and West Germany is beating a path to Russia's door."

IN A FLUX

But commerce ministry officials believe that the "China factor" is not as significant to Indian trade prospects as made out at the moment. The Soviet hunger for consumer goods is almost insatiable and they believe that India has little reason to worry about China as far as exports are concerned. Complacency, however, is not advisable, commerce officials say, adding, "Their packaging, their delivery schedules and their public relations are far better than ours. But more important, the Chinese pricing policy allows for a rate of exchange that allows their products to outprice ours." They also point out that the pace of price changes and the limited introduction of market mechanisms in the Soviet Union and China has put everything into a flux. The current Sino Soviet trade pattern also works on a market clearing system, except that historically the conversions have always been on the basis of Swiss francs, point out officials in the trade ministry. They foresee all this changing as both economies closer towards becoming ma oriented.

All of which indicates that on s fronts the lessons of *perestroika glasnost*, are bound to get to Indian ness very soon. Says N. Verma, com secretary, "Indian companies must to take Russia seriously. We have used to having the inside track. N may have to compete to stay on it." Gonsalves, "The special relationshi ween India and Russia is there all But for industry to take advantage much greater efforts at being comp are essential."

Says an external affairs of "Indian industry must get its act to and move very fast. There is going to big advantage in political cosines going to be business that wins the

And an insider says: "Russian tra no longer be taken for granted. Th are looking for ways that will allo jects they buy, to repay their borro out of earnings. India must reali this." And, as they say, if all this out, the bear hug that Gorbachev Gandhi may have more meaning an tent than just diplomatic rhetoric.

The Chola Sheraton Business trip

There is a fine difference between a business trip completed and a complete business trip.

It takes more than just a hotel to prove it. It takes the Welcomgroup Chola Sheraton. And the discerning business traveller.

For whom we have created the **Executive Club,** a new world of hospitality with specially appointed rooms and suites, extensive business support facilities and personalised valet service.

And the **Executive Club Lounge.** Quiet, elegant and distinctive. Ideal for informal meetings and private entertainment.

But the 'complete' business trip means more than business. And we at the Chola know this.

The new, fully equipped **Health Club** not only smoothes away the creases of your hectic schedule, it also helps you unwind—for the leisure hours.

So that you can revel in the pleasures of dining at our speciality restaurants, and, of course, the **Peshawri**—the North-West Frontier restaurant that brings you an unforgettable gourmet experience!

All this in an environment which exudes the inimitable Chola warmth and hospitality.

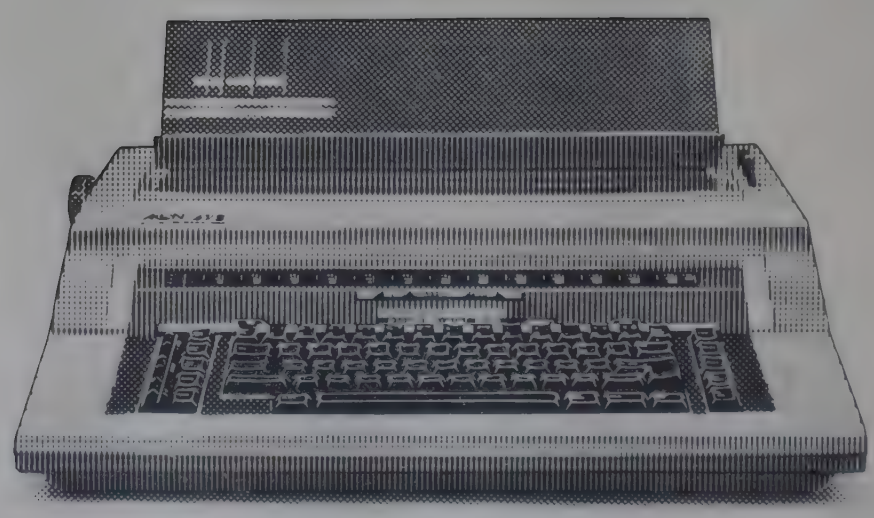
20TH CENTURY FOX, AMERICAN EXPRESS AND AIR FRANCE COULD HAVE BOUGHT THE WORLD'S BEST ELECTRONIC TYPEWRITER.



THEY DID.

Right here.

They chose the ACN Electronic Typewriter. Manufactured in India, in technical co-operation with Nakajima All, Japan. And Nakajima All, they well knew, is the largest manufacturer of electronic typewriters in the world. Possessing, undoubtedly, the most advanced technology. Technology behind the phenomenal success of the international best-sellers — Triumph Adler, Smith Corona, Olympia and Sears. The kind of typewriters they could have imported from anywhere in the world.

Quality and technology on par with the best in the world, something more clinched the deal. Professional guidance and service. Prompt, efficient and always at hand. Plus, the Ranutrol Group reassurance. Reassurance of over 18 years in high-technology, in India.

An ACN for all three. Certainly not by coincidence.

ACN

FROM

NAKAJIMA ALL, JAPAN.

RANUTROL GROUP

INTERNATIONALLY, THE BEST.

400 kV substation using HBB equipment

ASEA BROWN BOVERI

The new powerhouse

Barely ten months after the merger of Sweden's Asea AB and the Swiss BBC Brown Boveri, their respective Indian arms have followed suit. Even as the new company, Asea Brown Boveri, is beginning to homogenise the corporate cultures, a new force has emerged in the electrical equipment industry

Competitors yesterday. Partners tomorrow. The proposed merger of Asea, Bangalore, with Hindustan Brown Boveri (HBB), Baroda — cleared by the two Indian boards on 25 October 1988 — will make the two companies, engaged in similar businesses and with complementary product profiles, a single legal entity. If accepted by the courts, the shareholders and the government (a formality, say the two companies), the merged company will be christened Asea Brown Boveri Ltd (ABB) which is the name of the parent company in Sweden. The new entity will then confront other companies in the industry — Siemens, Kirloskar Electric, NGEF, Larsen & Toubro and others — with a far better capacity to service customer requirements.

The proposed merger — one of 39 such in as many countries — follows a similar exercise carried out by the parent companies earlier. In August 1987, a simultaneous statement was issued in Stockholm and Zurich, informing the public of the merger of Asea, Sweden, and BBC Brown Boveri Ltd, Switzerland, with effect from January 1988. The merger, which took place by mutual consent of the management and stockholders of the two companies, was an equal one. The two blocks of shareholders — of Asea and BBC — will have a 50 per cent holding each in the equity capital of the new company. The bulk of the assets of Asea, and BBC Brown Boveri was transferred to the new company, Asea Brown Boveri Ltd (ABB), Sweden.

hattacharyya: no diversification into related areas

NO COMEBACK

"The greatest European across-the-frontier merger of the post-war period" (according to the West German *Manager Magazine*), has turned the spotlight first on ABB abroad and now on the Indian operations. The obvious question is, will the merger succeed? Percy Barnevik, ABB president and chief executive officer, does not have any doubt. He told the magazine, "ABB will be a success story. We have no other choice. There is no comeback." Says a Siemens manager based in Bombay, "The merger is a result of both companies coming to terms with increasing competition."

Says Amiya K. Bhattacharyya, the Stockholm-based president of Asea Brown Boveri (West and South Asia) Ltd, who is in charge of ABB subsidiaries and associate companies in 16 countries, "ABB wants to be the world's leading electro-technical company at the lowest cost. The new company has a commitment to the core business and there will be no diversification into unrelated areas." Bhattacharyya (a member of the board of Asea, Bangalore) who was in India in the latter part of October as a representative of the parent company, stresses that the consumer will stand to gain from an undertaking which now has greater financial resources at its command.

The merger of the two companies which has generated so much interest in India will bring together two companies with similar profiles and complementary products, observes Bhattacharyya. Both the companies are essentially in the electrical equipment business. Asea's products include weighing equipment, thyristor drives and high tension capacitors whereas ABB manufactures low tension motors, power line carriers, etc.

LARGEST PRODUCTION BASE

"The two major products in which we compete are medium voltage switchgear and relay and protection systems, while some competition had also started in furnaces and electronic equipment," says Arun K. Thiagarajan, managing director of Asea Ltd, Bangalore, who will take charge as joint managing director of the merged ABB in India. K.R. Shenoy, managing director of HBB, will take charge of the new company as managing director. Medium voltage switchgear is sold mainly to state electricity boards (SEBs) and various industries. Relays and protection systems are sold to the SEBs and NTPC, while furnaces are sold mainly to foundries and steel/non-ferrous industries. After the merger, ABB will operate six

The shape of things to come

K.R. Shenoy, managing director of Asea Brown Boveri Ltd, India, spoke to Business India *on the shape of things to come after the merger*

Organisation structure.
We are going to look at our product range rationalisation. We are going to have the same concept as the ABB group in Sweden. There will be a very flat corporate management and decentralised profit centres at the level of each business group.

Overlapping areas.
There are certain production areas which are common to both Asea and HBB, eg, relay and production systems and low voltage switchgears. Both the companies have a sufficient order

book position in these two products. But the technologies are different, so are the customers. Both companies will therefore continue to manufacture these items to keep their commitments to the users. Moreover, in Europe no decision has been taken on which of two common technologies will survive. Here, in India, we will tackle overlapping products on the basis of the economies of manufacture, cost-effectiveness and commitments given to customers.

Retrenchment.
We are in a growing market and there will be no retrenchment of the work force. That would have been the case in a stagnating market. But, yes, we expect redeployment of staff.

The consequences for shareholders.
Three basic parameters — yield value, book value and market value — were used by S.B. Bilimoria & Company, chartered accountants, who worked out the exchange ratio. The ratio is 1:1.2 in favour of Hindustan Brown Boveri's shareholders. Which is to say that every one share of HBB (Rs.100 paid-up) will be exchanged for every 12 shares of Asea (Rs.10 paid-up).

factories, four R&D centres, and 13 marketing offices, with a total of 4,000 employees. India will then become the largest production base of the ABB group, east of Europe.

What changes do the merger necessitate? If the management of the new company intends to derive not merely a more dominant market presence but also synergistic advantages, it needs to curtail overlapping functions. Some of the important responsibilities include: selection of the top and middle management cadre; scaling down or getting rid of manufacturing divisions that are less economical or profitable; eliminating jobs which become redundant in production as well as R&D; retraining the work force for redeployment; building a new organisation structure in place of the old if the need arises.

In the parent company, Barnevik and his team have reportedly already completed some of the tasks. According to *Manager Magazine*, Barnevik's motto is: "Speed is the essence in the implementation of a merger." Says David Mitchell of Business International, Geneva: "The speed at ABB is impressive." Just six weeks after negotiations began, the two groups signed on the dotted line.

With such a model before them, it would not be an exaggeration to say that for the Indian managements of Asea and HBB half the task is done. With some patient modifications, realignment towards the market should not be a major problem for ABB India.

The initiation and familiarisation programme started in January soon after the merger of Asea and BBC Brown Boveri. Shenoy and Thiagarajan participated in a conference of 250 Asea-BBC chief executives from all over the world, held in Cannes on the French Riviera in January. An entire morning was devoted to a 198-slide show outlining the company's future plan of action. It was announced that ABB would not retreat from the core sectors and that there would be more aggressive marketing and expansion of markets in the US and the Far East. The axiom, "First reorganise and then grow", summed up the new orientation. "The conference gave an idea of the strategy and direction the new company would take," says Thiagarajan. That was the first step.

Around March, Shenoy and Thiagarajan started investigating the impact of a possible merger of the two Indian companies. Six task forces were set up — finance, legal, personnel, marketing, technologies and products. "We had joint teams from the two companies, with a

GAGAN® Vanaspati
GINNI Refined Oil
Uncle Chipps' Potato Wafers
ALFA Soap
AMRIT Paper

The list of our best sellers keeps growing.

High product quality and excellent consumer marketing skills have taken us from one success to another.

Amrit Banaspati Company Ltd. One of the largest vanaspati manufacturers in the country. A household name for nearly 50 years.

Excellent Quality and a Wide Range.
A most modern plant together with stringent quality control ensures that products conform to the highest standards.

Gagan Vanaspati—among North India's largest selling brands. **Ginni Refined Groundnut Oil. Ginni Refined Cottonseed Oil. Bansari Refined Mustard Oil. Soya Lite Soya Oil.** And **Sunehri Teer** (vanaspati for bulk consumers).

Amrit Banaspati offers a wide range indeed.

Anticipating consumer needs... and responding to them.
Today, the group product range also includes **Alfa Washing Soap; Amrit Paper**—manufactured from agricultural waste, a non-traditional raw material and the highly popular **Uncle Chipps' potato wafers** (manufactured by Amrit Agro Industries Ltd.).

Over 800 stockists. More than 1,00,000 retail outlets. And millions of consumers. There is strength in our numbers.
Amrit Banaspati serves the consumers in the interior markets with a strong marketing network. The result—runaway brand successes.

And now a complete line of fitness foods and beverages.
Amrit Banaspati's new venture, Amrit Protein Foods Limited will manufacture a complete line of fitness foods and beverages. To fulfil a vital need of Indian consumers. Among the fast growing products in the West, they will open up a new dimension in the Indian consumer market. Yes, the excitement will soon begin.

Now promoting

A winner all the way.

nimum of two at the GM and VP levels," alls Thiagarajan.

The deliberations of the task forces ok between two and three months. "In e personnel area, we found that no anges in the wage structure would be quired," states Shenoy. The task force served that as a first step the market- offices should merge. "We need more ople, so the question of cutbacks in the rk force does not arise," says Thiagara- n, echoing Bhattacharyya's point of w. According to the Asea managing ector, the two companies were budget- to increase staff. "Now we don't have take on more people," he says. Both enoy and Thiagarajan are of the view at the problems identified by the task ce are not insurmountable.

While the decision to merge was for- alised only in October, the two Indian mpanies started responding to the erseas decision taken in August 1987 most immediately. Around that time ea had decided to invest US $ 17 mil- n in a high-voltage circuit breaker ant. That decision was frozen and later opped on account of HBB's presence in at business. "Those funds will be useful ter either for making new products or r upgrading technology," says Bhat- charyya. Similarly HBB would have had invest funds in the manufacture of rger relays to catch up with Asea, but cided not to. Conversely, Asea wanted become an electric motor manufac- rer, either by acquiring a motor plant through new investment. "But now we ve HBB's plant in Faridabad," says hattacharyya.

EIGHTAGE TO BACK-UP

this unique merger likely to achieve nders in the Indian marketplace? mments Ranjan Dasgupta, vice-presi- nt of the control equipment group of mpton Greaves, "In the marketplace, e user is not concerned about who con- ls which company. But the discerning er gives weightage to technical back- p. Whether ABB will provide an im- roved version of what is available, I can't y at this stage." According to him, ABB n't score over the competition by pro- ding turnkey solutions. "The big users, amely the public utilities (state electric- y boards) prefer to buy equipment ther than go in for turnkey projects. hey have a large retinue of their own ngineers, and they put together the en- re system."

Given that most of the equipment made by Asea and HBB is tailormade and sold directly through their own marketing organisations, the two companies in their new avatar hope to achieve a greater marketing depth. "That may be possible in the area of power station auxiliary controls where Asea is considered superior and in starter relays — here there is a solid marriage," says Dasgupta.

However, he does not see how the customer will benefit. "I don't think they will have a price advantage." He expects that in the overlapping areas of production, ABB will decide which one is more cost-effective. "They will perhaps lay one cold or kill it. But on a product such as switchgears, cutting prices would be suicidal. One can only work at improving realisations and market shares."

The competition is not unduly worried by the proposed midi-merger. ABB will be India's second largest electrical equipment company (the largest is Siemens) in the private sector with expected sales of Rs.200 crores in the first year of operation. For one, the advantages accruing to ABB are going to be limited, at least initially.

"It isn't going to be easy to update technology rapidly. There is a price attached to it," comments Dasgupta. "The government of India expects companies to develop their own technology. But if ABB brings in new technology, then it would be acceptable, I presume, to the government."

NO RETRENCHMENT

And then there is the matter of redeployment of the work force. Bhattacharyya is categorical about "not foreseeing any retrenchment — "our idea is to find the place that an individual belongs to and then transfer him there" — which amounts to retraining manpower.

But this could create problems of its own as the two companies think differently. "It's like taking a south Indian to work in Delhi. He would face problems of food and climate." This could well turn out to be a real problem if, say, staff from Asea's Bangalore office or factory is moved to HBB Delhi. And judging by the Siemens experience, retraining can be a lengthy process. It took eight months for Siemens to retrain its own workers in Nashik before they were ready to move from switchboard manufacture into electronics.

"It is nice to have an able competitor, but the merger is no threat," states Dasgupta. "We will survive on our own merit and the merger will not conflict with our plans." It may be too early for the competition to rethink strategy. But it is clear that they do not expect the nature of the marketplace to change radically, partly because a large chunk of the purchases is made by the government, directly or through SEBs and the NTPC. "The merger makes ABB a stronger company, but at this stage, it does not require much of a response from Siemens. We are clear we want a larger market share," says the Siemens manager, "and our wider product range will continue to give us a lead over others."

Thiagarajan: enthusiastic about the merger

FAMILIAR BUZZWORD

Both Asea and HBB have set in motion their plans to make the Indian merger a success. Setting up the task force to look at key impact areas — finance, legal, production, etc — was a first step. Will the merger achieve the necessary economies of scale and establish marketing systems that will bring ABB closer to customers? The management is not about to give out details of the restructuring, saying "it is too early". A great deal hinges on whether "operating synergy", an all too familiar buzzword, is put into practice. Says Thiagarajan, "The organisational structure of the joint company will be finalised shortly. However, this will be done on the business area concept where each product group is treated as a separate profit centre. The task will be simplified as the concept is already in use in Asea and to a large extent in HBB."

Needless to say, all eyes are rivetted on one of the biggest restructuring exercises in the Indian corporate sector which is expected to result from the merger.

BASUDEV DASS

DEEPAK FERTILISERS

Joining the big league

With a Rs.346-crore diversification at hand, Deepak Fertilisers is all set to join the big league. If all goes well, the company will grow fivefold by 1991

A relatively small and low profile company, Deepak Fertilisers and Petrochemicals Corporation Ltd (annualised sales: Rs.37 crores), is on a diversification spree. The company has one plant at Taloja in Maharashtra manufacturing 90,000 tonnes of ammonia per annum. At this site, it is now setting up five new plants at a cost of Rs.346 crores. The four products to be made, including ammonium nitrophosphate and methanol, fit in perfectly with the company's overall vertical integration plan. Diversifications into new but closely linked downstream products of ammonia was perhaps the best option for Deepak Fertilisers to grow big. In three years from now, when the expansions are over, Deepak Fertilisers will join the big league of the industry with a turnover of Rs.250 crores per annum.

Deepak Nitrite Ltd (sales: Rs.23.56 crores), the other company in the group, is also setting up a new project at its present site at Baroda to produce some new chemicals. The cost of this project is Rs.50 crores and when commissioned will add about Rs.50 crores to the present turnover of the company. To finance i massive project cost, Deepak Fertilise soon plans to enter the market to rai Rs.190 crores by way of convertible debe tures. The issue will be the second large after RPL's mega issue last Augus Another Rs.130 crores will come fro term loans (including Rs.55 crores in fc eign currency) and the balance Rs. crores from internal funds.

Deepak Fertilisers came into being December 1983 when its ammonia pla at Taloja was commissioned. But t price of ammonia, the key material f fertilisers, is controlled by governmer Profitability is therefore limited. Mor over, Deepak Fertilisers' ammonia pla is the only merchant plant in the count — its output is available for sale unli the ammonia produced by fertiliser co panies for captive use. The government neither allowing new merchant plants f ammonia nor permitting existing ones t expand because it is far cheaper to in port ammonia. "We at Deepak were fee ing very constrained. We had to find ne avenues to grow," says Chimanlal Mehta, chairman and managing directo

OWN PIPELINE

The existing plant's entire ammon production of 90,000 tonnes, which currently being sold to two fertiliser co panies, will be used to produce amm nium nitrophosphate (ANP), low densi prilled ammonium nitrate (LDPAN), a concentrated nitric acid (CNA). The co laborator is Stamicarbon of Netherlan for ANP and LDPAN, and Adolf Pinl Sohne of W. Germany for CNA. Besides, 100,000-tonne gas-based methanol pla is also being set up in collaboration wit I.C.I. of U.K. at the same site The lett of intent for the new projects has bee obtained, technical collaboratio with foreign firms finalised and th basic engineering work commenced. A these projects will be commissioned in short span of six months between Octo ber 1990 and March 1991 *(see table)* Once the new plants become operationa a part of the ammonia produced by th company will be converted into weak n tric acid (WNA) and the rest will be use to produce ANP and LDPAN. Again, part of WNA will be used to manufactur ANP and LDPAN and the rest to produ

CNA *(see flow diagram)*.

Interestingly, Deepak Fertilisers is the only company in the country which has its own pipeline for the transportation of gas. Its 45-km long pipeline from Uran (a Bombay High gas fall point) to Taloja was set up at a cost of approximately Rs.6 crores in 1982. This gives the company a tremendous cost advantage over the other users of gas. The Gas Authority of India Ltd (GAIL) charges its customers along the HBJ pipeline Rs.2,250 per 1,000 cubic metres of gas comprising a basic price of Rs.1,400 and transportation Rs.850. Since Deepak Fertilisers uses its own pipeline, it pays just Rs.1,400. Thanks to this cost advantage, by 1991, when the new projects become operational, the present ammonia plant along with the pipeline, will have been fully paid for.

The lower cost of gas and zero depreciation and interest for the ammonia plant mean that the input costs for the downstream products will be lower. Says R.R. Kotwal, vice president (project planning), "Against the market price of Rs.5,500 per tonne of CNA, our cost will be only Rs.2,600." And on the total gas consumption of 202.5 million cubic metres of gas a year, the company will save around Rs.15 crores every year on a projected turnover of Rs.250 crores.

KEY MATERIALS

The largest of the new projects is the ANP plant with a capacity of 230,000 tonnes per annum. ANP being a fertiliser, however, will not enjoy the benefit of lower input cost. This is because of the retention price fixed by the government for fertilisers which is on a cost-plus basis. So the higher cost of production gets automatically neutralised. But ANP is in great demand in the country. Points out Mehta, "RCF's ANP fetched a premium last year despite the overall slack in fertiliser consumption due to drought." This is because half of the nutrients in ANP are readily available to the plant and the other half released gradually. In case of other fertilisers, like diammonium phosphate (DAP), the initial release of nutrient itself takes too long resulting in loss of nutritional capacity. Deepak Fertilisers also claims that the ANP produced by it will be superior to that made by RCF (the largest manufacturer making 300,000 tonnes) because the phosphoric acid it uses will be 100 per cent water soluble whereas RCF's is only 70 per cent soluble. (This claim could not be cross-checked).

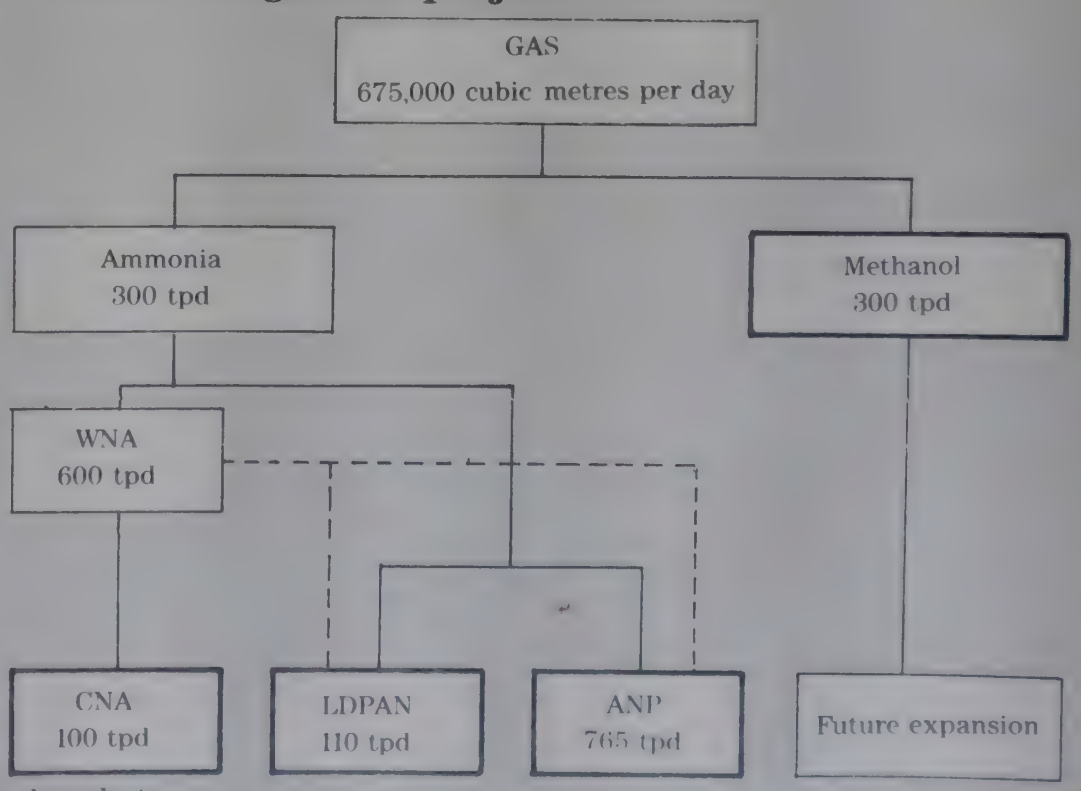
Chimanlal Mehta: "our input costs will be the lowest"

Sailesh Mehta: exploring new avenues for growth

The ANP project of Deepak Fertilisers, which will contribute 64 per cent of the company's sales, could still face problems if the demand slackens. This possibility cannot be ruled out because Gujarat Narmada Valley Fertiliser Company (GNFC) is also putting up an ANP plant at Bharuch in Gujarat with a capacity of 140,000 tonnes. Another damper is the price control on ANP by government.

The next important project of Deepak Fertilisers is the 100,000-tonne methanol plant. Currently methanol , an important industrial raw material, is in short supply in the country. Against the total demand of around 180,000 tonnes, domestic production last year was about 150,000 tonnes. The shortfall was met through imports. But will the shortage continue when Deepak Fertilisers' plant goes on

The vertical integration project



☐ Final products

WNA: Weak nitric acid
CNA: Concentrated nitric acid
TPD: Tonnes per day

ANP: Ammonium nitrophosphate
LDPAN: Low density prilled ammonium nitrite

Note 1: Gas for the project is supplied by ONGC at Uran and brought to the plant by Deepak Fertilisers' own pipeline

Note 2: For the ANP plant, 375 tpd of phosphoric acid will be brought from outside and used

WHAT MAKES TEXTEL THE IDEAL MESSAGING SYSTEM.

The TEXTEL detects errors. And corrects them. And even compensates for line disturbances! No other messaging system can deliver this. And that's just one reason why the TEXTEL is the ideal messaging system.

The TEXTEL ensures quick, efficient, and inexpensive messaging within any organisation that has dispersed operations. It stores, sends, and receives messages over the telephone line, at speeds up to 20 times that of telex. Night-time transmission and other automatic functions make for enormous money savings.

In addition, the TEXTEL doesn't need air-conditioning, has a battery-protected memory, and allows normal telephone use. It can serve as a long-haul terminal. Not to mention its ability to handle forms, automatic printout of messages, personal security codes, and a built-in directory.

The TEXTEL is a product of India Tele-Comp Limited (ITL), a venture of the Dalmia group; and British Telecom, world leaders in communications.

The TEXTEL is the only contemporary system specifically designed and dedicated to messaging. It doesn't perform a whole lot of functions, but it does one thing very well. And if messaging is what you need, make no error about it.

TEXTEL

The dedicated messaging system.

stream? "Definitely not", says H.S. Purushottam, group finance director, Rama Petrochemicals, which produces 50,000 tonnes of methanol per annum. "In about three years from now, methanol capacity in the country will outstrip demand. This is because GNFC is also putting up a 100,000-tonne methanol plant while Rama Petro is doubling its capacity." Thus the total installed capacity in the country will soon swell to 430,000 tonnes, while the demand is expected to grow to only around 250,000 tonnes. "In such a scenario, the older plants with lower depreciation and interest charges will be more price competitive," says Purushottam. However, he adds a rider if the government permits methanol to be mixed with petrol to improve the latter's octane rating which reduces automobile pollution, as in the US and Japan, the demand for methanol will skyrocket.

Mehta of Deepak Fertilisers, however, does not think that there will be a glut in methanol. Says he: "Even if there is oversupply, we have nothing to worry about because our input cost will be lowest in the industry." He argues that the technology used by RCF (which produces 40,000 tonnes per annum) is very old and consumes 1,500 cubic metres of gas to produce one tonne of methanol. Its cost of gas is also higher. RCF's input cost therefore works out to Rs.2,400 per tonne. Similarly, Rama Petrochemicals, which uses naphtha as feedstock (naphtha prices are far higher than gas) has an input cost of Rs.3,200 per tonne of methanol. Deepak Fertilisers, on the other hand, by using an energy-efficient technology, will be able to restrict its input cost to Rs.1200 per tonne or just half of RCF's cost. "Our gas consumption per tonne will be lower and our gas prices are lower too," explains Kotwal. However, Deepak Fertilisers' only advantage over GNFC will be in the price of gas. Rama, on the other hand, has already made representations to the government to either lower the cost of naphtha or raise the price of gas to bring about parity in input costs. RCF is also modernising its plant to make it more efficient. All this means that the advantage Deepak Fertilisers is hoping to enjoy over the others may be considerably reduced.

Ambitious plans

Project	Installed capacity (tonnes per year)	Cost (Rs crores)	Expected date of commissioning	Value of production (Rs crores)
AMMONIUM NITROPHOSPHATE (ANP)	230,000	186	December 1990	160
WEAK NITRIC ACID (WNA)	200,000		October 1990	Captive

1. 15-month period.
2. At full capacity

BRIGHT PROSPECT

Deepak Fertilisers, however, is also preparing to counter any glut. In the second phase of diversification, the company plans to put up a 10,000-tonne polyacetol plant at a cost of Rs.150 crores. Polyacetol being a superior grade engineering plastic has a wide range of uses in automobiles and building materials. According to Mehta, 40 per cent of the engineering plastics used in the USA and Japan is in the form of polyacetol. Says he: "This project will consume 15,000-20,000 tonnes of methanol on a full capacity operation." The company has also made an application for another methanol-based petrochemical (Mehta will not disclose details at this stage) which will consume another 20,000 tonnes of methanol.

The other two projects, CNA (33,000 tonnes) and LDPAN (36,000 tonnes), are smaller in size but appear to have better market prospects. These will also enjoy the benefits of cheaper gas. CNA, a key chemical intermediate, is in acute short supply. But it cannot be imported because of its corrosive nature. RCF's production never exceeds 20,000 tonnes as its plant is very old. The other producer, Deepak Nitrite — a sister concern of Deepak Fertilisers — has a small 3,000 tonne capacity. GNFC too is coming up with a 33,000-tonne CNA plant. The total capacity will thus go up sharply in the near future. However, both GNFC and Deepak Fertilisers officials are confident that demand will be no constraint. "CNA has a large export potential and many new small and medium sized user units will come up if it is not in short supply," they say.

The company is also confident of the prospects for LDPAN — an explosive material superior to ammonium nitrate. "The two other rival firms are too small in size and their product will not be as pure as ours," says Sailesh Mehta, vice-president, commercial planning, Deepak Fertilisers. Prilled ammonium nitrate has blasting power equal to nitroglycerine but it is one-third cheaper. Adds Sailesh "That is why prilled ammonium nitrate now accounts for nearly 40 per cent of the explosives used in the developed countries."

Clearly, the key advantages of Deepak Fertilisers' new projects are their lower input cost compared to their rivals and acute domestic shortages of the products they will turn out. But soon, the supply is likely to outstrip demand, particularly in the case of ANP and methanol. So the survival of manufacturers will largely depend on their marketing ability. But Deepak Fertilisers does not have any marketing experience to boast about. All these years, its only product, ammonia, was sold only to two fertiliser companies on a contract basis.

But Sailesh does not think that marketing will pose any problem. "We already have marketing skills within our group," he says. "Most of Deepak Nitrite's products like sodium nitrate and CNA are sold in a competitive market." At the same time he admits of a need to build up a strong marketing team in Deepak Fertilisers. "The process has already started," he says.

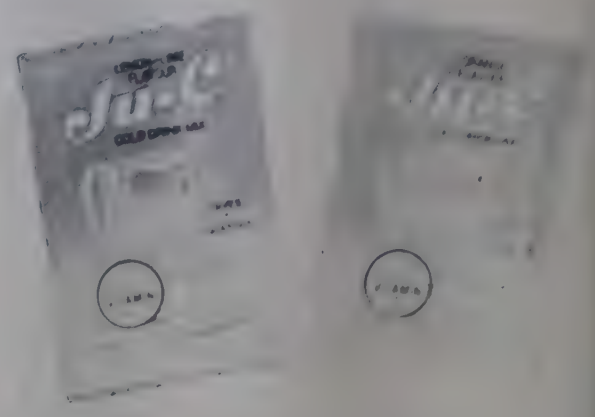
KOTHARI GENERAL FOODS

Waiting for succour



Kothari General Foods is in trouble. Its products have not had the desired impact on the mass market and pressure is mounting on the company's already strained finances. It now needs a saviour

The identity of the new partner in Kothari General Foods (KGF), should soon be known. KGF, the Madras-based joint venture between Kothari Industrial Corporation Ltd (KICL) and the giant General Foods Corporation (GFC) of the US, was incorporated in 1985 amidst high hopes. The plant was set up in Mysore for the manufacture of soluble coffee, powdered food beverages and vegetable-based protein products. At the end of this, its first full year of operations, the company is badly strapped for cash and is in need of a saviour.

Whoever comes in will have to pump in at least Rs.5 crores to keep operations going. Takeover artiste R.P. Goenka (RPG) was considered to be in the lead until recently. But now the Modis (specifically, K.K. Modi of the Gujarmal branch of the family) are believed to be serious contenders who may pip RPG at the post.

The joint venture was mooted in 1981 when the Kotharis were in top gear. The cost of the project was Rs.34.85 crores. Out of the equity of Rs.11.40 crores, KICL and GFC put in Rs.3.80 crores each and the rest was offered to the public. KICL had turned in a record profit after tax of Rs.4.6 crores, on a turnover of Rs.53.40 crores. It had diversified from its traditional lines of textiles, sugar and plantations into caustic soda when demand for it was booming. DC's reputation as a leading industrialist was flying high.

D.C. Kothari: errors in judgement

DRAMATIC DOWNTURN

Clearances took time and the project went on stream only in 1987. By that time, however, DC and his brother, H.C. Kothari, had split. The caustic soda project, into which DC had sunk Rs.25 crores, turned out to be a disaster, and KICL's fortunes took a dramatic downturn. It was thought then that KGF would provide a turning point for DC.

That was not to be. KGF's entry into the mass market with Ju-C, a powdered soft drink concentrate, based on the highly successful Kool-Aid of GFC, in 1987 turned out to be inopportunate. The failure is attributed to the inability of local manufacturers to provide a consistent quality of vital inputs for Ju-C. Also, competition from more cost-effective units like Pioma Industries (the makers of Rasna) and Corn Products, was severe. Ju-C was withdrawn from the market. Tang, another popular GFC product, introduced by KGF at Rs.49 a bottle, is proving too expensive for the Indian market.

On the coffee front too, KGF has problems. It is entirely dependent on the USSR for instant coffee exports. This year, it has managed to get an order for 1,500 tonnes from that country, valued at Rs.12 crores. In the long run, however, this is not likely to be profitable. And, to make a dent in the highly brand-conscious domestic coffee market, which is dominated by established names like Nestle and Brooke Bond, is going to be very expensive and tough.

KGF now needs to make good urgently. Its large investments (reportedly totalling Rs.50 crores) mean a heavy debt servicing burden. Also, suppliers are queuing up to be paid off. Ideally, it should choose a product which does not have competition in India, and which can be introduced fairly rapidly without too much expense.

TIGHT SQUEEZE

GFC, it is said, remains committed to its Indian venture. It has brought in an additional $ 1.3 million and is reportedly not averse to bringing in more funds if its Indian partner does the same. But KICL can't. The financial results of the company for 1987-88 show a loss — for the third consecutive year — of Rs.1.83 crores.

It is not surprising then, that there are many waiting in the wings to take over the company. Food processing is the 'in' business in India today and GFC, with the widest product range, is the biggest name in the industry. What is more, it wants to continue with its Indian venture.

It is reported that R.P. Goenka has offered a Rs.2.50 premium on every share held by the Kotharis. His condition, however, is that the Kotharis must sell their entire one-third stake for a total consideration of Rs.4.75 crores. But DC apparently does not want to let go off KGF. He would prefer to remain a partner, albeit with a reduced equity stake. GFC too, which has been controlling marketing and technical operations, does not want to hand over complete control to the Goenkas.

K.K. Modi's interest in KGF is partly explained by the fact that he has an indirect association with GFC. The latter has been taken over by Phillip Morris, the US tobacco giant, which has a 40 per cent controlling stake in Godfrey Phillips, India — a K.K. Modi company. It is this association that has led many to believe that GFC may have a preference for the Modis.

At the moment, GFC top brass are in Singapore, conferring on what to do next. Reportedly, K.K. Modi will be going to New York soon to negotiate with Phillip Morris. By late November, the suspense should be over.

How do you measure the distance between high tech and supertech?

Measure the time it takes for everyone else to catch up. When people were still using punch cards, Hinditron was already into terminal-based computer systems. When consultancy companies were offering batch processing services, Hinditron was offering on-line services. When companies were still using first-generation computers, Hinditron was already into computer net-

vorking. When India's software industry was in its infancy, Hinditron was
ousy designing complex diagnostic software for Digital. We also pioneered
colour graphics terminals, CAD/CAM consultancy centres, artificial intelli-
gence... and that's not even half the list. Much of the technology you consider
state-of-the-art today was being offered by Hinditron many years ago. That's
the distance between high tech and supertech.

Hinditron. Beyond high tech, there's supertech.

HOTEL LEELA VENTURES

Another beginning

The Hotel Leela Penta in Bombay had not been doing too well. Now, with an improved rating, a new foreign partner, and ambitious expansion plans under implementation, the hotel seems to be set for big business

The Leela, Kempinski: at last, five star deluxe status

On 15 July 1988, after making Hotel Leela Ventures Ltd wait for two long years, the Department of Tourism awarded its hotel in Bombay, then called the Leela Penta, "five star deluxe" rating (till then it had only a five star rating). The new status allowed Leela to raise room rates by a third; the higher income is expected to help the hotel out of the red soon.

Consequently, Leela has entered into a new sales and marketing agreement with Kempinski Hotels of West Germany which runs a chain of 10 deluxe hotels in different parts of the world. With the agreement, the Bombay hotel has been rechristened Hotel Leela, Kempinski; the earlier Leela tie-up with Penta Hotels has been discontinued. Leela is now substantially expanding its facilities in Bombay and setting up a new luxury beach resort in Goa. This is expected to help augment the Rs.11-crore turnover five times in the next three years.

NO PROFIT YET

What Leela's 26,000 shareholders are now asking is: when will it turn around and declare a dividend? The company made a public issue in February 1985 and it has yet to reward investors.

The hotel became operational in November 1986 with 205 rooms. Subsequently, another 77 rooms and a banquet hall were added and the final tag was Rs.35.43 crores. The unaudited results show that during the year ended June 1988 (the first full year of operations) the company made a net loss of Rs.93 lakhs, after providing for depreciation, on a net turnover of Rs.11.43 crores. And this, despite a very high occupancy rate of 85 per cent.

What went wrong? For one, positioning Leela Penta as an airport hotel was probably a wrong marketing decision. Last year, nearly half of Leela's rooms were occupied by airline crews and layover passengers. "Discounts in airline-related business can be as high as 40 per cent sometimes," points out Vivek Nair, managing director of the company.

Also, income from sales of food and beverages has been very low for Leela. The hotel has four good restaurants and several conference halls, but there hasn't been much business. This is mainly because the hotel is located in the industrial belt of north Bombay, far off from the main business and office centres of the city.

Overheads have been high too. To meet the total project cost of Rs.35.43 crores, Leela Ventures had to borrow Rs.23.63 crores from financial institutions — the interest burden (including some lease expenses) last year was therefore Rs.3.22 crores, eating up 28 per cent of the company's net income. Also, the number of employees, at 2.5 to a room in the Leela, is higher than the average of less than two in newer hotels.

NOT UNIQUE

People in the industry, however, point out that these problems are not unique to the Leela. Most new hotels face them because initial investment is always heavy. Leela has perhaps found the going tougher because it has yet to establish its full capacity. The hotel is now adding another 200 rooms at a cost of Rs.9 crores. "Once the expansion is over, our operating cost per room will come down considerably," points out C.P. Krishnan Nair, chairman of the company. Room rates will be higher too.

The management is now trying to change the guest profile of the hotel. "We are marketing Leela now as a corporate hotel for Indian and foreign individuals and groups. The emphasis is no longer on airport-related guests," says Vivek. According to him, their number is to be brought down from 50 to 35 per cent of the total.

The management is vigorously marketing its conference and meeting facilities, and is spending a lot on advertising its restaurants. With these efforts, it expects to notch up a net profit of Rs.1.50 crores or so this year (nine months ending March 1989), and Vivek hopes to declare a dividend too.

The more ambitious project Leela is now implementing is a 180-villa luxury beach resort near Kolva beach at Goa. The Rs.25-crore project is to be operational around mid-1989 and is expected to earn Rs.25 crores in the initial years. The company will soon apply to the banks for funds and is also planning to make a rights issue.

There are many who feel that the Goa market is already too crowded and that there will be too much competition. Krishnan Nair, however, is confident that "ten more such hotels can come up and still do good business in Goa". His confidence perhaps stems from the fact that Lufthansa has agreed to charter flights to Goa to keep his villas occupied.

JUTE

New entrepreneurs to the rescue

The once flourishing jute industry has been reduced to a state of near bankruptcy, largely because of a lack of initiative on the part of the big industrial houses and competition from Bangladesh. But, the entry of a new breed of businessmen has brought a ray of hope

Over the last couple of years, a new breed of entrepreneurs has been entering the down-and-out jute industry. As many as 13 mills have changed hands during this period. Of these, nearly one-fourth have started showing better results. There has also been an improvement in productivity as well as in the working atmosphere. Is all this only a flash in the pan or have these new owners set in motion a trend that will turn around this beleaguered industry?

Right now, they appear to be full of confidence and optimism. Arun Bajoria, who virtually pioneered the new trend and owns four sick mills, is determined to make the experiment a success. Similarly, Ghanshyam Sarda and B.P. Agarwal have taken upon themselves the burden of running four and two sick mills, respectively. "The big houses, because of their increasing diversification into newer areas, could not pay as much attention to jute as they ought to have. That had its impact," Agarwal notes. He claims that it is purely because of his team's personal involvement in day-to-day management that the Kamarhatty Jute Mills, which had incurred a loss of Rs.3 crores in 1986, has recorded a marginal profit of Rs.6 lakhs this year. He acquired this mill from S.S. Kanoria in January 1987.

Almost all the companies that Bajoria, Sarda, Agarwal, and others like S. Bagaria and R.K. Mall, et al, have now come to own belonged not long ago to the big business houses. The Birlas have sold off the Rameshwar and Hukumchand mills, both of which were sick. Some mills are still doing well, as for instance, the Birla jute mill (largely because it diversified into other lines at the right time) and the Surrah mill. The Bajorias have walked out of Waverley and Megna. The S.S. Kanoria group's Ludlow mill is doing all right but it has given up Kamarhatty. The Bangurs, Goenkas and Mehtas, who were heavyweights in the industry, have similarly withdrawn from the scene.

The big groups themselves did not seem to have much of a choice. The increasing competition from mills in Bangladesh and from synthetics created doubts about the future of the industry. So they have chosen to invest in the newer sunrise industries, leaving jute to its fate.

It was at this juncture that the new band of owners stepped in. One of the first noticeable changes that they instituted in the mills was a gradual replacement of officer-based with personalised, owner-based management. The owners started visiting the mills more frequently and tried to establish personal rapport with the workmen. The approach paid handsomely and helped to de-escalate the tension that had been building up in the industry over the years.

A jute unit: back in business

In most mills, the new owners have imposed wage cuts. As Sarda explains it, "In my mill, the average wage has been brought down from Rs.1,100 to about Rs.900 a month. We have told the workers that the balance of Rs.200 is being kept in a reserve fund and that it will be paid to them as soon as the liquidity position of the company improves."

The wage cuts, the cheap prices at which the new owners acquired the mills, and, in several cases the cancellation or deferment of outstanding liabilities, have all helped in the revival of the sick units.

DAUNTING ODDS

But the odds against which the industry has to fight are daunting. According to Sarit Ray, deputy secretary of the Indian Jute Mills Associaton (IJMA), while the average price of jute goods has gone up by 148 per cent since 1970-71, wages have spiralled by 545 per cent. And while productivity has gone down, the number of workers has steadily increased, with the result that almost all the mills are burdened with surplus labour.

"No one really has an answer to this problem," says a new owner. "In a state that has a government with an avowed pro-labour stance, any retrenchment is unthinkable. We have left the matter to a

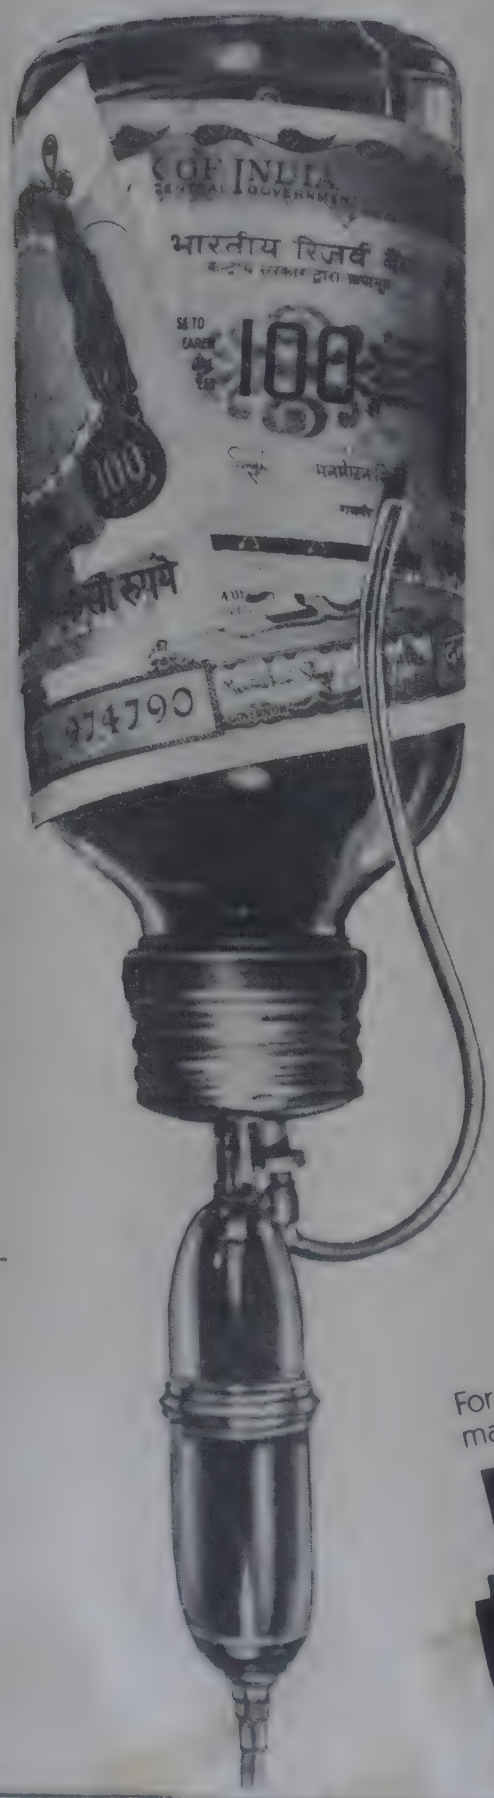
TO SAVE YOUR LIFE, YOU MIGHT NEED YOUR LIFE'S SAVINGS.



Major illnesses can be pretty expensive indeed. Reason why, United India has tailor-made Mediclaim slabs to help you when you need help most.

With its total hospitalisation and domiciliary hospitalisation scheme, UI Mediclaim helps you cope with the heavy expenses of major illnesses—a probability in everyone's life.

For a premium that amounts to less than 60p. a day, Mediclaim reimburses your hospitalisation and domiciliary hospitalisation expenses upto Rs. 13,600/- per year (minimum slab) and you can avail of the best in medicare.

Inexpensive and tax-deductable

The most attractive feature of UI Mediclaim is that premiums upto Rs. 3000/- enjoy a deduction on your taxable income.

Family Discount

UI Mediclaim also offers a special family discount of 10% if you cover besides yourself, spouse, two children and dependent parents.

Take the UI Mediclaim Cover

Interpub/UI/88

Box 1

Wage anomalies

The wage bill accounts for nearly 40 per cent of the final cost of jute goods. It is the single largest item of expenditure, followed by raw jute which takes up about another 35 per cent. During the last few months, however, the wage pattern in the industry has undergone some major changes. On 5 July 1988, a tripartite agreement was signed for higher dearness allowance for nearly 30,000 employees of the five public sector jute mills under the National Jute Manufactures Corporation (NJMC). Now for every point rise in the cost of price index (CPI), the DA will be Rs.1.65, compared with the prevailing Rs.1.50. Earlier, on 24 February, following a 72-day strike, these same workers were granted an *ad hoc* wage increase of Rs.50 and a lump sum settlement of Rs.500.

A majority of the workers of private sector jute mills too have obtained a wage increase. Under the latest tripartite agreement for the jute industry signed on 25 February, they have secured an *ad hoc* wage increase of Rs. 40 and a DA hike of Rs.1.65 per point rise in CPI.

There is a third category of jute workers for whom things are different.

Most workers have had to settle for wage cuts

These are the employees of the erstwhile sick units now being taken over by a team of new owners. They have had to sign bilateral agreements which almost always have meant a cut in their wages. (Some industry insiders estimate that the cut is as much as 50 per cent while the new owners claim that it is 18 to 20 per cent at the most).

However, for the workers, as for the industry, it is a question of either making compromises or being lost forever. Says one of the new owners, "We are not cutting back the wage. We are only holding back part of it to secure breathing space. As soon as our finances improve, we hope to pay the workers their dues in full."

Box 2

Exports on the wane

India's exports of jute goods, in terms of both volume and value, have been declining. The high cost of production and freight rates are major reasons. According to the Calcutta Jute Fabrics Shippers' Association (CJFSA), freights costs, as a percentage of the fob value, at US $400 per tonne on an average, work out to as much as 41 per cent. But, Lalit G. Toolsidass, chairman of the CJFSA, maintains that it is still possible to boost exports to over Rs.350 crores from the present Rs.250 crores, even within the current constraints, provided exporters "get adequate goods at the right time to sell".

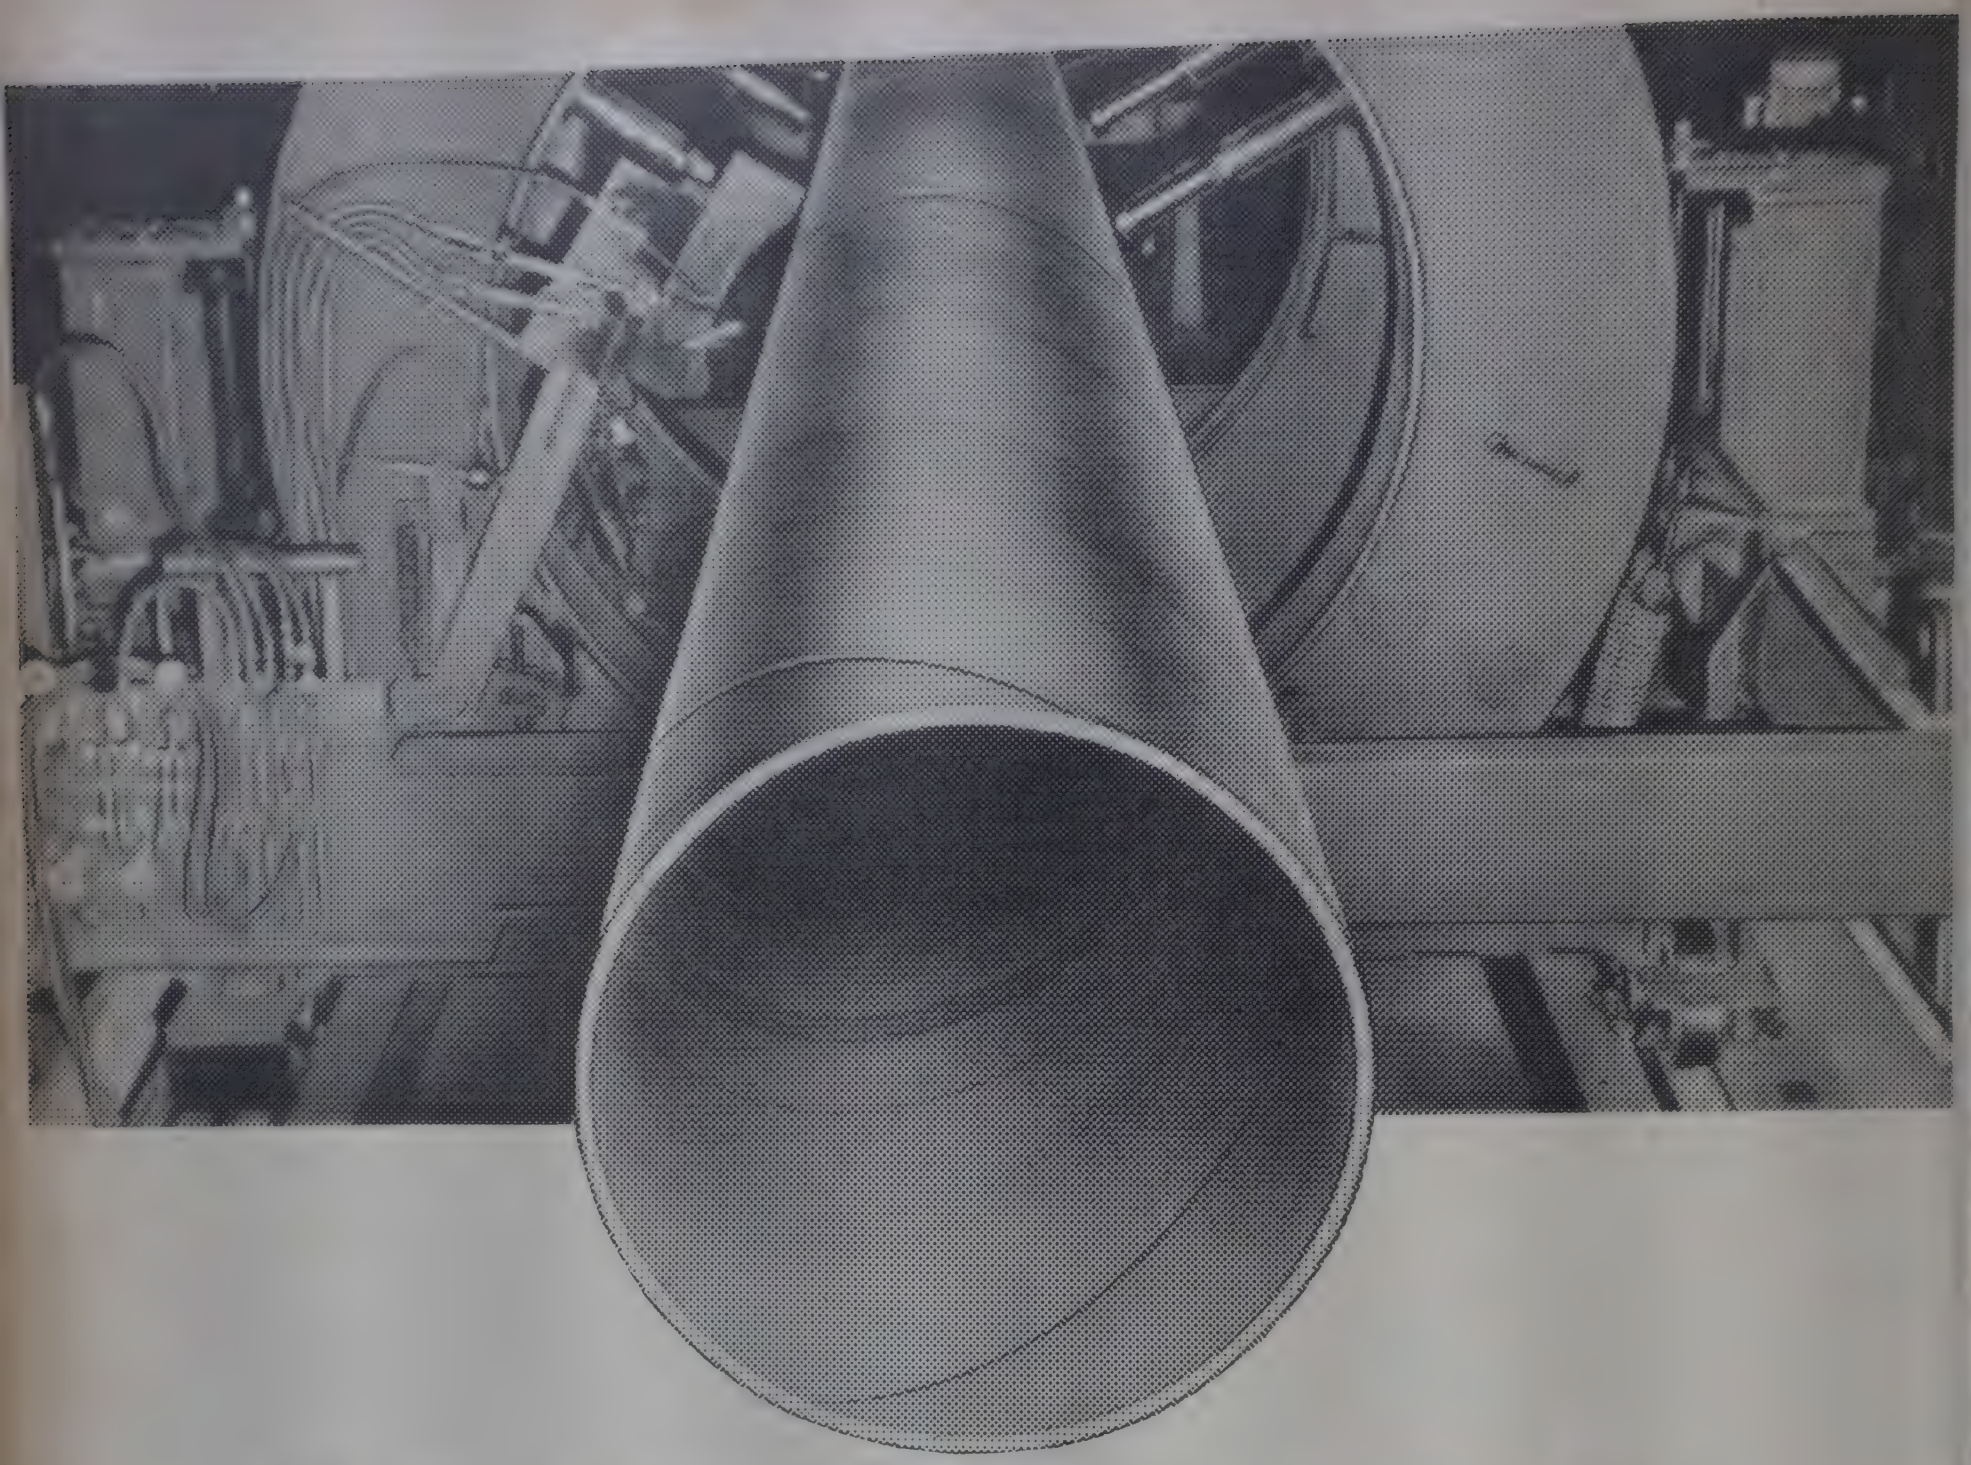
But, the major thrust has to be in the development and marketing of new products. Non-traditional jute goods now account for only 0.2 per cent of the total market. But even this can be pushed up to 5 per cent without much effort. As the former jute commissioner, B.R. Basu puts it, "Since jute industries are concentrated in this part of the world it is we, and not the West, who must develop the technology to meet the challenge of modernisation."

Toolsidass: still possible to boost exports

process of natural elimination, through retirement, deaths, etc." Some trade union leaders, allege that of a total work force of about 32,000 in the mills taken over, about 8,000 workers have been struck off the rolls.

Wages account for 40 per cent of the product cost and raw jute for 35 per cent. On both these counts, the Indian industry is at a severe disadvantage compared with its counterpart in Bangladesh. In fact, Bangladesh, because of its low-cost economy, has to pay half of what the Indian industry pays for raw jute and labour. Against a daily wage of Rs.60 in India, Bangladesh's cost is about 40 to 42 taka, or about Rs.17.

According to Sarda, Bangladesh enjoys a cost advantage of about 25 per cent over India, "even if its productivity, in spite of more modern machines, is not as good as India's". This is the main factor that helps it to underbid India in the export market. (The total export market worldwide is estimated at 1 million bales, of which India's share is 250,000 on an



PICK OF THE PIPES

SPIRAL WELDED PIPES from ROURKELA STEEL PLANT

First in strength. First in value. First in hi-tech features.

Large diameter spiral welded pipes. The only one of this kind in India. It established Rourkela as one of the few manufacturers of the finest and high-tech steel pipes in the world.

Named for its unique spiral-welded strengths—a result of advanced submerged arc welding technology—SW pipes are famous for their precision and capability of taking high-stress loads.

Spiral Welded Pipes from Rourkela changed the very notion of what steel pipes mean in the country. Sophisticated ultrasonic and X-ray fluoroscopy testing ensures flawless construction and long-and-trouble-free performance even under tough operating conditions. That's why SW pipes from Rourkela are the first choice for water supply schemes, oil, petroleum and gas pipelines, irrigation, sewerage et al.

More importantly, Spiral Welded Pipes from Rourkela are readily available in a range of size and in all grades including API from the 16" (406.6 mm) outer diameter to the large dia 64" (1625.6 mm) pipes, and in a variety of wall thicknesses.

Professionals in every sphere have acclaimed the versatility of Spiral Welded Pipes and put it to innovative uses even outside pipeline construction. The invisible leaders continue to lead.

Box 3

Confusion over pricing

The government of India has changed its pricing policy for raw jute, from the year beginning 1 July. Ever since 1975, when it first introduced the statutory minimum price provision, it had been announcing a statutory minimum price for the commodity at the beginning of every jute year. But this year, it decided to withdraw the statutory status of this minimum price. The policy change has given rise to widespread confusion.

Some industry representatives think that this will adversely affect the supply of raw jute which, in any case, is very erratic. Others feel that jute growers will not get remunerative prices for their produce which, in turn, will dissuade them from growing jute. In order to allay this 'misconception', a highly placed official in the union textile ministry says, "The statutory status of the minimum support price has undoubtedly been withdrawn. But a minimum support price will always be announced and the Jute Corporation of India will still be buying whatever raw jute is brought to it for sale at that price."

In practice, the only effect that this withdrawal of statutory status would have is that from now on no one can be legally penalised for buying raw jute at prices below the statutory minimum. But, as B.R. Basu says, "Through all these years, not a single person has been brought to book though there has been large-scale trading of raw jute at prices below the statutory minimum."

Raw jute: supply determined by price

average and Bangaldesh's, 450,000 to 500,000. The balance is shared by China, Thailand and Nepal.)

LARGER OPERATION

In terms of scale of operation, however, the Indian industry is much larger, compared with that in Bangladesh. The installed production capacity of the mills on a monthly basis is 115,000 tonnes in India and only 56,000 tonnes in Bangladesh. Similarly, India consumes 637,650 bales of jute a month against 310,800 bales in Bangladesh.

A cause for great concern, however, is that the mills have to operate with obsolete machinery. In fact, the much discussed modernisation plan announced by Rajiv Gandhi in September 1985 is meant precisely to tackle this problem. A sum of Rs.150 crores has been earmarked for this purpose, besides another Rs.100 crores for the jute development fund. But, till end-June this year, the total assistance under both the schemes totalled only Rs.39 crores.

What has been worrying the industry most is the state of the domestic market. According to the Jute Packaging Material Act, 1987, all foodgrains and sugar, 70 per cent of cement and 50 per cent of non-corrosive fertilisers have to be packed in jute bags. However, many user industries opposed the order and have taken the matter to court. The case has gone up to the Supreme Court where it is now pending final disposal. HDPE and PP sacking manufacturers, who have been hoping to finish off the jute industry, are now urging New Delhi for some support.

A LOT OF HOPE

India's export earnings from jute now average around Rs.230 crores to Rs.240 crores a year. And even this is proving difficult to maintain. But industry sources are extremely hopeful that exports can be raised substantially if government policies help to create the right climate. Cash assistance, in their opinion, is not enough. There is need for a total policy package involving product development, cost subsidisation and rationalisation, freight control, proper market intelligence and changes in obstructive rules (see Box). Goverment sources say that there is no question of writing off jute exports. Also the development of new products like poly-jute bags made of a mixture of jute and synthetics has been well received.

For the time being however, the industry is still very shaky. Out of the 48 operating mills in the country (another 10 are now shut down) only a few have managed to stay out of the red. The others have huge provident fund, gratuity, ESI and tax dues. They together owe over Rs.100 crores on these accounts. The Board for Industrial and Financial Reconstruction (BIFR) has declared 80 per cent of the mills sick. The industry is running on borrowed money and its debts are several times its paid-up capital. A Reserve Bank study shows that among the major industries, the deposits of the jute industry, at Rs.7.3 crores in 1986, were nearly the lowest. So were its net owned funds; these amounted to only Rs.102.6 crores.

It is in this perspective that the entry of a new team of owners assumes importance. Most of them have risen from the ranks of jute traders and therefore have thorough knowledge of the business. Pessimists say that their involvement won't last long and that they will call it a day once they have recovered their dues. But the new owners feel that it is only a canard that is being spread to harm them.

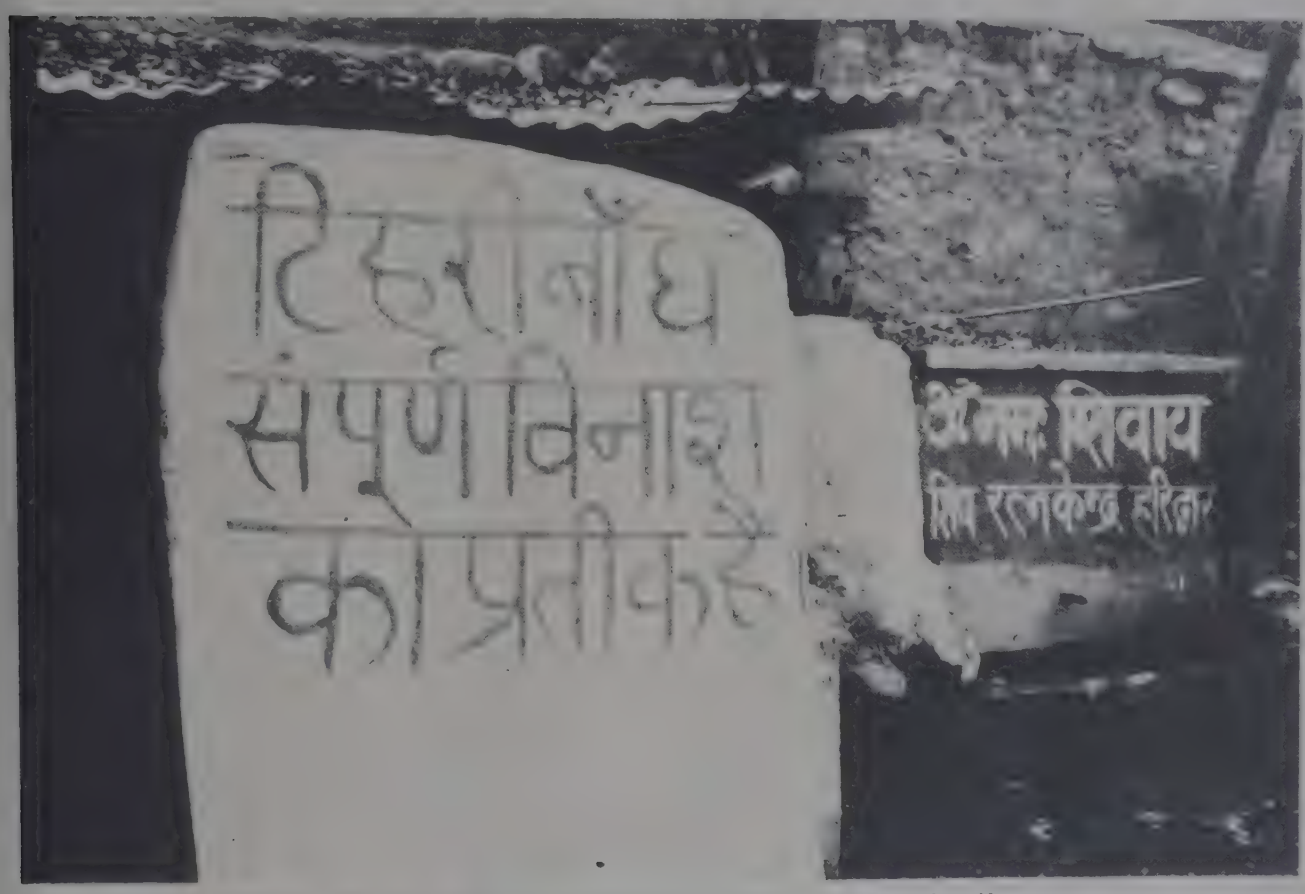
TEHRI DAM

Neither safe nor economical

The Tehri dam project is an invitation to disaster, say environmentalists and seismologists. The proponents of the dam insist it is safe. What's more important, they argue, it will work wonders for the surrounding region. A report on the controversial project



Slogan on a bridge: "Tehri dam is a symbol of total destruction"

The department of environment of the government of India has categorically spoken against it. There has been strong opposition from the local population. Serious techno-economic flaws have been pointed out. Despite all this, construction work on India's tallest rockfill dam at Tehri in the Garhwal Himalayas has gone on for more than a decade. Even the fact that the Planning Commission has not cleared the revised version of the project has not succeeded in stopping it. Nor has the threat of serious loss to life and property if the dam were to fail.

In its initial form in 1972, the cost of the project was estimated at less than Rs.200 crores. By 1986 the cost had gone up to Rs.1,765 crores. And by December 1987, estimates had reached Rs.2,400 crores, a 1,100 per cent increase in 15 years. The specifications of the dam had not changed in the meantime. The height of the dam and its water-impounding capacity remained constant at 260.5 metres and 3,615 million cubic metres respectively. The irrigation potential of 2.7 lakh hectares, and the installed capacity of 1,000 MW have also remained constant.

To justify the economic feasibility of the dam the project authorities over-estimated the value of benefits and under-estimated the costs in its 1986 project report. They also decided to build another storage dam about 20 km downstream at Koteshwar as a part of the same project to further augment the installed power capacity and thus raise the value of benefits. But the Koteshwar dam also added Rs.600 crores to costs.

The Tehri dam controversy took an unexpected turn in November 1986 when Mikhail Gorbachev visited India. A project which was dying a natural death due to the bloated weight of its own costs was suddenly revived. The Soviet Union and India were working towards an economic agreement. The nuclear component of the agreement was in trouble. Casting around desperately for a project to announce during that visit the Tehri dam was chosen. And so the Tehri dam project, which had practically been abandoned due to a lack of funds and unattractive economic prospects, got a new lease of life.

In June 1987, a general agreement was signed in Moscow, according to which it was decided that Soviet and Indian engineers would construct the Tehri hydropower complex. The Soviets were to render technical assistance in the erection of the dam, the hydro-electric and storage plants, and a transmission line on a turnkey basis. The Soviets insisted that their experts would come to India in October to collect the necessary data and prepare a new design if need be.

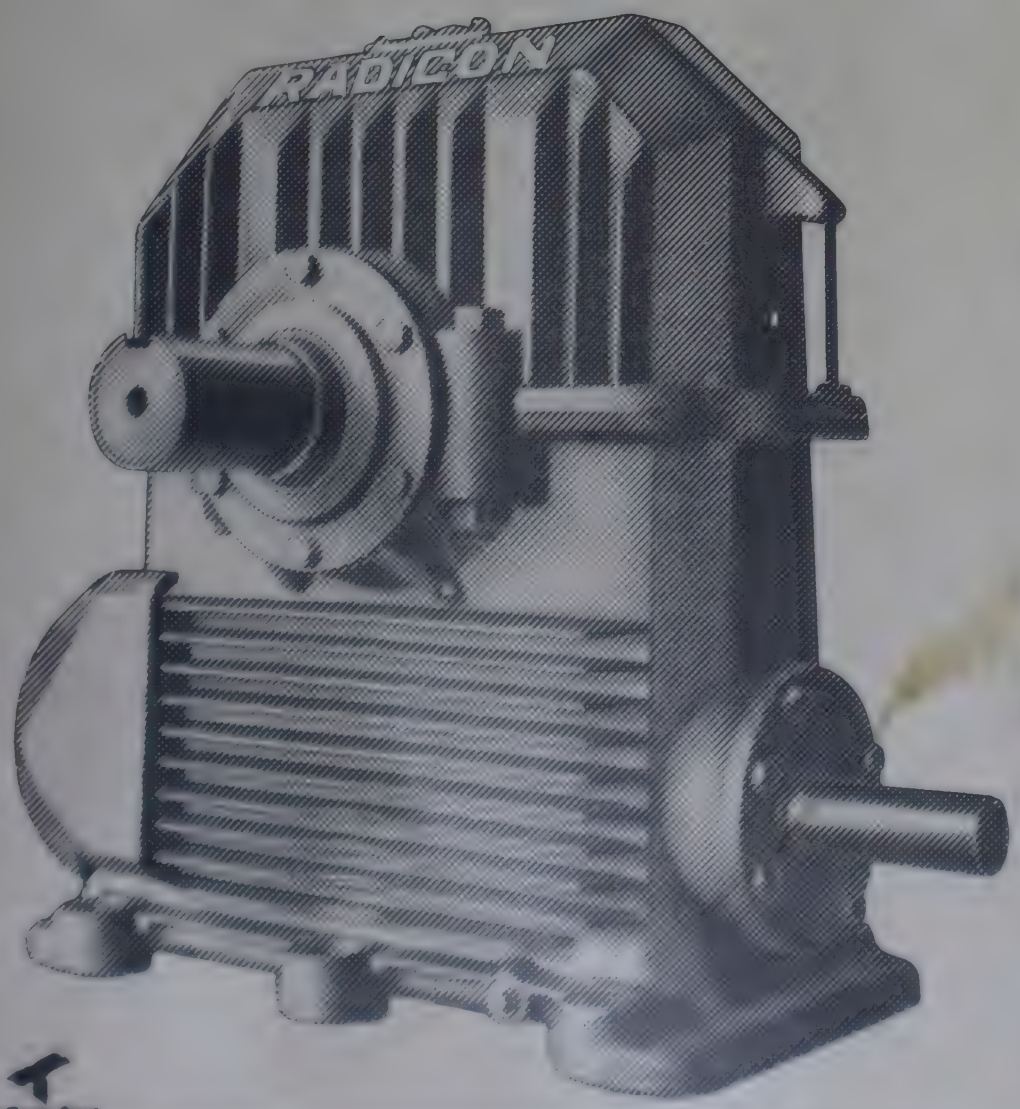
On 2 October 1987, they unilaterally issued a press statement saying that the existing design had failed to take into account the high seismicity of the Tehri area. The design, they said, was not sufficiently reliable especially considering the height of the dam and the fact that a densely populated area lies behind it. Soviet scientists estimated the site's seismicity at nine points, ie, one point higher than specified in the design. They concluded that the design needed revision because it did not meet the safety standards applied to similar structures in the Soviet Union.

THE PEOPLE PROTEST

The citizens of Tehri had been arguing on exactly the same lines. In October 1986, in a writ petition filed in the Supreme Court, they had challenged the project on the grounds that:

- It would endanger the life and property of the inhabitants of Munikiret, Rishikesh, Haridwar and other places on the banks of the Ganges, as the dam is located in a seismically active and tectonically unsuitable area.
- It would create insecurity among peo

HOW YOU CAN BENEFIT FROM DAVID BROWN GREAVES' 26-YEAR EXPERTISE IN RADICON WORM REDUCTION GEARBOXES



Every David Brown Radicon worm reduction gearbox has been engineered to offer you lasting efficiency and reliability... with minimum maintenance.

In fact, Radicon gearboxes installed more than 25 years ago are still performing as satisfactorily as ever.

This high quality is a result of David Brown Greaves' experience and expertise. In the design and manufacture of an ever-increasing range of gearboxes.

Widest range for greatest choice

- 15 sizes.
- Three types – horizontal, vertical and double-reduction.
- Speed ratios from 5:1 to 4900:1.
- Maximum versatility and convenience – due to high interchangeability of gearboxes.

Custom-made gearboxes, too!

Apart from its standard units, David Brown Greaves also offers you custom-built gearboxes. To suit your specific needs.

This is possible because of its access to the latest international manufacturing technology and equipment. Through its world-famous collaborator, David Brown Gear Industries Ltd. (U.K.).

Quick delivery, prompt service

Today, you can get prompt deliveries of Radicon gearboxes. Through any of Greaves Cotton's 21 Sales and Service Centres spread across the country.

While Greaves' qualified and experienced personnel give you speedy and efficient after-sales service.

The next time you buy a gearbox, ensure high quality and good service. Insist on a Radicon.

• It would cause mindless destruction and degradation of the environment.

Unfortunately, as is the plight of other public litigation cases, the hearings, adjournments have been going on for the last two years. The TBVSS (Tehri Bandh Virodhi Sangharsh Samiti) headed by the 80-year-old veteran advocate, V.C. Saklani of Tehri town, continues its battle against the project. Recently the Supreme Court judges have indicated that it would be best to have the whole issue settled at the earliest in the national interest.

The Soviet press-release referred to earlier states: "In constructing the Tehri dam, various engineering solutions will also be used so as to enhance its reliability and safety. For example, a foundation width of 1.5 km will securely keep the dam on its feet and will not allow it to tumble down." The only inference from this statement is that the width of 1.1 km designed by Indian engineers had been rejected by the Soviet experts as unsafe. The Tehri dam authorities reportedly called a special meeting at Roorkee in December 1987, where the Russian experts were told that their unsolicited statement to the Indian press had been extremely embarrassing. However, the Soviets have not, to date, changed or withdrawn any of the statements made in the press-note.

Currently the Soviet engineers along with their Indian counterparts are working towards implementing the agreement, which would necessarily mean significant design inputs to satisfy their safety and technical standards. Little information is made public by the authorities on the progress of this gigantic project.

Yashpal Singh, director of construction for Tehri dam has claimed that by March 1988 Rs.271 crores had been spent on diversion tunnels, head race tunnels, excavation work and approach passages. "If work on the dam was to be stopped, this amount would be a loss to the exchequer."

However, opponents of the dam emphasise that these investments need not be wasted at all, as the very same facilities could be still used virtually as is, for run-of river power generation even without the dam. Similarly, new roads, new Tehri town and other amenities are assets useful to Garhwal in any case.

The findings of a Pune research team commissioned by INTACH (Indian Natural Trust for Art and Cultural Heritage), whose chairman happens to be the prime minister, reveal a classic case of bad planning and ignorance and neglect of social and environmental variables. The study should be an eyeopener.

Head-race tunnels which feed the power turbines

BHAGIRATHI'S HYDROLOGY

The Bhagirathi, as the river Ganges is called till it reaches the confluence of the Bhagirathi and Alaknanda at Deoprayag, originates at Gomukh at a height of about 12,000 feet. It has a catchment area of 7,511 square kilometres. Of this almost one-third is snow-bound and lies at an altitude of more than 16,000 feet.

A scrutiny of the detailed project report prepared by the Uttar Pradesh government in 1986 revealed that the Tehri dam project authorities have absolutely no data on the entire snow-bound area of the Bhagirathi river. Their reports contain no studies about the total or average snowfall (annual), the seasonal variations in the rate of snowmelt, glacial and morainic movements, the 'ice-falls' and 'debris' sections of the glaciers, all of which have a considerable influence on the water discharge and 'silt-load' carried by the tributaries and sub-glaciers feeding the Bhagirathi. This means that the data base related to annual yield, maximum probable flood and the frequency of floods is incomplete and therefore unreliable.

The project authorities have all along maintained that there is no danger to the Tehri dam as similar structures in the USSR, like the Nurek dam which is 300 metres tall and in a region of high seismic activity, proved to be safe. However, what the authorities omit to mention is that the Soviets have a hydrological time-series data for a minimum of 60 years and often more than 100 years, while our data for rainfall and run-off, dates only from 1964. Discharge data is available only from 1970. Yashpal Singh has this to say: "Should we wait for 100 years to construct this dam? We have sufficient data. Data for a longer period will help in economising on the structure but will not affect the safety."

The authorities say that they have used statistical methods for "extrapolating" rainfall and yield using data collected at Raiwala, 65 km downstream from Tehri.

The Geological Survey of India, the National Geophysical Research Institute at Hyderabad and several scientists have expressed grave apprehensions about the safety of a dam of this scale built right on top of geological faults and "shear zones" at the Tehri site. Vinod Gaur, Director, NGRI, says, "The probability of a major earthquake whose rupture zone may traverse the dam site is high."

SILTATION AND EARTHQUAKES

The economic life of a dam is determined by the "dead storage capacity" and the rate of silt accumulation in the reservoir. In the case of the Tehri dam it would mean the number of years required for the silt level in the Tehri reservoir to reach an elevation 720 metres above

We bottled these contents

NAGEMA Bottling Equipment

Yes. We helped them pile up the profits, faster. Because Nagema Bottling Equipment forms an integral part of their total manufacturing process.

Our customers know how vital it is to have a quick, hygienic and dependable mode of bottling. It is no wonder then, that they have installed Nagema Bottling Plants.

Nagema Bottling Machinery is precision engineered for reliable working and long life. As a result it needs minimum maintenance. It is this obsession with quality and perfection that has given Nagema Bottling Equipment a world-wide reputation to be proud of. Nagema Bottling Plants are exported to over 40 countries around the world.

World famous Nagema Bottling Equipment is available with speeds of up to 50,000 bottles per hour. It's suitable for all kinds of liquids, including:

Aerated Soft Drinks	**Beer**
Fruit Juices	**Wine**
Milk	**IMFL**
Ketchup	**Rum**

And now, in India, **these** bottling plants are manufactured by Rita Bottling Machines Private Limited in technical collaboration with Nagema, GDR.

mean sea level. When this happens, the head-race tunnel leading to the power-generating turbines would get blocked.

Calculations by the Ganga Discharge Organisation (GDO) indicate that the annual rate of siltation is 16.53 hectare metres per hundred sq kms per year. At this rate, the dead storage capcity will be exhausted within 61.4 years. The Tehri dam will therefore be useless in economic terms in a little over 60 years, after which the generation of hydel power will not be possible, and irrigation will be restricted to what spills over the gates of Tehri dam. If we also take into account the fact that the rate of land erosion in the Garhwal Himalayas due to deforestation has become alarming in recent years, the Tehri dam may not yield hydel power for more than 50 years. However officially the dam life is claimed to be 100 years.

BENEFITS FOR WHOM?

"Tehri will provide power for 140 industrial townships which will provide jobs for 4 million families," claims Yashpal Singh. Much of the power generated by the Tehri dam, opponents of the project point out, will be used to meet the requirements of industrial units and the urban elite. Those who will be most affected by the dam and face the greatest risks will benefit the least.

Only a minuscule part of the power from the Tehri project will go to the backward districts of Uttarkhand. Most of it will be fed into the northern power grid to satisfy the demands of the urban areas. Environmentalists argue that the highest priority in terms of poverty alleviation should be accorded to the generation of power from non-conventional sources. What happens in fact is that expensive and exorbitant investment options are justified on grounds of 'public-demand' and 'national-interest'. They argue that there is obviously a conflict of priorities inherent in this approach.

Devender Kumar, superintending engineer, Tehri dam says: "Of late, the importance of environment has been overemphasised. If the dam is abandoned, the country will forever be deprived of the enormous, inexhaustible and renewable power source. Bhakra did not adversely affect the environment, nor will Tehri."

The environmentalists argue that the statement that hydel power is a renewable source of energy needs to be examined carefully. Hydel power generated on run-of-the-river schemes is certainly renewable, they say, but when it is based on a reservoir which has an economic life of barely 60 years — like the Tehri dam — it certainly does not qualify to be called renewable. Therefore, considering the high environmental and social risk involved, high dams with large storage reservoirs — especially in the Himalayas — are not the long-term answer to our "peaking-power" requirement.

They also question whether hydel-power projects are cost-efficient. Although in the fifties and early sixties, the per unit cost of generation of hydel power was between 3 paise and 7 paise, time over-runs, bureaucratic inefficiency and galloping material and administrative costs have raised the cost of generation to about 70 paise per unit. This has made hydel power as expensive as other conventional power sources. However the dam authorities claim that taking all increases into account the cost per unit will be 35 paise.

The north-western districts of Uttarkhand like Saharanpur, Muzaffarnagar, Agra, etc. are today among the most intensively irrigated districts. They have enjoyed the benefits of the Ganga canal system for more than a hundred years. In addition the Ganga-Yamuna Doab is endowed with stable, exploitable groundwater resources. Consequently more than 60 per cent of these lands are already irrigated.

The Seventh Five Year Plan has stated that instead of starting new major projects, the emphasis should be on greater utilisation of existing irrigation resources. In spite of this and other suggestions like giving priority to drought-prone areas and tribal districts the Tehri dam authorities have decided to build another canal parallel to the existing Upper Ganga Canal and Agra Canal. Thus, instead of protective irrigation for water-scarce areas, canals have been planned for further enriching the irrigated areas.

The opponents of the dam say that there has been an unrealistic overestimation of benefits. They further allege that various ruses have been used to overestimate the benefits, and thus debasing the economic feasibility study. In addition, the phenomena of water-logging and land salinisation which turn productive lands into unproductive wastelands have been totally ignored, even though, if the experience of projects elsewhere is any indication, this is bound to occur.

An anti-dam morcha in Tehri town

The Tehri dam is likely to submerge villages and towns with a population of almost 85,600 people. Yashpal Singh claims that the figure is 46,000. However, the opponents point out that this government figure does not take into account the population on the rim slopes of the reservoir that would be displaced and the growth of population in the last nine years. These 'oustees', who are likely to be the greatest sufferers are being undercompensated taking into account the real value of their properties; and settled in the dry beds of hill streams or in forest lands near Rishikesh and Dehra Dun.

TAKING QUALITY STANDARDS BEYOND NORMAL LIMITS, FOR A VERY IMPORTANT REASON.

THIS.

Friendship may seem an odd subject to discuss in the context of business. But we have long held the belief that it is what business is all about. Establishing a relationship with clients based on trust, understanding, respect, commitment and cooperation. And cultivating it even further by raising quality standards even higher. By accepting tight schedules and then going all out to meet the deadlines. By offering service that's sincere, not superficial. At Khimline, we try harder to get into our customers' minds, which is why we now enjoy a place in their hearts.

Dattaram-KP 33 A/88

Many now argue that they should have been given land in the benefit zone. Instead, they have been allocated 2,767 acres of forest land near Dehra Dun which is already under severe pressure from tourism, limestone quarrying and urban expansion. What is worse, the project authorities adopted the 'divide and acquire' approach when they faced stiff opposition to land acquisition. They offered lucrative compensation to the Doms and Bajgis, the scheduled castes, who then withdrew their opposition to the dam. The Tehri dam Control Board then passed an order that "those families who could earn a livelihood without depending on land, be paid compensation in cash only, instead of land". Undercompensation and withholding of land titles was another way of harassing the oustees resettled at the Baniawala settlement. Since they had no official title to the land the oustees could neither sell nor mortgage the lands allocated to them. Then came the second eviction, to make room for the extension of the Dehra Dun Airport. Today,the oustees resettled at Baniawala are disillusioned and aggrieved. Under the leadership of Chattersingh, a local leader, they have formed the Tehri Vistapit Samiti and are getting ready to protest against the dam.

Tehri town

THE WRIT PETITION STALEMATE

The strongest evidence against the Tehri dam was the note submitted by the department of environment of the government of India to the union cabinet for consideration before granting final approval to the project. It severely criticised the manner in which the Tehri dam authorities had dealt with the oustees and pointed out that the life of the dam is not likely to exceed 50 years. "After considering the relevant environmental implications and after being aware of the fact that over Rs.200 crores had been spent for divergence tunnels," the note concluded by saying "that it will not be advisable to continue further work on the project." Yet, in the Supreme Court the project authorities pleaded privilege, and declined to make this note public as its contents were not in the public interest. It is ironic that a report of the department of environment whose objective it is to protect the interests of the displaced people and the environment, is being held back in the 'public interest.'

Earlier in 1982, the S.K. Roy Committee report had also raised several objections relating to the environmental hazards and the problem of rehabilitation. But the main objections related to the safety of the structure and were based on detailed submissions by the National Geophysical Research Institute, and the Wadia Institute, Dehra Dun.

After the Roy Committee report, the work on the dam virtually ceased. While the project has not formally been abandoned, virtually no central funds were made available and the state government provided only sustenance funds.

The obvious question which arises is, why is work on the dam still continuing? Part of the answer lies in the fact that once a project is initiated, and has the full weight of state machinery behind it, it is difficult to bring it to a complete halt. Probably no politician would like to risk announcing publicly abandoning a project on which tens of crores have been spent. Moreover, contracts for part of the work had been handed out earlier, and the state government possibly did not want to risk suspending the contracts. So the project limped along, with very small amounts being provided by the state government in every year's budget. Then in November 1986, the project was given a resuscitating boost with the announcement of Soviet assistance for the project.

The broad terms of the agreement are that the Soviets will provide all the turbines and other machinery for the power generation, while India would have to pay out of its own resources for all the civil works including the rockfill and concrete for the dam itself.

Unfortunately, the government releases little information on the implementation of the agreement. It appears that so far both the Soviet and Indian teams are working on further design inputs in the light of the concerns earlier expressed by the Soviets. Since work on the dam proper has not even started, it is not surprising that no completion date is even being mentioned. Given past experience with high dams, it is unlikely that the project will be completed before the turn of the century.

The Tehri dam issue has been raised several times in Parliament. Representations have also been made to all levels of government. In Parliament debate is usually avoided on the plea that it is a state subject. Cases filed against the project are pending in the courts.

A view that is now being expressed by the citizen groups and bureaucrats in the state and central governments is that the matter is finally likely to be decided by the Supreme Court. The more cynical say that the government, after the next elections, using the Supreme Court as the cover, may finally take a decision.

In this state of affairs, the proponents and opponents of the dam are watching with interest, if any developments might take place during Mikhail Gorbachev's current visit to India.

■ VIJAY PARANJPYE

The author is an economist teaching at the Ness Wadia College of Commerce, Pune. He also led the study team commissioned by INTACH to investigate the Tehri project

Myths about innovation

Over the last decade Indian elites have been increasingly bothered by the stagnation in the growth of Indian industry in comparison with countries like South Korea, Singapore and especially Japan. They also feel cheated that though the level of their training, education and intelligence is similar to that of the elites in these South-East Asian countries, they don't seem to make as much money and don't possess as many of the fancy consumer goods which should be theirs by right.

There is an impatience that the rich here are not able to catch up with the rich of the rich countries. It is a feeling strengthened by every trip abroad; and it is no longer uncommon for professionals and members of the upper classes to make trips abroad. In this atmosphere it becomes much easier for ideologues based in and supported by the capitalist nations to push their case for recruiting India into the league of third world nations which follow "open door" policies. This is justified in the name of faster economic growth supported by a vigorous and innovative science and technology sector.

Very little attention is paid to the historical background of nations which have been able to follow such policies "successfully" and the prevailing social structures making this possible. Surprisingly, even less attention is paid to the social dislocations caused in low income countries when World Bank policies are implemented in them. For example, the social structure in Sri Lanka started collapsing soon after the Jayawardene government started implementing World Bank/IMF prescriptions. Is this just a coincidence? Would it have happened in any case? Or, are the genes of social disruption built into economic policies which are divorced from the aims, aspirations and cultures of the people they affect? These questions have to be debated at length and honestly here before we liberalise our way into chaos and violence in India also.

If we consider the issue of innovation in technology a little seriously, we will discover that there are no clear unilinear paths which can be prescribed. Even within the general theory of capitalism and free enterprise there does not seem to be any unanimity of opinion on this. A recent article in the *Harvard Business Review* (May — June 1988) brings this out very clearly. The author, Charles H. Ferguson, argues forcefully that "in the wake of voodoo economics, US corporate executives must now defend themselves against an equally dangerous successor — voodoo competitive doctrine".

Ferguson's main argument is that Japan, Korea and Germany have got the edge over American industry because "US industry falls victim not to nimble, small companies but to huge, industrial complexes embedded in stable, strategically co-ordinated alliances often supported by protectionist governments — exactly the kind of political and economic structures that, according to the free-market entrepreneurship argument, give rise to stagnant cartels".

Some very interesting data have been highlighted in this short paper, data which are common knowledge among astute Japan watchers, but not publicised and discussed among industrialists in low-income countries. For example: absolute levels of capital expenditure on R&D in semiconductor companies were very similar in the US and Japan as far back as 1976. Further, R&D expenditure as a percentage of sales was much higher in Japanese corporations.

Actually, the Japanese have always given a great deal of importance to research in areas they selected as necessary and important for their economy. They were far more selective in the early part of the century; they chose a small number of subjects as thrust areas and then mastered them. The fact that they could perform so well in the Second World War is evidence enough that their knowhow was excellent in those areas they considered essential for their nation.

Ferguson highlights the fact that Japanese producers and their major suppliers send professionals to one another's plants and have co-operative R&D organisations. This activity is supported, encouraged and protected by the government. "Until recently, for example, US companies were essentially precluded from operating in Japan. In 1974, when US industry still held technical superiority and dominated world markets, US companies operated 45 factories in Europe but only 6 in Japan — despite the fact that Japan's market was already larger than Europe's."

The point being made is that to compete in the international market in technology goods that require large science inputs, small firms really cannot do the job. Even large firms have to co-operate, particularly those operating out of nations like India. This is so because, for R&D to be effective, long-term plans have to be evolved. Companies generally avoid long-term investments in terms of either finance or personnel. "Thus we have a puzzling situation," says Ferguson. "Japanese, Korean and even German competitors seem not to share America's passion for fragmentation and entrepreneurial zeal."

We really do not have to accept Ferguson's theory as correct. However, we do have to realise that there is no one correct route to innovation and development. Ranged against Ferguson are those who claim that it is the middle-sized company that is more innovative than large bureaucratic mega-corporations. We probably have to look at our own success stories more honestly and see what works better in our own culture.

Competition, after all, can only be fair, beneficial, and non-exploitative when the competitors have equal opportunity. This is mostly not the situation in India. Secondly, we must have a situation where the consumers have effective voting power. That is, they must be able to judge the product adequately and must have purchasing power to opt for better quality. When a consumer buys a *paan*, he knows exactly what he wants and so can make a reasoned choice. But in items which involve technological complexity it is not easy to judge the product except through long experience and objective information about cost effectiveness and safety. The latter is possible when there are competent consumer organisations which do the testing and evaluation. These organisations need large investments and technically competent manpower. This is not easy in societies like ours, though a start has been made.

Instead of condemning the public sector organisations as unnecessary and inherently inefficient, it would be much more useful to give more thought to finding out which ones can be useful, which ones are necessary, and how we can make them work. Because, these are the corporations which are large, where long-term investments can be made, and long-term plans for innovation and invention outlined. The private sector in particular will have to play an important role in making this possible.

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable
* Maintenance-free * 100% Leakproof and Rustproof
* Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes.
* Backed by excellent installation and after sales service through a wide network of dealers.

Money talk

The world of high finance saw a gathering last month of the best and brightest of British and Indian financial experts at the Taj Inter Continental in Bombay. The occasion was a three-day Indo-British conference (from 31 October to 2 November) on financial and capital markets picturesquely called "Gateways to India and Europe: Bombay and London".

The conference was jointly organised by the British Invisible Exports Council (BIEC), British Overseas Trade Board and the British High Commission on the British side, and IDBI, ICICI, UTI, Exim Bank and Assocham on the Indian side. The conference also had the blessings of the Indian government — Eduardo Faleiro, union minister of state for finance, and R.N. Malhotra, governor, Reserve Bank of India, addressed the crammed conference, attended by the country's leading financial experts.

The overwhelming response to the conference led Kit McMahon, chairman, Midland Bank, who headed the British delegation, to regret that the working sessions had been organised concurrently. The sessions covered subjects like trade finance, venture capital, investment management, capital markets. Participants had a problem deciding which to attend and which to leave out. But then, as McMahon said, "Better to have people asking for more than asking for less." The response to any conference depends to some extent on its timing. In this case it seemed to be well timed — for both the British and the Indians.

SPECIAL SIGNIFICANCE

David Goodall, the British High Commissioner, spoke of Britain's present position of strength. From having been at the bottom of the pile through the sixties and the seventies, Britain now has the fastest growing economy in the European Community. He said, "Since 1980, the growth in our manufacturing productivity has been the highest of the seven major industrialised countries."

And unlike in 1982 and 1984, when the previous BIEC conferences were held in India, the conference held special significance for the British — it falls between the Big Bang of 1986 when financial markets in the UK were deregulated and the magic year 1992 when tariff barriers within the European Community will be abolished. As a result, the British delegation was hardselling its expertise in finance services for India to take advantage of the trade shift likely to occur in 1992.

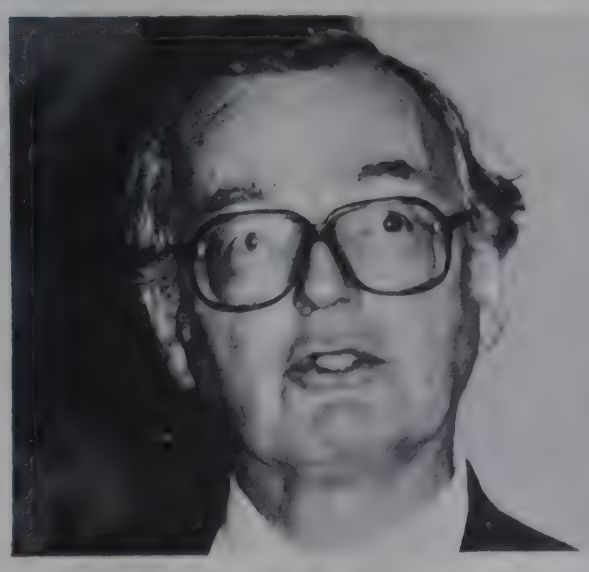
For India, as L.M. Thapar, president of Assocham underlined, there is a "need for a vastly accelerated export effort... to be able to convert an adverse foreign exchange situation into a balanced one, and then into a favourable one." Kalyan Banerji, chairman and managing director of Exim Bank, told the visitors, "India can increasingly absorb technology from Europe for production and exports. In this, the European financial community has an opportunity for partnership with Indian industry and the financial community.

The objectives of the three-day deliberations were laid down by the different speakers at the inaugural gathering on 31 October. The working sessions began the next day. At each of the sessions, one British and one Indian speaker outlined the prospects in their own countries, thus aiding a better understanding of each other's capabilities.

Predictably, the first session was on trade finance, specifically counter-trade, forfaiting and factoring. G. Nockles, trade finance director of Midland Bank was the first speaker. He laid down the broad theoretical parameters within which each of these export financing schemes worked and outlined the state of each in the world currently. T. Prakash, executive director of the State Trading Corporation of India (STC), presented the Indian viewpoint. He pointed out that although India had not taken a definite official stand on counter-trade till recently, the STC has been involved in such trade in the form of barter deals since 1961. "The bilateral relationship between India and the East European countries, as well as the USSR, has been marked by counter-trading transactions." Also India has from time to time tried to attract technology and investment through buy-back and other counter-trade techniques.

The Indian government, Prakash pointed out, has been in recent years encouraging forfaiting and factoring as means of export finance. In fact, a committee appointed by the RBI has recommended that banks should develop factoring services and that private financial institutions should also be encouraged to do so.

The recent interest in venture capital in the country was apparent from the attendance at the session devoted to it. The UK speaker was P. Hargreaves Allen, director of J. Henry Schroder Wagg & Co. He pointed out that although there is considerable public recognition of the rapid growth of the junk bond market in the US, there is less awareness of the dramatic growth of unlisted securities placement in the UK. The present phase of growth of the venture capital industry in the UK commenced in 1981. Since then, the number of specialist venture capital organisations has grown nearly five-fold, from 27 to 126. Indian counterparts could learn from the British experience.



McMahon: better to ask for more

Zuckerman: selling the BOT model

Mathrani: professionalism needed

Udayan Bose, managing director of Credit Capital and Finance Corporation, pointed out that though venture capital can create large investment and aid in industrial growth and employment, India does not have yet a proper venture capital corporation.

ORIGINAL HOUSE OF OPTIONS

As far as the stockmarket is concerned, L. Ingrams, director of Robert Flemming & Co, said that India is the "original house of options" while speaking on investment management. Hence, the BIEC would have little expertise to offer in the field. However, the Big Bang had given the UK an ability for international fund management.

With the private sector having become fashionable in the Thatcher era, the British speakers had a wealth of experience to share on the subject of funding large projects with private money. P. Zuckerman, director of S.G. Warburg, described the by-now famous case of raising resources for the Channel Tunnel. His company had played a key role as a financial adviser to Eurotunnel, the private sector Anglo-French consortium that was granted the concession to develop, finance, construct and operate the Chunnel, as it is known, scheduled to be commissioned in 1993.

In this context, Zuckerman outlined the build operate transfer (BOT) model which is becoming popular in developed countries. BOT has demonstrated the effective role that the private sector can play in the financing, construction and operation of large projects. Very often, therefore, commercial and economic considerations have gained precedence over technical elements in determining the success of a particular proposal. An interesting variant of BOT projects in the developing world are projects being conceived in the joint sector — a model which could probably have relevance in India.

IMMENSE POTENTIAL

To give the British delegation an idea of the achievements of the domestic capital market, Nimesh N. Kampani, managing director of J.M. Financial & Investment Consultancy Services Ltd, traced the history of stockmarket operations in the country — from its limited scope before the seventies through the excitement of the FERA dilution years to the more recent liberalisation of government policies in the eighties. In conclusion, Kampani pointed out that with a savings rate in excess of 20 per cent the capital market has immense potential for growth. Recently, the government of India has also permitted foreign equity participation on a case-to-case basis in existing companies. Kampani urged the government to consider issuing dollar or pound sterling denominated securities to mobilise foreign exchange for equity financing and to create an awareness among foreign investors of the Indian capital market.

Thompson: too many obstacles

Vaghul: seeing in context

The British speaker on the same subject was R. Mathrani, executive director of Standard Chartered Merchant Bank. Considering the current scenario in the Indian capital market, Mathrani made a strong plea for more corporate members besides the state-owned institutions on the stock exchange, more professionalism among those involved in the raising of capital, more players in the mutual funds market, and lastly, a review of the role of the Controller of Capital Issues in fixing premiums on new issues.

Of all the sessions, the one on direct investment in India was unanimously considered to be the most controversial and stimulating. Both the speakers, D. Thompson, executive director of Rank Xerox, and N. Vaghul, chairman and managing director of ICICI, were extremely forthright.

UPCOMING CHOICES

Thompson took the opportunity to caution the Indian participants about the current choices before foreign investors, especially British, with 1992 just around the corner. He believed that with a market comprising 330 million people (in Europe and Britain) opening up, the European Community will be able to attract a lot of investment. So, Thompson warned, if India does not sit up and make direct investment more attractive, it could lose out on a great opportunity. He made special mention of irritants like the convertibility clauses, conditions on phased manufacturing programmes and, of course, bureaucratic delays in the "unreal world of Delhi".

Taking up for the Indian side at the session, Vaghul first made light of the importance being given to 1992. It was an important landmark no doubt, he said, but in terms of being an investment alternative to countries like India it would have to be remembered that it is not only the British who are eyeing the EEC market but also the French, the Germans, the Italians and others.

In answer to Thompson's conclusion that the Indian government's reluctance to liberalise further foreign investment in India was unrealistic, Vaghul said that the government's stand would be better understood if seen in context. India, he said, has had an excellent track record of honouring foreign dividend and royalty payments. If now India was being criticised for being cautious about allowing foreign investment, the criticism would be stronger if she were to open her doors now but renege on commitments later.

As for the bureaucracy, Vaghul commented lightly, at least it did not discriminate between Indians and foreigners. And after all, he said, it has been inherited from the British themselves, though, of course, bettered beyond recognition.

History has forged a unique relationship between the two countries participating in the conference — and all indications were that the participants were working further on it by airing their views frankly for mutual benefit.

CHIRANJN

Yellow Pages blues

Just a year after the idea was blessed with government recognition, the Yellow Pages are promising to be a consistent source of revenue for the telephone departments. And private publishing companies are feverisly bidding for the contract to compile them.

At last count, the telephone authorities in 12 cities ranging from Bombay to Baroda and Pune to Patna had decided to go in for a Yellow Pages section in their directories. The publishers will print the entire directory (white pages included) and supply them free. The telephone departments will be paid a healthy royalty while the publishers will be allowed to keep the ad revenue from the Yellow Pages.

In January this year, 100,000 Ahmedabad telephone subscribers became the first in the country to get a Yellow Pages section with their new telephone directories. Tata Press, their publishers managed to pull in as many as 3,300 paid ads in the 220 page section, a commendable first year performance. Madras, Calcutta and Delhi followed in the subsequent months. The Madras Yellow Pages has as many as 2,300 categories — from ice suppliers to palmists — as against Delhi's 1,100 and Ahmedabad's 317.

DELIVERY DELAYED

In Bombay, the city with the largest number of telephone connections in the country, the Yellow Pages are 592 pages strong (compared with Delhi's 276 and Calcutta's 232) and has 7,400 paid advertisements in 1,488 categories. But UDI, the publishers (they are part of the group that owns Delhi's *Patriot* newspaper) have hopelessly delayed the delivery of the 900,000 directories to subscribers in the city. Only about 85,000 copies have so far been delivered nine months after the expiry of the original March deadline. UDI officials cite problems with paper mills as the source of the delay, while their competitors say it is because of the poor financial status of the publishers.

The Bombay and Delhi directories will bring Mahanagar Telephone Nigar Limited (MTNL), which runs the telephones in the two cities, royalties of Rs.20.16 crores from UDI in the next five years. The Calcutta Telephone Department which is still under the Department of Telecommunications which has also contracted UDI, will receive Rs.5 crores in the same period. The Madras Telephone Department will get Rs.1 crore as royalty from M&N Publications, its publishers. M&N which is owned by the Delhi based Tej group of newspapers also has the contract to publish the Bangalore telephone directory for which they will have to pay the telephone authorities there a royalty of Rs.1.5 crores in the next five years. As for Ahmedabad, the royalty amount the telephone department there will receive is comparatively very low — Rs.23 lakhs. While in the case of Pune, which has around the same number of telephones, Sesa, the Goa-based industrial house with interests in publishing, which has just secured the contract for the Yellow Pages will pay a high royalty amount of Rs.1.3 crores.

As against the promised royalties, Tata Press this year is estimated to have collected around Rs.42 lakhs in advertising revenues from the Ahmedabad directory. M&N's figure from Madras is around Rs.78 lakhs and UDI claims it collected Rs.1 crore from Calcutta, Rs.1.7 crore from Delhi and Rs.4.2 crores from Bombay.

MYSTERIOUS SYSTEM

Unlike other companies however, UDI's accounting system continues to be a mystery for industry watchers. When bids were put in for the Bombay and Delhi Yellow Pages last year, while bidders like Thompson Press offered to pay Rs.1 lakh as royalty spread over five years, M&N Rs.6.5 crores and Tata Press demanded a negative royalty of Rs.25 crores, UDI as stated earlier offered a generous Rs.20.6 crores for the contract to print the directories for the two cities. This works out to a royalty of Rs.4.12 crores a year. Add to this the production cost of the directories for the two cities at around Rs.13 crores this year and the high cost in maintaining a marketing staff of over 100 people for the Yellow Pages. As against this the ad revenue has been less than Rs.6 crores. So how does the company hope to make money out of this deal is a question that is being asked around. Says Xerxes Desai, the former managing director of Tata Press who has studied the industry very closely, "To our mind, their quotation for royalty looked exceptionally high, particularly because of the high cost of production as well as the considerable expenditure that is known to be involved in this business worldwide in developing your client base in the initial years."

S. Mitra, a general manager of UDI, claims that his company would break even in two years and that he expects his ad revenue to go up to Rs.9 crores in Delhi next year and Rs.12 crores in Bombay. These are no doubt an exceptionally high figure to hope for considering that both cities together brought in less than Rs.6 crores for the company this year. But what is more interesting is that UDI has another hitherto hidden source of ad revenue and about which its competitors had no clue when they bid for the MTNL tender.

HIDDEN REVENUE

Strangely, a few months after UDI obtained its contract, MTNL increased its rates for bold entries in the white pages of the Bombay and Delhi directories tenfold. A bold entry now cost Rs.200 and each additional entry Rs.400. As per the contract all ad revenues from the directory go to the publishers and as a result UDI stands to make an additional Rs.5 crores every year from the white pages alone. Rivals claim that UDI used its considerable political clout in Delhi to pressurise MTNL into doing this and that the whole thing was planned even before they made their generous tender offer. Mitra of UDI denies this saying that MTNL would have anyway increased the rates because they were unrealistically low.

Whatever the strategy employed by UDI it is clear now that revenues from the white pages will form a substantial portion of its total earnings from the business. But to make a profit the company will have to still substantially increase its ad revenues from the Yellow Pages.

"The first year has been a good year of learning," says Gupta of M&N, "We made mistakes and this year we hope to correct them." Adds Mitra of UDI, Next year's directory will be far superior to this year's. And hopefully with people taking such a keen interest in this new concept, our revenues will also go up. There is no doubt thus that the Yellow Pages are here to stay.

■ N. RADHAKRISHNAN

A new landmark

WTC, Phase II

On 14 November, the 34-storeyed Centre I and the 26-storeyed Centre II of the World Trade Centre (WTC) on Bombay's Cuffe Parade, was finally ready to be occupied. The centre is claimed to be the country's tallest building. While the IDBI has taken up 24 storeys of Centre II, most of the floors at the Centre I have been leased out to private entrepreneurs and big companies. Apart from some export promotion councils and many semi-government agencies, companies like TELCO, Duncan India, BHEL, MECON, UTI, RBI and MARG, have also booked a number of floors in the centre.

The credit for founding the Bombay association of the WTC in 1960 goes to the All India Manufacturers' Association (AIMO) under the inspiration of Dr.M. Visvesvaraya. Described as an "engineer-industrialist-planner-statesman", Visvesvaraya felt the need for a proper scientific and industrial approach to trade and industry. He conceived the idea of building an industrial research and development centre and consequently the M. Visvesvaraya Industrial Research & Development Centre (MVIRDC) was established. The twin towers of the WTC are only a part of the three-phased complex of the MVIRDC.

Appreciating the concept of the WTC the government of Maharashtra allotted 16 acres of reclaimed land at the Backbay Reclamation and became a partner in the project along with the central government whose nominees were also appointed on the council of management of the centre.

"It was in 1970-71 that we became members of the World Trade Centre Association (WTCA)," recalls P. K. Akerkar, the executive director of the present council of management of the centre. "The aim was to bring together business and government agencies involved in the foreign trade." Founded in New Orleans in 1968 to encourage the expansion of world trade, the WTCA has grown to become a network of 166 member organisations in 56 nations. The WTCA has held a general assembly meeting every year since 1970. At its board meeting held in New York in March 1986, the WTCA awarded the honour of hosting the General Assembly for 1988 (GA '88) to the World Trade Centre, Bombay. "This was despite stiff competition from other centres in the first world," Akerkar points out.

Each general assembly focuses on a trade subject of current importance. The theme chosen for the nineteenth GA '88 is: "International Trade: The Silent Language of Global Integration." Various subjects relevant to the theme are proposed to be discussed at the assembly. The focus, however, is on the sub-continent and the south Asian region. A special trade policy panel on "The GATT-Uruguay Round" has also been planned.

So far, 360 delegates from abroad have registered themselves with the WTC, Bombay for GA '88 earning the centre a sum of US $180,000. "It is the Indian registrations that have been disappointing," laments the executive director of the centre. Until now, only 100 Indian delegates have registered with the WTC. But with the registration fee per delegate being Rs.4,500, this is not really surprising. The WTC council of management, however, considers the fee reasonable taking into account the fact that the meet offers businessmen an opportunity to develop trade contacts.

"The idea is to enable a foreign businessperson visiting the country to complete all his transactions without stepping out of the complex. The constantly updated R&D service is the core facility of the WTC, Bombay," sums up a council member. The centre will have a well-furnished library with the latest journals and global research papers, accessible to the members and the media. The unique feature of the centre will, however, be its state-of-the-art telecommunication facilities that will include computerised data bases and an electronic link with other WTCs. The WTC has also planned an executive club located on the top floor of Centre I and a well-appointed business centre with full-fledged secretarial and translation services besides exhibition and convention centres.

The project is expected to be fully commissioned by 1991. The construction cost of the two centres until 31 December 1987, according to the annual report, amounted to Rs.50.59 crores. By 1991, the cost, it is estimated, will exceed Rs.100 crores. Yet, the centre has so far refrained from borrowing any money from the market. The total cost has been met from booking costs paid by the tenants in the two complexes.

Many offices that felt that Nariman Point, the nearby nerve centre of Bombay's commercial district, was getting congested will soon move into the WTC. However, the full potential of this mega-centre will only be felt after a few years when the aims of the centre are fully realised by the Indian trading industry.

"2" that's paved the way for "4"

The popular two-wheeler tyre — TVS Srichakra — now comes to you for your four-wheeler.

A tyre that will not only give you excellent mileage but will also offer you peace of mind: added safety.

'Lock-in Tread' for added safety

TVS Srichakra is designed with a unique tread pattern.

'Lock-in Tread'.

It provides the firmest grip on any surface.

On wet roads, it helps draw out water so that there's no slip, no skid. Its broader contact area holds tight dry roads. And gives your vehicle the stability you need on steep slopes and sharp corners. No shakes... no wobbles.

All that adds to that extra safety you need in today's driving conditions.

TVS Srichakra :

Safety you can trust

R K SWAMY/STL/8099

A new Indian multinational

On 22 October, the Ispat group passed an important milestone. The Calcutta-headquartered group with a combined turnover of around Rs.150 crores signed an agreement which would give it effective control of a Rs.700-crore steel plant in Trinidad.

The Iron & Steel Co. of Trinidad & Tobago (ISCOTT) is owned and run by the government of Trinidad and Tobago. Says Mohan Lal Mittal, chairman of the Ispat group who signed the deal with Ken Gordon, Trinidad's minister for industries, "The company was suffering from poor capacity utilisation — 20 per cent — for the past five years. As a result it has incurred an estimated loss of $500 million."

"Being a government company, the balance sheet of ISCOTT was not available but we estimate that its current book value is US $200 million," he says.

The Mittals knew of ISCOTT's poor health since it supplied sponge iron to the group's Indonesian company, P.T. Ispat Indo. "About a year and a half ago the government of Trinidad and Tobago seriously started considering the possibility of selling or leasing the operations to outsiders," says L.N. Mittal, who runs the Indonesian operations. Among those in the running for the plant were Kobe Steel of Japan, Hamburg Stahlwerke of West Germany, and others.

"NOT A TAKEOVER"

Under the arrangement, P.T.Ispat Indo, Indonesia, has set up a company, Caribbean Ispat Ltd (CIL). This company will be responsible for running ISCOTT, which has leased its assets to CIL. "It is not a takeover. We've only taken the assets on lease at favourable rates," says M.L. Mittal. (He was not ready to disclose details of the lease finance arrangements as he felt "the time was not ripe yet".) Mittal hopes that the government of India will eventually permit the group's Indian companies, Nippon Denro Ispat, Ispat Profiles, and Ispat Alloys to subscribe to the share capital of Caribbean Ispat

The agreement gives the Mittals a first option to buy the assets at the end of five years although the lease agreement is for an initial period of ten years. (The Ispat group has the discretion to extend the lease agreement by another five years.)

This arrangement, could swell the overseas assets of the group, if it decides to buy the assets later. "This is the largest star in the group," asserts chairman Mittal whose group's corporate emblem is a star.

ISCOTT was set up in 1981 and is considered to be "one of the new breed" of integrated steel plants. It has two modules for producing sponge iron (using the direct reduction method) with an annual capacity of 840,000 tonnes. The plant has two electric arc furnaces with a total annual capacity of 600,000 tonnes, and a two-strand wire rod mill with an annual capacity of 420,000 tonnes, which makes it twice the size of Ispat Indo.

M.L. Mittal and Gordon (second and third from left): opportunity came knocking

Despite huge investments by the government — US $460 million in the plant and US $ 200 million in the infrastructure including a port of its own — ISCOTT was shackled by what the Mittals term "lack of managerial and technical expertise". As a result capacity utilisation averaged 70 per cent and the government was forced to pump in funds to keep the company afloat.

OUTSIDE HELP

But the government soon realised that the company had to survive on its own merit. Therefore it started weighing the pros and cons of bringing in outsiders. For the Mittals it was an opportunity which came knocking at their door, which they didn't let go. "The technology which this plant uses is not new to us. It is similar to the technology we use in Indonesia, although the scales of operation here is larger," says M.L. Mittal. He estimates that setting up a new plant of the same capacity would require a capital outlay of Rs.1,000 crores.

The decision of the government of Trinidad and Tobago to lease out the ISCOTT plant to the Mittals with manufacturing operations at the other end of the globe, over world renowned contenders, could not have been an easy one. "The deal swung in favour of the Ispat group after the government's representatives identified the technical expertise the group has acquired in running a similar plant," says K.S. Menon, adviser to the group. According to Menon, a former general manager of Mukand Iron & Steel Works Ltd, Bombay, "The Indonesian plant and the ISCOTT plant are similar to the extent that both use electric arc furnaces and are equipped with continuous casting mills and a high-speed wire rod mill. So it was brought home forcefully to the Trinidad government that for the Mittals, ISCOTT would be an extension of the Indonesian plant."

Moreover, the Mittals by impressing upon the government that their involvement in Trinidad was going to be of a long-term nature, only strengthened their position. "We told the government that we would progressively increase our activity in those islands," says Mohan Lal Mittal who signed the deal. "We believe that there is scope for backward and forward integration once we stabilise the performance of this plant."

The Ispat group's involvement with ISCOTT, which is expected to become an acquisition, has placed this group firmly on the steel-making map in at least two countries. A new Indian multinational is born, shall we say!

ROLLS ROYCE

New Zealand ownership?

Sir Ron Brierly, the New Zealand entrepreneur, has announced that he has built up a 5 per cent shareholding in Vickers, the UK-based engineering group that makes Rolls Royce cars. Australian businessman John Spalvins has also acquired a 2 per cent stake in Vickers. The Brierly group already has substantial investments in a number of UK companies, including Ultramar, Molins, and Ocean Trading.

CAPARO INDUSTRIES

Rise in profits

Caparo Industries, the British-based engineering group controlled by Swraj Paul has reported a sharp rise in profits to £ 3.8 million for the first half of 1988 compared to £ 1.2 million for the first half of 1987. The rise in profits is attributed principally to the closure and disposal of the loss-making Fidelity electronics division. While the sale of Fidelity has boosted profits, turnover has dropped slightly to £ 68 million compared to £ 70 million of the previous year.

PLAYTEX

Second leveraged buy-out

The big US undergarments manufacturer, Playtex, is going through its second leveraged management buy-out in two years. In the first leveraged buy-out the management of Playtex acquired the company from Beatrice Foods. Shortly thereafter the Playtex cosmetics division, which included Max Factor, Almay and Halsten, were sold off to Revlon for $ 375 million. The current buy-out of $ 1.3 billion is principally designed to realise the profits from the sale of the Playtex cosmetics business.

STANDARD CHARTERED BANK

£ 300 million rights issue

Standard Chartered Bank which had been badly battered in 1987 because of bad debt write offs has announced a £ 300 million rights issue of shares to strengthen its capital ratio. After the rights issue and the sale of its American subsidiary, Union Bank of California, Standard Chartered's ratio of capital to assets will move up from 3 per cent to 5 per cent. Of Standard Chartered's main shareholders, the Bell Group of Australia which owns 15 per cent of the shares has announced that it will take up its rights entitlement. Two other large shareholders, Sir Y.K. Pao of Hong Kong and Tan Sri Puat of Malaysia, who own 15 per cent and 8 per cent of the shares respectively have, however, indicated that they will not be taking up their rights entitlement.

FIAT

Billion-dollar Polish contract

Fiat of Italy has won a billion-dollar contract to modernise and expand the Polish car industry, principally the FSO car plant in Warsaw. Last year Fiat had won another half-billion-dollar contract to modernise and expand the FSM car plant in Poland. The programme is designed to build the bestselling Fiat Uno in Poland replacing the 20-year-old Fiat 126 which had previously been produced at these plants. Fiat bagged the huge contract in the face of stiff competition from Daihatsu of Japan.

BRITISH PETROLEUM

Forced reduction of Kuwaiti holding

The British government has told the Kuwait Investment office that it must reduce by half the KIO's 22 per cent shareholding in British Petroleum, UK's largest company. The reduction in the KIO holding is to be effected over a period of 12 months, so as not to adversely affect BP's share price. Kuwaiti officials expressed strong resentment against this order, but are expected to comply. At the same time KIO announced that it had built up a 5 per cent shareholding in Midland Bank, the UK's third largest bank. The purchase has been notified to the Bank of England and no objections are expected unless the foreign holding crosses 15 per cent.

REMY MARTIN

Takeover of Piper Heidsieck

Remy Martin: Piper Heidsieck in the bottle

The champagne house of Piper Heidsieck has agreed to a $ 200 million takeover by the Remy Martin cognac company. The deal was struck hurriedly to ward off a mystery British predator for Piper Heidsieck. The combined Remy Martin-Piper Heidsieck group which will include brands like Charles Heidsieck and Krug will be the world's fourth largest champagne producer, after Moet, Mumms, and BSN.

GUEST KEEN NETTLEFOLDS

Link with Westland Helicopters

British Engineering giant Guest Keen Nettlefolds (GKN) is planning a helicopter joint venture with Westland Helicopters. GKN already makes Warrior and Saxon armoured personnel carriers and the Westland Lynx helicopter will be complementary to this range. To strengthen the links between the two companies, GKN has purchased from Fiat its 8 per cent stake in Westland, and a further 14 per cent holding from Hanson Industries (owner of Eveready Batteries and Imperial Tobacco).

EASY TO FILE
EASIER TO FIND

Crucial papers misplaced or files lost. Irritating hold-ups, tension, anxiety. You just cannot afford it.

Godrej Instafile — the only solution.

Sturdy, high quality Filing Cabinets from Godrej help you enhance office productivity through systematic storage and retrieval of files.

The functionally designed Instafiles offer a set of unmatched benefits:

- Fully enclosed drawers prevent files and papers from falling out
- A unique Godrej double extension telescopic slide features smooth, effortless movement of fully loaded drawers and easy access upto the last file
- The Godrej lock with a 'push and lock' action ensures confidentiality.
- Automated airless electrostatic painting process and special Alkyd-amino paint give the Instafiles longer life and a lasting, attractive finish.

Godrej also offers two choices for Filing Systems.

VISAFILE®—Interconnected file folders house individual files—recommended where files are referred to frequently.

EEZEEFILE®—Individual files suspended directly from the top of the drawer—an economic alternative.

To put an end to disorganised office routines and boost efficiency, buy Godrej Instafiles and Filing Systems today.

THE MERGERS GAME

Takeovers go global

ILLUSTRATION: TAMAR RABER-SCHAUM

By David Sinclair
in London, England

IT WAS THE 18th-century Scottish philosopher Adam Smith who first identified economics as a great moving force in the history of mankind. Today, it sometimes appears that making money is the sole motivation for human activity. Business and financial affairs dominate news bulletins and newspaper headlines. Aggressive entrepreneurs have become the heroes of the age. Commercial ethics have attracted the kind of debate that used to be attached to religion. The US presidential election became a contest not between ideologies but between managers. Such is the climate that national pride in Britain and the United States is now closely related to the exchange-rate values of the pound and the dollar. It once was thought that states too sophisticated to fight each other would make war through sport. They do not. The real international battleground these days is the boardroom. The weapon is the takeover. *Continued*

David Sinclair covers the European economy from London and southern France.

Heads or tails you always win...

Unique package from LIC

BIMA SANDESH + JEEVAN DHARA

Do you know that by just putting aside Rs. 181 per month from age 30 you can get a life insurance cover for Rs. 1 lakh and a life-long monthly pension of Rs. 1,000 after age 55?

This is LIC's novel package—simple and inexpensive. Ideal for young and middle aged persons.

BIMA SANDESH—low-premium, high-cover plan

You can have a large life insurance cover by paying a small premium. On survival till the end of the term, all premiums are returned. On death during the term of the policy, the total sum assured is paid to the nominee. Premiums for this plan are payable yearly or half yearly.

JEEVAN DHARA—voluntary pension plan

You save regularly over a selected period to provide for a monthly post-retirement income. This pension is life-long. On death of the pensioner, after commencement of the pension, GIVE (Gross Insurance Value Element) is paid to the nominee. Jeevan Dhara bonus is added twice—once when the pension starts, and again when the pensioner dies and the GIVE is to be paid to the nominee.

Rates for selected terms & ages are given below:

BIMA SANDESH (Sum assured Rs 1 lakh)

Age	Term	Annual Premium Rs.	Premiums returned on Survival till the end of the term Rs.
25	25	871.70	21,793
30	25	1,078.60	26,965
35	25	1,408.60	35,215
40	25	1,906.00	47,650

JEEVAN DHARA

Deferment Term	Age when pension starts	Annual Premium Rs.	Monthly Pension Rs.	GIVE Rs.
25	50	1,090.60	1,000	1,19,701
25	55	1,090.10	1,000	1,19,641
25	60	1,089.50	1,000	1,19,581
25	65	1,087.40	1,000	1,19,344

Rates for other ages and deferment periods can be worked out to suit your needs.

TAX BENEFITS

Besides normal 80C benefits for Bima Sandesh, 100% income tax relief under 80CCA for 'JEEVAN DHARA' premiums upto Rs. 30,000/- for the year 1988-89.

Contact your life insurance agent or the nearest LIC Branch today.

Yachting victory cheers Australian takeover king Alan Bond (below), but will the next cold economic wind bring him problems a la Robert Holmes a Court?

Takeovers go global

(Continued from previous page.)

A takeover binge that a decade ago in the United States spawned the junk bond and that shows signs of growing even more frenzied has spread worldwide from Wall Street. Goldman, Sachs and Co., the largest privately-held US investment bank and leading mergers-and-acquisitions advisor to US firms, has also become the leading adviser to British firms seeking US acquisitions and in all public takeovers in the United Kingdom. Once-courtly European manners of high finance are being replaced by snarling corporate struggles, and the clubby European Community (EC) seeks tougher regulation of acquisitions within its borders. Hostile takeovers have emerged for the first time in West Germany, Holland and Spain (the last involving Salomon Brothers, a US advisor). Even in polite Japan, where takeovers were akin to hijacking, corporations are moving in more frequently for the international kill. The takeover game has moved to India, and Middle East financiers armed with oil riches stalk Western takeover bazaars.

British society was shaken to its foundations earlier this year when the country's long-established chocolate company, Rowntree, became the target of a hostile bid by the Swiss firm Nestle. Amid cries of public outrage, civic delegations sped from Rowntree's hometown, York, to Switzerland in an attempt to talk Nestle out of its dastardly act, while members of Parliament urged the government to stop this foreign invasion.

Municipal officials convened a Council of the North in York for the first time in 347 years (minutes of the last meeting had to be taken as read—they were burned in the 1644 siege of York). The last previous meeting, comprised of barons, protested the call of Charles I for taxes. Members, who no longer have any real authority, this time protested the impact of foreign takeovers on British jobs.

But in spite of that spirited defense, Nestle acquired Rowntree for some US$4.25 billion over a $3.9 billion bid from another Swiss chocolate maker, Jacob Suchard AG, which was also considered a suitor for another British sweets firm, Cadbury Schweppes, in what delighted UK headline writers tagged "bar wars." The British government refused to intervene. How could it? At almost the same time, hundreds of people in Pittsburgh USA were ripping up their American Express cards in protest against a British bid for the locally-based construction materials firm, Koppers.

The British bidder, Beazer, was partly financed by the American Express subsidiary, Shearson Lehman Hutton, one of several Wall Street investment banks that have emerged as leading advisors to acquisitive British firms. Goldman Sachs International, a subsidiary of the New York bank, was involved in deals worth more than $15 billion as the leading financial adviser to UK acquirers in 1987.

"The lessons learned in the United States over the last decade—about how to take over companies—are now being applied by foreigners," says J. Tomlinson Hill, head of mergers and acquisitions for Shearson Lehman Hutton.

Also imported was the taint of alleged insider-trader scandals, such as one involving Nahum Vaskevitch, London-based mergers-and-acquisitions chief of Merrill Lynch & Co., the first US firm to join the London Stock

PREMIUM ISSUE

Sparr Equipments

Strike it rich with us.

In just half a decade since commencing operations, Sparr Equipments has a remarkable set of achievements to its credit.

To start with, from selling one Hydraulic Water Well Drilling Rig in 1983, the Company now sells over a 100 rigs in a year. Developed with complete indigenous technology.

Despite the stiff competition from multinationals, whose shares are commanding high premium, Sparr has developed a high technology product. Which, commands a major market share in Hydraulic Water Well Drilling Rigs.

We attribute this phenomenal growth to our technical strength, professional management and innovative product design with strong R & D, made adaptable to suit local conditions. Our record of achievements so far has added immense impetus to introducing more related products.

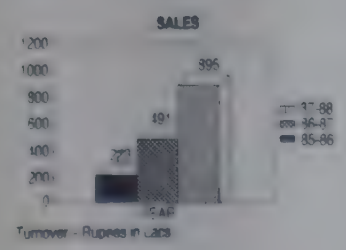
With the Government according top priority towards agriculture, water resources development and open cast mining, the prospects of growth for the Company, are very apparent.

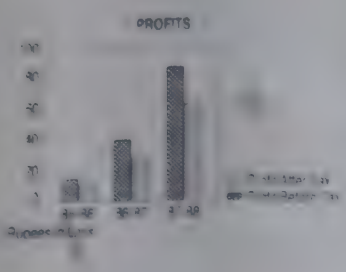
The Company is planning to introduce crawler-mounted mining rigs and also innovative accessories, to meet the growing market.

This is how we struck rich: Strike it rich with us.

HIGHLIGHTS:

- ★ **Sparr – the name behind majority of Hydraulic Water-well Drilling Rigs sold in the Country.**
- ★ **Technocrat promoters.**
- ★ **Excellent track record of growth.**
- ★ **Assured and growing market.**
- ★ **Established dividend paying Company.**
- ★ **Assured dividend of 20% (pro-rata) for the year 1988-89**
- ★ **Listing at Bombay and Bangalore Stock Exchanges.**





Public issue of 6,00,000 Equity Shares of Rs. 10/- each for cash at a premium of Rs. 10/- per share.

Subhagya/BNG SEL/88377

Exchange. His March 1987 firing meant Merrill Lynch's decline as an M&A adviser to British firms.

Nationalistic fervor surfaced again in July in Britain as the Australian company Goodman Fielder Wattie attempted to take over the food conglomerate Rank Hovis McDougall. More than 100 members of Parliament tabled a motion asking that the bid be referred to the Monopolies Commission, which is charged with maintaining free competition in the marketplace.

"Are we going to let all our major companies...be taken over by foreign groups" thundered a leading industrialist. A few weeks earlier, the makers of the venerable HP and Lea Perrins Sauces had been bought by a French company.

Yet once again, Britain could hardly complain. The British retailer Marks & Spencer had just taken over the US menswear chain, Brooks Brothers, Beazer acquired Koppers, and media magnate Robert Maxwell launched a $2 billion bid for the US publisher Macmillan, his third attempt in a year to buy a US company. Britain is by far the largest buyer of US businesses, having spent $31 billion there in 1987 and with investments five times greater than those of the feared Japanese invaders.

Acquisition and mergers in the UK in the 1988 first quarter totalled $12 billion, the second highest figure on record, representing 275 deals, the fourth consecutive quarter with a total exceeding 250. John Banham, director general of the Confederation of British Industry, said mergers, acquisitions and joint ventures involving at least one of the European Community's top 1000 firms rose 27 percent in the year to June 1987, compared to 17 percent the previous year.

A $4.9 billion bid in September from the overseas investment arm of the South African Anglo American Corp. for Consolidated Gold Fields, a London-based company with gold mines in South Africa, was the largest ever for a British firm. The bid opened a battle between the two largest gold-mining companies in the non-communist world.

Then in October, Britain's Grand Metropolitan, reportedly selling its Inter-Continental Hotels Corp. to the Japanese department store operator, Seibu Saison, for more than $2 billion, turned around and bid $5 billion for the US miller, Pillsbury.

The five-month battle over Italian financier Carlo de Benedetti's hostile bid for Societe Generale de Belgique, Belgium's dominant corporation, ignited a boom that so swiftly boosted the country's stock market index, the otherwise sedate Brussels exchange became the first in the world to recover from the Bloody Monday crash of October 1987.

"Our market has suddenly been injected with a mentality that Wall Street has had for many years—that a company can be bought," said Jean Peterbroeck, the exchange president.

There is little concern among businessmen (at least those not about to be taken over) and economists at these manifestations of economic imperialism. When BBA Group last April captured Guthrie Corp., ousting managing director J.M. Green-Armytage, who helped engineer a takeover of Guthrie in 1982, he remarked, "This is a case of he who lives by the sword, dies by the sword."

Capitalism is once again the flavor of the month, as witness economic developments in China and the Soviet Union's fabled *perestroika*.

Despite a small market, what makes Britain attractive to the likes of Swiss, Australian and US investors (the biggest), is its membership in the European Community and the prospect of the tariff-free, frontierless single European market that the community seeks to create in 1992. When that happens, outsiders will be at a disadvantage without a foothold inside the EEC.

> A takeover binge that a decade ago in the US spawned the junk bond and that shows signs of growing even more frenzied has spread worldwide from Wall Street.

The instinctive public resistance to such wheeler-dealing is not entirely misplaced. "Merger mania" may not serve us very well. We have already seen—through various insider-trading scandals—how the takeover business can encourage financial crime. We know that "rationalization" after merger is often just a euphemism for unemployment and that asset-stripping is a favored technique among those who want to get rich quick.

Empires have a nasty habit of crumbling. A recent example is the once-acquisitive Australian entrepreneur Robert Holmes a Court, whose Bell Group crashed with world stockmarkets last October and is now being sold to his yacht-racing fellow countryman Alan Bond. The colorful Bond is said to have financed his international purchases—ranging from the Chilean telephone company to a US brewery—with an amount equal to a ninth of Australia's total external debt. What will happen to him when the next cold economic wind blows?

Takeovers are popular because a lot of people make a lot of money out of them. They help to create an illusion of dynamism and prosperity, so they benefit politicians, too. They are a quick and easy—perhaps too easy—method of achieving what we are encouraged to think of as "growth."

Adam Smith wrote: "To found a great empire for the sole purpose of raising up a people of customers, may at first sight appear a project fit only for a nation of shopkeepers. It is, however, a project altogether unfit for a nation of shopkeepers. But extremely fit for a nation that is governed by shopkeepers."

The question is, do we want to entrust our future to people whose chief concern is what comes through the cash register?♦

YOUR CORPORATE GIFTS COULD EARN A BAD NAME FOR YOUR ORGANIZATION!

The corporate gifts that you give to your clients and business associates are your gesture towards the relationship that you have with them.

A gesture, that you care. And think of them with fondness.

If, what you gift is substandard and does not perform, then think, what your clients and associates will feel?

More important — how would you feel?

To avoid embarrassment follow the tried and trusted idiom:

PREVENTION IS BETTER THAN CURE.

So, when you select a corporate gift based on digital watch modules, make sure it has a SCL digital watch module in it. And not a spurious smuggled one. Insist on the gift manufacturer showing the SCL digital watch module to you.

For, if you decide in haste you may repent at leisure.

Don't decide in haste. Don't repent at liesure.

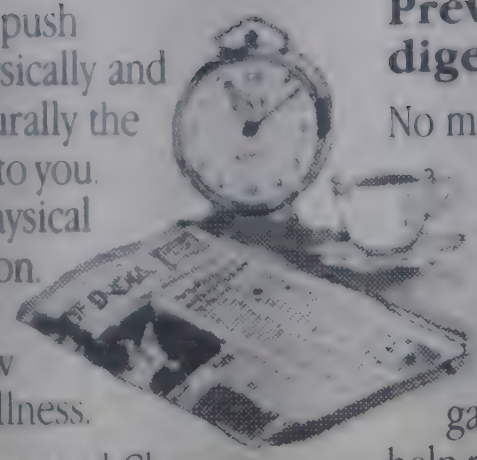
The right choice.

Everyday you push yourself – physically and mentally. Naturally the pressure gets to you. Mental and physical fatigue. Tension. Digestion problems. Low resistance to illness.



That's why you need Chyawan Shakti –nature's own formula to fight symptoms of stress–created with over 46 precious herbs. Brought to you by Dabur.

Chyawan Shakti–combats stress, revitalises mind and body

The effects of stress on your nerves can be disastrous. Chyawan Shakti has ingredients like Draksha, Ashwagandha, Akarkara and Gokshur. These act as demulcents and tonics, while Kesar and other herbs build up physical vigour and invigorate the mind.

Prevents acidity and digestion problems

No more antacids and anti-flatulence pills. Herbs like Akarkara, Lavanga, Madhu and Mukta Shukti Pishti prevent acidity, help digestion, stimulate appetite, relieve gastric and intestinal pains and help regular bowel movement.

Rich in Vitamin C to fight illness

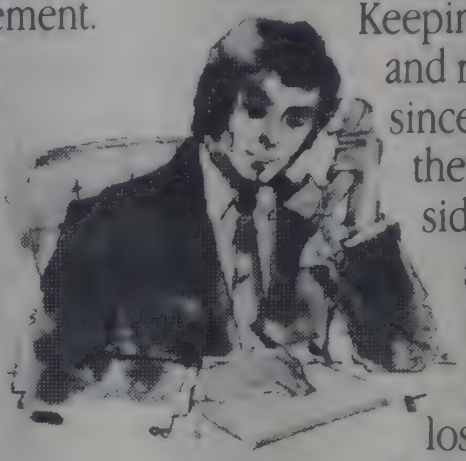
Who needs orange juice!

Chyawan Shakti has an abundance of Amla, the richest source of Vitamin C.

This, along with other herbs in Chyawan Shakti, acts as a powerful immuno-stimulant to build up resistance to common ailments.

Fountain of youth

Chyawan Shakti supplies you with Iron, Calcium, Minerals, Magnesium, Phosphorous and acts as an all-round health tonic.



Keeping you feeling young and raring to go. And since it is wholly natural, there are no harmful side effects. So go ahead and give it a try.

You have nothing to lose except the adverse effects of stress and strain!

'No income tax anywhere'

That helps takeover artist build billion-dollar empire in India

By Arun Chacko
in New Delhi, India

MANIHAR (MANU) CHHABRIA was a small-time Bombay dealer in electronic spare parts when at 27 years old in 1973 he headed for Dubai with US$3,000, attracted by the oil-fueled Persian Gulf bonanza. With Arab partners, he established Jumbo Electronics and by March 1975 secured an exclusive Sony dealership for Dubai and five other emirates. The dapper, bespectacled Chhabria never has looked back, building a commercial empire with a worldwide annual turnover of US$1.2 billion and becoming one of India's premier takeover specialists.

No one in India really had heard of Manu Chhabria until 1984 when he turned his attention to his native land, chilling many an industrialist. In tandem with another takeover expert, R.P. Goenka of Calcutta, Chhabria quietly bought up the foreign-held shares of Dunlop India from the British-based mother corporation and took over the tire and rubber goods maker with annual sales of about $400 million.

In less than four years, Chhabria and his brother, Kishore, 33, who runs Jumbo's London operation, built a ranking Indian industrial group with annual sales of $700 million adding to sales of $500 million by his foreign holdings.

In late 1986, Chhabria's net worth was estimated at $100 million and his annual salary from Jumbo Electronics, Dubai, at $500,000. He took no money from other business and reinvested all profits. Chhabria's net worth is believed to have nearly doubled since.

To acquire the 60 percent Australian share holding in Mather & Platt, Falcon Tyres and 66 percent in Hindustan Dorr-Oliver, which have combined annual sales of $70 million, Chhabria shelled out over $30 million in hard cash. Another $46 million went into other acquisitions—Shaw Wallace, Dunlop, Gordon Woodroffe and a 7.5 percent stake in Bayer India.

Where did he get the money? Chhabria has said, "My investments in India are from surplus funds which I have set aside. It is important to understand that I am a resident of Dubai where, apart from a 4 percent tax on imports which is passed on, no other taxes are payable. Moreover, by careful tax planning I don't pay income tax in any country in the world.

"Thus I have been able to save and reinvest my entire dividend income for over 14 years. And by West Asian standards, the net worth I have built up in these years is not very unusual.

"In 1974, I was lucky enough to make a large windfall by trading in sugar and in the early 80's in gold. But the explanation for my large investment kitty is that I have consistently saved my entire worldwide income and have lived on the Jumbo salary. I have excellent portfolio managers who have invested my savings very profitably."

Chhabria paid $11 per share, double the market rate, or $27 million to Malaysia's Sime Darby in 1985 for its 38.7 percent equity stake in Shaw Wallace. The Shaw Wallace management bitterly resisted the acquisition. Chief executive S.P. Acharya claimed Chhabria was a front for Bangalore liquor tycoon Vijay Mallya. A fierce battle raged, and it was March 1987 before Chhabria and his brother, Kishore, were elected chairman and director.

Chhabria has denied he fronted for other businessmen. Explaining his rash of takeovers, he says, "I wanted to prove that I am nobody's front man, that I have enough money on my own."

Shaw Wallace has launched an all-out assault on the liquor front, seeking to overtake the 33 percent market share of Mallya's United Breweries of Bangalore. Shaw Wallace has a new consumer products division to sell toilet soap, detergents, toothpaste and hair oil and hopes fourth generation pesticides will improve the company's 4 percent market share in India. Further plans range from automotive tires to geophysical prospecting and real estate development.

"Shaw Wallace is like a sleeping giant," says Kishore Chhabria. "We want to wake it up and turn it into a highly diversified, high technology oriented, multi-product conglomerate."

Chhabria's strategy has been to buy the often controlling foreign shareholding of Indian companies. He has made unsuccessful bids for Chloride India, the battery giant, and for International Instruments, which makes odometers. He entered the local stock market to attack Larsen and Toubro, a large engineering concern, but failed to corner enough shares for control.

Although Chloride India and the others have taught Chhambria he can't win all the time, he says, "Now that I have tasted industrial power, this is the future for us."♦

Reliable,
Rugged and Compact

Discover the three-in-one advantage of contactors from Batliboi

Lakshmi contactors from Batliboi. Their advantages to original equipment manufacturers and actual users, are threefold:

Superior Electrical and Mechanical Properties: High AC3/AC4 ratings. Eliminate contact failure and down-time. Add-on blocks, mechanical latches, mechanical interlocks and surge suppressors, common to all contactors in the range. Common coil for auxiliary and power contactors upto 16A rating.

Higher resistance to damage in transit: The contactors are made from high-grade plastic, not bakelite.

Compact design: Occupy minimum space in the panel. Have higher thermal ratings, to enable mounting contactors in close proximity to each other.

The thermal overload relays have built-in safeguards against single phasing. Auto/manual reset facilities along with two independent trip contacts are available as standard features.

All backed by Batliboi's prompt after-sales service.

THE MERGERS GAME

Once labelled hijacking, M&A goes legit in Japan

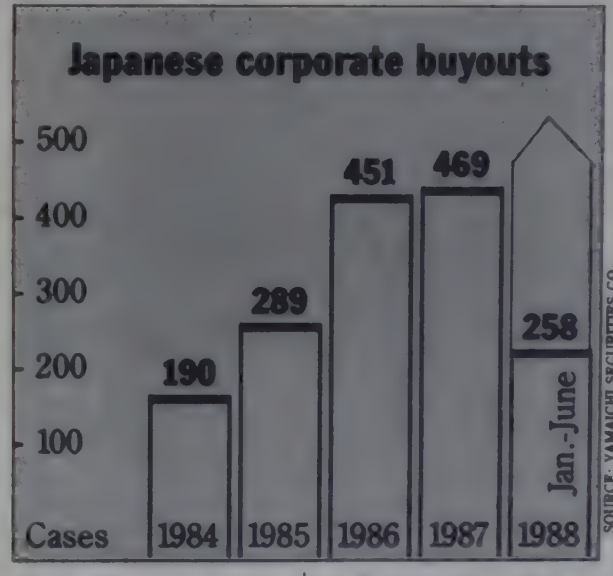
Need to expand, yen rate means no more nottori

By Yusuke Watanabe
in Tokyo, Japan

JAPANESE INDUSTRY long has considered corporate buyouts an unwelcome, even illegitimate business strategy. Executives who believe in old-line entrepreneurship—creating a big enterprise from the bottom up—often call takeovers *nottori*, or hijacking.

Nottori is still used today—but with fewer negative connotations. Needing international business expansion and enriched by the higher exchange rate of the yen, an increasing number of Japanese corporations has begun snapping up foreign enterprises.

Japanese buyouts of foreign firms rose to 228 in 1987 from 44 in 1984, according to Yamaichi Securities Co., Japan's most active mergers and acquisitions mediator. The number reached 141 after the first six months of 1988 and is expected to hit a record high.



Recent buyouts included such mega deals as Dainippon Ink & Chemicals' (DIC) US$535 million purchase of Reichhold Chemicals Inc.; Aoki Corp.'s $1.3 billion acquisition of Westin Hotels & Resorts; Sony's $2 billion buyout of CBS Records; and Bridgestone's $2.6 billion takeover of Firestone Tire and Rubber Co.—the largest acquisition ever by a Japanese entity.

Dainippon presents a typical Japanese M&A strategy.

Following the acquisitions of Kohl & Madden Printing Inc. in 1974 and Polychrome Corp. in 1979, Dainippon obtained the graphic-art division of Sun Chemical Co. for $550 million in August 1986, and Reichhold Chemical, the top thermoplastic maker, a year later. These buyouts instantly established integrated US production bases both for ink and resins, and DIC became the world's largest printing ink supplier, holding 15 percent of total market share.

One strong incentive for Japanese buyouts has been the yen's sky-high rise against the US dollar. Sanwa Bank, for instance, decided to buy Lloyds Bank California in the summer of 1985 when the dollar was equivalent to 240 yen. By Aug. 26, 1986, when Sanwa bought the bank for $263 million, the yen's rate had climbed to 154, pushing down Sanwa's yen payment burden to 40.5 billion yen from the initial value of 63.2 billion yen.

The unprecedented M&A spree has also given rise to new moves in investment banking businesses. While powerful M&A organizers from Wall Street, such as First Boston, Goldman Sachs and Morgan Stanley, have reinforced their Tokyo bases, Long-term Credit Bank of Japan has expanded its investment banking network by obtaining a stake in Peer's & Co., a New York-based M&A adviser. Nomura Securities Co., the largest Japanese brokerage house, has tied up with Wasserstein-Perella & Co., one of the most aggressive M&A firms on Wall Street.

Foreign buyouts, a new, unfamiliar strategy for many Japanese companies, sometimes cast dark shadows over ambitious dreams. To buy Firestone, for example, Bridgestone forked over a sum 3.5 times greater than it had originally planned to outbid Italy's Pirelli. Its winning bid was greeted with an unexpected announcement by General Motors, a big client of Firestone, that it would stop purchasing automobile tires from Firestone in two years. Many industry observers say the Firestone buyout has brought new hardships to the Japanese tire producer.♦

Yusuke Watanabe covers Tokyo's economic beat.

25 LINES ON THE GLORIOUS SAGA OF INDIA'S PREMIER TRADING ORGANISATION IN ITS SILVER JUBILEE YEAR

1963: The year of MMTC's birth. Now a quarter century of eventful existence.

Born out of the objective to match the nation's basic resources with needs closely linked to its progress.

A canalising agency — to acquire vital imports while exploring world markets.

Export of mineral ores and import of non-ferrous metals dominated the early years.

Agriculture coloured the next phase.

Import of fertilisers in right quantity, time and price.

The objective was to evenly balance the demand and supply of critical inputs.

Skilful management escalated the iron-ore exports to record heights.

Then the old order changed. A new corporate plan was evolved to make MMTC the flagship of India's foreign trade.

To move out from the shadows of a mere canalising agency to a multi-merchandise international trading company.

Suddenly, new strategies — innovative and creative, came into play.

Restructuring the corporation into various divisions as profit centres, was the first step.

A corporate planning group was established to define long term future plans, identify newer markets.

A satellite based communications system was developed along with infrastructural facilities and modernisation of ports.

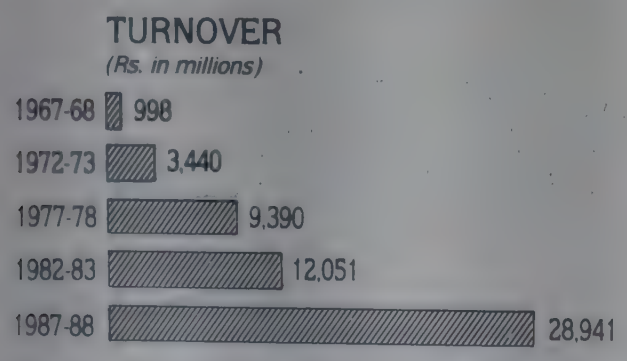
Training gained crucial importance in keeping with the increasing demand for specialist skills.

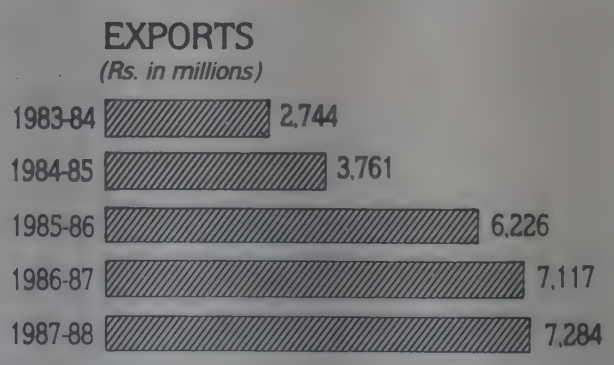
The challenging objective of financing its imports through exports demanded newer approaches.

The corporation used its leverage to open up new export opportunities for organisations, specially in the public sector.

It became a catalyst creating new exports beyond minerals and metals. Like jewellery and diamonds.

Light and heavy engineering goods, agricultural products, processed foods, projects, consultancy services and more.





Result : The corporation's turnover grew from Rs. 870 million in 1962-63 to Rs. 28,941 million in 1987-88.

Exports in the last 5 years grew from Rs. 2,744 million to Rs. 7,284 million, making MMTC the largest export organisation in the country.

Today, as we move from strength to strength it's time for thanksgiving to all who have helped us in touching silver.

An occasion to look to the future with hope and confidence and articulate a corporate commitment.

To achieve the phenomenal growth the country is planning in foreign trade by the turn of the century.

1988: Yes, MMTC is now all set to enter the golden era in global trading.

The Minerals and Metals Trading Corporation of India Limited

THE MERGERS GAME

EC seeks takeover curb

Europe's competition czar explains new policy

PETER D. SUTHERLAND, the European Commission's commissioner for competition policy, explains from Brussels, Belgium, the EEC drive to strengthen regulation of mergers and acquisitions among members:

What is happening to prompt the EC to seek greater control now over mergers?

The present proposal is based on one which was first put to the Council in 1973, the member states having agreed on the principle at the Paris Summit in 1972. Changing circumstances in recent years have given the issue added significance. The rapid internationalization of trade and the restructuring of European industry in response to the developing single market is being reflected in increasing numbers of cross-border mergers and acquisitions and has clear implications for competition within the Community. The Community strategy of achieving a single internal market by 1992 requires the adoption of merger control legislation. It is difficult to see how the internal market could properly function in a legal environment which continues to subject Community-scale operations to different, and perhaps conflicting, national laws.

What are the most important elements of the EC merger plan?

- Mergers subject to control by the Commission should only be those with a Community dimension.
- The system should provide legal certainty for companies and it should be a "one-stop-shop" operation.
- There should be provision for authorization of mergers where they benefit the wider economy or improve the competitive structure.
- There should be adequate consultation with the member states in the decision-making process.

Are mergers and acquisitions increasing within Europe?

Intra-community cross-border mergers or acquisitions involving at least one of the Community's 1000 largest firms, have increased from 29 in 1983-84 to 75 in 1986-87. Furthermore, in almost 60 percent of the total mergers monitored by the Commission in 1986-87, the combined turnover of the companies concerned exceeded 1,000 million ECU's. This is a significantly higher percentage than in previous years and points to an increase in the rate at which concentrations are occuring.

What impact do mergers and acquisitions have on the economy?

It is obvious that merging undertakings always expect to benefit from the operation, but some studies show that this is not always the outcome. "Big" is not always "beautiful." Experience also shows that mergers, which are motivated by restructuring, may lead to job losses in the short term. If mergers achieve their micro-economic objectives, an increase in jobs may be expected in the long run. One thing is clear—maximum efficiency can only be exploited when we have the stimulus of competition. ♦

ST. GEORGE'S UNIVERSITY SCHOOL OF MEDICINE

GRENADA, WEST INDIES

The General Medical Council of the United Kingdom has officially recognized St. George's University School of Medicine.

This recognition allows graduates of St. George's to do postgraduate training in Great Britain. St. George's has had a clinical training program in British hospitals since 1980.

St. George's University offers two programs leading to the degree of Doctor of Medicine (M.D.) for qualified international students:

1. A 4½ year program for students who have completed a bachelor's degree in addition to higher secondary education in math and sciences.
2. A 6½ year combined premedical/medical program for students who have completed secondary education (equivalent to at least five "0" Levels). The premedical phase is offered at Barry University in Florida, U.S.A.

St. George's University has graduated more than 1,390 students from over 30 countries and offers a broad-based international curriculum and clerkship opportunities. The medium of instruction is English. Tuition and fees are paid in U.S. dollars.

Boehringer-Knoll

Excellent performance; dividend skipped to conserve funds for modernisation; chloramphenicol plant fully restored to operation; new drug introduced

The company has skipped dividend as in the previous year to conserve funds for capital expenditure urgently required for modernisation of the plant. The last time the company paid a dividend was in 1986 (10 per cent). The company's sales increased by 20 per cent to Rs.23.82 crores (previous year: Rs.19.89 crores).

The company has fared exceedingly well. Its operating profit rose from Rs.0.73 crores to Rs.1.53 crores. After interest charges of Rs.0.98 crores (Rs.0.73 crores) the gross profit is Rs.0.55 crores (nil in the previous year). After depreciation of Rs.0.20 crores (Rs.0.21 crores) there is a net profit of Rs.0.31 crores (loss of Rs.0.21 crores).

The company had, in fact, turned the corner in the second half of the year under review, by making a net profit of Rs.0.85 crores, compared to a loss of Rs.0.55 crores in the first half. Sales were higher by 25 per cent and operating profit was Rs.1.51 crores compared to just Rs.1 lakh in the first half. Operating margins jumped 11.39 per cent.

The chloramphenicol plant was fully restored to operation by the end of June 1987 after the mishap which occurred in November 1986. The plant produced 58 tonnes of chloramphenicol against the installed capacity of 60 tonnes.

The company has undertaken the modernisation of the pharma division involving an outlay of around Rs.1.50 crores. With the liberalisation policy adopted by the government, the company will be able to expand its production to the level of the maximum capacity of the plant, by adding balancing equipment. The growth of the diagnostic division continues to be good.

During the year, the company introduced a new drug ISMO 20, which is used in the treatment of angina pectoris.

VAM Organics

Increased dividend, sales, and profit; new plant to make monoethylene glycol expected to be commissioned by January 1989

The company paid 30 per cent dividend for the year ended April 1988 (previous year: 25 per cent). Sales increased from Rs.27.92 crores to Rs.32.21 crores, a 15 per cent increase. Operating profit was more or less the same at Rs.10.74 crores (Rs.10.70 crores). After reduced interest charges of Rs.1.55 crores (Rs.1.64 crores), the profit at gross level was Rs.9.19 crores (Rs.9.06 crores). Depreciation claimed only Rs.2.33 crores (Rs.4.82 crores) and taxation Rs.2.10 crores (Rs.66 lakhs). The net profit was Rs.4.76 crores (Rs.3.58 crores). The cash profit is lower at Rs.7.09 crores (Rs.8.40 crores).

The company has revalued its assets, namely, land, building, plant and machinery; they are now valued at Rs.20.46 crores.

India Glycols Ltd, a company promoted by VAM to manufacture monoethylene glycol at a project cost of Rs.87.50 crores, is making rapid progress. The plant is expected to be commissioned by January 1989. The company has also entered into an agreement with a West German company to jointly manufacture specialised silica. The plant will be located in Moradabad, UP.

The company is enhancing its installed capacity for the manufacture of vinyl acetate monomer to 20,000 tonnes from 10,000 tonnes. The average selling price of VAM was Rs.21,535 per tonne, (Rs.19,919 per tonne). The main raw material — molasses — cost Rs.360 per tonne (Rs.253 per tonne). The company has an amazingly low ratio of raw material cost to sales — 13 per cent.

The company did well in the year ended June 1988 and made a profit of Rs.15.28 crores (previous year: loss of Rs.4.55 crores). As a result, it has increased dividend from 15 per cent to 20 per cent. Operating profit was Rs.35.33 crores (Rs.29.43 crores). It would have been more, but for the 51-day strike which resulted in a considerable loss of production. Furthermore, it faced a water shortage caused by successive severe droughts in Rajasthan.

The company's interest payment was lower than in the previous year at Rs.3.73 crores (Rs.4.71 crores) because its loans have come down to Rs.116.29 crores (Rs.119.51 crores). The company reduced its expenses on depreciation account and had to provide Rs.3.30 crores for taxation.

At net levels there was a profit of Rs.15.28 crores. The reserves and surplus is Rs.15.51 crores (Rs.3.09 crores). This indicates the profit retained by the company in a favourable year. The earning per share is over 100 per cent at Rs.11.10. The higher profits are a result of a drastic cost-cutting and efficiency drive by the management.

JK is the only tyre company manufacturing steel belted radial tyres. It will soon launch a new steel belted radial tyre, namely Star Trek, for Maruti cars. The company produced 733,000 automobile tyres against an installed capacity of 1,284,000 tyres and sold them at an average price of Rs.2,745 per tyre. The company's costs have gone up. Rubber cost Rs.20,900 per tonne (Rs.20,000 per tonne). Likewise the cost of fabric shot up to Rs.113,785 per tonne (Rs.99,605) and that of carbon black to Rs.16,705 (Rs.15,440).

The company is setting up a new tyre plant with a capacity to produce a million tyres per annum. In order to diversify its activities, the company is pursuing a project for the manufacture of penicillin-G which is an essential basic drug required for a number of formulations.

The company exported Rs.7 crores worth of goods during the year.

** Figures for 1987 are for 15 months*

Jagatjit Industries

Profits maintained; exports decline; change in group's distribution policy

Jagatjit Industries is engaged in the manufacture of liquor, malted milk food, malt, malt extract, glass bottles and carbon dioxide gas. Nearly 68 per cent of its sales earnings come from liquor and 20 per cent from malt food. Bottles contribute another 9 per cent. For the year ended 31 March 1988 total income at Rs.119.52 crores was higher by 12 per cent compared with the annualised total income of Rs.106.80 crores for the previous 15 months ended 31 March 1987. Dividend was maintained at 30 per cent (previous year: annualised dividend 24 per cent).

The profit for the year would have been higher by Rs.1.77 crores had the company adopted straight line depreciation rates on energy-saving devices. The depreciation on these assets is charged at 100 per cent. During the year lease rental has increased substantially from Rs.44 lakhs to Rs.1.23 crores. Additions to fixed assets at Rs.3.41 crores are lower (previous period: Rs.8.97 crores); the company may therefore have taken certain assets on a lease basis but these are not reflected in the balance sheet.

During the year, the company sold 20,091 kilolitres of liquor for Rs.87.63 crores (Rs.92.06 crores). The average sales realisation per kilolitre was marginally higher at Rs.43,616 (Rs.42,040). In malted foods, thanks to a sustained advertising campaign, the average sales realisation per tonne improved to Rs.38,665 (Rs.36,844). Jagatjit sells whisky under the Aristocrat brand name and malted milk food under the name 'Maltova' and 'Viva'. In the malted food segment, its main competitors are HMM (Horlicks) and Hindustan Cocoa (Bournvita).

The value of exports declined to Rs.9.83 crores (previous period: annualised Rs.11.24 crores). Exports which consist mainly of shrimps are not very profitable but through them the company earns duty drawbacks of Rs.56 lakhs. The company is cash rich with cash and bank balance of Rs.8.74 crores as on 31 March 1988. Its short-term as well as long-term financial position is quite comfortable as indicated by various liquidity ratios.

During the year, it ploughed back Rs.6.11 crores which was used to finance additions to gross block (Rs.2.98 crores) and working capital (Rs.2.91 crores). The book value of the share has increased from Rs.68 to Rs.75. With free reserves about five times the equity capital, the company, subject to various approvals, intends to issue one for one bonus shares. Its subsidiary, Milk Food, has stepped up dividend from 15 per cent to 50 per cent. The distribution policy of both Jagatjit and Milk Food was uneven in the past. But there seems to be a change now for the better.

East India Hotels

Profit declines following higher interest and depreciation; benefits of Sec.80 HHC now extended to hotels also

East India Hotels (EIH) which runs the Oberoi group of hotels has posted disappointing results despite a 22 per cent growth in its gross revenue. Pre-tax profit

F ONLY ELECTRICAL SHORT CIRCUITS WERE FIREPROOF

A minor fault in a control panel of a machine can lead to major short circuits and fire hazards, leading to loss of life and costly equipments.

VERSATRIP provides complete range of VB combination fuse switches for control and protection from the deadliest of short circuits and to protect your equipments from fire hazards.

Here is the proof: VERSATRIP'S VB Fuse Switches incorporate

- DMC Mouldings which are non-hygroscopic in nature and which have high temperature withstand capacity. Thus they can maintain their insulating properties even when mounted inside the panel.
- Integral inter-phase barriers between terminals and between contacts. Thus no loose sheets are required to act as insulating barriers.
- Highest creepages and clearances between terminals eliminating flash overs.
- Unique contact system with arcing tips and arc chutes preventing arc spreading outside.

In addition to the above special features of design, these fuse switches have passed exhaustive ***Type Tests*** *as per latest* ***I.S.S. 4064.***

a. *Fuse short circuit tests of as high value as 50/84/104 KA in three frame sizes respectively.*

b. *AC-23 motor duty tests.*

c. *Electrical/Mechanical endurance tests.*

Yet VERSATRIP Fuse Switches do not cost the earth!

TVSE-308-88

eclined by about 15 per cent following igher interest and depreciation charges. rofits declined further by 29 per cent to s.6.93 crores due to higher tax provision equired under section 80 HHC of the ncome Tax Act. The benefits under this ection are now available to hotels too. Jnder this section, 50 per cent of revenue arned in foreign exchange will be tax-ree and the rest is eligible for tax exemp-ion provided it is re-invested in tourism-elated activities.

EIH's foreign exchange earnings for he year were higher at Rs.48.74 crores (previous year: Rs.40.65 crores). The company's major rival, Indian Hotels, which runs the Taj Group of hotels, earned substantially higher foreign exchange at Rs.67.81 crores during 1987-88.

During the year EIH's tax ratio was much higher at 24 per cent (8 per cent), the same as Indian Hotels. The tax ratio is likely to come down after the benefits under section 80 HHC are extended to the hotel industry. The earning per share declined from Rs.5.6 to Rs.2.9 during the year.

The main reason for the decline in profits was the 48 per cent increase in interest costs to Rs.12.03 crores. The company had raised Rs.32 crores last year by issuing 13.5 per cent convertible debentures resulting in higher interest costs. The company proposes to raise a further Rs.15 crores through the issue of non-convertible debentures for renovation and for meeting long-term working capital requirements. As a result interest costs will go up even further.

During the year, the company added Rs.24.81 crores to the gross block. Its application to invest in the equity shares of Pleasant Hotels, Madras has been approved by the government. With the acquisition of this 174-room hotel the group's activity will get a further boost. It has also selected sites for constructing hotels in Agra and Goa. A relatively new activity is the development of hotel computer software for export.

Indo Asahi Glass

The company has performed excellently in the first half of the current year.

Sales at Rs.16.56 crores are 63 per cent higher while operating profits have jumped Rs.3.27 crores (Rs.1.85 crores in the corresponding period last year).

The company is servicing a higher interest burden of Rs.1.86 crores (Rs.0.86 crores). The provision for depreciation is high at Rs.1.36 crores (Rs.0.98 crores). The net profit therefore remains at the minuscule level of Rs.4 lakhs (Rs.1 lakh). However, the cash profit was much higher at Rs.1.40 crores (Rs.0.99 crores).

There has been an appreciable improvement in profitability and productivity. This is evident from the fact that operating margins have risen to 19.75 per cent from 18.16 per cent in the corresponding period last year.

Meanwhile, costs per unit are lower. The cost of raw materials accounted for only 19.69 per cent of the value of sales (25.91 per cent), while expenditure on salaries and wages accounted for 13.10 per cent (16.39 per cent) of sales. But the other selling and distribution expenses were higher.

Fulford India

The company's sales and profits in the half year ended June 1988 have grown. Sales at Rs.12.91 crores (Rs.10.79 crores) are 20 per cent higher than in the corresponding period last year. The operating profits have jumped up to Rs.0.94 crores (Rs.0.67 crores). The interest charges are higher at Rs.0.65 crores (Rs.0.51 crores). The provision for depreciation is Rs.5 lakhs (Rs.4 lakhs) and taxes are Rs.14 lakhs (Rs.10 lakhs). The raw material costs are higher at Rs.7.74 crores (Rs.6.01 crores). The wage bill too is higher at Rs.1.10 crores (Rs.0.93 crores).

But despite these extra charges and higher provisions, the company has managed to earn a higher profit.

It is important to note that the company usually does much better in the second half of each year. Last year, sales in the first and second half were Rs.10.79 crores and Rs.17.93 crores respectively and net profit in the same period was Rs.10 lakhs and Rs.60 lakhs respectively. Even the working margin in the second half was better at 11.1 per cent compared with 6.2 per cent in the first half.

The price realisation has vastly improved, following the upward revision under the new DPCO. But this has not been fully reflected in the six months under review as the DPCO came into existence sometime in the middle of this period. The next half year should see highly improved sales and profitability.

Escorts

The company has done remarkably in the first half of the current year. Its sales at Rs.253.57 crores (Rs.190.80 crores) were 33 per cent higher.

The company has lumped raw material costs with the other selling and administrative expenses. As a result, its raw material costs are difficult to determine. The wage bill has risen to Rs.27.53 crores (Rs.22.25 crores), an increase of 24 per cent, while the other expenses are higher

A LOT OF MANUFACTURERS IN INDIA HAVE GOTTEN WISE AND PROGRESSIVE.

ARE YOU ONE OF THEM ?

All over the world manufacturers are switching over to the lamitube. For good reasons. For one thing, the lamitube looks so much better. You can print whatever attractive designs you want in as many colours as you like. Which means your product, standing on the shelves among so many others, stands out to catch the consumer's eye. And the lamitube is so much more hygienic. No messy grey oxides on your products. No wastage because of wrinkled tubes. No paste oozing out of the back of the tube instead of the nozzle. And no bursting.

So, if you haven't switched over to the lamitube yet, do it now. It makes a lot more sense.

37 per cent at Rs.192.70 crores Rs.140.39 crores).

The company's operating margins have ightly improved to 9.43 per cent (9.20 er cent). This has resulted in a higher perating profit of Rs.23.92 crores Rs.17.56 crores). The interest burden is ightly higher at Rs.10.43 crores (Rs.9.47 rores). The company has provided s.5.75 crores (Rs.3.92 crores) for depreiation and Rs.1.22 crores (Rs.0.63 rores) for taxation.

In spite of this, it has managed to earn much higher net profit of Rs.6.52 crores Rs.3.54 crores).

The number of Escorts tractors produced rose to 7,287 (5978) and that of ord Tractors to 3,800 (2,818). The company has maintained its position in motorcycles. Production of 175 and 100 cc notorcycles rose to 72,850 (51,571). The ompany expects to end the year with much better profits and sales keeping the urrent performance in view.

RESULTS ANNOUNCED

ACC

During the year ended 31 July 1988 the company clocked a 10.02 per cent increase in operating profit at Rs.75.42 crores (previous year: Rs.68.55 crores). Total income jumped marginally by 5 per cent to Rs.798.13 crores (Rs.760.22 crores). The company continues to pay a dividend of Rs.10 (per Rs.100 share) despite an increased equity base of Rs.55.95 crores (Rs.40.85 crores).

After providing Rs.33.68 crores (Rs.33.33 crores) for depreciation and Rs.34.88 crores (Rs.34.72 crores) for interest, the pre-tax profit is substantially higher at Rs.6.86 crores (Rs.0.50 crores). There is no provision for tax as compared to Rs.0.16 crores last year.

The company sold three loss-making plants accounting for a non-recurring loss of Rs.8.99 crores. The sale increases the capacity utilisation to 93.6 per cent (92.7 per cent). Sales of cement dropped by 1.76 per cent from 78.93 lakh tonnes. The company produced 78.44 lakh tonnes (79.01 lakh tonnes).

Subroto Ganguly, ex-IPCL chairman has joined ACC as vice-chairman and managing director replacing B.K. Banerjee. Two Tata stalwarts Darbari Seth and N.S. Soonawala also joined the board as non-executive members.

All these augur well for the company. The stock market has been quite enthusiastic about ACC. In spite of indifferent results the share price has gone up.

Reliance

Reliance Industries Ltd has announced its financial performance for the 18-month period ended June 1988.

The results announced make impressive reading. Sales for the 18-month period are valued at Rs.1,778.19 crores, gross profit is Rs.172.96 crores and net profit after depreciation is Rs.80.77 crores. Gross block went up to Rs.1,863 crores from Rs.1,138 crores in 1986. The board of directors announced an aggregate dividend of 55 per cent (inclusive of 30 per cent interim dividend declared earlier).

The annualised turnover is Rs.1,180 crores (Rs.924.02 crores). The annualised gross profit is Rs.114.78, up by 53 per cent over 1986. Interestingly, nearly one-third of the gross profit was earned in the last quarter ended June 1988, thanks to the numerous concessions granted by the government since the budget. The annualised net profit is Rs.53.85 crores, a commendable hike from Rs.14.17 crores in 1986, but less than the corresponding net figure in 1985 and 1984. (Rs.71.35 crores and Rs.61.19 crores respectively).

The total depreciation charged for the 18-month period is Rs.91.41 crores, out of which strangely Rs.44.79 crores (about 48 per cent) relates to the last three months. The balance of Rs.46.62 crores covers the rest of the nine months. Of course, the extension of the results from 15 to 18 months made it possible for the company to benefit from the re-introduction of investment allowance reserves. Yet the tax liability at Rs 2 crores under section 115J appears prima facie to be too low. The company has not explained the accounting treatement given to depreciation and tax which makes it difficult to interpret its results.

The stock market did not respond positively when the results were announced, and Reliance share prices went on a decline. The institutions apparently had to step in and keep the prices up.

Mather & Platt

The company improved its performance during the year ended 30 June 1988, with turnover at Rs.46.92 crores (Rs.42.04 crores in the year before). The gross profit was Rs.7.21 crores (Rs.6.79 crores); a 25 per cent dividend has been declared.

After depreciation of Rs.87 lakhs (Rs.89 lakhs), taxation of Rs.2.65 crores (Rs.1.98 crores) and adjustments, the disposable profit was Rs.3.77 crores (Rs.3.87 crores). While dividend payout is Rs.1.6 crores (Rs.1.28 crores), the remaining Rs.2.17 crores (Rs.2.18 crores) has been transferred to the general reserve.

IN BRIEF

Deccan Cements Ltd expects to pay a dividend of 20 per cent for the year ended 30 June 1988. The company's production this year was 120,000 metric tonnes (mt, previous year: 110,000 mt). Gross profit was Rs.2.6 crores (Rs.2.35 crores) and net profit was Rs.85.19 lakhs (Rs.56.15 lakhs). The company is implementing a modernisation and expansion scheme to double its plant capacity which is expected to be completed by September 1989.

Shreyans Paper Mills has achieved higher production this year; as a result the board of directors has recommended a dividend of 15 per cent for the year ended 30 April 1988. Turnover increased to Rs.13.49 crores (previous year: Rs.10.36 crores) and profit before depreciation was Rs.1.77 crores (Rs.1.37 crores). The management has planned a modernisation programme to increase production.

WHEN YOU THINK OF INDUSTRIES

Set up your industry in Maharashtra. And avail of the new 1988 package of incentives. Super incentives you would have hardly imagined any State would give.

Extraordinary features:

Substantial increase in Sales Tax incentives and Special Capital Incentive. Incentive periods raised upto 10 years. Sales tax exemption/ deferral made available where expansion/diversification is undertaken with minimum Rs. one crore investment. Extra incentives provided for energy saving devices, pollution control measures and for local employment. For power intensive units, there's exemption from electricity duty. Resource-based industries get incentives on par with other industries. You get these incentives practically all over Maharashtra except Bombay/Pune and some nearby areas.

SICOM

The ingredients for success

Besides, Maharashtra offers your industry everything it needs to thrive. Unrestricted power. Abundant water. A readymade communications network. Infrastructure complete with modern amenities in the Growth Centres. A ready market and most of all, an industrial culture that provides skilled productive labour.

SICOM – to top it all

Whatever the size of your unit – medium or large – you can depend on SICOM for plant location, technical guidance, finance and escort services. Everything you need to get your industry off to a flying start.

TOCKMARKET REVIEW

All's well that ends well

For the period 24 October to 5 November 1988.)

hough it started badly, the year Samvat 044 has ended by satisfying most partic-ants in stock exchanges around the ountry. Investors are pleased that *The conomic Times* All India Index of Share rice rose by 42 per cent over the year, hile the BSE Index rose 57 per cent. oth indices recorded new highs of 355.4 nd 705.06 respectively over the last nonth and have closed the year near hose highs, with the undertone distinctly ullish. For the broking community, the ayoff has come in the form of higher rading volumes, now recording Rs.90 rores per day on average compared with ess than Rs.20 crores a year ago. The ublic financial institutions must be dou-ly pleased — as much with the returns rom their price-support operations in 1987 and early 1988, as with the returning onfidence of private investors.

Time for a well-earned rest? Stock-narkets, indeed, appeared to have taken time off for a breather last fortnight as prices steadied and *The Economic Times* Index rose only marginally to 353.9 from 353.7 (at the end of the previous fort-night). Meanwhile, the Bombay Stock Ex-change Index fell marginally from 705.0 to 699.8, but was as low as 654.2 on 1 November following the announcement of the annual results of Reliance and ACC. The market's pause was, however, more apparent than real since trading volumes continued to be high. Daily turn-over reached a new record of Rs.120 crores at the close of the fortnight, with the average for the fortnight exceeding Rs.90 crores. The high volumes combined with the steadiness of prices suggest that the market may be approaching its equi-librium level; indeed, many brokers felt that profit taking and portfolio realign-ments seem to have been the major forces behind much of the trades last fortnight.

Another influential factor was the high badla rate of over 50 per cent at the end of the previous fortnight. Although badla rates were expected to fall from those high levels and did (to a still high 36 per cent), prices were under some downward pressure for a while since many specula-tors, once stung, were unwilling to extend their forward positions any longer. The uncertain political situation arising out of the farmers' rally in New Delhi also helped to keep prices subdued until 1 November.

A fascinating aspect of the stock-market is the time it takes to react to information. A case in point is ACC's annual results announced on 31 October. The market's immediate response to the announced profit after tax of Rs.32 lakhs was to mark the stock price down. In very active trading of over 400,000 shares, the price fell to Rs.276.50 (after it had risen to Rs.280 during the day). In kerb trad-ing, however, the impact of the rise in operating net profit (ie, without consid-ering the loss on the sale of two wet-process units) from Rs.34 lakhs to Rs.6.86 crores was felt as the price rose to Rs.320, then to Rs.324 during trading hours the next day when over 1 million shares were traded, and to Rs.380 two days later. The BSE, though, following the now archaic price bands specified in the Dave Committee report, officially re-ported Rs.303.50 against the actual close of Rs.324, and Rs.332 against the actual close of Rs.380. The BSE's discomfiture, was not eased by reports that public fi-nancial institutions were busy trading at the unofficial prices. Clearly, then, the market took its time deciding what ACC's results meant, for ACC's price rose 38 per cent, but only four trading days after its results became publicly known.

While the BSE merely looked silly in the ACC episode, the cases of Noble Ex-plochem and PSI Data suggest that the BSE needs to review the accuracy of its price-recording mechanism. Noble Ex-plochem, for instance was quoted in the official BSE quotation sheet at the single price of Rs.4.50 on 11 October, while trades actually took place at Rs.8. PSI Data's case is even more glaring. The scrip was officially quoted at Rs.19 on 2 November and at the two rates of Rs.19 and Rs.20 on 4 November, while trades took place on these days at Rs.30 and Rs.38 respectively.

Reliance Industries announced its re-sults for the 18 months to June during the fortnight. The market, expecting a divi-dend of at least 60 per cent, was not pleased with the total dividend of 55 per cent, which implied an annualised divi-dend of 37 per cent. The scrip closed at Rs.177, down Rs.9 over the fortnight, after touching Rs.160 upon announcement of results. Meanwhile, the much-awaited an-nouncement of Tata Steel's half-yearly re-sults led to some initial disappointment in the market since the earning per share for six months was Rs.40 against an ex-pected Rs.50. The scrip fell to Rs.962.50 as a result after opening the fortnight at Rs.987.50. But as in the ACC case, once it became clear that an unexpected in-crease in depreciation charges accounted for the reduction in EPS by Rs.8, the market price went up again to close the fortnight at Rs.1,047.50. However, the un-certain effect of pending wage settle-ments may make the share somewhat more volatile than usual.

The general flow of corporate news continued to be very good, with Bur-roughs Wellcome and Ceat Tyres an-nouncing much better annual results, and with Boots, Gujarat Alkalies, Indian Organic, Punjab Tractors and TVS Suzuki also announcing improved half-yearly re-sults. Oswal Agro Furane's annual report announced that all its projects had been implemented and that it envisaged a good year ahead. The scrip, which had been languishing at Rs.30 in April, closed the fortnight at Rs.72.50, up from Rs.63 at the close of the previous fortnight. Vin-dhya Telelink was also actively traded, closing unchanged at Rs.140, as was Modi Xerox, also unchanged at Rs.71. Hin-dustan Brown Boveri rose sharply to Rs.900 from Rs.700, as did its future sta-blemate, Asea, rising to Rs.72.50 from Rs.60. Hindustan Brown Boveri was quoted at Rs.270 in May and was Rs.625 in early October. Its sharp rise in the absence of any particular good news is probably a response to the news of its coming merger with Asea. Since the terms of the merger will probably be in-fluenced by book values, Hindustan Brown Boveri with its market value to book value ratio of 1.72 (calculated at the current market price of Rs.900) appears an attractive purchase given that Asea's market value to book value ratio is 22 per cent higher at 2.1.

Marketmen are looking back on the past year with a mixture of relief (the year started badly, ended well), enthusi-asm (corporate performance was excel-lent in spite of the crop failures of 1987) and optimism (the effects of this year's excellent monsoon are yet to be felt). Add political stability, and the recipe for a bull market will be complete.

■ RAFIQ DOSSANI

31 October 1988
The Boat Club lawns

And I thought the trading floor of the Bombay Stock Exchange was crowded and smelly.

Well, the stroll along Raj Path as one walks dejectedly away from yet another one of those inter-ministerial-committee meetings, where everything one says is rejected or "appropriate notings put in the file", is generally a pensive one. One normally tends to think of catching one of those Indian Airline flights which seem to have some difficulty staying up in the air these days or going on one of those popular relay fasts where you drink a glass of juice every hour on the hour and feast on *chaat* in between it, all in support of a cause. But this stroll was different.

The sea of people got me thinking. Two lakh people all within an area of one square mile. If each guy was to subscribe to Rs. 10,000 worth of shares, that would give you a figure of Rs. 200 crores. And marketing costs would be minimised. One would have hoardings concentrated only in that area. Ten vans with video recorders spewing out the usual stuff about how well the company is performing could be strategically placed on the lawns. One prospectus could be passed around the two lakh people (since most of them cannot read, it would be a waste to print more). The issue cost would fall dramatically — to levels even the G. S. Patel Committee would be proud of.

Although my body movement was restricted, my pace of thinking quickened. Amidst yells praising the new messiah, I thought of the electoral reforms of the old messiah and of the issue of funding political parties. Maybe every political party should launch a merchant banking division. Every time a company wants to go public, political parties should round up their grass level supporters on some silly issue of banning movies or books, or raising the support level prices for mushrooms and converge on Boat Club Road in Delhi, Chowpatty in Bombay, and other equivalent hot spots in Bangalore, Calcutta and Madras. And then, when all the innocent lambs are in for the asking, the application forms and thumb-print stamp pads can be circulated by a set of volunteers on the North Side of the crowd and collected by another set of volunteers on the South Side of the crowd. For all its efforts, the political party will receive 2 per cent as its broking commission.

I doubt whether any of us would object to that because the political parties would be tapping a new market — the rural market — something which we would never touch. After all, we like to fool people but not the poor uneducated guys living in villages who can barely make ends meet. That, we decided way back, is a monopoly market for the messiahs and the not-so-messiahs that is not to be encroached upon.

Furthermore, as recent events have shown, when one PMB (Political Merchant Bank) collects a crowd to push an issue, another PMB can organise a rival rural crowd to push the same issue. This would create an atmosphere of healthy competition and lead to better post-issue investor services, reductions in commissions charged to investors, etc. — an as yet unfulfilled ambition for those poor few serious lawmakers who are trying to regulate the activities of us non-political city merchant bankers.

But really, if only I could weave my way back through this crowd to another inter-ministerial meeting....

6 November 1988
The Hanging Gardens

"Humpty Dumpty," my paternal uncle had told me, "should never have sat on a wall. Before you try to jump into anything," he intoned in his stern but gentle tone, "it is far better to think things over in a garden."

Well, Vikram Samvat 2044 has come to an end. And what a year it has been. From the depths of depression, we have come to the highs of happiness. I confess there has been some strong dose of drug injection in the market — doses that would make the Ben Johnsons of this world seem like angels.

But 2044 has not been as good a year for everyone as it could have. There were the usual disappointments, too. A significant section of my peers did expect the BSE index to cross the 1,000 mark and some indeed were convinced that the position of the stars in relation to Mars, Jupiter, and New Delhi would give us an index of 2044 — matching the year cycles. In any case, if ACC continues its upward climb, TISCO continues to flare, and the omnipresent Reliance continues to be everybody's favourite household pet, can 2,000 be really far behind?

Every party though has its pooper and, as usual, we have our stubborn lot of analysts who continue to act as if the Indian version of Black Monday, Terrible Tuesday, and Woeful Wednesday is just about to hit the screens in 70-mm. This section of society claims that it will be an epic that will make the Ramayana and the Mahabharata look like a Walt Disney family entertainment production. The pessimists continue to point at our rising deficits — internal and external — and the higher costs of servicing these debts.

But all this worry is really hogwash. If the government was really concerned about its deteriorating financial position all it really needs to do is get one of these bright corporate finance guys and liberal auditors to help rewrite its annual accounts. Furthermore, since private sector companies are increasingly hiring public sector employees, it's about time that the government "looks into it", "examines the issues", and reverses this internal brain-drain by inducting some of the bright sparks in the private sector into its fold.

Personally, though, I think we are at the crossroads. Although I do not see a return to the Dark Ages of 1987, I am rather worried about what is going on in the markets today. On the day when ACC and Reliance were to announce their results, my colleagues on the trading floor tell me that there were huge crowds of brokers and jobbers gesticulating wildly in ACC, Reliance, and TISCO. The other scrips, I am told, were treated like neglected farmers. Surely the broking community must change its attitude to speculation. I mean, the last thing we need is some agitation by a leader of the neglected scrips who will bring in a band of speculators into Dalal Street. Has anyone thought of the frightening logistics? Where would they stand or sit? Would the BMC allow more unlicensed bhel-puri wallahs and channawallahs to serve the bigger crowds for the duration of the agitation? And where would all the kerb trading take place? It is quite all right to have these sort of agitations in Delhi but in Bombay....

It is essential that we encourage speculation in all scrips and not just a favourite few. That way if we hang, we hang together. And that is very unlike because, as recent history has shown us, the more you speculate, the bigger you get and the more you collect. The more you collect, the bigger you get, and the bigger you get all the King's men will keep you together again. If only Humpty Dumpty knew that before he had his fall.

In support of your many splendoured personality

You deserve a bank with versatile capabilities – VYSYA BANK

Behind your brilliant personality is an admixture of grit, tact and hardwork — special qualities of a many splendoured person which demand patience, understanding, innovation and flexibility.

That is — the versatility of the service of Vysya Bank — designed to support success to sustain.

And this has been the secret of our success — in being responsive, in being proactive to challenges, in going beyond banking through equipment leasing and credit cards, in occupying the premier position in the private sector.

In your pursuits, team up with the winner — Vysya Bank.

Come, let us grow together.

THE VYSYA BANK LTD

Regd. Office: Avenue Road, Bangalore-560 002.

ULKA-11377

Festive mood

We have no winners for investor contest 276. Contestants have just not been able to cope with the runaway rise in share prices. For instance Finolex Cables which was quoting at 298.75 on 23 September moved to 387.50 three weeks later. The markets continue to be in the grip of the bulls and this year's festival of light is the brightest for marketmen in years.

How to enter

On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict the prices of each of these shares as on 9 December 1988, and send in your entry by 29 November 1988. The winner in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry which has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of 6 correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

Rules:

1 There is no entry fee.

2 The list has been selected on the basis of what we consider are actively traded and interesting scrips on Indian stockmarkets.

3 The price mentioned last in the official quotation list of the stock exchange (if there is a series of such prices against the name of the share) will be taken as the correct answer. The official list of the particular stock exchange, which will be referred to, is given against the name of each scrip. If for some reason the stockmarket is either closed on 9 December 1988, or there are no transactions for the six scrips chosen below, then the quotations for the nearest working day prior to 9 December 1988, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 29 November 1988.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of the **Business India** group of publications is entitled to enter the contest.

Your executives can now fly to work. At ground level.

Presenting the luxury of the new Tempo-Traveller

Tempo-Traveller is the new executive perk

It offers senior personnel the comfort and status that ordinary company buses can never match – and a car-pool could never give.

A spacious interior offers the luxury of upto 15 ergonomically designed seats and large, airy windows.

There's ample room for baggage. And a high curved roof allows for greater freedom of movement.

And it has been specially built for Indian roads by Bajaj Tempo – in collaboration with Daimler-Benz, the creators of the classic Mercedes range.

As cost-conscious as it is status-conscious

The new Tempo-Traveller is equipped with the advanced 72 BHP Mercedes OM 616 diesel engine, which functions like a built-in accountant. It stretches your company's every rupee – delivering the highest level of fuel economy with the lowest level of noise.

The Tempo-Traveller even minimises other maintenance costs. Spares are cheaper and more readily available. And regular service is close at hand. Because you are backed by the 150 experienced dealers established by Bajaj Tempo over a period of 25 years.

So before you stake business capital on company buses or corporate cars, give the new Tempo-Traveller serious thought.

And let your executives 'arrive in better shape'.

BAJAJ Tempo LTD.

The new Tempo-Traveller.
Anywhere else, they'd call it a Mercedes Transporter.

"Strength.
The ability to meet challenging
situations head-on.
The drive to get what I want.
These have all contributed to my success.
Naturally, I opted for the strongest
general insurance company.
New India, of course."

At the heart of a truly successful enterprise, here's always a strong core of motivation...
Boldness in thought and action.
The courage to take on new challenges.
The confidence and the innovative spirit to be the first in its field.
All this has made New India Assurance a Rs.500 crore premium company — and the leader in general insurance in India.
Always the first with so many policies... such as the Cancer Cover, Unborn Child Welfare Scheme and the Borewell Scheme — to name a few...

And the first to provide high-risk covers for the nation, as well as enterprising individuals...
Has resulted in unique policies for Satellites, Antarctic and Everest expeditions, the Himalayan Car Rally... even horticulture.
It is this combination of boldness, strength and innovative thinking, that has made New India the largest general insurance company.
But, most important, with every cover New India offers that something extra...
The personal touch.
And a genuine concern for each and everyone.

You name the risk. We insure it.

NEW INDIA ASSURANCE

A subsidiary of the General Insurance Corpn. of India

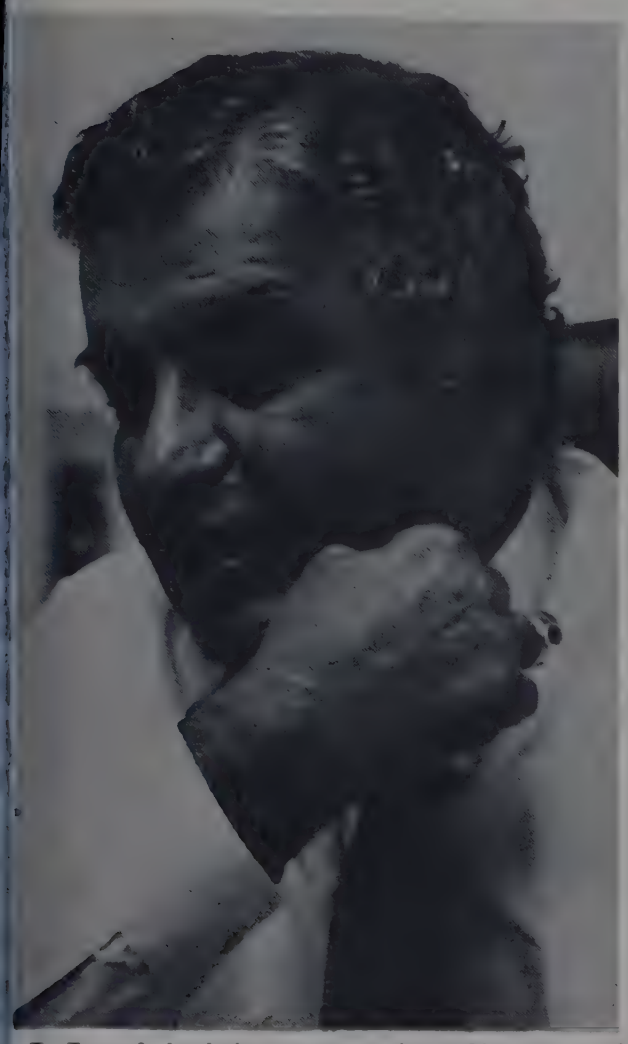
The New India range of assurance covers:
Personal: Mediclaim, Cancer Insurance, Unborn Child Welfare Scheme, Janata Policy, Personal Accident, Householder's Policy, Overseas Medical Insurance, Travellers' Baggage Insurance. **Commercial:** Court Bonds, Government Bonds, Money in Safe, Shopkeepers' Insurance. **Industrial:** Electric Equipment Insurance, Fidelity Guarantee, Satellite Insurance, Burglary & Housebreaking Insurance, Motor Insurance. **Rural:** Hut Insurance, Animal Driven Cart Insurance, Silkworm Insurance, Gobar Gas Insurance. And many more...

The more important the meeting, the more important the airline.

Flying on Lufthansa means reaching your business appointment on time.

Lufthansa

Steel in the blood



J. Irani *is joint managing director of Tisco*

What does it feel to be at the helm of the largest private sector company in the country? For J.J. Irani, the 52-year-old joint managing director of Tata Iron and Steel Company (Tisco), it is undoubtedly a source of pride. Tisco is not just a front-ranking 81-year-old company but the life-blood of Jamshedpur, the city of half a million which has grown around the steel plant.

Irani, who has a doctorate in metallurgy, has held as many as 14 different positions, including that of vice-president and president, in his 20 years at Tisco before he was designated joint managing director recently.

There isn't much in the Tisco plant with which he is not familiar. During his 12-hour working day he handles interpersonnel management problems and labour relations and goes on plant inspections. Besides, he is actively involved in drawing up the company's expansion plans. And he plays an active role in every major project — from preliminary survey to the selection of projects for modernisation or expansion to implementation. Currently, he is busy with three new joint equity projects, ie, Tata Man, Tata Korf and Tata Timken.

As a metallurgist, Irani's personal contribution has been in the field of special steels, the manufacture of which requires high technological skills. It was he who helped change people's attitudes at Tisco and convinced them that it was indeed possible to manufacture speciality steels, using existing facilities. Says Irani, "A housewife can turn out a standard meal, regularly and successfully, using common kitchen ingredients and equipment. But it requires special skill and flair to make a more artistic or innovative meal. The spirit is important."

More than equipment and technology, it is this pioneering spirit that has constantly spurred Tisco to excel and innovate. The company's production figures — 2.3 million tonnes of crude steel and 1.2 million tonnes of finished steel — and the record turnover of Rs.1,527 crores (as against Rs.1,416 crores in 1987) are ample evidence of this.

Irani is modest when laudatory references are made to Tisco's performance compared with that of public sector steel plants. "There is plenty of capacity and enough demand for all to participate. No one is considered superior — SAIL is just as good," he says. But he agrees that the Tatas' rapport with labour and their benevolence has made Tisco a unique success.

The labour relationship, built up painstakingly over the years, has paid rich dividends not just in high productivity, but also in greater worker consciousness. Only the children of employees find employment. The Japanese "cradle to grave" culture has been perfected by Tisco. Also, Irani strives hard for openness and it has paid off.

His approach to staff participation in company affairs often takes an unusual route. For instance, he once took a group of 80 company personnel — from doctors to managers to maintenance staff — and their wives on a trip to Goa. Everyone was expected to have fun. But at the same time, the holiday makers were also expected to think in a different environment about the company's growth and needs.

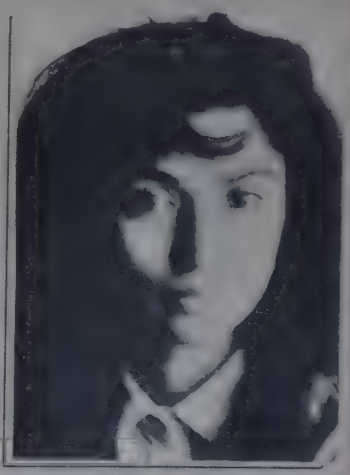
Despite his hectic schedule, Irani finds time to indulge his avid interest in photography and stamp collection. He has set up an amateur photography club to encourage school children.

■ PADMA RAMNATH

FRONTRUNNERS

R. JAIDEV

"Citibank places a premium on youth. That's why I've risen to this position so early," says a modest R. Jaidev, who at age 30 is a vice-president in Citibank, Bombay. Jaidev joined the bank ten years ago. He has only a Bachelor of Arts degree, but heads the bank's prestigious foreign exchange division which he set up in 1983. Two years later, he successfully pioneered the bank's entry into currency swap operations, the first being one for Maruti Udyog. Since then his division has been one of the bank's top moneyspinners. Jaidev is ambitious but unlike others who tend to eye foreign postings, he prefers the Bombay beat.



ELSIE NANJI

Five years ago, they would have asked, "Elsie who?" Now Elsie Nanji is recognised as "that bright, smart kid" who's art director, Ambience Advertising. She bagged the CAG's Art Director of the Year award in 1985 and then again in 1987. "My style is young, refreshing and different, a blend of the international and the ethnic," she says. Her past work includes the campaigns for Vadilal ice cream, VIP Skybags, and Nelco copiers with Enterprise Advertising from 1983 to 1987. Then came the Ambience offer and a chance to work on two high-profile products — Thums Up ('Taste the Thunder') and Garden sarees. She's just completed two films for Siddhi Cement.

SICO's MAPSICON

MICROPROCESSOR BASED AUTOMATIC pH CONTROL SYSTEM

for better quality sugar

FEATURES

1. On-line pH control of preliming, shock liming and SO_2 control system with three independent microprocessor controlled PID controller.
2. Stepper motor driven valve for lime feed and integrated motor driven non-corrosive SO_2 control valve.
3. Linear bar graph display for valve positions with built-in pH recorder.
4. Control of pH possible within range of ± 0.15 pH of set valve.
5. Suitable for JPMA, NSI and other types of sulphiters

BENEFITS

1. CaO content in clear juice is reduced.
2. Saving of sulphur consumption.
3. Reduction of final molasses % in cane.
4. Rise in purity- 0.5 to 0.75
5. Higher setting rate leading to increased capacity utilisation.
6. Reduced scale formation in evaporators reducing the frequency of cleaning operations and the cost of cleaning.

COMPUTER FOR SALE

CITIBANK is desirous of selling the following computer systems and associated equipment. Items are in excellent condition and fully operational.

1. 2 computer systems, each consisting of: IDM-3250 (Mod IV) CPU, equivalent to Prime system 2655, 1.3 MIPS rating, 4 MB main memory, 2x300MB removable disk drives, 1 Kennedy Vacuum column, 75IPS, 1600 BPI tape drive, 32 Terminal ports, 1 ICS-2 controller (cap: 32 lines), 1 AMLC controller (16 lines), 1 Terminet hardcopy console, Dual porting option, 2x300 LPM printers, 2 diskpacks, International Data Management Ltd. manufactured and maintained.
2. 1 Computer system IDM-2250 CPU equivalent to Prime 2250, 2 MB memory, 2 x 158 MB Winchester drives, 16 Terminal ports, 1 ICS-1 Controller (8 lines), 1 AMLC Controller (cap 15 lines).
3. 2 Nos. of 25 KVA Uninterruptable Power supply (UPS) with Isolation transformer and stabiliser, with imported Oldham batteries.

Interested parties to contact Mr. S. R. Balasubramaniam on phone 2870844, Telex: 11-3675 or by writing to him C/o Citibank, N.A., Sakhar Bhavan, 2nd Floor, Nariman Point, Bombay 400 021.

ICFAI ANNOUNCES

A Unique Correspondence Course

DIPLOMA IN BASIC FINANCE

(The DBF Programme)

ADMISSION NOTICE

Encouraged by the phenomenal success of the CFA Programme (Chartered Financial Analyst) meant for Financial Executives, The Institute of Chartered Financial Analysts of India (ICFAI) now launches a new and unique programme in Basic Finance, entitled the DBF Programme (Diploma in Basic Finance) through correspondence.

DBF Programme Design & Structure

The DBF Programme is designed to help the candidates get a good insight into Finance through structured self-study at home. The Programme covers the essentials of finance through a mix of four compulsory and two elective modules. Two-day Weekend Workshop Sessions will be conducted at major cities periodically to facilitate direct interaction between faculty and the participants.

Eligibility

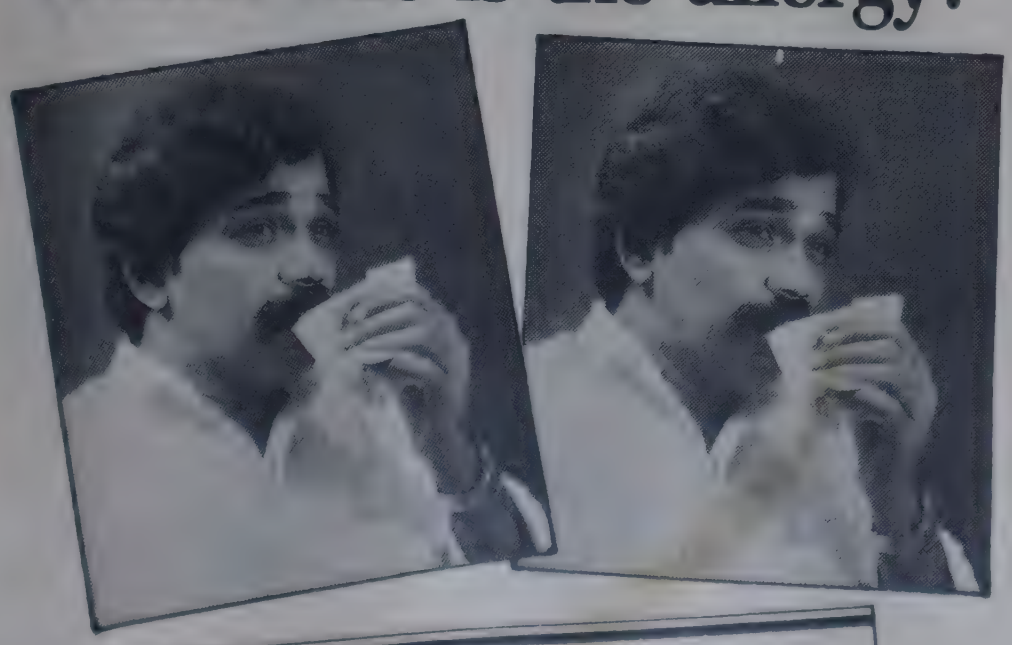
Corporate executives, self-employed persons, entrepreneurs, bank and insurance executives, Government officers, defence personnel, teachers and others without a formal professional/academic qualification in finance. The Institute welcomes sponsorship of candidates from employers.

Prospectus

For Prospectus and Application Form, please write to the Administrative Officer (DBF) giving your address and enclosing a demand draft for Rs. 40 drawn in favour of 'The DBF Programme A/c ICFAI' payable at Hyderabad.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA
Road No. 3, Banjara Hills Hyderabad-500 034.

Spot the difference
Which one is the allergy?



If you suffer from:
- *Allergic asthma*
- *Allergic rhinitis*
- *Eczema*
- *Contact dermatitis*
- *Hives*
- *Food allergy*
- *Any other allergy*

may be the Allergy Clinic can help you

How can you tell?

It isn't always easy. Because an allergy isn't always obvious. A persistent cough, for instance, could be a manifestation of allergic asthma. Sneezing could mean allergic rhinitis. A rash, a food allergy or contact dermatitis. And so on.

What causes allergies?

Allergies are caused by what you inhale, or ingest, or come in contact with. It depends on your body's sensitivity.

How do you treat it?

Only correct diagnosis can define the line of treatment. The earlier you identify the cause, the better the chances of cure.

Who can help you?

The Allergy Clinic can. The Clinic is geared to treat any case. Mild or severe. In adults or children. A highly qualified specialist, who will make a thorough study of your history, and the latest testing facilities the world has to offer make diagnosis doubly sure.

How much will it cost me?

Initial consultation: Rs. 100. Follow-up: Rs 50 per visit.
Blood tests: Rs. 200 (approx.)
Skin tests: Rs. 20 per allergen.

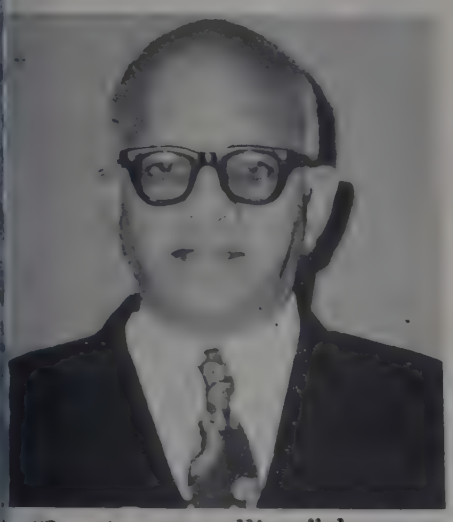
n four years the deposits of
ie Coimbatore-based Sakthi
inance Company under **S.N.**
ai leapt from Rs.2 crores to
s.25 crores. How did Pai
chieve this? "Hard work," he
ays. In these four years Pai has
ot taken a single day off. He
pends two days a week in Ma-
ras, two days a week in Coim-
atore, and the other three
ravelling ceaselessly. His beat
ncludes small towns and boom
owns in Tamil Nadu.



"I enjoy travelling," he says. Every Sunday he is in his Madras office between 9.30 am and 2.30 pm. Sometimes he stays up late even on Sundays.Wherever he is, he gets up at 4.30 in the morning, does a little yoga and goes for a walk. "My work is my tronic," he says.

In the days of yore the arts flourished when rajas and maharajas patronised them. Those days are gone. But today, a heartening number of the rich are extending support to the arts in their own way.

The latest addition to the tribe of art patrons is **Lekha Poddar,** daughter of G.P. Birla, who along with culture-conscious princeling **Martand Singh,** sponsored a fashion show by two budding designers in New Delhi recently.

The unusual backdrop of a ruin near the Qutab Minar, the free flow of champagne and the number of glitterati present ensured a very successful opening. Poddar promises many more such "happenings" and the good news is that the number of such new patrons of the arts seems to be growing.

What do you do when you have to inspire a motley crew of 24,500 employees? How do you get them to work harder and together? Can you ensure that they feel a sense of pride in their organisation? All these and more are everyday tasks for **V. Krishnamurthy,** chairman of the giant Steel Authority of India Limited (SAIL).

A veteran public sector manager, Krishnamurthy's methods are always a pleasure to watch. His latest exhortation to workers was inspired by a critical comment made by "rival" Tisco chairman Russi Mody. SAIL used Mody's observation to tease its own employees to react. Krishnamurthy says that "it makes people think positively about themselves and their organisation".

In using Mody's barb to motivate its own employees, SAIL was in a way only doing what Tisco had done earlier when it used a Krishnamurthy compliment in one of its ads. Now you know what they mean when they talk about the devil quoting scripture for his own ends.

Have you stopped and shopped? Most of Madras will, if **R. Badrinarayanan** has his way. When Badrinarayanan decided last year to set up a chain of provision shops in Madras, many eyebrows were raised. But his 'Stop and Shop' chain of eight shops that have come up in Madras in various strategic locations in the last 12 months have been a new experience for the Madras shopping public. The shops are air conditioned, have piped music and provide computerised billing with a uniformed staff that's always doing its utmost to please the customers. Badrinarayanan says that in spite of the doubting Thomases, he is "on the verge of breaking even".

And for would-be chain store owners, he has the following tips. "My staple customer is the 30-40 age group middle class two-wheeler owner who comes to shop with wife and child and also people who come in more often for daily needs like milk. Today milk is my top selling item."

From development banking to doing development work in the north-eastern hilly tracts of India can hardly be termed a natural career transition. But that is the path chosen by **S.M. Palia,** executive director of IDBI, Asia's largest development bank.

Palia, who is acclaimed among company promoters and colleagues alike for his integrity and uprightness, announced in September that he was going ahead with his plans of retiring voluntarily in early 1989 at the age of 50. "I've been toying with the idea of voluntary retirement from service for the past five years," he says. And the choice of his new vocation became increasingly clear after he saw the excellent results produced by IDBI-assisted voluntary agencies. "Our bank has been giving assistance to these agencies under the Technical Assistance Fund and our experience has been reassuring. These agencies, which are led by dedicated and honest-to-core social workers like Baba Amte, are well managed, and repay loans according to schedule," he says, "I would like to get involved with them and see how it works out." Social welfare would certainly get a boost from the services of a development banker.

"Big Jon" flies. And his realm is outer space. Having flown the Challenger in 1984, **Jon McBride** is scheduled to go into the big blue yonder in 1990 when Columbia will toss aloft a seven member team. In Bangalore recently to attend the International Astronautical Federation meeting, Jon gave desi questioners a taste of what its like out there. Among the questions that Jon fielded in Bangalore were: does one dream in space? Answer: yes, and the dreams are much the same as on earth.

And for those budding young ones dreaming of flying machines a la Rakesh Sharma, there was the sage advice that life out there was not just the heady feeling of weightlessness and of "sunrises that looked like diamonds". Said Big Jon, "Out there I had both body-aches and back-aches too."

Last year he learned how to hold a glass.

This year he's tying his own shoelaces...

...what he does next year is up to you!

The brave battle fought by a spastic child

When your hands and your feet don't listen to what your brain says, it's a very dark, lonely world.

And so we teach our children at the Spastics Society how to fight. They fight despair with hope. They fight fear with courage. And they fight their own inabilities with determination and careful training.

The efforts of the Spastics Society

For the last 15 years we have been working towards rehabilitating and educating these special children.

Through clinics, urban and rural demonstration centres, training material and medical research. By tapping varied professional expertise.

And the results have been heartening: hundreds of children have learned to cope with their problems and lead near-normal lives.

Make a special decision

Make this brave boy's fight your fight too.

Yes, a little investment from you can go a long way. Because we're all set to embark upon an intensive rural programme to reach spastic children in outlying areas.

The results of your investment might not show in your balance sheet. But they'll show on the face of an 8-year old boy as he smiles proudly after managing to eat his breakfast all by himself.

Yes, I would like to make these brave children's fight my fight too!

Effective management of human resources

Managing the poor performer
by Valerie Stewart and Andrew Stewart
Wildwood House, pp 178, £6.95 (paperback)

Improving Trainer Effectiveness
Editor: Roger Bennett
Gower Publishing Company Ltd, pp. 283, $ 59.00 (hardcover)

The two books take up issues of skill development and performance management. The first is designed to help the manager lift the poor performer from "below the line to on-line". It is not designed to help you create superstars. Nor to help you turn around a whole department or a whole company — that would require several management skills rather than just the man-management skills discussed in the book.

The book is divided into three parts: the first part deals with detecting poor performance; the second describes the factors which cause poor performance; the third part explains the ways in which it may be possible to solve the problem of poor performance.

GOOD CHECKLIST

The authors have provided a good 12-point checklist to assess performance. The parameters used are: quantity of work, quality of work, absenteeism, other forms of withdrawal from work, conflict, dishonesty, refusal to volunteer, lack of delegation, unrealistic targets, information distortion, slow decisions and capriciousness.

The causes of poor performance are varied. And, almost invariably, any case of poor performance has more than one cause, though there may be a principal one. Some of the more important causes of poor performance relate to ability and job knowledge, stress and emotional problems, motivational problems, medical disorders, work group problems, the organisation itself, or working conditions. Even domestic problems may lead to poor performance in the workplace.

The authors caution managers about being seduced into investigating the causes of poor performance at the expense of concentrating on the cure. Among the remedies open to managers, the Stewarts say, are counselling, an interview to determine which job the person is suited for, a change of job in case of a pronounced mismatch, job redesign, peer group pressure, professional counselling from an outside expert, etc. The importance of training as a remedy for poor performance has been suitably highlighted. However, it is essential to emphasise that it needs quite positive support especially over the 'results dip' when people try new skills and take time to produce results.

It is after watching several good managers in action that the Stewarts have formulated their ideas. Study and observation have led them to the conclusion that it is possible for the average manager to extend direct help to most of the poor performers he will have to manage.

WHAT PEOPLE DO

There are a couple of aspects, however, which need to be mentioned. First what the Stewarts have discussed is 'performance' — in other words, how people behave at work. Their concern is with what people do, not with what they are. Secondly, by concentrating on the middle of the job sandwich — pulling up a current poor performer — they seem to ignore the two outside layers, namely recruitment and separation. The Stewarts have, it must be clarified, deliberately ignored a detailed discussion on these two aspects as, according to them, these have been treated quite well elsewhere by other authors. Nevertheless, they have this brief comment to make: (a) prevention is better than cure, and (b) you need to know what your options are if all your efforts seem doomed to fail. They have, accordingly, emphasised the need to recruit correctly and to treat recruitment as a major investment decision.

The second book has been designed to help trainers improve their effectiveness at (a) doing the current job and (b) adapting to change.

It is no conventional book. The contributors have been drawn from across the world and are known for their excellence. Roger Bennett, editor of the book as well as one of the contributors, is himself an eminent professor of management education and training. Among the others are: Alun Jones, a well-known trainer of trainers; Tad Leduchowicz who has done extensive research on trainer effectiveness and developed training packages for large organisations including Hewlett Packard, Rank Xerox, British Caledonian, etc; Howard Silverfarb who has 20 years of international experience in multinational firms in Asia, the US, Europe and Africa in management as well as executive training.

Roger Bennett observes that training is a frustrating business. Some people hold perverse views about training. They believe it to be necessary, yet doubt its value and relevance. Some trainers too hold perverse views about training. They believe that what they do is right, yet are not committed to the success of the organisations they work for. Roger Bennett believes that all trainers can be successful — they can integrate what they do with the real needs of their organisations.

KEY CHANGES

It begins by investigating what trainer effectiveness really means and placing it in the context of key changes that will affect what is done by the trainers. It then identifies the factors that influence trainer effectiveness, with many exercises aimed at getting the reader to identify such factors in his own job and situation. It goes on to look at different jobs or roles that trainers perform, and explores how these jobs and roles can be developed. The most important chapters are on style.

Roger Bennett, however, sounds a note of caution: the effectiveness of trainers flows from a good training policy, sound management of the training function, and a full understanding of the culture with which training must work.

The usefulness of the book is enhanced by two model programmes for developing trainer effectiveness, a quite effective trainer checklist, and an exhaustive annotated reading list of 30 books (besides the customary bibliography).

The most important feature of the book is its emphasis on integration of the training function and content with the real needs of the trainer's organisation.

Both the books will be found quite useful by managers and trainers.

■ JAYANT KHER

Continuity in Change

Excerpts from the speech of Shri J.N. Sapru, Chairman, I.T.C. Limited, at the 77th Annual General Meeting held on 14.10.1988.

Shri J. N. Sapru

INTRODUCTION

On the economic front, the year 1987/88 has been a difficult one for the country. Inflation, which inevitably rears its head in these adverse circumstances, will need to be closely monitored through carefully designed monetary and fiscal policies, and a severe check on non-plan expenditure exercised to avoid a repetition of the near double digit inflation of last year. The overall favourable monsoon this year has buoyed the economy, and though foodgrains production—estimated at around 170 million tonnes this year—will be an all-time record, we would be well advised to be less euphoric about it as the beneficial impact will take time to permeate. In the interim, the steps taken to accelerate the growth in the service and industrial sectors need to be further augmented through the process of measures now termed as 'liberalisation', and through specific incentives to boost the exports and foreign exchange earnings.

PERFORMANCE HIGHLIGHTS

Total income crossed Rs 1200 crores and, after payment of over Rs 819 crores by way of customs and excise duties, net income at Rs 381 crores registered an 18% increase over last year. From the profit after tax of Rs 24.79 crores, your Directors are pleased to recommend a dividend of 35% after retaining Rs 13.18 crores for future growth and expansion.

1. Foreign Exchange

For some years, India's tobacco exports have been declining for several reasons. What has been forgotten is that India is the third largest producer of tobacco in the world, and this important agricultural cash crop could play an important part in the drive for more export earnings, provided it was given the encouragement and incentives to improve its quality and competitiveness in the international market.

Your Company has for some years been taking steps to increase its non-traditional exports and foreign exchange earnings. **Several new areas of foreign exchange earnings are being simultaneously worked upon and I am pleased to highlight that today over two-thirds of your Company's foreign exchange earnings of about Rs 55 crores are from non-traditional items and, further, they represent nearly 15% of your Company's net turnover.**

2. Agri-businesses Division

Last year, I had given you an indication about your Company's proposed entry into edible and non-edible oils. The Agri-businesses Division became a reality from May this year and its objectives are: to assist the country in achieving self-reliance in edible oils and thereby conserving valuable foreign exchange; earning foreign exchange through the export of by-products and other agricultural produce; through research and development, improve farm economics and quality of life in the agrarian sector.

ITC has made arrangements with leading international organisations with proven track records of research in oilseeds for rendering technical assistance and scientific advice for the development of sunflower hybrid seeds. ITC shall spare no efforts to contribute significantly in improving yields and increasing production of oilseeds in the country.

3. Family Planning

We have stepped up our family planning activities in a big way, and are working closely with Government not only for effective distribution of contraceptives, but also through a variety of means to increase awareness among vast sections of the population of this very essential national priority. For the year ended March 1988, your Company achieved a sales turnover of 128 million pieces of condoms, which is the highest ever recorded by any company.

EXCISE

As you are aware the Director, Anti-Evasion, had issued a Show Cause Notice to your Company in March 1987, proposing to levy differential excise duty of Rs 800-odd crores on the allegation that your Company has misdeclared the maximum retail sale price printed on cigarette packets (which formed the basis of payment of excise duty from March 1983 to February 1987) to the extent that the actual prices charged by retailers were higher and that such prices were fixed by the Company for purposes of retail sale in the market. The Show Cause Notice was challenged before the Calcutta High Court but the Trial Court dismissed the Writ Petition on the ground that the allegations could properly be adjudicated upon by an Adjudicating Authority and not by the High Court in its writ jurisdiction.

An appeal was preferred against this judgement and the Appeal Court by its judgement dated 12th October 1988 has now agreed with the trial judge. However, the Appeal Court has clarified that the burden of proving all allegations made in the Show Cause Notice lies with Excise Authorities and your Company would be entitled to submit all evidence in support of its contention as may be considered necessary by your Company. The Adjudicator will decided the matter after considering such evidence.

We have not yet received copies of the Judgement. Further course of action, including appeals to Supreme Court, will be considered and decided after a detailed study of the Appeal Court Judgement is carried out. Meanwhile, your Company will continue to participate in the adjudication proceedings which had commenced in May this year.

I would like to reiterate your Company has not, ever, evaded excise duties nor knowingly trangressed the law.

FUTURE PROSPECTS

The trading results of the first quarter indicate a healthy outlook for the year ahead with all Divisions continuing to record satisfactory progress. Your Company will spare no effort to continue to augment foreign exchange earnings.

The next year will see further consolidation of the Agri-businesses Division. This important activity yields gradual results and its growth will be apparent over a period of three to four years. It is your Board's plan to engage in a phased, modular expansion into downstream products in the future.

These results would not have been possible without the dedicated endeavour of all our employees at every level of your Company's operations. Thank you also for your continued and unwavering support.

PREAMBLE: THE REASSESSMENT

I would like to briefly dwell on the expected responsibilities of large houses and reassess and reaffirm your Company's sense of purpose and direction.

Public debate would seem to imply that as a nation we have only weaknesses and no strengths. We seem to be taking delight in publicly berating ourselves and highlighting what is wrong and not what is right. Let us build from our strengths rather than focus always on our weaknessess.

We forget the sheer enormity of our country, and the magnitude of our achievement in increasing the National Income 28 times since the first decade of planning. Of creating an infrastructure which is the envy of even the developed world.

India is not short of resources. Economic surpluses are not God given nor created automatically. They are the result of what the human resource does with the physical or material resources. The solution to our economic advance is very much in our hands and in our ability to mobilise the creative productivity of our vast human resources.

Your Company as a corporate citizen has also been in the vanguard. **From the mid-'50s to the mid-'80s, your Company's sales turnover increased 31 times, contributions to the exchequer as excise tax 58 times, and the net fixed asset base expanded 21 times. Foreign exchange earnings in recent years crossed the Rs 50 crore mark, and profit before tax has grown more than ten-fold.** What 77 years ago started as a cigarette company, is now a multi-product, multi-market, and multi-technology organisation of businesses, symbolising 'Continuity in Change', and marching ahead in the overall interests of our stakeholders, and the development of our nation.

To establish the rationale of our practice, and obtain our direction, let us assess the market circumstance.

Around 540 million people live above the poverty line in India, and if we take 50% of this, we are already talking about a market-size of around 270 million people, which is growing in numbers and affluence, and which can be compared to any country.

Emanating from the first, the second reality about our market is its vast demand potential. India is a rich country with many poor people. If we can harness and channel our demand potential, with appropriate products and services, we can not only augment commercial surpluses but, in doing so, bring about an unparalleled socio-economic transformation.

THE REAFFIRMATION

To make all this happen, we must reaffirm a sense of direction.

In the past, when ITC was a single-product company, it was possible to get our bearings by answering the question "What business are we in?" Today, with a multiplicity of businesses, we must answer the question "What do we stand for?"

First, ITC is an Indian 'professional' commercial organisation, where control is earned and exercised through performance, and existence is allowed by public sanction.

But though we are professionals, we are not mercenaries. We have our aspirations, our values and a code of conduct that enables a congruence of theory and practice.

ITC is a professional organisation in yet another sense. In ITC there is a continuous revitalising of the human resource to prevent obsolesence, and a continuing focus on accountability and contributions with commensurate rewards.

Perhaps the single most important dimension of professionalism in ITC is the separation of ownership from control. In a large professional concern, where decision-making is decentralised, it is intrinsically required that there be a common understanding of the purpose and mission as the corporation or institution extends beyond and outlives the man or leader.

Secondly, ITC manages commercial enterprise for commercial results.

No society can shed the shackles of poverty until its investments create surpluses. It is the responsibility of business to create surpluses through the effective management of all resources held by it in trust for society for the overall benefit of all stakeholders.

In India we have some soul-searching to do. For reasons rooted in historical experience, the creation of profit has been equated with exploitation. But these attitudes have no relevance to our day and age which will not tolerate profiteering; if we do not impose the most desirable compulsion to make a fair return on investment, we would be falling seriously short of our duties as professional managers of commercial enterprise, and responsible citizens of modern India.

Thirdly, ITC makes sustained contributions to the quality of life.

We realise that the quality of profit, though essential, is not a substitute for the quality of life that our enterprise contributes to for all its stakeholders. Considering our history and commercial profile, our *shareholders* expect security, a growth in the value of their investment, and a meaningful return.

Our *suppliers* and *business associates*, many of them in the small-scale and ancillary sectors, expect organisations like ours to provide them steady long-term markets.

Our *employees* are not only seeking employment but growth opportunities.

Our *customers*, the reason for our business existence, are seeking enduring value; this is reflected in the quality of products and services we provide.

Government expects us to be partners in progress. We must make and take opportunity by providing impetus through research, innovation, investment, and managment to contribute to the uniform development of our nation.

Society expects responsible and responsive behaviour from corporations and not charity. Enlightened self interest demands businesses to make qualitative contributions for the betterment of the environment around us. It requires the enmeshing of business objectives with social needs so that our rich and varied national heritage is encouraged and preserved.

The competing demands on your organisation's varied contributions are harmonised and balanced by an irrevocable commitment to excellence. It is a dynamic concept which makes us reach forever forward. This is a concept which helps direction setting for the professional manager, who is a leader but not a master.

Fourthly ITC values knowledge and derives its strength from the collective knowledge of its people.

When organisations like your Company operate in the Indian market, they do so in a very specific context. In developing countries, alongside the branded differentiated market there is a vast market of unbranded and undifferentiated substitutes. Witness the co-existence of these two types in the product fields of cigarettes and 'bidis', loose and packaged oil, loose and packaged tea, etc. The logics of success in these two markets are different. One has a windfall and speculative short term approach to the market. The other is based on making investments in value addition. Your Corporation belongs to this second type.

To be successful in this context, ITC's strategies must be based on research and superior knowledge of the product and the consumer. Your Company's success depends not on short term expediency, but in creating surpluses by adding value, based on research and superior knowledge of the product, processes and the consumer.

Finally, ITC stands for the ability to harness and allocate resources, both human and financial which are befitting its size and strengths.

One of the main inhibitions to the realisation of the potential of the Indian market is the inability to mobilise adequate resources. In our country there is a belief that big and small are antagonistic to each other. In reality, there should be no competition. Both have their distinctive roles to play and the sooner we realise their complementarity, the sooner will both thrive to mutual benefit and the larger interests of the country. Similarly, there is a belief that wealth creation and distributive justice are mutually exclusive issues. You cannot distribute poverty. Distribution must follow the creation of wealth as night follows day.

The general hypothesis is that to be able to maintain the requisite standards of competitiveness and quality, organisations like your Company have to make substantial investments, which are of a 'sunk' nature. These investments are in areas like R&D, capacities and people. The only way to make these investments economic is to defray them over a large market, which is an intrinsic advantage for enterprise in India.

In this context, ITC as an enterprise must always think big and will adopt strategies that are commensurate to its size and scale. ITC will endeavour to mobilise resources to make investments and absorb gestations which emphasise the strengths of your Company and are in the interests of the country.

In conclusion, let us recapitulate. Your Company is motivated by the five fundamental factors of professionalism, commercial results, quality of life, knowledge and resource ability. The sum of these constitute your Company's reputation and goodwill built over eight decades of consistent dedication to the pursuit of excellence. We value our goodwill and will carry it forward to the future as our most cherished resource.

Integrating these six factors we can state what ITC stands for :

ITC stands for the professional management of commercial enterprise and its planned growth through the effective use of knowledge and resources at its command to create sustained surpluses and contribute to the quality of life as a valued corporate citizen.

This does not purport to be a report of the proceedings of the 77th Annual General Meeting.

THE PACKAGING INDUSTRY WILL SOON FACE A COMPULSIVE CHOICE

Issue opens on 24th November, 1988

JALAN TEA GROUP promotes

JALPAC INDIA

A hi-tech venture to manufacture Metallized Paper and Films

HIGHLIGHTS

- ☐ Promoted by JALAN TEA GROUP with equity participation from PICUP.
- ☐ Metallized Paper and Films – a superior and cost effective packaging material.
- ☐ Tremendous market potential in consumer based and processed food industries – substantial enquiries already in hand.
- ☐ Plant and Machinery incorporating state-of-the-art West German technology from Weinert Vakuum Systeme and Pagendarm Beschichtungstechnik GmbH.
- ☐ Trial runs to commence in January, 1989 to be followed by commercial production.
- ☐ 80CC and other Income Tax and Wealth Tax benefits.
- ☐ Listing in Kanpur, Ahmedabad, Bombay, Calcutta and Delhi Stock Exchanges.

The Jalan Tea Group, which had set pioneering tradition in the Tea industry now enters the world of flexible packaging to manufacture Metallized Products.

Metallized Paper and Films are superior and cost effective substitutes to Aluminium Foil laminates. Offering better barrier properties and enhanced aesthetic appeal, they provide an ideal solution to the demands of the fast growing consumer industry, like processed food, tea, coffee, fruit juice and pulp, seeds, confectionery, pharmaceuticals, vegetable and lubricating oils, spices, pan-masala, chewing tobacco, cigarettes, soaps, electronic components, etc.

In the decorative category, they are used for labels, wall-paper, tinsels, giftwraps, liquor cartons, and zari.

Jalpac's plant at Haldwani in Nainital has been set up with state-of-the-art West German technology, to manufacture 4500 tonnes per annum of Metallized Paper and Films.

To part finance this project, Jalpac will soon issue 11,00,000 Equity Shares to the public – a profitable investment opportunity backed by the enterprise and commitment of the Jalan Tea Group.

ACKWARD LOCATIONS

The quandary

he problems of being based in a far ut location are manifold both for e employer and the employee

ow that new industries or units are not ermitted within the limits of metro- olitan cities, both employers and em- oyees find themselves in a quandary. n the one hand, employers, especially ew entrepreneurs, find that it is difficult attract competent managerial staff to cations outside the metros. Employees, n the other hand, find that their career owth could be stifled unless they are illing to move out of the comfort of etro locations. The problems of being ased in a far out location are manifold r both the employee and the employer.

The problems for employees stem from he absence of basic amenities such as ousing and, often more important, chooling. Poor communication facilities, e it telephones or rail and air links, add the sense of being totally cut off from he outside world. Also, the absence of he kind of entertainment facilities that ost city-bred employees are used to, akes it virtually impossible to get a top ass manager sign up for assignments in uch locations. And yet, all the major vestments in industry are being made such locations.

UNCTIONAL PROBLEMS

or most entrepreneurs, the incentives iven for setting up units in backward nd no-industry zones are financially at- ractive. They also find that it is possible o commission projects in such an area ithin a reasonable time. But, most en- repreneurs fail to anticipate the diffi- lties in day-to-day management due to he lack of competent managerial staff. nless the entrepreneur is himself based t the location, he finds it difficult to get he project off the ground after the ommissioning.

The problem of recruiting staff be- omes more apparent in the case of tech- ical and manufacturing personnel. ommercial and sales staff are generally ased at developed locations due to the mportance of communication facilities. n any case, it is not essential for them to e based at the plant. For technical per- onnel, however, restricted as they are to articular industries because of their raining and experience, there are few options but to move — if they wish to grow.

Many employers start out by believing that employment costs would be substantially lower at these backward locations. While this may be true of the workmen, wage costs for supervisory and managerial staff are often the same as those in the metros, if not more. Many find, to their dismay, that even the official consumer price indices of these locations are not substantially different from those of major cities, making it impossible to justify lower dearness allowances.

Further, a premium in terms of compensation and designation has to be paid to attract staff to these locations. In fact, the compensation is often more than the quality of staff warrants.

SMALL TOWNSHIPS

Employers are often left with no option but to make investments in housing and other infrastructure for their employees, such as schools, clubs and sports facilities. Transport facilities for families, school children, and even family outings on holidays, have to be made. It is found that in several of these locations, companies virtually run small townships and incur all administrative costs.

Certain industries, such as the cement or fertiliser industries, have historically been based at out-of-the-way locations. As a result, these industries had not been able to attract the best talent. But, over the years, they have developed skilled technical and managerial personnel who are specially attuned to the needs of these locations. Companies in these industries, like ACC in the private sector or various Birla companies, have managed to do this by making considerable investments in housing and other amenities for their employees — even to the extent of paying for the education of children.

Many public sector companies in steel, mining and power, too have set up units in backward locations. While the quality of staff may not be comparable to that at metros, these units generally have lesser problems than private sector units. This is mainly due to the considerable investments they make in housing and other infrastructural facilities.

Despite these efforts, several bugbears remain, the chief being proper schooling. Given the myriad problems of our education system, managers find that once their children are past the primary school level, postings in reasonably big towns become necessary. For example, the requirement of a domicile certificate for entrance to a professional course makes it essential for a family to reside continuously in the same town through the final years of its children's schooling. This highlights the need for the government to consider measures for providing proper schooling facilities as part of the infrastructure while developing backward and no-industry zones.

What has been the experience of multilocational companies? Many of them report problems of parity in defining compensation policies initially. They have also found that employees are not as mobile as expected. Most employees refuse transfers to backward locations due to problems of schooling and also because spouses would not find suitable employment. And, with the increase in the number of two-income families in the major cities, it will become increasingly difficult for employers to attract personnel and compensate for such monetary losses.

In some cases, where the employee has agreed to such a transfer, the company has had to compensate for the maintainence of two establishments over prolonged periods of time. This aggravates problems of parity. But, at senior levels, especially, the employers have virtually no option. Frequently, therefore, employers base senior employees in towns and have them travel to the site. This, of course, is not the happiest solution from the point of view of daily management. It has also often led to an increase in so-called 'corporate' jobs that oversee the activities of the unit.

Companies find that employees are willing to work at such locations only when they are unmarried or after their children are settled. This leads to a very skewed age profile and the need for mature, yet energetic and ambitious managers at such units is acutely felt.

What is the solution to this dilemma? Most employers are agreed on the need to provide incentives, for making investments in housing and infrastructure facilities, and for ensuring that schools of good standard are located near such zones. There is perhaps need to provide the employees also with incentives in the form of tax breaks if they are posted at such locations. And perhaps add another category of reserved seats to the already long list — in professional courses — for children of employees based in backward locations!

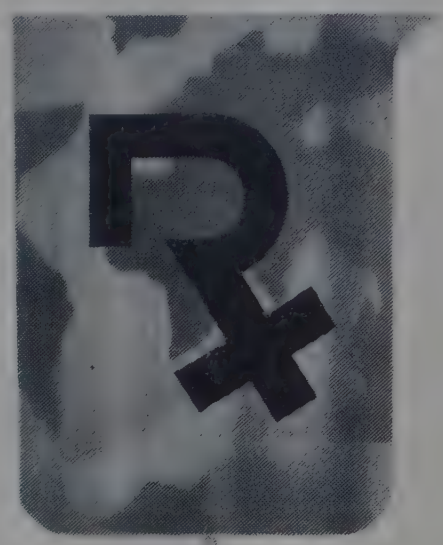
The Challenge is to do much more and much better in bulk drugs



Vice president

(Marketing)

Pioneers and trend setters in the bulk drug industry. Dr.Reddy's Group is the country's largest manufacturer and exporter of many frontline basic drugs that include among others Alpha Methyldopa, Ibuprofen, Ranitidine, Norfloxacin and Naproxen. The Group continues to dominate the field by recognising the changing trends in drug industry earlier than others and preparing to meet these requirements in the field.

The Group is now looking for a marketing chief to consolidate the bulk drug marketing operations and penetrate new market segments both in the country and abroad. He should be outstanding enough to be a part of a professional team that has made a world-wide impact in less than five years.

Experience in the Pharmaceutical/Basic Drug industry will be an advantage but not a necessity.

Compensation, package will match the best in the industry with all benefits like house, car etc.

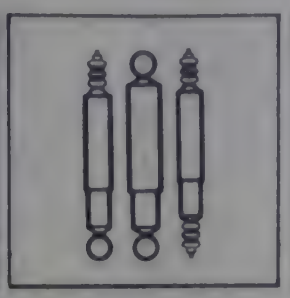
Gabriel INDIA LIMITED



PARWANOO (H.P.)

GENERAL MANAGER-BIMETAL BEARINGS

Excellent compensation package including Company accommodation.

Gabriel India Limited is a leading manufacturer of shock absorbers and engine bearings in the country. The Company has an outstanding growth record in the automotive industry, and present sales of Rs. 350 million are expected to double in the next four years.

The Engine Bearing Division of the Company has been set up with an investment of Rs. 90 million, in technical and financial collaboration with Federal-Mogul Corporation of U.S.A.—an acclaimed leader with over 75 years of international experience in engine bearing technology. The Division's plant is fully integrated and is technologically the most sophisticated in the country, manufacturing a complete range of bimetal bearings, bushings, flanges and washers for commercial and passenger vehicles, tractors and stationary diesel engines. Manufacture of the product from the raw material stage for the first time in India has led to the setting up of a foundry to make bimetallic copper-lead powder, and sinter lines to make bimetallic strips. The Company has also installed equipment to produce flange bearings, which is unique among bearing manufacturers. The plant can, with marginal balancing equipment, substantially increase its installed capacity of 9 million pieces.

Immediate opportunity exists for a result oriented professional to take charge of the Company's Engine Bearing Division.

Gabriel India Limited is looking for a mechanical/metallurgical engineer with relevant manufacturing experience in a comparable modern precision industry. Good career growth prospects are assured.

Preferred age group : 35 to 40 years.

The job requires sound engineering and manufacturing acumen and excellent man-management capabilities.

The candidate will be based at Parwanoo in Himachal Pradesh. The Company offers a challenging work environment for motivated professionals.

The location offers the added advantage of working in a small community in the open environs of a valley, plus modern facilities at Chandigarh for schooling. Accommodation will be provided by the Company.

PRESSMAN

Bilt

WE DON'T NEED YES MEN
BUT IF YOU ANSWER THESE QUESTIONS IN AFFIRMATIVE,
WE WILL MAKE AN EXCEPTION.

ARE YOU

— A qualified Personnel Professional
— More than 35 years of age with more than 10 years of experience
— Total Personnel man, equally at home with IR & HRD

DO YOU BELIEVE

— that bad Industrial Relations scenario is not the fault of the workmen; but invariably the result of short term, firefighting, breakdown maintenance approach of the Management

— that Personnel Management is primarily the responsibility of the Line Management; that Personnel Manager should develop the competencies of the Line Managers to enable them to do so

— that people are the prime movers of any organisation, and most Managements lack the requisite understanding, will & skill to manage people effectively

— that you could deal with PEOPLE; inspire and motivate them

— that you could act as a catalytic agent of change by playing a facilitating role rather than a controlling one.

With us, you could translate these beliefs into action

ASSISTANT GENERAL MANAGERS/ PERSONNEL MANAGERS

DELHI, HARYANA, MAHARASHTRA

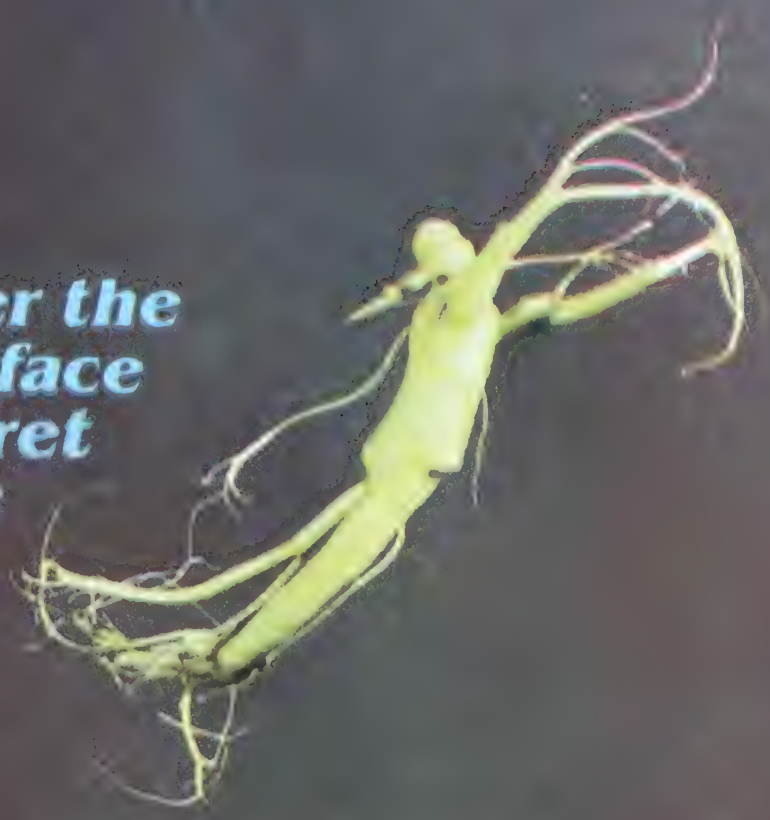
Breaking through. Breaking ahead!

LINTAS M IEL P12 2720

There's no force in this world that can make the inhibited bold, and the bold valiant....

but from under the earth's surface a 5000 year old secret proves otherwise



A secret that takes you to the hidden depths of the Orient. To the fertile soils of Korea. To an enigmatic man-shaped miracle root. To a legend that modern day scientists have already put to the test, proved, and accepted with awe. A secret called.... GINSENG.

Ginsèng. Over the years it's come to mean vigour, vibrance, vitality, plain good health or even energy plus. International pop legends have sung its praise. Celluloid giants have become fans. Celebrity authors write about it. Oriental athletes improve their track records with it. And Russian Cosmonauts use it in space to combat fatigue.

Ginseng. Across the counter, in Russia, China, Japan, Korea, West Germany, UK and USA, it's gained total consumer acceptance. And in every form, inspired hard-core medical confidence too.

Ginseng. To many it's the elixir of life. To others it's the key to sexual virility. While the Orientals have believed in it for years, the rest of the world is still waking up to its prowess. And discovering that Ginseng is much more than the aphrodisiac it's reputed to be. ★ It's good for body tone. ★ Protects the liver ★ Great for the heart ★ Helps normalise blood pressure. ★ Reduces stress ★ Stimulates the nerves. ★ It has known anti-diabetic properties. In short, it's an ideal weapon to fight the rigours of today's demanding lifestyles.

Now, the original, most potent Korean Red Ginseng. In capsule form. Under the brand name JENSHENG, comes to you from Biological E Limited.

JENSHENG. Use it to make flights of imagination, exciting journeys of reality. Use it to open up the frontiers of your mind. Use it too, to surpass your own concept of the ultimate. But use it. Most of all, for your better health.

If you want to know more about JENSHENG do write to us for a complete illustrated booklet.

SRF
SHRI RAM FIBRES LIMITED

BUSINESS PLANNING PROFESSIONALS

SRF is one of the few Indian companies to have successfully adopted long range planning. The company's management is firmly committed to a formalised strategic planning system which has been in existence for the past five years. The system encompasses the entire SRF group of companies engaged in diverse businesses such as Nylon Industrial Yarn; Synthetic Industrial Fabrics; Engineering Plastics; Fluorocarbon Refrigerant Gases; Ball & Needle Bearings; Auto-electricals; Hire Purchase/Leasing; and Financial Services. Business plans are formulated at the level of each Strategic Business Unit (SBU) as well as at the corporate level for the entire group.

The Corporate Planning Department located at the Head Office at Delhi, provides inputs to top management for strategic decision-making besides co-ordinating the planning exercise of the SBUs. Each SBU has its own strategic planning cell which works in close co-ordination with the Corporate Planning Department.

We need professionals to help in this effort at various locations.

We are looking for young professionals, in the age group 25-35 years, preferably Engineer – MBAs with 2-10 years' experience in good industrial/consultancy organisations.

The job involves systematic analysis of business environment in order to be able to identify business opportunities & threats and build competitive strategies. Another important role would be to continuously improve upon the existing strategic planning system and provide conceptual inputs to line managers who have the prime responsibility for formulating and implementing strategies. Besides keen intellect, good inter-personal skills are essential.

The positions provide an excellent opportunity for acquiring a general management perspective and would be stepping stones for suitable senior positions.

We offer an excellent compensation package commensurate with qualifications and experience.

Please apply within seven days to:

INTERNAL AUDIT EXECUTIVE

We are looking for a committed professional to join our rapidly evolving Internal Audit Department based in Bombay. The combination of the Company's operating environment and the emphasis being placed on the internal audit task offers considerable opportunity for an innovative approach to audit and scope for individual growth.

The challenges of this assignment can be visualised from the breadth of the Company's operations, which currently comprise of four manufacturing plants and forty one sales offices across the country, as also eight support functions located in Bombay. All operations are carried out in a decentralised manner, in an environment of extensive computerisation. The role of the incumbent would lie in ensuring that adequate controls are exercised, without dilution in the extent of autonomy needed for Executives to achieve their goals.

The candidate we are looking for must be a Chartered Accountant/Cost Account/MBA from an Institute of repute. Though prior work experience is not essential, it would be given due weightage.

Besides an attractive compensation package designed to attract the best available talent, we also provide a stimulating work environment which emphasises professional excellence, operational autonomy, an open culture and recognition for contribution. Those interested may please apply within 10 days giving full biographical particulars, including qualifications, work experience, salary drawn and expected and a recent passport size photograph to:

General Manager (Personnel)
ASIAN PAINTS (INDIA) LIMITED
L.B.S. Marg, Bhandup
Bombay 400 078

Please superscribe the words "INTERNAL AUDIT EXECUTIVE" on the envelope.

ADROIT/AP-140/88

Vice-President (Technical)

Required for a HT Porcelain Insulators manufacturing works near Bhopal, belonging to a large public limited company having annual turnover of Rs. 200 crores. The person would be required to take complete charge, and lead team of highly knowledgeable and professional personnel on technical functions in a most modern plant installed in technical collaboration of West German firm. A technocrat having first class degree in Engineering with specialisation in Ceramics is being looked for.

Minimum 15 years experience, of which at least 5 years in senior position in Solid core insulators and Bushings of 132 kV and above ratings, in India or abroad is desired. The position requires high degree of technical expertise, man-management capabilities, and thus proven track record in HT Insulators manufacturing Company of high repute would meet our requirements. Preferred age around 40 years.

Being a senior management position, salary and perks offered will be attractive. Application be sent in strict confidence with needful bio-data details to :

Insulators & Electricals Company
Unit : Hindusthan Development Corpn. Ltd.
Kanchenjunga (7th Floor), 18-Barakhamba Road, New Delhi-110 001

MANAGING DIRECTOR

A leading listed Finance Company involved in Leasing, Hire-Purchase and Safe Deposit Vaults and based in South India with all India Branch net work wishes to appoint a Managing Director.

The Company plans to expand its asset base to Rs.20 crores from the existing Rs.10 crores in the immediate future and also to diversify into property development and other areas of financial and non-financial operations.

The candidate we are looking for should be holding a Senior Executive position comparable to a Deputy Managing Director or Executive Director in a large financial banking or diversified Commercial Group with proven track record in the financial service field. The position may suit those seeking to relocate in the South. He will report to the Board consisting of well known professionals and will enjoy considerable freedom in deciding the future policy for the Company.

Preferred age will be around 50 years but relaxable in deserving cases. Remuneration package will be comparable with the best in the field.

All correspondence or contacts will be strictly confidential and no references will be made without prior clearance of the candidate.

Please apply within 15 days with a one page resume why you consider yourself as the person we are looking for to fill this top position.

Please reply to P.O. Box AA/279/LP/1,

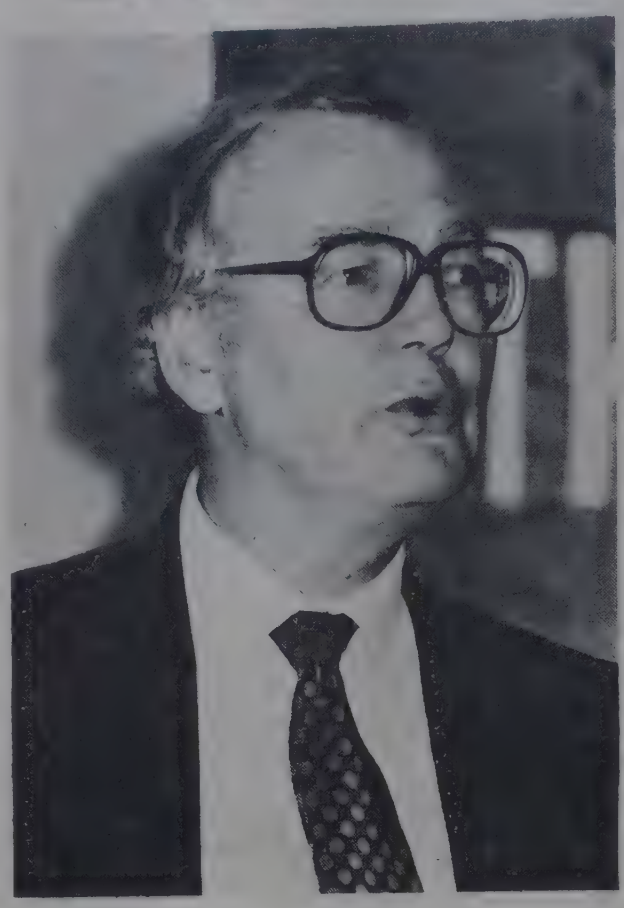
"Allow more direct foreign investment"



As chairman and chief executive of the UK-based Midland Bank and former deputy governor of the Bank of England, **Kit McMahon** *is undoubtedly a major voice in the world of high finance. On a visit to India last fortnight, he replied to questions put to him by Basudev Dass of* Business India.

Recently, Lazard Brothers & Co was permitted to buy equity in an Indian merchant banking company, signifying the Indian government's keenness to allow joint ventures in the financial services sector. What is the Midland Bank's response to this? Do you expect a branch licence to be granted in the near future?
We have no immediate plans to seek permission to open branches in India. There is a particular reason why we don't feel the need. Midland's strengths traditionally and even now is in correspondent banking. It has been our strength for 70 years or so. Besides, the Hongkong Bank has a 14 per cent stake in our bank's equity, and it is in branch banking here. As a correspondent bank, we have links all over India which may be affected if we were a competing bank.

If Lazard is going to be the first of several joint ventures, we would certainly be interested in considering. We have always been thinking about this and are in touch with potential partners, but there is nothing imminent or immediate. We are not pushing for anything particular at this moment.

Since our association with the Hongkong Bank, we have withdrawn from other southeast Asian countries. We have sold them our branch in Seoul, we've folded in our branch in Singapore into their operations, and closed down our operations in Bangkok and Malaysia. Similarly we've taken from them their branches in our part of the world such as those in Germany and Amsterdam. But we have kept representative offices in India and China, because we regard these countries as strategically important.

The Indian government is seriously thinking of liberalising the rules relating to foreign currency borrowings by the Indian private corporate sector. What are your views on official assistance versus commercial borrowings?
We would be delighted if we could take part in some of that commercial borrowing. But the problem is that at the moment, there is competition from countries like Japan, who can do tax spared lending. We can't take part in that unless we do it on commercial terms, and earn a reasonable commercial rate on it. At the moment there is no prospect of that.

After Citibank gave the lead, banks are starting to think that debt-equity swap is not a bad idea after all. Do you believe that this is a solution for international banks to move out of sticky accounts?
It is a partial solution. We are very keen to explore and are exploring debt-equity swap possibilities in a number of countries. Most countries are reluctant to allow this. I don't think swaps can ever be on a big enough scale to solve the problem. And I think the banks will have to be careful to avoid taking industrial stakes themselves. I mean, we don't know how to run hotels, or cement factories, whatever it would be. So what we would be looking for is international partners — hotel chains or whatever. We are working on this... we've got a lot of possibilities

Consumer or retail banking, which was relegated to the back seat not so long ago is today a major preoccupation of international banks. Why have banks made a big push in this area? Given the cost in financial terms, and the personalised nature of this business, do you feel it can be self-sustaining?
Retail banking is essential business in the UK. We are a consumer bank there, and we intend to remain so. It's a profitable business though it is increasingly competitive. So you have to keep up with the game and invent new products for the market. But outside UK, we do not have ambitions to do retail banking. I think it is very difficult, actually, for any bank to run a successful retail banking operation in a country other than its own. The local relationships and the nexuses, the loyalties and so on, are harder to crack than most foreigners believe. It looks like the same kind of business, but it isn't so. It's tricky. Even if we had a licence here, we would use it only for corporate lending.

What, according to you, should be done by the government to improve the banking environment in this country?
The Reserve Bank of India has already made a start, and it is a very encouraging start (a reference to the recent relaxation of credit limits and interest rate controls). What does strike one here is that there is much, much more bureaucratic regulation — detailed regulation of what banks can and can't do — than in most other countries. We are very pleased to see the abolition of the rule that a company couldn't change its bank and take its account elsewhere, without a no-objection certificate. Now, in most countries of the world, it is inconceivable that such regulation should have even been in place.

An important change would be to allow and encourage more direct investment from abroad. Although people say that it is encouraged, we do know of examples where it will take two years from start to finish, whereas in other countries it would take six months. That is how India should really be looking for foreign funds — less from borrowing and more from encouraging investment.

LETTER FROM THE PUBLISHER

HCL is India's largest computer company. Its success deserves a full round of applause. Started by a group of technocrats led by Shiv Nadar, in 13 years HCL has crossed the Rs.100 crore mark leaving the competition behind.

And what an achievement, considering that many of the competitors belonged to the giant business houses of Tatas, DCM, Sarabhai or giant multinationals. What are the reasons for HCL's success. Clearly Nadar and his team have a spirit of enterprise. But they also have understood the need to keep up in the rapidly changing world of computers and electronics — to absorb the changes, and then to turn the change to their advantage. And most important they have a vision of where they want to go.

In the US (and less so in Europe) such stories are not uncommon. In virtually every field of new technologies or new products or even services new companies establish themselves quickly, and then capture the market nationally as well as internationally. But in India such stories are indeed rare.

Broadly, there are two reasons for this. First, in the US, society recognises the role of technical innovation. Given the speed of change, and also obsolescence, it is widely recognised that unless one keep up and produces the most modern products, companies will be left behind. And if large sections of industries are left behind, soon the country will be left behind. Therefore, there is always a search for the new competitive winners.

World over, the computer industry is a high growth exciting industry. But what is often not fully understood by our sheltered industrialists is that in such a competitive hot house the chances of failure are much greater than success.

The second reason is a little more complex. It is of course well known that the US has well developed capital markets. But what is equally important, the US has tax and company legislation that permits new entrepreneurs to raise money honestly and then to retain again honestly significant sums. It is only now that the Europeans and Japanese are beginning to appreciate that in spite of developed capital markets, legal mechanisms and systems are required that allow creation of capital (and wealth!) in the hands of the new entrepreneurs. Yet, as is only too well known in India, the system is heavily weighted in favour of those who already have a great deal. And the tax structure is such that it is extremely difficult for any entrepreneur to accumulate any significant sums of money legally.

Finally, there is one point on which within the industry, there is most universal agreement. Whatever success electronics and computer companies have achieved, it is *inspite* of the Electronic Commission and the department of electronics. The real reason for setting up a separate commission and department, was to give special emphasis and treatment to the electronics and computer industry. But the department has consistently sought to justify its own existence and has created more problems and hurdles than it has solved. It is time we give up such special treatment for this industry.

Ashok H. Advani

Let's face the truth

Read your cover feature on aviation safety (31 October) with great interest. Am glad that at least one magazine has investigated the matter.

You may be surprised to know that the airlines are recruiting aviation engineering staff from the general engineering stream (mechanical, electrical, electronics) rather than from the nine approved aviation institutes.

The inadequate experience of the general stream trainees results in risky operations and overburdens their supervisors and seniors. Besides the airlines' policy deprives aviation institute students, who undergo *ab initio* training for three years, of jobs which should go to them. AME students have no alternative openings because of the nature of their training. On the other hand, the general category students have vast job opportunities open to them. The question is, why is the government absorbing general stream students for posts actually meant for AME graduates.

AME apprentices are also deprived of their stipend when working with any airline in India. This violates the apprenticeship act.

Rakesh Bhatia
Ex-president, AME Students Association
Calcutta

• Liberty or licence?

This has reference to Jaswant Singh's article, 'Liberty' (31 October).

Without going into the merits of the arguments against the banning of Salman Rushdie's book, *Satanic Verses*, I want to ask a question. How does the author of the article justify his possession of a book which has been banned by the government?

Not only this, his proclamation of this fact in a widely read magazine like yours may incite others also to lay hands on this banned book. Is this morally and legally right?

S.R. Chowdhry
Jodhpur

• Air-India: ban free passes

I must congratulate Air-India's managing director, Rajan Jetley, for the measures introduced by him to effect economy in the undertaking. I particularly appreciate his bold decision to withdraw the facility of free first class passage and the chauffeurs attached to the managerial cadre. Also, residential accommodation for the staff posted overseas is being limited to 1,600 square feet.

When the airline is making huge losses year after year, it is the duty of every employee to wholeheartedly support Jetley's actions. But the staff members who are used to living in maharajah style have chosen a path of confrontation rather than co-operation. I would like to suggest to Jetley that he suspend the free travel facility for the entire staff until the national airline makes a profit. And even after it comes out of the red, the staff should only be given a concession of 50 per cent. Gradually, say by 1993, the concession should be only to the extent of 10 per cent of the fare and no more. Let the employees realise that there is no reason whatsoever for them to be entitled to more than this.

Talking of free passages, I would recommend to the railway ministry also to follow in the footsteps of Jetley and stop free passes for employees. It is no secret that free rail passes are misused and that an army of railway staff is engaged in the unproductive job of issuing such passes and keeping records. Thus, at a stroke the railways will save millions of rupees. Will the railway ministry muster enough courage to take the necessary action?

It is pertinent to note that the government has taken such bold steps in the past — when the privy purses were abolished.

• Small investors' woes

Will someone speak on behalf of the small investor whose pleas for justice are being drowned amidst the din of the raging bull market? What is being done by the stock exchange authorities to ensure that the small investors get a fair deal from brokers and jobbers?

The brokerage is high — 1 to 2 per cent. Besides, orders are rarely executed at the prices one expects them to be — even when the price has been attained. Recently I placed a sell order at Rs.70. It was not executed even though the price touched Rs.75 and closed at Rs.67. The next day my sell order at 'best' was executed at Rs.59, about 15 per cent less than the original order.

Also, the prices reported in the papers are often not correct — jobbers are able to manipulate them.

These are just some of the problems a small investor faces. The payment of monies, receipt of scrips, etc, present several others.

Don't you think that both brokers

• A highly elitist policy

Considering the fact that the new credit policy ('A whiff of liberalisation', 17 October) is going to have far-reaching consequences on the working of the entire banking and industrial sectors, a more in-depth analysis was expected.

It leaves several questions unanswered. Do most banks have the infrastructure to meet the new challenge? What will be the fate of smaller banks in the long run? How will the new and small borrowers cope with the changed policy?

I personally feel that the new credit policy is highly elitist. While the bigger banks and the blue-chip companies will reap the benefits of the policy, smaller banks and marginal borrowers will suffer in the emerging aggressive scenario.

Anupam Sircar

• Tall claims

This refers to your Professional Profile ('A love affair with rice', 30 October).

The statement in the article that "universities concentrate only on the development of high yielding varieties" is misleading and incorrect. Similarly IR-50 was not introduced by J. Farm but by different agricultural universities in India, through the international rice-testing programme of the IRRI, Philippines and ICAR. The varieties IR-8, IR-20, IR-36, IR-64, etc, also came from IRRI. Most of these varieties were popularised by the government of India (Directorate of Rice Development), through the National Minikit Demonstration Programme or the state level ART.

Nagarajan's statement that IR-50 is cultivated on a million hectares of land is wrong. The gross area under rice in Tamil Nadu is only 2.2 to 2.4 million hectares. This is the total area cultivated in all the seasons together, namely, Swarnawari/Kar/Kuruvai, Samba and Thaladi. IR-50 is normally grown during the Kuruvai season (May-August), since during the second crop season, it contracts the disease called blast which is highly devastating. Hence not even 100,000 hectares are covered by this variety. A similar claim by Nagarajan regarding the J-13 variety is also not correct. At least in Madurai district, which I had visited recently, the farmers have rejected this variety.

It is regrettable that at times people make tall claims, which go against the public interest.

K. Vellaichamy
Director (Rice Development)
Patna

• Urgent action essential

What is happening at Kamani Tubes Ltd (Corporate Report, 31 October) is being watched with immense interest by people all over the country and with great expectation by workers in similar sick units. When urgent action is the essence of the proposal any delay in the process of implementation can ground the scheme. The RBI's instructions to co-operative banks to withhold releases of funds to the workers at KTL is a thorn in the flesh for this revival programme.

For a scheme of this nature, why should the workers be made to pay 15 per cent interest for loans of Rs.10,000 for buying shares from Kamani family members. Why not make available 'venture capital' or 'seed money' free of interest to these workers? Secondly, why not extend to them a moratorium of at least three years for the repayment of the loan? These measures will lighten the burden on the workers, ease their anxiety, and enable them to address themselves wholeheartedly to the onerous task of reviving the unit.

Panaji

• Squeezed out by Piramal

I refer to your corporate report on the take-over of Universal Luggage by Blow Plast (31 October). The article states that the Piramals who own Blow Plast and VIP Industries have acquired a controlling interest in Universal Luggage Manufacturing Co Ltd set up by Jal Engineer.

What about the shareholders who have put their hard-earned money in Universal Luggage? They have been deprived of dividend for the second year in succession even though the company has earned a handsome net profit of Rs.2.25 crores.

In fact, the investors were assured a 20 per cent dividend when Universal Luggage went public in January 1987. The Company Law Board should look into the matter and not permit the Engineer family to sell their equity to the Piramals until they pay dividend to the shareholders who have been left high and dry.

Bangalore

• How to retain high-fliers

This refers to the article on high-fliers (Job Watch, 19 September). Anita Ramachandran is right when she says that in the ultimate analysis, the system of identifying a high-flier must also be able to recognise his performance and reward him with the growth he deserves.

A really dynamic management should not worry about the loyalty of a high-flier if it has displayed the necessary courage to establish such a system and if such a system is not only fair but also seen and accepted as fair.

Having created such a system, only the performance of the high-flier and his contribution to the growth of the organisation would determine its success and to that extent the management must take a risk with a high-flier.

• Double standards

Recently, visas were refused to some British cricket players

It is a well known fact that the diamond cartel of De Beers is based in South Africa, with some subsidiaries elsewhere. However, all those who are associated with this South African cartel, either directly or indirectly through its subsidiaries, are being issued visas freely to come to India whenever they want.

Only last month an executive of De Beers was here with his colleagues; another team is scheduled to visit Bombay this month. Will anyone explain?

Private Telecom Network- Make Distant Offices Seem Like The Cabin Next Door.

Tata Telecom has ushered in Digital Electronic PABX Systems that have revolutionised communication in commerce.

Digital Electronic PABX Systems with Stored Program Control.

Systems that can help you get in touch with the outside world by merely lifting a finger.

Networking For A Closer Business World.

Tata Telecom has set up Private Telecom Networks that link far-flung offices within an organisation with EPABX Systems that can now operate as a single, integrated network.

Systems that not only transmit voice but data and images as well.

Result: Instant and complete communication between wide-spread offices. Be they offices within the city as required by Tata Electric Companies. Or offices all over the country as required by State Bank of India.

Technology From Oki Of Japan.

Tata Telecom is working with technical assistance from Oki Electric of Japan.

Oki is a world leader in the field of telecommunication.

Oki's technology is state-of-the-art, which makes it relevant to today's needs – and to those of the future.

Rs. 12 Crore Worth Of Back-Up For Quality And Service.

Besides the hardware, Tata Telecom has built a comprehensive infrastructure for quality service to customers.

The company has invested Rs. 12 crore in this project, in sophisticated computerised test equipment – so that every component can be checked for 100% performance. And that diagnosis is immediate and rectification rapid.

The Tata Commitment.

Tata Telecom is here to stay – with an automated assembly and testing facilities at Gandhinagar, Gujarat.

Key personnel have been intensively trained in Japan.

Tata Telecom has done all this to meet the challenge of the future. To bring you EPABX Systems that will change your life. For the better.

Radical allowances

After considerable negotiations, the employees' union and the management of Herbertsons Ltd have arrived at a unique settlement. Employees will now be entitled to some innovative benefits and allowances.

- Hill station allowance: paid along with LTA irrespective of whether the journey was undertaken or not
- Holiday working allowance: awarded every time an employee has to work on a company designated holiday
- Honeymoon leave: seven days on full salary, allowed at the time of an employee's first legitimate marriage
- Abortion leave: allowed only twice for "female workmen"
- Paternity leave: allowed twice during workman's service, provided it is taken within 15 days of the child's birth and provided workman does not have more than two children

Sad reflection

A recent journey by the Howrah Mail opened my eyes to one of those irrationalities that religion and superstition have perpetuated.

Crossing over the Godavari, my co-passengers started throwing coins into the river as a token to appease whatever 'god' it is that resides in those murky waters. And all this when an urchin from one of the surrounding villages was sweeping the compartment with dried leaves to earn a little money. Needless to say, he got very little because most of the change had been offered to the river.

If one were to take into account the numerous 'holy' rivers in India, the numerous trains crossing them and the thousands of coins that go into the rivers as offerings every day, and tot up the total financial loss, it must run into several crores every year. Not only is this an enormous, senseless waste but also a poor reflection on our national attitudes.

Let's stop this waste.

SPS

Mukti knee joint

Mukti, a Madras-based socia organisation which provides artificial limbs to arm and leg amputees, has developed an artificial knee joint called the Mukti Joint to facilitate easy movement of legs for above-the-knee amputees. The joint will enable the handicapped to sit and do their work like any one else. The Mukti Joint works on a spring action and is being provided free of cost to the poor and at a negligible cost to the well-to-do.

V. GOVINDARAJAN, *Madras*

Courting a tangle

At Sorab, about 80 km from Shimoga in Karnataka, the taluk's litigant public had to travel all the way to Sagar for any court matter. The high court decided that the establishment of a munsif and magistrate court would end the inconvenience. Until a building was built for the purpose, the district court took possession of a hostel maintained by a trust for the purpose of trials, etc. However, a suit has been filed by some persons challenging the handing over of the hostel to a court. The grounds? The donors had willed that the building be used as a hostel and none other.

A court may come into being by winning a suit against itself.

ARUN BHATIA, *Bangalore*

Cluttering up the heavens

The heavens are facing a population explosion of a different kind.

According to the report of the Astronautical Congress held in Bangalore recently, the number of manmade satellites is growing every year. As on 10 February this year, there were 379 objects in geosynchronous orbit alone. Of them, 240 were spacecraft and 89 were rockets. Of these, 91 objects belong to the US, 64 to the Soviet Union and the rest to 16 other countries and Intelsat.

VIVEKANAND V. KADAM, *Bangalore*

Zap the birds

Japan's second largest airline — All Nippon Airways (ANA) — claims to have reduced bird hits by 20 per cent over the last three years.

ANA attributes this to the huge eyeballs painted on the aircraft's engines. These "eyes" trigger a reflex action in the birds, which makes them veer away from approaching aircraft.

Maybe this is something our civil aviation and air force authorities can look into and implement.

ASHOK V. KARNIK, *Pune*

Converting plastic into crude oil

The Germans have been at it again — this time, they have gone and converted discarded plastic into crude oil, the organic material it was once. Researchers at Union Kraftstoff, a West German chemical firm, have developed a process whereby plastic and other wastes are treated under high temperature and pressure. Plastic molecules are broken down to form a product superior to crude oil and one that can be used as gasoline or heating oil.

In India, a lot of discarded plastic is recycled and re-used in the making of products like shoes, tubs, mugs and pegs. Though the Indian government encourages recycling, it must be noted that the quality of recycled material gets progressively poor. With the West German breakthrough, the discarded plastic can be put to more profitable and efficient use.

N.S. KUKREJA, *Kota*

Guaranteed imperfect!

The world of fashion functions by its own rules. Each new fold or wrap brings its own twist into the scheme of things. No one and nothing remains untouched by the vagaries of fashion it would seem — not even law. Take for instance this label which comes with every pair of stone washed designer Vidam Sassoon jeans.

Now that covering one's backside — at least in the eyes of the law.

ABHAYA BHARGAVA, *Bombay*

Rs.50 paid for each published contribution.

Rules are forever

Rules and conventions are usually adopted because they serve a purpose. Government departments, however, carry their observance to ridiculous lengths. A case in point is the special status given to SC/ST candidates for government jobs.

An ad placed by a public sector company, "Hooghly Dock and Port Engineers Ltd", in the *Indian Express* of 23 July 1988 invites applications for the post of general manager (finance). The post carries a salary of Rs.6,100 a month and candidates are required to have 15 years of post-qualification experience. As usual, general applicants are required to attach a postal order for Rs.20. Candidates belonging to SC/ST are exempted.

Is it that the government believes that SC/ST candidates who have risen to the rank of deputy general manager cannot afford to pay Rs.20?

UPPULURI KRISHNAMURTHY, *East Godavari*

Still going cheap

If the United Bank of Switzerland (UBS) figures are correct, Bombay is still one of the cheapest cities to live in the world — at least by European standards. Based on a group of 108 goods and services — excluding rent — utilised by an average European family of three, the study finds that Tokyo costs 50 per cent more than European cities like Stockholm and Geneva. Compared with London and New York, Tokyo is 100 per cent more expensive to live in. Against Bombay, it is 269 per cent dearer! Shonali, a teenage tourist from Bombay in Tokyo, found that all she could afford to buy there was a spectacle case!

ST, Bombay

Know your telephones

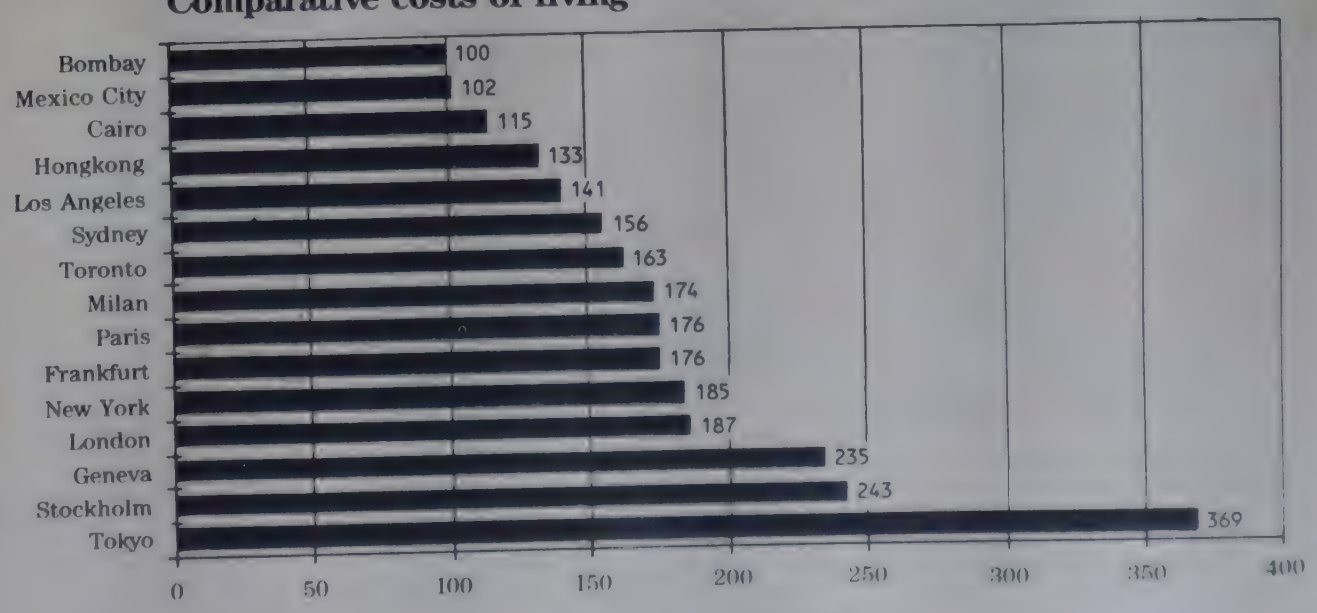
- If you are on the waiting list for a telephone connection you have the right to inspect the waiting list records.
- If your phone bill is more than twice the previous bill and you think you have been charged excessively you need pay only the average of the previous three bills immediately. The balance will await departmental investigation.
- Under Rule 421 of the Indian Telegraph Rules, seven days' notice with reasons in writing has to be given before your telephone is disconnected.
- There is no reconnection charge if the outstanding amount is paid within ten days of disconnection.
- According to norms laid down by the department, a telephone should be repaired within a specific number of hours, eg, seven hours in Bombay. This is, however, a norm, not a mandatory provision. You can point this out if your telephone remains dead for long periods.
- The department officers cannot refuse to see subscribers who want to meet them. They have instructions to receive visitors at a specified time every day.
- The general manager or district manager of the Telephone Department is required to make the rules available to subscribers.
- The complaint booking number, 198, has to be picked up by the person in charge within three rings.
- Normally an ordinary trunk call has to materialise within two hours, an urgent call within one hour, and a lightning call within 15 minutes.
- Telephone rules provide that the department has to check every telephone every six months to keep the instrument in order. This is a mandatory provision.
- During the financial year April 1987 to March 1988, 179,464 complaints were made in the country. Of these, 165,000 were disposed of.
- The Department did not find a justification for rebate in 131,901 cases while a total of Rs.7.15 crores was refunded in 33,799 cases.
- Bombay topped the list with 24,763 complaints though a rebate was given only in 741 cases, involving Rs.49.3 lakhs. Delhi followed with 21,336 complaints but 4,954 subscribers got a refund of Rs.2.07 crores.
- The union minister for communications granted 824 and the minister of state for communication 112 out-of-turn phone connections since their assumption of office. All this at a time when there is a waiting list of about 1.2 million. This means there is approximately one waitlisted person for every three people who have a connection.
- As per MTNL's Tatkal (instant) scheme, according to the Department of Telecommunications, the monetary loss to the government due to these out-of-turn allocations is about Rs.3 crores.
- To clear any confusion regarding the rental to be paid under the Own Your Telephone (OYT) scheme, the following information will be useful.

OYT

Amount	Bi-monthly rebate in rental	Bi-monthly rental
Rs.3,000	Rs.24	Rs.176
Rs.5,000	Rs.40	Rs.160
Rs.8,000	Rs.64	Rs.136

This applies for 20 years, after which the normal rental in the case of general category applies.

Comparative costs of living



Index: Bombay = *100, based on exchange rates as on 31 March 1988*

What do you mean, "I didn't get the circular"?

Should lazy circulars hold up vital decisions?

If your answer is 'No', call Team Xerox

Very often, a circular doesn't circulate. It settles on some desk and quietly gathers dust.

Many managers don't get to see it. And because they're uninformed, they can't contribute when it comes to arriving at decisions. Or they can't take action when they are supposed to. Delayed information, or the lack of it, results in the kind of decision that could spell disaster.

Moreover, circulars get delayed. Not only in travelling from one desk to another, but also at the preparation stage where they are often tied up by their traditional ally, the cyclostyling machine. Which necessitates the retyping of an existing original onto a stencil. This takes more time than you might expect.

And every time anything is retyped, chances of mistakes increase. Then, copies have to be run off... a further waste of time, besides being messy.

Speedy communication is essential for your organisation to function efficiently. And that's where a Modi Xerox photocopier comes in. Original circulars need not circulate.

With a Modi Xerox copier, information can be rapidly reproduced and speedily communicated to those who need it, when they need it.

Managers can get all the data they require, well in time for considered decisions. And people who need to contribute, can.

All this rapidly starts adding up. You function more efficiently which does your organisation's image and results a world of good.

So call Team Xerox. From manufacturing to after-sales support we provide cost-effective solutions to communication problems.

You'll break the vicious circle caused by lazy circulars and time-consuming stencils.

Fill in the coupon and post it today to :

Who will breast the tape first?

Three companies — Essar, McDowell and Gujarat Ambuja Cement (GAC) — have filed applications to set up downstream petrochemical units in Maharashtra, Andhra Pradesh and Gujarat respectively. The applications are reported to be pending with the cabinet committee for project approval — the final hurdle before a decision, one way or the other, is taken.

The committee comprises the union ministers for finance, industries and commerce and the cabinet secretary. In practice, however, the decisions come from the prime minister's secretariat. If GAC's Rs.200-crore styrene and polystyrene project application steals a march over the others — and current indications are that it will — then it will prove once again how important it is to have your man in Delhi.

Letting it be

Vijay Mallya seems to be more active overseas than he was while a resident Indian in recent years.

After clinching a deal to buy out 21 per cent of the equity of the Pune-based WIE Ltd, a civil construction and erection company, Mallya is reported to have shown an interest in acquiring Alfa-Laval India, known for the range of dairy machinery that it manufactures. It is said that after acquiring 3 to 5 per cent of the company's equity in the stockmarket, he made a bid to negotiate with Alfa-Laval's parent company in Sweden for transfer of the latter's 40 per cent equity in the Indian company. But Mallya's overtures have not been entertained, it is reported. The Swedish multinational prefers to let things be at its Indian associate.

One's good, four's better

Macneill & Magor Ltd (sales: Rs.88.33 crores for the year ended June 1987), a Calcutta-based company headed by B.M. Khaitan, is now in the process of splitting up. Each of the four engineering divisions of the company is being converted into a separate company while the tea and mining divisions are being left untouched for the time being.

Kilburn Reprographics, having units in Calcutta, Bombay and Ghaziabad, was the first engineering division to become a separate company at the end of 1987. Soon Kilburn Engineering in Bombay will follow and then the electrical division (Calcutta and Madras) and the materials handling equipment division. (Calcutta).

The main aim of this exercise, according to company sources, is to come out of the MRTP net which is stalling the company's expansion and growth. Also, the idea of having a centralised management at Calcutta for the units scattered all over the country, had not been working well. But shrewd market observers want to compare the performance of the engineering units with that of the tea units before making any judgement.

The BIFR means business

The reputation of the two-year-old Board for Industrial and Financial Reconstruction (BIFR) is growing with every case that comes up before it for hearing. At a recent hearing to decide a revival package for the "sick-beyond-redemption" Gogte Textiles, Belgaum (accumulated losses: Rs.10 crores as on 30 June 1987) the BIFR is reported to have vetoed any fresh assistance to this company.

According to reports, at the hearing, the company representative repeatedly tried to make the company's bankers, State Bank of Mysore (SBM), the scapegoat accusing it of delaying cash credit. Strangely enough, the Industrial Development Bank of India argued that the company was justified in its demand for further assistance. However, SBM and the Industrial Finance Corporation of India (with the largest exposure in Gogte Textiles) did not think so.

The BIFR is believed to have stuck to its norms and has asked the promoters (chairman B.N. Gogte, SICOM and others) to bring in 20 per cent fresh capital. The concerned banks and institutions have been asked to submit a revival package by January 1989. Obviously the BIFR means business.

An IAS victory?

B. Ratnakar, the former banker who matched the State Bank of India step for step when he was chairman of Canara Bank, may not occupy the coveted position of joint chairman of the Minerals & Metals Trading Corporation and the State Trading Corporation. According to the Delhi grapevine the government has cleared the name of another individual (which it has kept a closely guarded secret) believed to be from the IAS cadre. If that is the case, it is one more victory for the bureaucrats.

B. Ratnakar: lost out

Cement cartel broken

The cartel of cement manufacturers, which has been operating since the monsoon this year broke up last week. ACC, the largest producer of cement and also the most active promoter of the cartel, was the culprit.

Last week, it offloaded 30,000 tonnes in the Bombay market (total demand: 100,000 tonnes a month). The cement was brought from Andhra Pradesh where the demand is poor. ACC priced its cement at Rs.62 a bag and thus brought down the average price in the Bombay market to Rs.64 from Rs.70 a bag the week before. So, is the cartel finished? Some believe that despite ACC's action, the cartel will hold on. Others feel that other manufacturers will be tempted to initiate ACC's cartel-breaking action when in trouble.

17.5 per cent hike in aluminium price

In spite of a 17.5 per cent hike, the domestic price of aluminium continues to be lower than the international price which is Rs.36,000 per tonne on the spot market. The ex-factory average selling price of aluminium has gone up from Rs.25,309 to Rs.29,749 a tonne with effect from 17 November 1988.

The increase is primarily due to the escalation in power tariffs, expenditure on modernisation and technological upgradation, and improvement in the quality of the metal.

While aluminium producers have welcomed the price hike, they consider it inadequate to meet the cost escalation in the industry.

Canadian aid for Rajmahal coal mines

The union cabinet has approved the expansion of the Rajmahal opencast coal mines in Bihar at a cost of Rs.550 crores. The project is to be undertaken with Canadian assistance. The Canadians will meet almost 85 per cent of the foreign exchange required — $120 million at a conservative estimate. A large portion of this is to come from the Canadian Export Corporation.

After the expansion, the output of coal will increase from around five million tonnes a year to approximately 10.5 million tonnes. The project is linked with the National Thermal Power Corporation's Farakka thermal plant. It is estimated that the project will be completed within 66 months after work begins on it.

Almost 10 per cent of the expansion cost has been allocated for environmental work — reclamation of land, planting of trees and allied activities.

Grain output may exceed 170 million tonnes

While inaugurating NAFED House (the new official headquarters of the National Agricultural Marketing Federation Ltd) Bhajan Lal, the union minister for agriculture, announced that foodgrain production during 1988-89 may exceed 170 million tonnes.

While advising farmers not to resort to distress sales, he promised them that the government would procure all items for which procurement prices had been announced.

Autonomous body for FTZs mooted

One of the first major recommendations of a committee set up by the India-USSR Chamber of Commerce and Industry is that a unified, autonomous and plenipotentiary authority be formed to manage all free trade zones (FTZs) in the country.

The committee headed by Vivek Singhal, the chamber's vice president, was constituted to analyse the slow growth in exports from the zones, particularly to the Soviet Union.

According to the committee, some of the units in the FTZs, particularly those in Kandla have been misusing the import facility granted to them by re-exporting imported items without any further processing. The units have been repacking imported products and export them at prices 20 to 30 per cent higher. They have therefore neither created any additional employment nor raised technical skills or the level of indigenisation of products.

Revenue collection short of target

The central revenue collection till October in the current fiscal year fell short of the pro rata budget estimates by 5.57 per cent, according to a status report on revenue realisation from direct and indirect taxes.

The report prepared by the revenue department of the union ministry of finance says that the collection during the period was Rs.21,302 crores while the estimated revenue was Rs.22,558 crores. However the receipts represented a 12.6 per cent increase over the Rs.18,905 crores of the corresponding period last year.

The combined realisation of customs and central excise fell short of the sanctioned budget estimates by 3.43 per cent. In absolute terms the shortfall was Rs.1,152.85 crores. The central excise collection was 3.91 per cent short of the sanctioned budget estimate. In absolute terms, the shortfall was Rs.906.28 crores.

Taking 1984-85 as the base year, the report showed that the central excise collection grew by 16.48 per cent in 1985-86, 15.87 per cent in 1986-87, 8.98 per cent in 1987-88 and 10.18 per cent in the current year.

Rajmahal mines: coal output to double

Plastics exports to get a boost

The plastics and linoleums export promotion council (Plexconcil) has identified idle plastics processing capacity to the tune of 1.29 lakh tonnes which if diverted to exports could fetch Rs.400 crores in foreign exchange.

India's traditional plastics exports have been confined to items like bangles, spectacle frames, imitation jewellery and

usehold articles like buckets d mugs. Exports have never en above Rs.70 crores and re than half of this trade is in pees.

In recent times, considerable reign exchange has been in-sted in the processing sector. uch of this is in non-tradi-onal products like LDPE agri-ltural films, woven sacks, jection moulded products, ulti-layer films and the like. uring the last five years, 14 ultilayer film plants have ome up each costing Rs.1 crore Rs.3 crores. After the US, it is dia which has the largest nu-ber of such plants. Their ca-pacity utilisation, however, is ess than 10 per cent.

To help the industry find an export market for these uncon-ventional plastics, IPCL, the premier polymer manufacturer n the country has set up an export cell.

Rs.45,000 crores for railways during Eighth Plan

The railways are expected to get 7 per cent of the projected Eighth Plan outlay of Rs.650,000 crores. The transport sector as a whole is expected to get 14 per cent of the total plan outlay.

Working on the preliminary projection made by the Planning Commission, the railways have drawn up a Rs.45,000-crore Eighth Plan outlay at 1988-89 prices.

Of the Rs.45,000 crores, it is estimated that Rs.15,000 crores will be spent on the rehabilitation of assets including rolling stock, track renewals, signalling and electricals. Rs.15,000 crores will be set aside for the completion of the ongoing projects and adding certain capacities to meet the Eighth Plan growth rate of 6 per cent. The balance of Rs.15,000 crores will be utilised for supporting inputs mainly the rolling stock.

Financial experts describe the Rs.45,000-crore investment as "need based requirement". In the Sixth Plan the railways were allocated Rs.6,700 crores. However, the outlay was stepped up two-and-a-half times to Rs.16,700 crores in the Seventh Plan.

The railways will finance project investments to the extent of 55 per cent through generation of internal resource. A productivity increase of 12 per cent is envisaged over and above the 25 per cent increase likely to be achieved during the Seventh Plan.

ONGC to sign $ 125-million loan pact

The Oil and Natural Gas Commission (ONGC) is about to sign an agreement with Credit Suisse First Boston Ltd for a Eurodollar loan worth $ 125 million. ONGC is expecting to receive the entire loan amount in December. The money is to be used to meet the foreign exchange requirements of its expanding operation within the country and abroad.

ONGC has also tapped other international capital markets for raising foreign commercial loans. A Eurodollar loan of $ 300 million had been signed with 37 international banks including 17 lead managers from different countries in February this year.

Rs.5,300-crore Soviet aid pledged

India and the Soviet Union have signed six agreements. Four of these provide for co-operation in the areas of space, nuclear and thermal power. One deals with cultural, scientific and educational exchanges between the two countries. The sixth agreement proposes to avoid double taxation of income. Under the agreements, the Soviet Union will provide concessional assistance of 3.2 billion roubles (about Rs.5,300 crores).

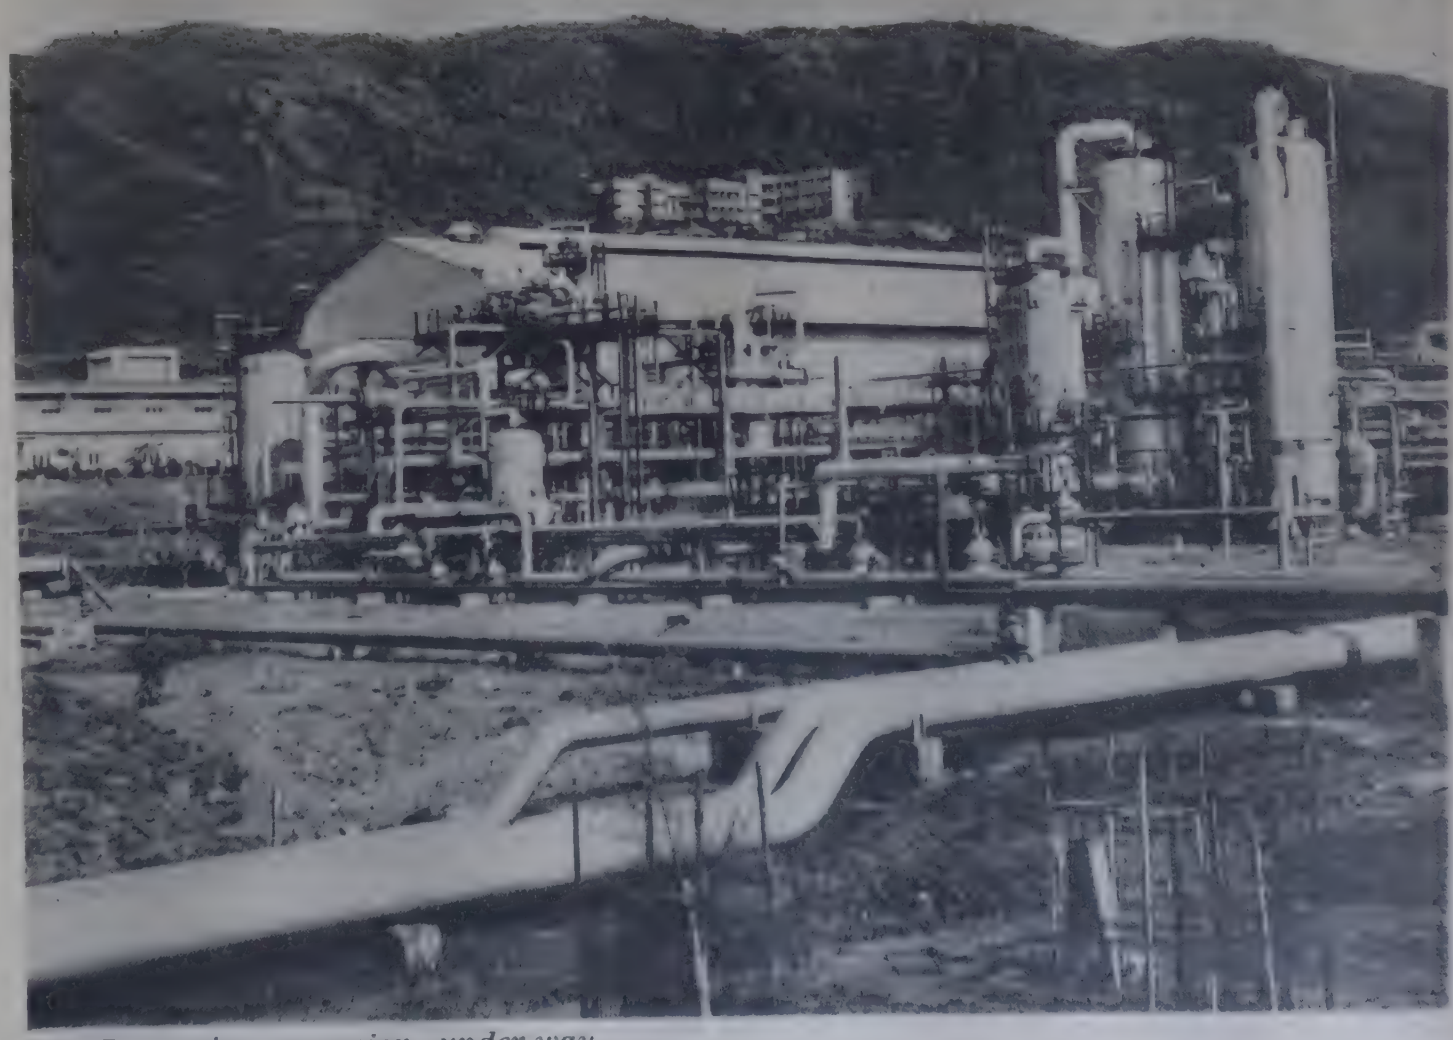
The mega Soviet credit covers six power projects with a total capacity of 6,000 MW. This includes a nuclear power station in the south (with two reactors of 1,000 MW each).

The USSR will provide concessional credit for the nuclear power station. It will supply enriched uranium fuel for the entire operational life of the nuclear power station. The nuclear power station, when completed will supply much needed electricity to the states in the southern region. This will be in addition to the country's indigenous programme of setting up 10,000 MW of nuclear power capacity.

CMC gets ordnance project

The Ordnance Factory Board (OFB) has dropped the idea of buying five mainframe computers for production planning in ordnance factories. Instead, it plans to buy minicomputers for each of the 35 factories. CMC Ltd has been entrusted with the entire computerisation project.

The OFB decision follows a long battle between the public sector Electronic Corporation of India (ECIL) and the private sector International Computers Indian Manufacture (ICIM). OFB had recommended purchase of the mainframes from



ONGC: massive expansion under way

ICIM last year. However, ECIL lobbied for the contract and the Department of Electronics (DoE) recommended to the defence ministry that it would be better not to involve private sector firms in the computerisation as it might endanger security.

OFB then asked CMC to take over maintenance and support of the mainframes. After a study of the project CMC recommended that separate minicomputers would be preferable to mainframes for the job.

NGE strike called off in Bihar

After six hours of discussions with the chief minister, Bhagwat Jha Azad, the non-gazetted employees of Bihar called off their 75-day-old strike. The 800,000 NGEs had almost paralysed the state government with their strike demanding wage parity with central government employees.

The payments as per central scales will commence from March 1989 and not with retrospective effect from January 1986 as demanded.

Damage repair equipment

Unipro Transport Equipment, a division of the Madras-based Union Motors Services Pvt Ltd, one of the oldest automobile dealership companies in Southern India, has introduced the 'Dataliner 800 repair equipment' to rectify accident damages. The measuring and aligning system is designed and manufactured by the company's principal, Nicator AB, Sweden. Run on a laser measuring system, it is suitable for all types of cars, Indian and imported. The equipment is capable of achieving 100 per cent accuracy of chassis alignment.

The damage rectifier

GSFC: developing bioweapons against pests

Bio-insecticides from GSFC

Scientists at the joint sector Gujarat State Fertilisers Company (GSFC) have isolated strains of bacteria which can eliminate certain pests. Strains of a bacteria called bacillus thuringiensis (BT) can control the population of about 500 insect pests. BT has been found to be effective against a wide variety of crop diseases including those affecting cotton, tobacco, sugarcane, vegetables, groundnut, pulses and other oilseeds. Biopesticides are developed using genetic engineering techniques.

Qantas flights

Qantas has introduced a twice-weekly service to Bombay in order to increase the traffic capacity between Australia and India. Qantas intends to aggressively market the Indian sub-continent to Australian holiday-makers.

The new Boeing 767 flights depart from Australia on Thursdays and Saturdays and reach Bombay via Singapore. The Thursday flight departs from Sydney and Adelaide and the Saturday flight from Townsville and Darwin; flights from Bombay to Australia depart on Friday and Sunday.

State Bank of Indore is top performer

An analysis of the performance in 1987 of all the 28 public sector banks has revealed that the State Bank of Indore (291 offices) recorded the highest growth in deposits — its deposit growth at 42 per cent was far above the average growth of 15 per cent of all the banks. In advances too, it achieved t highest growth of 28 per ce which was twice the avera growth recorded by all t banks. The analysis furth shows that per employee bus ness of the bank also record the highest growth of 36.56 p cent in 1987 against an averag of 12.62 per cent for all the pu lic sector banks.

The profit performance of th bank was also very laudable whereas the net profit of all th banks increased by 36 per cen in 1987, that of State Bank o Indore increased by 104 pe cent.

GE wins judgement in Bombay

The Bombay High Court has upheld an $ 13 million arbitration award in favour of General Electric Co against Renusagar Power Co Ltd, a wholly-owned subsidiary of Hindustan Aluminium Corporation Ltd (Hindalco).

The dispute involved a 1964 agreement between GE and Renusagar, in which GE sold power generation equipment to Renusagar on deferred credit terms. GE claimed that Renusagar was paying only 27 per cent of its interest payments to the company. Renusagar claimed that it was required to hold the remaining 73 per cent in reserve for Indian taxes, although the disputed money was never paid to the Indian government.

MAA's success

MAA Communication notched up a significant success recently, when it scored over agencies like Mudra, Trikaya and Speer to win the Asea-HBB merger communication account. Considering that it is the first merger of this magnitude in India and the diversity of the target audience, it may well prove to be a major communication challenge.

Agency sources attribute MAA's success to the fact that it is the only agency offering total communication capabilities in

Ever since Vedic times, colour has held a very special place in India.

Scholars and sages studied the psychological and physiological effects of colour on human life. Recent scientific findings indicate a closeness in thought to the colour symbolism studies of the great rishis.

Blue.

Look around you for blue.
You'll see it sparkling.
You'll see it stormy.
You'll see it peaceful.
You'll see in it the cosmos.
And you'll sometimes see it sad and melancholic.
Dark-blue for meditation.
Calm.

Blue is tranquility.
Contentment.
The Vedas speak of blue representing creation and spirituality.
But simultaneously muddy shades are greed and covetousness.
And so undoubtedly, the changing moods of blue make it the most mystic of all colours.

THE PCL SERVIC

48 OFFICE

In a country as vast as ours, can a service oriented company be true to itself and its customers if it controls its operations from just a few offices or through a network of dealers and retailers?

At PCL, we believe not.

That's why our own network is so widespread. And manned by 800 experts to effectively service and support each of our clients locally.

Whether they are large national companies with branches all over the country, medium-sized organisations planning to spread their wings, or small units in anv small town!

Networking the PCL Service Plus

Yes, the PCL service offices, do in fact, work like a perfectly synchronised configuration. Offering manifold advantages to you, our customer.

You can start by centralising your decision to computerise all your offices, without any worries about the quality of the service and maintenance facilities your small town branches will receive.

Then, since you will be installing similar systems all over, you can hold collective training programmes for all your teams at a central location.

Another time and expense saving advantage of acquiring similar or compatible systems from a company like PCL is on the software front – you don't need to buy different software packages for each system, o make a large investment while converting or modifying these packages

And, we're sure you'll agree that uniform upgradation (made on the basic system by the manufacturer himself) also leads to greater system compatibility and reliability.

Pertech Computers

CONFIGURATION

NATIONWIDE

Now, for a look at the day-to-day benefits of being serviced by PCL:

Our service personnel are absolutely tuned up to meet your every need.

To ensure that their service is prompt, each of our offices is equipped with a special communication channel that swiftly puts you in touch with our engineers. And, they are guaranteed to see you in less than two hours! So, whether it is new consumables you want, or a service or repair that your system needs, remember, PCL service is just a phone call away from you!

The proof is in the performance

Yes, PCL's exemplary service and support, and revolutionary hardware range have come together to establish a virtually unbelievable track record. The fastest growth rate with 3000 installations in just a year. A record uptime of 99.8%. And a repeat order track of almost 70%!

That's the kind of performance that few can hope to match, leave alone beat!

PCL

India's fastest growing computer company.

BHEL invested a total of Rs.254 crores in capital schemes in the first three years of the Seventh Plan period. A total investment of Rs.500 crores has been planned for the Seventh Plan period and is being funded from company's internal resources; 40 per cent of this would be spent on modernisation of facilities and 30 per cent in new growth areas.

For the year 1988-89, BHEL has planned for a turnover of Rs.2,600 crores.

Memory's CASTLE

Memory Banks, a Bangalore-based computer company has developed a software package called CASTLE (computer aided selective teaching and learning experience).

The system has a massive data bank of questions and knowledge modules in physics, chemistry, maths and biology. CASTLE will first spend about 12-14 hours over 5-6 days with a student and create a 'map' of a student's mind on a floppy diskette. The map indicates the areas of his weakness and strength in each subject. It will then proceed to coach the student by asking him over 35,000 questions spanned over several months at the rate of two hours per session with it. At the end of each two hours it will produce a progress report.

CASTLE is not on sale. Instead Memory Banks has decided to open about 100 centres in 68 cities to cater to about 6,000 students who can spend about 168 hours over several months till the eve of the exams.

Company sources expect that by June 1989 CASTLE will be running on computer terminals in thousands of homes in the US, Australia, Germany and France.

Memory Banks & Computers (P) Ltd is scheduled to go public in July-August 1989.

Electronics export opportunity

The Electronic Component Industries Association (ELCINA) has called for steps to attract Japanese electronics companies seeking expansion of their production facilities to invest in India. This is one of the suggestions made by ELCINA based on the report submitted by its delegation which visited Japan, Taiwan, South Korea and Singapore last month.

The delegation found that the hardening exchange rate is forcing Japanese units to look for production facilities outside the country. Certain Taiwanese companies were also keen to transfer technology and some of them were interested in setting up joint venture projects in India.

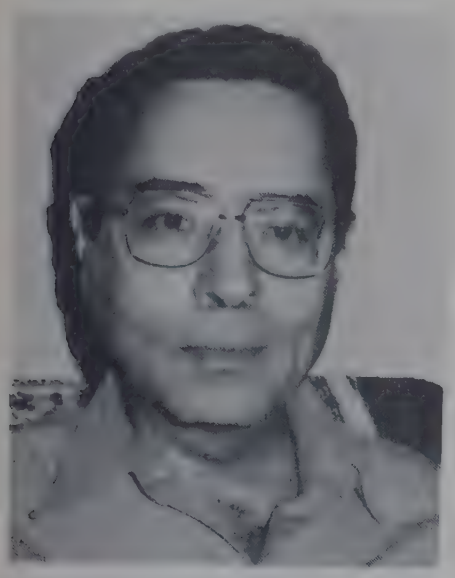
ROHINTON D. AGA

Rohinton D. Aga, chairman and managing director of the Pune-based Thermax Pvt Ltd (sales: Rs.108 crores in 1986-87), makers of industrial boilers, water treatment plants and pollution control equipment, has now decided to manufacture state-of-the-art spray painting guns and equipment. Thermax is setting up a new company at Pune with DeVilbis of USA, one of the world leaders in the field. The new company is named Thermax DeVilbis Pvt Ltd.

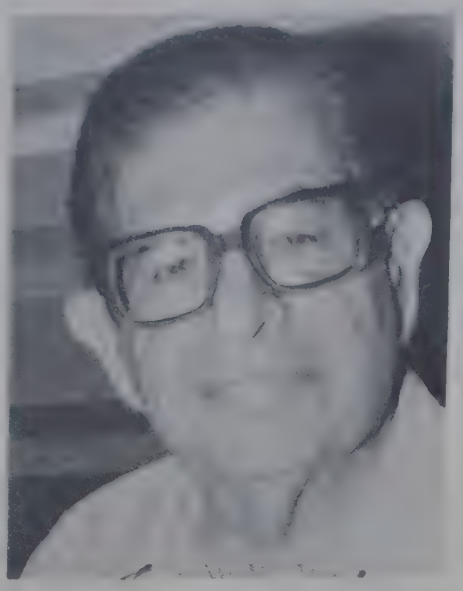
According to Aga, the products of his new company, although more expensive than those now manufactured in the



country, will ultimately be cheaper because they will consume 30 per cent less paint by reducing wastage. And Aga does not foresee any problem in selling his product. "By the time our plant comes up in 1989, the demand for spray painting equipment in the country will be double the domestic production and we will meet a large part of the shortfall," explains Aga.

T. RAMESH U. PAI

According to a recent survey conducted by a Delhi-based company, there is a growing tendency in Bangalore and Hyderabad to go in for three-and two-star hotels as they would be in demand.



Recently, the Taj group took over a sick two-star hotel in Bangalore called East-West, with the intention of catering to middle-class tourists. Now here comes another, a 3-star, to be promoted by the successors to Syndicate Bank — the Industrial Credit & Development Syndicate (ICDS) of Manipal.

Says T. Ramesh U. Pai, chairman of ICDS, "The hotel, which will be located behind Manipal Centre, under construction at Dickenson Road, will cost Rs.7.50 crores. It will be centrally air-conditioned and have 144 rooms." The Manipal Centre, which is designed to be a shopping complex, and the hotel are expected to be ready by the end of 1989.

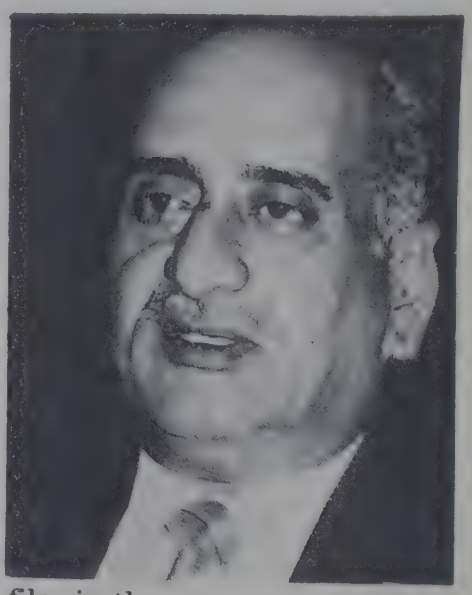
ICDS also plans to construct apartments for high-income and middle-income groups in the city. "The proceeds of these apartments will be utilised to put up a hospital on the airport road, already under construction," says Pai.

RAMACHANDRA RAJU

"We talk of food, clothing and shelter as every human being's basic needs, but I think we should change that order," says Ramachandra Raju, managing director of the Hyderabad-based NCL Industries Ltd. "The right order should be food, shelter and clothing." Raju was explaining his group's resolve to stay in housing and related industries

Five projects on Raju's drawing boards are evidence of this resolve. A Rs.7.5-crore project to double cement manufacturing capacity to 600 tonnes per day at NCL Industries is likely to be completed by March 1989. The second is a Rs.24-crore project to manufacture cement-bonded wood particle boards with know-how from Bison Werke of West Germany. "These boards retain the best qualities of both cement and wood," claims Raju, who hopes to find a good market for this fire-proof, water resistant and termite-proof product.

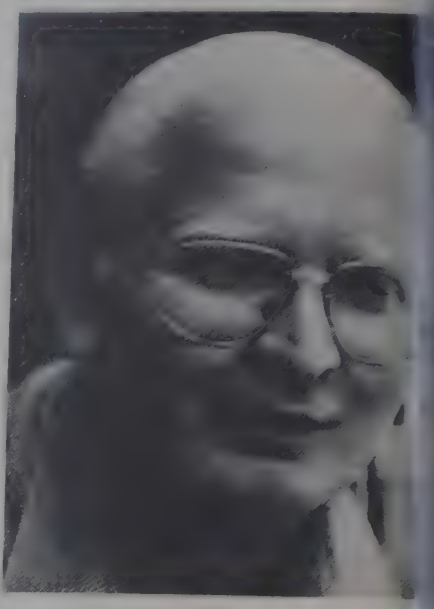
NCL Seccolor Ltd, a new company, will introduce pre-painted cold rolled steel pro-



files in the country, in a Rs.11.1-crore project with technical collaboration from the Italian Industrie Secco. NCL Finance & Leasing will diversify into surface coating materials in a Rs.2-crore project with Swedish knowhow. NCL Nirmans Ltd, which will build houses using products manufactured within the group, is the high point of Raju's grand scheme. "We will show people how to build decent, affordable and strong houses," he says.

N.K. BANGUR

For N.K. Bangur, fourth-generation member of the Calcutta-based industrial house of Bangurs, the last phase of the year-long Festival of the USSR in India offered a useful opportunity to acquire a high profile. "We have always been a low-profile group," says Bangur,

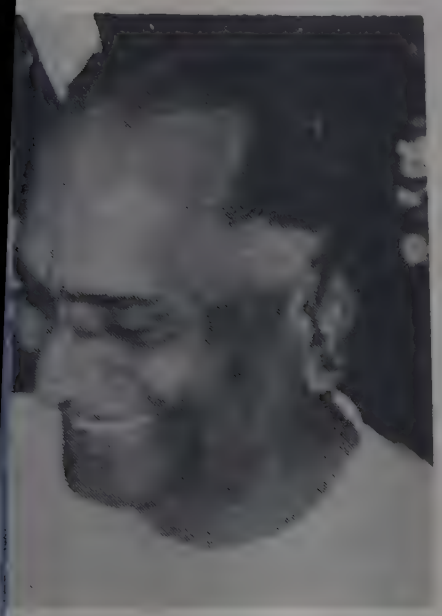


president of Shree Digvijay ment Co Ltd, "and we wante shed that image." Digvij along with the manufacturer Rilaxon mattresses and t Indian Council for Cultural lations, sponsored five ma events of the festival, includ the Kirov ballet of Leningr the Moscow state ballet on i and the Moscow state circus

The Bangurs will foot a h upwards of Rs.2 crores for t image-building exercise. For group that has strong trad links with the USSR, the return will undoubtedly be more tha a public image that will attem to cover up the infighting with the Bangur family. One grou company, Fort Gloster Indus tries Ltd, alone, exported cable worth Rs.8 crores to the USS last year. Says Bangur, howeve "We have not sponsored thes events with any business mo tives."

M. H. PRASAD

Mullapudi Harishchandra Prasad, the 67-year-old chair man and managing director o the Rs.75-crore Andhra Sugar Ltd, is now diversifying into petrochemicals. In a joint venture with APIDC, Andhra Sugars (the flagship company of the Rs.140-crore group headed by Prasad) is setting up a new company named Andhra Petrochemicals Ltd at Visakhapatnam to manufacture 2-ethyl hexanol and butanols. "These two chemicals have a wide range of uses in plastics, paints, cosmetics and pesticides and

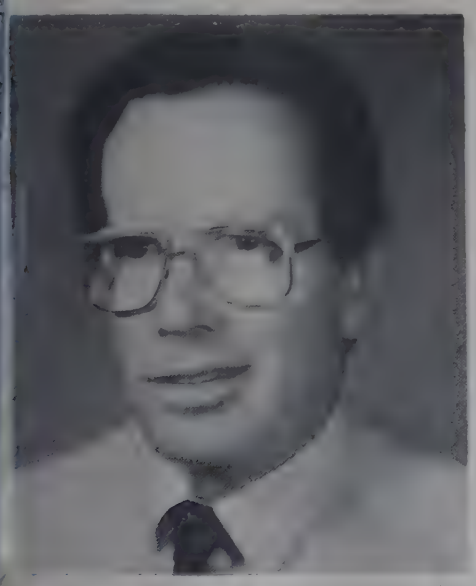


e country's needs are largely et through imports," says asad.

The Rs.120-crore project is pected to commence produc- on in the middle of 1990 and, cording to Prasad, will have output worth Rs.70 crores r annum at full capacity. For e first time in the country the sian Development Bank and ie Commonwealth Develop- ent Corporation are partici- ating in the equity of a new ompany. They are together tak- ig up shares worth Rs.7.43 rores (21 per cent of the total).

RONALD PURSSEY

Ronald Purssey, technical director of Allan International Manufacturing Private Limited, a



leading firm of architects in Australia, feels he has the solution to India's housing problem.

Purssey's firm has devised a "remarkable construction system" which, he says, could "dramatically affect the lives and living standards of the Indian people". Called the Lincrete construction system, it is the latest development in the successful construction of pre-cast concrete elements. Material for an entire three bed-room house can be easily packed in a truck and the construction finished in a week.

Purssey had extensive talks with the Housing Urban Development Corporation (HUDCO).

Allan International has patents for the Lincrete system in about 100 countries and hopes to license parties in India. As a matter of policy, the Australian firm does not participate either in equity or undertake any production. "We only develop and sell technology but don't do any building ourselves," says Purssey.

GEROLD R. GUT

The newest, ultra-short, desk-to-desk delivery system from Bombay to 87 destinations worldwide, is the Swissair Parcel Express (SPEX), according to Gerold R. Gut, the Zurich-based manager (creative selling cargo) of the company. The airline has tied up with Express Kargo Forwarders Pvt Ltd, an air cargo agency.

What sets SPEX apart from other courier services, says Gut, is that each consignment is not just consolidated but "treated on an individual basis". And it's super-fast. For example, a parcel of spares, samples or documents picked up today will reach Geneva tomorrow. In case the delivery schedule is overshot, a rare occurrence, Gut says their commitment to customers extends to paying a refund of the charges. In his view, "It's not just speed, but also reliability that counts."

For the last six years SPEX has been growing 20 per cent annually but Gut is typically Swiss about revealing turnover figures: most secretive.

TIM HARTFORD

Tim Hartford, director of Hertz Asia Pacific Ltd, was in Bombay recently to announce that 'Wheels Rent A Car', a division of the Transport Corporation of India, was becoming a Hertz franchisee. Hertz operates in 120 countries, 4,700 locations and uses 350,000 cars. Wheels' operations in Bombay, Delhi, Hyderabad, Pune and Panjim will utilise 300 cars.

"Markets feed on one another," says Hartford. Travellers from the US or Britain, who are used to Hertz services, are only too ready to use Hertz cars in other countries. Hertz has an exclusive marketing agreement with British Airways so that a traveller can book a car at his destination at the

same time that he books his ticket.

Hertz's relationship with Wheels involves insisting on certain standards of service. The franchisee has also to accept reservations made for its cars by any other part of the Hertz chain. According to Hartford, Hertz see its relationship with India as an investment in the future. "When we first went into Europe in 1955, people thought we were crazy," says Hartford. Today Europe is one of Hertz's largest markets. With the Indian economy opening up, Hartford sees the possibility of a large market for rental cars.

DORON TAMIR

Political differences need not come in the way of trade relations, according to Doron Tamir, head of an Israeli delegation of businessmen that was in Bombay last fortnight to attend the 19th General Assembly of the US-based World Trade Centre Association. Tamir, who is also managing director of the Tel Aviv-based HMM (Conducting Wires) Ltd, invited Indian cable manufacturers and importers of non-insulated conductors to do business with Israeli companies.

For a war-ravaged nation that is not well-endowed with natural resources and suffers a 90 per cent annual inflation rate, Israel has done remarkably well. The average Israeli takes home a monthly salary of US $ 1,000, Tamir points out. "We may be lacking in resources, but we have the brains," he says immodestly.

A Saving Of Rs. 4 Million From Year 1 – That's What Hindustan Motors Has Achieved

Juran on Quality Improvement

This is the programme that the Earth Moving Division of Hindustan Motors is successfully implementing. With results that are truly astounding. A saving of about Rs. Four million, with a promise of more to come.

What is this programme?

Most organisations are unaware of the extent to which chronic problems of poor quality can erode profits. These problems add to cost, constrain pricing and slice off market share. Tackling these hidden chronic levels of poor quality and permanently reducing them is the Juran definition of quality improvement.

Through his video series, Juran on Quality Improvement, Dr. J. M. Juran gives managers a structured and proven process to carry out quality improvement projects. The programme is usable by service organisations and manufacturing industries. It assures immediate and continuing results.

The Key Elements of the Programme

Sixteen videotaped sessions guide managers through actual company improvement projects. A comprehensive array of user guides and a Quality Improvement Reference Library provide support. In addition, the Juran Institute offers the assistance of its affiliates.

Let Juran Work for You

Fourteen international affiliates form the global network of the Juran Institute. Qimpro Consultants Private Limited, Bombay, is part of this network which provides access to Dr. Juran's programmes, including Quality Improvement.

RIFAMPICIN

Looming shortage

Suddenly rifampicin, the vital ingredient in mass-selling anti-tuberculosis and anti-leprosy drugs like R-cin, Tibirin, Montonex and Rifamycid, is disappearing from the market. The six manufacturers of the bulk drug in the country have stopped selling after the government last month slashed its price from Rs.3,000 to Rs.2,500 a kilo. Says a leading rifampicin manufacturer, "It is not economical any more to manufacture this product in the country, so we have stopped selling it at the new price. How can we sell a product at a cash loss?"

Many advantages. Rifampicin is the most advanced anti-TB drug available in the market today. It has eliminated the need for patients to take drugs intravenously. Rifampicin formulations are administered orally, have no side-effects and the patient can continue with his normal routine while under therapy.

Since it is used in the national programmes for the eradication of TB and leprosy, rifampicin is categorised under the Drug Price Control Order of the union ministry for chemicals and fertilisers. That is to say, its sale price is fixed by the government from time to time. Till January 1987, for example, the price was Rs.3,098 a kilo, which was then reduced to Rs.3,000 a kilo. This price prevailed till the recent reduction.

The annual consumption of rifampicin in the country is estimated to be around 110 tonnes while the production capacity is over 200 tonnes. Till 1986, the entire requirement of the drug was met through imports. Then Lupin set up a manufacturing facility to produce it indigenously. Since then five other small bulk manufacturers have set up similar plants. But the intermediate that is used in the manufacture of the drug — 3-formyl rifamycin — continues to be totally imported from companies like Dow Leppit of Italy.

Higher costs. The intermediate contributes nearly 80 per cent to the cost of rifampicin manufacture. And though its international price has remained fairly constant in the last two years, the hardening of the dollar in the same period has increased the Indian manufacturers' cost. The dollar has appreciated by nearly 13 to 15 per cent against the rupee in the last two years. Says P.V. Wandrekar, managing director of Gebco, after Lupin the second largest manufacturer of the drug in the country, "It was a fit case for revision of the price upwards."

The government has not given any clear explanation for its action. Wandrekar feels that it has something to do with a recent import of a few tonnes of rifampicin by the state-owned IDPL from a Chinese manufacturer. (Why IDPL should import the drug when there is surplus capacity available in the country is itself a mystery.) The Chinese use a cheaper but cruder method for the manufacture of the drug and hence have been able to sell at a price that is about 15 to 20 per cent lower than that of their counterparts in Korea and Europe.

The quality of the Chinese product is suspect, though. Says Jasu Shah, managing director of Bio-Chem, the formulator of such popular rifampicin-based anti-TB drugs as Rifamycid and Isorifam, "Even in the days when we used to import our entire requirement of this bulk drug, we never bought the Chinese product. Though cheaper it is of a very poor quality." Adds a rifampicin manufacturer, "The government, however, may not be aware of this difference in quality and probably wonders why, since the Chinese can make it at such a cheap price, our manufacturers can't also do it. But the fact is that we use some of the most advanced technology in the world and so our price will naturally be slightly higher."

Lupin, Gebco and the other makers of rifampicin stopped selling the drug as soon as the government announced the price reduction last month and have since then petitioned the union chemicals ministry for a review of the decision. Last fortnight they met the industry minister, Vengal Rao, to seek redressal of their grievances. Rao said he could refer the matter to the Bureau of Industrial Costs and Prices.

Alternative plans. Nothing much has happened since then and these companies are already considering other products which they can manufacture in case the government does not meet with their demands. Says Wandrekar, "We have two new products in mind which can be manufactured in the same plant. And if the price is not reduced by the government we'll have no option but to change our product line."

According to Bio-Chem's Shah, there is already a shortage of the drug in the market although manufacturers of the

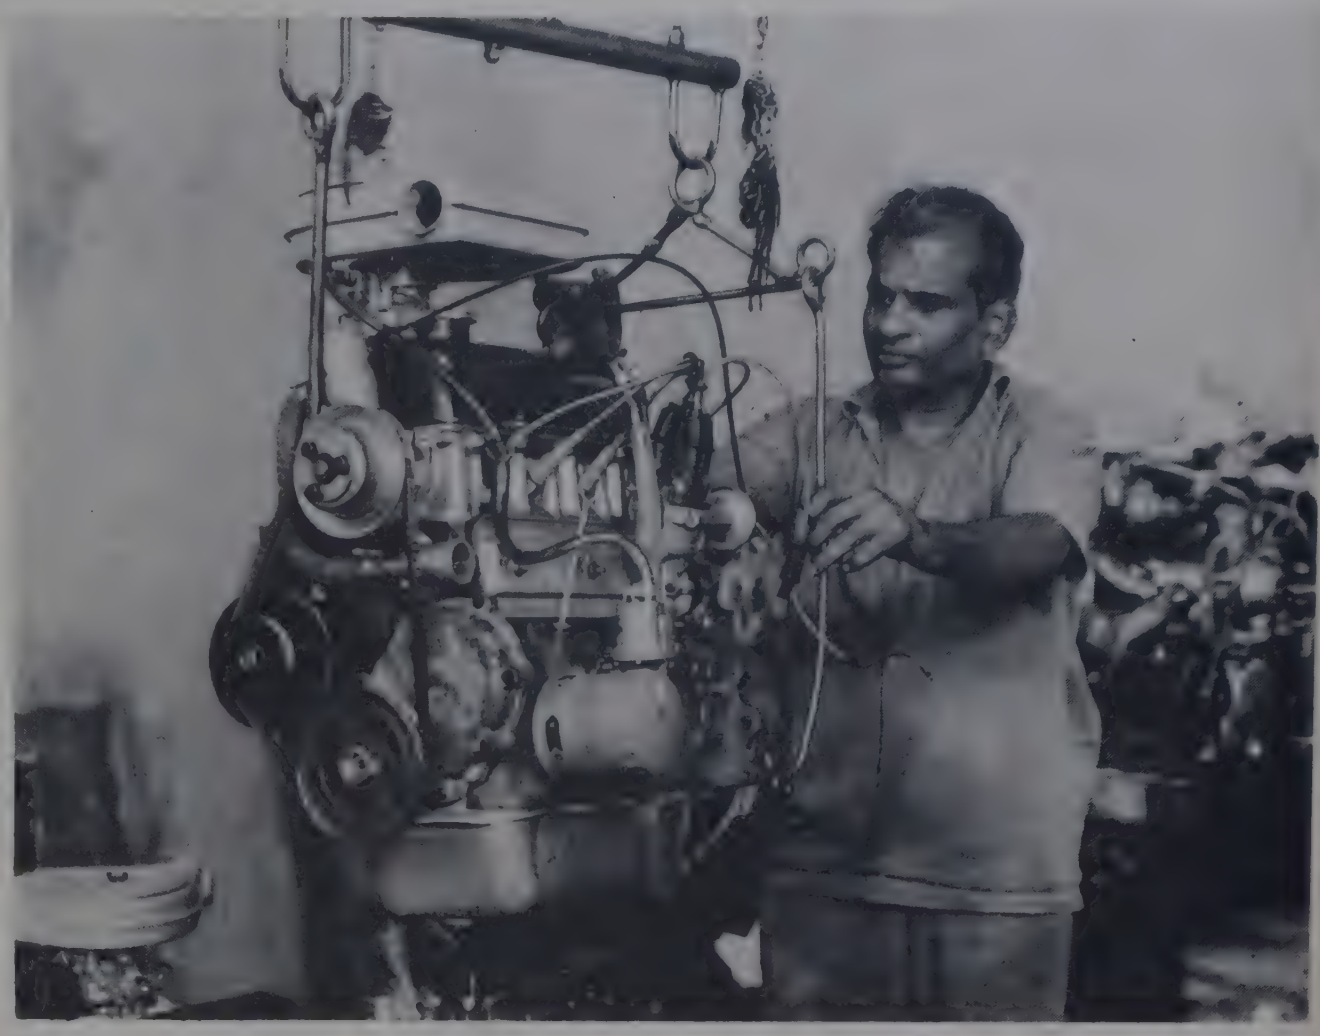
formulations won't feel the pinch for four to six weeks; most of them have enough stocks to last till then. After that, the formulations too will perhaps start disappearing from the market.

What will happen in a worst-case scenario, if the government does not raise the price? According to Shah, formulators like him will have to import the drug. The imports attract no duty and the international price currently is very nearly equal to the domestic price. "The only problem," Shah says, "is that the moment we stop manufacture of the bulk drug in the country and decide to buy from the international market in a big way, the rifampicin cartel might hike their prices. The use of rifampicin is restricted to the tropical countries since diseases like TB and leprosy prevail only here, and hence it is easy for them to manipulate prices." Besides, the government runs the risk of all the local manufacturers shutting down their plants. Such a move would be disastrous.

It was after years of persuasion that these rifampicin manufacturers set up plants to make the drug from the intermediate stage. And now when companies like Lupin are moving ahead and trying to manufacture the drug from the basic stage itself, they ironically have to face the spectre of the whole operation suddenly becoming uneconomical overnight.

■ N. RADHAKRISHNAN



The upgraded engine

PREMIER PADMINI

A thorough overhaul

The old, familiar Premier Padmini is getting a thorough overhaul. Premier's R&D department has been doing extensive work on the car and the engine has been upgraded to give 17 km per litre under test conditions, instead of 12 km. The 30-year old model might also be getting a sleeker body.

According to Vinod Doshi, chairman of Premier Automobiles Ltd (PAL), the company had been looking at the possibility of phasing out production of the car because the dies, which had been bought from Fiat in the mid-fifties, were reaching the end of their life-span by the eighties. Premier was planning to shift the focus on their Nissan-Fiat hybrid car, the 118 NE. But, when they found that the dies could be rehabilitated and that, in spite of Maruti's arrival on the scene, there was still a demand for the car, it became apparent that the old Padmini was still a going proposition.

Relief rejected. The R&D department's first step was to work on the fuel efficiency of the engine. Premier hoped to take advantage of the fuel efficiency incentive scheme announced in 1983 — 5 per cent relief on excise duty for cars achieving the required fuel efficiency. However, the government has refused to give the excise relief on the grounds that the incentive scheme was meant to motivate indigenisation of imported technology and hence, not applicable to cars not following the phased manufacturing programme (PMP).

The norm for 1000 cc engines was 17 km per litre under test conditions, and after three years of work, the R&D department was able to achieve this. They claim the car gives 11 to 12 km per litre even in heavy traffic conditions.

Fuel efficiency depends on a large number of factors and changing one component involves redesigning the whole system — starting from the carburettor which feeds the right mixture of fuel and air required for burning, the combustion chamber where the fuel is ignited to form gases, the ignition system which controls the spark necessary for ignition and the lubrication and cooling systems.

The R&D department's main thrust was on reducing the fuel consumed when the engine is idling, ie, when the car is held up at traffic lights or in a traffic jam. An engine requires different amounts of fuel depending on the running condition of the car. When the engine is idling or at cruising speeds, a leaner mixture — ie, low fuel to air ratio — is acceptable but when the car is accelerating, more fuel is required and a richer mixture has to be fed into the engine.

Premier also increased the compression ratio to 8.3:1. Unfortunately, increasing the compression ratio involves a trade-off between power and pollution. More mechanical energy is available to the engine but the exhaust gases will include higher levels of nitrogen oxides and hydrocarbons. Premier, however, says that the emission levels have not increased significantly.

Premier has more plans for the Padmini. Disc brakes and a diaphragm type clutch will be introduced within a year. The R&D department is already working on improving the suspension and steering systems and the car is scheduled to have a more streamlined look within 24 months.

The Padmini is still selling steadily, and Doshi says he is planning to increase production from 100 cars per day to 150 cars.

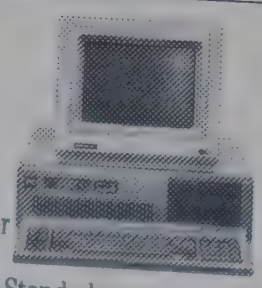
"HOW STRANGE. IT DOESN'T LOOK LIKE A NELCO COMPUTER."



Just because we're big in minicomputers, people tend to forget that we make anything else. So here's a gentle reminder.

Nelco also make PCs.

For use as network solutions. Stand-alone systems. Terminals for minis and mainframes. Data entry systems. And as CAD work stations.

They get the same quality of support that our minis do. And they have as outstanding a reliability record as our minis. So if you're in the market for a PC, take a look at the Nelco range.

Matrix PC. Matrix XT. Matrix AT. Matrix 386.

You'll find just what you're looking for. And more.

NELCO MATRIX

INDUSTRIAL SAFETY

Fire-fighting the MAS away

On the night of 9 November, millions of television viewers across the country watched six naphtha tanks of the Bharat Petroleum Corporation Ltd (BPCL) Mahul plant in Bombay blazing. The conflagration had begun little before noon that day. The Bombay Fire Brigade was alerted at 12 noon and in nine minutes 23 fire engines and ancilliary equipment constituting a "brigade call" were at the BPCL refinery. However, first on the scene apart from the BPCL's own fire-fighting force, were members of the mutual aid scheme (MAS) — and the containment of the fire was under way. Many of the fire engines of the Bombay Fire Brigade had to park out in the street.

Commonsense approach. The MAS was started in 1969 by the BPCL and the Hindustan Petroleum Corporation (HPC). This scheme soon spread to other industries in the area and currently the MAS has 12 organisations as its members, including the Indian Oil Corporation (IOC), BARC, the Tata Thermal and the Naval Armament Depot, Mankhurd. Under an agreement, each member of the scheme is to provide one fire engine and the requisite manpower in the eventuality of a disaster such as the one at the BPCL refinery. K.R.S. Narayan, director (refineries) at BPCL, says, "It is a commonsense approach to pool our resources to combat major fires in our area."

N.A. Khatib, chief fire oficer of the Bombay Fire Brigade, appreciates the role played by the MAS. "Fires such as petroleum fires require specialised equipment and sophisticated extinguishing media — we are better equipped to handle more general types of fires." Apart from sophisticated equipment and fire-fighting media, a very well planned strategy is essential. "It is like fighting a war," says G.R. Raote, director (production) at HPC and chairman of the MAS. "When a fire like the one at BPCL erupts, effective and strategic containment is very important. The volatile liquids stored in tanks which are on fire should not be allowed to escape or leak out. Nor should water be allowed to enter the tanks as it allows oxygen to enter and fuel the fire. Foam is applied from the top to cut the air supply and a water jet applied from the outside to control the temperature. For this we need people with considerable experience in fighting such fires."

Each member of the scheme has one fire warden who is an expert in combating industrial fires and is usually an ex-serviceman or from the civil defence force. Raote adds, "This is the most important feature of the scheme. Apart from the equipment and support we get from the Bombay Fire Brigade and the other members, it is these men who are instrumental in containing the fires on all fronts."

Constant monitoring. During "times of peace", the MAS and representatives of the Bombay Fire Brigade meet once a month and discuss various problems that may arise in maintaining safety standards. Also, resources in terms of men and equipment are constantly evaluated and monitored. The other issues taken up at these meetings include having updated information on the establishment of positive communication links, and the results that come out of mock exercises.

Some years ago a plan was mooted to have a dedicated fire station at Mahul with all the sophistication and skills necessary to combat such industrial fires. But the plan did not fructify, because of a disagreement among MAS members about its funding. Khatib feels that by the time the Bombay Fire Brigade got to the site, most of the damage was done; a well-equipped fire station in the vicinity may have helped. Raote on the other hand feels that the advantages of having a fire station in close proximity would be "psychological" at best. "Ideally no fires should occur and the maximum effort should be applied for maintenance and safety. In the event of a fire occurring, what is necessary is effective containment of the fire and for that good co-ordination is important — and at the MAS that is our endeavour."

■ SHIV TANEJA

Industrial fires need for specialiseed containment techniques

WASHING MACHINES

On a growth spin

Going by market estimates, this year alone around 100,000 Indians will either throw away their dhobi lists or sack their cantankerous maids. They will simply go out and buy themselves a washing machine.

With a turnover of Rs.7 crores in 1987, the washing machine industry is considered a high growth area, as the refrigerator market was in the sixties. A study commissioned by the National Council for Applied Economic Research (NCAER) estimates that there are a whopping 650,000 washing machines in India, and the number is growing at a rate of 20 to 30 per cent annually.

This year, four large manufacturers have put their machines on the market.

and yet demand has far outstripped supply. Says Rajkumar Dhoot, managing director, Videocon International Ltd (VIL), a new entrant into the market, "We are carrying almost no inventory. Everything we manufacture is being sold."

Organised interest. Till 1986, washing machines in India were primarily made by the unorganised sector — low on technology and crude in design. The only sophisticated machines available in India were either imported or smuggled. All that has changed now. Girish Rao, product officer at Batliboi & Co, which manufactures Trak washing machines, offers three reasons for the sudden interest of the organised sector. "In 1986, the government delicensed the manufacture of washing machines with a wash load of over 3.3 kg (which were being manufactured only by the small-scale sector). At the same time, it scaled down excise duty from 30 to 20 per cent. And finally, the attitudes and lifestyles of urban households are changing."

Thanks to government liberalisation, various components can now be imported under OGL. So the top end of the market can boast of state-of-the-art technology that till a few years ago could only be had from imported washing machines. Sources in the trade estimate that the share of smuggled machines in the market has fallen from 10 per cent in 1987 to about 5 per cent in 1988, in spite of the fact that they are cheaper. Consumers, they say, are willing to pay more for Indian products because they are assured of after-sales service and repairs, a great uncertainty with foreign brands. Notes one industry source, "With Indian manufacturers tying up with well-known foreign companies, the Indian consumer has the best of both — sophisticated technology and no problems of repairs and spares." Racold has a tie-up with Philco of Italy, Batliboi with Siltal Casa, also of Italy, and Videocon has collaborated with Matsushita of Japan, manufacturers of National brand of products.

The washing machine industry is divided into three segments — fully-automatic, semi-automatic and manual. The upmarket fully-automatic machines cost between Rs.12,000 and Rs.16,000. Sumeet, with its totally indigenous washing machine (only the timer and door lock are imported), Racold, and Batliboi are the principal competitors in this segment of the market. With its machine priced at Rs.12,000, Sumeet is the cheapest. But Rao of Batliboi is confident that despite

Becoming part of the urban household

the higher price of his company's machine (Rs.14,500) it will find a market. TVS has just negotiated with Whirlpool Corp of the US (manufacturers of various laundering devices) to manufacture an automatic, single-tub washing machine.

At the lower end of the market, as many as 35 of the 65 brands in India compete for a share. Most of the manufacturers are in the unorganised sector, though there are a few big names too — Bajaj, Voltas, and Usha which has a 10 per cent share of the non-automatic machine market. These machines are very crude and lack most of the feature of the more advanced machines. What makes them attractive is their price — ranging from Rs.1,700 to Rs.3,500.

Fastest growing. Between these two segments lies the fastest growing segment of the industry — the semi-automatic machines. With an annual growth rate of about 30 per cent, this segment occupies about 35 per cent of the market. Surprisingly, there are only a few manufacturers in this range, the most prominent being Videocon, with two models priced between Rs.6,000 and Rs.8,000. Bajaj is another manufacturer, but its sales are restricted to south India. There are reliable reports that Crompton Greaves plans to enter this market soon, with a machine very similar to the Videocon one.

Predictably, 95 per cent of all the washing machines manufactured in India are sold in the urban areas, with Delhi, Maharashtra, Kerala and Andhra Pradesh accounting for 65 per cent of the sales. Most manufacturers are clocking up s of 200 to 400 pieces per month in automatic machine category and as m as 2,000 to 3,000 machines in the se automatic and non-automatic categ Dhoot says that even in the smaller to sales are as high as 300 to 500 wash machines a month.

Sources in the trade are confident total industry sales touching 100,000 t year. But not all share the upbeat mo currently prevailing. The government n raise excise duties on consumer durab to encourage savings and curb expen ture. In that eventuality washi machines will go back on to the luxu shelves," says one observer. But rig now, the rush for washing machines is

■ SHIV TANE

PVC PRICES

A sobering effect

After witnessing an upward trend f months, prices of polyvinyl chlorid (PVC), an important plastic raw mat rial, have recently seen a reversal, muc to the relief of hundreds of units makin pipes, footwear, and household product out of PVC. After reaching a peak o $1,300 per tonne in August this year, th price of imported PVC has on an averag come down to around $1,050 per tonne This in turn has forced at least two of th five domestic PVC producers to roll back their prices by at least 10 per cent or Rs.3,000 a tonne, to Rs.27,000 a tonne.

These producers attribute their present plight to the government's recent liberalisation of imports. With the good demand, prices of PVC, like those of all other plastic raw materials, have been going up worldwide since the beginning of this year. India is a large importer of PVC, as its domestic production of 130,000 tonnes a year meets only 60 per cent of the demand. This year, imports were even higher, as duties were lowered and imports for stocks and sales were allowed.

Speculative purchases. "As the prices were moving up large quantities from abroad were booked by traders for speculative gain," points out Vivek Jain, executive vice-president, DCW Ltd, which produces about 21,000 tonnes of PVC every year. "Between January and September this year 80,000 tonnes of PVC have been imported, which is double the quan-

tity imported during the same period last year."

Higher imports did not affect the domestic producers much, as the price of imported PVC was higher and the gap between demand and domestic supply was huge. In fact, the domestic manufacturers raised their prices. NOCIL, for example, raised its price of PVC four times during this year — from Rs.14,200 per tonne (basic price) in January to Rs.18,600 per tonne in October. "Manufacturers have always capitalised on the higher prices of imported stuff and raised their price," points out B.H. Jain, chairman of the Jain group of industries, the largest manufacturer of PVC pipes in the country and also the largest single consumer of PVC.

The trouble began when in September foreign suppliers lowered prices, as China, a large buyer of PVC, suddenly withdrew from the market. "Within two months price tumbled by $ 300, and today we cannot sell our stocks that we booked two months ago at a higher price," says a hard hit trader who had imported large quantities of PVC expecting good business. Panic striken importers, in a rush to off load their stocks quickly, dampened the price further.

Hard-hit. Consequently, two domestic manufacturers have been badly hit. DCW in Kerala and Shriram Chemicals in Delhi are the two manufacturers whose PVC was priced the highest; their cost of production is higher than that of the other three because of costlier inputs and processes. Both have had to cut prices recently. "We were forced to bring down price and incur loss because our unsold stocks of PVC have doubled recently," says Vivek Jain of DCW.

The other three manufacturers, whose prices were lower, have not been affected yet. IPCL, the largest manufacturer, has only marginally raised its price and it is still the cheapest. NOCIL, according to K. Dharam, managing director, had to raise its price only to offset the higher input costs. "But even today our PVC is Rs.1,000 cheaper per tonne than the imported material," claims Dharam. Chemplast, the fifth manufacturer, claims that it produces a special grade of PVC for which the demand is very good and does not anticipate any problem to sales.

The pertinent question here however is, if the present situation continues will it affect the entire industry? Both NOCIL and Chemplast do not think so. "It is only a temporary phenomenon and imports will even out in the long run in relation to demand," says Dharam. Chemplast officials echoes the same view. Besides, others point out, the government's intention to bring in a price discipline among the domestic manufacturers by liberalising imports has been fulfilled. "When the price of the imported material went up they quietly raised their price, now when it comes down, why should they (the domestic manufacturers) cry themselves hoarse?" asks a large consumer of PVC in Bombay.

■ DILIP MAITRA

ELECTRONIC CAB METERS

The government lowers the flag

The Maharashtra government recently decided to revoke its 30 May order making electronic fare meters compulsory for new taxis and autorickshaws in five districts — Bombay, Pune, Thane, Nashik and Kolhapur. Installation of the meters has now been made optional. Bombay's taximen and autorickshaw drivers kicked up a row over the order, which had also said that all existing meters should be replaced by electronic meters within a period of five years. They alleged that the electronic meters had been approved without adequate testing under road conditions. They also objected to the high price of the meters — Rs.1,900-2,500 compared with the Rs.1,100-1,900 for mechanical meters.

While trying to cope with the agitations launched by the drivers' unions, the government also came up against another problem — the electronic meter manufacturers ran out of stocks. The demand for the meters had been estimated at 50 meters per month as this was the number of taxi licences issued every month. However, the government order was interpreted to include old vehicles which were being replaced by new vehicles under existing licences. Taking these replacements into consideration, the demand for the meters went up to a 100 meters per day. Says A.V. Narurkar of Marshfield Electronics, "We tried to cope with the demand, but we just could not manage."

Left high and dry. When the government postponed the order to take effect six months later, ie, from 8 December 1988, the meter manufacturers got a brief respite. They have been building up stocks in the meanwhile, and hence the government's latest decision to make the electronic meters optional has come as a shock. They estimate that about Rs.25 lakhs has been tied up in this venture.

Old is not so bad

The electronic meter manufacturers are upset about the unions' power to decide which meter is to be installed. The government has tossed the ball up into the air and the manufacturers are left wondering what to do next. "We would like to have the option of selling the meters all over the state and not just in five districts," says Narurkar. If Maharashtra had made electronic meters compulsory, it is possible that other states would have followed suit.

The electronic meter is accurate and virtually tamper-proof. Changes in tariff can also be made easily whenever fuel prices go up. Expectedly, the manufacturers of the old mechanical meters have reservations. "The electronic meters are not rugged enough," says Uday Vaidya of Diamond Clock Manufacturing Co, although the meters have been approved after a battery of tests.

Bombay Taximen's Union general secretary, M.H. Baji, says, "We don't care which meter is chosen by the government as long as the taximen don't have to pay for it."

Amidst the lobbying by the unions, the electronic meter manufacturers and the mechanical meter manufacturers, the passenger will have to put up with the old meters and risk being taken for a ride.

The *Lipi* factor

in computer printers

R

RELIABILITY

- Reliability makes Lipi the largest selling line printer.
- Performance parameters include the 3100-hour MTBF (Mean Time Between Failure).
- Has continuous 96-hour print capability.
- Built for high duty cycles in any work environment (installed in NIC, Banks, Reliance, Telco, HMT, and other giant corporations).
- World-wide an installed base of 250,000 line printers with Dataproducts' (U.S.A.) technology – collaborators with Lipi.

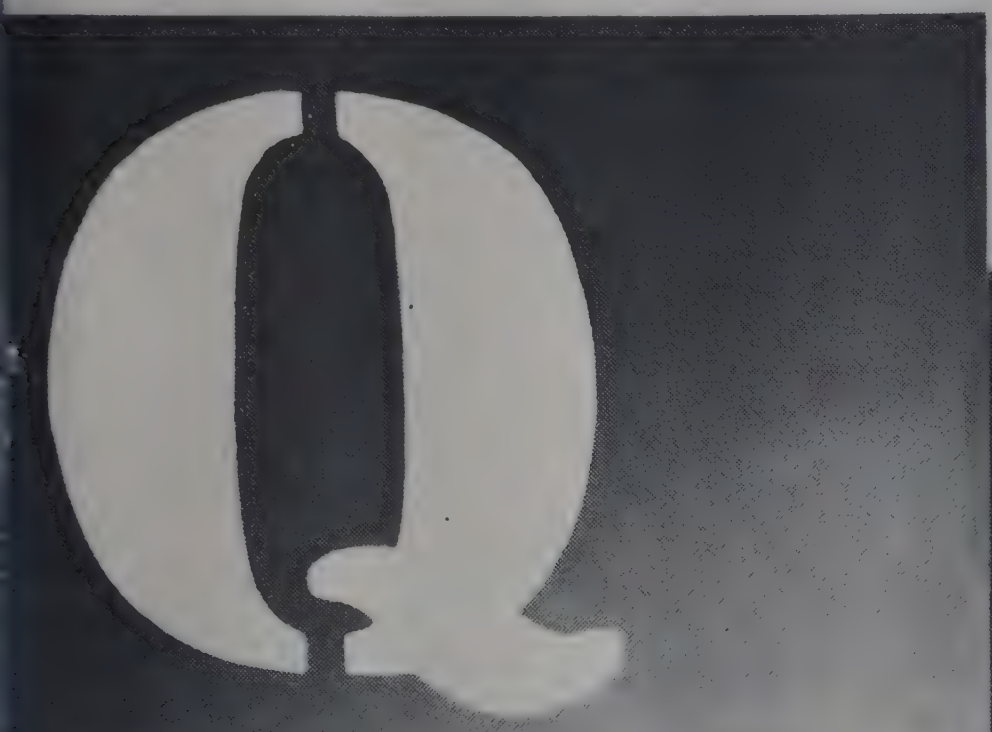
V

VERSATILITY

- The Lipi line printer is the most versatile and cos effective computer printer.
- Can be interfaced with most imported computer systems, and all computer systems manufacture in India.
- Ideal for main-frames, super-minis, minis, and ev PC's requiring high-volume and high speed. (OE users include CMC, DCM, ECIL, ESPL, HCL, HINDITRON, IDM, INDCHEM, KELTRON, NELCO, NORSK DATA, OMC, ORG, PCS, PSI, TATA UNIS UPTRON, WIPRO, ZENITH, etc.).
- Volume-friendly. Can hammer out between 300 t 1000 lines per minute, depending on print requirer and time schedule.

The performance of the Lipi line printer is quantifiable. Our R V Q T factor is your guarantee of performance both in output and in operating cost. That is why Lipi is superior to any other line printer. Now consider our maintenance support and long-lasting consumables – and you have an efficiency and economy package hard to beat.

So whether you are buying a new system, or upgrading your present one, choose the best computer printer. Choose Lipi.



QUALITY

- At the Lipi plant in Udaipur, quality control and auditing meet the highest international standards set by Dataproducts Corpn., U.S.A.
- Quality begins as a design concept and governs the entire manufacturing operation.
- The entire production undergoes extensive reliability tests.
- Sophisticated DEFTs are used to test Hammerbanks, CCAs, Power supplies, etc.

TECHNOLOGY

Lipi's computer printer technology comes from Dataproducts Corpn. (U.S.A.), world leaders in new generation computer printers.

- Precision control electronics synchronize at less than 10^{-6} secs. – permitting higher print speeds.
- Permanent Magnet Hammerbank Technology (PMT) cuts power consumption by 80%, increases reliability.
- Microprocessors operating at 20 MHz allow faster throughput.
- Statistically analysed print bands permit higher speeds, with dimensional stability.
- Constant Voltage Transformer (CVT) tolerates ± 50 volts fluctuation without a stabilizer.
- On/off current early warning – thermal and current protection circuitry.
- Wide ranging Interface Protocol ensures system compatibility.

David Brown's 'H' Series.
A wide range of fully metric helical gearboxes.
Engineered for efficiency, economy and versatility.

'H' Series – your industry's power-savers

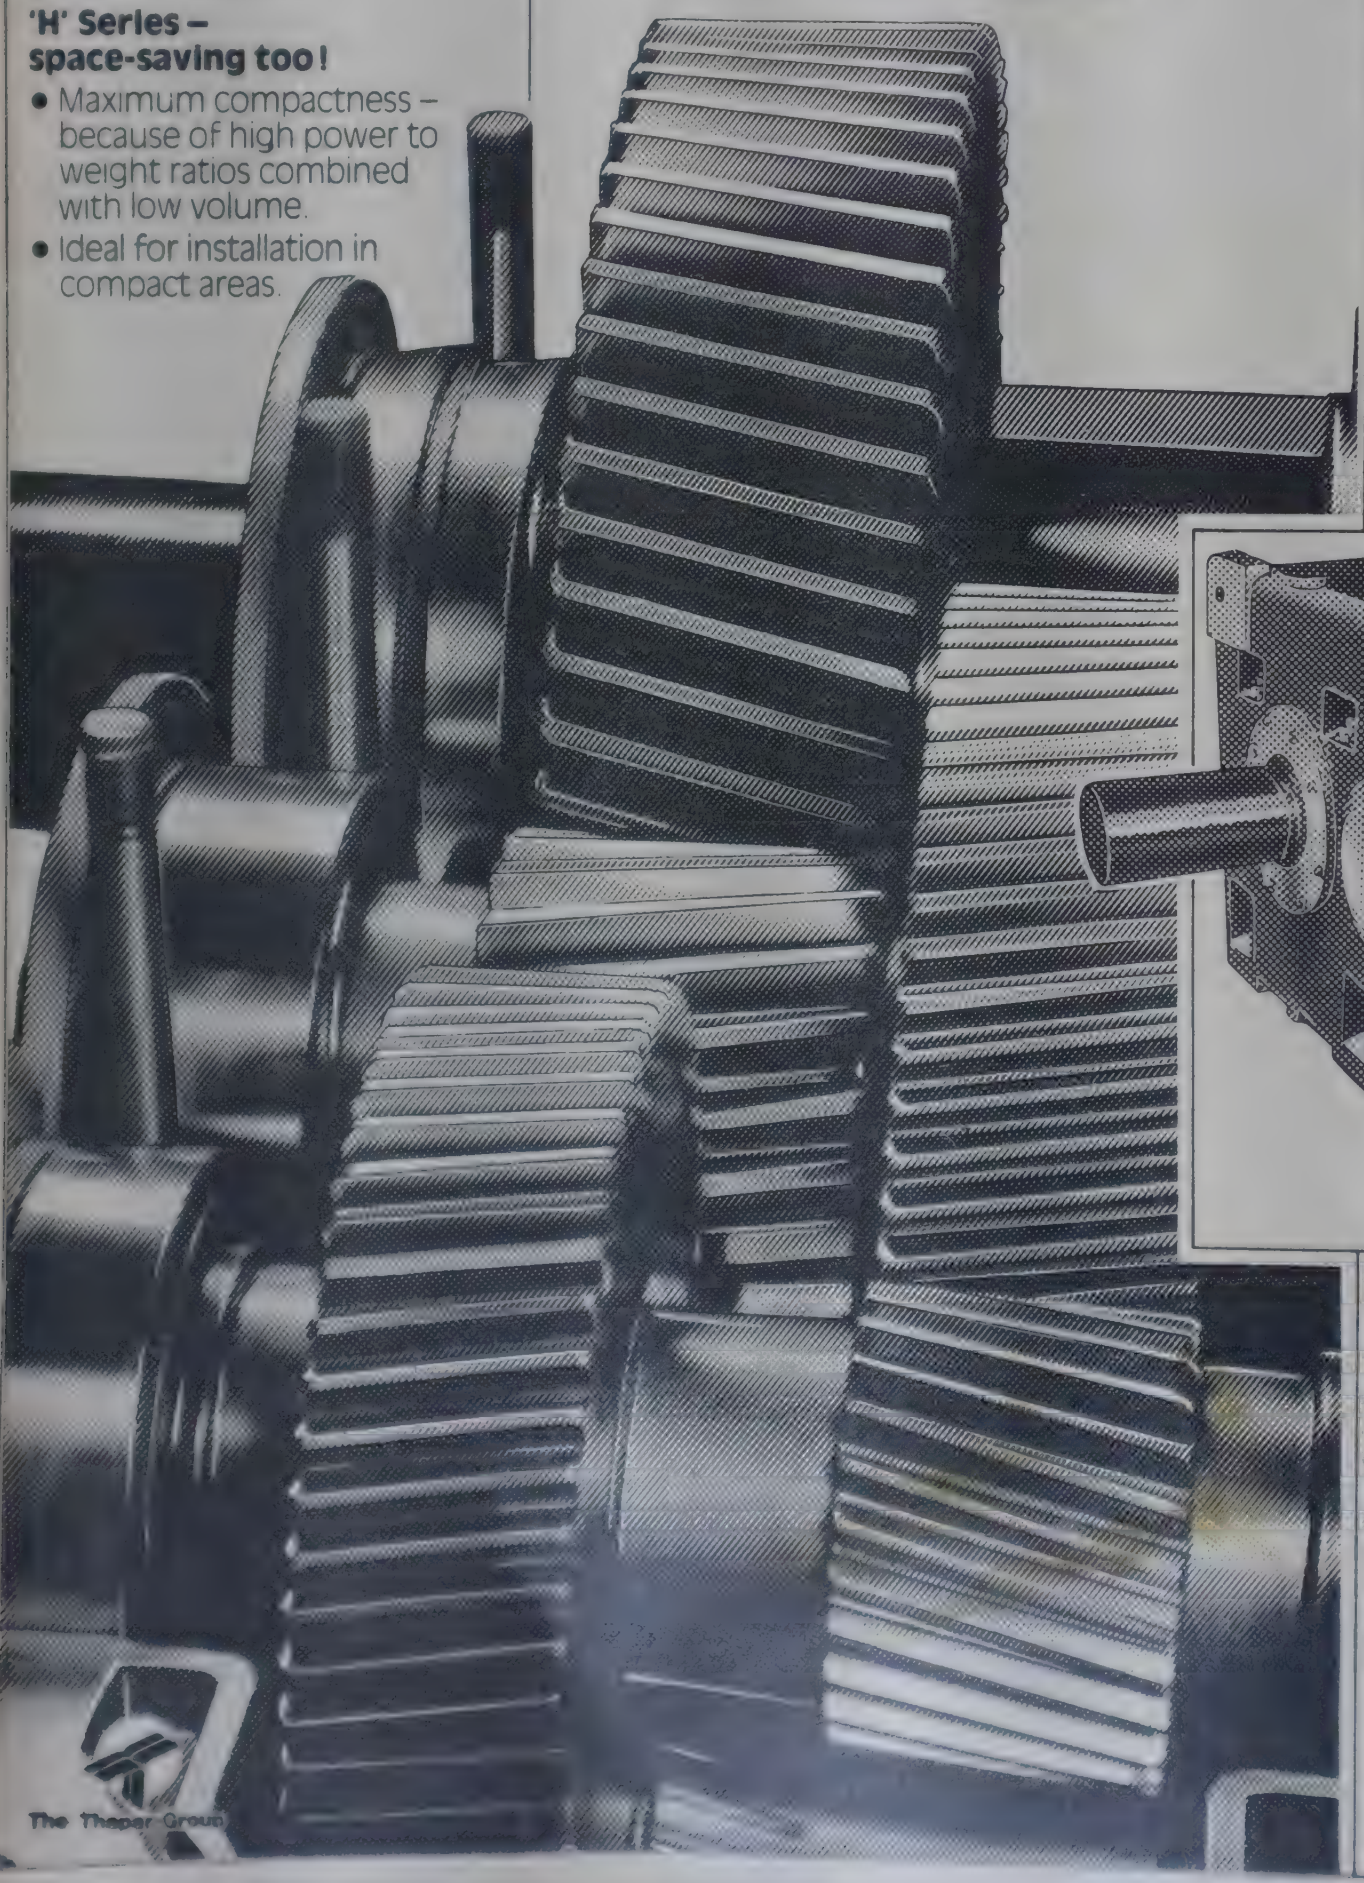
- Very high efficiencies (97-98.5%) – because of perfectly matched and aligned components
- Greater load-carrying capacity – due to highly optimised gear geometry.
- Long life and operational reliability – because of high quality materials.

'H' Series – space-saving too!

- Maximum compactness – because of high power to weight ratios combined with low volume.
- Ideal for installation in compact areas.

David Brown 'H' Series Helical Gearboxes.

Helping you save energy and space.. in many more ways than one.



'H' Series – amazingly versatile

- Highly interchangeable parts and sub-assemblies – because of modular design and construction.
- Suitable for both horizontal and vertical drives – with right angled (Spiral Bevel) and parallel shafts.
- Choice of foot/shaft mounting with optional right/left hand shaft arrangements.
- Answers every need – available in extensive close ratio ranges (AGMA) with additional half-ratio steps.

Nationwide sales and service

David Brown 'H' Series Helical Gearboxes are sold and serviced by Greaves Cotton, leaders in power transmission equipment.

Greaves' countrywide network of 21 Sales and Service Centres, manned by qualified and experienced engineers, can help you select the right helical gearbox.

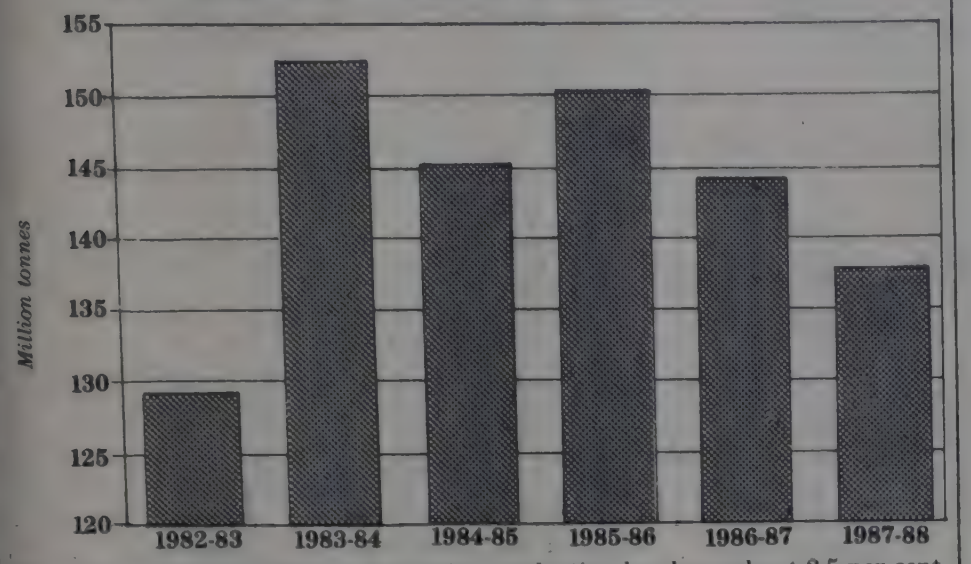
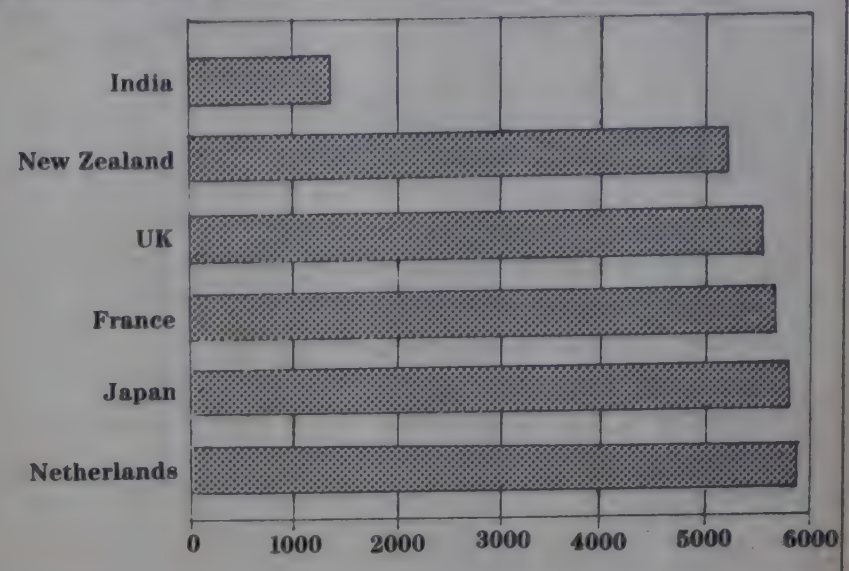
Foodgrains production in India



The average rate of growth in foodgrains production has been about 2.5 per cent between 1949-50 and 1986-87. There was a quantum jump in foodgrains production by 17.7 per cent to 152.4 million tonnes in 1983-84. But since then production has declined and due to drought has touched a low of 138 million tonnes in 1987-88. However, due to a good monsoon foodgrains production in 1988-89 is expected to touch an all time high of 175 million tonnes.

Per hectare yield of foodgrains (kg): 1985



The per hectare yield in foodgrains production has increased from 566 kg in 1949-50 to 1,377 kg in 1985. Even though this is more than 100 per cent increase, Indian yield rates are low by world standards. There are also glaring disparities in yield rates within India. Punjab has a yield of about 3,000 kg, while Rajasthan has only about 650 kg.

Money and banking (scheduled commercial banks): During the month under review M3 has increased by Rs.2,077 crores. For the first time in recent months, food credit has increased by 3.71 per cent, but it is 66.3 per cent less than a year ago.

(Rs. crores)

	4 Nov 1988	7 Oct 1988	6 Nov 1987	% change over month	% change over year
Broad Money (M3)	177,899	175,822	153,370	1.18	16.00
Agg deposits	131,090	130,194	111,156	0.68	17.93
Bank credit	76,310	75,058	65,815	1.67	15.94
Food credit	1,146	1,105	3,401	3.71	−66.3
Credit/dep. ratio	58.21	58.04	59.21		

Wholesale price index: The WPI-all commodities has increased by 1.47 per cent during the month to 22 October 1988. The primary articles index has increased sharply by 4.02 per cent, mainly due to the increase in the prices of pulses by 14.2 per cent. The manufacturing products index dropped by 0.16 per cent. The price index of jute, hemp and mesta textiles dropped by 5 per cent.

(1970-71=100)

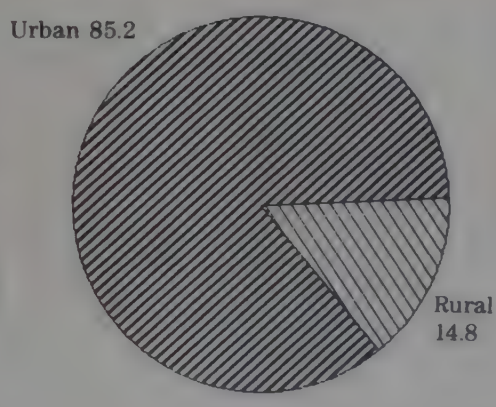
	22 Oct 1988	24 Sept 1988	24 Oct 1987	% change over month	% change over year
All commodities	441.6	435.2	410.3	1.47	7.63
Primary articles	421.6	405.3	390.8	4.02	7.88
Mfg products	419.4	420.1	388.4	−0.16	7.98

Bullion prices and stock market index: The price of gold and silver in the domestic market is up by Rs.70 and Rs.51 respectively in the month under review. While the price difference (between London and Bombay) in gold has narrowed to Rs.1,199 (a year ago it was Rs.1,543), in the case of silver the difference is about the same. The Bombay stock exchange index has risen to 719.07 due to good institutional and investor support.

	18 Nov 1988	18 Oct 1988	18 Nov 1987	% change over month	% change over year
Gold (Bombay)	3,220	3,150	3,490	2.22	−7.73
Gold (London)	2,021	1,948	1,947	3.75	3.80
Silver (Bombay)	6,503	6,452	6,248	0.79	4.08
Silver (London)	3,004	3,038	2,798	−1.10	7.36
Bombay stock exchange index (1978-79=100)	719.07	678.67	421.74	5.95	70.50

The price of gold is in rupees per 10 gms and that of silver in rupees per kg.

Market for cough lozenges — 1987

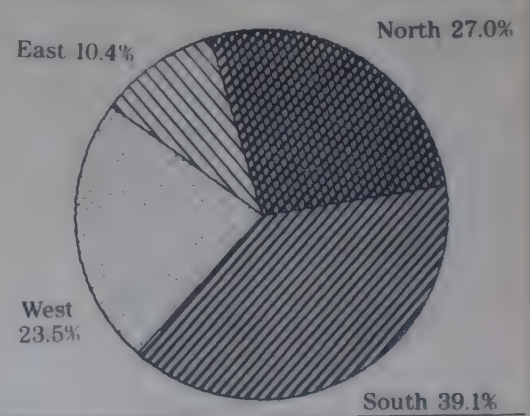


The cough lozenges market is dominated by the urban sector (85.2 per cent share) but the rural sector is also not insignificant, accounting for 14.8 per cent of the market.

All India = Rs.17.2 crores

Cough lozenges zonewise market — 1987

The south has the largest share of the all-India market (39.1 per cent) followed by the north (27.0 per cent). The east has the lowest share of 10.4 per cent.



Cough lozenges townclasswise market — 1987

The metros account for a hefty 38.3 per cent of the urban market. The class II, III and IV towns account for 30.1 per cent.

MOULDS

We have been designing and manufacturing moulds and dies since 1970 and have 250 employees including engineers, designers, machinists, tool makers and moulders. Our engineers have been trained in the best tool rooms in the U.S.A. and are fully conversant with the latest techniques of precision mould manufacture.

We have a fully air-conditioned computer controlled tool room which is equipped with the best EDM's from Switzerland, three dimensional die sinkers from W. Germany, inspection and quality control machines from Japan and all other precision back-up machines.

We hold large stocks of the best imported alloy steels which are heat treated in our modern heat treatment plant. We can case-harden, harden, nitride and stress relieve all steels.

We are specialists in moulding the whole range of thermo-plastics and can ensure supply of moulded components to your requirements. Our moulding shop is equipped with ten Toshiba 150 ton fully automatic moulding machines, a Kautex blow moulding machine and a team of experts to run them.

Contact us for further information.

- High quality moulds for plastics and die casting industries.
- Moulded plastic components for general purpose and engineering plastics.
- Precision and electric discharge machining (spark erosion).
- Complex jigs and fixtures.
- Heat treatment of steels.

No respite from inflation

For the seventh month in succession, the consumer price index for industrial workers (CPI-IW) has risen. At 806 in September 1988, the index was up by 7 per cent over March 1988. The comparable rise last year was 59 points or 8.6 per cent. Even though the index has been rising steadily, the price situation is certainly not out of control as feared earlier. This is because the government took prompt action to import essential commodities like wheat, edible oils, rice etc to avoid shortages.

Wholesale prices have also increased and for the six months to September 1988, the all-commodities index was up by 5.3 per cent, as against 6.8 per cent in the corresponding period of the previous year. However, in spite of this rather modest increase in the first six months of the current year, there has been a substantial rise in the prices of certain commodities. For instance, the index for potatoes has risen by a whopping 57 per cent (July 1988) since March 1988 Pulses is up by 19.8 per cent. However, the index for rice increased by 8 per cent while that for wheat actually declined by 6 per cent.

In manufactured products, the wholesale price index during the six months to September 1988 was up by 5.6 per cent. Commodities that have risen significantly in this period are sugar, khandsari and gur (32.3 per cent) and jute, hemp and mesta textiles (19.7 per cent). On the other hand, tyres and tubes, paper, tobacco manufactures, cotton textiles, non-electrical and electrical machinery have hardly recorded any increase in price. But this does not mean that prices of the above mentioned commodities have been stable over the year. For instance, electrical machinery on a year to year basis has notched up an increase of nearly 12 per cent.

The increase in the consumer price index or the inflation rate as it is generally called has not been consistent over the major towns and cities in India. The consumer price index at 889 (1960=100) was the highest at Varanasi and Srinagar. But it was Monghyr in Bihar that has the dubious distinction of having the highest inflation (17.5 per cent) during the year to July. In fact, 22 major cities in India registered double digit inflation. Nevertheless, there were certain cities like Bhavnagar in Gujarat, Mundakajam in Kerala, Indore in Madhya Pradesh, Coonoor in Tamil Nadu, Varanasi in Uttar Pradesh and Raniganj in West Bengal that have registered single digit inflation of about 5 per cent. The range therefore was quite wide. Considering the geographical diversity of the country, this is not at all surprising.

Be that as it may, the consumer price index which has a base year of 1960 has become dated. A new more effective and comprehensive index is definitely called for. In principle it has been accepted that a new CPI with a base year of 1982 is needed. It has been reported that the new series will cover a wider span of 78 centres as against the earlier 58. The number of items in the basket of consumption has also increased from 175 to 268. Also the weightages given to the different commodities have been rationalised. For instance, the weightage given to food has been reduced from 75 to 60.92 which is more in tune with reality because expenditure on food as a percentage of total household expenditure is about 60 percent for the bulk of the working class. The trade unions have not yet fully accepted the new index. Apart from a host of grievances on technicalities their grouse is that after the linkage is made the dearness allowance payable to the workers would be a bit less.

Tinkering with an index does not solve the problem of the inexorable rise in prices which has continued year after year. The average annual rate of the increase in consumer prices has been 8.4 per cent, between 1970-71 and 1987-88. In good years, the increase has been around 6.5 per cent, and in bad years around 12.5 per cent.

Even though prices of essential commodities were contained last year (in spite of the severe drought) the overall policy on inflation has been lackadaisical, to say the least. The general expectation is that prices in the medium long term (about five years) will increase at the same rate.

We sell more. Because we tell more.

Technical know-how from Armstrong, U.K.

Your ticket to prosperity. NATIONAL AUTO ACCESSORIES LIMITED An investment in the booming auto-component industry.

Now is the time to invest in the auto-component industry, whose fortunes are closely linked to the auto industry, its main customer.

The auto industry is basking in the sunshine of boom conditions. The production of cars, jeeps, trucks and tractors is steeply on the rise, as reflected in the high prices quoted for auto shares on the stock markets.

With the on-going boom in the auto sector, there is a paucity of supply of high quality critical components. The organised sector today can only meet 40% of the requirements.

Not only is the investment climate right for the auto-component industry, but National Auto brings many more strengths:

1. the promoters, the House of Dempo with a track record of success in Goa Carbon Limited.
2. proven technology from Armstrong, U.K.

The Company's plant which is already in commercial production in Margao, Goa, will manufacture safety critical components such as complete Steering Linkages, Tie Rod Ends, Suspension Joints etc. for cars, jeeps, trucks and tractors.

With the growing demand, latest technology and professional management, NAAL will soon be a name to reckon with in the field of auto components.

HIGHLIGHTS

- Promoted by renowned Dempo Group of Goa.
- No gestation – Production already started in September 1988.
- Manufacture of components for booming Auto Industry.
- Technological excellence from Armstrong Patents Co. Ltd. of U.K.
- Assured market for product – only 40% of the demand met by organised sector.
- Experienced professional management and technicians.
- Tax benefit to investors including 80CC, 80L, 80M & Wealth Tax benefits.
- Easy Liquidity – Listing at Bombay and Ahmedabad.

ISSUE OF 9,60,000 EQUITY SHARES OF RS. 10/- EACH FOR CASH AT PAR.

NORTH-SOUTH TRADE

A two-way affair now

International trade is sometimes described as the engine of economic growth. Economists continue to differ about the validity of this statement. Nevertheless, it is generally agreed that an expanding volume of international trade can make an important contribution to the growth of output, employment and improvement in living standards.

Very few countries are so richly endowed as to produce domestically everything they need. A policy of autarky even if physically feasible can be economically a very wasteful proposition. The opportunity to trade enables a country to take advantage of economies of specialisation and of scale to a much greater extent than is possible within the framework of domestic markets. Also, international trade provides a powerful stimulus to innovation, technical progress and productivity growth, which play an increasingly important role in growth processes of the modern world.

This does not mean that free trade is always an optimum policy. Certainly, developing countries need a period of protection to develop their infant industries in which they may have a long-term comparative advantage. But protection also has its costs and indiscriminate prolonged protection can greatly stifle growth of productivity and cost consciousness.

DELICATE BALANCE

It is the experience of most developing countries that import needs inevitably rise in the process of development. In a country like India with a broad-based resources endowment, experience has shown that imports rise at least as fast as national income. In smaller countries with more limited resource endowment, import growth is likely to be faster than national income. This means that unless exports increase fast enough, the country will be faced with a severe balance-of-payments constraint, which may affect the overall rate of economic growth. Of course, in the short run imports can be financed by foreign credit. However, this credit has to be serviced and if exports do not grow fast enough, the country will face a crisis of creditworthiness.

For all these reasons, developing countries need a favourable international trading environment in which their trade can grow. Nearly 70 per cent of developing countries' exports go to developed countries. Thus, import regimes of developed countries exercise a powerful influence on the export outlook for developing countries. Developing countries' exports to developed countries depend on growth of income in developed countries and income elasticity of demand for the type of goods exported by developing countries; competition from developed countries; import policies of developed countries.

In all these areas, recent developments are a cause of legitimate concern. First of all, the rate of growth of the economies of major developed countries has considerably slowed down since the early 1970s. Whereas the OECD countries' economies grew at an average rate of 5 per cent per annum from 1950 to 1973, currently their growth rate is in the range of 2.5 to 30 per cent.

While important structural factors are at work in contributing to a slow-down of growth in the developed countries, similar structural factors are also at work in reducing these countries' demand for the type of goods typically supplied by developing countries. Many of these products have a low elasticity of demand and in addition they face competition from synthetic substitutes.

Tariff negotiations under the auspices of GATT have led to a significant reduction in tariffs on manufactured goods. This liberalisation has stimulated world trade, and several developing countries have taken advantage of the more favourable international environment to expand their exports of manufactures. However, the tariff structures of developed countries still discriminate against manufactures from the developing countries.

Furthermore, the liberalisation of trade among the regional groupings of developed countries and the enlargement of a group like the European Community have also placed exporters of developing countries at a disadvantage compared with exporters from countries which are members of the regional groupings.

UNFAIR PROTECTIONISM

Finally, the last 15 years have seen a significant increase in protectionism in the developed countries, often directed specifically at products in which developing countries have a significant comparative advantage. Exports of textiles, footwear, steel and several other product groups fall in this category. Very often, this discriminatory protectionism, of which the Multi-Fibre Agreement is a classic example, violates GATT rules and principles. Yet, because of the weak bargaining position of developing countries in international negotiations, the tide of discriminatory protectionism has not abated.

In addition to factors affecting longer-term growth of trade, the export trade of developing countries, dominated as it is by primary products, is characterised by considerable instability.

The author is secretary-general of the South Commission

The Kirloskar Electric Challenge Series

Everybody, well almost everybody, knows that Kirloskar Electric makes a range and variety of DC motors that's virtually unparalleled in the country.

But did you know that Kirloskar Electric designed and developed a replacement for one of the world's finest and most proven DC traction motors–with hardly any specs–for the first time in India?

There are over 200 superb American shunting locomotives working in the country, moving materials in steel and cement plants and generating stations. These traction motors had worked continually for more than 12 years without a hitch, many a time under abuse conditions. After such remarkable service, they were running into problems.

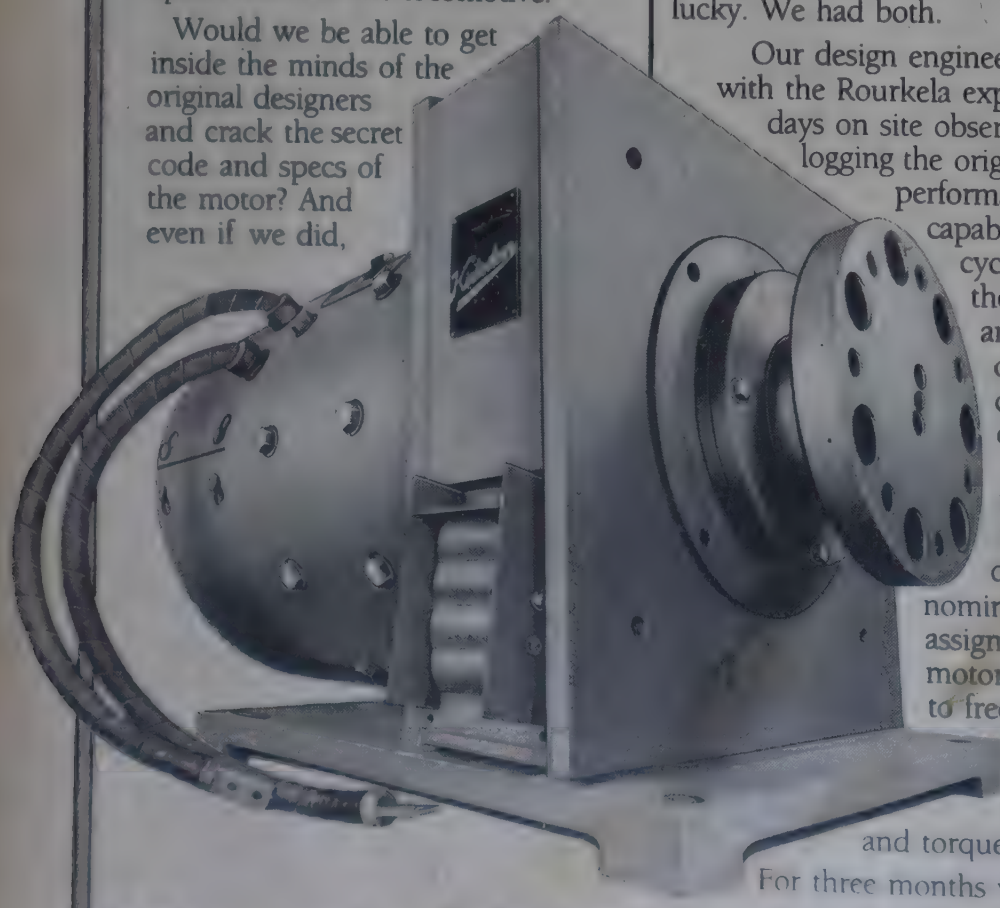
The Rourkela Steel Plant asked us to develop DC traction motors as replacements. The client's instruetions were short: "Your motors must perform like the originals. And they must be mechanically and electrically interchangeable". There was just one catch. There were hardly any specs barring the tractive effort versus the speed curve of the locomotive.

Would we be able to get inside the minds of the original designers and crack the secret code and specs of the motor? And even if we did, could we attain the technological level of the Americans? And could we improvise and invent since we couldn't possibly have access to the materials they used?

Hardly anyone in the industry was willing to take on the job. Were we then rushing in where angels fear to tread? Quite likely. But, we decided, nothing ventured, nothing gained. We said yes.

The whole essence of import substitution is a strong and experienced engineering team with the patience and the commitment to work for years till it designs and manufactures an identical replacement for the original. Plus one other critical factor: the total involvement and continuous guidance of the customer. We were lucky. We had both.

Our design engineers along with the Rourkela experts, spent days on site observing and logging the original motor's performance, capabilities, duty cycle loadings, the frequency and duration of the currents drawn, etc. They realized that irrespective of the nominal ratings assigned to these motors, they had to frequently deliver thrice the power and torque expected. For three months we studied the motor in our factory. We took it apart, grasped its design philosophy, then finalized kilowatt, torque, speed and overload parameters. We got down to the drawing board. The designing objective was to pack as much power as possible into a small frame and to maintain sufficient reserves to meet the demands of traction duty.



Within 8 months, we delivered the prototype motors. They were almost identical with the original in performance. In fact, the identity was so close, not only could the motors be interchanged but the entire rotors and stators could also be interchanged. All ten motors have now been delivered to the Rourkela plant and are working extremely well.

What, you may well ask, makes us take on such challenging jobs that others won't touch? The truth is standard motors — small, medium and large — are our bread and butter. We make them with an enormous amount of care because our livelihood depends on them. But it's the really tough jobs that give us our kicks. We don't just thrive on them, we need them to feel alive. What we are doing is developing technological muscle and invaluable expertise and experience. It saves the country crores in foreign exchange. And it does wonders to our self-confidence and the confidence our customers have in us. They know that when nobody else can do the job, Kirloskar Electric will.

KIRLOSKAR ELECTRIC COMPANY LTD

Regd Office Industrial Suburb, Rajajinagar, Bangalore 560 010.

When nobody else can do the job, Kirloskar Electric will.

Pratibha /KEC/26/88

Prices of primary commodities in the 1980s have on the whole declined to their lowest level in real terms since the Great Depression of the 1930s. Yet this steep decline has not led to any international attempt to stabilise commodity prices. No new international commodity agreements have been negotiated in this decade and those that were in operation have faced great difficulties.

In the late 1960s, developed countries had agreed to institute a Generalised System of Trade Preferences in favour of developing countries to promote the growth of their manufactured exports. However, the system is riddled with so many exceptions and qualifications that it has had only a marginal impact on the growth of manufactured exports of developing countries. Developed countries have resorted to unilateral actions to graduate some developing countries out of the purview of GSP. As a result, the GSP system does not provide a secure basis for planning of export growth.

In the 1980s, the debt crisis has severely affected the import capacity of a large number of developing countries in Latin America and Africa. The diversion of resources for servicing of external debt has also led to a squeeze on investment in capacity expansion. This has also affected growth of export capacity expansion.

For some of these problems, no effective solutions are in sight. For example, the deceleration of growth in the developed countries and volatility of exchange rates do not lend themselves to readymade solutions. Some of the other problems are being dealt with in the course of the Uruguay Round of Trade Negotiations. For example, the Punta del Este Declaration of September 1986, which launched the Uruguay Round, commits the GATT Contracting Parties to a stand-still and roll-back of protectionism inconsistent with the objectives of GATT. The contracting parties have also promised to pay special attention to problems faced by developing countries namely, liberalisation of trade in tropical products and return of trade in textiles to the normal disciplines of GATT.

At this stage one can only hope that these commitments will be fully honoured. Nevertheless, it has to be admitted that protectionist forces are pretty strong, both in the US and the European Community. The latest US Trade Act has strong protectionist overtones even though much will depend on the manner in which the US Administration might choose to apply its various provisions. There is a danger that bilateral approaches for dealing with trade issues, such as through the recently concluded US-Canada Free Trade Agreement, may be used more aggressively to include countries such as Japan and Mexico. In Europe, the sentiment of building "a fortress Europe" has considerable appeal and its temptation may increase as the Community approaches 1992 when all the remaining intra-EC barriers to the movement of goods and factors of production will be removed.

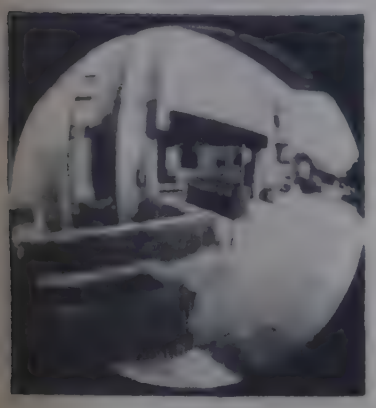
FRAGMENTATION

If these trends gain importance, there will be fragmentation of the world trading system. Developing countries, having a weak bargaining power in relation to major trading blocs, will be major sufferers unless they develop some countervailing power through increased South-South co-operation.

Developing countries' share in the developed world's consumption of most traded products is still very small. As such, developed countries cannot justify their import restrictions in the name of avoiding market disruption or injury to essential domestic interests. Indeed, a period of slow overall growth of world trade which is now on the horizon makes it all the more necessary that every possible opportunity should be provided to developing countries to increase their share of trade where they have a competitive edge.

Helping developing countries export is of course not an act of pure charity on the part of developed countries. Since developing countries normally cannot afford to accumulate large reserves of foreign exchange, an increase in exports will invariably lead to increased imports from developed countries. Moreover, the slowdown of the engine of economic growth in the developed countries can be avoided, if somehow the vast latent purchasing power of the economies of the Third World can be activated. In this context, it is worth noting that the four Asian economies of Hong Kong, South Korea, Singapore and Taiwan are now significant buyers of manufactures on world markets.

A well-functioning trading system backed by an efficient system governing capital flows can make a major contribution to the acceleration of growth, both in developing and developed countries. Currently both these systems are not functioning properly. The open trading system is now threatened by the use of protectionism in major developed countries. Capital flows, which normally ought to move from rich to poor countries, are going in the opposite direction. Surplus savings of Japan and West Germany are being invested in the world's richest country rather than being used to help the poor countries of the world. Here then is both a challenge as well as an opportunity. What the world needs is a new global vision and strategy for promoting economic growth in the world, of which the core element is the promotion of sustained growth of the Third World. The development of the Third World could provide a powerful stimulus to revitalise growth processes all over the world.



HCL

Riding the technology tiger

HCL's bash on 4 October 1988 at the Taj Palace, New Delhi, was a celebration of two things: first, it had in the previous financial year achieved a turnover of over Rs.100 crores and second, its US operations had taken off. HCL America Inc will be manufacturing and marketing its super mini-computer, the Magnum, in the US. HCL has also, during the last year, become the largest computer manufacturer in the country

In many ways, the HCL's party was a recognition of the fact that dreams can be made to come true. What had started as something of an adventure for Shiv Nadar, now chairman of HCL, and five of his colleagues, who left DCM Data Products together to set up their own company in 1975, has become a reality. Nadar, an electrical engineer from PSG College of Engineering, Coimbatore, joined DCM as a management trainee in 1968. He was in charge of the marketing division of DCM Data Products when he and his colleagues, Arjun Malhotra, Y.C. Vaidya, D.S. Purie and Subash Arora left the company. Today, with the exception of Subash Arora, they are all involved in the day-to-day functioning of the company and are on the board.

UNSTABLE ENVIRONMENT

HCL's success is a tribute to its ability to manage in an environment wherein technology is proliferating exponentially. Uncertainty — often due to the proclivity of the government to change rules of the game in mid stream — is high, and the competition is cut-throat.

HCL Ltd, as a company, is new. It was formed in April 1986 through the amalgamation of four companies set up in the late seventies and early eighties. These include Hindustan Computers Ltd, Hindustan Instruments Ltd, Indian Software Co Ltd and Indian Reprographics Ltd. HCL today has a share capital of Rs.14.83 crores and reserves of Rs.11.11 crores. It is still a closely held company with 90 per cent of its share capital held by the original promoters of the company and its employees. It has an affiliate company in Singapore, Far East Computers Pte Ltd, in which it has a 43.75 per cent shareholding.

The company has seven divisions: computers, CAD/CAM, reprographics, communications, instruments, customer support and peripherals. In the last financial year from June 1987 to June 1988, the computer division provided approximately 70 per cent of turnover, CAD/CAM 5 per cent, and reprographics 14 per cent. The reprographics manufacturing facilities are in Dehradun while the telecom and computer plants are in Noida, UP. Since Noida was designated a backward area when the plant was set up, HCL is exempted from paying the UP sales tax currently in force at 12 per cent. The company has a peripherals manufacturing facility in Madras and the instruments factory is in Gurgaon.

HCL's strengths have always been its marketing savvy and quickness of response, and its ability to forecast technological trends fairly successfully. As Arjun Malhotra, vice-chairman of HCL puts it, "We want to ride the next tiger — but its damn difficult to tell which one its going to be." Says Ajit Balakrishnan, chairman of PSI, "HCL's speed is an extension of Shiv Nadar's own quick responses. Where others take one-and-a-half years to react, Shiv reacts in four-and-a-half months."

AGILITY

This agility is something that has characterised HCL from its inception. HCL's first major opportunity was the withdrawal of IBM from India in June 1978. Though the American giant began winding down operations only in September 1977, Nadar and his colleagues had learnt of IBM's intention to withdraw as early as July 1977.

They seized the opportunity and HCL announced the launch of its 8C and 8CR microcomputers. Full page ads announced the machines as the first microcomputers for the commercial user. Nadar remembers that DCM came out with ads saying, "Wait for a better product." Finally, both companies held product demonstrations in December 1977. In the head-on clash that ensued for the first-time user segment, HCL was faster and more aggressive. Most computer companies, such as ICIM, ORG Systems and ECIL, didn't want to sell to widely diversified locations because they were not confident of being able to support their products.

HCL, however was willing to take the risk of selling first and bothering about maintenance

later. This caused its reputation for after-sales service to suffer but the risk-taking paid off. Contrary to the fears of other companies, customers were willing to accept less than top class service initially. As technology progressed and HCL offered an upgrade path, it was able to 'lock' in customers to its products. Today 65 per cent of HCL's orders come from old customers.

The ability to respond innovatively is also evident in HCL's launch of its Workhorse I in Feburary 1983 as a computer-cum-super electronic typewriter. In September 1981, HCL launched the System 2. The computer was well received and almost 600 orders were booked by the end of 1982. At that time, the company was offering two or three pieces of application software with each computer but could not, in practice, meet this commitment.

TIME TO CATCH UP

The System 2 was repackaged with basic software packages like word processing, and renamed the Workhorse I. The company launched a high powered ad campaign, backed by direct mailers and road shows. By April 1984 the system was the largest selling micro computer in the country. Because it used only standard packages, the Workhorse gave HCL time to catch up on its other commitments.

During the early years, especially from 1981 to 1984, HCL's revenue was largely stagnant. Nadar explains that many of the company's problems came from having to re-invent the wheel. Due to government regulations, HCL and most other computer companies in operation at the time had to design computers and write their own operating systems and compilers. This was a disaster.

For example, HCL designed one of its products, the System 4, as a mini computer. It drew its inspiration from Digital Electronic Corporation's PDP-II. Though HCL wrote the operating system and compilers after a tremendous effort, the system never worked successfully.

Salvation came in November 1984 when the government announced the new computer policy which allowed the free import of PC kits. According to Nadar, HCL had already decided to scrap attempts to create operating systems for mini computers and decided to use UNIX, a system that even then showed promise of becoming an industry standard. The operating system was independent of hardware and easily portable. After the announcement of the computer policy HCL decided on PC-compatibility for micro-systems as well.

According to Ajit Balakrishnan, HCL was the first Indian company to see the possibility of adapting to world standards. Companies such as WIPRO and PSI followed quickly while others, like ORG and DCM Data Products, were slower. ORG continued to attempt to develop its own computers while DCM Data Products failed to capitalise on the opportunities that the government's more liberal policy provided.

MANAGEMENT-INTENSIVE BUSINESS

"Companies with traditional businesses too, where change is slow, have been unable to react to the computer industry where product cycles are short — typically two to two-and-a-half years. It is a management-intensive business," says Ashok Soota, president of WIPRO Information Technology Ltd (WITL). But, being in a traditional business is not necessarily a disqualification; WITL's parent company is in traditional areas like the manufacture of vanaspati, but it has been run very successfully and is today the

ORGANISE YOUR LIFE

FLEXIBLE, PRACTICAL, RELIABLE, much more than just a diary
– a whole new approach to organise your life.

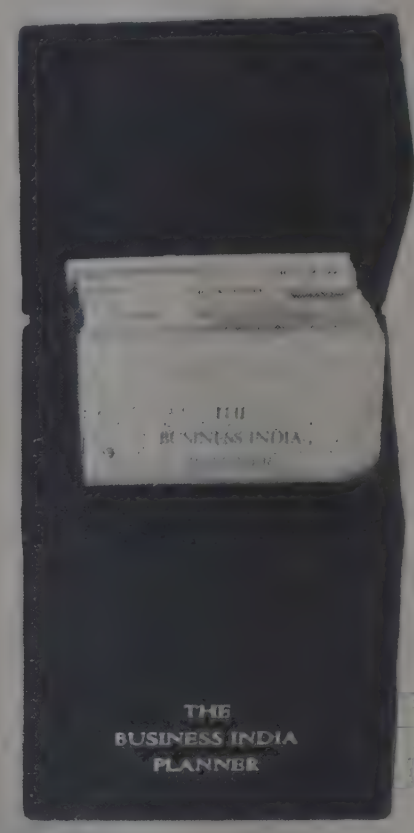
THE BUSINESS INDIA PLANNER 1·9·8·9

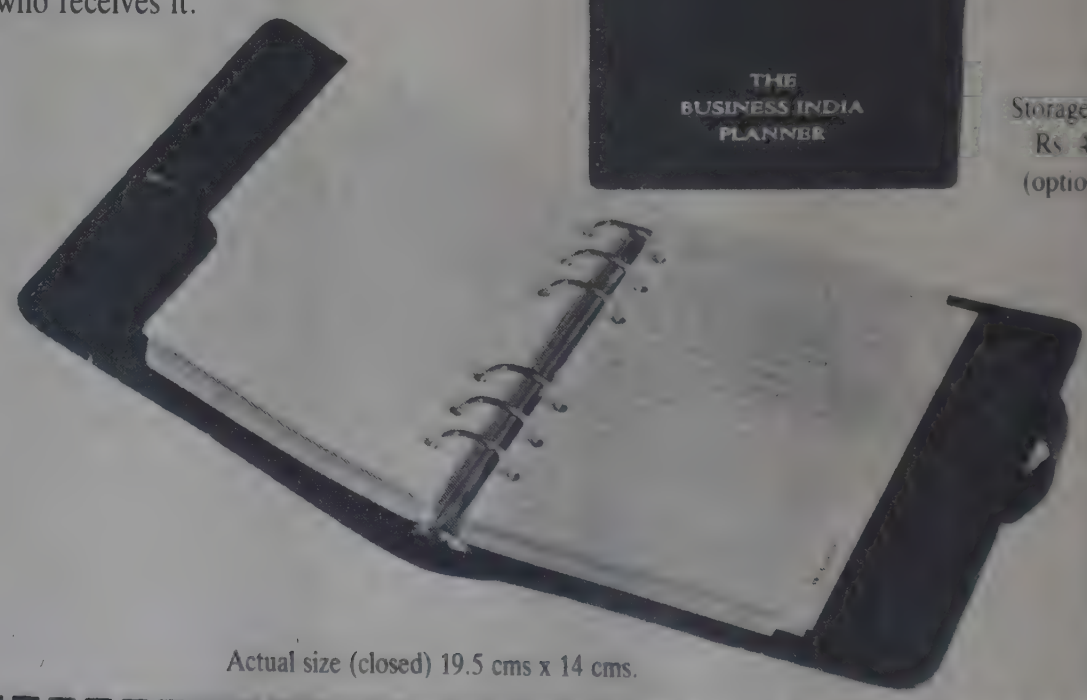
With its unique trigger operated ring binder system, The Business India Planner can be organised to suit individual requirements and style. Add, subtract and relocate pages from numerous features and options available including an optional storage box which is ideal to store alternative or spare pages. And next year, all that needs replacing is the diary section.

Leather bound in black, grey or burgundy, with its easy to use design format, The Business India Planner 1989 has a new expanded Information Section, a versatile Diary Section, a handy Network Section, and an indispensable Organiser Section.

Select between the two versions of the Planner: the Day Plan and the Week-at-a-glance. The diary section of the Day Plan devotes a page a day whilst that of the Week-at-a-glance views a week on a spread.

Meticulously designed to suit varied lifestyles –The Business India Planner 1989 is also a perfect gift idea that will be appreciated by anyone who receives it.





Storage B
Rs. 40/-

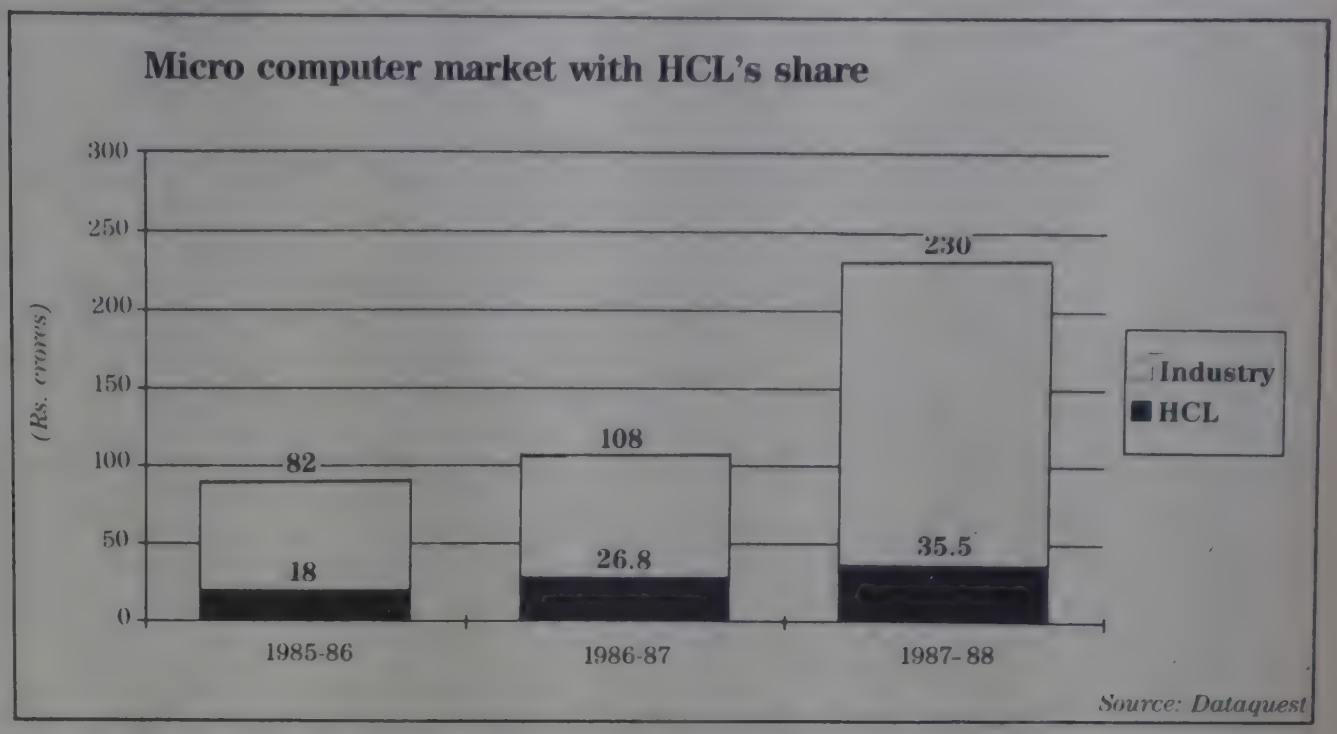
MDD

second largest computer company in the country. Started only in 1980, its growth rate over the last four years has been higher than that of HCL, even though the latter had a head start.

PSI Systems Ltd, according to observers, could have capitalised on the boom in the computer industry but chose not to. The company's focus has always been on the development of technology and has now moved into the technology-intensive mainframe market, after its tie-up with Groupe Bull of France. ICIM too did not pay the micro market much attention.

After 1984, the whole focus of the computer industry changed from attempting to develop technology indigenously to being able to spot technological trends abroad and find their applicability in India. Today HCL's product range includes IBM PC compatibles, minicomputer UNIX based systems and technical workstations.

HCL has helped open up the micro market in the country. When HCL launched its IBM PC compatible — the Busybee — in April 1985, most competitors were offering their products at Rs.80,000 to Rs.1,50,000. HCL priced the Busybee at only Rs.50,000. In September 1986, HCL once again slashed its prices for a basic configuration for a PC to as little as Rs.20,000 and for a PC XT with a disk for as little as Rs.35,000. HCL has, at least in the public perception, thus been the price leader. In reality, however, the total price of an HCL package including sales and service has been much higher than that of competitors.



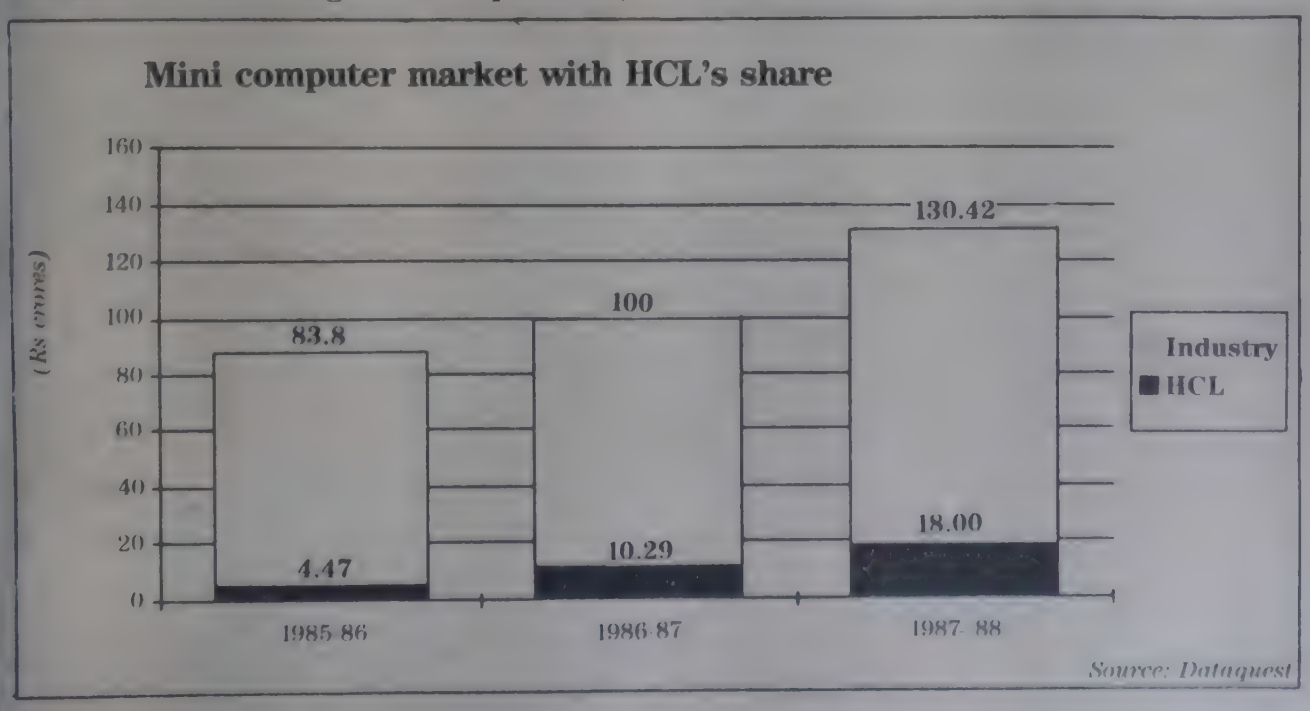
SLIPPING MARKET SHARE

Though HCL is said to have some special method of sourcing its components, which gives it an edge over its competitors, it has been unable to retain market share in an increasingly competitive and fast growing micro market. According to *Data Quest's* survey of the top 10 computer companies, HCL remains the largest seller of micro computers but its market share has slipped from 25 per cent in 1986-87 to 15.4 per cent in 1987-88. New startups are eating into the larger companies' market. Says S. Raman, director-in-charge of HCL computer division, "Machines are now being sold below the cost of production." The real winner in the micro market has been Sterling Electronics, of Madras, of Siva PC fame. C. Sivasankaran runs a lean organisation — provides no support and sells on price.

HCL has, in a flanking move, increased its share of the less competitive mini market, where its market share over the last year increased from approximately 10.52 to 13.8 per cent. Though WITL stays marginally ahead in market share, HCL sold 275 of its Horizon III mini computers, while the former sold 232; WITL had till last year been selling substantially more minis than HCL. HCL has been able to capitalise on its UNIX standardisation while WITL has been offering its own operating system, which was not very well received, and delayed its own UNIX offering.

HCL is also set to exploit the rapidly growing CAD/CAM market, expected to rise from Rs.35 crores in 1987-88 to Rs.83 crores in 1988-89 and Rs.137 crores in 1989-90. All the major international vendors in this market have marketing or technical tie-ups with some Indian company: Hewlett-Packard with Blue Star, Digital Electronics Corporation (DEC) with Hinditron and Sun Micro Systems with WITL.

As a result of its technical collaboration with Apollo Systems of the US, HCL will be the first company to manufacture engineering workstations in the country. The DEC-Hinditron tie-up, Digital Equipment India Ltd will first launch its computer, the MicroVAX II but has still to announce plans to make an engineering workstation. WITL — which represents Sun Micro Systems, the largest manufacturer of engineering workstations in the world — is expected to announce a technical collaboration shortly. But, HCL clearly has a head start.



"SOMETHING RIGHT"

According to Arjun Malhotra, even on a conservative estimate, HCL should sell CAD/CAM systems worth Rs.24 crores. HCL's strategy in the CAD/CAM market is illustrative of its ability to anticipate the opening up of new markets. Five years ago, HCL's affiliate, Far Eastern Computers Pte Ltd, became an agent for Apollo Systems. Today, Far Eastern has nstalled 300 workstations in Singapore,

The shed where HCL was started

Thailand and Malaysia. Ajay Chowdhry, director of Far Eastern Computers, will be returning to India to head HCL's CAD/CAM divisions. As a result of the relationship between Far Eastern and Apollo, HCL has managed to win the trust of the latter company. Apollo has no manufacturing plants outside the US; that it has agreed to transfer its technology and allow the manufacture of its computers in the country and lend its name too is noteworthy. "They must be doing something right," says Pravin Gandhi, executive director of Hinditron, who had his own share of troubles persuading DEC to enter into a manufacturing venture in the country.

HCL's American venture is a classic example of how the company is able to spot an opportunity and grab it. In the beginning of 1987, HCL sent a team to the US to see whether it could acquire technology other than what it already had in the super-micro area. It couldn't — so the company continued to work on its own design. When it developed the Magnum, a super-mini computer which uses multi processing and can have up to six processors, it searched all over and found that there wasn't any comparable product in the market. It then decided to launch the product in the US. Reportedly, orders worth $16.5 million have already been received in the first year of a five-year contract.

In the US, HCL will use contract manufacturers, do the system integration and then sell the machines to Fortune, a division of SCL, a multimillion dollar company in the US, which will resell them. According to Shiv Nadar, the product's strengths are its price:performance ratio and the fact that its operating system, UNIX, has special features which make it suitable for a commercial environment. In the rest of the world, UNIX has grown in largely technical environments. In India, however, substantial work has been done towards adapting the operating system to commercial applications. There is some scepticism about how HCL's product will fare in the US market. Nadar concedes that failure could mean wastage of the Rs 7.5 crores that HCL has spent on the product. "But," he says, "if the project proves itself, the avenues that could open up after that are very vast. It could be the difference between a multi-million dollar company and multi-hundred dollar one."

UNIQUE SELLING STRATEGY

HCL reinforces its ability to capitalise on emerging technological trends with a unique selling strategy. It manages to stay in the limelight by launching innovative marketing schemes which it pushes with the help of a hard selling sales force. It is not unusual for Shiv Nadar or Arjun Malhotra to make a sales call, if requested by the frontline sales force, on a client who has been designated as 'key account' by the company.

Unlike WITL, HCL relies more on its sales force than distributors. It motivates its 177 sales force through a number of incentive schemes. Ashok Jain, executive director of the computer division, reveals that a recent scheme called 'PEP' (performance evaluation points), makes it possible for sales executives to win an airconditioned Maruti and, in some cases, upto Rs.1.5 lakhs in cash too.

With all its marketing savvy and its

hard selling sales force, one problem that HCL has faced time and again is after-sales service. To set things right, the company has poured resources into its customer support division which services products of all its divisions. Today, the division employs 945 people out of a total of 3,153 people in the organisation. Its service record ranks as among the best in the computer industry, though, as customers put it, there is still room for improvement.

Though HCL Ltd is predominantly perceived as a computer company, its officials prefer to say that it is in the electronics business, more specifically in the office automation business. All the technologies that HCL employs could eventually converge in a paperless office. "How that is going to take place, I don't know," says Malhotra.

FIGHTING BACK

Observers point out that HCL's strengths in the computer business do not necessarily translate to its other activities. HCL's reprographics division, for example, which make the Finesse range of plain paper copiers in technical collaboration with Toshiba of Japan, is an poor second to Modi Xerox. Modi Xerox's willingness to run up large losses while fighting for market share appears to have worked effectively as a strategy against HCL. In the last two financial years, the company's turnover from the division has dipped by Rs.18 crores to Rs.14.8 crores. HCL is attempting to fight back by expanding its range — a process which should be completed by 1989 — as well as its marketing operations.

One of the biggest challenges before HCL is coping with the impact of its rapid growth. The company, which has grown from Rs.64 crores to Rs.100 crores in 1987-88, has the declared objective of reaching a turnover of Rs.250 crores by 1990. Over the last year, the company has added 1,400 people to its rolls and has almost doubled in size.

Nadar and Malhotra: supreme team

The two people who, by all accounts, have been critical to the success of the company have been Shiv Nadar and Arjun Malhotra, the vice-chairman. Nadar is described as the visionary, who is quick to sense what the market needs and also to predict technological trends. He relies more on intuition than on "scientific reasoning". He sets much store on loyalty and his explanation for it is simple. In a market characterised by uncertainty and rapid change, commitment to the job at hand is critical. "Shiv is a natural leader," says Mahinder Pratap, executive director, R&D and CAD/CAM manufacturing, who joined the company soon after it was started. "He is good with people but is also a good taskmaster," he adds. Nadar comes across as a man who is emotionally restrained though those who know him well say that he cannot go to a funeral because he fears he will break down.

Malhotra appears to be almost the antithesis of Nadar; warm and friendly, he doesn't give the impression of being 'heavy' like Nadar does. He is described as an excellent strategist and day-to-day manager who fleshes out Nadar's intuition. Nadar and Malhotra work excellently as a team and, according to a friend, often take important strategic decisions at home over a drink. And, as an observer quips, their reputation in marketing confers on them the ability to sell

The Busybee has been the cornerstone of HCL's success

ice cream to Eskimos!

On a day-to-day level, there is considerable decentralisation of authority. Each division is typically headed by an executive director who reports to a member of the board. At the moment, S. Raman, a director, oversees the computers and communication divisions, Arjun Malhotra looks after CAD/CAM and reprographics while the peripherals and the instruments divisions reports to Nadar. Both at the board level and lower down in the organisation, there is a frequent reshuffling of responsibilities which, as Nadar explains, becomes necessary as the company grows and new opportunity areas open up. Observers of the company, however, point out that frequent changes in job responsibilities have been causing stress in employees.

A major challenge that the company now faces is the growing globalisation of the computer market. A number of tie-ups, which include equity participation between international computer companies and Indian companies, have materialised in the recent past, as in the case of PSI-Bull, Modi-Olivetti, or DEC-Hinditron. What this means for Indian computer companies, including HCL, is that they will have to compete not on their own terms but on standards established for product features, manufacture, support and research by international giants. Companies like DEC are acknowledged leaders in the mini market while Olivetti is an acknowledged leader in personal computers in Europe. B.K. Modi of Modi Olivetti says that his company will attempt to provide what no Indian company has provided before, ie, a total solution incorporating both hardware and software. While this makes the ballgame so much tougher for HCL, it is also true that the mere presence of foreign companies in the Indian market is no guarantee of their success; a lot will depend on their ability to adapt to their Indian counterparts and conditions.

Shiv Nadar acknowledges that DEC will be a tough customer but he welcomes the company as he feels that it would only sharpen HCL's competitive edge. HCL has also begun to gear up its production facilities. Over the last year, it has invested Rs 8.04 crores in its computer manufacturing facilities, which will not only help increase volumes of production but also the quality of manufacture.

Whether HCL will continue to be number one in a new and competitive milie remains open to question. Shiv Nadar major advantage, as he sees it, lies in tl slowness with which most of the ne ventures are being implemented. By th time they are on stream, HCL expects t be a better developed organisation, bot in structure and size, and in a strong position to face the challenge that the present.

EAPEN THOMA

Meditate on how world travellers seek bliss on their way westward or eastward.

The answer becomes obvious once you know the pulse of the world opinion on airlines. For six years in succession, business travellers everywhere have voted the same carrier as the best airline worldwide in the Business Traveller magazine's global survey. This airline flies to over 100 destinations, is universally admired for exceptional punctuality and hospitality and consistently offers a choice of three classes on all its aircraft.

DCM

Accord or discord?

If somebody up there loves DCM and wants to help it, the heirs of the late Lala Shri Ram — founder of the group that bears his name — certainly seem to be doing their best to make things difficult for him. Even their grand trifurcation plan is in danger of falling apart because of ambition, greed and one-upmanship

Somebody up there must love DCM. Only that can explain the survival of this mess-ridden monster. The Rs.624-crore corporation, which recorded a gross loss of Rs.8.23 crores for the year ended 30 June 1988, has been on the brink of financial disaster for some years now. This year, for the second time in succession, DCM will skip dividends and DCM shareholders who have been watching the company's performance plummet cannot be looking forward to much cheer from their AGM scheduled for 23 December.

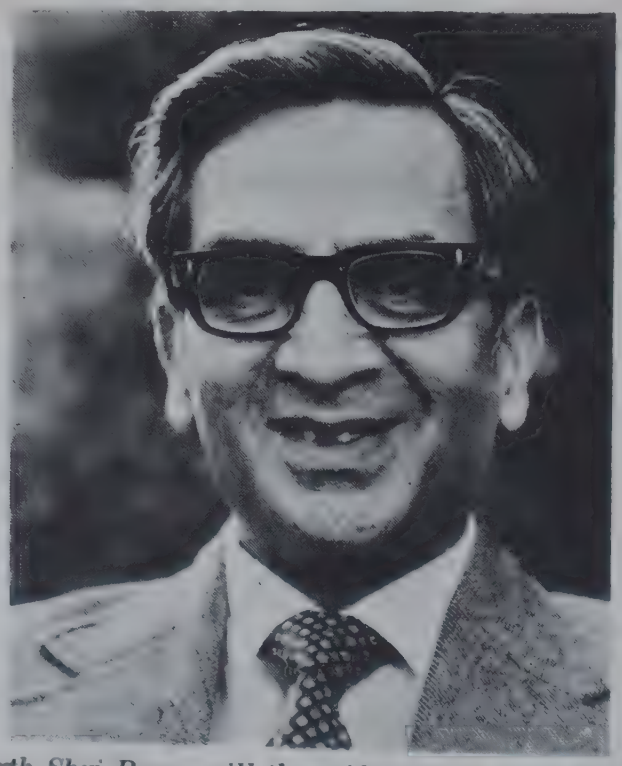
But the company's woes go much beyond strained finances. While most reports about the troubled behemoth have in recent times highlighted the details of a grand "trifurcation" plan agreed to by the warring brotherhood in the Shri Ram family, news from the cloisters of Sardar Patel Marg suggest that this dismemberment may not be as unanimous as it is made out to be. Though all three warring branches of the Shri Ram family had in the week just before Diwali put their weary signatures to a one-page memorandum on the asset splitting pattern, by Sunday, 20 November, barely a week after, the deal was getting rapidly unstuck.

On the morning of Monday, 21 November, two branches of the family met secretly at a safe house "somewhere in Delhi city" to chart out a strategy that may seek to block any hasty trifurcation. There are also plans to inform the financial institutions that the modalities of the division, as announced in the media, are in for a drastic revamp.

WIDE DISPARITIES

As we go to press, all three branches of the Shri Ram family were publicly refusing to discuss details of the hectic parleys going on within the corporation's Kanchenjunga building headquarters. However, *Business India* spoke to all three branches in "strictly off-the-record" conversations that revealed the wide disparity of private views even while public display of concurrence was at its peak. Though the dissenting members were keeping their doubts private for the moment, it became clear last week that the trifurcation accord was nowhere near ready and that the Augean stables stretching from Bara Hindu Rao, the original home of DCM, to the headquarters at Barakhamba Road were yet to be cleansed.

The latest crisis has been sparked o by news that the Bharat Ram family ha struck a deal with New Delhi's most a gressive builders — the Ansals. In a se cret arrangement that will allow th Ansals to develop part of the disputed 6 acre Bara Hindu Rao mill site, the Bhara Rams have reportedly amassed a wa chest of Rs.20 crores or more as "earne money". And, according to reliabl sources, this mass of money is being de ployed by the Bharat Rams in a secre outflanking move to acquire the DC shares (estimated to be 11 per cent of th total equity) that have been held b Swraj Paul and his stockbroker Haris Bhasin, ever since the famous Capar raids of 1983. These sources also revea that this acquisition of DCM stock by th Bharat Ram family is accompanied by a equally private and hush-hush dea whereby the Bharat Rams also hope t acquire majority control in MMLSR — private holding company that originall



Vinay Bharat Ram, Bansi Dhar and Siddharth Shri Ram: will the trifurcation plan hold

controlled the publicly held DCM corpo ration and its subsidiaries. While all thi is a closely guarded secret in stockmarke circles, Bharat Ram family sources re fused to comment.

Comment was of course unnecessary i some senses. Living up to the reputatio of the Bharat Ram impatience, Vina Bharat Ram, made an appearance a company headquarters on the morning o Monday, 21 November, despite a spell o hospitalisation necessitated by a mino stroke. Accompanied by his private atten dant, Vinay — who had to go home to res after barely two hours in office, accordin

IF YOU USE SEWING THREADS THIS WILL INTEREST YOU

At Madura Coats we don't just make the best threads. In fact, as the Thread Makers we also assist you in selecting the right thread for each application. To help you understand and overcome thread and associated problems, we've set up the COATS THREAD ADVISORY SERVICE.

Our panel of experts will answer all your thread queries, from routine sewing problems to complicated ones. In addition, the COATS THREAD ADVISORY SERVICE also publishes papers on sewing and thread related subjects such as seam pucker, seam stretch, etc.

When technologically superior products are introduced, bulletins are prepared assessing their relevance to your needs and mailed to you if you are on our mailing list. These will help you improve your product quality and productivity.

It's so easy to be a part of the COATS THREAD ADVISORY SERVICE. Just write in to be on the mailing list. You don't have to pay anything for this service. All this comes absolutely free to you from Madura Coats, the Thread Makers.

Fill in the coupon below and mail it to : Thread Advisory Service, Madura Coats Threads, 144 M.G. Road, Bangalore-560 001. Or dial the Madura Coats office nearest to you.

A question to the new breed of enthusiastic computer users...

Should your monitor leave you cross-eyed at the end of the day?

Yes, we are talking about the monitor, the face of your computer. The face you've got to communicate with for hours. And days on end.

And it's this face that can leave your face cross-eyed. And your head reeling. With its display of imprecise, grossly structured characters on a screen that glares at you. A drawback that most monitor users suffer in silence.

The time to make a noise, therefore, is now. When you're taking a critical look at the computer you're going to buy.

Insist on the BUSH Monochrome Monitor. NEC's favourite protege in the fiercely competitive international field of computers. And it's the apple of the user's eye wherever computers are a way of life.

The secret lies in BUSH's much better resolution than most other monitors. Resolution being the all-important quality that makes every displayed letter crisp and precise, inviting to be read.

Besides, unlike most other screens, the BUSH leaves no lingering after image to interfere with the next page, everytime you turn a new leaf.

Moreover, the BUSH monitors have a unique, non-glare, reflectionless screen, and a thoughtful ergonomic design to harmonize with any system or environment.

So, go for the BUSH Monitor. It's just what the doctor ordered. Unless, of course, you prefer aspirin.

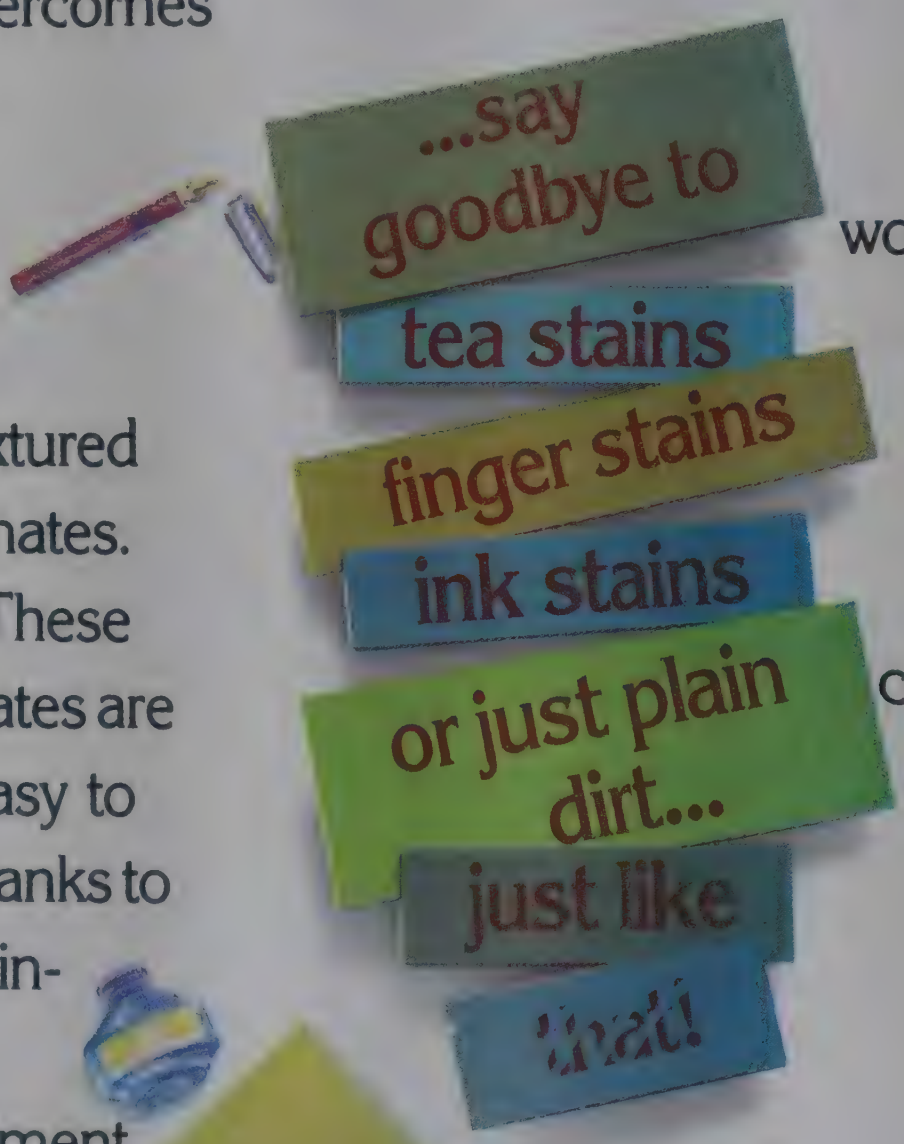
Decolam's new Softclean textured laminates

Decolam overcomes yet another laminate limitation, with its new Softclean textured laminates.

These laminates are amazingly easy to maintain. Thanks to a special stain-resistant surface treatment that makes them suitable for high-traffic vertical surfaces.



You can even use them on horizontal surfaces – kitchen worktops, for instance.

The range? All your favourite Decolam colours and patterns, with an exquisite, grainy texture.

Minus, of course, those 'textured' problems.

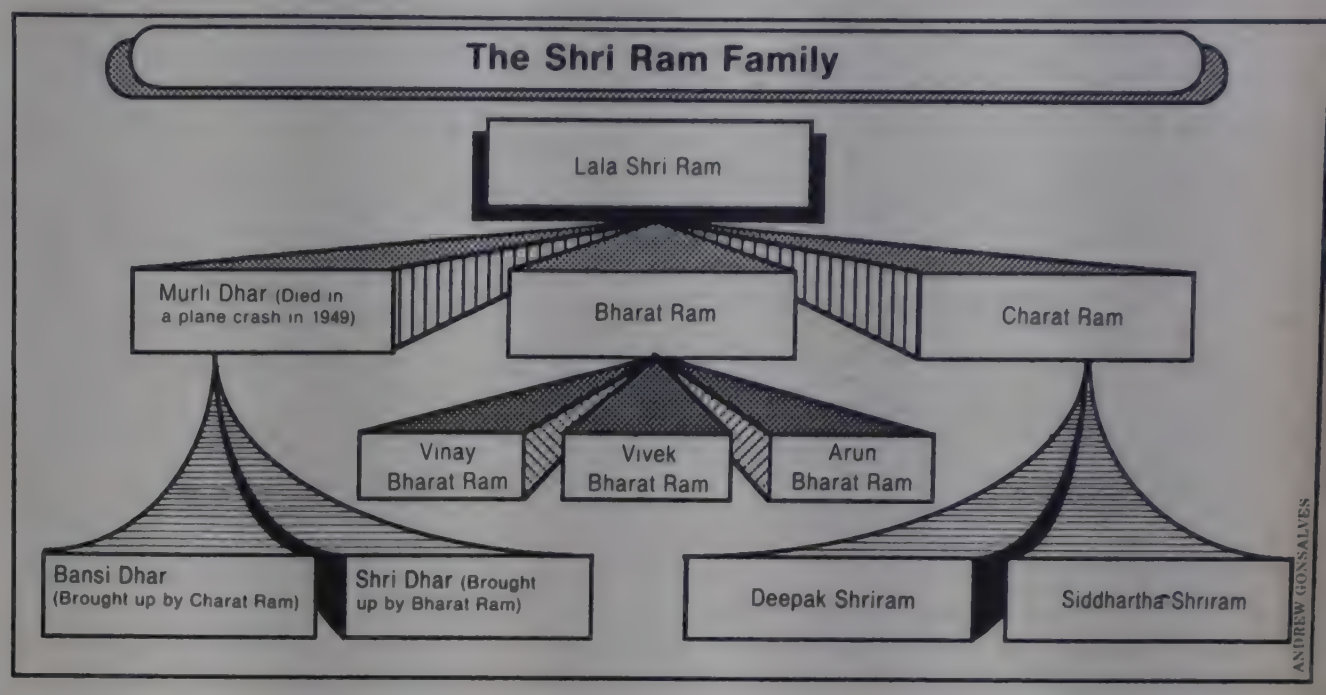
The designer's laminate

Beautiful...forever

A quality product of Bakelite Hylam

to reports from his own office — was eager to complete some "paperwork on land matters". Land affairs are assigned to his direct control by the BMC (Board Management Committee) that has been overseeing the crippled giant's operations for almost 11 months now (since 27 January this year) Vinay's personal intervention was found necessary since another family member who was looking after the subject during Vinay's illness had refused to sign on the Ansals' dotted line.



TRICKY BUSINESS

Land development plans, specially when the prime 63-acre mid-city plot in question is in the limelight of public attention, are of course always a tricky business. Sources in the building industry say, however, that the DCM double deal to include the Ansals in a major way is still very secret. Originally, say DCM family sources, the builder Kailash Nath Associates had paid a huge advance (estimates put it at Rs.17 crores) for the main development project of flatted factories where the Bara Hindu Rao Mills stood. It is understood that the Ansal advance is for a smaller area to be developed within the same complex. Builders now say that, once the necessary permission is obtained — the chances are high now given the considerable clout that the Ansals have in Delhi — the deal will be bigger. Since the effective FAR will now be 2.5 rather than the existing 1.7 — an amendment to the law that insiders say was passed to accommodate only DCM (since only midtown land more than an acre in area benefits and nobody else has it now). With a DCM board meeting scheduled for the weekend, the Bharat Rams were clearly loathe to allow physical disability to stand in the way of their game plan.

Such games and such plans have landed DCM into the mess it currently is in. When the brothers, Bharat Ram and Charat Ram, after years of feuding handed over charge to a new generation in 1985, some hope of change had surfaced. But, pretty soon it became obvious that chairman Bansi Dhar, managing director Vinay Bharat Ram and deputy managing director Siddharth Shri Ram were all pulling in different directions (and not so coincidentally each belongs to a different one of the three branches of the original Shri Ram family). The battles between the three took their toll and the institutions (and family) finally agreed to a BMC packed with venerable outsiders to oversee and enforce battle lines.

The BMC, which met regularly, was rendered ineffectual by family squabbles. In sheer disgust, the three family branches decided that a legal parting of ways was desirable and drafted last fortnight's trifurcation package. The BMC had in the interim flirted with the idea of selling DCM's crown jewels — the Kota complex — a move opposed by Bansi Dhar and finally shot down by the financial institutions themselves. And even now, the committee is believed to be considering the prospect of selling DCM's data products division if a suitable price and buyer can be agreed upon.

The trifurcation solution reflected the combination of individual frustrations matching personal ambitions in a peculiarly satisfying manner. According to the agreed upon division, the Bharat Rams would get the prized Delhi land which only they believe they can turn into gold (real estate developers in Delhi put its official market value at Rs.500 crores and another Rs.200 crores as the unofficial value) and be satisfied with their computer and foundry division. This would be over and above the complete control of the profitable Shri Ram Fibres and DCM Toyota subsidiaries that they currently run anyway. The Charat Ram empire — including Jay Engineering and Shri Ram Refrigeration — would be left intact and, Siddharth would get a regular cash income from the profitable vanaspati and sugar operations. Bansi Dhar's desire for peace — away from his quarrelsome cousins — was fulfilled and made worthwhile by control of the company's prime assets at Kota, the Mawana Sugar Mill and a chunk of land.

As one highly placed insider in DCM remarked, "The trifurcation plan revealed an unhealthy balance of personal greed with little regard to the health of the company as a whole." It was so evenly balanced, say family sources that one faction confessed to *Business India* that "I would be willing to draw lots for any of the three chunks." Not quite, say others who believe that the factions had chosen only those shares which suited their individual temperaments. Which is not to say that the division, drawn up by the three cousins, was instantly acceptable. Lala Charat Ram for example delayed the pre-Diwali declaration by battling for three weeks to get the Mawana Sugar Mill moved from Bansi Dhar's share into that which his son Siddharth would control.

The trifurcation plan, despite its tenuous "balance of personal greed", suddenly seemed to have found favour with the institutions. One highly placed official in the finance ministry indicated clearly that the ministry's blessings were with the plan, "since the family was resolving its problem without exercising the option of selling the company in bits and pieces". The same official is understood to have issued "instructions" to the financial institutions to support any unanimous family solution which promised to put an end to the feuds that were crippling the corporation's everyday functioning during the last few months.

It became even more necessary to complete the trifurcation exercise speedily when the Delhi Administration refused to allow DCM to close its Bara Hindu Rao Mill as a prelude to the commercial development of the land on which it stood. The burden of 6,000 workers of the 100-year-old mill has cost DCM over Rs.45 crores in losses and the refusal to permit closure also seemed to put paid to the company's

Fertiliser plant at DCM's Kota complex: prime asset

modest expectation of Rs.190 crores in revenue on the books. So when the 28 October decision, to disallow closure was announced by Lt.-Gen. Romesh Bhandari the family conclave closed ranks to come up with new solutions to keep themselves going. The matter had already assumed urgency since D.N. Davar, chairman of IFCI, the lead institution, had cautioned chairman Bansi Dhar against failure to find a solution. That such a consensus solution was desirable was also made clear to Arun Bharat Ram and Vivek Bharat Ram who got the same message when they called on finance secretary S. Venkitaramanan.

ORDERS FROM ABOVE

While the finance secretary as well as family members refuse to confirm this, highly placed sources within the government indicate that orders from above were responsible for the trifurcation agreement being patched together so swiftly. While it is claimed that Vivek Bharat Ram's personal rapport with classmate and buddy Rajiv Gandhi alone ensured that orders were passed to aid and assist DCM, the latest twist in the land development plans suggest that bigger and murkier deals may underlie the government's acceptance of the family's trifurcation solution.

Government assistance to DCM in this their darkest hour, is substantial. It is understood that PNB chairman J.S. Varshneya has been "instructed" to fund DCM's working capital requirement to pay bonuses this year. In addition, government organisations may also step in to buy space in DCM's office building at fancy prices for a property that it has so far found difficult to market. And, to top it all, the institutions have been told, they say, to ensure that family management is not destabilised. As a senior executive of a financial institution admitted: "Ultimately, the politicians take the key decisions affecting the fate of large corporations. And the institutions just fall in line."

While the family's enthusiasm and efforts to reorganise management in the way they deem fit is understandable, only powerful pressure from above explains the pusillanimity of the institutions. The fact remains that two major constituencies of DCM confront disaster today — the employees and the small shareholders. While employee morale has taken a bashing, the interests of shareholders seem to have been completely ignored. In all the negotiations so far the institutions have rarely (if ever) raised the question of the price small shareholders are being forced to pay for petty family considerations.

It is against such a backdrop that ignores everybody else that the warring family factions decided to bury the hatchet and fashion a trifurcation that the institutions (with their 43 per cent equity holding) would quickly ratify. When chairman Bansi Dhar met finance secretary Venkitaramanan two weeks ago, both he and the Charat Ram faction had believed that the end to their battles was in sight. In fact, the trifurcation seemed so settled a fact that family members had scheduled a Saturday morning (19 November) meeting with a team of lawyers to decide what the best legal framework for such an operation would be.

Even on this Saturday, the glitches to trifurcation seemed procedural. In their undue haste to gratify their individual needs, family members had forgotten to do some calculations. They had convened the lawyers' meeting to find out ways which would convince their own finance men that a three-way division was possible. The number crunchers had already started asking the most obvious but unresolved questions about how liabilities would be apportioned, how investment allowance would be availed of and a host of other thorny queries. The Saturday meeting was expected to decide between the option of a holding company with three subsidiaries or three independent companies.

Indeed, as recently as 19 November, trifurcation seemed to be proceeding smoothly. And suddenly, though a tight cover is being kept on events at the moment, the entire exercise seems to be once more in jeopardy. Once again there are uncomfortable questions to face — why are the Ansals muscling in on a land development that the builder Kailash Nath has already staked his claim to and why are the Ansals so bullish when the mill closure refusal has just been issued. The news that the fresh Ansal advance is being used for some rather judicious purchase of control in a company where the pattern of trifurcation has been agreed upon is astonishing and intriguing, to say the least. Why have the institutions and the finance ministry been bending over backwards to allow trifurcation? Is the trifurcation exercise only a smokescreen to ensure that other family members do not question the Bharat Rams collecting advances on what would be their rightful share in the division of assets? If that is so, why do the Bharat Rams seem to be busy buying MMLSR and DCM shares that are available?

Suddenly, like flares in a still night, the pyrotechnics are back. Clearly the agreements hammered together before Diwali look like they are about to go up in smoke. And, as DCM watchers acknowledge rather wearily, it looks like this sorry show must go on and on.

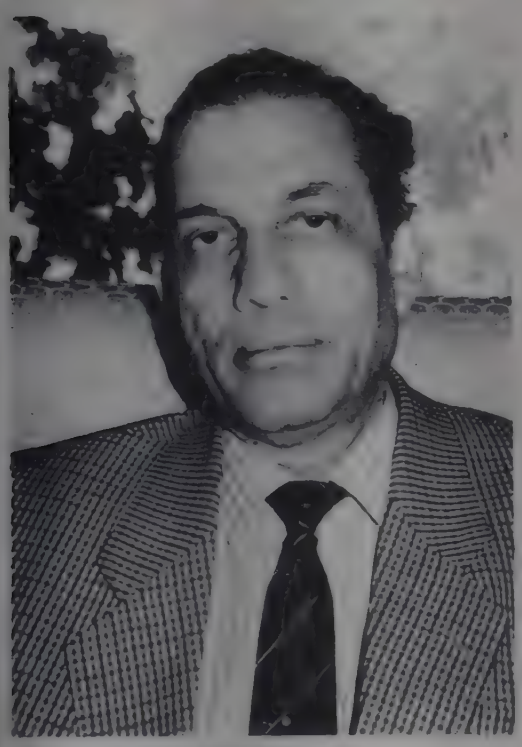
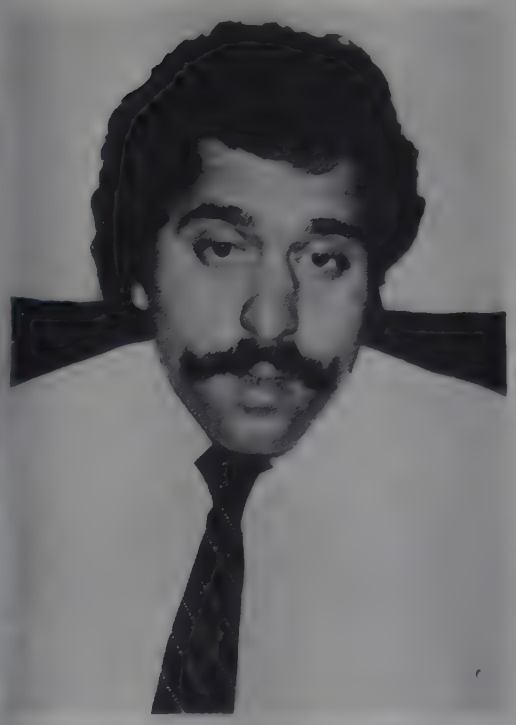
Wardekar: "good to leave at the pinnacle of one's career"



Soman: key negotiator



Mallya: a valuable acquisition

WIE

In the UB fold

The sale of Western India Enterprises to Vijay Mallya's United Breweries has surprised everyone. Why did A.S. Wardekar, the dynamic technocrat who built up the Rs.70-crore WIE from scratch, sell his consistently profitable company?

Last month's takeover of the Pune-based Western India Enterprises Ltd (WIE), along with WIE Engineering, by United Breweries Limited (UB) headed by Vijay Mallya came as a real surprise to corporate circles. No one seemed to have a clue as to why A.S. Wardekar, chairman of WIE, should choose to sell a profitable construction company that he has built up from scratch.

More surprising than the deal itself was the suddenness and secrecy with which it was concluded. Rumour has it that Wardekar had decided to quit the country and live abroad and also that he was paid abroad for the deal. Mallya's recent decision to turn NRI seemed to fuel such conjecture.

The deal was swift. The key negotiator was Madhav K. Soman, a director of WIE and, significantly, a cousin of Wardekar. Soman is also the chief of the liquor division at United Breweries. Wardekar, apparently, had mentioned his intention to sell WIE to Soman three to four months ago. Soman got interested and he placed a proposal to acquire a stake in WIE before the UB executive committee on 28 September. The committee decided in his favour. Later, Mallya and Wardekar met in London and the deal went through. "It was very amicable," Wardekar says, "we just met over drinks and struck a deal."

NO RETRENCHMENT

The foremost condition laid down by Wardekar was the proper utilisation of WIE's staff; he insisted that no worker at any level be retrenched or replaced. In fact, UB has requested Wardekar to continue as the chairman for the next three years. In an exclusive interview with *Business India*, Vijay Mallya confirmed this arrangement: "The present management will continue for three years."

On the part of UB, Soman will continue to play a key role in assimilating WIE into the UB fold. At the next board meeting of WIE, scheduled for 29 November, Soman will be inducted as vice-chairman. He will also head the newly created engineering division of UB and will soon shift from Bombay to Pune, where WIE is headquartered.

What surprised many, including Wardekar, was that despite the takeover, the WIE's share price did not change much — it moved within a narrow Rs 30 to 36 range. Wardekar ascribes this to the "Maharashtrian mentality of wait-and-see". He says, "Most of our minority shareholders are from traditional Maharashtrian families who have held our shares for years. Instead of reacting quickly, they would rather wait and see which way the tide turns."

Mallya bought 21 per cent of WIE's equity capital of Rs 4.81 crores at Rs.45 a share, at least Rs.10 more than the market price. So, Wardekar, who owns 16 per cent (the other 5 per cent is controlled by his brother-in-law, Nandan Gadgil, a passive partner who was unavailable for comment), will receive a payment of Rs.4.5 crores. Mallya claims that "it is all above board and there is no cash payment."

WARDEKAR'S BABY

WIE is virtually Wardekar's baby. Started in 1963 as Western India Erectors, this technocrat built it almost single handedly into a prime construction and erection company. It has executed several prestigious projects both in India and abroad. The forte of the company lies in construction and erection of turnkey projects in power, chemical, fertiliser, and other industrial plants. At present, the company has 45 domestic assignments on hand which includes conceptualisation of projects and their operation and maintenance.

Trudging through severe hardships — financial and operational — Wardekar had expanded the assets of WIE from less than Rs.1 lakh in 1963-64 to Rs.24.3 lakhs in 1968-69. In 1972, the firm went public and growth continued at a spectacular pace. Where WIE used to receive Rs.4 lakhs as project fees in the early sixties, it

"He who acts on his own behalf is the master of himself, and his environment."

Harry Levinson's description of the Corporate Chief is also a reflection of the self-made man.

Such people have developed the rare insight of selectivity; and to them, the Executive Club is a natural choice, when they fly out on business.

The exclusivity begins with a separate check-in; and continues to the well-appointed rooms with a host of add-ons—an elegant workable with an additional telephone extension; complimentary Continental breakfast; special toiletries; bathrobe and slippers....

A full-fledged Business Centre with its meeting rooms; and the Lounge Bar that offers just the right stimulus for work and ideation.

Undeniably, the accent is on comfort, luxury and convenience, set in very exclusive environs. A fitting tribute to the man who's master of it all.

EXECUTIVE CLUB

HTA 6155B

now earns Rs.22 crores and more for a single job. Last year, its turnover exceeded Rs.70 crores.

That WIE is a growing company with an enviable market credibility is indisputable. Why then did Wardekar, who turned 56 this year, decide to wash his hands of the company? Several factors played on Wardekar's mind. One was the failure of the company to successfully diversify into unrelated areas of business. First, the company's foray into the manufacture of dye intermediates for the textile industry in 1981 ended in failure. The textile strike of the time caused a huge loss of Rs.4 crores and it was ultimately sold off in 1987.

The second diversification into electronics also failed to do as well as expected. "This division is just about making ends meet, Sam Pitroda and the booming electronics industry notwithstanding," confesses Wardekar. "In fact, if these two ventures had proven viable and profitable, I may not have sold out now."

The construction and erection divisions, the main source of income for WIE, are faring reasonably well, despite ups and downs. The company's income increased from Rs.38.77 crores in 1984-85 to Rs.45.12 crores in 1985-86, but the operating profit spurted from Rs.99 lakhs to Rs.1.94 crores. In 1986-87, although the total income inched up to Rs.47.17 crores, the net profit declined sharply to Rs.62 lakhs. Wardekar ascribes this to the Rs.160-lakh loss incurred by the electronics division during the preceding 18 months.

CAD at WIE: valuable engineering expertise

NOT REASON ENOUGH

Sources in the construction business, however, maintain that the losses are transitory and absorbable. "Definitely no reason to give away a company," asserts one insider. Wardekar himself envisages a large part of the loss to be made up in the current year, the accounts for which are yet to be released.

So the Rs.4.5-crore question still nags: why did Wardekar sell out? "I am tired of running the company for the last 25 years," Wardekar candidly says. "Now I want to devote my time to the pursuit of other interests — sports, education and my greatest hobby, farming. Besides, I am not getting any younger ... it is good to leave at the pinnacle of one's career. I still have ten useful years to do the things I've always wanted to."

But the talk of being "tired" comes as a surprise from a man who looks as if he is in his forties, thanks to his passion for badminton which has kept him sprightly and fit. His love for sports and education has brought him many laurels. He has constantly been involved in various social and philanthropic activities in and around Pune. Fond of doing "unusual things", Wardekar says, "In reality, my decision to sell out should not have come as a big surprise. Perhaps, we in this country are not used to the idea of sparing time to enjoy the money one has earned during a lifetime."

People close to Wardekar understand. Says N.K. Prasad, vice-president for corporate resources at CEAT, "I don't think he should have sold out now, when the company is riding a crest. But knowing Avinash, he could chuck everything away to do what he has really decided to."

PRESSING NEED

From Mallya's point of view, the WIE acquisition makes eminent sense. Of late, UB has been diversifying in a big way. It is setting up four major petrochemical plants at Vizag and Madras at an approximate cost of Rs.600 crores. And, the polymers division in Andhra Pradesh is being expanded. UB also has 28 distilleries all over the country. Thus, the UB group has a pressing need for in-house engineering skills to operate and maintain existing plants as well as set up new ones. The presence of qualified and experienced WIE engineers within the group will be a valuable asset.

As Vijay Mallya explained to *Business India*, "Nine months ago, we constituted an engineering division. This will gain strength with the acquisition of WIE. We have also launched a new engineering company, called United Vanderhoost, with headquarters in Bombay. Moreover, erection is very vital for petrochemical plants and WIE's engineering skills will be very essential for fabrication work."

WIE would also complement UB's electronics division. Says M.K. Soman, UB's liquor chief, "We already have two companies in the electronics field — Unitel and United Telecom. Besides, we also plan to set up a new company in collaboration with Genecom of USA. WIE has a sophisticated electronics division; its expertise will be very useful to us."

Meanwhile, many WIE staffers appear to have been overtaken by events. While they swear by Wardekar, there is also a feeling of having being let down. Said one middle level executive, "We do not know how to react. It was all too sudden. We've worked for Wardekar *saab* for 20 years. I don't know how it will be like working for a new management." Senior managers, on the other hand, like G.S. Shukla, senior vice-president for corporate finance, and several directors, like M.R. Joglekar, refused to comment. In fact, many observers still wonder why Wardekar could not have handed over the running of the company to his professional colleagues.

Wardekar insists that WIE will carry on its activities as usual, United Breweries notwithstanding. "I will be heading the company for at least three more years," he says. Refuting rumours about his turning an NRI, he says, "I am very much here. After three years, when I will be able to encash Rs.4.5 crores from UTI capital gains bonds, I may take up consultancy work for small-scale industries and local entrepreneurs. With my experience of 25 years in this cut-throat industry, I may also set up partnerships with NRI ventures. Apart from farming, of course."

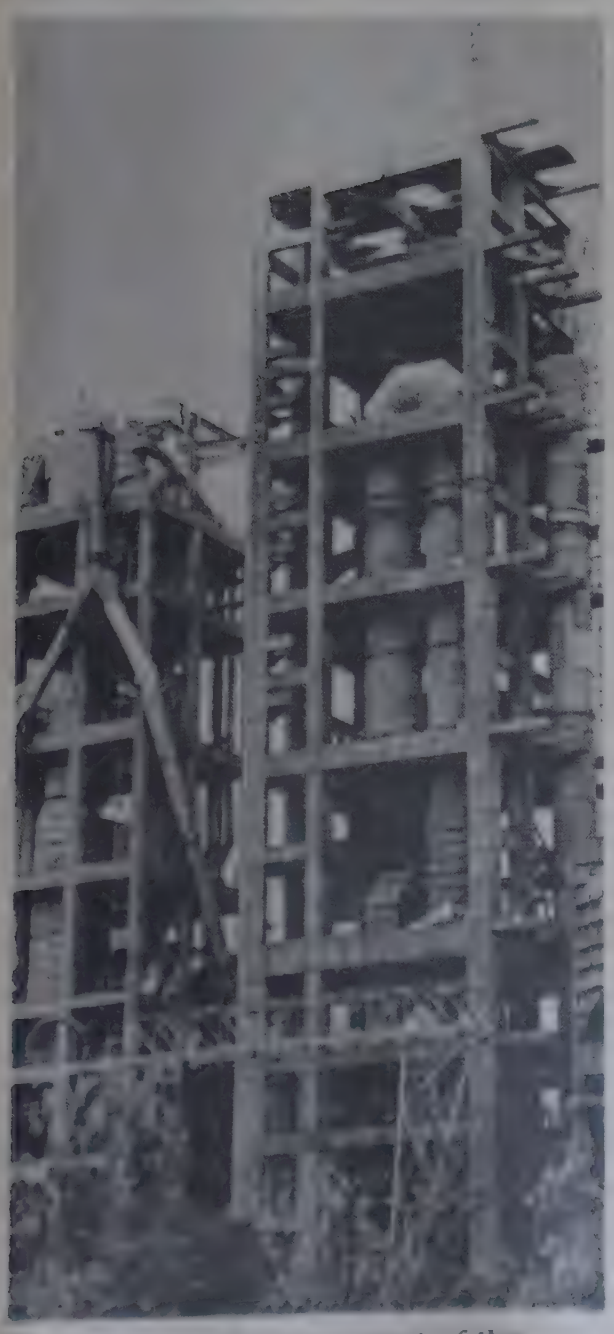
Hamirwasia: on to bigger things next



The 6-stage preheater is part of the expansion at Damoh

MYSORE CEMENTS

Everything going for it

The last few years have been tough for the cement industry. But Mysore Cements has managed well, and now, with its Rs.150-crore modernisation and expansion scheme, is all set for a good season

Ever since cement was partially decontrolled in 1982, the product has attracted many large business houses. And thanks to the government's pragmatic attitude, the production has shot up from 18 million tonnes in 1981 to over 36 million tonnes in 1987. And this is likely to go up further once the modernisation in various plants is complete and power availability improves.

Mysore Cements Ltd, on its part, will soon complete its Rs.150-crore modernisation and expansion scheme. This will take its capacity from 1.03 million tonnes (mt) to 2.2 mt a year.

The last few years have been a trying period for most units, with costs of all major inputs going up. Levy realisations have stagnated; open market prices have not risen either. Yet, the S.K. Birla-managed Mysore Cements has consistently paid a dividend of 17.5 per cent, something that companies like ACC and Madras Cement have not been able to do. One of the largest cement producers in the country, with an annual turnover of Rs.91 crores, the company will be ready with peak production by the summer of 1989, when the market is expected to be very good. After the entire project is completed, the equity will be a modest Rs. 20 crores.

SIX-MONTH DELAY

The expansion-cum-modernisation was earlier expected to be completed by the third quarter of 1988. There has been a six-month delay and now the project cost has gone up by 50 per cent to Rs.150 crores. The programme was rescheduled twice. Funds were raised through several issues; non-convertible debentures, convertibles, and shares. A rights issue of 700,000 shares at a premium of Rs.5 per share was made as late as August this year.

The company's Ammassandra (Karnataka) plant has a licence to manufacture 700,000 tonnes per annum (tpa) though production was always lower. This plant had four kilns based on the dry process. Two of these, more than 20 years old, have been scrapped. The remainir two have been upgraded. In one kiln, th company introduced a pre-calcinat (along with one additional stream of fo stage pre-heater). Some additional ba ancing equipment has also been i stalled. This raised the kiln's capaci from 600 tonnes per day (tpd) to 1,5(tpd.

Earlier on, to combat the persista power shortage at Ammasşandra, it ha installed a 10 mW second-hand pow plant. But it did not work at the rat capacity, due to inadequate supply ar poor quality of coal. Now, under the pr sent scheme, two sets of 6600 KVA eac have been installed. The power consume per tonne has decreased from 140 to 12 kWh. The company expects to save abou Rs.100 per ton. So the Ammassandr plant can now meet its entire power r quirements. A total of Rs.35 crores ha been spent on modernisation and th has helped this unit to produce at th rate of 500,000 tpa. This is expected t increase to 650,000 tpa.

The company presently has a split loca tion plant in Madhya Pradesh — th clinker unit at Narsinhgarh and th grinding unit 16 km away at Damoh, wit capacities of 525,000 tonnes eac Clinker capacity is being increased to 1. million tpa while the Damoh unit's ca pacity is being raised to 1.1 million tonne by March 1989, at a cost of Rs.90 crores The company recently commissioned ropeway between Damoh and Nar sinhgarh for clinker transportation. Thi has reduced the transportation cost substantially. After expansion and ratio nalisation, power consumption is ex pected to drop further to 100 kWh pe tonne by March 1989. Though the powe situation in MP is easy, the company ha ensured itself of 40 per cent of its require ment as a precaution.

SECOND UNIT

The cement industry has been known t perish and flourish on government regu lation — concessions on sales tax, excis duties and levy quotas have a great im

THE BEST THINGS IN FLIGHT ARE FREE.

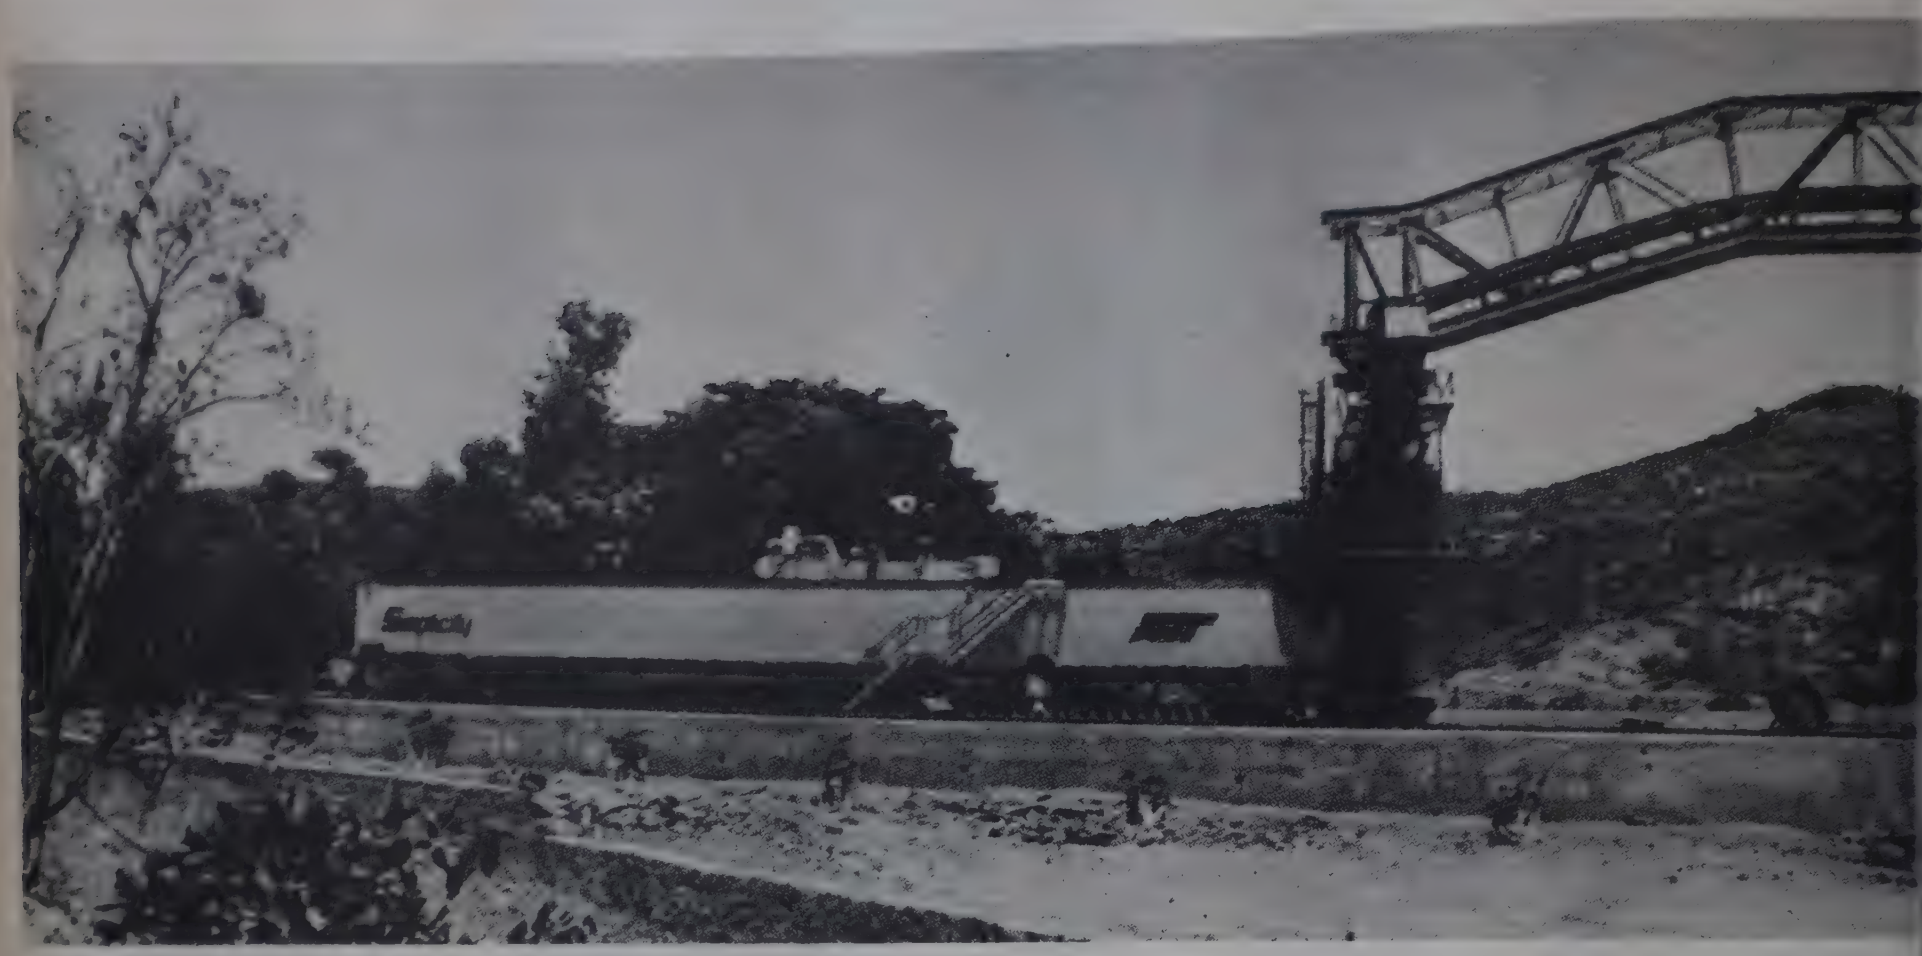
BRITISH AIRWAYS

The world's favourite airline.



A stacker reclaimer at Ammassandra

pact on the profits of each unit. To take advantage of these, Mysore Cements has set up a second grinding unit at Jhansi in Uttar Pradesh, with a capacity of 5 lakh tpa, just about 200 km away from Narsinghar. The Rs.12-crore unit is located in the vicinity of NTPC's thermal plant from where fly ash will be transported pneumetically. This will enable the unit to blend fly ash directly, and thereby save Rs.50 lakhs a year in grinding costs.

The UP state government has agreed to exempt the unit from sales tax of Rs.120 a tonne for a period of six years, totalling Rs.6 crores per annum. It will also supply power for five years at 50 per cent of the normal rates; this will save the company Rs.2.6 crores. The levy obligation on the plant is only 15 per cent.

The economic and geographical advantages of the Jhansi unit are substantial, leading to a payback period of only one year. Also, it will be the only unit of its size in that part of UP, thus assuring high realisations. The state is already a major market for Mysore Cements' products at Damoh. And Jhansi has even earlier served as the distribution point for the company in UP.

By early 1989, Mysore Cements will have completed all its modernisation and expansion schemes and its plants will be operating at full potential. The whole scheme is quite perfectly timed, since this year's monsoons are definitely going to accelerate demand from various sectors. Besides, planners have laid great emphasis on housing in the next plan. Banks have already been asked to provide housing loans on liberal terms. Also, the government is pursuing the policy of steady decontrol of cement.

Mysore Cements: a financial profile *(Rs. crores)*

	June '88	June '87	June '86	June '85
SALES	91.35	89.71	84.13	87.02
OPERATING PROFIT	12.85	10.39	10.79	12.93
INTEREST	3.00	2.72	3.30	3.87
TAX	0.25	0.25	Nil	Nil
CASH PROFIT	9.60	7.42	7.49	9.06
EQUITY CAPITAL	4.98	4.98	4.98	4.82
RESERVES	—	24.65	26.38	23.94
SALE OF CEMENT (in '000 tonnes)	900	956	906	957
SALE PRICE (Rs. per tonne)	1,015	938	928	909
OPERATING PROFIT (Rs. per tonne)	143	109	119	135

From the current year onwards, the per unit profit will go up substantially, due to the economies of scale on the one hand and reduction in cost on the other. The only major increase would be in interest payable.

HIGHER DEMAND

The summer of 1989 may thus find demand beginning to outstrip supply. This is expected to continue in spite of higher production due to modernisation and better power availability. With almost 10 mt already added to overall capacity in just 48 months, it is not likely that many new plants will be put up in the future.

Today, a 2.2-mt plant would cost Rs.300 crores to set up — equity would be Rs.100 crores and debt, Rs.200 crores. Interest alone would amount to Rs.150 per tonne. And profits in this industry depend directly on the location of the unit, its distance from the raw material source, the power situation and of course the market. Mysore Cements seems to be well placed on all these counts.

The mood in the company is definitely upbeat. As N.L. Hamirwasia, president of Mysore Cements, puts it, "Soon we would like to look at new areas — anything from consumer goods to petrochemicals. With a projected turnover of Rs. 250 crores and over Rs.25 to 30 crores in cash accruals by March 1990, we would like to take on some big projects."

It certainly looks like Mysore Cements has everything going for it. ■

Mr Patel blocked 5 burglaries, 3 takeover bids and 4 sabotage attempts on his factory... but he couldn't plug the leakage of his profits.

Yes, Mr Patel's factory fell a prey to water leakage. Because he neglected one vitally important security measure lasting waterproofing. So what with endless repairs and renovations over the years, his profits kept pouring down the drain.

Fortunately, over 5,25,000 constructions all over the country have escaped the same fate. Thanks to STP Limited. The most trusted name in waterproofing pioneers and leaders for over 50 years. Only STP has developed such an impressive range of durable waterproofing treatments for every leakage problem. Like Shalimar Tarfelt BH for roofs, FG Felts for special waterproofing and Flash Strip for instant waterproofing.

And STP Limited has an equally impressive record in corrosion protection and pipe coating. It also offers a wide range of mastic asphalting treatments both for roads and industrial floors.

So, invest in STP protection for your factory today—and avoid the continuous maintenance expenses that drain away your money.

Because STP protection means the longest-lasting protection.

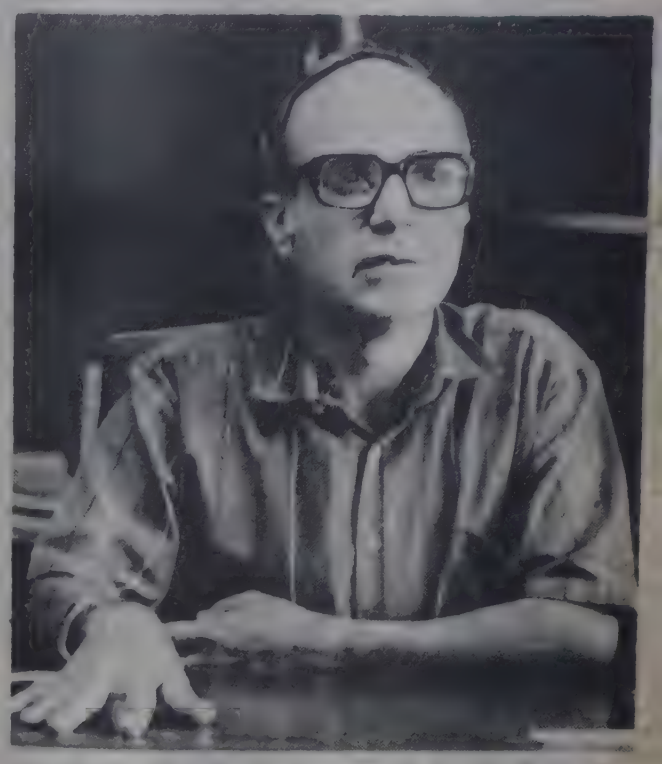
MELTRON

Growth is the buzz word

Virtually doubling its turnover every year since 1984-85, Meltron is easily the fastest-growing state-sector electronics undertaking in the country. Now, eyeing high-tech areas such as cellular radio and compact discs, it is evolving into a total communications organisation



Makhija: "we've surpassed our targets"

Picture a state transport bus conductor issuing tickets from a hand-held, battery-operated electronic ticketing machine. Or electronic taxi meters that save you the bother of looking at rate cards. These are just some of the ways in which Meltron, Maharashtra's state-owned electronics undertaking, is planning to promote the use of electronics in the state.

In terms of sales, this 10-year old company is easily the fastest-growing state-sector electronics undertaking in the country. Its turnover, which was Rs.3.89 crores in 1984-85, has virtually doubled every year, to cross Rs.31 crores during the last financial year ended 31 March 1988. "We have always overachieved our targets," says Bishamber N. Makhija, managing director of the company. The company is expected to report pre-tax profits of at least Rs.2.4 crores for 1987-88.

BIG JUMPS

Unlike other prominent state-sector electronics undertakings, such as Uptron and Keltron, Meltron has by and large stayed away from lucrative consumer electronics and instead focused efforts on areas that are either reserved for the public sector or where private sector investment is not forthcoming. Meltron's emphasis is now on expanding operations to include manufacture of high-tech, capital-intensive communications products, and providing integrated consultancy services in communications systems. According to a business plan under preparation, turnover is expected to jump to Rs.45 crores in 1988-89, Rs.60 crores in 1989-90 and Rs.85 crores in 1990-91.

Meltron's growth during 1987-88 has come from all three manufacturing divisions as well as the marketing division. The audio-visual division at Andheri in suburban Bombay leads the pack with a contribution of Rs.13 crores; the radio communications division at Nagpur has chipped in about Rs.10 crores, and the telematics division at Aurangabad, which commenced production during the year, contributed another Rs.8 crores.

Nearly 90 per cent of the company's audio-visual and radio communications divisions' sales are to the public sector, according to Makhija. Sales of the EPABX systems and the smaller capacity key telephones, however, are evenly spread out among both private and public sector clients. The latter is a major customer for the company's tape recorders (AIR), heavy duty playback decks, UHF and VHF transreceivers and radio relay equipment, among others. "There is a tendency among public sector enterprises to place orders with government agencies such as Meltron ... they feel safer," says Makhija.

The telematics factory at Aurangabad: three new products on the anvil

Among the new products that Meltron proposes to manufacture, the most ambitious are compact disc (CD) players and discs. "AIR wants to convert its old master tapes into CDs, and they will be our biggest buyer," says A.R. Khandekar, general manager. The Rs.30-crore project will be a joint venture with an Indian private sector party with "strong marketing expertise". The technical collaboration will be with either a European or a Japanese company. The plant will produce 3 million discs annually and is scheduled to be operational 18 months from now.

A proposed Rs.8-crore joint venture with Motorola of the US for the manufacture of mobile radio systems (telephones and transreceivers) based on cellular technology and rugged versions of transreceivers, among other products, is also high on Meltron's agenda.

"Cellular technology represents the fastest-growing market internationally in communications," says G.S. Rao, additional general manager (projects) of Meltron. A mobile switching centre linked to the local telephone exchange, which will form the core control station for a network of mobile subscribers, is proposed to be sited at Mazagaon in central Bombay.

The company's new projects division provides escort services for entrepreneurs

and companies that plan to set up electronics units in the state, by conducting research, identifying market niches, and helping to locate suppliers of technology. The company provides such services in its capacity as the nodal agency under the Maharashtra Electronics Development Agency (MEDA). The company has, in the three years since MEDA was formed, assisted over 600 projects in the state, of which nearly 80 per cent are in the small sector.

Imparting training in the electronics industry is another area where Meltron is active as a development-oriented organisation. Under a grant from the Norwegian Aid for Industrial Development (NORAD) programme, the company has trained about 225 women in electronics assembly at Aurangabad, Pune and Nagpur. Encouraged by Meltron's work in this area, Integrated Rural Development Programme authorities have recently cleared a Rs.85-lakh scheme for training about 4,000 people under Meltron over 4 years.

The company also hopes to commercialise products that have been developed in-house, such as a data over voice (DoV) system that can be used with the C-DoT EPABX systems it makes to transmit data. The company hopes to obtain approvals from the Department of Electronics and commercialise the product in six months. Besides these, the company's engineers at the telematics division at Aurangabad have also developed a transit exchange system that allows the integration of as many as eight to ten 128-port EPABX systems to enhance the total capacity.

Also coming up at the company's telematics division at Aurangabad is a project to manufacture rural automatic exchanges, based on C-DoT knowhow. The RAX project will have a capacity of 5,000 lines a year (the installed capacities for EPABX systems and key telephones are 10,000 lines a year each). An order for 22 systems from the Department of Telecommunications for field trials is already in the bag. Meltron is the first among three parties which have readied prototypes of the RAX system.

A proposed project for the manufacture of pulse code modulation (PCM) multiplex systems, used for linking telephone exchanges, with technology from Bharat Electronics Ltd, is likely to be delayed since its viability has yet to be established. Another division of the company that is lagging is the strategic defence division at Pune. A Rs.2.12-crore

Rao and Khandekar: thrust in cellular communications

loan recently sanctioned by the Industrial Development Bank of India (IDBI) from its venture capital fund is expected to help the division take off. Cut-throat competition in the EPABX market has also affected the telematics division. Meltron sold about 3,000 lines (30 systems) of the C-DoT version last year but has sold no more than two systems during the first four months of this year.

PLANS THAT BACKFIRED

Meltron's performance has come in for criticism on some counts. Industry watchers point out the abortive venture with the Kalyani group for the manufacture of colour television sets, and the case of Meltron Semiconductors Ltd (MSL), where losses of about Rs.5 crores were incurred. Company officials contend that the Kalyani group backed out and tied up with the Japanese company Sharp once the private sector was allowed entry into the manufacture of colour television systems. In the case of MSL, which had a collaboration with Thomson CSF of France, Makhija says, "The failure of the venture was partly the result of wrong forecasting by us of international market trends. Also, it was a slippery area, where the technological changes pushed prices down in the international market."

Back home, the company's management has other problems — industrial relations is an uneasy area at Meltron. The Meltron Employees Welfare Association (MEWA) issued a strike notice in late October, demanding a bonus of 20 per cent for last year, against the management's offer of 8.33 per cent. Later, the notice was withdrawn, and the company's revised offer of 14.5 per cent has been accepted "under protest".

Office bearers of MEWA, who requested anonymity, also accused senior Meltron officials of corruption. It is alleged that the company made indirect payments to Nitsuko (the Japanese company which supplies key telephone components to Meltron) by overinvoicing bills, and also that the Nitsuko deal is illegal. Khandekar denies these charges, and points out that it is perfectly legal to import electronic components. The Maharashtra Public Accounts Committee is believed to have taken a look into the charges and has handed over the relevant documents to the government.

Other critics of Meltron also point out that the company has not put up a good show in marketing electronic products manufactured by small scale units — the number of companies whose products are marketed has fallen from 22 to about five now. Road traffic signalling systems, fire alarm systems and closed circuit TV systems are among the small scale manufactures marketed by Meltron. Although these products helped the company's marketing division to rake in a turnover of Rs.4.40 crores last year, it now plans to hand over this activity to Maharashtra Small Scale Industries Development Corporation Ltd.

Thus, Meltron is aiming to sharpen its focus and evolve into a communications organisation faithful to its primary goal: to promote the use of electronics by extending its reach. "We realise that just making electronic goods is not enough," says Rao, "you have to get people to use them."

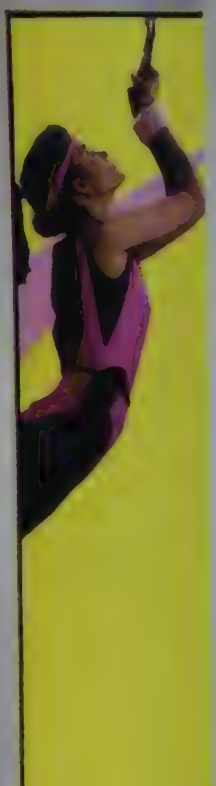
SENSATIONAL PROFILES

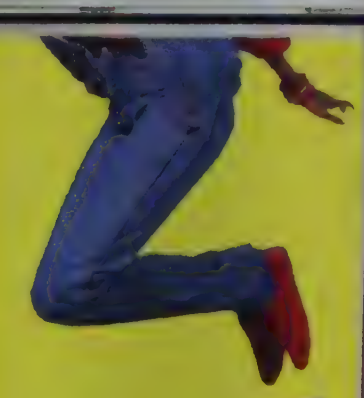
ater-Resistant Profile

e double sealing and built-in drainage system do not let the rainwater come through. Profile is unaffected by water, salts, acids, alkalis, humidity and all other atmospheric pollutants.

Care-Free Profile

Maintenance free, in effort and cost. Once installed, Profile is totally immune to rotting, swelling, warping, peeling, moths, termites and rust.





Tough Profile

high impact base material, zinc galvanised steel insert and highly effective multi-point locking mechanism offer maximum durability and security. It is fire-resistant too.

Perfect Profile

Doors & Windows that look elegant and perform wonders. Fabricated on highly sophisticated machinery with German technology. Installed by trained company personnel. A perfect need for every perfect setting.

ol & Quiet Profile

aled cavities, EPDM askets and an effective glazing unit keep noise, heat and dust infiltration at its minimum. Ideal for airconditioned areas.

Hi-Fashion Profile

Profile is modern and elegant. With contemporary designs blended with traditional care.

"Magnifique"

That's how any Frenchman, with his Gallic eye for beauty, would describe Profile Doors & Windows. He'd be right, of course, bu there's much more than just beauty–Profile Doors & Windows are a marvel of attention t technical details.

Profile Door & Window systems–created by expert German designers–are processed t high standards and skillfully assembled. Perfectly glazed with a foolproof locking mechanism and flawless hardware. Strict quality assurance procedures ensure its incredible strength and long term operational reliability.

Profile Doors & Windows are even installed by trained company personnel.

Profile's faultless technology is a must for every Hospital, Hotel, Computer Centre, Food Processing Units, Sensitive Electronic and Chemical Industry, Laboratories, Commercial and Public Buildings and any dust free environment and of course,.. your home.

The wide range of Profile offers you Picture windows, Open-out windows, Main doors and Sliding doors.

Custom built doors and windows are fabricated within 7 days.

Profile has a 10 years warranty that says these Doors & Windows have come to stay.

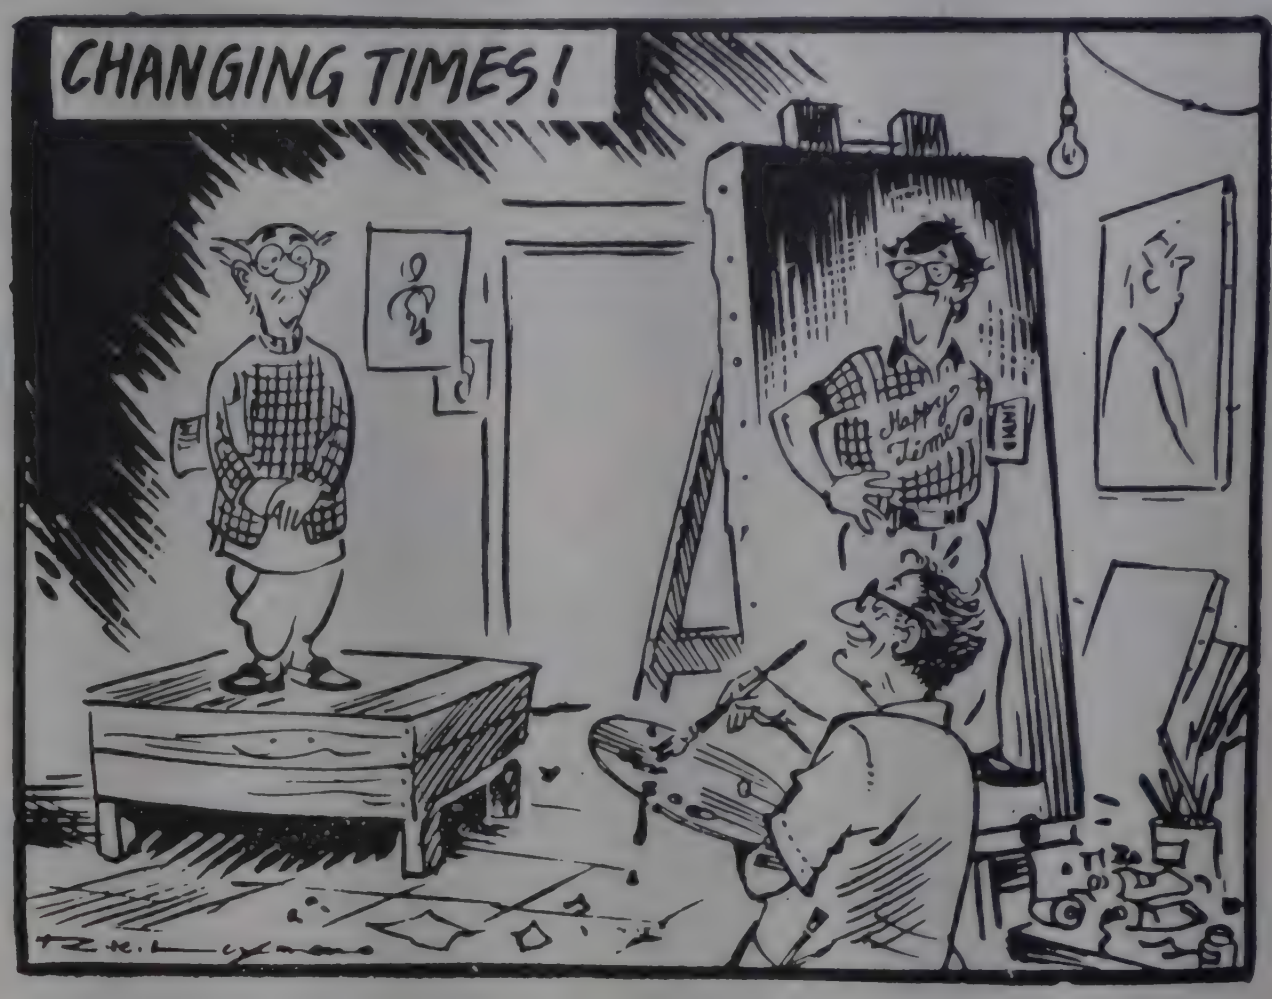
THE TIMES OF INDIA

Anniversary time

The 150th anniversary of The Times of India *marks the beginning of a new era for the paper. On one hand are a new breed of managers who have seized the day and for whom the past is of little use; their plans are made for a competitive future market. And on the other, is the old guard which views the future with much anxiety*



COURTESY: R.K. LAXMAN/THE TIMES OF INDIA

When Bennett, Coleman and Co Ltd, the largest publishing house in the country, turned 150 years old on 3 November, the government released a Rs.1.50 commemorative postal stamp. The company marked the beginning of its year-long sesquicentennial celebrations with a symposium on "Bombay — the next 150 years". For the employees of its 18 publications, the Rs.150-crores-a-year company had a gift of Rs.150 for every year of service put in.

Though celebrations formally opened only on the 150th birthday, *The Times of India* had begun sponsoring music concerts and shows, symposia and films, over a month before. "This is public relations at its best," says Sylvester da Cunha, chairman of da Cunha Associates. "The promotion of events, the special issues, serve as well-orchestrated, path-breaking anniversary publicity. It shows what can be done to create excitement over an historic occasion," he says.

Many media persons also read a clear message. "The activities state that *The Times* is part and parcel of the city and intends to stay that way," says Roda Mehta, director for media and research at Ogilvy, Benson and Mather (OBM), Bombay. "In the process, they have generated a lot of goodwill. Even the subject of the symposium was appropriate. Bombay is the raison d'etre of *The Times*."

The sesquicentennial celebrations are also being used to project a new image of the "Old Lady of Bori Bunder" under the new management of the 35-year-old vice-chairman, Samir Jain, who took over the reins of the company from his father Ashok Kumar Jain, a couple of years ago. "We have planned a large number of activities for the 150th anniversary celebrations, designed to promote an image of a dynamic and innovative company," says Dileep Padgaonkar, senior executive editor of *The Times*, who is tipped to take Girilal Jain's place as the editor shortly. "The activities planned over the next year include serious and light programmes and cultural shows involving the youth," says Ram Tarneja, managing director of the company. "We have made our plans, keeping in mind the changing readership profile of *The Times*."

The new readers of *The Times of India*, according to Tarneja, are young, better educated and earn higher salaries. More important, they have a lively enthusiasm and hunger for information on contemporary issues. "If the readership profile is changing, we have to accept it and change our product to suit its needs," he says.

"A company that is 150 years old is bound to the problems of age," says Pritish Nandy, editor of the *Illustrated Weekly of India*, publishing director of *The Times* group of publications, and director of the 150th anniversary celebrations. "The market has become very competitive and we have had to change our attitude towards publishing. "We want to tell people that we are looking at the business, not in traditional terms, but in the light of contemporary realities," he says.

The renovated lobby of *The Times of India* building at Bori Bunder, Bombay, reflects the new image. Beyond a broad glass door at one side of the lobby is a flight of stairs going up to the classified ads section, now renamed Timespacenter — spic-and-span with piped music, water rippling down a wall, and computer display screens. The rest of the building though, still has that Raj look.

Within the organisation there is a massive induction of new talent in all sections — editorial, advertisement, and administrative — and at all levels. Even the company's board of directors has been changed: C.A. Varghese, who was earlier president of Rallis India Ltd, comes in as president, while Satish K. Mehta, who was marketing director of ITC Ltd until three years ago, takes charge as marketing director.

STAYING AT THE TOP

Says Padgaonkar, "The thrust of this reorganisation is to ensure that we continue to remain the largest selling newspaper. It is also to strengthen our lead in the market through closer interaction between the editing and publishing sides." One implication of this, according to Padgaonkar, is the speeding up of modernisation. Many editorial functions are carried out directly on PCs, and it is only

COMMUNICATION WORKSHOP/VB/024

*AFBC FLUIDIZED BED BOILERS

Modern State-of-the-Art Technology now brought to India by

ISGEC JOHN THOMPSON

In Technical Collaboration with, and under licence from

OUTOKUMPU OY of FINLAND

A fully Government owned Company

ISGEC JOHN THOMPSON now offers to Indian Industry the modern and fully-developed Bubbling Bed *ATMOSPHERIC FLUIDIZED BED COMBUSTION TECHNOLOGY for use with high ash, low calorific value coals, high moisture lignites and agro-waste fuels. This has been possible through a Government approved Collaboration Agreement for the manufacture of *AFBC Boilers.

While IJT have been working on the Fluid Bed technique for several years and have fo their credit 3 Indian patents No. 154079, 154520 & 155593, the technical collaboration route was selected for speedy implementation of the process for commercial applications. After a world-wide search for this technology in various countries like UK, USA, West Germany, Austria, Sweden and Finland, IJT chose OUTOKUMPU OY of Finland. Outstanding features, proven design and years of actual operating experience of Outokumpu is hence available to boiler users in India

Outokumpu have been using this technology for several decades in their Mining Division. Suitability of this process for the purpose of steam generation was technically proved by Outokumpu several years ago with a number of commercial installations to their credit.

The main advantages of IJT-OUTOKUMPU *AFBC Boilers are

- High combustion efficiency
- Emission control capability
- Simplified fuel feed systems
- Multi-fuel capability
- Lower auxiliary power consumption
- Natural circulation
- Adaptability to conversions & retrofits
- Proven experience of Collaborator
- Manufacture at well-experienced Boiler Works
- Top class quality
- Prompt service

React/IJT/054/88

Three years ago, a new concept in Indian aviation was born.

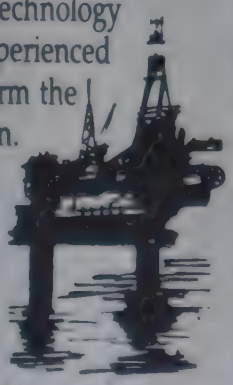
Pawan Hans took to the skies...

On its 3rd Anniversary Pawan Hans Ltd. unfolds

THE GREAT INDIAN AVIATION STORY

Nov. 1985 –
Helicopter Corporation of India (later known as Pawan Hans Ltd)
Starts functioning from 1st Nov'85 to tackle a critical objective – to provide helicopter services to the oil sector and thus save on foreign exchange outflow and essential services in other sectors.

Oct. 1986 – Meeting a stringent one year deadline
The first two helicopters take off, marking the commencement of Pawan Hans operations. State-of-the art technology helicopters supported by experienced and motivated personnel form the backbone of the organisation.



1986-88 – Pawan Hans spreads its wings
ONGC says goodbye to foreign operators. State governments and Union territories utilize helicopters to provide access to far-flung and until now inaccessible areas, thus bridging a communication gap.

The scattered islands of Andamans and Lakshwadeep are now inter-linked and a new chapter in inter-island communication begins.

The Vaishnodevi shrine nestling forbiddingly high in the mountains now becomes accessible to even the aged and infirm.

Pawan Hans helicopters assist Coal India, Nagpur, in the quick movement of emergency supplies and medical aid to remote mining areas.

The wheels of industry move faster with speedier transport of key personnel between city offices and manufacturing units and sites.

A Progressive track record
From a modest beginning of 2 helicopters to 40 helicopters today, Pawan Hans has come a long way. The service is backed by a trained and motivated staff of over 500 people operating from 2 regional centres in Delhi, Bombay and 13 other bases all over India. No wonder then that a phenomenal 34,000 flying hours have already been recorded. Pawan Hans' in-house training school at New Delhi imparts updated technical instructions in key aviation aspects, to produce men of high calibre and professional skills.

The Future
Pawan Hans' ambitious expansion plans will explore many challenging horizons in important and diverse areas such as city centre and airport linkage in metropolitan cities, railway electrification work and helirig operations to name just a few. When man and machine come together, the sky is the limit...

The spirit continues
As India nears the 21st century, Pawan Hans gears itself to broaden its social responsibilities and write yet another glorious chapter in Indian aviation.

FSA/PH/10-88

PAWAN HANS LIMITED
(A Government of India Enterprise)

Exploring new frontiers

a matter of time before everyone has access to one.

New editorial structures will also come into force. "Hierarchy will be determined in a more functional manner than in the past," says Padgaonkar. He explains, for instance, that assistant editors, who have been confined to the edit page so far, will now be encouraged to do much more field work and take a more direct interest in editing the paper. He also hopes to strengthen the news collecting network by sending people who have been in the field for eight, ten, or even 14 years, to countries where India's interests are directly at stake.

To ensure a more comprehensive coverage of developments in diverse areas of national life and further step up the level of comment and opinion, the paper is appointing editors who are experts in their subjects to head each section. Thus, it has, for the first time, appointed an arts editor. Shortly, there will be a media editor as well as editors in charge of business, sports and environment.

Padgaonkar also hopes to initiate new policies for career development. "All these initiatives are meant to boost the efforts of the company which now regards itself as a marketing outfit," he says. He adds that a new, more interactive culture has emerged in which the different departments that produce the newspaper have begun to co-operate with each other on a day-to-day basis.

LOCAL FLAVOUR

Each edition of *The Times* will be given an identity that has the largest possible appeal to its own readership, according to Padgaonkar. Thus, while it continues to remain a national paper, it will have a strong regional flavour. For example, more coverage will be given to Bombay and Maharashtra in the Bombay edition. "With newer editions being launched, the older editions get confined to smaller regions. They should now give more coverage to local news," says Ravi Gupta, managing director, Trikaya Advertising, referring to the Lucknow, Bangalore, Jaipur and Patna editions of *The Times*. All of these were launched between 1983 and 1986.

Roda Mehta agrees with Gupta. She says, "What *The Times* needs to do is to increase its reader participation and give it a more local flavour so that people can relate to it." In saying this, Mehta touches upon one of *The Times*' weak spots — the city reporting of *The Times* has been less than adequate. Says M.J. Pandey, a reporter in *The Times* and general secretary of the Bombay Union of Journalists (BUJ), "If the city reporting of *The Times* is bad, and I think it is the worst of all the Bombay papers, it is not because of a lack of talent. What the reporters lack is initiative."

Traditionally, *The Times* has had a hierarchy in which older reporters, in the absence of a promotion policy, cover the same beats for years till they are sapped of all their enthusiasm. And, in doing so, they prevent the younger reporters from entering their territories. This leads to stagnation and frustration among the reporters. Similarly, on the desk, a subeditor is promoted to chief sub after 20 years, if he is lucky. This makes the subs seek transfers to reporting, which is perceived to be higher up in the hierarchy. "In the present reorganisation the marketing department has got much greater importance while working conditions in the editorial department have remained unchanged," says Pandey.

"The successful paper of the future," said Samir Jain in an address to the Advertising Club of Bombay early this year, "will be market driven and also a market driver." He, however, felt that the

editorial side cannot be totally market driven, but must "create the material which it thinks the reader must have". The extent to which the market will be driven, according to Jain, will depend on the sections the paper contains, how much colour it has, and how it is designed. The paper will also have to depend on its own stories and opinion instead of syndicated opinion to distinguish itself from its nearest competitor. "The press is going to have to offer environmental positioning and the three 'R's — revenue related reading," said Jain.

A newspaper, according to Nandy, who was a marketing man in Guest Keen and Williams (GKW) before he joined the company in 1982, is a consumer product, the readership of which is a target buying group. So, there is no reason why marketing strategies which work in other areas should not be structured to sell newspapers and magazines.

Samir, Girilal and Ashok Jain: the youth takes over

EMPHASIS ON PACKAGING

But not everyone would agree with Nandy. "The new thinking seems to be oriented towards the packaging rather than the contents of the product," says Prabhakar Nair, assistant editor of *2001 — Science Today* and chairman of BUJ, pointing to the magazines which, with the exception of *Vama* and *Femina*, have been under Nandy and, in recent years, have improved tremendously in terms of layout, design and production. Yet the circulation of these magazines has dropped.

Nandy, however, believes that "gross readership" is not the only indicator of a magazine's success. "Our products were market leaders in terms of numbers only," he says. So, when he took over, he examined the product position and the core readership of each publication so advertisers would know precisely whom they were beaming their messages at. "As a result, today the magazines are better positioned, more profitable, and more user-friendly for the advertisers," says Nandy. "It is no longer possible for journalists to sit in ivory towers and pontificate about the state of the world. They have to become managers of information," says Nandy.

The Timespacenter: projecting a new image

Girilal Jain, the outgoing editor against whom the charge of pontificating from ivory towers has often been made, refused to speak to *Business India* about the radical changes taking place in *The Times*. But his views are well known.

In an edit page article on 2 November he wrote: "The status and independence of the editor account in no small measure for the status and esteem *The Times of India* enjoys .... Indeed, as the political scene becomes more and more turbulent, as it is bound to, the importance of firm editorial direction and control can only increase."

The Bombay edition of *The Times* of India is the only one in the group with significant political clout, which, according to a special correspondent of *The Times*, it derives from being the widest circulated national daily published from the commercial capital of the country. "But, if they make it more upmarket and elitist, they will cater to a narrower economic class and fritter away their advan-

tage," he says.

A hike in ad tariffs during the year, according to Nandy, resulted in increased revenue and volume of ads in the group's publications regardless of a drop in circulation. Ramesh Chandra, executive director, does not agree. "While the revenue did increase, the number of ads declined," he says.

The increase in revenue is commensurate with the rise in the cost of newsprint and other expenditure, according to P.R. Krishnamoorthy, executive director and secretary of the company. He also revealed that the company had now begun to calculate its profits from each "brand" instead of each branch, as it did earlier. Thus, *The Times* is seen to be making profits even if these are generated from the Bombay edition alone while the other editions make losses.

Samir Jain explains the losses incurred by some publications thus: "Successful companies with successful brands will have to have other brands which make large losses." He told the Ad Club that the company very consciously continues to run brands at large losses "to keep the competitor at bay because he would run away with the success of his product if we were to close down our brand."

SELECT CLIENTELE

Jain feels that for the newspaper of the future to succeed, the advertising in the top paper in the city will necessarily have to be different from that in the second best and will have to cater to a select clientele. "It is like renting a room in the Taj," he said. "You pay more for it than you would for one in the President, although both are as luxurious, because of the ambience attached to the Taj. You would like to be seen at the Taj." According to him, the medium adds value to the ad; while ads appearing in a paper like *The Times of India* get a positive value, those appearing in a sensational tabloid will get a negative value.

Suren Chawla, chief executive of Dimensions Advertising and formerly media director of Hindustan Thompson Associates (HTA), Bombay, does not agree with Jain's analogy of the Taj and President. "Prestige is something I have not been able to measure," says Chawla. "The factors that influence the choice of a newspaper when buying space are its circulation and the composition of its readership."

The new management views the drop in circulation of the magazines as a sign of the effectiveness of its marketing strategy and hopes to see a spurt in the number of ads there. The old guard feels it is circulation that brings in the ads. "The drop in circulation of the magazines is only a temporary phase," says Ramesh Chandra. "They will bounce back after a while." The primary function of ads, he feels, is to subsidise the price of a publication thereby rendering a service to the reader.

Whether the new marketing strategy will work with the magazines, only time will tell. Until such time, would it be prudent, many ask, to tinker with the dailies and squander certain advantages for uncertain marketing strategies?

■ ALOYSIUS FERNANDEZ

The Old Lady of Bori Bunder: birthday bash

Now you don't have to wait for a windfall to balance your budget.

Introducing the Executive Budget Balancer from Standard Chartered Bank.

You know how it is every month. A number of big expenses coming together. A family ceremony. Education fees. Or (heaven forbid) a medical emergency! While the figure on your salary cheque remains the same. That's when you need money double-quick.

At Standard Chartered Bank, we understand your needs. That's why we have introduced the Executive Budget Balancer Facility. Now you can be assured of money whenever you need it.

If you are earning more than Rs. 5,000/- per month and satisfy a few simple criteria, you will be entitled to an overdraft worth three times your salary.

To avail of this facility all you have to do is fill in a cheque and draw the money.

There will be no red tape and no delays.

Standard Chartered Bank's Executive Budget Balancer Facility is your rain cheque in times of emergency.

So if you are earning more than Rs. 5,000/- gross per month, just cut out the attached coupon and send it in, marking the envelope "Executive Budget Balancer".

TELUGU GANGA

A move on, at last!

NTR: determined to go ahead

The recent announcement by the ministry of environment and forests clearing the Telugu Ganga project has been received with much jubilation in Andhra Pradesh. Karnataka, on the other hand, is not pleased. H.D. Deve Gowda, Karnataka's minister for public works, command area development and irrigation, says, "NTR cannot bulldoze us on the Telugu Ganga issue." The other beneficiary of the project — Tamil Nadu — has so far maintained a stoic silence.

The project which was originally planned to provide drinking water to Madras city, was later modified to include an irrigation component to help the most drought-prone area in Andhra Pradesh — Rayalaseema. It is this irrigation component which has led to many controversies and delayed the implementation of the project. It has made Karnataka and Maharashtra, the upper riparian donor states, very suspicious.

The centre, on its part, has thrown all kinds of hurdles in the way of the project because it did not want Andhra Pradesh's swashbuckling chief minister, N.T. Rama Rao, to get the credit for doing something for Rayalaseema. Successive governments have failed to help the Rayalaseema farmers. The farmers and even MPs of this region have been getting agitated and no government can afford to ignore them.

PROJECT CLEARED

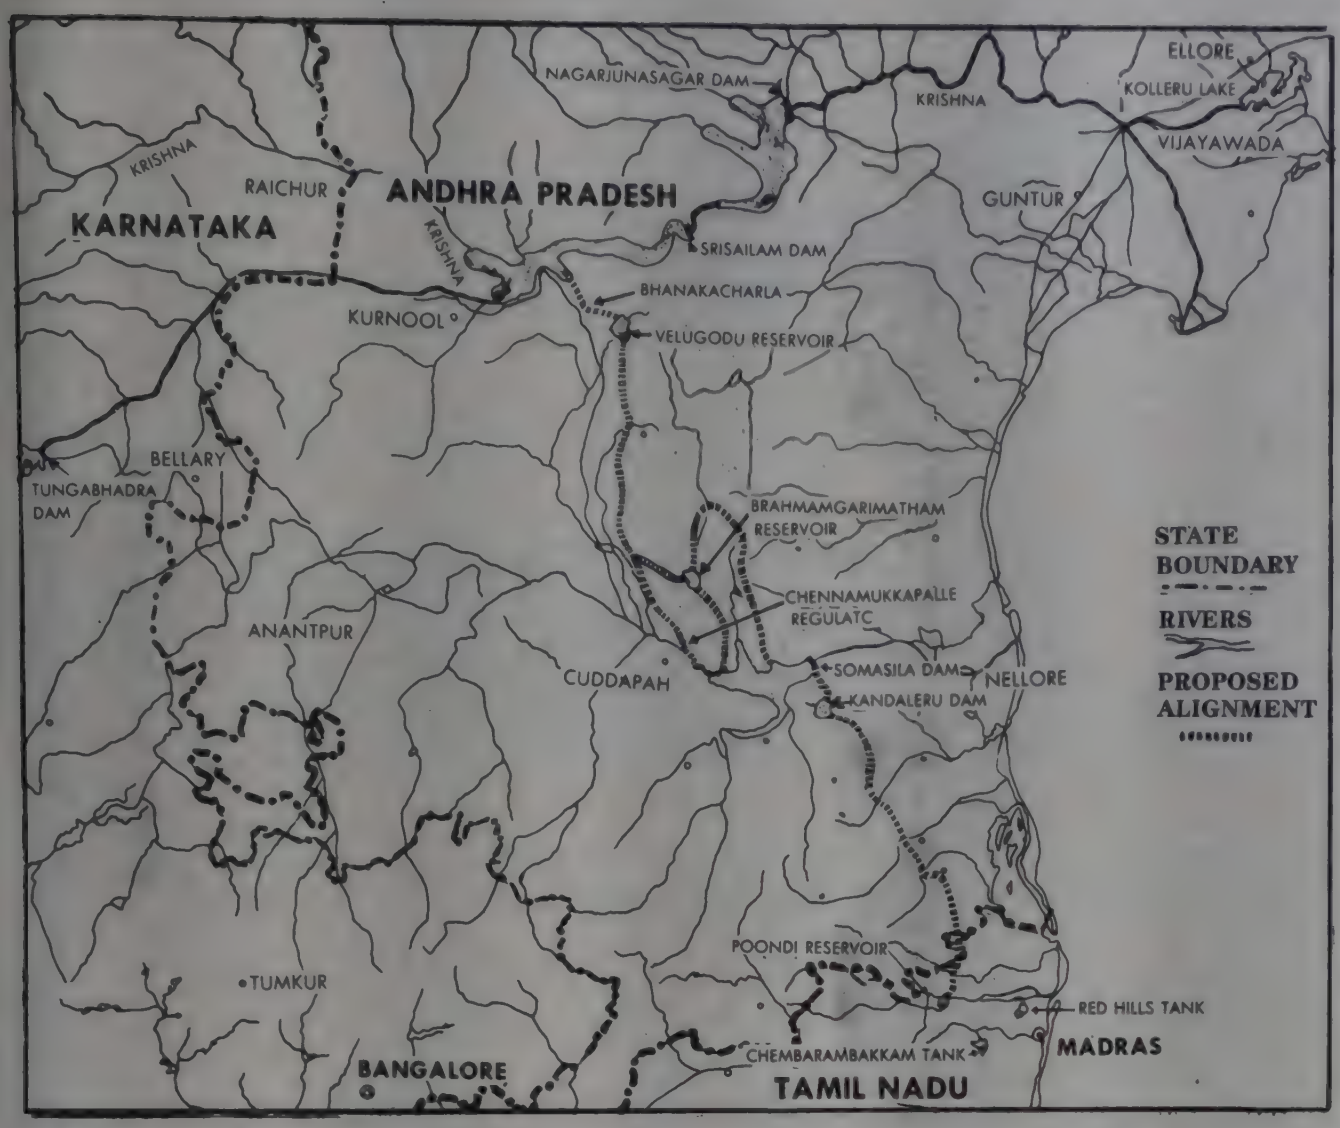
Now that the ministry of environment and forests has cleared the project, it is unlikely that it will be delayed much longer. The last 170 km of the 408-km length of the Telugu Ganga canal in Andhra Pradesh has to be cut through forests. This was why the environment ministry had delayed clearance. The Andhra Pradesh government had offered to turn over 13,330 hectares of government land to the forest department for compensatory afforestation as against the 10,371 hectares of forest land which will be affected by the construction of the canal. The AP government also promised to give Rs.23.40 crores to plant a new forest. In spite of this generous offer, clearance took time obviously because of political considerations. In the last five years, the Andhra Pradesh government has had to answer 40 sets of questions on this subject.

As early as 1951, a committee appointed by the Planning Commission had stated that water from the perennial Krishna river should be diverted to Madras since there was no other dependable source for augmenting the water supply to the city. But it was only in 1976 that the chief ministers of Andhra Pradesh, Karnataka and Maharashtra agreed to spare 5 tmc (million cubic) feet each from their share of the river's waters to Madras.

According to the Bachawat tribunal on the sharing of the waters of the Krishna, the river has 2,060 tmc ft of water with 75 per cent dependability. This means that in three out of four years the flow in the river is 2,060 tmc ft. Of this Andhra Pradesh has a share of 800 tmc ft, Karnataka 700 tmc ft and Maharashtra 560 tmc ft. Since each state has to part with 5 tmc ft the water requirements of its projects should not exceed the allotted amount minus 5 tmc ft. The tribunal also allows Andhra Pradesh, for the time being, to use the surplus water (which otherwise would flow into the sea) without claiming a right to it, when the award comes up for review in 2000 AD.

Project formulation took years. In April 1983, the project christened Telugu Ganga, was inaugurated in Madras in the presence of the chief ministers of the three donor states, the chief minister of Tamil Nadu, the union irrigation minister and the late prime minister Indira Gandhi. The project plans to draw water from the Srisailam reservoir in Andhra Pradesh when the Krishna is in flood from July to October and convey it to the Somasila reservoir by another canal. From Kandaleru a canal will run to Poondi in Tamil Nadu. This gravity canal flow system backed up by the large reservoirs at Srisailam, Somasila and Kandaleru will irrigate about 230,000 drought-prone hectares of land in Andhra Pradesh and provide a regulated supply of 12 tmc ft of water each year at the Tamil Nadu border for supply to Madras city. According to the updated estimates, the project cost is about Rs.875 crores, of which Tamil Nadu's share is about Rs.251 crores.

Once the details of the project were clearly understood, Karnataka, and to a certain extent, Maharashtra, turned staunch opponents of the scheme. Karnataka contends that the Telugu Ganga project in its present form is a distortion of what was agreed upon in 1976 by the three Krishna basin states, while consenting to part with 5 tmc ft each for meeting the drinking water needs of Madras. It insists that the irrigation component designed to benefit 230,000 hectares in Rayalaseema and Nellore districts has



gone far beyond the Bachawat award. Karnataka also complains that Andhra Pradesh has already used up its share of 800 tmc ft and that if it receives water from the Telugu Ganga project, it would exceed its entitlement. The state also disputes the allotment itself. Says S.G. Balekundry, chief engineer (retired) of the public works department of Karnatka, "The Bachawat tribunal awarded us 34 per cent of the 2,060 tmc ft of dependable water, though we are entitled to 47 per cent. On the other hand, Andhra Pradesh which is not entitled to receive more than 25 per cent of the water, has been awarded 800 tmc ft or nearly 40 per cent."

Andhra Pradesh has asserted that the scheme does not violate the 1976 pact and the Krishna tribunal award. It maintains that the project envisages drawing only 27.5 tmc ft of Krishna water to irrigate about 110,000 hectares in Kurnool and Cuddapah districts (as against Karnataka's accusation that Andhra Pradesh might draw as much as 300 tmc ft in a year of plentiful rain). Water for the 120,000 hectares in Chitoor and Nellore districts, which forms the other segment of the irrigation component, is to come from the surplus of the Pennar river.

Karnataka fears that when the Krishna waters award comes up for review in 2000 AD, Andhra Pradesh might claim that it has a right to the surplus water it now proposes to utilise. Whether its fears are justified or not, the fact remains that a large quantity of water from the Krishna does go waste. This year, with a good south-west monsoon, it is estimated that almost 1,000 tmc ft of the waters of the river flowed into the sea. Should so much water be allowed to go waste till 2000 AD, asks Andhra Pradesh.

According to Tamil Nadu officials who do not want to be quoted, Karnataka is raising a hue and cry for two reasons. The state feels that it has got a raw deal in the matter of sharing the waters of the Cauvery with Tamil Nadu and is afraid that its experience with Tamil Nadu may be repeated with Andhra Pradesh. Also by being difficult over the Krishna waters, it might be able to force Tamil Nadu to make concessions on the Cauvery waters issue. The officials say that Karnataka is blowing the issue out of proportion. "Neither Karnataka nor Maharashtra has used up even half of the water alloted to them. When they do make plans to utilise the water, they will need Rs.1,500 crores to Rs.3,000 crores. What is the need for all this fuss?" they ask.

In spite of the obstinate stands taken by Andhra Pradesh and Karnataka (nobody takes Maharashtra's objections seriously as it just seems to be echoing Karnataka's sentiments) neither state has seriously discussed the issues involved. The two great champions of opposition unity, N.T.Rama Rao and Ramkrishna Hegde, have violently disagreed on the subject. Hegde's successor, S.R. Bommai, has also taken a tough stand. NTR has refused to negotiate with his counterparts in Karnataka and Maharashtra; he has simply contended that as far as Andhra Pradesh is concerned there is no dispute.

MINOR QUARRELS

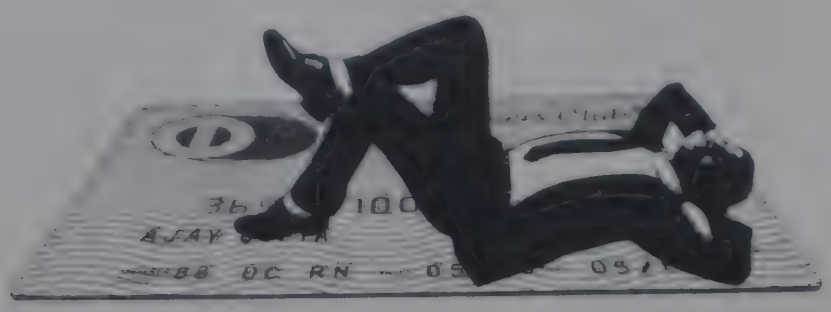
Not that Tamil Nadu and Andhra Pradesh have not had their own minor disagreements. In spite of scarce resources, Andhra Pradesh has been pushing ahead with the project. Tamil Nadu, on the other hand, which has faced water shortages for the last 12 years, was lethargic under MGR. With the kind of close relationship that he enjoyed with the centre, he could have pushed the project far more vigorously.

And despite the great personal friendship between MGR and NTR, Tamil Nadu and Andhra Pradesh could never agree on what part of the costs Tamil Nadu would bear. In 1987 NTR declared that in the event of Tamil Nadu defaulting on payments, he would go ahead and supply water to Rayalaseema and not worry about Madras.

Andhra Pradesh has so far spent about Rs.260 crores and Tamil Nadu Rs.47 crores. Some things do move faster under President's rule -- Tamil Nadu has allocated Rs.30 crores this year for the project. If construction had proceeded smoothly, the project could have been completed in five years. But 12 years after work began, barely a fourth of the work has been done. And although the much-awaited environment clearance has been obtained, another obstacle remains: the project has not yet been sanctioned by the ministry of water resources. This means that no plan funds have been allocated for the project. If funds are provided — the requirement is about Rs.600 crores — the work can be completed in two to three years.

But whether plan funds are allotted or not, NTR does not plan to let the grass grow under his feet. He has declared that he will generate funds within Andhra Pradesh to complete the project. In Tamil Nadu too, no government can any longer ignore the project. And all said and done whatever Karnataka claims, it cannot stop a river from flowing.

■ SUSHILA RAVINDRANATH



MOBILE ASSET

People who are going places (in more ways than one) need this mobile asset. It's made of plastic, measures 2" × 3" and puts a world of convenience in your pocket. It buys your airline ticket (and automatically gives you free flight insurance for Rs. 1 lakh), pays for your hotel room, picks up your restaurant bills and your shopping tab. It gives you commission-free travellers' cheques, presents you with discounts upto 40% at select hotels in India and abroad. Through the year it makes you offers at hotels (extra room nights, upgradation to suites... you are always pleasantly surprised) and its very name ensures personalised service and a travel package that's difficult to refuse.

It wraps all this and a heap of other benefits in a style befitting the world's first credit card.

The Diners Club card. When you get it, you know you've arrived.

Diners Club

Managing our way to growth

It is refreshing to note that our government and industry leaders have stopped being so defensive about the lacklustre performance of India's five year plans. Today, "adverse natural factors" and "unforeseen environmental factors" are no longer trotted out as excuses for India's slow economic growth. Instead, our leaders openly admit that the plans of the seventies and eighties have lacked perspective. And they generally agree that the Eighth Five Year plan, which is currently on the drawing board, must be developed within a new framework.

Unfortunately, however, publicly available information indicates that the Eighth Plan suffers from the same myopia and tunnel vision that characterised the previous plans. Unless major corrective measures are immediately taken, our leaders ten years from now will most likely look back at the Eighth Plan with equal, if not greater, frustration and anguish.

To avoid this trap, we need to stop dealing with the symptoms of poor planning and inadequate economic leadership in a superficial and reactive fashion. Instead, we should concentrate on identifying the fundamental causes behind our failure to design and execute winning strategies. To do this, we need to ask ourselves some tough questions. Why is it that India, in spite of having several internationally-renowned economists, the world's second largest pool of scientists and engineers, thousands of businessmen and government bureaucrats, and a diversity of natural, cultural and historical resources, cannot prepare a strategic plan that will put us back on the global economic stage? Why, after years of focus on "removal of poverty", has the number of people below the poverty line increased? Why, after so much emphasis on exports, does India sell only $10-12/capita overseas, as compared with China's $40 and Thailand's $150? Why has India failed to keep the cost of capital internationally competitive? Why, after enjoying a head start over all other Asian nations in jute, steel, and textiles, have those industries remained in the early stages of development? Of course, these questions will not be easy to answer, but we must fully understand the causes of our problems in order to prioritise the issues we want to resolve.

My own belief, based on a preliminary analysis of the above questions, and my own direct and indirect exposure to problem-solving in other countries, both developed and developing, is that our difficulties stem from shortcomings in the problem-solving process itself. It is not that our leaders lack creative ideas nor that our businessmen lack insights into the industries they run. Rather, the reasons for our failure lie in the way we define our problems, the way we prioritise and sequence their solutions, the way we measure our performance, and the way we build or fail to build a consensus prior to policy making and execution. Most important, we all too often operate with economic philosophies, principles, assumptions and management processes which date back to the pre-independence era, a time when the rules of economic development and competition were very different. As a result, we find ourselves very much out of sync with the more progressive segments of the global economic system, and often wind up taking very costly corrective measures too late.

We all too often operate with economic philosophies, principles, assumptions and management processes which date back to the pre-independence era, a time when the rules of economic development and competition were very different. As a result, we find ourselves very much out of sync with the more progressive segments of the global economic system

Four areas need immediate attention:

Objective function vs. constraints: A country like India which suffers from many socio-economic constraints must be extremely innovative in choosing the right objectives. In the early stages of development, elimination of significant economic constraints should be a key objective. Until now, "removal of poverty" has been one of the stated objectives of each of the five year plans. But "removal of poverty" does not provide a focus for a strategy or a plan. In fact, given its generic nature, it would be much better viewed as a superordinate goal.

A more appropriate objective would be the removal of those economic constraints which are the causes of poverty and/or barriers to employment creation. For example, improved economic linkage between rural and urban areas or aggressive use of $30 billion in Japanese funds to resolve infrastructure-related economic bottlenecks, reduction of interest rates below 10 per cent to stimulate investment — these are the kind of objectives which could naturally give rise to detailed strategies and plans. In other words, we should focus on tangible targets which will reduce, if not eliminate, certain constraints on economic development.

A common failing of the five year plans (including the eighth one now on the drawing board) is their tendency to confuse objectives with superordinate goals, and to outline strategies only vaguely. Ideally, there should be a progression of planning as follows: First set a *superordinate goal* for the nation — a theme for the decade ahead; second, develop 5-year objectives (including a set of constraints to be removed in order to reach the long-term superordinate goal); third, design strategies to attain the objectives; fourth, formulate a five year plan to convert the strategies into actions.

All too often, India's planning approach appears to have "short-circuited" this process by leaving out the second and third steps described above. As a result, our five year plans often appear to be no more than extended budgets, products of a consolidation-and-compromise exercise as opposed to being products of a creative and courageous approach. Designers of the Eighth Five Year plan, for example, are discussing very broad objectives such as "overcoming the structural backwardness of the economy", which is in itself a superordinate goal. At the same time, they are limiting the problem-solving space by calling attention to constraints such as savings rate, investment rate, incremental capital output ratio (ICOR), etc. which are themselves products of economic strategies and fiscal and monetary policies. Clearly, we first need to make a sharp distinction between the four components of the planning process (superordinate goal, objectives, strategies and 5-year plans), and articulate each one fully and in logical sequence. In particular, we need to identify three or four major economic constraints (causes, not effects) and then tailor our objectives to remove those fundamental con-

straints.

Microeconomic realities vs. macroeconomic aggregates: All too often, economic policy discussions revolve around macroeconomic aggregates (eg, ICOR, savings rate, capital formation rate, etc) without giving due consideration to microeconomic forces. Given today's technologies, specialisation of industry practices, linkages between major capital markets, the general trend towards deregulation, and the sheer size and economic power of major multinationals, microeconomic forces are far more real than the macro aggregates economists have traditionally focused on in formulating economic policies. It is in fact dangerous to draw conclusions based on correlations of aggregates such as employment, saving rates, ICOR and growth rates. For one thing, the relationship between employment, ICOR and growth is very industry-specific. Also, saving rates are different in different population segments, and vary according to the controls we place on the conversion of white to black money and vice versa. To ensure sound economic policies, we need to place significantly more weight on industry-specific microeconomic variables and clearly distinguish between segments of the population which have diverse economic capacities and habits. Thus, our new approach should take into account economies of scale and skill, labour/capital ratios and the intensity of technological input required to sustain the competitiveness of priority industries. To familiarise themselves with the microeconomic realities facing our industries, our economic planners need to spend a significant amount of time in the field where economic battles are fought and industry rules constantly rewritten. This should ensure that the plans are based on genuine grassroots experience. At the same time, industry leaders, consultants, and academics should be systematically involved in brainstorming sessions with our economic planners to help them design competitive strategic plans.

Through a down-to-earth approach, we should be able to sound more pragmatic to foreign governments and companies and avoid the shallow image we often leave behind after top-level meetings overseas. Government and industry leaders in Japan, for example, who are typically very humble in expressing themselves, often wind up confused about India's priorities after discussions with Indian industry and government leaders. Typically, our leaders cover a whole range of subjects in these discussions, appearing superficial, unfocused and conceptually unclear.

Outside-in vs. inside-out mindset: In today's world of increasingly interdependent national economies, it is important for us to recognise that for India to take a significant step forward, it must find innovative ways of linking various levels of the economy with more progressive economies. In contrast to the conventional inside-out approach (which essentially defined the country's international activities as virtual by-products of internally focused planning), the outside-in approach should emphasise how India could exploit global macro and micro-trends to solve its internal problems and/or capitalise on its unique strengths. Our inward mindset has made us extremely slow in seizing external opportunities and weak in sustaining our competitiveness. The erosion of our market share in tea and spices, our relatively late entry into the global textile and garment industry, our unpreparedness to take advantage of the appreciated yen or the availability of surplus funds in Japan, are but a few examples of how our poor surveillance of external trends has put us behind the same countries over whom we once enjoyed a natural competitive advantage. As the Eighth Five Year plan takes shape, it is surprising to note how little public debate there has been on how India should respond to critical developments such as Europe's 1992 move from a common to a single market, Asia-Pacific's growing consumerism, the emergence of China and ASEAN countries as strong competitors, Japan's import-oriented expansion of the domestic economy, etc. For India to switch to a fast-growth mode, it must stretch its problem-solving space by innovatively using external forces to release internal constraints. For example, if internal demand, low purchasing power of our people, and low savings rates are factors which impose limits on the speed at which employment can be created, then we should look for ways to take advantage of large markets and low-cost capital overseas to deal with the constraints of domestic economy.

Interactive vs. unidirectional planning: Everyone would agree that our planning process has essentially been a centralised one. State governments have traditionally provided budgetary (as opposed to strategic) inputs, which the centre has then incorporated into its master plan. For the Eighth Plan, however, the planning commission seems to have shifted towards decentralisation, which will require state governments to prepare their own plans for industrial growth. While the two approaches differ with regard to geographical thrust and scope, they are both basicaly unidirectional. What we need is an interactive approach which will allow the states, irrespective of their political biases, to converse with the centre on a regular basis during the planning period. At the beginning of each planning cycle, the centre (in consultation with the state chief ministers and planning boards) should develop a strategic framework that takes into account agreed-upon objectives, microeconomic realities, and external trends. Then, each of the states should work within the framework to formulate region-specific strategies. And to ensure that the state plans are well co-ordinated and consistent with the vision of the country's leadership, regular meetings should be held between the PM and state officials.

If we want the Eighth Plan to put India on the fast track, we should be prepared to take our time in crafting it, pushing back the deadline for its completion if necessary. It is important that all the fundamentals of a sound strategic process are in place before we start documenting the plan. It must be recognised that the strategic process that India needs to adopt is fundamentally different from what it follows now; consequently incremental efforts to adjust the current process along the four dimensions discussed will not be enough to make a dent in our economy. We should plan on a total transformation by taking a zero-based approach. A good five year plan should aim at innovative objectives, be guided by a unique conceptual framework which best captures our strategic problems and prospects, and be based on creative strategies. Above all, it should encompass actions which are both bold and foolproof; it should not simply be a consolidation of the budgets of state government's extended over a five-year period, and should not be limited by constraints which should be reduced or removed by our strategies. Smart strategies remove constraints, they are not limited by self-imposed constraints.

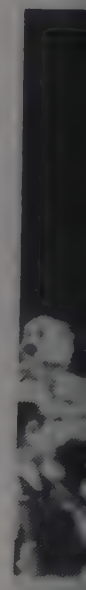
The Digital difference:

Integrating the enterprise through networking.



Dattaram-DEo.38

digital

MIPS. Chips. Clock Speed. Bus Bandwidth. Sort Timings. Relational DBMS. Unix. Ad infinitum. Ad nauseam. Of themselves, technological buzzwords. Nothing more. Nothing less.

All the musical instruments in the world do not a symphony make. Without a Beethoven and a Zubin Mehta making a transcendental leap, a musical experience through harmony cannot happen.

Digital Equipment (India) Limited, a joint venture between Digital Equipment Corporation, U.S.A.,

and Hinditron Computers, offers a perspective on information technology as a means of achieving organisational objectives:

ANNOUNCING THE DEIL VAX II Computer system, functionally equivalent to the world-renowned Micro VAX II, of which over 100,000 systems are installed worldwide.

Never before has it been so important to integrate an enterprise by effectively managing people and the information they handle. Digital has developed a simple, elegant strategy for doing just this.
An information management system connecting all parts of the enterprise, and thereby making it more flexible and responsive. Computer systems that work together, so that people who use them can work together.

DECNET/OSI, Digital's networking software, provides a single, open network environment in which VMS, Unix, MS-DOS, large mainframes, and supercomputers can work together.

An open environment extends beyond operating systems. Digital is one of the founders of the Open Software Foundation which is establishing standard interfaces, protocols, and languages to manage information whether in document, picture, or voice form. Digital is committed to making its two major operating systems, VMS and Ultrix, meet all information interchange standards. Digital's personal computer integration strategy enables IBM compatible PCs to be peers on a network with the DEIL VAX II and other VAX computers by providing seamless sharing of files, applications and information. Soon, Apple Macintoshes will also be covered.

The success of this open approach to networking can be measured by the number of DECNET licenses issued (144,000 at the end of fiscal 1988), making Digital the world's leading manufacturer of networked computer systems.

The DEIL VAX II shares a common architecture with the rest of the VAX family of computer systems with a performance range from the desktop to the data centre. The DEIL VAX II single-base architecture guarantees compatibility not only with other VAX systems in existence today, but also with future VAX systems that may evolve.

Digital's goal is to provide customers with the most productive computing environment possible. So they can realise the rewards of an enterprise that works together. •

Taking on new demons, not dead ones

The problem with our politicians, it often seems, is that they have not learnt anything new since the sixties and worse, have not forgotten anything learnt before that. For confirmation of this, one has only to open the newspapers and read what our leaders are saying. Only a few weeks ago, the labour leader Dr Datta Samant warned the government against allowing textile mills, most of which are sick, to shift out from Bombay and raise badly needed finance by disposing of their valuable real estate. He said that such a policy would be "anti-labour". If Dr Samant is saying this in Bombay, others of his ilk in the Congress-I and BJP are saying it in Delhi. A little earlier Chandra Shekhar traced the root cause of all our economic woes and corruption to the presence of multinationals in the country. It was Chandra Shekhar's suggestion that V.P. Singh, as finance minister, had framed policies that were favourable to multinationals and that this had led to an increase in their numbers in India and to their growing and, therefore, corrupting role in our economic and political affairs. And it is Congressmen like K.N. Singh, who are opposed to the transfer of loss-making public enterprises such as Scooters India and Allwyn Nissan to the private sector.

Most of our politicians, in an almost Pavlovian way, oppose anything that involves or implies retrenchment, restructuring, relocation, automation, overseas technology and capital, and privatisation. On the other hand, our leaders have an infinite capacity for stomaching bad and inefficient managements, both in the public and private sectors, a tolerance for monopolies, and an endless patience for poor and shoddily manufactured goods. They also do not seem particularly opposed to those making large profits by distorting public policy. More important, they seem oblivious to the plight of the consumer or to the condition of the majority of our people whose poverty renders them mute and ineffective.

"RIGHT TO WORK"

The opposition to retrenchment, even when it is at a huge cost to the public exchequer, is not only because of the ready vote bank that labour can provide. The roots go down to rather vague notions about what is the "right to work" and the obligation of the state to provide full employment. The right to work is automatically provided to all Indians. One needs to read only the opening page of our constitution to figure this out. What our leaders have in mind is the right to a job. There is a significant difference between the two. The first is an inherent right. The other is sought to be imposed as an obligation on the state. Only when the state arrogates to itself the ownership and control of all means of production, be it land or industry or services, can this right be demanded. To impose this obligation without imposing the expropriation of all property, collectivisation, and full central planning, among other things, would only imply providing unemployment benefits. In reality, those who advocate the right to a job, have the educated unemployed in mind, particularly since this is an articulate and vigorous section. Now what kind of a job does a citizen have a right to? You won't find many takers from among the educated unemployed for jobs such as those created by famine relief works which pay the barest minimum needed for subsistence. Many a "socialist" thinker or politician has advocated the creation of a "land army". If it is set up we might have to resort to conscripting aspiring babus.

Retrenchment is always an extreme step. It must never be arbitrary, capricious and whimsical. Given a chance many employers will be all these. The duty of the state, therefore, lies in protecting workers against such managements. If corporate illness is a result of managerial incompetence or dishonesty, the state must act quickly to safeguard the livelihood of workers and the interests of the overall economy. Our leaders seldom press for this when things first begin to slide downwards. All they seem interested in is higher wages without correspondingly higher productivity. Managements which can keep paying this by passing on the burden to the general public or the state are considered fine and doing a good job contributing to the national wealth.

When managerial incompetence or the wage cost spiral goes out of control, the company or undertaking becomes sick. It then seems to become the state's obligation to protect jobs. Often this is only possible by assuming all liabilities. The representatives of public financial institutions seldom evince interest in the affairs of the companies in which the state has a major stake in the form of loans or equity or both. Also, they seem to assume that management skills are carried down by genetic memory, and chromosomes confer legitimacy.

A NEW INDUSTRIAL DEMOCRACY

V.P. Singh keeps harping about labour participation in management, as if this participation can ever be meaningful without the responsibility of ownership. But why doesn't he speak out for an industrial democracy managed by a meritocracy? This is because Singh still sees matters in the classical worker versus capitalist terms. This hardly ever applies to the Indian scenario because an overwhelming proportion of the capital deployed in industry belongs to the state. Thus, workers, minority shareholders and managements are all living off public funds. Clearly now there is a symbiotic partnership between inefficient and corrupt managements and unproductive and indisciplined workers. A new industrial democracy that links wages to productivity and vests management in those competent to do so will serve to create the new cultural ethos that our economy so badly needs. V.P. Singh would be doing the country a great service if he addressed himself to these issues rather than engage in obsolete populist rituals like demanding worker participation in management. Real and meaningful worker participation in management will only come about when the new industrial culture is in full bloom and workers invest their savings and take their bonuses in the form of stocks.

Similarly, when a corporation wants to restructure its operations by hiving off a part of it to bring it in line with new management philosophies and economic conditions, there is an unthinking outcry. Restructuring in time, often has a salubrious effect on corporate health. Both public and private sector managements should be free to divest and invest freely. If HMT feels unable to make and sell electric lamps profitably, it must be allowed to sell out that part of the business and re-invest it in what it might decide is

5 GOOD REASONS WHY YOU SHOULD TAKE THE MACHINERY BREAKDOWN INSURANCE POLICY FROM UNITED INDIA

1 The Production Reason

"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry. Targets can't be met. Downtime goes up. Everything goes haywire."

2 The Finance Reason

"Cash flow disruption. Short-term financing. Locked-up working capital. All this can make a big difference to profits."

3 The Personnel Reason

"Deployment of labour becomes a problem. Overtime later to make up for production loss. Employee morale goes down. If we can't manage machines, we can't manage men!"

4 The Marketing Reason

"Availability and flow of products into the market can make or break a company. Loss of credibility among distributors and customers will allow competitors to get their foot in. It'll be marketing suicide!"

5 The Maintenance Reason

"Turbines,compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses. I'm not God, I'm only a man. I'm not even a machine!"

Avoid management by crisis. Make insurance a part of your policy.

Any kind of mechanical and electrical machinery — at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

more worthwhile and in tune with its skills and abilities. And nobody can explain why it is the nation's obligation to ensure that the ownership of Scooters India vests in it, even if it produces little and makes monumental losses. If the nation has an obligation to protect the jobs of a few thousand well-paid workers, it has an even greater one to the hundreds of millions who get nothing from the state except the tightening noose of deprivation and hopeless poverty. It is time we paid attention to where the numbers are and not get diverted by the articulate and excessively organised.

OPPOSITION TO RELOCATION

But more than restructuring, it is to relocation that our leaders are viscerally opposed. SAIL, for instance, can operate just as well and at a far lower cost from, say, Ranchi. Such relocations are not only good for the corporate balance sheet, but also have the good effect of spreading growth evenly among regions. The real advantages of dispersing industries in terms of triggering off local multiplier effects will only come about when the relatively highly paid "head office" staff moves to smaller towns. In a few years, INSAT should give us nationwide telecommunication links and there would be little reason left against moving to where the plants are.

If relocating head offices poses a problem, relocating a plant is like asking for the moon. Try moving out a smoking, polluting and unsafe plant out of any location and you will have the leaders crying themselves hoarse. Already we have heard Datta Samant speak out about textile mills in Bombay. Chembur can choke to hell because of industrial pollution, but the squawk of the all-knowing "progressive" politician is heard over everything else. Rangarajan Kumaramangalam who shouldn't exactly be enamoured of Samant, would also echo the same sentiments if we were to seek the relocation of one of "his" factories out of Delhi.

It now seems that only those privileged to work in the modern sector have a right to choose their place of work. Farmers forced to seek employment breaking stones and digging ditches when the monsoon fails have no such rights. The concentration of workers in a few square miles and their ability to put pressure on the chokepoints of the economy and to contribute generously to the bottomless coffers of our leaders, make the politician receptive to their every need, real or unjustified. Yet when 19 Harijans are gunned down for seeking three kilos of coarse rice a day as promised instead of two actually given, our leaders can only turn the event into a circus for political exploitation. Both the well publicised elephant ride to Belchhi and the motorcades to Nonhi and Nagwa near Jehanbad are, at best, cynical attempts to manipulate and exploit the poor to further selfish ambitions.

MULTINATIONAL, A SWEAR WORD

The word multinational is used almost exclusively in a pejorative sense by most of our leaders. The only exception probably would be Subramanian Swamy, but he is such an exceptional fellow that his very support for something almost absolutely condemns it. According to current usage, multinationals are evil empires and all those who work in them are co-conspirators against the nation. Some in fact are. The American multinational PepsiCo's involvement in the coup against the elected government of Salvador Allende and his murder, resulting in the establishment of one of the most repressive regimes anywhere, is well established. To allow a corporation with such a record to enter this country in its quest for green pastures is to reward sordidness and the worst form of neo-imperialism. Some of our politicians, including those at the very top, seem to be in favour of this company. One of PepsiCo's strongest advocates had sent his son to the company for "training". Perhaps he was privy to some inside information and was sure that the new ministry of food processing industries would pull off the coup.

It is true that we do not need multinationals to produce toothpaste or soda pop and other such urban trivia, but to seek to produce several thousand tonnes of chemical fertilisers or steel each day at the lowest cost is a national priority, and one must not allow obsessions with "swadeshi" to place interminable burdens on the nation. The guiding principle here should be the contribution to the common good. If we can produce steel at half the present cost, we must not hesitate to import the technology. But there can be hardly any justification for the import of Royal Doulton or Wedgwood china by either Air-India or the Taj group of hotels. Just as there is no need to import technologies to manufacture kitchen sinks and toilet seats. But to seek to outlaw all overseas technology and to term it inimical to our national interests is just as foolish. If Chandra Shekhar were to visit his son's printing press in New Delhi he would see Swedish machines at work. Now, is the young man also a part of some international conspiracy just because he made a rational choice when confronted with the bloated costs of indigenously produced equipment? Those who make irrational economic choices, especially when it almost always involves public capital, are bad managers and are therefore contributing to the national economic malaise.

MISGUIDED OPPOSITION

Now we come to the opposition to automation. Computers are seen as anti-labour. This is true to the extent that they can make labour redundant. But it is rarely that computerisation is economically optimal given the still low relative cost of manpower. Thus computers will rarely replace labour unless there is an economic imperative. But there are vital areas in science, defence, medicine, meteorology, communications, public management and services where computers have become essential. To oppose them blindly is, therefore, to oppose the march of time. But the real cause of this misguided opposition to change lies in the fact that our education system has become a gigantic babu-producing machine. Even today the number of colleges offering liberal arts education exceeds by far the number of institutions providing vocational training. It is ironical that even in these days of huge unemployment it is difficult to hire a lathe machine operator.

In the 40 years since independence a completely new set of circumstances has come into being. The onrush of technology, changing values, growing inequality and the population explosion have all equally contributed to this. New and more dangerous demons now stalk us. Before we set upon them, we need to bury the dead ones first.

DEPRECIATION LAW

Drastic changes

The sections of the income tax law relating to depreciation have been altered substantially. Since depreciation is a major item on the expenditure side of the profit-and-loss account and affects gross and net profit, the changes merit close attention.

First, the depreciation allowance for income tax purposes has been substantially increased from the assessment year 1988-89. For instance, the rate on plant and machinery has been increased from 15 per cent to 33.3 per cent. Second, income tax depreciation has been delinked from the Companies Act depreciation and separate depreciation rates have been prescribed for company accounts purposes. Third, the entire concept of allowance of depreciation under the income tax law has been changed and depreciation will be allowed on the concept of "block of assets".

INCENTIVE TO MODERNISE

The new rate schedule for depreciation is different in several respects from the old one. For one, the concept of extra shift allowance and initial depreciation has been done away with. Also, the number of categories of assets has been reduced. Earlier, for example, plant and machinery was sub-divided into five separate categories. It has now been reduced to three. The higher rates of depreciation, according to Bansi Mehta, a leading chartered accountant, will encourage industry to accelerate the process of modernisation.

The concept of "block of assets" for income-tax purposes has far-reaching consequences. A block of assets has been defined as "a group of assets falling within a class of assets, in respect of which the same rate of depreciation is prescribed." For instance, plant and machinery falls in a class of assets but since more than one rate of depreciation is prescribed for different categories of plant and machinery, there will be more than one block of plant and machinery for tax depreciation purposes. The calculation of depreciation under the block system is shown in box.

The block system of depreciation is beneficial to industries in several ways. For instance, the profit on sale of individual assets which was hitherto charged to tax as business income will no longer be chargeable and the entire sale proceeds will be credited to the block. The effect, of course, will be that the closing written down value of the block will be reduced and the depreciation allowed in succeeding years will be lower. "This virtually amounts to replacing your asset without paying tax," says Mehta. The reverse would be the case if depreciable assets are sold at a loss.

However, in case the sale proceeds are in excess of the opening written down value plus additions to the block, then the excess will be considered as short-term capital gains.

This is a serious implication because short-term capital gains tax will have to be paid even if the asset sold has been held for more than three years. In other words, the various benefits available under income-tax law by way of concessional treatment to long-term capital gains would be denied. Says Mehta, "This will be detrimental to sick companies or companies which are closing down. Also, companies shifting to backward areas will encounter this difficulty." On the other hand, Hosnang Billimoria, deputy chief executive of Tata Sons, is not unduly worried because, in his opinion, there will be very few cases in actual practice where the provisions for short-term capital gains will apply. Mehta is of the opinion that Section 54E, which provides for reinvestment in IDBI bonds (which mitigate the payment of tax on capital gains) is clearly applicable. But, he quickly adds, the tax department has yet to accept this.

> Short-term capital gains tax will have to be paid even if the asset sold has been held for more than three years. Thus, benefits available by way of concessional treatment would be denied

PROBLEMS OF "BLOCK" SYSTEM

However, several practical difficulties could result from the revised scheme. In a block of say 20 assets, some plant and machinery may be used while others may not be used at all. If depreciation is calculated on the entire block, there is the possibility of charging excess depreciation

Opening Written Down Value of the relevant block	X
Add: Additions to the relevant block	Y
	Z = (X + Y)
Less: Sale proceeds/ insurance value etc of assets sold, destroyed etc in respect of the relevant block	A
Closing written down value	W = (Z − A)

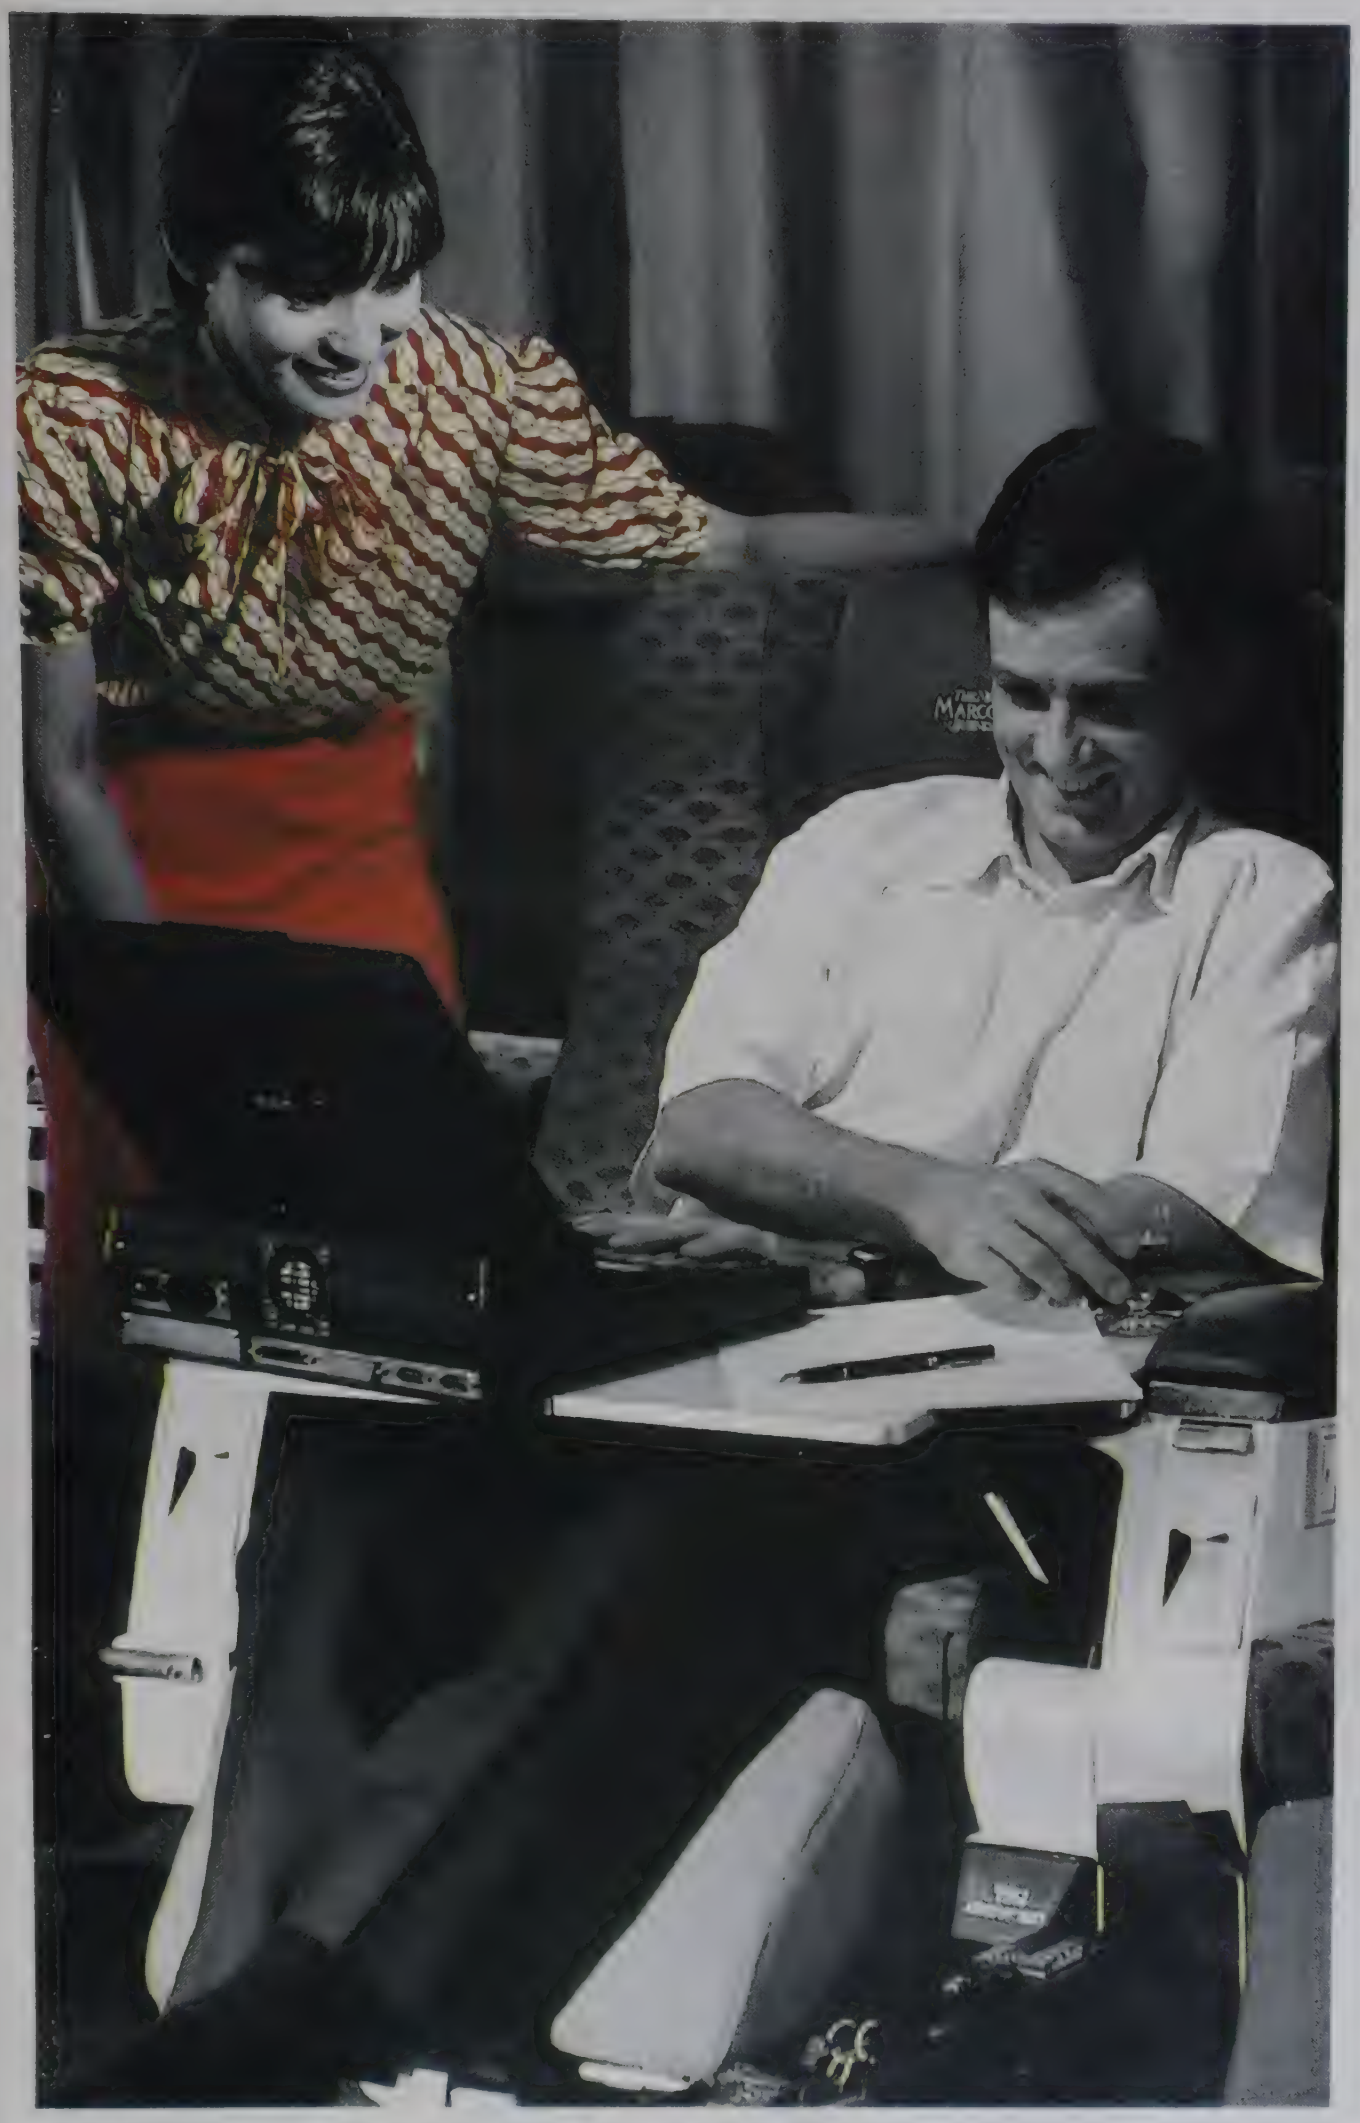
Depreciation will be allowed on closing written down value (W) at the relevant rate.

Difficulties will also arise in computing the taxable profit of an individual manufacturing unit, in the case of multi-division companies. Since the classification of a block of assets would depend upon the rate of depreciation of the relevant assets, it is possible that assets having the same depreciation might be used in more than one unit of a company. Hence, these assets would form part of the same block, although used in different units in different locations and operating as different profit centres altogether. The reason for the need to determine the taxable income of each individual unit is that, for a specific number of years, new units are entitled to deductions under certain tax holiday provisions. For example, 25 per cent of the profit of a new unit is exempt for eight years under Section 80-I. According to Vasant Narkar, a chartered accountant, this is not really a major problem because new units will have the option of clubbing their assets separately under the block system.

There is no provision in law for reducing the value of an asset gifted or discarded or used for other than direct business purposes. For example, if a factory building which is temporarily not being used, is rented out no depreciation is allowable on the rental income. There is also no legal provision for reducing the value of the factory building from the block.

From the above it can be seen that in trying to make the law simpler the finance ministry has not done a good job. In fact, many companies could end up paying more tax and also run the risk of litigation. As Mehta rightly summed up, "Every effort at simplification should try to minimise the avoidable harshness in the law."

■ KETAN DALAL and ASPI CONTRACTOR



THE NEW MARCO POLO BUSINESS CLASS

BUILT TO HELP THE CORPORATE BODY ARRIVE IN BETTER SHAPE

On July 10th, 1988, Mr. David Lloyd, Director of an international finance company, tested the New Marco Polo Business Class.

He was the ideal choice — a frequent flyer who flies over 100,000 miles each year.

Our design team had created a business class to help executives like Mr. Lloyd arrive relaxed and refreshed.

Wider, more comfortable seats. A new seven-abreast seating configuration. A more spacious environment. And, on long-haul flights, foot and legrests were just some of the changes that he experienced.

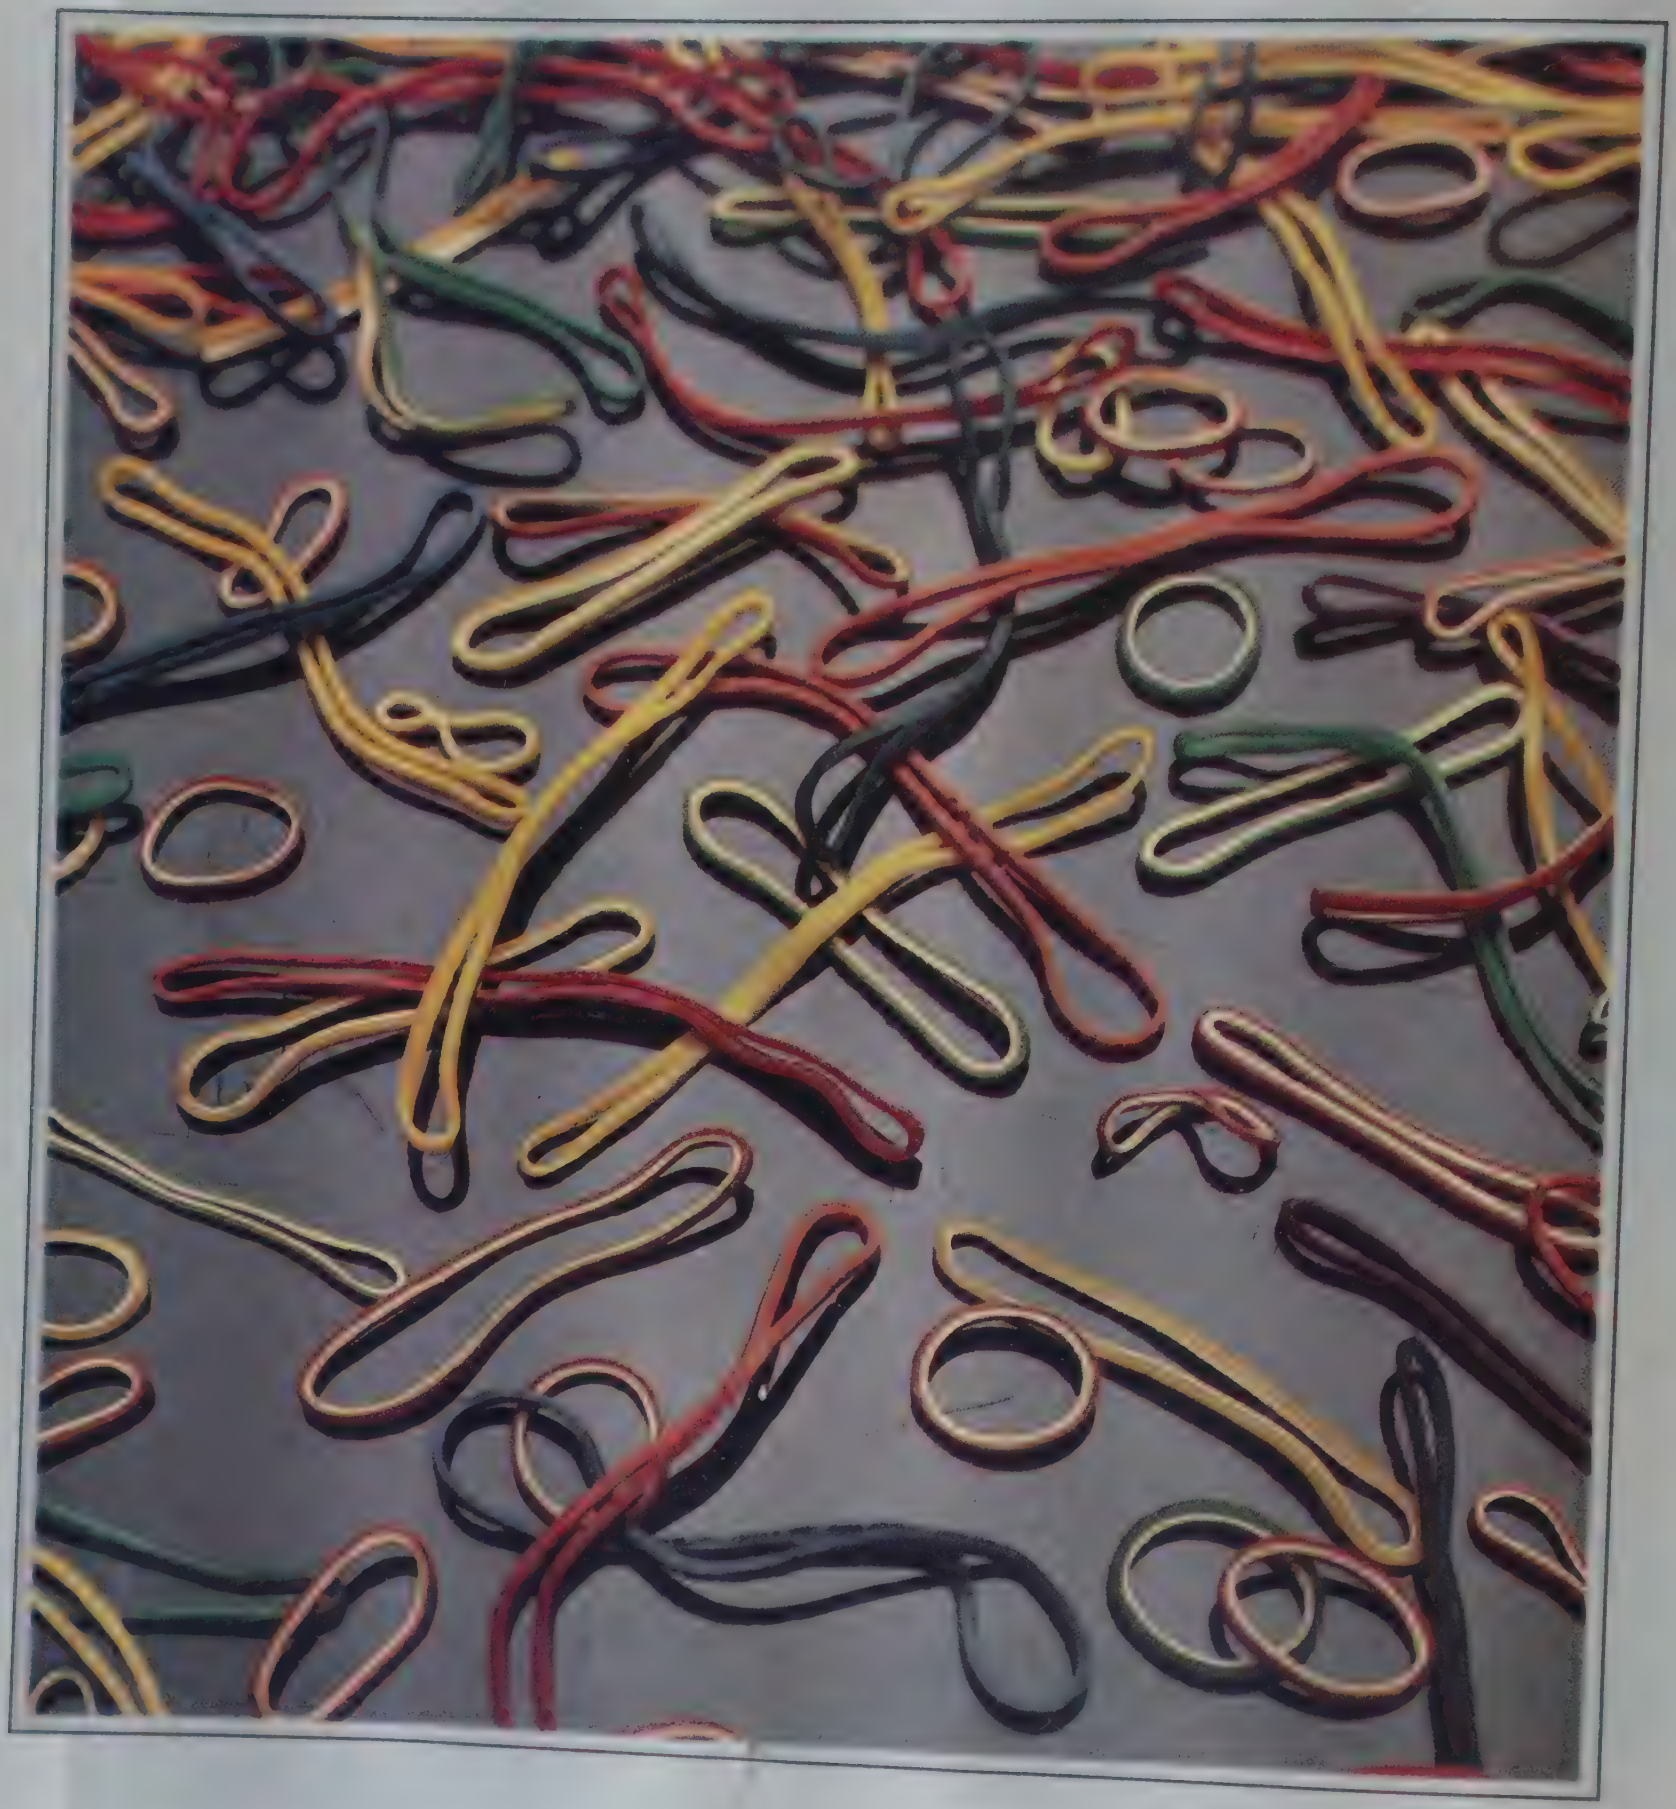
But there was one thing our design team did not change at all.

Our high standard of service. He found our stewardesses from ten Asian lands to be still as charming and attentive as before.

Cathay Pacific gratefully acknowledges the participation of Mr. David Lloyd, in testing the New Marco Polo Business Class.

Arrive in better shape

CATHAY PACIFIC



HCL'S NEWEST COMPUTER WORKS ON AN ULTRA-MODERN PRINCIPLE

HCL's computer Magnum is the perfect example of an expandable computer.

Today, like any other mini, it will support ten to twelve users.

Tomorrow, when your needs grow, Magnum can stretch just like rubber to fit you.

Simply add on a processor board, and Magnum will almost double its power. Supporting twenty five users.

As your organisation grows, you can keep adding more processor boards, till your Magnum effortlessly supports more than a hundred and fifty simultaneous users.

The equivalent of a mini-mainframe computer's capacity.

Five computers for the price of two.

To start off with, Magnum costs just a little more than any other minicomputer in the market.

But the addition of each subsequent processor board adds the power of one more mini to the Magnum—at one-tenth the cost of a new mini.

If you see Magnum through to its full capacity, you'll have a computer with more than the power of five minis.

Which would have cost you less than two minicomputers would.

Two heads are better than one. Three heads...

Magnum is a product of multi-processor technology.

More than one 'brain' goes into operation at the same time in this machine, solving problems faster, and creating greater capacity for work than ordinary machines.

Magnum's unique design allows easy expansion from one to six 'brains'.

It's a computer that's designed to grow with you.

Never say die.

Magnum is also a computer that's designed to never get obsolete.

It has an 'open architecture'.

Which means that any new-chip that is designed in the future can be made to work on Magnum.

This is one machine that will still be there in your organisation ten, twenty, thirty years from now.

As powerful as ever.

The Unix advantage.

Magnum is designed to fully support the world-standard Unix operating system.

So your office will always have access to the largest bank of minicomputer software in the world.

Now, and in the future.

Outperforming DEC, Unisys, Hewlett Packard...

Magnum recently came in the top five computers in the world in an internationally established performance test.

Beating some of the most respected names in the business. (And, to rub it in, costing 70% less than any of those machines.)

So impressed were an American company that they immediately ordered Magnums worth $16 million (Rs.23 crores).

Magnum is the price-performance solution for an organisation's growth plans.

People across the Atlantic have already realised that.

You don't have to stretch your imagination to see it revolutionise your office here.

LIJJAT

From papads to detergents

Is there room for Sasa?

Before the year is out Lijjat Papad's mascot, that cute, white rabbit, will be hopping into the vast and wickedly competitive detergents industry. It's a veritable jungle out there and strong, fearsome forces like Hindustan Lever, Nirma, Godrej and Tomco already stalk the market. Does an ignorant, inexperienced bunny stand a chance against these veterans? Well, yes. For one, this is no ordinary ingenue. And more important, she is not unescorted. Holding hands with Shri Mahila Griha Udyog Lijjat Papad, a self-help "society of sisters" is big, big brother, Reliance Industries Ltd.

What may appear to be an incongruous combine makes eminent marketing and business sense if one considers the reasons that prompted Reliance to seek Lijjat's hand. ("Yes, it was we who approached Lijjat," confirms Anil Ambani of Reliance.) As a major manufacturer of linear alkyl benzene (LAB), the main raw material in detergent manufacture, the tie-up with Lijjat will provide Reliance a captive market for an estimated 20,000 tonnes of LAB a year. This is a marketing coup for Reliance since the supply of LAB currently exceeds demand by 40,000 tonnes. The tie-up is also, in a way, a piggy-back ride towards forward integration. Says Ambani, "We wanted to integrate but our size prevented us. So we had to think of a way to be there and yet not actually be there at the same time." And what better way than to team up with a small-sector unit entitled to excise concessions and possessing a ready-made national brand?

Lijjat too stands to gain in many ways. It will have access to technical know-how from Reliance. Besides, Mudra, the Ambani-owned ad agency, will devise an advertising and promotion strategy for Lijjat. Result: a quantum leap in Lijjat's turnover which today stands at Rs.20 crores. Rukmini Pawar, the brisk, no-nonsense president of the Udyog, expects to sell Rs.50 crores worth of detergent powder in the first year of operations.

GROWING DEMAND

The sudden, back door entry of Reliance-Lijjat into the detergents arena is likely to cause a dither amongst other detergent manufacturers. When contacted in Ahmedabad, a Nirma spokesman declined to comment on the likely impact of the new entrant, saying it was "premature" to do so. Says Siddhartha Sen, vice-president, marketing (detegents) of Hindustan Lever Ltd (HLL), "It's an interesting and unique innovation by a major supplier of raw material. In my opinion, there's room for all of us."

The market for fabric washing products (i.e. synthetic detergents and washing soaps) grows at an average annual growth rate of 10 per cent. By 1990 the consumption will be 2.23 million tonnes. And by 2000 A.D. the market should have doubled in size to 4.23 million. Recent trends also point towards an increasing penetration into rural areas and a switch in consumer preferences from washing soaps to chemical detergents. Today, chemical detergents account for over 60 per cent of the Indian market. This is expected to rapidly increase to 70 per cent, a level which still falls short of the international detergents:soap ratio of 90:10.

It was Karsanbhai Patel's Nirma washing powder, the first low-priced detergent targeted specifically at middle income consumers, that uncovered a latent, mass segment at the bottom end of the market. With the entry of Nirma, the market structure of synthetic detergent powders altered dramatically. Down went the share of premium detergents like Surf — from 36 per cent in 1980 to 8 per cent last year — while the cheaper varieties grabbed 86 per cent. Several cottage-sector products like Adhunik, Vimal, Ojhas, Hippolin managed to fence off their own regional turfs. Six months ago, Wheel, Lever's belated answer to Nirma, was launched with a Rs.1-crore, TV oriented ad budget. Thus, no matter what Lalitaji may say, it's the low-priced segment that is the fastest growing one.

TRIAL RUNS

At a factory at Dahisar, a Bombay suburb, 40 women are already working round-the-clock, manually mixing the ingredients of a yellow, washing powder branded Sasa (Marathi for rabbit). Trial production of the detergent has begun on a 2 tonnes per day basis. This will shortly be stepped up to 10 tonnes a day, and many more such units are planned.

Lijjat's 37 branch offices will provide a broad network and ensure market permeation. Also, Lijjat Papad is a strong, national brand and has a reputation for quality. The fact that the Lijjat enterprise has a social purpose too could work in its favour since it is the housewife who makes the purchase decision for this functional product.

Will Sasa, priced at Rs.9.50, nibble into existing market shares or will it carve its own niche? Lijjat may know exactly how the papad crumbles, but detergents is a totally different world. Pawar's approach is homespun, almost simplistic, reflecting the organisation's philosophy. "It's all in the hands of the consumer, we're nobody's enemy," she says. The competition, however, isn't likely to take any chances. An exciting bout is sure to follow.

■ NAAZNEEN KARMALI

Your executives can now fly to work. At ground level.

Presenting the luxury of the new Tempo-Traveller

Tempo-Traveller is the new executive perk

It offers senior personnel the comfort and status that ordinary company buses can never match – and a car-pool could never give.

A spacious interior offers the luxury of upto 15 ergonomically designed seats and large, airy windows.

There's ample room for baggage. And a high curved roof allows for greater freedom of movement.

And it has been specially built for Indian roads by Bajaj Tempo – in collaboration with Daimler-Benz, the creators of the classic Mercedes range.

As cost-conscious as it is status-conscious

The new Tempo-Traveller is equipped with the advanced 72 BHP Mercedes OM 616 diesel engine, which functions like a built-in accountant. It stretches your company's every rupee – delivering the highest level of fuel economy with the lowest level of noise.

The Tempo-Traveller even minimises other maintenance costs. Spares are cheaper and more readily available. And regular service is close at hand. Because you are backed by the 150 experienced dealers established by Bajaj Tempo over a period of 25 years.

So before you stake business capital on company buses or corporate cars, give the new Tempo-Traveller serious thought.

And let your executives 'arrive in better shape'.

BAJAJ Tempo LTD.
Akurdi Pune-411 035

The new Tempo-Traveller.
Anywhere else, they'd call it a Mercedes Transporter.

If we're capable of big things in cemen

Commitment.

We realise that delaying a job, even by a day, costs money. So we respect a client's schedule. Every commitment made by us is a commitment honoured by us. So it isn't surprising that Buckau Wolf has a reputation for being engineers who deliver. A quality which has helped us grow tremendously in an apprehensive market. Which has also helped us win seven turnkey projects in seven years. For Coromandel Fertilisers, Gujarat Ambuja, India Cement, Jaypee Rewa, Modi Cement, Vasavadatta Cement and Vikram Cement. Commitment coupled with consistent quality and the backing of Krupp Polysius AG, West Germany. A few small reasons for our reputed capabilities.

t's because of one small reason

Wood you believe...

WIP is the first and only company in India to

WIP is the only wood products Company in India to enter the atomic age, using radiation techniques with Gamma Rays, and development of Speciality Wood for shielding neutrons in Atomic Power Reactors.

With these techniques, and unmatched human skills, it has created wood that is as strong as steel and can be used for critical applications.

Its remarkable achievements include production of composite panel product for electromagnetic shielding to protect critical electronic components in the Anechoic Chamber in the Space Research Organisation.

WIP is the first in the field with quality wood products. It is today the largest integrated wood products Company in India with the most modern manufacturing plant and a relentless commitment to Research & Development. Its list of firsts include:

- **First to make irradiated wood.**
- **First to make aircraft plywood.**
- **First to make synthetic resin adhesive using hot pressing techniques.**
- **First to make high pressure industrial laminates.**
- **First to make quality hardboard way back in 1959-60.**
- **First to manufacture Diallyl Phthalate moulding powder.**
- **First to make metal faced plywood.**

WIP wood products are the first choice of discerning users like Bhabha Atomic Research Centre, BHEL, Birlas, DGS&D, Hindustan Aeronautics, Hindustan Motors, Hindustan Lever, Hindustan Shipyard, I.T.C., Indian

enter the atomic age with irradiated wood.

Railways, Indian Space Research Organisation, Maruti, Mazagaon Docks, T.V.S., Vikram Sarabhai Space Centre plus all Petroleum & Petrochemical Industries and Fertiliser Industries. In fact WIP wood products find a place wherever quality is the watchword.

EMPLOYEE PRODUCTIVITY

What is the measure?

Concern about declining productivity

On 27 September 1988, the Department of Banking Operations and Development (DBOD) of the RBI issued a memo on employee productivity to all chairmen and managing directors of public sector banks. The RBI was "distressed" that employee productivity in public sector banks was falling.

The memo quoted certain portions of the Sixty Fourth Report of the Estimates Committee of the ministry of finance, Department of Economic Affairs (banking division). It said, "On the basis of estimated productivity per employee for 1986, as many as 16 of the 28 public sector banks were below the industry level average." The State Bank of India (SBI) and its seven associate banks were singled out for causing "anguish"; they were lagging behind the industry level average despite "the business of the government and the public sector/autonomous bodies (being) heavily concentrated in them". The banks were asked to conduct "in-depth studies" and initiate suitable measures for improvements.

INADEQUATE PARAMETER

The parameters used by the report to judge employee productivity is business per employee (BPE), which is arrived at by dividing the value of deposits and advances by the number of employees in the bank. D.R.K. Patnaik, deputy general manager (HRD) at SBI, feels that BPE cannot be taken as the only indicator of productivity; various other parameters need to be considered as well, given the rigid rules that public sector banks have to adhere to.

T.P. Raman, Patnaik's predecessor, maintains that for an industry like banking — being manpower-intensive and service oriented, where 40 per cent of advances must compulsorily be made to priority sectors — BPE can at best be one of the parameters in monitoring productivity. Others like the interest rate spread, burden efficiency ratio and the quality of customer service need to be taken into consideration too.

If BPE is not an accurate indicator of productivity, what is? The Indian Banks' Association (IBA) under the chairmanship of R. Srinivasan — who is also chairman of Bank of India — has decided to institute a productivity award for the best bank branch in each state. This is modelled on the National Productivity Council's (NPC) award for banks, which are given at the bank level. Though certain modalities of the award are still to be worked out, the IBA hopes to institute it from next year. Says Srinivasan, "With over one million people employed in the banking industry, trying to monitor productivity on an individual level is a difficult proposition." Hence the decision to evaluate productivity at the branch level. The reasons proferred: individual productivity is inextricably linked to branch productivity, and the branch as a unit is considered as a profit centre.

MORE BROAD-BASED AWARD

Under the IBA award scheme, BPE is only one of the parameters that are considered. The others include credit management, customer service, house-keeping and profitability. Based on its own internal evaluation, each bank has to name its best branch in each state. The IBA then evaluates the best branches of all the banks, applying the above mentioned parameters, and awards the prize to the best branch in each state. The IBA will also award 11 prizes at the bank level for good performance in areas like agriculture finance, small-scale industry, anti-poverty schemes and industrial relations.

On the face of it, the IBA award scheme seems more comprehensive and a better indicator of productivity than the RBI's evaluation based on BPE alone. Srinivasan, however, hastens to add that the IBA award scheme is not considered foolproof or better than the BPE evaluation. "But any step in the direction of increasing productivity is to my mind a positive step." M.N. Goiporia, chairman of Central Bank, echoes Srinivasan's sentiments. "The NPC award, the IBA award and the RBI evaluation complement one another. Each can only help in increasing productivity."

Not everyone is so optimistic about the positive effects of the various awards for productivity. One bank economist feels that in the frenzy of competition, wrong data or data that cannot be cross-checked may be provided by some branches, a problem that V.P. Singh faced in 1985 as finance minister while trying to get the unwieldy banking industry to raise its productivity. Another banker compared the IBA award scheme with a spot-the-best-baby competition. "It is not difficult to prime one branch of a bank in a state at the cost of the other branches." What the banker would ideally like to see is an award system that evaluates banks on the basis of networked branches. "At the end of the day, what do we want? Not one or two stars in a galaxy of mediocrity, but the entire banking industry moving towards greater productivity."

Whether such criticism is valid will become clear once the award scheme is actually implemented next year. Srinivasan says the IBA is open to suggestions and will continually monitor and evaluate the award scheme. At this point, it would be only fair to give the IBA credit for initiating a scheme which, in some measure, is attempting to reverse the trend of falling productivity.

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable
* Maintenance - free * 100% Leakproof and Rustproof
* Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes.
* Backed by excellent installation and after sales service through a wide network of dealers.

E.A. RAMASWAMY

Can we reform?

The Trade Unions and Industrial Relations Amendment Bill has been the subject of a tide of conferences, workshops and media analyses since its introduction in the Rajya Sabha last May.

The trade unions have made plain their hostility to the bill. The employers have criticised it as well, but more to register their presence than with intent to scuttle. They would probably be happy if the Bill were passed intact, even if all their objections are ignored. The intelligentsia are equivocal. They see in the Bill some hope of clearing the chaos in our industrial relations, but feel that it severely restricts the right to strike. The Bill makes it virtually impossible for labour to launch on a legal strike. One might say that this is precisely the situation even under the existing provisions of the Industrial Disputes Act. The new Bill is different because it proposes stiff penalties to punish violations. Trade union leaders who spearhead illegal strikes can be debarred from holding office, and workers who support such strikes are to be punished with a minimum imprisonment of 14 days. Perhaps it is this provision, more than any other, which contributes to the happiness of employers.

STATUS QUO PREFERRED

But if everyone is opposed to the Bill, we must ask whether we can at all reform industrial relations. Deeply entrenched vested interests stand in the way of reform. Take for instance the trade unions. They have opposed the provisions of the Bill wholesale. They are unable to find in it a single redeeming feature. They do not want minimum membership raised beyond the absurdly small number of seven; want no restriction on the number of outside leaders; and have no interest in deduction of membership fee from the payroll. It would seem that they have no interest in any kind of reform. In earlier times, the unions used to demand statutory recognition. Today, even that has ceased to be a problem. The fact is that our unions have learnt to survive under the existing dispensation.

It is interesting to draw a parallel with what happened in England in the early seventies. Till that time, British law provided neither for union recognition nor for the enforcement of contracts by the courts. There was nothing underpinning settlements except mutual trust. In the early seventies, the government introduced legislation that provided for formal union recognition and conferred sanctity on settlements. In addition, it also placed certain restrictions on trade unions. The unions wanted none of this. They said they were managing pretty well with unwritten conventions and did not need the backing of law. That, more or less, is the situation of our unions now.

GOVERNMENT INVOLVEMENT

The government represents an even more powerful vested interest. In no other industrial nation does the government play such a dominant role in labour-management relations. Elsewhere, the government's role is limited to setting the rules of the game and overseeing the industrial relationship, except when vital national interests are threatened. Right here, Jagjivan Ram spoke of the need to free industrial relations from government control as early as in 1950 when he was labour minister.

In spite of all this, the bureaucrats and politicians have ensured that their powers are not whittled down. Conciliation and the power to grant or withhold reference of disputes for adjudication are the two most potent weapons in the government's armoury, and both powers have been wilfully abused to meet political ends. Consider the following case. Reliance Industries retrenched 348 workers who were members of R.J. Mehta's union. The government found no merit in the dispute for adjudication, arguing instead that the retrenchment was justified. The union moved the Bombay High Court, which in turn asked the government to reconsider its decision. The labour minister of Maharashtra reconsidered the issue, and once again denied reference. The union then moved the Supreme Court, which advised that the matter be taken back to the high court. This time the high court ordered the government to grant reference, adding that the court would itself give the order if the government did not want to do so. All this merely to gain a reference which is routinely granted by every government to its cronies in the labour movement. Given such partisanship, where do we begin to reform industrial relations? Those who have learnt to play the game under the present rules would block change. The trade unions would fight to retain the advantages of outmoded legislation. The employers would fight as well, except that they have little to fight for right now. From their point of view, the new Bill represents a big improvement over the old laws. The bureaucrats and politicians don't even have to fight. Being themselves the lawmakers, they can so draft the law as to protect all their powers. And a government which tenaciously holds on to its powers, especially in the face of hard evidence of their abuse to further partisan rather than national interests, cannot have the moral force to ask others to accept change.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

ADMISSION NOTICE

THE CFA PROGRAMME

(In collaboration with the Institute of Chartered Financial Analysts, USA)

The CFA Programme is designed to provide specialised training in Corporate Finance, Investment Management and Financial Services leading to the designation of '**Chartered Financial Analyst**'. More than 8000 candidates have already enrolled in the CFA Programme from all over the country.

National institutions like IDBI, ICICI, IFCI, UTI and many companies have approved the CFA Programme for reimbursing the fees.

ELIGIBILITY

Graduates (any discipline). Final year degree students may also apply. Exemption from the Admission Test is granted to certain categories of candidates like CAs/AICWAs/ACSs/MBAs/First Class Graduates etc.

For Prospectus and Application Form please write to The Admissions Officer giving your address and enclosing a DD for Rs. 50 favouring ICFAI, payable at Hyderabad.

The Institute of Chartered Financial Analysts of India
Road No. 3, Banjara Hills, Hyderabad - 500 034

MENTORS

An unembarrassed view

I was 23 and shocked. One of my brightest and best-educated friends had just announced that the key to success was finding a godfather. We had recently seen the Marlon Brando film so the word had sinister connotations. Moreover, we knew that Indian politics largely operated through factions within which patronage flows down and political support flows up. So how could us aspiring meritocrats, would be Mr. Cleans, accept mentors?

The years since, of first and second hand experience, have proved my friend right (he, incidentally, by his mid-thirties, commanded a pinnacle in the Alpine headquarters of a famous transnational). An elder confirms that a mentor can make things easier for the able and possible for the merely lucky. Moreover, he believes that in most cases a mentor is not looking for a material quid pro quo from his pupil. Mainly, he acts for "psychological satisfaction" — perhaps an affirmation of his power; sometimes he also seeks to accumulate goodwill against a rainy day.

The story is told in the UK of Cecil Harmsworth King, one of England's last homegrown press lords. His office boy (read "peon" in India) was a bright 16-year-old. King took the lad under his wing — for example, gave him Gibbon's monumental *Rise and Fall of the Roman Empire* over a weekend for quizzing on Monday morning. Years later, the protege, Sir Donald Ryder, was chairman of the International Publishing Corporation, which owned not only the late King's publications but also huge paper, forestry and property interests in several countries. In 1974 Sir Donald was made a lord and head of the National Enterprise Board which was the Labour government's effort at industrial regeneration.

Unfortunately, Indians tend to be reticent in acknowledging their mentors. Hence naming names in our domestic anecdotes is unwise — especially since envy and badmouthing is not uncommon.

For example, the meteoric rise of the head of a leading financial institution is attributed to his connection with a senior statesman. In fact, the man's early mentor was the then head of India's largest bank who recognised ability in several juniors. And his proteges were typically not connected to him by blood or community or caste or even school.

The existence of a mentor, and getting ahead because of one, cannot be taken as evidence of being otherwise incompetent. On the contrary, stories abound of very able people for whom a powerful well wisher was just one more, albeit very important, success factor. Conversely, we all know of persons who went far on the backs of others and then fell down when personal ability was essential. My thesis is that those who wish to be able should learn how to find and work well with mentors.

Taking mentorship beyond anecdotes, management theory provides its raison d'etre. Much of the challenge, the difficulty, of working in organisations — especially large or complex organisations — is in finding clues to how they actually function. Will Shethji actually look after my family if I devote my life to his business? Can I invite my boss's boss home — is he friendly? Why does this supervisor command respect while the other does not? Am I really doing well? Why? And so on. Sensitivised novices find their answers in quick time. Others do not. All would be aided by a reliable adviser in understanding such "informal" aspects of the organisation and its culture.

An industrial psychologist has a lucrative consultancy. He spends half a day every week listening to a successful top executive's work experiences. Not, apparently, because the tycoon is going nuts. Rather, firstly because articulation of concerns, objectives, difficulties is often half way to solution. Secondly, because where a problem is insuperable, that becomes more bearable when discussed and agreed with a trusted other. For most of us, a friend is more practical then a psychiatrist. And, for top men, Drucker advises use of the board directors precisely for such "sounding" purposes.

When "Japanese management" was the fad, you may have noticed that the Japanese officially appoint mentors for their young executives. The role is seriously taken. My flatmate at business school had worked with a top bank after taking Japan's most prestigious first degree. As a company-sponsored student, he reported lengthily each month to the bank's personnel department. But his letters to his mentor were even longer and more detailed. Subsequently, amongst other things, the mentor advised my friend to get married — and even found the bride when that proved necessary.

All of this shows that being, or accepting, a mentor can be perfectly legitimate and socially useful. In fact, newcomers to a profession (the older professions make explicit arrangements for pupilage), or to an organisation, would be wise to actively seek mentors. Conversely, a senior might offer advice or solace without accusation of powerbroking or favouritism. Perhaps establishing this should be a conscious task of both mentor and protege.

One need not have only one mentor. Nor, for that matter, need the guru be perfect or omniscient or even, necessarily, more successful than oneself. Many a finance director, for example, has learnt the disciplines of book keeping from a clerk. But then the pupil has gone on to other skills, with other masters. What is important is that at the time the guru and shishya have some thing to offer each other. Similarly, readers of Sir Arthur Conan Doyle, will remember that the legendary Sherlock Holmes sought the counsel of his brother Mycroft with especially taxing problems — although Mycroft was not as good a detective as his younger brother, his powers of deduction were superior.

Clean mentorship is especially important in our country at this stage because, firstly, relatively few Indians have first-hand experience of modern organisations. And, secondly, we have chosen a path of modernisation or "westernisation" in which many basic values are challenged and may have to change. It seems that only through such mentorship can we create an appropriate work culture.

Participation in nation building in this sense could be the greatest payoff to the mentor. Additionally, the mentor himself grows — just as boys become men when they try to be real fathers to their children.

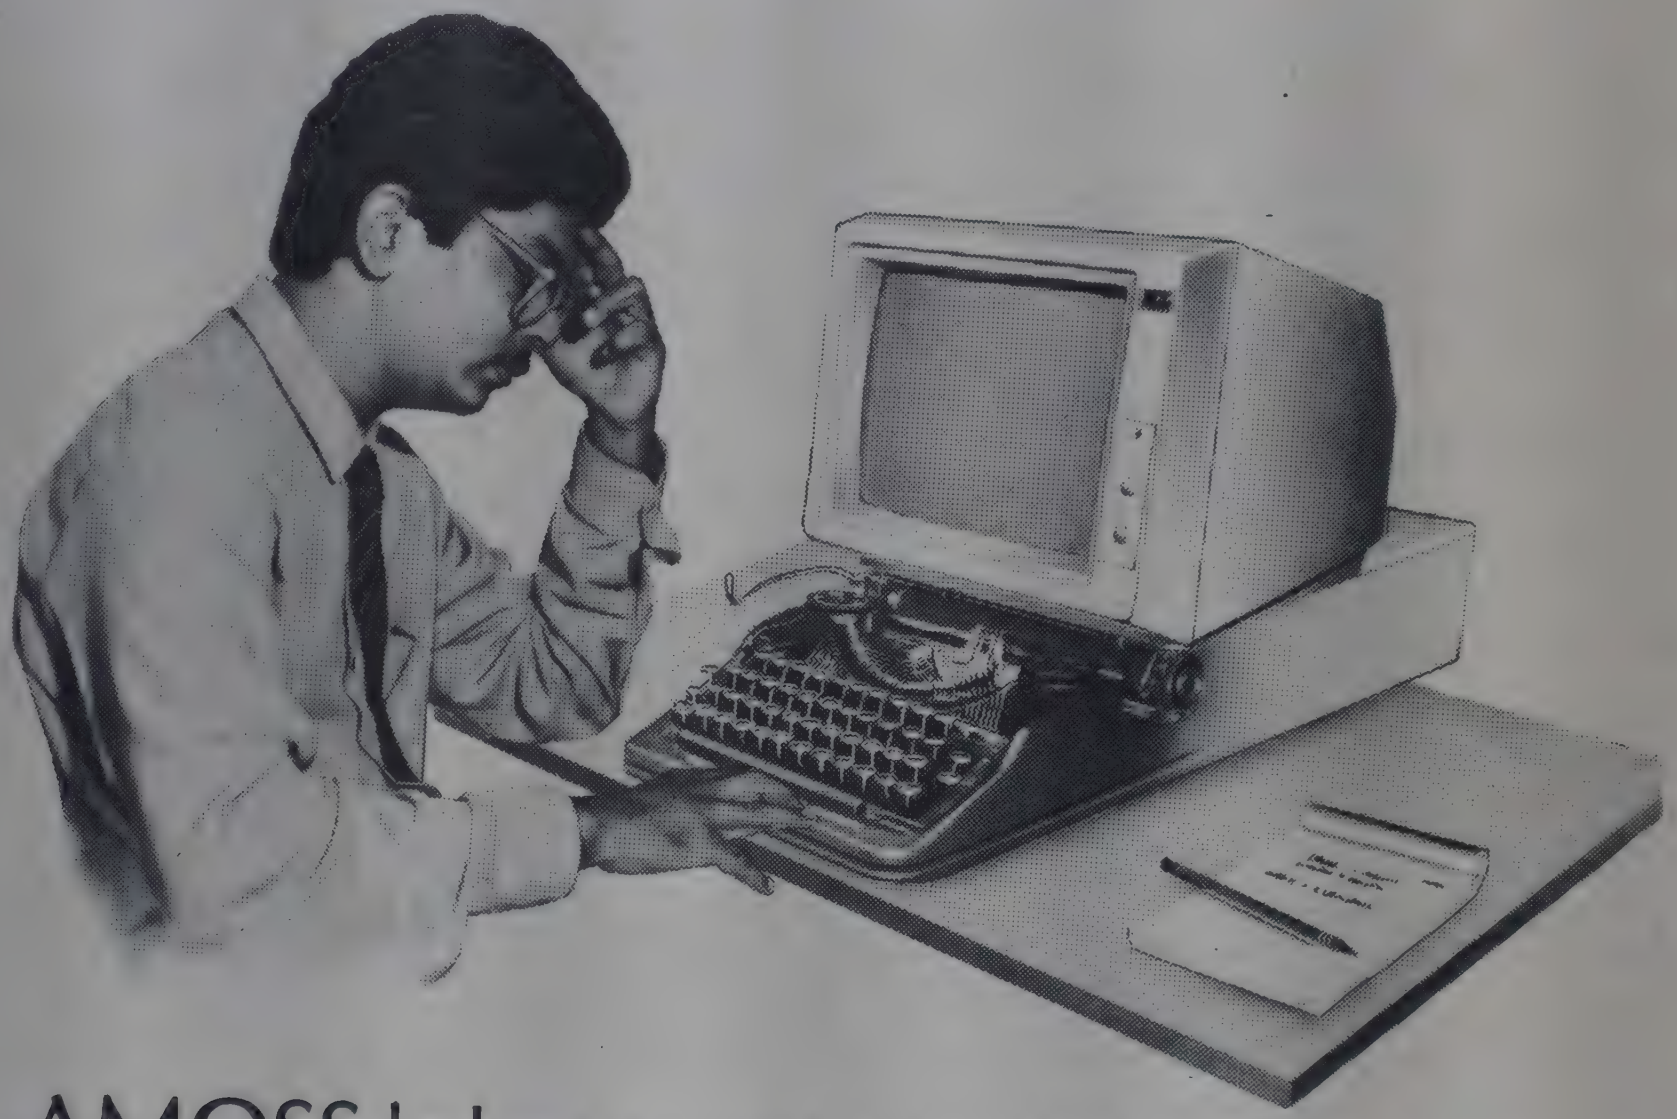
Are you managing your business with incompatible technology ?



AMOSS helps you in technology management.

THRIVING! PROSPEROUS! This was the condition of many Indian companies in the 60's & 70's. But now they are down the road at a dead-end. Languishing for failure to up-date their technology. It is not just a question of having technology. It is the crucial question of managing the technology. And keeping abreast with the latest from the world.

AMOSS is the pioneer in technology management. AMOSS provides opportunities in emerging and relevant technologies to Indian professionals. The team at AMOSS consists of highly qualified managers and engineers from India and abroad. AMOSS is associated with Oidelft Groep n.v., a Dutch multinational which has a high rating as a "knowledge company".

In addition, the AMOSS Technological Management Group helps in locating current trends in technology management. Shows you how to take advantage of major changes in fiscal policies. Speeds up technology from drawing board to market and protects your lead. Allowing you to be always one step ahead of the competition.

KELTRON

From bad to terrible

Keltron was the prototype for other state electronics development corporations. Yet in its 15 years it has never been able to boast of financial strengths. Right now it's going through another convulsion as unions and politicians train their guns on its chairman

When the LDF government of Kerala sacked Thomas Kora and brought in S. Krishna Rao as executive chairman of Keltron in August last year, hopes ran high for the future of the public sector electronic development corporation. Nothing of the kind has happened. Employee morale has sunk to a new low and the two major unions of the company are rolling up their sleeves to oust Rao.

Interviews with a cross-section of workers and management staff revealed widespread discontent and alienation, and a complete lack of accountability. Says A.D. Damodaran, director of the Regional Research Laboratory, Trivandrum and a former director of Keltron who recently quit its board in disgust: "Short of a miracle, nothing can help Keltron turn around." Rao himself didn't want to speak to *Business India*.

NO FINANCIAL VIGOUR

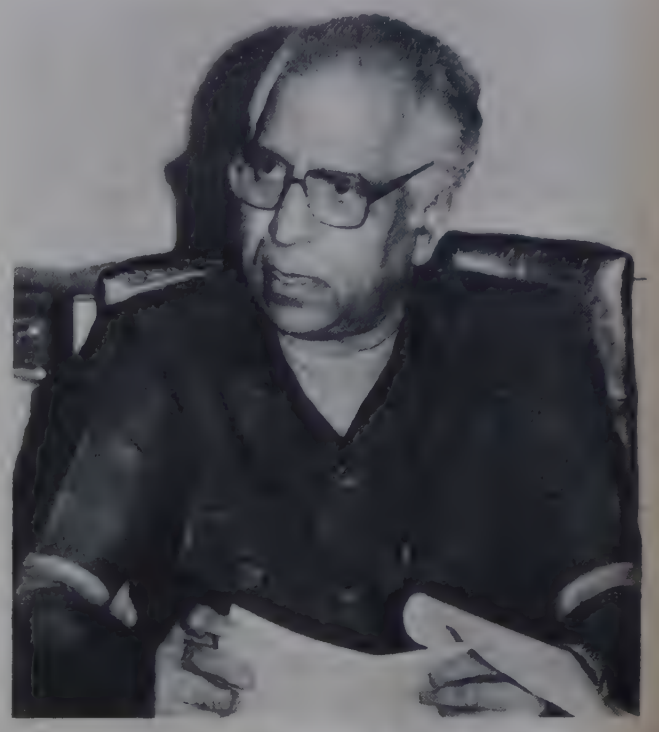
An assertive management could have done much for Keltron. The company has a wide range of acceptable products and services in electronics, and a lot of goodwill still left amongst its customers. But this is not reflected in its bottom line. None of the company's chief executives has been able to translate its strengths into financial vigour.

The beleaguered Rao

K.P.P. Nambiar, Keltron's founding father and now secretary, Department of Electronics (DoE), displayed the zest of a pioneer in steaming ahead with myriad projects and swift diversification. But in his zeal to build Keltron, the financial implications were often overlooked. By 1977, five years after Keltron was born, several of its subsidiary companies were in the red and the parent corporation's net rate of return (post-tax profit as percentage of total capital) was just around 0.5.

The next man, Thomas Kora, came from the stuffy world of government. He was secretary, department of telecommunications before heading Keltron. Despite some well-intentioned attempts to streamline management procedures and introduce systems in Keltron, Kora who was retiring by nature could not provide the vigorous leadership that the feeble Keltron needed.

Rao, currently in the hot seat at Keltron, has a research background. He is a postgraduate in advanced electronics from Eidgenossiche Technicsche Hocschule, Zurich, and was director (R&D) at Bharat Electronics Ltd (BEL), Bangalore, before he joined Keltron. He played a notable role in the TV expansion plans of the government of India and developed the first indigenous colour OB van used in the 1987 World Cup. Thus, his academic as well as professional pedigree is impeccable. But industry has been traditionally prejudiced against research. Rao's performance to date has done little to change this. Critics say his research orientation robs him of the keen managerial prowess required to steer a large, multiproduct industrial enterprise.



Nambiar: poor financial management

At BEL, a defence ministry organisation flush with funds, Rao probably never faced the cash flow problem that troubles Keltron. According to an internal document of the company, Keltron's targeted turnover for 1987-88 was Rs.117.6 crores. But it achieved only Rs.73.61 crores and ended up with a loss of Rs.2.75 crores. (The net loss for 1986-87 was Rs.5.12 crores. The accumulated loss as on 30 June 1987 was Rs.10.81 crores.) Other slightly different figures from the company's management information report for 1987-88 put the year's sales achievement at around 60 per cent — Rs.73.55 crores against a target of Rs.123.63 crores for Keltron and Rs.90.52 crores against Rs.148.69 crores for its subsidiary and associate companies.

SERVICE LOANS

A lot of Keltron's funds go to service loans. As working capital needs burgeoned, so did interest and bank charges. In the three years from 1983-84 to 1985-86, the net working capital increased from Rs.17.64 crores to Rs.29.59 crores, while interest and bank charges jumped from Rs.3.91 crores to Rs.7.49 crores. By June 1987 bank borrowing for working capital dropped, but only marginally to Rs.29.48 crores.

Keltron: a financial profile *(Rs. crores)*

	1983-84	1984-85	1985-86	1986-87
TOTAL INCOME	28.79	56.85	67.30	70.82

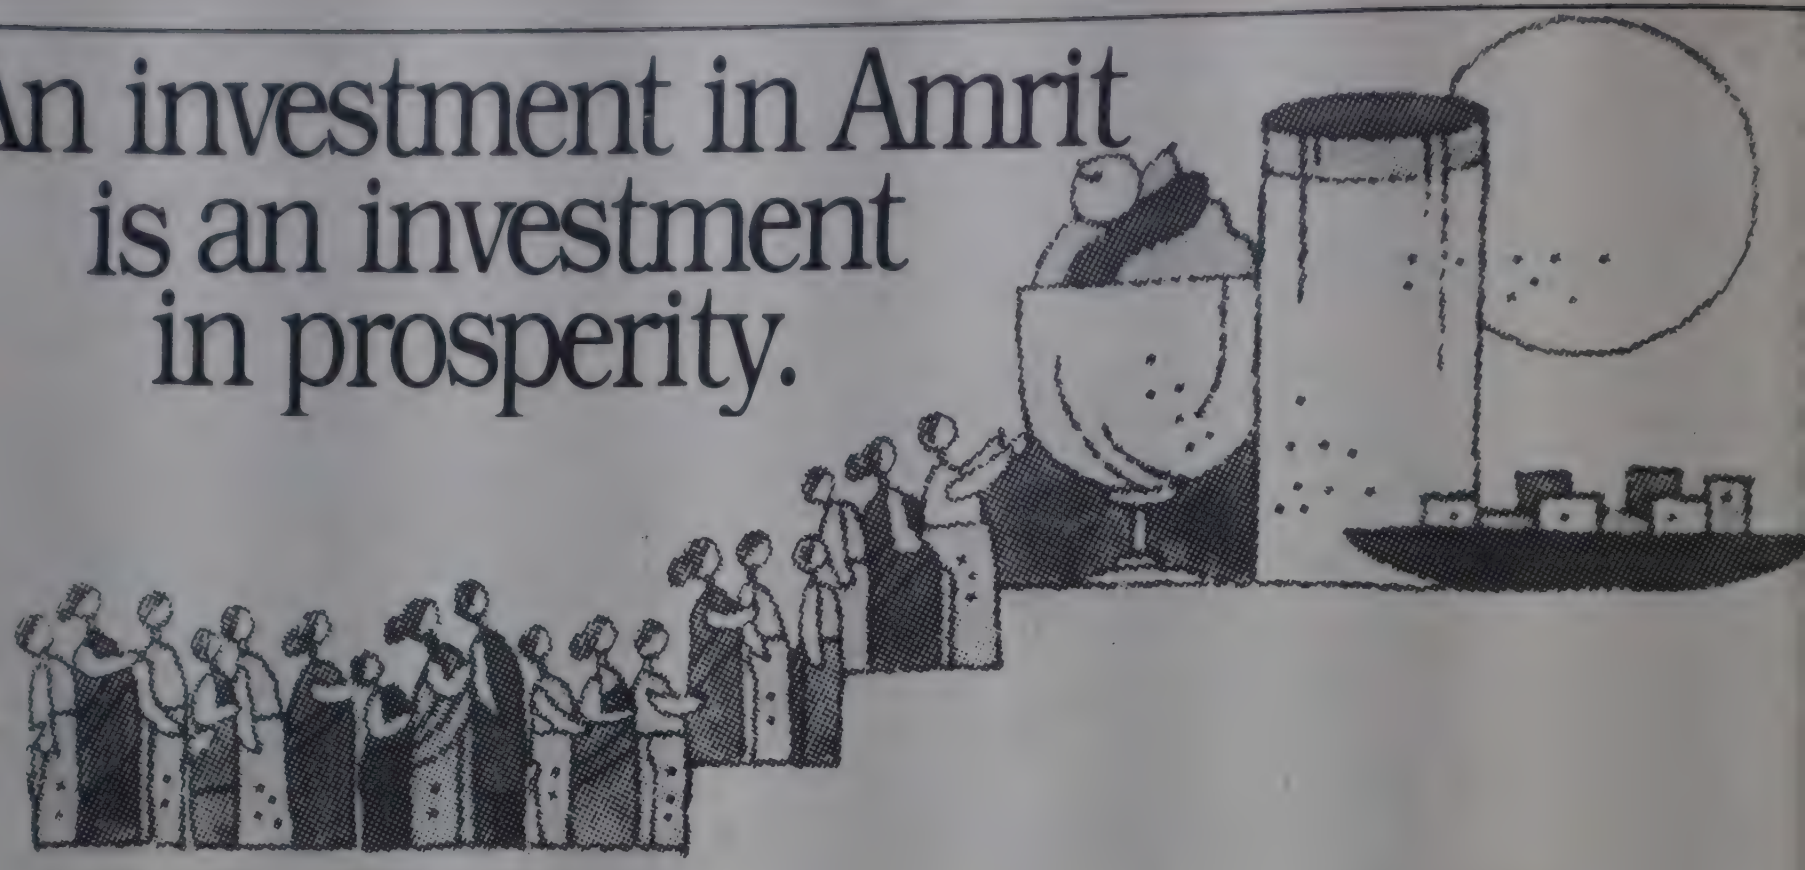
An investment in Amrit is an investment in prosperity.



Promoters' proven capabilities in consumer marketing

Amrit Protein Foods has been promoted by Amrit Banaspati. A Company with spectacular brand successes. Like **Gagan Vanaspati**—among North India's most popular brands, **Ginni Refined Groundnut** and **Cottonseed Oils, Bansari Refined Mustard Oil, Soya Lite Soya Oil** and **Sunehri Teer Vanaspati.** Group products also include **Alfa Washing Soap, Amrit Paper** and the highly popular **Uncle Chipps' potato wafers** (manufactured by Amrit Agro Industries Ltd.).

Promoters' outstanding track record

For 9 months ended 31st March 1988, on a Turnover of Rs. 148.28 crores, the Company made a Gross Profit of Rs. 5.67 crores resulting in Earnings per Share of Rs. 18.70. Reserves and Surplus stood at Rs. 22.31 crores against Share Capital of Rs. 2.48 crores giving a Book Value per Share of Rs. 84.18. And Amrit Banaspati has an uninterrupted 10 year dividend record.

A complete line of fitness foods

Health and fitness are making big headlines these days. And to meet the growing demand for new generation fitness foods, Amrit Protein will manufacture a wide range of products—Soya Milk, Soya Milk Beverages, Soya Dessert and High Quality Soya Paneer.

Proven technology from world leaders

At Amrit, we understand the needs of the Indian consumer. Technology has therefore been selected and adapted accordingly. From **STS—Soya Technology Systems**—a division of the world renowned **Danish Turnkey Dairies.**

Big success in the West!

Products based on this technology have been a **phenomenal success** in the West. In fact, a plant set up as recently as 1985 near Hamburg has substantially increased its capacity.

Products backed by extensive research

Amrit Proteins' products are a result of **extensive market and product research.** And all formulations have been thoroughly **tested through consumer taste trials.**

The market is ready and waiting!

Increasing awareness about nutrition and health has created a growing demand for fitness foods. Indeed, they are among the fast growing products in the West. With the marketing strengths of the Amrit Group, Amrit Protein will open up a whole new dimension in the Indian consumer market.

And you have an opportunity to share our bright future.

To meet a part of the finance required for the project, Amrit Protein is making a public issue of 24,70,000 Equity Shares of Rs. 10 each for cash at par.

An outstanding opportunity for investors to share our growth and prosperity.

An exciting new venture.

PRESSMAN

Rao did introduce some organisational changes "to improve the control and reporting structure". Oddly, the managing director, A.K.K. Nair, has been stripped of his powers. He now oversees only the minor divisions. All Keltron watchers know that organisational shuffling in Keltron is invariably a sign of intense power play. The company often becomes the battleground for politicians to fight their petty wars. Thus, Kora's firing and Rao's hiring are seen to be political decisions, as were some other appointments and transfers. It is this tradition of constant shifts, abrasive and political in nature, that spells continuing uncertainty for Keltron executives.

Keltron's employees have grown restive. The Keltron Employees Union was the first to launch a campaign highlighting Rao's alleged excesses and incompetence. (The union's pro-Congress (I) bias is significant. After all, Rao was hired by the LDF government. By ousting Rao, many a political row could be settled.) In late February 1988, the union issued a highly damaging public chargesheet against Rao accusing him of an extravagant style of functioning (including, for example, frequent trips to his company-rented house in Bangalore). Says general secretary V.J. Joseph: "I expected to face a defamation suit, but the chairman hasn't responded at all." Later, the union stepped up its campaign beginning with a march to the Kerala legislative assembly, followed by a dharna. And now, in a letter campaign, hundreds of employees have begun sending signed letters asking Rao to quit Keltron. The union is to begin an indefinite sit-in before Rao's office demanding his resignation.

The emasculated Keltron: a moratorium on intrigue and in fighting would help

REMOVING RAO

Several leaders of the strongest union, the Keltron Employees Association, affiliated to the CITU, commanding nearly 41 per cent membership, told *Business India* that they too now regard the removal of Rao as priority number one. The association considers Rao's functioning too individualistic and devoid of trust. It finds him unprepared to listen to the unions' point of view. Says one senior manager: "His problem is that he never carried the staff with him."

Knowledgeable observers attribute Rao's weaknesses to the absence of sound, well-meaning advisers. With little perceptive feedback, Rao remains secluded and isolated. He hasn't been able to get a real feel of the organisation and its workers. Many find it shocking that he has not yet visited all of Keltron's units.

Many ofthe charges against Rao were openly aired at a first-ever meeting of government, management and trade unions spread over three days early this year. According to union participants, an exasperated industries minister K.R. Gouri herself expressed dissatisfaction at Rao's performance. If that is true, it represents a sharp turnabout from the hype in Keltron's press note released on Rao's appointment: "He is committed to technology advancement by strengthening the three pillars of R&D, production and management in the service of the nation."

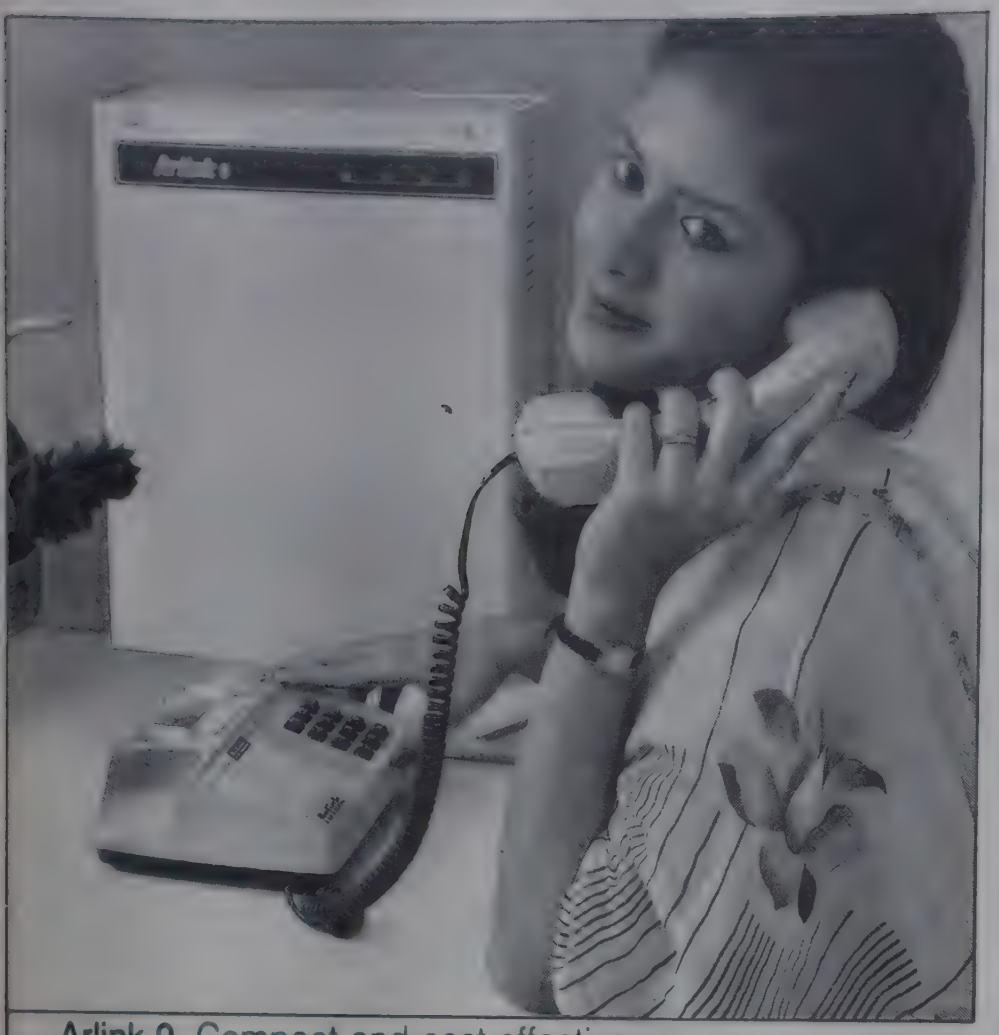
Earlier, in the state legislative assembly, Gouri had conceded Keltron's dismal performance and promised a thorough examination. Such an enquiry would have to ask why the Electronics Research and Development Centre (ERDC), previously the in-house R&D wing of Keltron, was transferred to the DoE, and who really stands to gain from this "sale".

Curiously, this deal was struck without the knowledge or sanction of Keltron's board of directors. This proved to be the last straw for Damodaran who then quit. "The ERDC was never meant for original research. It was always meant to be a design and development centre to support Keltron's industrial activities. Without such a centre, Keltron will suffer in the future," says Damodaran.

Even the compensation originally promised to Keltron by the DoE for the transfer of ERDC has now been scaled down from Rs.7 crores to Rs.3.9 crores. Things are now in a sort of limbo, with ERDC neither completely in DoE's ambit, nor completely out of Keltron's sights. ERDC staff, other than the classified workmen, will probably be put on a contractual basis.

Despite the spreading cynicism about Keltron, there are still many who feel the company is not beyond salvaging. If there appears to be an overemphasis on the role of the chairman, it is only because Keltron has failed to develop a second line of top-flight managers or a core group of professionals who can ensure continuity of corporate missions. The future of Keltron will largely revolve around this. In the next year or so, many top spots including that of MD, will fall vacant. How should this vacuum be filled? Finding an answer will give Keltron and the government of Kerala many sleepless nights. Meanwhile, a moratorium on intrigue and infighting would certainly help.

■ K.G. KUMAR



Arlink 9. Compact and cost-effective.

Arlink 64. Designed to meet your growing needs.

We offer you a full range of EPABX systems...

To meet the special needs of small, medium and large organizations.

The Arlink 9...
The Arlink 64...
The Arlink 128 port...
EPABX Systems with features tailor-made to your growing business needs.

Competitively priced, so you really get good-value-for-money.

Service with a smile – and within 24-hours at that

We believe that an essential part of any hardware package is the service support that goes with it.

Should you need us, for any reason, we will be at your doorstep within 24 hours of your complaint being lodged with us.

For you this will mean minimal stoppage and inconvenience.

High speech technology for the hi-tech age

Arlink EPABX systems are digital microprocessor based ones. Thoughtfully designed to suit local climatic conditions of heat, dust and humidity.

These EPABXs are compatible with all existing systems. And have the ability to adapt to your needs and grow with them.

Proven commitment to office automation

There are 14 branches and 35 service centres to advise you in system selection, design, installation, maintenance and servicing.

An all-India network, at your service, whenever and wherever you require it.

Arlink 128 port. Tailor-made to suit big office needs.

Please send me more
information on the Arlink EPABX.

The official dBASE III PLUS comes to India

Ashton-Tate. Setting the world standard in software.

In data base management systems, Ashton-Tate of USA is an acknowledged leader. And one of the top three PC software companies in the world.

With a wide range of software, including dBASE - the world standard in data base management software.

It's this range of superior software that's now available to you.

Through WIPRO, the exclusive distributors in India for Ashton-Tate packages.

dBASE III PLUS. Full-featured and fully legal

Till now, getting a dBASE III PLUS or any other Ashton-Tate package meant importing it or procuring it illegally, as pirated versions.

With all its consequences, including possible legal action.

Now, WIPRO brings you perfectly legal Ashton-Tate packages.

The complete product with all features and full support.

For instance, dBASE III PLUS from WIPRO is a full set of diskettes: 2 system disks, 2 administrative disks, a tutorial, a sample program and an application generator.

Compare this with what you normally get in a pirated version: 2 diskettes at the most?

Moreover, dBASE III PLUS comes to you with the original manuals, so you don't need any other book to refer to.

You get timely updates and upgradeability to dBASE IV at a nominal cost.

What's more, WIPRO offers you training. By personnel trained at Ashton-Tate, using course materials developed by Ashton-Tate.

dBASE III PLUS. The first of Ashton-Tate packages from WIPRO.

Since its introduction, dBASE III PLUS has revolutionised PC computing - by bringing the full power of relational data base management to the desktop PC.

Till date, the dBASE family of packages has sold over 1.5 million copies - accounting for a phenomenal 60% of the PC data base management system market worldwide.

Also introducing FRAMEWORK III.

FRAMEWORK III is an integrated spreadsheet-word processor-database package.

With a host of highly useful features: graphics, electronic mail and telecommunication facilities, and a programming language called Fred.

Its power and versatility lets you organise ideas and structure them, analyse numbers and graphs, communicate words and definitions.

Ashton-Tate software. WIPRO support.

WIPRO Systems Limited is the leading software company in India.

With a reputation for R&D, technical support and commitment to developing customer specific solutions that is matched by few computer companies in the country.

And with a marketing network that is as strong on customer support as it is in reaching products to 35 cities and towns.

It is this kind of professional ability that has made Ashton-Tate choose WIPRO as its Indian marketing partner.

So when you get any Ashton-Tate package, you're doubly assured.

Of the highly developed Ashton-Tate expertise.

And support from WIPRO you can rely on.

For REGD. USERS:
We will upgrade your dBASE III PLUS to dBASE IV at a nominal cost!

For more details, write to:

MOBIKES

Riding the nostalgia wave

For a certain generation of motorbikers, the newer, trendy and utilitarian Japanese motorcycles — be it Honda, or Kawasaki, or Yamaha — hold no appeal. For them, the monsters of old — weighty and often difficult to handle, but unmatched for sheer power and vintage elegance. Any motorcycle enthusiast worth his salt would like to own a Norton or a Triumph or a Royal Enfield or a Harley Davidson — the higher the capacity the better, and preferably vintage.

In Western Europe, the US and Japan, motorcycle enthusiasts are once again turning to the old brand names — Royal Enfield, Triumph, Norton, Matchless and Harley Davidson. The result is the emergence of a "class" market. "This wave of nostalgia for the old started in the early eighties, as a reaction to the trendy, flashy, utilitarian motorbikes popularised by the Japanese manufacturers," explains C. Sarat Chandran, general manager for international operations, Enfield India Ltd. The company is currently trying to take a segment of this market by playing on nostalgia.

Enfield Bullet: cashing in on the classic wave

STUDY TEAM

Prodded by a dull market at home, the company had decided to go in for exports in 1985. A study team was sent to the UK and Germany, and it recommended an attempt to cash in on the classic wave, especially since Enfield India originally had a collaboration agreement with the UK company. In the last one year, the company made exports worth Rs.30 lakhs, taking the total exports of two wheelers to Rs.2 crores.

"The response has been tremendous," claims Chandran especialy because almost all the old motorcycle manufacturers, including Royal Enfield, had downed their shutters between 1960 and the late seventies. Several factors influenced these closures. First, the younger generation showed a preference for the more speed oriented utility motorbikes. Second, registration rates are higher for the classics because they are heavier and costlier; insurance premiums are also higher. Third, with an improvement in standards of living, more people began to opt for cars.

The fortunes of most of the well known motorcycle companies began to nosedive. BMW is probably the only survivor from this pack and it had to make many product innovations in order to stay in the race.

However, with the revival of interest, Norton and Triumph have reopened their factories. "But the possibility of more factories being reopened is remote due to the small size of the market", says Chandran.

The main target user group is in the 40 plus age range; manufacturers are however trying to rope in the youngsters. In the meantime, users of these motorbikes have formed clubs. Enfield clubs as well as clubs for owners of Norton and Harley Davidson have been formed in the UK, US, France and West Germany. "A lot of these members own the 'original' bikes, go picknicking together and use the club as a forum for exchanging views about their machines. Specialised classic bike magazines have also been launched. When Enfield reintroduced its Bullet in the UK, it received a lot of free publicity from these magazines, which viewed it as an exciting development," says Chandran.

SPECIALISED SEGMENT

The classic bike market, therefore, has become a specialised segment, as opposed to the mass market represented by the utility bikes. The distributors and channels are different for these bikes in the UK. Enfield India, for instance, operates through a concessionaire who distributes the bikes through 20 outlets which deal exclusively in classic bikes. "The margins are higher compared to conventional bikes, since these have become collector's items," says Chandran. Although the utility bikes are technologically superior, the classic bikes are rugged, reliable and are more easily repaired. The interest in Bullets in the West is proved in some measure by the fact that Enfield's office on Anna Salai, Madras, is frequently visited by foreigners with enquiries. "Almost 200 to 300 Bullets are sold annually to foreigners buying in India," the company claims. Almost 100 enquiries have been received from Japan. In addition an American company, Moto America Intercorp, has evinced interest in importing Bullets to the US. Says a company official, "The real growth will come when Enfield enters the US market. If homogenisation clearances are received, this will happen in 1989."

Enfield is planning to introduce a 500 cc model of the Bullet for the export market shortly. With this, it then expects a larger market to unfold.

ADMINISTRATIVE STAFF COLLEGE OF INDIA

announces the following programmes

CORPORATE FINANCIAL STRATEGY AND PLANNING
(January 23 to 28, 1989)

Eligibility: Top level and Senior Finance Managers and Accounts Executives - Vice Presidents (Finance), Directors (Finance), General Managers (Finance), Financial Controllers, General Managers (Corporate Planning) from Industrial and Commercial organisations in public and private sectors and also Senior Executives of Development and Commercial Banks specialising in corporate financing.

Programme Director
Prof. V E Ramamoorthy

Last date for nomination
December 23, 1988

PROJECT MANAGEMENT
(January 23 to February 4, 1989)

Eligibility: Senior Executives involved in project execution and co-ordination, also executives in corporate planning, diversification, marketing and finance, executives responsible for project implementation in Financial Institutions, State Planning Boards, Research and Development Agencies and Construction Industries.

Course Director
S Sridhar

Last date for nomination
December 23, 1988

TEAM BUILDING AND CONFLICT MANAGEMENT
(February 6 to 18, 1989)

Eligibility: Senior and Middle level executives of Public and Private Sector Organisations, Financial Institutions and Government Departments.

Programme Director
Dr. I G Kannan

Last date for nomination
January 6, 1989

MANAGEMENT INFORMATION SYSTEMS
(February 27 to March 4, 1989)

Eligibility: This programme is designed primarily for (i) Senior and middle level executives who seek a concentrated programme to increase their effectiveness in using Decision Support Systems as also to improve their ability to guide and use the advanced information systems and (ii) Professionals in the MIS and computer functions who seek a comprehensive view of the economic management in applying information technology.

Programme Director
Ms. Nirmala Hindupur

Last date for nomination
January 27, 1989

MANAGEMENT OF R & D SYSTEMS
(February 27 to March 4, 1989)

Eligibility: Directors/Managers of 'R & D' Units; Senior Scientists from Industry, Central and State Government Departments and National Laboratories.

Course Director
Dr. A S Ramasastry

Last date for nomination
January 27, 1989

Organisational sponsorship is essential

TELEPHONES

Ringing out the old, buzzing in the new

Alexander Graham Bell may have invented the telephone but it is doubtful whether he would be able to recognise one of today's instruments. Telephones have changed drastically in shape, appearance and circuitry. The latest entry is the DTMF or the dual tone multi frequency telephone which is light years ahead of the old rotary dial type.

Push-button telephones (PBTs) entered the market on a large scale last year when the government okayed technology transfers from Siemens AG (West Germany), Ericsson (Sweden), and ITT of Italy. The Siemens design was picked up by Set Telecommunications, Bharati Telecomm, GECL, L'avenier, Crompton Greaves, etc. Swede (India), Rajasthan Telephones, United Telecommunications and Punwire were the major companies which opted for Ericsson's technology. ITI chose the Italian design.

PBTs are of two types — with decadic pulse dialling and DTMF dialling. DTMFs have certain advantages over the decadic pulse type telephones — they are faster, more efficient and cheaper. The DTMF costs Rs.1,037 whereas the decadic pulse type costs Rs.1,080, according to Mahanagar Telephone Nigam figures. MTNL has already installed about 50,000-60,000 DTMFs in Bombay and Delhi, with plans to install another 100,000 instruments.

LINE-BREAKING CIRCUIT

To understand the advantages of the DTMF, it is necessary to take a look at how the old rotary dial telephone works. What happens when, say, Anant calls up Madhavan on the telephone? In a rotary dial instrument, each time he picks a digit of the telephone number and rotates the dial, the dial moves back and activates a line-breaking circuit. The line-breaking circuit has a tiny mechanical switch which breaks the current in the circuit a certain number of times — if a '1' is dialled the circuit breaks once, if a '2' is dialled the circuit breaks twice, if a '0' is dialled the circuit breaks 10 times, etc. Because there are a maximum of ten breaks, this type of dialling is called decadic pulse type dialling.

The exchange picks up these pulses on the line and decodes them. The first two or three digits identify the area exchange and the rest of the digits correlate to the called party's instrument. When Madhavan lifts the handset, a physical link is established between his telephone and Anant's.

"Hello," says Anant. The transmitter in his handset picks up the sound waves and a diaphragm in it starts vibrating at a frequency that varies with the tone of his voice. These sound signals are converted to electrical signals which are sent over the line to Madhavan's receiver. There, the electrical signals are converted back to sound waves for Madhavan to hear.

The rotary dial instruments are now being pushed out of the scene by the sleek, silent push-button telephones. These use ICs and printed circuit boards and are easier to repair.

The decadic pulse type of PBT is only a sophisticated version of the rotary dial type. Inside, a dialler IC stores each digit as it is punched and transmits it to the exchange, using a line-breaking circuit. The decadic pulse PBT differs from the rotary dial type in that the number has to be stored because the user punches the digits faster than they can be sent to the exchange. But the time taken for the exchange to receive all the pulses is the same as in the rotary dial type.

Light years ahead of old rotary dial tyre

ADVANTAGES OF DTMFS

Here is where the advantage of the DTMF lies. The DTMF transmits the number to the exchange by a succession of tones rather than pulses. For each digit pressed, the dialler IC generates two signals with different frequencies. For example, to identify the digit '1' it uses a combination of 697 Hz and 1,209 Hz signals. These two frequencies or tones are sent to the exchange. As the combination of tones is fixed for each digit, the exchange can decode the signals and identify the number.

Says P.R. Kalyankrishnan of the consultancy firm, Digital Controls and Systems, "The DTMF is much faster. There is no time gap between punching the number and getting the connection. The tones are generated instantaneously whereas in the line-breaking circuit a certain number of pulses have to be generated. Second, the make-or-break circuitry in decadic pulse dialling circuits is not very efficient. Quite often, the correct number of pulses is not generated resulting in a wrong connection. This never happens in DTMFs. Third, the frequencies used in DTMF fall in the voice-grade band and the strength of the signals is not diminished even when transmitted over long distances. Pulses, on the other hand, use frequencies which do not fall in the voice-grade band of the transmission line. They tend to get distorted and are not easily identifiable."

But despite all these advantages it may be quite some time before DTMF telephones totally phase out the rotary dial instruments. The reason is that DTMF telephones can be used only with electronic exchanges. Most of the existing telephone exchanges are of the crossbar and strowger type which can identify only pulses on the line. So, until the old exchanges are replaced by electronic exchanges, we are going to see a lot more of the old telephones.

■ GAYATRI BHANDARKAR

Announcing the MMA Annual Convention

"Competitiveness of India in global markets" is the theme of this year's convention, which will be held on Dec. 16 & 17, 1988. The subjects and speakers are:

ANNUAL CONVENTION 1988

Welcome & Introduction	**Mr. N Kumar,** President, MMA
Strategy Imperatives for Indian Industry for International Competitiveness	**Mr. Suresh Krishna,** Chairman & Managing Director, Sundram Fasteners **Mr. Viren J Shah,** Chairman & Managing Director, Mukand Iron & Steel Works Ltd. **Mr. N Vaghul,** Chairman & Managing Director, The Industrial Credit & Investment Corporation of India Ltd.
International Competitiveness Strategies — Conceptual Aspects Related to Indian Context	**Dr. K M Thiagarajan,** Managing Director, Loyal Textile Mills Ltd. **Mr. Partha S Ghosh,** Principal, McKinsey & Company, Inc.Japan **Dr. C K Prahalad,** Professor, Corporate Strategy, The University of Michigan, U.S.A.
Indian Companies' Experiences in Relation to International Competitiveness	**Mr. V Narayanan,** Chairman & Managing Director, Pond's (India) Ltd. **Mr. Arun Maira,** Executive Director, Tata Engineering & Locomotive Co. Ltd. **Mr. Keshav Prasad,** Vice President, The East India Hotels Ltd. **Ms. Lila F Poonawalla,** Managing Director, Alfa Laval (India) Ltd.

For further details, write to:

3-day Educational Program on

STRATEGIC MARKETING

Based on

STRATEGIC MARKETING MANAGEMENT PROGRAM OF HARVARD BUSINESS SCHOOL

Offered By

Prof. KASH RANGAN of Harvard Business School
with support from
Dr. Manesh Shrikant, DBA (Harvard) and others.
For senior managers in Consumer and Industrial sectors.

Content : Product Policy, Channel Management, Market Segmentation, Pricing, Consumer Behaviour

Venue : The Taj Mahal Hotel, BOMBAY
Date : January 5-7, 1989.
Fees : Rs. 5,000/- per participant (Non-Residential)

Organised by BHARTIYA VIDYA BHAVAN'S
S P JAIN INSTITUTE OF MANAGEMENT & RESEARCH
Munshi Nagar, Andheri (West) BOMBAY - 400 058.

Nominations/Enquiries be sent to:
The Program Co-ordinator at the above address. Tel: 6287454 / 6280396

ATENTS

Saying no to the Paris Convention

ow far will the Americans go with imosing trade sanctions against India if ie latter does not succumb to pressure nd refuses to amend its Patents Act of 970? Will they restrict the flow of high echnology to India, put up a high tariff all and even ban the import of Indian oods?

The US has for long regarded certain rovisions of the Indian Patent Act of 970 as grossly unfair trade practice. One ection of the US Omnibus Trade Cometitiveness Act of 1988 aims at unfair rade practice and gives the President the ight, called the retaliatory authority, to ake the necessary and appropriate acion to overcome, fix and get rid of it. The rovisions are designed, according to Alen Moore, US under-secretary for comherce for international trade, to make it arder for the President to choose not to etaliate.

DEVELOPING COUNTRIES OPPOSE

t has been estimated that the US loses bout $ 50 billion a year because of patnt violations across the world; by no neans a small amount for a country running an annual trade deficit of around 150 billion dollars. Though the violation of US patents is not as blatant in India as n East Asia and Latin America, we, along vith Brazil, have been in the forefront of he opposition to the international conention on patents called the Paris Conention. Any attempts to modify the onvention to meet the needs of developng countries have been consistently sabotaged by the developed world. It has been revised only six times in 100 years.

Pressure to amend the Indian Patent Act of 1970 has been on ever since it came into being. But the latest round of drum beating and war cries in the US has, as a secretary to the government of India put it, scared not only a section of the bureaucracy, but has split Indian industry and business as well as the scientific community. And this is due, to a significant extent, to a statement that Rajiv Gandhi made while presenting the Shanti Swarup Bhatnagar awards to scientists in 1987: Indian effort at import substitution in technology has been "one of the biggest mistakes", he said.

In 1985, Rajiv Gandhi opened the Pandora's box during the Gandhi-Reagan science and technology initiative between the two countries by agreeing to "consider the question of providing for protection and allocation, on a mutually agreeable basis, of any intellectual property rights arising out of the STI programme". To this end, the two governments decided to undertake bilateral discussions with appropriate representatives. A senior official in the prime minister's secretariat felt that "if the US wants to impose trade sanctions on this issue, we ought to be able to say that we are willing to negotiate. We cannot be caught in a position where we have to insist that there is no room for discussion".

INDIAN INTERESTS PARAMOUNT

Most of the secretaries are now refusing to take a public stand on the matter. However, they concede off-the-record that India's interests should be paramount and not bartered away in the name of vague American promises of massive induction of high technology if the Indian Patent Act is amended in line with the Paris Convention. Only Sam Pitroda, adviser, technology missions, said categorically, "Those who are for signing the Paris Convention do not understand the implications because so far no analyses have been made. I respect intellectual property and am not for stealing it. However, we are as yet not prepared for it. Are we in a position to join the club of highly developed nations? We need time, about ten years. Slowly, we must get in that direction in a phased manner."

The industries that would be worst affected if India were to accede to the Paris Convention would be pharmaceuticals and chemicals. Areas like biotechnology would also face the adverse impact of the activities of international monopolists. As V.B. Lal, deputy adviser for technology utilisation in the Council for Scientific and Industrial Research (CSIR), puts it, "The Americans will soon be marketing new seeds and asking for patents." The official stand of the Federation of Indian Chambers of Commerce and Industry (FICCI) is that "the Indian Patent Act

"Medical discoveries must be free of patents"

provides sufficient protection and we are not seeking any amendment". Insiders point out , however, that some industrialists are ready to believe that the floodgates of US technologies will be thrown open to Indians once our patent laws are amended.

The Indian Patent Act says: "Patents are granted to encourage inventions and to secure that the inventions are worked in India on a commercial scale and to the fullest extent that is reasonably practical without undue delay; and that they are not granted merely to enable patents to enjoy a monopoly for the importation of the patented article."

FEATURES OF INDIAN PATENT ACT

Significantly, the Act draws no distinction between Indian and foreign nationals in respect of entitlements to patents and affords equal rights to both. It specifies certain inventions (eg, those relating to atomic energy) as non-patentable. For certain substances, which can be used as food, medicine or drugs, or are produced through chemical processes, no patent is granted for the substances themselves; only the methods or processes of manufacture are patentable. The normal term granted for all patents is 14 years. In the case of manufacturing processes of substances used, or capable of being used, as food, medicine or drug, the term is five years from the date of filing the application or sealing it, whichever is shorter. The Act has the same powers against the government as against any other agency. It provides for judicial relief in the case of infringement of a patent and the courts, in such situations, would grant an injunction as well as either damages or an account of the profit. In short, the Act strikes a balance between the interests of the inventor and those of the consumer.

However, the Americans have found certain provisions, like compulsory licensing, duration, process patents and use by government in public interest, as "extremely detrimental" to their interests, and "major irritants in the way of greater involvement in the growth of Indian business and industry". Robert Pines, the US deputy assistant secretary of commerce, who is reported to have met almost all the Indian secretaries of the relevant economic ministries to argue out the American case, in his meeting with the Confederation of Engineering Industry (CEI) on 15 November, listed inadequate patent and trademark protection in India as one of the key irritants for American businessmen.

Compulsory licensing is a provision that is invoked "if the reasonable requirements of the public with respect to the patented invention have not been satisfied or if the patented invention is not available to the public at a reasonable price". The Americans insist that this provision is not only a deterrent to registration of patents and transfer of technology to India but also that it amounts to confiscation of the patent.

Several countries like France, the UK, Switzerland, Sweden, Israel and Greece have this provision in their legislation. However, it has been rarely used. UN studies have found that in various periods ranging from 1910 to 1963, no more than 101 applications for compulsory licences from 19 countries were received. This totalled less than 0.01 per cent of the total number of patents issued. In India, there has not been a single instance of the government revoking a patent under the provision. In any case, all legislations provide for compensation to the patent holder after taking into account "the nature of the invention, the expenditure incurred by the patent holder in making the invention, in obtaining the patent and keeping it in force and all other relevant factors".

ORIGINAL IDEA

The idea of patenting processes rather than products comes from the German patent law of 1877, which said that the grant of a patent for a chemical product per se had a deadening effect on research since it precluded attempts to arrive at the same product by other alternative processes. The German example was followed by Austria, Brazil, Holland, Hungary, Japan, Mexico, Norway, Poland and the Soviet Union. A switch-over to the product patent law at the current stage of India's development would stunt R&D efforts in the country.

As for the provision for use and acquisition of a patent by the government, first, the patent holder has the right to be compensated. Second, if there is dispute — about either the government's right to use the patent or the compensation payable — the matter is to be judicially decided by the high courts. Also, either party can refer the dispute for a decision. Here again, these provisions merely exist and have never been invoked.

Alarmed by the American pressure, and the signals from the prime minister's office, a section of the 'swadeshi' pharmaceutical industry has sponsored a national working group on patent laws to lobby for a status quo. Also, there are strong reservations about joining the Paris Convention. According to Krishna Iyer, former Supreme Court judge, "an unholy alliance is emerging between a group in the Paris Convention and GATT which says, 'Concede or face sanctions'. India, he says, must not succumb to this.

JUDGES NOT IN FAVOUR

According to Rajeev Dhavan of the Public Interest Legal Support and Research Centre, the Convention "will ensure the patentee guaranteed markets for a substantial period of time, in countries where he does not have to spend a single paisa for manufacturing a product". Legal opinion is strongly against acceding to the Convention. Four former justices of the Supreme Court, Y.B. Chandrachud, M. Hidayatullah, J.C. Shah and V.R. Krishna Iyer, who are known to have differed in the past over several issues, have unanimously disfavoured it. In fact, Shah has opined that joining the Convention would be legally impermissible because it is in violation of the directive principles of state policy enshrined in Article 39 of the Constitution of India.

The Science Advisory Council to the prime minister has opined that there is "no real need at the present juncture to join the Paris Convention before certain detailed studies are completed". It is also argued by the opponents of the Convention that non-accession to it has in no way hindered the induction of technology into India because the number of foreign collaborations approved per year has increased from 183 in 1978 to 957 in 1986.

Opponents of the Convention argue that India has reached a stage of economic development where it may soon become a major exporter of technology to the Third World and even the developed nations. This, according to them, has been possible only because of the protection afforded by the Indian Patents Act of 1970. The advantage gained over the past 18 years should not be frittered away by buckling to American pressures.

As the late Indira Gandhi had said at the 34th session of the world health assembly, "My idea of a better-ordered world is one in which medical discoveries would be free of patents and there will be no profiteering from life or death."

■ ANOOP SAXENA

An International Hotel that values guests as individuals.

Ramada Inn Palm Grove, Bombay

Aloke? Me again!
Had a great day. The hotel is most conveniently located. Near the airport ... very close to the factory site. The deal's been finalised ...

It was a good idea to select the Ramada Inn Palm Grove. Beautiful room, excellent service ... everyone is so pleasant and helpful.

Me? I'm going to the Health Club first thing tomorrow morning. Why don't you join me there? It's a great place to start the day.

Yes, I agree, this is a really good 5-star hotel at most affordable tariffs.

I'll be flying in often. And staying here everytime ... for sure ...

REDEFINING SERVICE STANDARDS, FOR A VERY IMPORTANT REASON.

THIS.

We believe in establishing a lasting, one-to-one relationship with all our clients that is far deeper than what the canons of business dictate a normal business relationship should be. A friendship based on unreserved respect. Unqualified commitment. And unstinting service. For our staff, it means meeting the toughest deadlines — not by taking short cuts, but by working longer hours. It means offering well considered advice, and need-specific solutions. ***At Khimline, we try harder to get into our customers' minds, which is why we now enjoy a place in their hearts.***

Khimline®

THE FRIENDLIER COMPANY TO DEAL WITH.

AS

Collaboration with Texas Air

SAS is making a $ 100 million investment n Texas Air and is also collaborating with that airline on routing and reservaions for the domestic American market. Texas Air, together with its subsidiaries, Continental Airlines and Eastern Airlines s among the largest domestic carriers in North America. It will now offer SAS passengers direct linkage to a number of points in the continental US. SAS is seeking to increase its presence on the American continent also through acquisition of a 40 per cent shareholding in Aerolinas Argentinas.

PRICE WATERHOUSE

Possibility of outside capital

The new chairman of Price Waterhouse worldwide, Joseph Connor, has indicated that his firm will need to raise outside capital if it is to compete with other financial service organisations. So far, because of the partnership structure of accountancy firms, it has not been possible for them to raise capital from non-accountant investors. However, the European Community regulations have now been amended to allow accountancy practices to sell 49 per cent of their shares to outsiders. In the UK, it is expected that by 1990, accountancy firms will be allowed to sell up to 25 per cent of their shares to outsiders.

RENAULT

French dispute with European Commission

The French government plans to write off 12 billion francs (Rs.2,500 crores) of state loans to the nationalised car company, Renault. The debt write-off and the injection of a further 20 billion francs of state funds into the company is being closely scrutinised by the European Commission to ensure that it does not give Renault an unfair competitive advantage over other European car manufacturers.

Earlier a British government plan for a debt write-off for the state-owned Rover car company also ran into opposition from the European Commission. The French government's move to bail out the nationalised Renault is also facing severe criticism from the private sector car manufacturer, Peugot, which argues that the massive state aid to Renault will distort competition not only in the European market but even in the domestic French market.

SANTORI

Tie-up with Allied Lyons

Japan's biggest liquor company, Santori, has entered into a share swap and joint marketing agreement with Allied Lyons of UK. Santori will be investing $ 150 million in Allied Lyons and Allied Lyons will be investing 6 billion yen in Santori. A joint marketing company called Santori Allied Lyons will import and distribute in Japan Allied Lyons liquor brands like Teachers, Ballantyne, Canadian Club and Courvoisier.

FIRST BOSTON

Merger with Credit Suisse First Boston

The Wall Street investment bank, First Boston, is being merged in its European offshoot Credit Suisse First Boston. Company sources say that with the growing internationalisation of the world's capital markets, the previous rationale of First Boston handling American business and CSFB handling European business is not relevant any more. As part of the restructuring process, the Saudi Arabian billionaire, Suleiman Ollayan, will be taking a 30 per cent equity stake in the merged company.

R.J.R. NABISCO

Biggest ever leveraged buy-out

Wall Street has been stunned by two enormous leveraged buy-out bids for R.J.R. Nabisco, the leading American tobacco and foods group. The group's tobacco division, R.J. Reynolds, makes Winston cigarettes while Nabisco division includes biscuits like Ritz, Oreo, Huntley and Palmers, and Peek Freans.

Of the two leveraged buy-outs, each of which is in the region of $ 20 billion, one is from the management led by company chairman Ross Johnson, backed by the Wall Street firm Shearson Lehman Hutton. Arrayed against them is a leveraged buy-out bid by the Wall Street specialist, Kohlberg Kravis Roberts. KKR is backed by Wall Street heavyweights, Morgan Stanley, Merrill Lynch and Drexel Burnham Lambert.

PHILIP MORRIS

Bid for Kraft Cheese

The US tobacco company, Philip Morris, manufacturer of Marlboro cigarettes, is planning to extend its food interests through a $ 11 billion takeover bid for Kraft Cheese, Philip Morris already has a very large presence in the food industry after its takeover of the leading food company, General Foods, which produces Maxwell House Coffee and Miller beer.

Kraft is opposing the bid and is seeking to implement a poison pill recapitalisation plan which will make the company much more difficult to acquire.

HOOVER

Takeover by Maytag

The leading vacuum cleaner manufacturer, Hoover, is being acquired by rival home appliance producer, Maytag, in a $ 1 billion transaction. The combined group would have sales in excess of $ 3 billion per annum and is expected to be a leader in the world appliance market. Earlier Maytag had taken over the Magic Chef group which is also a leading manufacturer of home appliances.

LLOYDS BANK

Link with Abbey Life

Lloyds Bank is hiving off its insurance and retail financial services division to the leading UK insurance company, Abbey Life. The consideration is the issue of 380 million new Abbey Life shares to Lloyds Bank which will give the bank a 58 per cent holding in Abbey Life. Following this, the insurance company is being renamed Lloyds Abbey.

At more than 3 MIPS Aurelec's 20 MHz 2AT6-XL surpasses all AT's

Aurelec Data Processing Systems announces the fastest ever **AT**, the **2AT6-XL**, which at 20 MHz outperforms even an **80386** based system running at 16 MHz, or offers performance equivalent to a **3AT6** running at 20 MHz! It is impossible to ignore such outstanding performance, even in a confusing computer market where vendors emphasise price over quality, performance and technical support. The **2AT6-XL** is so powerful that Mainframe terminology is required to describe its power: the **2AT6-XL** offers **3.24 MIPS** (Million Instructions per Second) at an unbeatable price. No wonder **Aurelec** has sold, simply by word of mouth, more than 75 **2AT6-XL** systems even before its formal announcement. The perceptive buyers know that the time saved more than pays for this speedier computer.

The **2AT6-XL** offers you much more computer for just a little more cost. You get **Hercules** and **CGA Graphics, 1.2 MB 5-¼" or 1.44 MB 3.5" Drives, Enhanced 101-key keyboard, LIM-EMS 4.0 and OS/2 support, 3.24 MIPS performance**, and the best price/performance ratio ever offered on a microcomputer. Further, the **2AT6-XL** accompanies you in your growth path with its guaranteed **SUPERLAN** connectivity. **SUPERLAN** is the time proven, high performance multi-user Local Area Network on which hundreds of **Aurelec** computers are running all over the country, at a wide variety of prestigious locations.

The **2AT6-XL** is the ultimate result of the latest in computer technology.

Technical details are very important, but there is also an equally important question of back-up service. When you buy **Aurelec** products, you also buy into the finest computer back-up service network in South India, where **Aurelec** has more branch offices/service centres than any other computer manufacturer.

Aurelec **2AT6-XL: Naturally outstanding**

Bajaj Auto

Equity doubles after bonus issue; dividend halved; sales and profit lower; new products to be launched

The company has recommended a dividend of 40 per cent on enhanced capital after a bonus issue in the ratio of 1:1. Last year it had recommended a dividend of 80 per cent on a pre-bonus capital. The dividend outgo remains the same at Rs.7.53 crores because the new shares allotted will also rank for full dividend. The company has subdivided its Rs.100 (face value) paid-up equity shares into 10 shares of Rs.10 each.

The company's working during the year was adversely affected by a seven-month strike at its Waluj (Aurangabad) factory. Consequently, sales have fallen by 12 per cent to Rs.507.78 crores (previous year: Rs.575.28 crores). Due to the higher cost of raw materials and other inputs the operating profit slumped to Rs.29.53 crores (Rs.96.62 crores), a decrease of 25 per cent. The company paid interest of Rs.17.70 crores (Rs.16.22 crores). The gross profit is down by 30 per cent at Rs.78.92 crores (Rs.13.31 crores). The provision for depreciation went up to Rs.42.68 crores (Rs.27.76 crores). After provision for taxation of Rs.7 crores (Rs.21 crores), the net profit dropped by more than 50 per cent.

The company's production of 2- and 3-wheelers was lower at 510,635 (601,091). The installed capacity is 620,000. During the year, the company purchased 7,906 Priya Scooters (3,805). The company is awaiting government clearance to enhance the capacity of its Waluj factory from 300,000 to 1,000,000. The Kawasaki Bajaj KB-100 motorcycle was launched in February 1988 and reports indicate that it has been well received. The company proposes to launch three new 2-wheeler models during 1989.

The company's Waluj plant commenced its normal operations after the management and workers signed a settlement valid until December 1991. During the year, the company built a track for testing vehicles under road conditions. Two technical assistance agreements with foreign companies were also signed. Both these collaborations provide for technical knowhow transfers and will not involve any significant import of CKD packs or components. The company has imported and installed a VAX-8800 mainframe computer system at its Akurdi (Pune) plant. This will enable the company to further computerise its various operations, and provide speedier flow of information leading to improved efficiency.

The average sale price per scooter rose to Rs.9,420 from Rs.9,099 and the average cost price rose to Rs.7,505 from Rs.7,060. The raw material cost as a percentage of sales was 50 per cent compared to 47 per cent. The cost of raw materials such as ferrous and non-ferrous metals increased from Rs.34,250 per tonne to Rs.38,885 per tonne. The total foreign exchange earned by the company was Rs.50.54 crores.

Hind Cocoa

Lower dividend; marginal increase in sales; fall in operating and net profits; equity doubled; work on new project commences

The company recommended a dividend of 20 per cent on an enhanced capital of Rs.8.40 crores, arising after a bonus issue in the ratio of 1:1. Last year it paid a dividend of 30 per cent. The company's sales stood at Rs.73.70 crores (previous year: Rs.73.42 crores). The company's results were adversely affected due to inadequate monsoons in many parts of the country. There was a substantial drop in the growth of the chocolate market. Hence operating profits were 10 per cent lower than the previous year at Rs.10.53 crores (Rs.11.75 crores). Net profit was lower by 16 per cent at Rs.3.74 crores (Rs.4.46 crores), due to higher interest of Rs.1.69 crores (Rs.1.48 crores). The provision for taxation was lower at Rs.3.40 crores (Rs.4.10 crores). The company's equity has increased from Rs.4.20 crores to Rs.8.40 crores due to 1:1 bonus shares allotted in April 1988. The reserves of the company stood reduced at Rs.9.69 crores (Rs.11.67 crores).

Chocolate continues to be the company's main product and accounted for 64 per cent of sales. Malted food, viz Bournvita, accounted for 30 per cent of the total sales. During the year there was considerable new product activity. In the chocolate group the company launched Crackle, Orange, Strawberry Krisp, Mello and Wildlife Bar. Choc-O-Cheer, a food drink, was launched and is believed to be doing reasonably well. The company entered biscuits markets with the launch of Cadbury Cookies and Milky Bite Biscuits. The company is planning to enter the lucrative ice cream business in the summer of 1989. The plant is likely to be located in Hyderabad.

In addition to the two factories in Thane and Pune, the company has been granted the necessary permission to set up a factory at Malarpur in Madhya Pradesh. Work on the project has commenced and commercial production is expected to begin by mid-1989. The price of cocoa beans, a major input, increased from Rs.29,435 to Rs.31,045 per tonne during the year. The company launched a "Grow More Cocoa" campaign in the four south-

n states. This is expected to help the mpany obtain a regular supply of this tical raw material at reasonable prices.

iturgia Biochemicals

igher dividend; equity reduced substan· ılly; slight increase in sales and net ofit

he company has declared a dividend of 5 per cent for the year ended March 1988 previous year: 22 per cent). The divi- end is paid on an equity capital of s.3.38 crores, whereas in the previous ear it was on an equity of Rs.5.25 crores. The reduced capital came about after he RBI approved the cancellation of the quity share capital held by the overseas artner, John & E Sturge Ltd of UK, for a otal consideration of Rs.4.86 crores. turge's entire shareholding of 1,868,735 quity shares (Rs.10 face value + Rs.16 remium) has been repaid from the quity and reserves of the company. As a esult of this the earning per share is igher at 87 per cent (46 per cent).

The company registered sales of Rs.24.58 crores, a 10 per cent increase over the previous year. The company has made an operating profit of Rs.6.88 crores (Rs.6.29 crores). After depreciation of Rs.1.74 crores (Rs.1.68 crores) and taxation of Rs.1.45 crores (Rs.1.40 crores), the net profit is Rs.2.93 crores (Rs.2.43 crores), a growth of 21 per cent.

The production of citric acid was higher at 3,783 tonnes compared with 3,414 tonnes in the previous year because of the favourable market trend throughout the year. The plant ran at 81 per cent of its installed capacity of 4,650 tonnes. The average selling price was Rs.36,445 per tonne (Rs.35,255 per tonne). The company's calcium carbonate plant ran at 76 per cent of its installed capacity of 35,000 tonnes per annum. The average selling price for the year was Rs.3,865 per tonne (Rs.3,470 per tonne).

The company is planning to modernise its citric acid plant for the optimum utilisation of its registered capacity of 5,000 tonnes a year. The company is also modernising and revamping its calcium carbonate plant at Rishikesh (UP). Moreover, the company has successfully commissioned an anaerobic effluent treatment plant to treat the effluents from its citric acid plant at Surat.

TRENDS

Tata Unisys

Tata Unisys has done reasonably well in the first half year ended June 1988. Sales at Rs.15.16 crores are 27 per cent higher. Profits have kept pace with sales. The operating profit is up by 26 per cent at Rs.2.55 crores. The interest burden has increased to Rs.0.67 crores (Rs.0.46 crores). The provision for depreciation has remained at the same levels but tax provision is higher at Rs.20 lakhs (Rs.10 lakhs).

The profit after deducting all these expenses is higher at Rs.0.95 crores compared with Rs.0.73 crores in the corresponding period last year.

The company has not been able to improve its margins, even though it achieved higher sales and profits. The selling and administrative expenditure has risen to Rs.9.34 crores (Rs.6.50 crores).

The company made some major breakthroughs in the international software market. It has signed a deal with an international bank (Banque Indo Suez) to develop software for the bank's international network. The company expects a revenue of Rs.2 crores, initially, from this contract.

The company has constituted a committee, to try and develop new markets for its B-23 system. It has also bagged a prestigious Rs.34-crore government order.

The merger of Burroughs and Sperry Corporation into Unisys has greatly benefited Tata Unisys. It has broadened its range of products, thus offering a greater variety to cater to the growing needs of the market.

Soon it is going to become the sole distributor of Sperry Corporation's products in India. This will appreciably increase the revenues of the company.

NOCIL

The company has turned out excellent results for the first half of the current year. The overall profitability has improved substantially.

Sales at Rs.156.44 crores are 17 per cent higher. The operating profit has jumped to Rs.31.16 crores from Rs.20.71 crores in the corresponding period last year. But the interest burden too has increased substantially to Rs.5.15 crores (Rs.3.89 crores).

The company has made substantially higher provisions this time. While provision for depreciation rose to Rs.7.26 crores (Rs.6.73 crores), tax provision jumped to Rs.7 crores (Rs.2.20 crores).

Even after these higher provisions, the company managed to earn a higher net profit of Rs.11.75 crores (Rs.7.89 crores).

The operating margins have improved by more than 4 points to 19.92 per cent (15.48 per cent). While higher sales realisation was one of the reasons for this, internal cost controls too contributed significantly. The raw material cost as a

percentage of sales went down to 40.19 per cent (41.30 per cent). The production of ethylene and agrochemicals has been higher.

The company has raised the price of MEG by Rs.1,500 per tonne. This will be reflected in the results of the second half. It has also increased the price of PVC by Rs.2,250 per tonne. This is in line with the worldwide rise in prices due to scarce output and higher demand.

The company plans to introduce two new pesticides, Phosphamidon and DDVP, in the second half; the excellent monsoon makes this an opportune time.

The company's diversification plans are slowly taking shape. It is investing in the equity of a new project for the manufacture of BOPP films.

With the price hike and proposed new introductions, the second half will probably be as good as the first one, if not better.

Peico Electronics

The company has gone back into the red. Though sales are higher, profits have taken a beating. Sales are higher by 10 per cent at Rs.170.27 crores but the operating profit is 17 per cent lower at Rs.12.85 crores (corresponding period in the previous year: Rs.15.57 crores). The interest burden has risen to Rs.12.04 crores (Rs.10.89 crores). The provision for depreciation is Rs.4.96 crores (Rs.4.55 crores). There is no tax liability.

The company incurred a loss of Rs.4.15

crores. But after bringing forward Rs.4 crores from last year's balance sheet, the net loss is Rs.15 lakhs compared with a profit of Rs.11 lakhs in the corresponding period of the previous year. The company has resorted to this window dressing as operating margins are lower at 7.55 per cent (10.10 per cent). The ratio of raw material cost to sales is higher at 55.71 per cent (52.59 per cent). The wage bill is also higher at Rs.21.09 crores (Rs.18.08 crores). The other expenses too have risen to Rs.43.03 crores (Rs.40.86 crores). The company has, during the year, introduced a new range of entertainment items under the name "Moving Sound" and a new range of radios under the name "Mega". Projects for the manufacture of new colour TV components are in various stages of implementation.

The Pune factory is expected to add to profits this year. It will produce advanced medical ultrasound equipment.

SAE (India)

Both the sales and the profits of the company rose sharply in the first half of the financial year.

Sales have jumped to Rs.41.57 crores (corresponding period of the previous year: Rs.29.46 crores). The operating profit has increased to Rs.5.06 crores (Rs.3.73 crores). Margins slid down to 12.17 per cent (12.66 per cent). The company paid higher interest charges of Rs.2.14 crores (Rs.1.93 crores) and made a higher provision for depreciation — Rs.81 lakhs (Rs.62 lakhs). The provision for tax was higher at Rs.40 lakhs (Rs.19

			(Rs. crores)

lakhs). Despite this the net profit has appreciated to Rs.1.71 crores (Rs.99 lakhs).

The raw material cost has increased to Rs.19.71 crores (Rs.13.24 crores). As a percentage of sales, the cost of raw materials rose from 44.94 per cent to 47.41 per cent.

The company still remains the leader among manufacturers of power transmission towers. The government's increasing emphasis on power generation augurs well for the company's products. To meet the expenditure for its expanding business, the company has launched a rights equity issue of 553,500 shares at a premium of Rs.50 each. The company has reserved the option of retaining 15 per cent oversubscription.

After the issue, its equity capital will stand at approximately Rs.2.35 crores while reserves will shoot up to Rs.13.85 crores.

The company made its last bonus issue in 1983 in the ratio of 1:1.

Elecon Engineering

The company has posted higher sales and profits in the first half of the current year. For the first time, turnover crossed Rs.60 crores in the first half. Sales at Rs.64.44 crores are 30 per cent higher than the turnover of Rs.49.69 crores achieved in the corresponding period last year. But the operating profit has risen only marginally.

Higher costs and lower margins have combined to reduce the company's profitability. The raw material cost rose sig-

nificantly from Rs.31.81 crores to Rs.44.20 crores. The wage bill too is higher and selling and distribution expenses have jumped to Rs.8.34 crores (Rs.6.51 crores). After servicing an interest burden of Rs.2.46 crores (Rs.2.42 crores), the company has made a lower provision for depreciation — Rs.2.90 crores. The provision for tax is higher at Rs.1.43 crores (Rs.0.94 crores).

Profits have kept pace with the growth in sales. They have increased to Rs.1.27 crores (Rs.1.01 crores). The margins stood at 12.51 per cent of sales (15.62 per cent).

This year the company has managed to bag a few bulk orders, including a Rs.29-crore order from the NTPC.

Judging by the results of the first half year, the company should end the year with higher sales than the record Rs.100 crores achieved last year.

RESULTS ANNOUNCED

Ceat Tyres

The company has performed better in all areas during the year ended 30 June 1988. It produced 2.6 million tyres, more than any other company in the industry. The company announced a dividend of 27.5 per cent (previous year: 25 per cent) on an increased equity of Rs.14.76 crores. The capital was increased by Rs.5.44 crores from Rs.9.32 crores after conversion of debentures on 1 March 1988.

The total income has increased to Rs.372.63 crores (Rs.320.20 crores), a hike of 16 per cent. The gross profit at Rs.41 crores (Rs.28.99 crores) shows a better margin at 11 per cent of sales, compared to 9.85 per cent before. After providing Rs.5.60 crores (Rs.7.29 crores) for depreciation and Rs.15.33 crores (Rs.9.40 crores) for tax, the company reports a net profit of Rs.20.07 crores (Rs.12.30 crores), an impressive jump of 63 per cent.

Ceat appears to have carved a niche for itself in a highly competitive market. It reports excellent domestic response to the recently introduced formula I radial tyres, and has made further inroads in the quality conscious US and West German markets. Exports were valued at Rs.12.90 crores (Rs.12 crores).

Blow Plast

The leader in the moulded luggage industry, Blow Plast, has turned in a good performance for the year ended 31 July 1988, with turnover going up to Rs.82.19 crores (previous year: Rs.75.54 crores). Gross profit, however, is lower at Rs.2.5 crores (Rs.5.87 crores in 1986-87). The profit figures for 1986-87, it must be noted, included a realisation of about Rs.2.5 crores from the sale of investments.

After depreciation of Rs.83.54 lakhs (Rs.85.54 lakhs), and taxation of Rs.6.5 lakhs (Rs.61 lakhs), the net profit is Rs.33.13 lakhs (Rs.3.07 crores). Dividend has been pruned to 15 per cent (30 per cent). During the year, the company maintained its premier position in moulded luggage, toys and furniture, and also bagged the top exporter award of the Plexconcil for the fifth consecutive year.

VIP Industries

The company's turnover in a year of industrial strife rose marginally to Rs.68.9 crores (Rs.67.45 crores) during 1987-88. Although troubled labour relations led to a two-month lock-out at the company's Nashik factory, it managed to maintain its sales levels. The company declared a dividend of 12 per cent.

Gross profit is higher at Rs.6.84 crores (Rs.6.38 crores), but depreciation of Rs.2.14 crores (Rs.2.06 crores), and interest of Rs.3.82 crores (Rs.3.29 crores) have pulled down the profit before tax to Rs.87.32 lakhs (Rs.1.03 crores). After adjustments and taxation of Rs.14 l (Rs.16.5 lakhs), the net profit is Rs. lakhs (Rs.96.65 lakhs).

Ahmedabad Advance Mills

The company has wiped out its accu lated losses and has declared satisfact results for the year ended 30 June 19 No dividend was declared.

Sales increased marginally by 2.45 cent to Rs.73.16 crores (Rs.71.40 cror but the gross profit declined by 28 cent to Rs.2.86 crores (Rs.4 crores). the company reported a profit of Rs.2 lakhs against a loss of Rs.88 lak (1986-87). This was arrived at after p viding Rs.2.26 crores (Rs.2.34 crores) depreciation and making other adju ments.

Voltas

The company's performance during t year ended 31 August 1988 is better, wi turnover at Rs.544.7 crores (previo year: Rs.458.4 crores) and gross profit Rs.29.9 crores (Rs.24.4 crores). Divide has been hiked by six points to 22 p cent. After interest of Rs.11.19 cror (Rs.10.61 crores), depreciation of Rs.3.8 crores (Rs.2.91 crores), and taxation Rs.5.12 crores (Rs.4 crores), the com pany's net profit is Rs.9.7 crores (Rs.6.8 crores). While the dividend payout Rs.2.81 crores (Rs.2.04 crores), the com pany has transferred Rs.6 crores to r serves (Rs.2 crores), and carried forwar Rs.2.01 crores (Rs.1.12 crores).

Ballarpur Industries

The company improved its turnover dur ing the year ended 30 June 1988 to Rs.37 crores (Rs.342 crores in the year before) and earned a gross profit of Rs.21.6 crores (Rs.23.91 crores). Dividend ha been maintained at 22 per cent.

After depreciation of Rs.15.91 crore (Rs.18.09 crores), taxation of Rs.91 lakh (Rs.90.5 lakhs), and balance brought for ward from the previous year, the amount available for appropriation is Rs.11.1 crores (Rs.11.72 crores). While dividend takes away Rs.3.3 crores, the company has transferred Rs.51 lakhs to the genera reserves.

INTRODUCING BHUTAN BOARD

SOUTH ASIA'S FIRST WOOD-BASED GRADED PARTICLE BOARD.

Now, South Asia gets the chance to use the most sophisticated particle boards anywhere.

Boards manufactured by Bhutan Board Products Limited, a joint venture of the Royal Government of Bhutan.

Boards that are created in an advanced computerised plant that employs proven technology used and valued the world over. Supplied, installed and commissioned by M/S SIEMPELKAMP of West Germany. Pioneers and world leaders in the field.

Boards that come in a vast range to meet all requirements. From doors to desks, flooring to ceilings, partitions to panelling, and kitchen cabinets to audio speaker cabinets.

Boards that are as tough as they are economical. As user-friendly as they are attractive. As dimensionally stable as they are uniformly thick. And as versatile as they are durable.

Bhutan Board. The finest graded particle boards available. Now within your reach.

BHUTAN BOARD PRODUCTS LTD.

Bananas ?!!! In an ad for Asphalt packaging ?!

The banana is a classic example of Perfect Packaging. The peel is light, protective, attractive and easy to unpack.

Problem? To pack MOLTEN ASPHALT in paper bags.

The Approach to the solution: Our top brains studied the Banana.

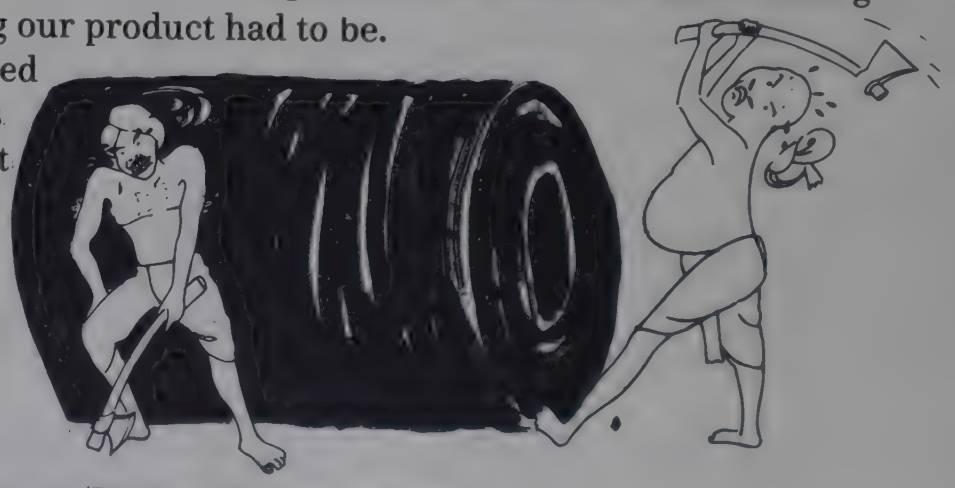
Eccentric?

Crazy?

May be,
but then so was the problem.

Asphalt is sticky and we had a feeling that the end user wanted Asphalt and not Paperised *Damber*. An unusual problem, the solution required some radical Brainstorming.

The banana peel represented everything our product had to be. The team absorbed its lessons and applied it to paper. The resulting breakthroughs went into TARPAK. It is very Strong, yet Light and easy to Handle. The attractive TARPAK is a revolution in Asphalt packaging. It costs less than 30% of the conventional methods, and best of all getting the Asphalt out is as easy as, well... **peeling a banana.**



Paper Bags available for MOLTEN wax, Special cements (Portland, Sulphate resistant, Oil well & Rapid hardening) Chemicals in fine powder and granule form, China clay, Carbon black, PVC Resin, Gypsum, Hydrate Lime, Fertilizers Food grains & perishables like Wheat, Maize, Rice, Sugar, Flour, DV Salt, Soya meal, Beet pulp and for any other product you can think of.

dotographic

Nippon Denro Ispat

This is a company which has carved out a name for itself in the business it is currently in — galvanised plain and corrugated sheets — as well as in the capital market. It was the first galvanising plant to be set up in India and declared a 20 per cent dividend in the first year of operations. In the capital market it is known to invite public subscription to its capital after it has completed a project — not before.

This time, Nippon Denro Ispat Ltd (NDIL) proposes to issue 814,000 secured fully convertible debentures of Rs.250 each, totalling Rs.20.35 crores. The issue which opens on 6 December will finance a 125,000-tpa cold rolling mill complex, a 50,000-tpa PVC and colour coated steel sheet plant, and the expansion and modernisation of the existing galvanising line to increase the capacity to 125,000 tpa of GP/GC sheets. While the first project has commenced trial runs, the colour coating plant is expected to follow suit in early 1989.

The company declared a dividend of 20 per cent in 1985-86, 22 per cent in 1986-87 and a 12 per cent interim in 1987-88. Its monopoly operation enabled it to do this. Till early 1987 it was the only plant making GP/GC sheets in India.

Anticipating competitors in the marketplace, the company decided to make available a range of products to cater to different segments of the market. Says R. Ramamurti, president, "We knew that all these lines were coming up. The only way we could score over the competition was by providing a wide range of products and by product differentiation." One of the first steps taken was to ensure supply of raw materials — cold rolled steel. To avoid shortage of this important raw material, NDIL had to stock several months supply mostly through imports. This meant deployment of expensive working capital which added to its interest cost. "With the installation of a cold rolled mill, we don't have a problem any more. Moreover, we will sell to outside consumers," says Ramamurti.

According to Ramamurti, the modernisation and expansion of the galvanising line would make the investment cost per tonne of NDIL "the lowest in the industry and also mean a substantial saving in operational costs".

The plant would be the first in India to produce a variety of hot dip coatings. Ramamurthi says that the company will be the first in the country to produce and market PVC/colour coated steel sheets with applications in automobile bodies, domestic appliances and in construction. The annual demand in India for paint-coated steel sheets is around 100,000 tonnes.

Grasim Industries

"Get a blue chip company share for Rs.35." This message from the company on several billboards in the country's metros heralds Grasim Industries' 1,678,571 secured, redeemable, partly convertible debenture issue of Rs.70 each for cash at par amounting to Rs.11.75 crores. The issue opens on 12 December.

The object of the issue is to partly finance the expansion of the company's cement plants located in Madhya Pradesh from 1 million tonnes to 2 million tonnes at a cost of Rs.145 crores.

Grasim today is a highly diversified company and reported a turnover of Rs.675.67 crores during 1987-88 and a pre-tax profit of Rs.21.99 crores during the same year. Compare this to the turnover it achieved in 1967-68 (Rs.45.18 crores) and pre-tax profits (Rs.5.30 crores) and it is evident that today the company is one of India's mega corporations. At a press conference in Bombay, Aditya Vikram Birla, chairman, proclaimed that Grasim is the largest producer of both viscose staple fibre (of various types) and rayon grade pulp made from bamboo and hardwood. He also said that the company was the second largest manufacturer of caustic soda in India and after the expansion of the cement plant would become one of the largest producers of this building material.

The partly convertible debenture has a face value comprising two parts — a convertible portion of Rs.35 and a non-convertible portion of an equal amount. The convertible portion will automatically be converted into one equity share (Rs.10 paid-up) on 31 March 1989. Thus the conversion premium is Rs.25 against a market price of Rs.90.

A host of new diversification projects for which the company has secured Letters of Intent and MRTP approval will help the company maintain its lead in the Indian corporate sector once they are commissioned. According to Grasim's prospectus the following projects are on hand:

- 6,000 tonnes per annum of hydrogen peroxide
- a gas-based sponge iron project with a licensed capacity of 600,000 tonnes per annum
- a 13,860 tonnes per annum poly-aluminium chloride project
- a 600 tonnes per annum hydrzine hydrate project
- a 6,600 tonnes per annum chlorosulphuric acid project
- a licensed capacity of 5,000 spindles for various types of worsted

These projects are in an embryonic state and the company is yet to finalise the financial package for them.

According to a calculation made by the company, a shareholder with 100 shares before 1966-67 now holds over 1,100 shares without having to make any additional cash investment. This is on account of six bonus issues (inclusive of the recent 3:4 bonus issues) that the company has made in the past 21 years.

Amrit Protein Foods

This is a new company promoted by the existing UP-based Amrit Banaspati Company. Amrit Protein Foods (APF) will enter the market with an issue of 1.5 million equity shares of Rs.10 each for cash at par. The issue opens on 12 December. The object of the issue is to provide part of the finance required for setting up a plant to make 19,800 kilolitres of soya milk beverages and soya paneer. The total cost of the project is Rs.14.50 crores.

When it commences production in early 1989, APF will be the second company to enter the yet uncertain area of soya milk and soya foods. It may be recalled that Noble Soya House Ltd, a joint venture by Bhiwandiwalla of Great Eastern Shipping Company and Godrej, which launched its range of Great Shake soya milk did not meet with great success.

Naresh Kumar Bajaj, chairman of APF, is unfazed by the earlier experience of Noble Soya. Says Bajaj, "We have a different concept. Ours is a food company and not a soft-drink company." According to him the company will introduce successively and at short intervals soya milk, soya foods (paneer), soya-based soft drinks and desserts.

He expects to hit paydirt because "we

THE ORIGINAL AMERICAN JEANS. NOW IN INDIA.

Slip into your Wrangler jeans. Feel it snuggle against your skin. Mould itself into your body shape. As only Wrangler can.

Simply because it's made so painstakingly. Thread by thread. So the special polyester core of the thread makes sure it doesn't shred for the entire life of the jeans. The button, the zipper, the rivets, the label are all pure, original Wrangler. Even the material is the same. As many as 70 cruel and minute checks precede any pair of jeans being branded Wrangler. From the classic regular 'Blues' to acid-wash to stone-wash jeans. After all, they are made for rather special people. People who would never accept second best. So when someone says you're looking so free, easy and extremely desirable in your Wrangler jeans, you know it'll stay that way.

WRANGLER IS THE REGISTERED TRADEMARK OF BLUE BELL INC.
A SUBSIDIARY OF V.F. CORPORATION U.S.A.

SHEER 20 101 88 A

have chosen a technology from Soya Technological System, a division of Danish Turnkey Dairies, Denmark which has perfected the process of removing the bugbear of soya products — the beany flavour. They have demonstrated this by setting up a plant which is working very successfully in West Germany."

Kanthal Bimetals

This is another project from the Swedish group Kanthal Hoganas. Following in the footsteps of its predecessor, Hoganas India Ltd, Kanthal Bimetals India Ltd (KBIL) proposes to make a public issue of 535,000 equity shares of Rs.10 each for cash at par after setting up a 100-tpa plant to manufacture thermo-bimetal strips at Hosur, Tamil Nadu. The issue opens on 12 December while the plant is expected to start commercial production by January 1989.

As in the case of Hoganas India, the KBIL product was originally imported from Hoganas, Sweden for the last two decades. Therefore, the company enjoys an initial advantage as it knows its market and the market is familiar with the company's product. If the KBIL plant delivers bimetal strips of international standard, success is assured, comments Virendra Sud, director of KBIL, who is also managing director of Hoganas India. "Our early experience has shown that technology transfer and absorption from the parent company does not pose any problem. We expect the plant to start production on schedule and we expect the product to be in the market soon."

The collaboration agreement between KBIL and Kanthal Sweden is fairly comprehensive and valid for eight years. It guarantees inter alia the achievement of full production capacity. But what is more important is that Kanthal Sweden has a 43 per cent stake in this project. This alone should ensure the full commitment of the technology transferers.

Tata Honeywell

This is a company which forms an important part of the "strategic plan for the Tatas" prepared by Ratan Tata, chairman Tata Industries Ltd.

Tata Honeywell (TH) is making a public issue of 250,000 equity shares of Rs.10 each for cash at par, totalling Rs.25 lakhs. The issue opens on 28 November. The object of the issue is to provide part of the finance for the company's project to manufacture digital process control systems with a capacity of 240 systems a year. The plant is being set up in Pune and the project cost is Rs.11.70 crores.

TH is a joint venture between Tata Industries and Honeywell Inc, USA. Tata Industries intends to play an important role in bringing to India frontier industries such as oil exploration, telecommunications, bio-technology and now process control equipment.

Tata Honeywell proposes to manufacture an advanced range of control equipment, the Honeywell TDC-3000 distributed control systems. The distributed control system has applications in power plants refineries and in the petrochemical and steel industries. According to the prospectus, the manufacture of the hardware through imports of the assemblies/sub-assemblies is scheduled to start in the first quarter of 1989.

Sparr Equipments

Sparr Equipments Ltd which is going public with a Rs.1.2-crore issue on 28 November is one of the leaders in the country in the manufacture of hydraulic water well drilling rigs. These rigs are generally considered far superior in efficiency and ability to mechanical and pneumatic rigs.

Sparr was founded in 1981 by two Bangalore-based technocrats A. Sugavanam, the chairman of the company and S. Ravichandra, currently its managing director. The company which has its manufacturing facility at Yeshwantpur, near Bangalore commenced production five years ago and has been doing consistently well ever since. In 1985 against sales of Rs.2.2 crores it earned a profit after tax of Rs.9.7 lakhs. By last year sales had jumped to Rs.8.9 crores and profits to Rs.62.7 lakhs, helped no doubt by the drought in the country.

But drought or no drought the company feels that there is a huge market for its equipment in the country since an increasing number of farmers are using bore wells or tube wells for irrigation.

The company has been doing well. Its shares have a high book value and the current issue of 600,000 equity shares is at a premium of Rs.10 each. The capital raised will be used to expand its existing factory and set up a new one at Nelamangala, also near Bangalore.

STOCKMARKET REVIEW

Watching for changing patterns

(For the period 7 to 19 November 1988.)

After a steady turn over the previous fortnight, prices on the stockmarkets continued their upward movement on heavy trading volume. *The Economic Times* All-India Index of Ordinary Share Prices rose 4 per cent to 368.3 (a record) and the Bombay Stock Exchange Index rose 2.8 per cent to 719.07 (also a record). Trading volumes in Bombay crossed a record Rs.120 crores during the special one hour new-year session on 9 November, while averaging Rs.85 crores during the fortnight.

Changed style. However, speculators have changed their style over the past month. The previous fortnight had been marked by steady prices and heavy volumes, which suggested that speculators were booking profits and realigning portfolios away from concentrations in just a few shares, with their net sales being absorbed mainly by institutions and the investing public. A study of price movements during the fortnight under review appeared to confirm this trend. Out of the 20 most heavily traded scrips in the B group in Bombay, the prices of 14 moved down, four moved up and two were unchanged. That this should happen while the market as a whole was strong implies that speculators were shifting their activities to new scrips over the fortnight while squaring off positions in the scrips they felt were well-priced. This has some important implications for investors, on which more below.

The scrips that currently attract the market's fancy are from the earlier inactive group such as Bajaj Hindustan, or are new scrips such as Tata Telecom and Invel Transmissions. Meanwhile, the BSE finally recognised the existence of speculation in the unspecified group by levying daily margins at the rate of 20 per cent on nine scrips in this group, including Finolex, Ingersoll Rand and South India Viscose. The BSE also raised the percentage of daily margins on 32 A group scrips from 10 per cent to 20 per cent for forward buyers and from 5 per cent to 10 per cent for short sellers.

The increased trading volumes have put pressure on the BSE clearing systems. As a result, settlements in Bombay were delayed by a week. This was bad news for badla financiers who will now receive a rate that is effectively 33 per cent lower than was expected at the start of the settlement on 7 November. As a result, they are certain to demand an increased rate in future settlements to offset losses from future possible delays. The badla session was, however, held in Calcutta, and the badla rate averaged 48 per cent. But the delay was good news for speculators, who greeted the BSE's announcement of a delay in the settlement period by marking prices up by about two per cent.

In the forward list, Tata Steel and ACC continued to be the most actively traded shares. The rise in the ACC share prices was, however, stemmed by institutional sales and sales by speculators in Calcutta where ACC has recently joined the forward list. Institutions sold on reports that the cement cartel has weakened and that cement prices have fallen to Rs.65 per bag over the past two weeks from Rs.72.50 per bag. ACC was Rs.389 at the fortnight's close, up from Rs.380 at its start, while Tata Steel rose from Rs.1,047.50 to Rs.1,092.50.

Pursuit of control. Modi Rubber continued to be the favourite of institutions seeking to consolidate their hold on the company in the face of the Modi family squabble. As a result of their buying, the scrip closed the fortnight at Rs.97, up from Rs.75. While there had always been little doubt that the public financial institutions would continue the shareholder activism that was earlier witnessed in the Shaw Wallace case, few expected such a vigorous pursuit for control. Perhaps the institutions, thwarted in the Shaw Wallace case, wished to leave less to chance. Small shareholders who often dearly desire a greater say in family-company matters (and usually penalise such family-controlled companies with lower price-earnings multiples in the marketplace) should be grateful.

Meanwhile, MRF continued to rise, unaffected by being traded only for spot delivery. The scrip closed at Rs.385, up from Rs.305. The third tyre share in the specified list in Bombay, Appollo Tyres, also rose sharply to Rs.69 from Rs.58. Apart from tyre company shares, the shares of Mangalore Chemicals and other fertiliser scrips were strongly traded in response to the improved fertiliser market. Mangalore Chemicals closed at Rs.55, up from Rs.41.75, while Southern P trochemicals closed at Rs.66.50, up fro Rs.53.

Among other forward shares, Baj Auto announced excellent progress at i annual general meeting, causing the scr — always a market favourite — to ri from Rs.382.50 to Rs.412.50. Glindia wa heavily traded in Bombay following new of new product developments — the scri rose to Rs.97 from Rs.84. Kirloskar Cun mins was also in the spotlight, rising t Rs.92.50 from Rs.78.25. In Calcutta, GK was actively traded, rising to Rs.18 fro Rs.10. The scrip was priced at Rs.6.25 on May. Another Calcutta-based scrip, Hir dustan Aluminium, which had been lan guishing of late following a decline i gross profit margins over the eigh months of the current year to Augus rose from Rs.125 to Rs.134 upon announ cement of a hike in aluminium prices b 17.5 per cent. Indian Aluminium also ros for the same reason from Rs.38.50 t Rs.48.

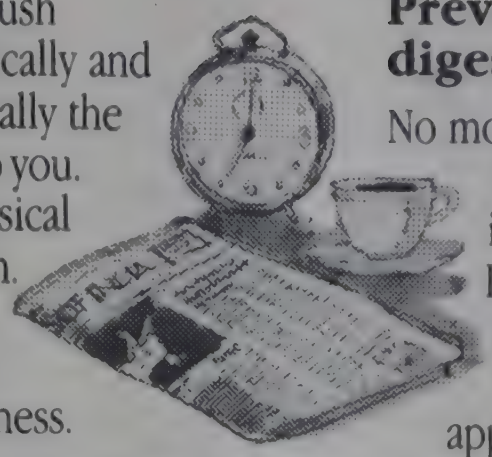
Corporate news continued to encour age markets, with Amal Rasayan, Am forge, Boots, J.B. Chemical, Tata Chemical and Z.F. Steering announcing strong improvements in performance Z.F. Steering rose to Rs.67 from Rs.56 while J.B. Chemical rose to Rs.42 fro Rs.34.

While the flow of strong corporate news and a generally favourable economic climate caused by the monsoons guarantee an active market over the coming year, this does not necessarily mean a strongly rising market. Once scrips are well-priced, the prices tend to peak out. Speculators — usually the first to sense such things — have recently been offloading a large number of actively traded scrips, and this should make small investors suitably cautious. On the other hand, speculator sales are also partly due to overbought positions — and thus too much risk exposure — in too few scrips, and such sales (which temporarily depress prices) then provide an opportunity for a small investor to get a good price. Speculators are also under pressure to sell shares because the BSE has levied high daily margins on some scrips. Such pressure is bound to increase as share prices rise and the value of forward positions consequently increases. This factor could also depress the prices of some actively traded shares in the short run even though the market may generally keep rising.

■

RAFIQ DOSSANI

Everyday you push yourself – physically and mentally. Naturally the pressure gets to you. Mental and physical fatigue. Tension. Digestion problems. Low resistance to illness.



That's why you need Chyawan Shakti –nature's own formula to fight symptoms of stress–created with over 46 precious herbs. Brought to you by Dabur.

Chyawan Shakti–combats stress, revitalises mind and body

The effects of stress on your nerves can be disastrous. Chyawan Shakti has ingredients like Draksha, Ashwagandha, Akarkara and Gokshur. These act as demulcents and tonics, while Kesar and other herbs build up physical vigour and invigorate the mind.

Prevents acidity and digestion problems

No more antacids and anti-flatulence pills. Natural ingredients like Akarkara, Lavanga, Madhu and Mukta Shukti Pishti prevent acidity, help digestion, stimulate appetite, relieve gastric and intestinal pains and help regular bowel movement.

Rich in Vitamin C to fight illness

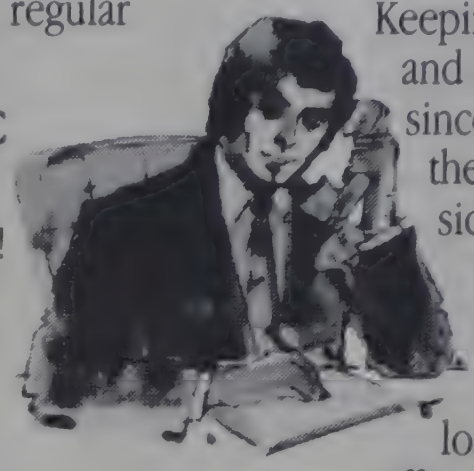
Who needs orange juice!

Chyawan Shakti has an abundance of Amla, the richest source of Vitamin C.

This, along with other herbs in Chyawan Shakti, acts as a powerful immuno-stimulant to build up resistance to common ailments.

Fountain of youth

Chyawan Shakti supplies you with Iron, Calcium, Minerals, Magnesium, Phosphorous and acts as an all-round health tonic.



Keeping you feeling young and raring to go. And since it is wholly natural, there are no harmful side effects. So go ahead and give it a try.

You have nothing to lose except the adverse effects of stress and strain!

SPECIALLY CREATED FOR PEOPLE WHO WORK HARDER

NEW Dabur CHYAWAN SHAKTI

AYURVEDIC TONIC
TO KEEP YOU GOING STRONG

NATIONAL INDEX

Long overdue

The new Bombay Stock Exchange National Index (BSENI), which is ready and awaiting the finance minister's official inauguration — as and when he finds the time — is aimed at replacing the existing BSE sensitive index with one of a more national nature.

The new index, which was compiled by the office of the general manager, Research Analysis & Data Processing, BSE, after sifting data for months, has been compiled on the basis of an arithmetic mean. The basket of 100 scrips taken into consideration is inclusive of the 30 scrips that make up the BSE sensitive index. The balance is made up by 14 scrips quoted only in Bombay; 50 scrips quoted on the BSE as well as other exchanges and six others quoted on other exchanges but not on the BSE.

More accurate. "The BSENI has been created to overcome the drawbacks of the BSE sensitive index which arose because it is highly weighted in favour of companies with high market capitalisation," says a Bombay-based broker. Consequently, the index reflected largely the price movements of scrips such as Reliance Industries Ltd, Tata Chemicals, Century Spinning, and TISCO among others. Once in use, the BSENI will reflect a more accurate state of the country's premier secondary market.

In compiling the new index, the market price of each share in the basket was weighted with the number of shares outstanding. This was done to ensure that the impact of a given scrip on the index was proportionate to its market importance. The market value itself was determined by multiplying the price on a given date with the number of shares that were outstanding.

According to R.R. Nair, general manager of the BSE, "The index for a day is calculated as a percentage of the aggregate market value — of equity shares of all sample companies on that date — of the average market equity value of the same companies during the base period. The advantage is that this gives flexibility to adjust for price changes on account of rights and bonus share issues."

The BSENI basket of scrips

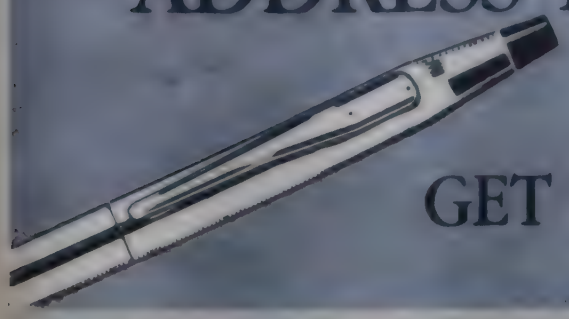
Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per shares for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price

HOW TO OWN THE BEST BUSINESS ADDRESS IN U.P.'S FASTEST GROWING TRADE CENTRE.



GET THE EDGE OVER YOUR COMPETITORS. BOOK YOUR OFFICE SPACE NOW.

Lucknow. The business centre for India's single largest market.

Lucknow is today Uttar Pradesh's fastest growing business centre, with improved communication and transport facilities, and an ever widening sphere of commercial possibilities.

Pioneer Plaza—the modern commercial complex in the heart of Lucknow.

The Pioneer Plaza is just the kind of commercial complex Lucknow needs.

Located in the centre of the city, it is just a few minutes' walk from Hazratganj, the major shopping mall.

So every public and business amenity is within your reach. Making it the ideal address for banks, public sector undertakings, government and corporate offices.

Facilities that make business sense.

At the heart of the Pioneer Plaza is the Business Centre which provides every kind of secretarial facility. Everything, from FAX to computers is being installed for the convenience of the occupants of the Plaza.

Other distinctive features of the Plaza include free hold land, a spacious lobby in marble, covered basement parking and open parking, six automatic elevators, fire-fighting facilities with three independent fire escapes, attached toilets for all units and stand-by generators for essential services.

Fidelia Constructions— impeccable credentials.

The Pioneer Plaza project has been undertaken by Fidelia Constructions (P) Ltd., a company promoted by the well known industrialist family—the Jaipurias. Dr. Raja Ram Jaipuria, who has rich and valuable experience in Financial Planning and Management heads the show as Chairman & Managing Director. Until recently, Dr. Jaipuria was also Chairman & Managing Director of Swadeshi Polytex Ltd., proven the most cost-efficient polyester fibre plant in the country. The Board includes Dr. Ramesh C. Vaish, who is a Chartered Accountant & Vice Chairman of Jaiprakash Industries Ltd., one of the largest constructio companies in the country, with several prestigious overseas contracts. Shri Shailendra Swaroop, who is a Director in companies like Modi Xerox, Ester India Ltd Bihar Sponge Iron Ltd., and Samtel Colour Ltd., and Senior Advocate Supreme Court of India, is also on the Board. Assisting the Board is a team of highly qualified Civil Engineers and other professionals—all with impeccable credentials.

Renowned architects.

The Board has also engaged the designing and structural expertise of M/s. Kothari & Associates to benefit its activities. The firm's list of architectural achievements includes the designing of the Bank of Baroda—New Delhi's 14-storeyed office building, Reserve Bank of India Headquarters, Jaipur, office building for Deptt. of Electronics, New Delhi, ONGC Works at Dehra Dun, Hotel Centaur, New Delhi, Shakti Bhawan, Lucknow's 15-storeyed office building, Escorts Heart Institute, New Delhi, Indira Gandhi Institute of Medical Sciences, Patna,and other buildings that have come to be known for their architectural excellence.

Pioneer Plaza. A profitable investment.

Today, real estate is the most profitable investment you can make. Especially when you consider the added benefits of Pioneer Plaza. So it makes sense to invest now and watch your money multiply as the construction progresses.

Space availability and payment modes

You can book office space of a minimum size of 500 sq. ft. At prices that will make you smile. For your convenience, two payment plans have been introduced. An Interest Free Payment Plan and a Cash Down Payment Plan.

For more information, mail the coupon below. And book your space in the best business address in Lucknow.

Note: CD: convertible debenture; NCD: non-convertible debenture including debentures that were earlier partially convertible for which the conversion is over.
Debenture yield is calculated as a percentage of market price without adjusting interest due component. This can make a significant difference in actual return.
The fact that the debenture market is generally active can be surmised from the dates of last business done. Hence readers are advised to seek suitable professional advice before deciding.
All care is taken to ensure accurate and up-to-date information.

ULKA-11377

No luck again

In Investor Contest 277, although L&T slumped from Rs.145.00 (7 October) to Rs.131.00 (11 November), many contestants predicted its price correctly. Many contestants also anticipated the fall in Telco's price from Rs.752.50 (7 October) to Rs.745 (11 November). But in the case of the remaining four scrips, most estimates were wide of the mark. We hope to have some winners in the next round.

How to enter

On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict t prices of each of these shares as on 23 December 1988, and send in your entry by 13 December 1988. The winne in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry whicl has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

Rules:

1 There is no entry fee.

2 The list has been selected on the basis of what we consider are actively traded and interesting scrips on Indian stockmarkets.

3 The price mentioned last in the official quotation list of the stock exchange (if there is a series of such prices against the name of the share) will be taken as the correct answer. The official list of the particular stock exchange, which will be referred to, is given against the name of each scrip. If for some reason the stockmarket is either closed on 23 December 1988, or there are no transactions for the six scrips chosen below, then the quotations for the nearest working day prior to 23 December 1988, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 13 December 1988.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of **the Business India group of publications** is entitled to enter the contest.

WHAT MAKES TEXTEL THE IDEAL MESSAGING SYSTEM.

The TEXTEL doesn't forget. Ever. If the power fails, a battery back-up protects any message stored in its memory. No other messaging system can deliver this. And that's just one reason why TEXTEL is the ideal messaging system.

The TEXTEL ensures quick, efficient, and inexpensive messaging within any organisation that has dispersed operations. It stores, sends, and receives messages over the telephone line, at speeds up to 20 times that of telex. Night-time transmission and other automatic functions make for enormous money savings.

In addition, the TEXTEL doesn't need air-conditioning, corrects errors automatically, and allows normal telephone use. Not to mention its ability to handle forms, automatic printout of messages, personal security codes, and a built-in directory. And it functions as a long-haul terminal, too.

The TEXTEL is a product of India Tele-Comp Limited (ITL), a venture of the Dalmia group; and British Telecom, world leaders in telecommunications.

The TEXTEL is the only contemporary system specifically designed and dedicated to messaging. It doesn't perform a whole lot of functions, but it does one thing very well. And if messaging is what you need, that's something to remember.

TEXTEL

The dedicated messaging system.

19 NOVEMBER 1988

A deserted beach

Aah! Out in the open at last, breathing all that fresh air. I mean, there is a limit to the amount of fragrance emanating from brokers' armpits that one can inhale in a lifetime. And with volumes on Dalal Street outnumbering the combined volumes of trading on the supposedly better-established exchanges of Hong Kong and Singapore, I figured that it would be good to get out for a while into the Indian backwaters and infuse clean air into my lungs. Besides, CJ isn't a bad sort of chap to be around with.

"Well," said CJ, looking up at the gentle blue sky, "sure beats Bombay doesn't it?"

"Yes," I retorted, "but if only they would build better roads. It was a rather bumpy ride and a bit long too. Obviously, certain people have been driving around these areas once again what with their decision to revive their proposal for a city across Bombay Harbour."

"Oh, come on, where is your spirit of adventure? You guys always claim that you are in the pioneering field of merchant banking and yet you can't even take a few bumps. How do you handle a situation where an issue you underwrite fails?"

"Pioneering we are, yes", I replied a bit taken aback at this unexpected onslaught, "but adventurous — now that we leave to others who want to fly miniature planes or teach their five-year old daughters how to drive Marutis. And, as far as issues failing is concerned, the question does not arise because we just sell the unsold shares to those mutual funds which seem to be forever starved of floating stock."

The shadow of a cloud passed across CJ's face. "Mutual funds," he muttered, "mutual funds. And here I am whiling my time away on some deserted beach."

"In 1986 when the first offshore fund was launched, we were all told that the sky is the limit. That billions of dollars were going to come rushing into India. And look what's happened — barely two hundred million dollars later, no one wants to touch Indian equities. No foreign investor wants to give our booming stockmarket a serious thought. Why, CJ? Why has it ended like this?"

CJ watched a crab scurrying across the golden sands. "The answer, my friend, is very simple. We had the wrong people market our country and the offshore funds. But the government has realised its folly and is now making amends."

"You mean private sector companies are finally going to get their approvals to launch their funds? That should be good business for us in the new issues market."

"Hold your horses, guy, that's not what I'm saying. What the government has finally decided to do though is to appoint a professional public relations guy who will drum up enthusiasm for India to such an extent that it will create a lasting demand for the shares of the closed-ended funds that are already listed on the LSE and the NYSE."

"Well I'm glad that they have finally hired the guys at Saatchi and Saatchi. After all if they can sell Thatcherism to unemployed millions, surely they can sell unemployed millions to the Thatcherites."

"No, no, they have not hired Saatchi. And they haven't hired the guys at Goodwell Investor Relations either."

"Not film stars and playback singers again I hope," I remarked. "What the government has decided to do though," said CJ ignoring my remark, "is to send out the various chief ministers on NRI-yatras and see which one has the maximum positive effect on the share prices of the funds and who can promise the largest addition of NRI projects for the country. The guy who generates the maximum benefits will be given a sole agency to sell all future NRI bonds and government offshore bonds. My sources tell me that a foreign passport of an unnamed country will also be arranged."

"You're not serious are you, CJ," I queried, worried about how the NRIs would feel when they realised that the greatest PR men of all time — people who have fooled hundreds of millions of people for over 40 years — have been let loose among them as a cat among the pigeons.

"Oh, no, the die is cast. The ball has been set rolling and, apparently, with the general election just round the corner and no one quite sure who will get to hang on to their seats of power, the CMs are more than willing to take on this challenge."

26 NOVEMBER 1988

The Mousetrap

Well, the game goes on. Every trading day the index opens higher than the previous day's closing. In the din of the floor there is that deafening silence as eyes turn, ears perk up, while everyone waits to see what Big Brother is going to do. But Big Brother watches in quiet content. The market slips slightly below the opening highs but still ends the day comfortably over the previous closing.

The wheels keep on turning, spinning faster and faster — everyone is on a roll. Employees are making as much as their annual salaries in one fortnight. But within this frenzy of speculation there is the reality of rising corporate earnings. They ask me if the higher prices are justified by these higher earnings. I do not have an answer. But what I have is a fear of the unknown — the unrecorded transactions by illiquid investors who are betting away their lives. If the music were to stop, if the party were to end, then who will foot the bill? Who will be left holding worthless pieces of paper?

MICO. The spark that moves millions.

Millions of vehicle owners all over the country get off to a flying start. Everyday. With MICO.

MICO spark plugs incorporate the late international technology from Bosch, West Germany – pioneers and leaders in spark plug technology.

An excellent example of this is the MIC Super – India's first bi-metal electrode spa plug.

MICO spark plugs are available in eve part of the country.

So when you fit a spark plug, stick to proven quality. Buy MICO. And ride on confidently!

MICO

LICENCE BOSCH

MICO makes a matching spark plug for *every* Indian vehicl

To a high tech company, technology is a business. To a superte company, it's a religion. We don't just market technology at Hinditr We live, breathe and worship technology. We live by a set of commandmer and understand our moral responsibilities. We realise that once you ventu into supertech, you become dependent on it. Your productivity and pro hinge on it. And your customers expect a service capability that far excee

average of the industry.So our total dedication to customer support goes
yond warranties and service contracts. For instance, our engineers often
rk round the clock to help you in a crisis. Or as a stop-gap measure, we will
en make alternative arrangements to help you tide over an unexpected
mputer system failure. Because customer support isn't a mere slogan at
nditron. It's our first and most cherished commandment.

Hinditron. Beyond high tech, there's supertech.

We're the first. We are the future.

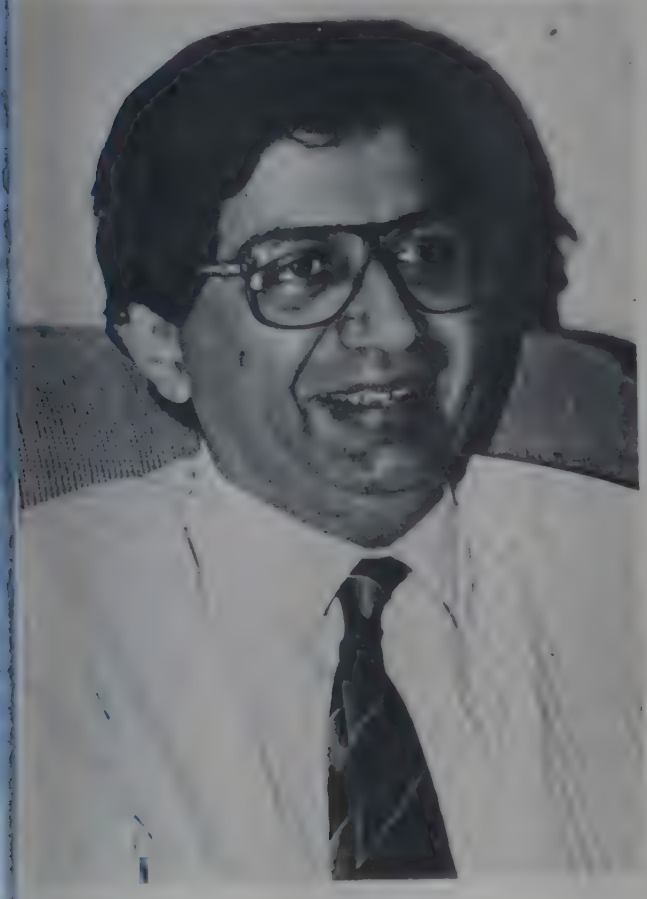
PRESSMAN

Youngest and tallest

Hoshang Billimoria *is deputy chief executive officer of Tata Sons, Bombay*

At 6 feet 3 inches, Hoshang Billimoria, deputy chief executive officer of Tata Sons, the holding company of Tatas is among the tallest at the top at Bombay House, the Tata power centre. At 37, he is also among the youngest.

However, as an avid collector of exotic varieties of goldfish, Billimoria stands alone. Not many corporate high-flyers share this hobby. He himself is a bit shy about it and feels that goldfish collectors



are generally not taken seriously. "It is a relaxing hobby," he says, "not only are these fish fascinating but watching a cool aquarium after a full day's work helps bring one's blood pressure down." Over the years he's acquired many varieties from various parts of the world. He even tried breeding them, but did not succeed. "They lay eggs, but the eggs don't hatch," he laments.

Rare distinction. Breeding goldfish must be one of the few things that Billimoria did not succeed in doing. He's had an impressive career that led him four months ago through the portals of Bombay House as the deputy to Tata Sons' chief executive officer, Minoo Mody. He's unabashed when stating that he's had a brilliant academic career and a natural aptitude to do the right things at the right time. He topped Bombay University's B.Com examination in accounting and then went to England to do his chartered accountancy with the prestigious Ernst & Whinney. Here he had the rare distinction of winning the highly rated Deloitte Plender Prize at both the intermediate and final examinations.

"I've always been highly ambitious," he says. In 1977, just back from England, he was picked up by S. B. Billimoria & Co, one of the top accounting firms in the country. Two years later, at age 28 he was made one of the seven partners of the 85-year old firm.

Though he had always wanted to be an accountant 15 years as a chartered accountant brought along frustrations for Billimoria. "Auditing, to be honest, can't fulfil the creative urge in you. It is not a creative profession. Even at Billimorias he says, "I tried to present myself to my clients as an advisor rather than just an accountant. I tried to give my job a general management direction."

A desire to "get into more entrepreneurial environment led Billimoria to Tata Sons. "I'd been talking to Minoo Mody for a while," he says, "and things just worked out four months ago."

Tremendous clout. Tata Sons is basically an investment company that originally promoted most of the present day large Tata companies. Over the years its holdings in the larger companies like Tisco and Telco have shrunk to less than 3 per cent. However, it still has tremendous clout as an apex consultant body and the chairmen of most Tata companies sit on its board. It is the only company whose chairmanship J.R.D. Tata has not relinquished.

However, the highly successful Tata Consultancy Services, Tata Consulting Engineers, are all independently run divisions of the company. It also has a large holding in Tata Unisys, of which Mody is currently the chairman. Billimoria's work mainly involves strategic and long-term corporate planning for all these companies. He sits on the managing committees of the consultancy services and assists Mody with his companies.

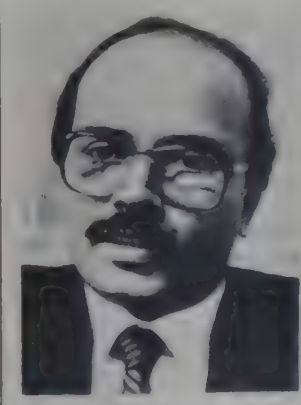
Had he expected such a powerful position at such a young age? "Well I've always been ambitious," Billimoria says, "and I knew I'd do well in whatever I took up. So I did not really surprise myself."

■ N. RADHAKRISHNAN

FRONTRUNNERS

It is just over a year since **S. Parmeshwar**, 26, started working. But already at Cyanamid India, where he's a manager, his responsibilities are awesome. Says Parmeshwar, "My brief is to develop human resources for a company which is expanding rapidly." He seems ideally suited for the job, with master's degrees in personnel management and industrial psychology.

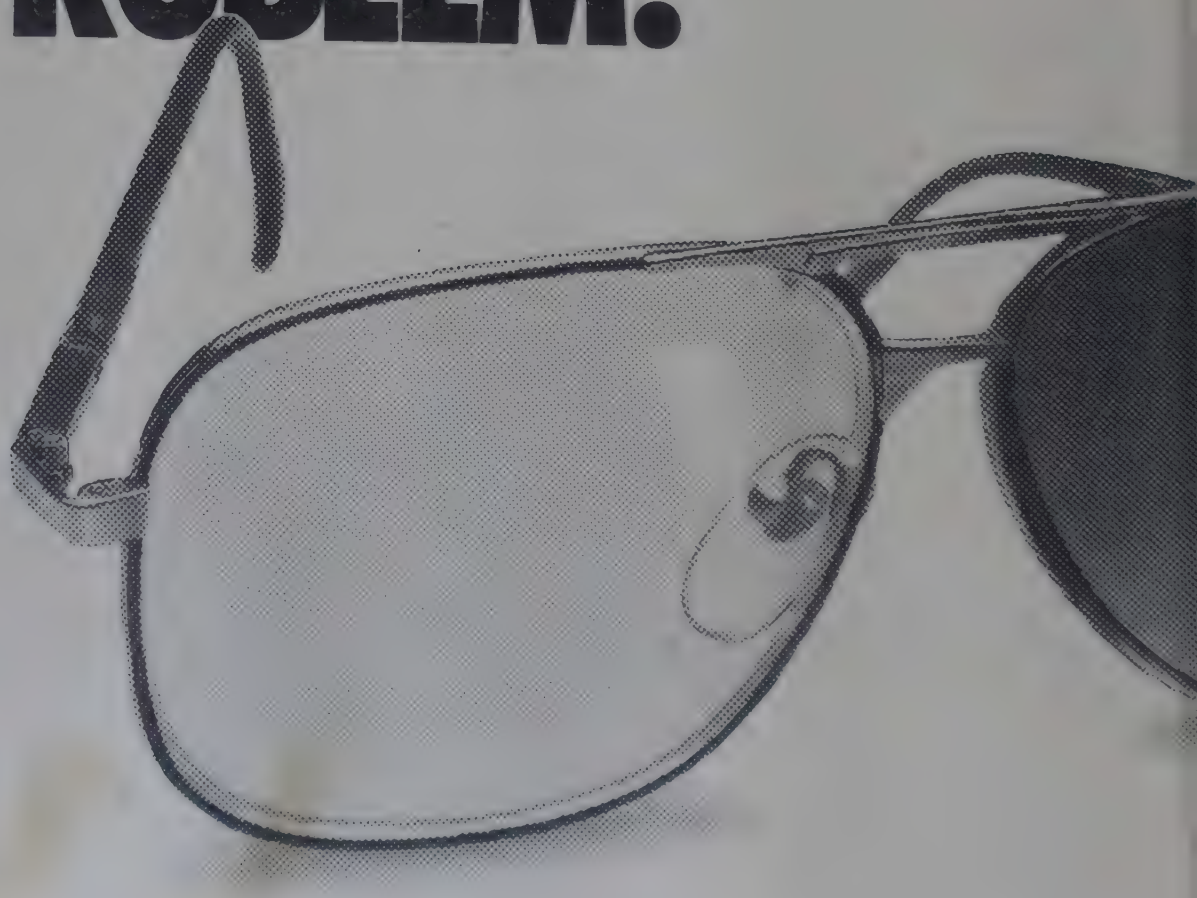
At Voltas, where he started out in April last year, he helped establish a psychological assessment centre. "Through this, we were able to spot people with managerial abilities among non-managerial staff." Parmeshwar's work at Voltas has been the subject of a recent study by IIM Ahmedabad.



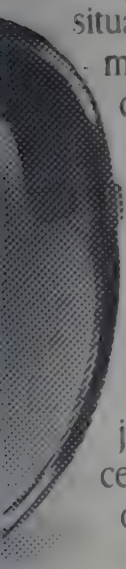
In 1981, **Sailesh Haribhakti**, then 25, gave a talk at the Indian Institute of Management, Ahmedabad, on the dividend distribution policies of different companies. So impressed were the mavens of management that they offered him a position as a visiting professor, making him one of the youngest to lecture there. This year Haribhakti also became the youngest ever president of the prestigious Bombay Management Association, a chair normally occupied by senior management experts.

A chartered accountant by education, he has taken the auditing firm founded by his father, Haribhakti & Co, into newer areas like management services and computer consultancy. As a result, the firm's revenues jumped sevenfold in the last 10 years. "Worldwide, auditing has become management oriented," he says, "and that is the direction we are moving in and is the reason for our success." Doesn't the lack of a formal management degree hamper his style? "No," he says when you are a good chartered accountant all management degrees are superfluous."

BUYING MULTIPLE BRANDS OF PCs SHOULDN'T MEAN YOU'RE MULTIPLYING YOUR MAINTENANCE PROBLEM.



INTRODUCING



As an EDP manager of a large organisation that uses a variety of PCs, you are constantly faced with a big maintenance problem – of interfacing with different computer organisations for your maintenance services. The situation is particularly difficult when more than one of your PCs break down.

Dealing with one computer company is bad enough, but the problem is multiplied when you have to get your maintenance service from numerous sources. Now all that is a thing of the past. All you have to do now is contact just one computer maintenance centre. A computer company that offers a unique maintenance programme.

Call Eiko. Book the finest computer maintenance engineers.

Call Eiko. No matter what your brand of PC.

Get yourself a maintenance service reputed to be the best in the country. Best of all, it comes to you from one single source.

Eiko PC Care

Backed by a full-fledged computer manufacturing company.

By a network of skilled service engineers.

By the facility to offer the best spares whenever you want it. To cut down repair time by a phenomenal amount.

Everything to take on where the others left off.

Find out more.
Ask any Eiko PC Care customer

Ask Procter & Gamble, Nuware India, Kirloskar, C.D.O.T., Indian Organic Chemicals Ltd., Dabur India, Vedanta Printers, Chandan Auto Agencies, Mohini Wines...

Some names you know, others you don't know. But all satisfied Eiko clients. Because their PCs are the best maintained PCs in the country.

The best maintenance service for your PC

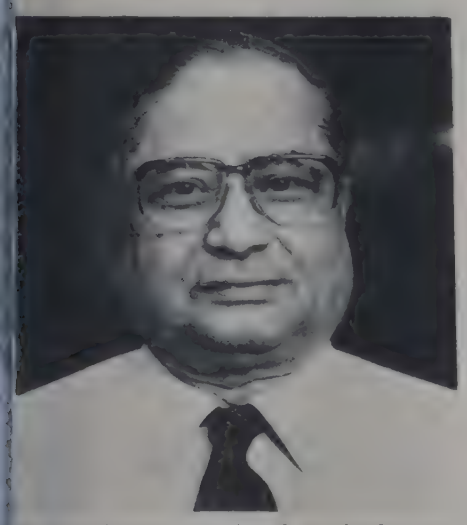
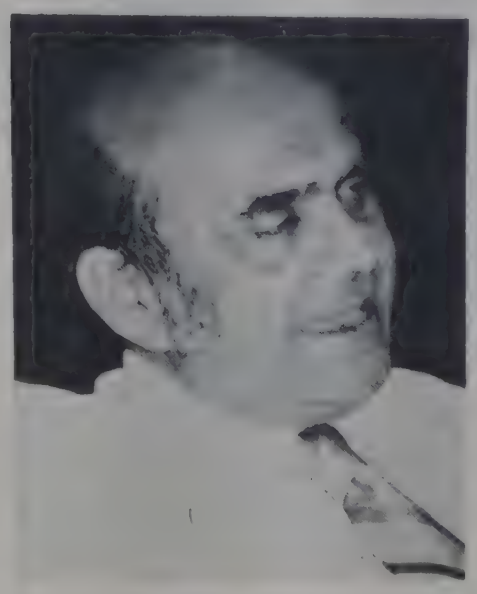
ARMS-ETO-10

.T. Narasimhan, the eldest
n of T.T. Krishnamachari, is
tering the 50th year of his
sociation with the company
s father founded. A fact very
w people know. It is also rela-
vely unknown that he took
er the indenting agency in
40 and built it up along with
s younger brother T.T. Vasu
to the industrial conglome-
te that the TTK group is to-
y. Getting him to talk about
s 50 years is a difficult job.
ıt once he gets going he is full
fascinating memories. His
es twinkle when he talks
out the time he used to travel
roughout the south with his
les bag, to reach melas and
anties. He used to play Tamil
m songs to attract the crowd
nd when the gramophone



roke down, he had to belt out
he songs himself. "The Indian
narket place with its thousands
f towns and villages is the most
xciting in the world. And its
reatest strength is the loyalty
t displays. But with the kind of
ncreases in raw material
rices, how can we produce
uality products at affordable
rices to create a consumer so-
iety," asks the man who intro-
luced pressure cookers and
ondoms to India.

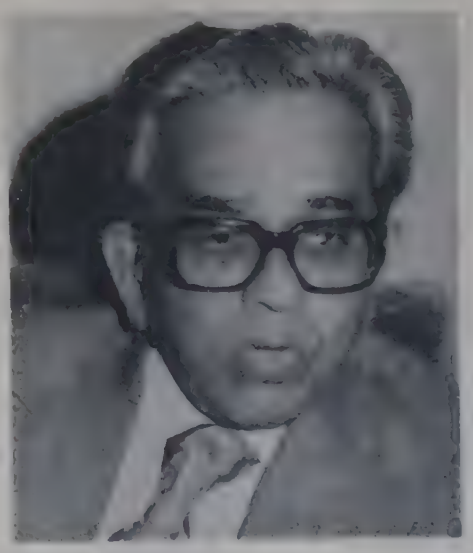
Selling rayon and clicking pic-
ures are two things **Nirbhay
Jain** has perfected into an art.
While Century Rayon of which
he is the president is doing
ather well this year, Jain has
aken time off to hold his sec-
ond exhibition of nature photo-
graphs in Bombay. Fifty two
pictures of subjects ranging
rom the Lodhi Gardens in De-



lhi to a Jewish temple in Cochin
are on show at the city's pres-
tigious National Centre for the
Performing Arts. "I took up na-
ture photography after seeing
the incredibly beautiful Pindari
Glacier from the Kumaon hills
while on a trek five years ago,"
he says. "Since then I've been
capturing nature on film both
for myself and others." And
three years ago a look at Ansel
Adams's famous book on
Yosemite convinced him, he
says, that unlike popular belief,
nature can be best captured in
black and white. Like his last
exhibition two years ago, the
photographs on display this
time also are in black and white.

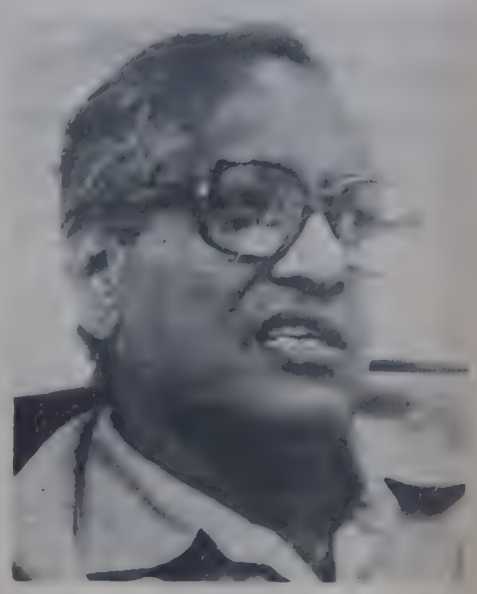
What does the labour do
when their leader for over two
decades decides to call it a day?
In the case of 1,700 workmen of
the Madras-based Ennore
Foundaries Ltd, when their
union leader for two decades,
S.C.C. Anthony Pillai retired re-
cently they decided to create
history. They invited a man who,
strictly in the trade union sense,
had been their adversary for
years, to lead them. **C.S.S.
Setty**, who for seven years was
the managing director of EFL,
was last fortnight elected presi-
dent of its employees union.
Setty, who's in semi-retirement,
claims he was surprised by the
workers' invitation. "But I did
take my time to decide," he says
and then goes on to add, "I was
popular then because I used to
mingle with my workers, spend
a lot of time with them and be
totally accessible when needed.
This they haven't forgotten and
I am thankful to them for that."

The latest person to be bitten
by the corporate bug is the for-
mer chief justice of the Supreme
Court, **Y.V. Chandrachud**. He's
been appointed to the board of
the newly- floated Amrit Protein
Foods. But the man who for
seven years occupied the high-
est judicial post in the country
insists that he is not too en-
amoured of his new calling. "I
don't like sitting on the board of
companies," he claims. "I have
been invited to the boards of
several companies in the past,
but I have stayed away. Amrit
was an exception because of an
old connection." The connection
is Khaitan and Co, Delhi solici-
tors to the company. For some
time now Chandrachud has also
been the chairman of the Pune-
based Sakal Newspapers, a
newspaper company owned by
the brother of Maharashtra
chief minister Sharad Pawar.
"Sakal was on a different basis,"



he says. "It involves the news-
paper business and a consider-
able amount of intellectual
inputs go into it," he says.

"Celebrations Ahoy," **Va-
sant Sheth**, chairman of Great
Eastern Shipping Co Ltd, must
be saying to himself these days.
Not only is the helmsman of
India's largest private sector
shipping company celebrating
the 40th anniversary of Great
Eastern and a year of record
profits, but also his prize deco-
ration from the King of Norway.
Sheth was appointed the
Knight First Class of the Royal
Norwegian Order of Merit by
King Olav last month, in recog
nition of his contribution in fur



thering economic co-operation
between Norway and India.

Sheth, who has had business
links with Norwegian com-
panies since 1949, also set up
Great Wilhelmsen Ltd (a joint
venture between Great Eastern
and the Norwegian company,
Wilhelmsen A/S) in 1974 — this
company services the Indian
offshore industry. He has also
been the chairman of the Indian
classification society, Det Nor-
ske Veritas, for the past 11 years.

**Srinivasan (Sundar)
Swamy** has every reason to feel
pleased with himself. The Ad-
vertising Convention '88 organ-
ised by the Madras Advertising
Club, of which he is president,
was a great success. For the first
time the scope of the conven-
tion was expanded to a two day
event. "Again for the first time
we had people drawn from out-
side the club for the steering
committee. After all it is the
advertisers who provide us with
our livelihood, and we wanted
them involved, he says. Swamy
did have his moments of panic.
"True to Murphy's Law, if some-
thing can go wrong, it will," he
says. There were problems of
getting confirmations from
speakers, some dropping out at
the last minute, and problems
getting sponsors for lunches,
dinners and coffee breaks. The
theme of the convention was
"Advertising — the competitive
age" a subject which interested
many and which was well-pre
sented by speakers like S.R.
Ayer, M.S. Ahluwalia, Bal
Mundkar, and Mohammad
Khan. "It really was two days
well-spent," says Swamy

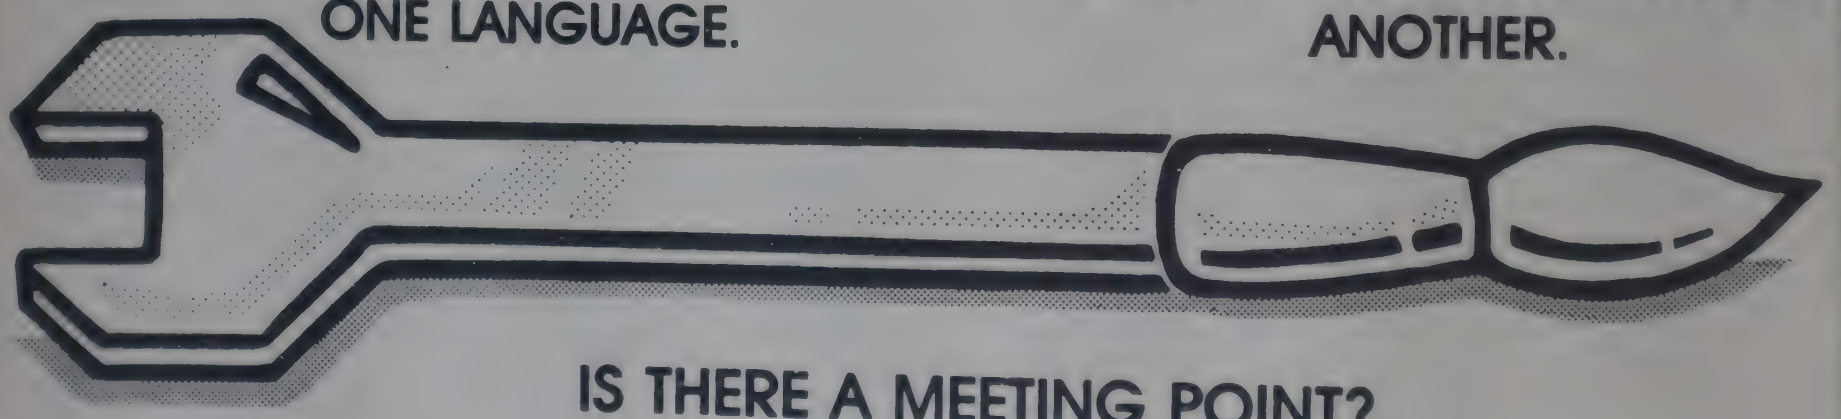
ENGINEERS SPEAK ONE LANGUAGE.

ADVERTISING PROFESSIONALS ANOTHER.



IS THERE A MEETING POINT?

Yes! TECH-COM 88, the advertising Seminar at Oberoi Towers, Bombay on December 16th and 17th 1988

At last, industrial communication without the mumbo-jumbo! The Institute of Engineers (India), Maharashtra State Centre, in association with The Advertising Club, Bombay, have organised a seminar on, "Marketing Technology Products - New Vistas in Advertising Communication." It's the perfect forum to bridge the communication gap between engineers, technocrats, entrepreneurs, members of specialised bodies and advertising professionals, industrial photographers and printers.

The seminar promises to be very invigorating, effective and constructive.

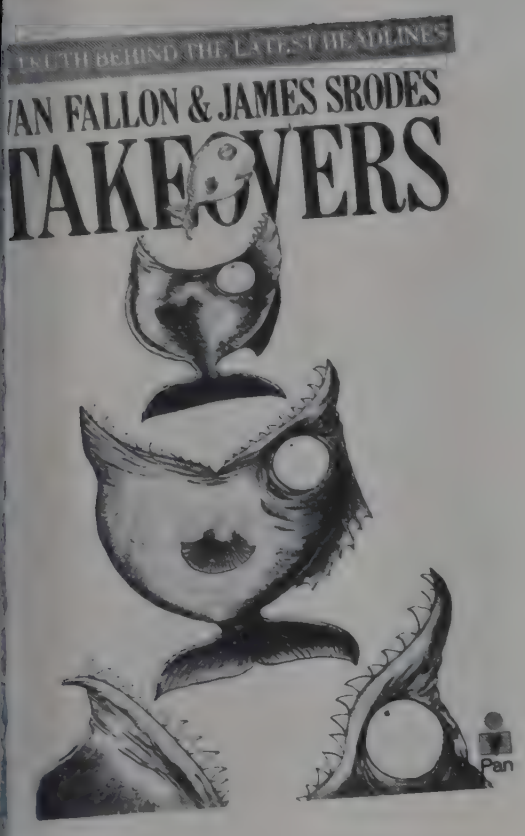
Seats are limited. So register immediately with The Institute of Engineers (India) Maharashtra State Centre, 15, Haji Ali Park, K Khadye Marg, Mahalaxmi, Bombay 400 034.

Delegate Fees are Rs.850 for members of I.E.(I) and The Ad Club and Rs.950 for non-members.

TECH COM

LINTAS SM G 150 1318

cial villains turn folk eroes



overs
an Fallon and James Srodes,
Books,
99, £2.50

t up to the early 1980s, MBAs were g told in the classroom that corpo- takeovers of profitable but unrelated nesses did not increase the market es of firms. Evidence was provided by takeover waves witnessed in the ed States in the late 1960s and again e mid-1970s, which often concerned s in related businesses merging to ease market power ("synergistic" gers), like GEC's takeover of English tric in 1967, or profitable firms buy- osing firms to make use of tax losses. "non-synergistic" mergers were rare were ascribed to the irrationality and er-hungriness of chief executives.

e takeover wave of the 1980s ex- led most of these myths. The total e of mergers between 1972 and 1976 lled $13 billion in the United States. total through the 1980s already ex- ls $450 billion; the largest of these, vron Corp's acquisition of Gulf Corp, worth $13.3 billion. If the current over of RJR Nabisco by Kohlberg vis Roberts succeeds, it will be the est, at over $17 billion.

VER AND CONTROL

e traditional economic motivation of it cannot explain mergers, what else could motivate companies to make bids? In their fascinating book, *Takeovers*, Ivan Fallon and James Srodes probe this central theme and provide an invaluable case study of takeovers in the 1980s. As they show, takeovers are linked to the development of a certain kind of business mentality that lusts for power and control. However, since such a mentality is probably never absent, there must also exist an economic and regulatory climate that encourages takeovers. Such a climate developed in the US and Britain in the 1980s, following the laisser-faire policies of the governments of that period. Hence it is not surprising that the takeover wave began with Reagan's presidency in the US and has also developed strongly in Britain under Thatcher.

The authors have developed case histories of some of the most interesting takeovers of this decade. This has inevitably involved the study of the most interesting personalities involved. They are all there in this book: T. Boone Pickens, Carl Icahn and Ivan Boesky in the US, Tiny Rowland, Lord Hanson and Ernest Saunders in Britain. Some of the big deals are also reviewed in detail, including Rowland's attempt to buy Harrods, the Guiness takeover of Distillers and Boesky's greenmailing in the CBS takeover case. In particular, the tactics employed by greenmailers, i.e., those who buy enough shares to convince the target company to buy them back at a premium, as well as the tactics employed in defence by target companies, such as the "poison pill" defence (exemplified by the paying out of high dividends to existing shareholders in order to reduce net worth), and the "crown jewel lock-up" (selling off assets in order to reduce net worth) are illustrated in detail.

PECKING AT PHILLIPS

Among the most revealing chapters is Pickens's attempt to take over Phillips Petroleum at the end of 1984. Phillips Petroleum was at the time the tenth largest petroleum producer in the world, with a market capitalisation of $6 billion of equity and 1984 earnings of $810 million. At a market price of $40 per share, it seemed well-priced — until Pickens made a tender offer of $50 per share for the company after picking up about 9 million shares in the market.

Meanwhile, Ivan Boesky and Carl Icahn had also picked up about 7 per cent of the company's shares in the open market. In order to ward off these raiders, Phillips counter-attacked with a poison pill: it asked shareholders to swap 60 million shares for a package of debt securities valued at $60 per share (Pickens's offer to shareholders was all cash) and offered to buy a further 20 million shares from the open market at a price up to $50 per share (repurchasing its own shares is legal for a corporation in the US).

However, the package of debt securities offered by Phillips was viewed as inadequate by some of the larger institutional shareholders of Phillips, who refused to go along with the deal. In the end, Phillips — in its desire to prevent a takeover — succumbed to the combination of greenmail and institutional pressure. It paid the three raiders, Pickens, Icahn and Boesky, $53 a share for their 18 million shares; it also picked up their lawyers' fees of $40 million apart from paying its own legal fees of $35 million. In addition, it went ahead with the repurchase plan of a billion dollars.

The total cost of the salvage operation exceeded two billion dollars. Was it worth Phillips's while to do this for the benefit of remaining independent? The future tells its own story. In order to pay for the salvage operation, the company sold off several of its oil fields and laid off over 2,000 workers in 1985.

NEGATIVE SUM GAME

Since much of takeover activity is financed by debt, the economy can significantly change from an equity-based economy to a debt-based one (since 1950, the average US corporation's debt-servicing ratio has risen from 20 per cent to 509 per cent of pre-tax earnings). Most telling of all, there is the evidence that corporate performance does not necessarily improve after takeovers. In fact, the evidence is on the negative side.

While *Takeovers* is not a complete book (it does not, for instance, examine some of the larger takeovers such as of Beatrice Foods, Conoco or Gulf Oil, nor does it discuss the undoubtedly important role of junk bonds as financing vehicles for takeovers), it is a fascinating and often thrilling account of the process of takeovers, especially of the players involved and the games they play.

BY ORDER OF THE BOARD

J E JHIRAD
Company Secretary

Of sales and marketing men

With increasingly competitive markets in several product categories, the focus is on the 'marketing' guys in most industries. Many traditional industries and conservative companies are scouting for these bright, aggressive marketing whiz kids who are expected to give a new lease of life to these organisations or help create new markets or niches. The great corporate success stories and legends are often the great marketing stories of our times and the people behind these success stories are the most sought after.

In general, marketing people have always been paid more than their counterparts in other functional areas and have appeared to progress faster in terms of money and status. Perquisites of all kinds from the type of house, furniture, cars have always been associated with marketing staff and have often been the cause of inter-functional tensions.

Who are these marketing guys and what is their profile? An analysis of the backgrounds of sales and marketing staff in a large number of consumer, consumer durable and pharmaceutical companies reveals that the field sales force consists mainly of second or third class science graduates. Most of them change at least three jobs in the first ten years of their careers unless they have been employed with a major multinational. In such cases the change of job happens later in their career. But the majority, in fact, change atleast six jobs during their career.

MBAs' STAY PERIOD

The managerial and product management jobs are increasingly staffed by management graduates. In the prime consumer marketing companies at least 70 per cent are MBAs. The average stay period for most MBAs is also estimated at about three years. However the prime consumer marketing companies do have a better rate of retention.

For most ordinary graduates who have not secured admission to a good professional course or college, there is often no future besides a clerical job. The only chance of making it in life is through a sales career, since this is the only career where payment always depends on results. And most employers who are constantly in search of these willing result-oriented young men and women are more concerned with the individual's personal qualities and attitude rather than theoretical knowledge.

The "marketing" staff, on the other hand, in these industries consists of the 'toppers' from the premier management institutes. There is therfore a paradoxical situation. The vast majority of the staff in all selling companies consists of the field sales force who are by no means the best or the brightest. But the marketing jobs and very often the sales management jobs are staffed by the brightest.

In most companies product management jobs are staffed only by management graduates. Even industrial marketing companies that often do not have a well defined distinction between sales and product management jobs, are now introducing such a concept.

SIGNIFICANT TREND

What is significant, however, is the trend of using MBAs in sales management jobs. Traditionally, MBAs have been regarded as immature and poor man managers, but a large number of marketing companies routinely rotate them through jobs such as area managers, branch managers, etc. Many of them are satisfied with the performance of such managers and have found them bringing in new approaches even to traditional selling techniques. But it is no secret that most MBAs would rather not spend their time in field selling. It is only the realisation that to make it to the top, a stint of sales management is required as a prerequisite by most companies that has made MBAs morewilling to accept such assignments.

There has of course been a sea change in the marketing concepts and attitudes in the country and therefore in the expectations from the marketing staff. The historical concept of the marketing head being merely a good motivator and man manager who could push his field sales team to give results has changed. The importance of strategic planning and thinking, as much if not more than traditional selling techniques, is well appreciated. The profile of marketing people today therefore is quite different from the image of a sharp, aggressive "sales" guy who has a charming personality and gift of the gab.

The problem today for several companies is to assimilate both these categories of staff into the organisation.With the change in the profile of the marketing staff, there is even more limited opportunity for the field sales force to aspire for managerial positions. Increasingly, the prime consumer marketing companies employ only management graduates even in sales management jobs such as branch managers, area managers, etc.

What is the future for a sales rep even after 15 years of service? Despite the good remuneration and in some cases even designations there is no future for him. He is also often required to go through several transfers, and of course the travail of spending 15 to 20 days a month travelling for all his working life.

TURNOVER PROBLEM

Several of the field sales staff therefore leave even the best companies to move into managerial jobs in smaller or high risk ventures. With the accepted high turnover rate of management graduates, many marketing companies are therefore faced with the problem of turnover at both the supervisory levels in the sales force and the marketing team. There is a gradual realisation of the important role played by the field sales force and their importance in maintaining continuity; however, not enough is being done to upgrade their skills and perspective.

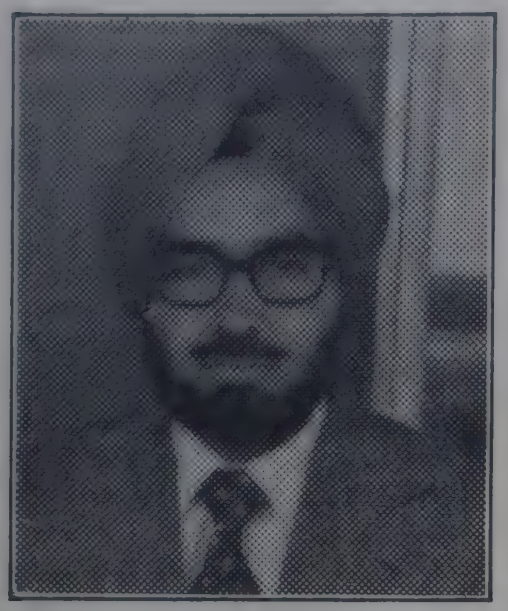
There are of course companies that have consciously decided to focus only on management graduates. Some of these companies, such as Asian Paints, have been quite successful. However the problem of motivating and assimilating both categories of staff is an issue for all marketing companies. Unquestionably, the field sales force is the backbone of any marketing organisation despite the increased use of various media for selling.

Companies must begin by clearly defining the role of the field sales staff and that of the sales management team. The distinction in the responsibilities of and expectations from both levels of jobs should be clear. This would enable the sales 'supervisor' to understand his limitation and also enable the organisation to pick up the better supervisors for training for sales management positions. It would also perhaps alleviate the simmering resentment amongst the more experienced salesmen if the role expectations are clear and conscious attempts are made to upgrade their skills.

There is a need to consciously provide career opportunities for both categories of staff. For every company needs only a few racehorses but a large number of willing, motivated albeit average staff

■ ANITA RAMACHANDRAN

pacl Punjab Alkalies & Chemicals Limited



SPEECH OF THE CHAIRMAN
SHRI A.S. CHATHA, IAS,
AT THE 13TH ANNUAL GENERAL MEETING
HELD ON 3RD NOVEMBER, 1988.

I have great pleasure in welcoming you all to the Thirteenth Annual General Meeting of the Company. The Report and Accounts of your Company for the financial year 1987-88 have been in your hands for sometime and I am taking them as read.

PERFORMANCE HIGHLIGHTS

As you are aware, your Company has done quite well during the year. Net profit is Rs. 149.85 Lacs against last year's net loss of Rs. 105.61 Lacs. Gross sales have crossed Rs. 22 Crores and registered an increase of 37.6% over the previous year. Cash profits are Rs. 475.45 Lacs against Rs. 175.17 Lacs during the year ended 30th June, 1987. Capacity utilisation has climbed to 96.3% against 79.1% during the last year. This achievement is quite significant compared to corresponding industry average of 70% and 67% respectively.

The year under report saw commissioning of diversification and modernisation projects amounting to about Rs. 10 Crores. The flakes marketed by the Company under the brand name of 'SATLUJ' have been well received and have already carved a niche of their own in the market. The change of Graphite to Dimensionally Stable Metal Anodes was completed in all the twenty cells. A sophisticated ACPD system imported from Italy has been installed for optimum utilisation of the Metal Anodes. This change has resulted in significant savings in power consumption and also improved the operational efficiency of the Plant.

CHLOR-ALKALI-THE NATIONAL SCENARIO

Coming to the national scenario, indigenous production of Caustic Soda during calendar year 1987 totalled to 7.72 Lacs MT against the previous year's production of 7.11 Lacs MT. The current installed capacity is 11.58 Lacs MT. While in comparison to the performance during last 4-5 years, this level of production is heartening; it also highlights the potential and promise for future growth. The industry still has to cover considerable ground to achieve full utilisation of the installed capacity. Here, it is relevant to observe that low level of capacity utilisation has been, primarily, due to low demand-availability. However, the problem caused by inflow of foreign material at recessionary prices leading to under-utilisation of indigenous capacity and destabilisation of caustic prices, is at last over. With the transfer of caustic from OGL list to the list of canalised items, the future demand in the next 4 years is likely to touch 10.5 Lacs MT per annum, which can certainly be met by the current installed capacity

As you are aware, in the past, Chlorine offtake always constituted a bottleneck for production of Caustic. However, now even its demand is looking up. Chlorine utilisation in the year 1987 reached the record level of 95%. This compares quite well with the international average of 85% during 1987-88. The industry would do well to explore the potential for export of Chlorine products because a gap still exists between the Chlorine prices in India and abroad

FUTURE PROSPECTS

As I had mentioned during the last Annual General Meeting, the demand for Caustic & Chlorine in this region has considerably gone up due to commissioning/revival of paper projects and other units. Consequently, the Company is not facing any marketing problem on account of increased production which at present is 110% of the installed capacity against the average of 96.3% during the year ended 30th June, 1988

After successful implementation of the first phase of corporate plan and setting up of downstream units, your Company is now consolidating the gains of the last years, in terms of higher capacity utilisation, improved operational efficiency and better product-mix. To take full advantage of the existing bouyant market conditions, your Company has targetted for further 15% increase in production over 1987-88 levels. This is despite the significant loss in production in the first two months of the current year due to technical problems.

As a result of imaginative planning and foresight, your Company has overcome the problem of imbalances in the demand of Caustic and other bye-products. Taking advantage of the existing infrastructure and conducive market conditions, I am pleased to inform you that your Company has decided to increase its installed capacity by 10% by adding two more cells. The expansion is likely to be completed by end, 1989.

Future prospects of your Company are, indeed, very optimistic and bright. With the present increased production, the Company is likely to make considerable profit in the year 1988-89 despite withdrawal of power subsidy. In fact, recognising the need for energy conservation, your Company, apart from introducing metal anodes and ACPD system is also commissioning an 'Energy Audit'. It would determine the scope and mode for effecting further savings in power, which at present accounts for almost two-third of the variable cost of Caustic production.

Establishment of downstream units has been another main objective of your Company. A Stable Bleaching Powder Plant and two Chlorinated Paraffin Wax units are already in production. Hydrogen Compressing and Bottling Plant and another CPW unit is likely to be commissioned during the year 1988-89. Apart from gainful and optimal utilisation of Chlorine and Hydrogen, the downstream units would generate considerable employment and industrial activity.

The affairs of your Company are being looked after by a competent team of administrators and professionals trained in diverse disciplines. Human assets are being considered to be most valuable as a matter of corporate policy. Appropriate measures are taken for the development of human resource skills at various levels through interaction and exposure so as to provide better work environment and to prepare employees for changing conditions

ACKNOWLEDGEMENTS

Before concluding, I would like to convey my deep and sincere appreciation and gratitude to the Company's personnel at all levels for their whole hearted cooperation and efforts.

I would also like to express my gratitude to Punjab Government, Punjab State Electricity Board, Bankers and All India Financial Institutions, for their unstinted support. I am also grateful to my colleagues on the Board for their counsel, contribution and guidance during the deliberations of the Board. Here, I would like to express appreciation for the excellent services rendered by Shri A.K. Kundra, who was the Managing Director of your Company for the last more than five years.

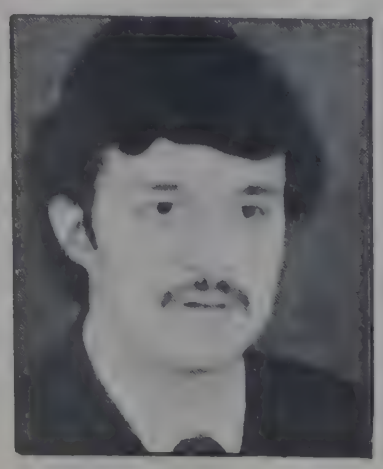
Above all, I thank you, the Shareholders, for giving continued support to the management of the Company to cope with the current challenges in order to make the future secure

Ladies and Gentlemen, I once again welcome you and thank you for your joining today's deliberations

This does not purport to be a report of the proceedings at the Annual General Meeting.

203-CH

R.C. SINGAL has been promoted as vice-president (corporate) and secretary of Arihant Fabrics Ltd.



RIKEEN P. DALAL has been appointed managing director of Ficom Organics Ltd.

R.R. NAGARKATTI has been appointed general manager (engineering and projects) of Hindustan Petroleum Corpn. Ltd.

M.C. NAWALKHA has been appointed member (finance) of ONGC.

K. MANMOHAN SHENOI, chairman and managing director of UCO Bank has been appointed director of the Export and Import Bank by the government of India.

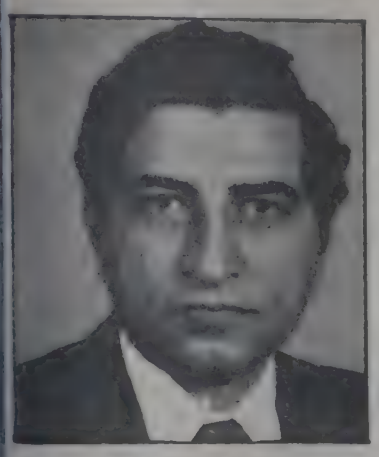
S.K. GUHA THAKURTA has been co-opted on the board of Gannon Dunkerley & Co Ltd and designated as director (technical).

HARISH C. JAIN, chairman of Jaisons Advertising and associated companies has been elected president of Bhratia Sabha Consumer Co-op Ltd.

P.P. RATHOD has taken over as vice-chairman and managing director of Gujarat Industrial Development Corporation.

A.W. JOHN has been appointed chairman of the South Indian Bank Ltd.

B.G. JADHAV has been promoted as additional commissioner of labour, Bombay.



KRISHAN KHANNA has been appointed vice-chairman of Hoganas India Ltd.

T.N. MENON, chairman and managing director of Travancore-Cochin Chemicals Ltd has been given additional charge of Malabar Cements Ltd.

RANJAN DAS has been appointed managing director of Maharashtra Weldaids Ltd.

NIRDOSH K. JAIN has been promoted as special director (finance) of Carborundum Universal Ltd.

ASSOCIATIONS

V.K. CHOPRA has been elected president and ASHOK DANDH vice-president of the executive committee of the Cement Stockists & Dealers Association of Bombay for 1988-89.

SURESH S. NADKARNI, chairman and managing director of IDBI, has been elected chairman of the Association of Development Financing Institutions in Asia and the Pacific (ADFIAP).

NETAI MOHAN SAHA has been elected president of the Federation of West Bengal Trade Associations for 1988-90.

V.L. SHAH has been appointed as IMC representative on the Zonal Railway Users' consultative committee of Western Railway for the period 1 November 1988 to 31 October 1990.

HARISH BHASIN has been elected president of The Delhi Stock Exchange Association Ltd.

SURESH I. BUCH, secretary of the Officers' Association of State Bank of Saurashtra has been elected all India president of the Associate Banks' Officers Association.

H. KRISHNAMURTHY, chairman and managing director of Hindustan Organic Chemicals Ltd has taken over as chairman of the Western India Chapter of Chemtech Foundation

Senior executive positions

A compilation of executive positions advertised in **Business India** and other major publications between 7 and 20 November 1988.

CALLING CONSTRUCTION PERSONNEL

WHOSE CONSTRUCTIVE IDEAS CAN BUILD THE COMPANY – AN IMAGE

We are a fast growing construction company having many prestigious projects throughout the country. The Company desires to strengthen itself to meet future opportunities in expanding civil construction/heavy earth-moving and turnkey projects.

We need high-calibre construction personnel who can spearhead the organisation in the following specific areas:

VICE PRESIDENT

(Civil/Heavy Construction)
Delhi/Bombay/Indore . CODE: AVP

This is a Senior Management position reporting directly to the Managing Director. The candidate, a seasoned professional of very high calibre with strong managerial personality and demonstrated leadership quality with emphasis on team-building will best suit our requirement. He should be an outstanding Civil Engineer with around 15 to 20 years of experience in management and execution of large civil engineering projects of which atleast 5 years in a very senior capacity. Apart from ensuring the orderly conduct of Company's operations, he will be expected to stimulate the growth of the organisation and to meet turn over and profitability targets.

GENERAL MANAGER

(Business Development & Marketing)
Bombay/Delhi/Baroda CODE: BGM

The incumbent should be a seasoned professional with outstanding capability in construction marketing. He will be responsible for all marketing functions including development and implementation of business strategies and arranging joint ventures with other companies here and abroad. He should be able to identify new progressive fields of construction incorporating latest technology. He should be a brilliant Civil Engineer with 15-20 years of experience at very senior levels in construction marketing.

GENERAL MANAGER

(Heavy Construction Machinery)
Bombay/Baroda/Delhi CODE: CGM

The incumbent should be a brilliant Mechanical Engineer, with deep insight towards heavy construction machinery such as Hydraulic Excavators, Dozers, Loaders, Dumpers, Compactors, Crushing and Batching plants and other miscellaneous equipment. He must have a proven track record and practical experience of managing and maintaining such machinery at widely dispersed work sites. He must have a good exposure to all the latest technical developments in the relevant machines, so as to keep on up-dating Company's requirements. He must be resourceful enough to create, mobilize and control excellent working/operating/maintenance team. He must be well acquainted with various modern systems/procedures of maintaining/monitoring centralised records of these machinery and their spare parts.
Preferred age limit: 45 years.

GENERAL MANAGER

(Execution & Implementation of Projects)
CODE: DGM

This is a challenging assignment for a Civil Engineer having experience of handling major projects in Civil Engineering and having a proven track record of handling men and machines. He must provide dynamic leadership, travel extensively and technically control, monitor and manage effectively the work sites in his charge and should have a capability to create his own team at site working levels. Preferred age limit: 45 years.

We are in the excellent team building process, so the compensation offered will be the best in the industry and not a limiting factor for the right candidates.

Please apply in strict confidence, marking the envelope with position code as given above, giving complete bio-data within 10 days to:

Post Box No. AA/280/LC/6, **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001

UNIT TRUST OF INDIA

wishes to recruit

The ideal candidate would be a skilled negotiator, highly result oriented, in the age group of 36 to 39, with minimum 6 to 7 years of relevant experience. Applicants should be graduates with post graduate specialisation in Foreign Trade/International Marketing.

ASSISTANT MANAGER (Marine Products) Bombay

We are looking for a mature professional with initiative and drive to shoulder independent responsibility. The incumbent would coordinate the export of marine products and liaise with manufacturers. Key responsibilities of the assignment would include inspection of finished goods, handling stocks and timely coordination of despatches.

The ideal candidate would be a CIFT graduate, in the age group of 26 to 28, with minimum 4 years of relevant experience. Preference would be given to applicants possessing their own residence in Bombay.

Goetze offers excellent growth opportunities and compensation will not be a constraining factor for the suitable candidates.

Please apply, within seven days, with a detailed Curriculum-Vitae and present emoluments to:

Divisional Manager
Corporate Management Development
GOETZE (INDIA) LIMITED
18/4, Mathura Road
Faridabad-121 007

YOUR PRESENT JOB'S A PIECE OF CAKE. THE TARGETS ARE EASY, SO ARE THE DEADLINES. THE MONEY'S OK AND YOU'RE HOME AT 6 SHARP. DON'T YOU JUST HATE IT?

It takes a rare manager to realise that he's outgrown his present job.

When you're faced with such a dilemma, what can the TVS group offer?

Well, for a start, we can make your work a lot more demanding.

You'll have more opportunities coming your way.

And more than your fair share of challenges.

It may take a lot out of you.

But then, every satisfying job tends to do that.

What it means to be a Regional Manager at TVS.

You'll be working with either TVS-Suzuki or Sundaram Clayton Ltd., two of our companies with a turnover of around Rs.270 crores.

Sundaram Clayton manufactures air-assisted braking systems; as well as railway braking and signalling systems.

TVS-Suzuki is one of India's biggest names in motorcycles and mopeds.

You could also be assigned to one of Sundaram Clayton's associate companies.

TVS Electronics, which produces a wide range of computer peripherals.

You could also be assigned to Sundaram Clayton's latest venture. TVS Whirlpool - a collaboration with the Whirlpool Corporation USA, world leaders in major home appliances.

TVS is quick to recognise good work.

And is prompt and generous with its rewards.

Which means that it's you who decides how far you want to go.

What you'll do for TVS.

You will independently conduct sales and service operations within your region.

And achieve your targets within the framework of time and budgets. (Mind you, this isn't going to be as comfortable as your present job).

You'll also be required to oversee market intelligence; its collection, tabulation and analysis.

Close interaction with and monitoring of present and potential dealers will be of vital importance to your position.

You'll need to be a graduate with around 10 years' relevant experience. Specifically in the areas of sales and service. With a proven ability to build, lead and motivate a dedicated team of professionals.

Your pay packet will be attractive. Apart from house and car.

The positions are based all over India.

Write with full details (on A4 size paper) within 10 days to:

The Senior Manager - HRD
Sundaram Clayton Limited
Jayalakshmi Estates
8 Haddows Road
Madras 600 006

Sundaram-Clayton

TVS-SUZUKI

TVS Electronics

TVS Whirlpool

In this Human Resource Development job, the most important resource you'll develop is yourself.

Human Resource Development is about making personnel function at its fullest potential.

But what about HRD people themselves?

What motivates them? What inspires them? What drives them to greater achievement?

You'll find out when you join the HRD department of the TVS Group.

Because HRD is a critical part of our unique corporate culture.

Because here, no one is too small to offer an opinion and no one is too big to listen.

Because at TVS, we believe that HRD experts must realise their full potential in order to make others realise theirs.

Where you start and where you go.

You'll be working with either TVS-Suzuki or Sundaram Clayton Ltd., two of our companies with a turnover of around Rs.270 crores.

Sundaram Clayton manufactures air-assisted braking systems; as well as railway braking and signalling systems.

TVS-Suzuki is one of India's biggest names in motor-cycles and mopeds.

You could also be assigned to Sundaram Clayton's latest venture.

TVS Whirlpool - a collaboration with the Whirlpool Corporation USA, world leaders in major home appliances.

TVS is quick to recognise merit. And is equally generous with its rewards.

That means you are the one who decides how far you want to go.

MANAGER - HRD
(Rs.80,000 p.a. + indirects)

A PG degree in personnel management from IIM/XLRI/ TISS, etc.

With atleast 10 years' relevant experience, 5 years of which should have been in a senior position.

Some exposure to areas like potential assessment, succession planning and team building will be an advantage.

Recruit and induct human resources at the managerial and executive levels.

Formulate strategic HRD plans, both short term as well as long term.

And review systems such as personnel policy, performance appraisal and career plans and adapt them to meet existing and future needs.

You will also be responsible for maintaining a high morale.

And use innovative HRD techniques to establish a high degree of excellence in work practices.

ASSISTANT MANAGER - HRD
(Rs.70,000 p.a. + indirects)

A PG from XLRI/TISS. With at least 6 years' experience in a healthy HRD environment.

To actively assist in the planning and implementation of all HRD activities.

And interact at various levels, making persuasive changes down the line.

HRD EXECUTIVES - TRAINING
(Rs.55,000 p.a. + indirects)

A PG from XLRI/TISS. With at least 2 years' experience in any of the sub-systems of HRD.

To identify training needs and initiate action of HRD programmes.

Practical experience in designing and conducting training programmes will be a plus point.

You'll be based either at Madras, Pondicherry or Hosur.

Write with full details (on A4 size paper) within 10 days to:

"Sometimes friends ask,
'How do you feel at 86?'
I can truthfully answer, I feel
fine. The old machine is still
running faithfully : after all,
it's a Kirloskar product."

— S.L. KIRLOSKAR

Kirloskar

The Kirloskars have never believed in isolating the concept of quality from the manufacturing process. We have struggled hard to ensure that it runs through our enterprise, in every work done there, and in every person who does it.

"**Quality**", as my brother Ravi always said, "**must go beyond standard tests and procedures. It must be equated with self-respect and personal pride**".

Our engines, motors, compressors, machine tools, pumps and valves and a host of other products serving every Indian industry and recognised in many parts of the world, provide ample proof of a century-long history of quality. That this history will be carried forward by the future generations is beyond doubt.

We shall continue to contribute to India's social and economic betterment through engineering excellence — our chosen method.

Into our next Century in the same spirit!

CAREERS IN MARKETING

The Unilever Group of Companies in India has a common pool of management resource. This enables us to offer Managers greater opportunities for career growth through exposure to diverse business functions.

We are on the lookout for young MBAs (under 25) from premier business schools with outstanding scholastic achievements for our Management Training Scheme. A good record in extra-curricular activities and in leadership roles will be an advantage.

Those selected will be put through a structured training programme of 18 months covering sales, product management, market research and allied areas with emphasis on learning while doing. After successful completion of training, they will be confirmed as Managers. Those with proven potential will have opportunities for international exposure and be groomed to take on general management responsibilities.

We offer an attractive remuneration package (both during training and on confirmation) which includes housing.

If you are interested in a career with us, do reply with a detailed resume within 10 days to: The Selection Manager, Hindustan Lever Limited, P.O. Box 409,
Bombay 400 001 superscribing the envelope "MT (Mktg)".

Those interviewed by us earlier or currently undergoing an MBA programme need not respond to this advertisement.

Sundaram-Clayton
and
Associate Companies
require
Engineering Personnel

Pondicherry/Hosur/ Tumkur/Madras

Rs.48,000 p.a. + benefits

Sundaram-Clayton and TVS-Suzuki are members of the TVS group of companies. Together they command a sales turnover of Rs.270 crores. Sundaram-Clayton manufactures air-assisted automotive braking systems and railway braking and signalling systems. TVS-Suzuki manufactures a range of mopeds and motorcycles. TVS Electronics manufactures a complete range of computer peripherals — drives, printers, keyboards, UPS, SMPS, monitors, etc. TVS Whirlpool, a company promoted by Sundaram-Clayton, will manufacture a range of appliances.

We are looking for dynamic, young professionals in Quality Assurance and Production Engineering functions.

Quality Assurance

This function is considered critical in our manufacturing process. You will essentially ensure quality of bought-out components and materials and will be involved in quality improvement through quality analysis/process analysis and reliability engineering. You will also assist in Quality Circle/TQC activities. You will have a Mechanical Engineering degree, preferably with Post-graduate qualification in SQC and OR, and with at least 5 years' relevant experience.

Tool Design and Planning

You will be involved in the organising and executing of tasks on cutting/press tools, jigs and fixtures. Knowledge of low-cost automation methods is a prerequisite for the job. You will be a Mechanical Engineering graduate, with a Post-graduate diploma in tool design and planning, with at least 5 years' experience in a light engineering industry.

Industrial Engineering

Your area of work will be in work measurements, plant layout, material-handling, etc. to ensure optimum use of resources. You will have a Mechanical Engineering degree, preferably with Post-graduate qualification in Industrial Engineering, and with at least 5 years' relevant experience.

Process Planning

You should be familiar with modern machines, tools manufacturing methods, trouble-shooting, estimation, etc. You will detail manufacturing methods, including estimating costs. You will also be responsible for trouble-shooting at the shop floor. You will be a Mechanical Engineering graduate with at least 5 years' relevant experience.

We offer the right candidate an attractive salary, and benefits which include PF, Gratuity, Medical, a healthy and professionally challenging work environment, with rewards based on merit and contribution, and excellent career development opportunities.

Send in your application on A4-size paper, within 10 days, to :

Opportunity to play the keys your way...

Opportunity to be a part of a leading software house involved in diverse and challenging activities.

Sonata, the software division of Indian Organic Chemicals Limited (a Rs. 150 crore company), has been blazing quite a few trails in the Indian and international software market — with the success of its software development and publishing, programming services, consultancy, technical training and software export activities.

Right on cue

Sonata was set up in 1986, to meet the growing need for solution-based, high-quality software, both in India, and abroad. Today Sonata has a 3000 strong customer base, and developing relevant and powerful packages for them are 120 software and system engineers — a team of dedicated and highly qualified professionals.

Coming to the ResQ

With offices in all the metros and an extensive dealer network, Sonata is constantly introducing and reaching its customers at least 2-3 new products every three months or so. Today its wide-ranging software includes the highly popular packages like IBIS, MultiWord, ResQ Professional and specialised packages like Fedora and Prakashak — regional language DTP.

And now...

To serve its rapidly expanding operations, Sonata requires talented and experienced software professionals for assignments abroad, to support its business interests in U.S.A. Europe and Australia.

Incumbents must have a degree in Electronics/Computer Science/Engineering/Mathematics, preferably with also an M.S./M.Tech/M.B.A.

A minimum of 3 years' experience in a commercial/consultancy organisation in the area of programming services/project consultancy is necessary, along with detailed knowledge of any of the following.

- IBM: CICS, MVS, DBZ, CSP, CMS, RPGII, RPGIII
- DEC: VAX VMS, RDB, DECNET, DATATRIVE
- BURROUGHS: DMS II, GEMCOS, LINC, COMS
- 4 GL/RDBMS: ADABAS, ORACLE, INGRES, UNIFY, NATURAL
- NETWORKING/COMMUNICATIONS/LANS
- C/UNIX/PASCAL ON MICROPROCESSOR BASED COMPUTERS.

Sonata is also specifically looking for Project Leaders who have managed software projects abroad.

The Company offers an extremely stimulating and performance-rewarding environment — as well as excellent remuneration packages and benefits. Starting emoluments will be based on qualifications and experience.

Note:

- Those without a good degree in the relevant subject and the requisite experience need not apply.
- Send your detailed bio-data which includes information regarding passport/visas/ previous experience abroad/driving licence etc.

Apply in confidence to Mr D Bharath, Divisional Vice-President within 15 days superscribing the envelope INS/87, to:

Experience with leading Indian banks at appropriate officer levels or similar experience with leading financial institutions and merchant banks will be essential. Good communication together with personality and requisite maturity is necessary.

A competitive remuneration package can be offered. Though housing will not be provided, a housing loan can be considered.

Please apply in strict confidence within 10 days to

A. F. Ferguson Associates

Poxt Box 1786

Bombay 400 001

giving full details of age, qualifications experience and salaries drawn. All applications and envelopes should be marked "Ref. MS/5002". Candidates not contacted within two months of application, may assume that they are not being considered.

"We need a change in attitudes"

The government's persistent efforts to infuse industry with the spirit of productivity have met with limited success. Business India's *Anoop Saxena spoke to* **G.K. Suri,** *chairman of the National Productivity Council, who feels that there is no magic solution to the problem. What is required is a total change in attitudes*

Do you think you have been successful in disseminating the culture of productivity? If not, what are the bottlenecks you have to cope with?
Response from industry has been encouraging. This is reflected by the ever-increasing revenue from specialised services that the National Productivity Council offers. Despite the droughts, revenue proceeds from services rose from Rs.2.48 crores in 1986-87 to Rs.2.63 crores in 1987-88. Our problem is not a dearth of demand but acute shortage of highly-specialised consultants, who are hard to get in the open market. We had an advertisement campaign but practically drew a blank.

Do you see the trade union movement as a major obstacle in enhancing productivity in Indian industry?
Trade unions can play a very important role in economic development. We cannot afford the luxury of a confrontational approach and current orientation must change. It involves the education and training of trade unionists at the enterprise level and active participation in production plans. There should be consensus solutions. There is a general realisation among trade unionists that technological change is inevitable, unavoidable and imperative. We must convert this realisation into co-operation.

Would legislative measures for boosting productivity really help?
Legislative measures alone cannot do much to enhance productivity. What is required is that specialised services to raise productivity should be provided at concessional rates. Currently, consultancy services are hired by those firms who need them the least — often they already have their own professional staff. Organisations who need them the most can least afford them. Therefore, small firms should be provided with subsidies to hire specialists. Some sort of productivity cess could be levied on industry to fund such a subsidy.

Won't rapid and large-scale modernisation of industry be sufficient to solve the problem of low productivity in the Indian economy?
No, not until modernisation is sustained with the requisite change in culture, attitudes, climate, systems and procedures.

How is the policy of liberalisation helping the cause of productivity?
Liberalisation is helping a lot because it has generated a spirit of competitiveness and made the industry aware of the pressures of international competition.

What are the prospects of bringing the German or Japanese industrial culture and discipline to Indian industry?
Each country has its own culture and I don't think the Japanese system can transferred in toto to India. However, some elements and features can certainly be adopted with good effect For example, in Maruti a team spirit and identification with the organisati is sought to be engendered by various symbols.

Productivity is ultimately an attitud of the mind which must percolate do to all sections of the community. It must be backed up by effective productivity services so that it is converted into action. Government policies, procedures and methods at the macro level must create the right environment.

How far have the tie-ups with international organisations and countries like the Federal Republic of Germany been helpful in raising productivity?
Currently, there is an on-going Indo-FRG project whereby the council will develop statistical norms for various sectors on the basis of certain parameters which may number up to 100. Firms which fall below the norm would be advised to undertake diagnostic investigations which would in turn, call for action-oriented consultancy. Initially, the council will generate data from Indian firms only arrive at a statistical norm. Later, da will be collected from other countries to determine why the Indian norm it is way below international standards disease diagnosis, speed is of the essence. In FRG, a diagnostic report a firm can be prepared in half a day. We will duplicate this system in Indi The project with FRG visualises acquisition of both software and hardware.

Do you think the five-day week, which the central government is observing, helps to enhance productivity?
In a country like ours, where the working class does not really relax a go in for the kind of recreational facilities for which a five-day week is intended, it is not of much consequen in the enhancement of productivity. However, it may have some advantag from the point of view of conservatio of energy and reducing the strain on the transportation system. But it doe not seem to help the working class much.

LETTER FROM THE PUBLISHER

C. F. T. R. I., MYSORE

Abhey Oswal is yet another of our new breed of entrepreneurs. While it is true that he belongs to a leading Ludhiana business family, he branched out on his own and has built an enviable business in a short span of time. Interestingly his success is not in a hi-tech industry but in almost traditional agro based businesses.

One of the most noticeable features of his success has been that he has built up a loyal following of shareholders. And he has been willing to go back to the share market again and again to raise capital. To be sure, as in the case of other successful businessmen, people have raised questions of his accounting practices and the charge that is levied is that such businessmen are more successful at raising capital and showing paper earnings than actually producing real profits from industry.

But frankly such criticisms grossly underestimate the skills and sophistication of our markets and our people. Unfortunately bureaucrats and politicians are also guided by similar misapprehensions about the nature and functioning of our markets. While our capital markets have boomed in recent years after a relatively long period of stagnation, we tend to forget that our capital markets are amongst the oldest in the world. Even sophisticated techniques that make news in western markets today such as futures trading, hedging and options were known and widely used by our financial community decades ago.

It is true that we have seen our fair share of malpractices and frauds in the past. But world over governments have learned understand how to derive the greatest advantages of free markets. In essence, what is necessary is that market forces be given full and free play within the regulations that are designed to ensure a fair market. And most important it must be well understood that breach of the rules entails swift and extremely harsh penalties, including long jail sentences. It is only then that free markets function effectively.

Unfortunately, in the post independence period our markets have been neither free nor rigidly policed. It would be no exaggeration to say that our businessmen get away with actions that would quickly land them in jail in western markets.

Our trading and financial community has had a long schooling in understanding sophisticated markets. Increasingly we hear of our fellow Indians making a mark in overseas markets. With a little vision it is not difficult to see our financial community taking its rightful place in the world community. It is also possible to see Indian markets emerge as major capital markets in the world.

It is time we understand and capitalise on our strengths.

• An appeal

I am writing to you about a personal problem.

I had one son, Amit Kumar Jain, who had passed his MBA Part 1 from Sukhadia University, Udaipur (Rajasthan). He was to do his summer training at Hindustan Levers Ltd, New Delhi, from 8 August 1988. In July, we — myself, my wife, Amit and his sister — went on a holiday to the Andaman and Nicobar Islands for a month. There on 17 July, my 21 1/2 year old son was drowned in the sea.

You can imagine the anguish and mental torture we have undergone during the last three months. I have given the matter my considered thought and have decided to adopt one boy who is doing an MBA degree programme or has done so. If not an MBA, a chartered accountant or an engineer could also fill the gap. Caste, creed, religion, no bar.

Through the esteemed columns of your magazine, I am confident of getting a suitable young man. Maybe like us, there is someone equally unfortunate — a boy, whose parents are no more and seeks affection and love.

M.K. Jain
Sr Intelligence Officer

Lucknow 226 001

• The right strategy

In the Letter from the Publisher (17 October), you have rightly highlighted the hush-hush manner in which the L&T-Reliance alliance has been rushed through. In the same issue you have also correctly focused attention on the match making company, Wimco. The company's fortunes had been greatly affected by the excise policy of the government, while ITC, another company equally affected by excise levies, has successfully warded off the danger by appropriate action and diversification.

It would be unfair to single out Kamaljit Singh or consider the absence of a succession plan as the only reason for the current state of affairs of the company. It is the strategy that has backfired.

A. Vidyasagar
Bombay

• What went right

I must compliment you on the excellent and objective reporting that you have done of the BPCL fire episode (Business Notes, 28 November). Unfortunate as it is, an accident like this, has brought out several plus points like the one you have covered, besides the capabilities of our people to have contained this fire with minimal loss. Elsewhere such situation have resulted in the loss of a whole refinery. The press in general has been exaggerating and conjucturing all sorts of things most of which were irrelevant. I am happy to say that *Business India* has brought out some of the positive aspects of disaster management.

K.R.S. Narayan
Director (Refineries)
BPCL
Bombay

• Props for jute

Your Industry Report (14 November) has touched only on the fringe of the problems of the jute industry. The present success of a few jute mills is by no way due to the dynamism of the new management but to doles and propping up by the government with disastrous consequence to various sectors of the economy.

Take the case of cement, 70 per cent of which is to be packed in jute under the Jute Packaging Material Act. Thus about 25 million tonnes of cement sold in jute sacks is subjected to spillage and the consumer gets an average of 45 kg against 50 kg. The loss at 5 kg per bag runs into 2.5 million tonnes on 25 million tonnes packed in jute bags and the loss to economy is around Rs.375 crores every year.

• Not the busiest

In your Cover Feature on aviation safety (31 October), it was mentioned that "Ahmedabad airport is one of the busiest in Western India, with more than 17 landings a day and it still lacks a proper Instrument Landing System". May I point out that Ahmedabad airport is not one of the busiest in Western India and has less than 10 landings a day!

• A guide to businessmen

Your analytical appraisal (Cover Feature, 14 November) of the effect of perestroika in the Soviet Union should serve as a guide to Indian businessmen.

Till now, Indian trade catered to a captive market in Russia, not much bothering about quality, packaging, price, public relations, delivery schedules, etc. This style of business will now be history.

S.S.S. Sarma
Singarayakonda

• Could housing be the answer?

The article on NRI investment (3 October) raises a number of questions.

Why should any NRI invest in India on a non-repatriable basis, when his chances of finally returning to India are almost nil?

Indian laws relating to access, eviction etc are in favour of tenants. The author suggests that these laws should not be applicable to NRIs. Wouldn't this be a clear-cut discrimination against Indian owners?

If housing units are built as suggested by the author, using special imported fixtures, their rents are bound to be high which the average Indian cannot afford

What India needs is small residential units which the average Indian can afford. No government in the world can provide housing to all its citizens. It has to come from the public. Because of Indian laws, 15-20 per cent of residential units in Delhi (probably all over the country) are lying vacant.

As regards non-repatriable NRI investment, only those NRIs who are returning to India for good will bring their assets into India in cash or kind (cars, home appliances etc). What I suggest is that the government should either allow the NRIs who return to India to import household goods duty free or offer them Indian household goods at reduced prices (international prices) against foreign exchange payments. This will help Indian industry and enable the RBI to collect a lot of non-repatriable foreign exchange

Assuming that 75,000 NRIs return to India every year, and each one brings goods worth Rs.300,000 (including car, home appliances etc), the RBI can collect Rs.2,250 crores every year in foreign exchange.

RAJIV GOEL
New Delhi

Erratum

You have done well in highlighting the sorry plight of the drycell battery industry (Business Notes 5 September). However, we wish to point out an error which has crept into the article.

Geep has never invested in button cell production capacity as pointed out in your article, and so has not suffered the fate of a shutdown. In fact, Geep has reported the highest rate of growth in production in 1987 and continues to do so in 1988.

THE PERFECT BUSINESS GIFT

for your important clients, colleagues, staff, friends and family.

THE BUSINESS INDIA PLANNER 1·9·8·9

Finally a business gift that is unique, useful, and elegant.

Meticulously designed to suit varied lifestyles, The Business India Planner is a gift that will be appreciated by anyone who receives it.

Leather bound in black, grey or burgundy, with its easy to use design format. The Business India Planner 1989 has a new expanded Information Section, a versatile Diary Section, a handy Network Section, and an indispensable Organiser Section.

Select between the two versions of the Planner: the Day Plan and the Week-at-a-glance. The diary section of the Day Plan devotes a page a day whilst that of the Week-at-a glance views a week on a spread.

With its unique trigger operated ring binder system, The Business India Planner can be organised to suit individual requirements and style. Add, subtract and relocate pages from numerous features and options available, including an optional storage box, which is ideal to store alternative or spare pages. And next year, all that needs replacing is the diary section.

Planners will be available for delivery by mid November.

Summer apprenticeships for students

AIESEC Bombay is organising a vacational apprenticeship scheme (VAS) to enable college students to work in Bombay companies during the coming summer vacations. Students can choose fields such as marketing, computers, finance, tourism and commercial art.

AIESEC is the French acronym for the International Association of Students in Economics and Management. Run entirely by students, it is spread over 67 countries and has a membership of over 45,000 students.

Bombay students interested in participating in this scheme: check with your nearest college for details.

RAJPAL SETHI
Co-ordinator, VAS
Bombay

Discount those discounts

While the MRTP Commission is engaged in taking punitive action against advertisers who put up misleading advertisements they could look at some of these instances in Bombay. The first relates to manufacturers of 'Encore' luggage who put up banners offering as high as 600 per cent discount to lure the unwary. What is actually offered is 30 per cent plus a further 30 per cent, making it an effective discount of 51 per cent on the original price. The second instance of a similar discount of 60 per cent comes from UP State Handloom Shop in south Bombay. Though, in this case, the banner does give the 30 per cent plus 30 per cent breakup, it is in a very small print.

JYOTIN MEHTA,
Bombay

Eucalyptus hazards

Farmers in Karnataka and Thailand have a common enemy — eucalyptus. 'Social forestry' programmes of large-scale eucalyptus planting have made much of their agricultural land useless. Their collective ire has led them to destroy eucalyptus seedlings and nurseries.

As scientific evidence and grassroots protests against eucalyptus build up, two organisations — the Asia-Pacific People's Environment Network (APPEN) and the Third World Network, both based in Penang, Malaysia — have begun to campaign in other Third World countries to prevent them from making the disastrous mistakes of Thailand and India.

Large scale Eucalyptus planting is bad because:

- it necessitates destruction of rich natural forest, as has happened in Karnataka;
- it absorbs a lot of water from the ground, depriving nearby communities of water for domestic and agricultural use. In the drier regions of India, with rainfall well below 1,000 mm, the shallow and laterally spread root systems of the eucalyptus have depleted groundwater, rendering the soil dry;
- it depletes soil of nutrients. Eucalyptus' nutrient intake is high, while what it returns through leaf litter is meagre;
- it makes the soil toxic, inhibiting seed germination and plant growth and thus reducing the yield potential of nearby crops. It is also toxic for soil organisms like earthworms which enhance soil fertility and structure;
- it increases the trend of desertification by shrinking the potential of land for biological production; and
- it reduces biological diversity. In Brazil, for example, the densely planted eucalyptus shelter few indigenous plants or animals.

Critics point to the World Bank and other funding agencies like the Overseas Development Administration of the UK as the source of the problem. The ostensible aim is to serve the needs of the rural people. But the actual beneficiary of 'social forestry' is industry. Most of the eucalyptus goes to supply wood and pulp. Not only does eucalyptus produce insufficient fuel and fodder, it also jacks up the price of other fuelwood. The employment and livelihood of millions of farmers are thus threatened. APPEN and the Third World Network strongly echo the warnings of environmentalists and indigenous villagers — review and halt eucalyptus projects.

A corporate spruce up in the offing

Clothes may not make a man, but "if you look good, you feel good". Propelled by this belief, Grindlays Bank plc has introduced the concept of corporate attire, exclusively designed for their 4,000-strong staff working at the bank's 55 branches in 14 Indian cities.

With 'personal banking' being the favorite buzzwords these days, the underlying motive of 'Expressions', as the new design line is called, is "to reinforce our strategy of coming closer to our customers", according to Gerald Howard, regional director, for South Asia.

For women employees, which make up 25 per cent of the workforce there are 15 different styles each in 7 colours; in comparison there are six styles for men. "It's user friendly," chips in Ashok Karambaya of Good Relations India Pvt Ltd, the PR agency that orchestrated this executive wear exercise for Grindlays.

An audio-visual presentation and a four colour, glossy catalogue was circulated at all the branches to sell the uniform look to the staff. "No it's not a uniform," Howard hastens to point out, simply because the employees will have to pay for it themselves. The prices, admittedly, are

darned attractive. A Zodiac shirt and Raymond trouser set costs an affordable Rs.300. For women, silk sarees (by Kaysons) are in the Rs.300 to Rs.400 range. Grindlays' new corporate insignia represented by network cities is either subtly woven into the saree pattern or makes a discreet appearance on the shirt pocket.

Most important, its not mandatory and Howard would prefer to rely on peer pressure to get those orders. So far, 70 per cent of the staff has responded positively. And what if some people prefer to be sore thumbs? "We won't bully him," is Howard's democratic reply.

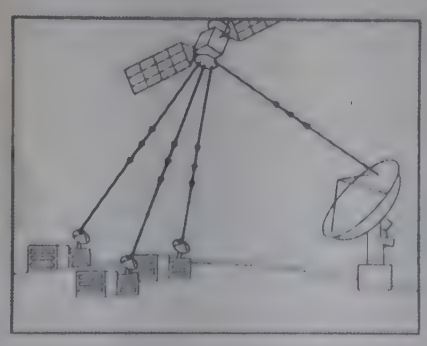
Swedes to improve Asian telecom scene

The Swedish company Netstar Satellite Communication AB, which is concerned with information transmission via satellite, has entered into an agreement with the Australian Overseas Telecommunication Commission, (OTC). This enables Swedish companies to maintain contact with overseas business connections in areas of Asia where there are no reliable telecommunications. VSAT (very small aperture terminal) technology has given Swedish companies two-way communications with subsidiaries all over the world using direct satellite transmission.



Netstar's first market will most probably be India where detailed talks with the telecommunications authority have begun. The parties involved have had collective discussions with several Swedish interests. Preliminary plans are for installation work to begin during 1989.

Matrix managers needed

According to various studies, between two-thirds and three quarters of the engineers in the country ultimately end up performing technical management tasks. An engineer, trained to deal with physical laws, will naturally be at a loss when he is exposed to non-mathematical problems like decision making. And that will be the engineer's greatest weakness. As is often said, "an engineer does not acquire a workable appreciation of the human beings with whom he deals".

Despite the frequent overlap of engineering and management functions, engineers till recently have rarely been offered management courses tailored to their needs. The necessity for establishing management courses tailor-made for engineers is now fast being understood in the US, where there are already more than 40 business schools, Stanford, Vanderbilt and Pittsburg among them offering management programmes for engineers.

Right now, Anna University in Madras is the only institution in India which offers business management programmes exclusively for engineers. Matrix managers as they are popularly known, learn the skills of corporate staff in such areas as accounting, finance, marketing and sales. They are taught various specialised subjects such as management of engineers and scientists RD&E projects, technical organisations, technical resources and technological systems. The importance of engineers to acquire management skills cannot be overemphasised and more institution must come forward to nourish this idea.

Enterprise/D/ACL/169

shh.... a new IMF oan

finance secretary, S. Venkitramanan, ng with J. Bajaj, a joint secretary in the istry of finance has just returned from vhirlwind tour of Paris, London and shington. The trip was planned quietly l there is no indication of the real pose of this visit.

However, astute observers believe that h the continuing criticism of the eign exchange situation, New Delhi s decided to make standby arrange- nts for a new IMF loan. Virtually no ails are available, not even the size of e proposed loan. Considering the heat d dust raised by the last loan, it is not rprising that the whole matter has en kept hush hush.

New found love?

e Modi feud has made front page news this year (see *Business India*, October to 30, 1988). However, suddenly it pears that the Modis are moving to- rds a settlement. Is there a new found ve between the feuding cousins?

The sons of the late Gujarmal Modi, K. and his younger brothers, had en- ged in a battle royal with K.N. and his ns, for control of the group. A key to the ntrol was Modi Rubber which, inturn, ntrolled newly set up companies, in- uding Modi Xerox.

The institutions, in any case, held out 44 per cent of the equity. In a quiet ove, but with clear green signal from elhi, the institutions quickly raised ere shareholding to above 51 per cent. uickly all the Modis realised that a set- ement can be imposed by the institu- ons. First the institutions quickly moved six "independent" members of e board. Sure enough, the settlement s begun to fall into place.

Corporate observers, however, believe at minor skirmishes will continue, par- cularly in the other companies.

More brickbats than bouquets

s the process of hammering out a settle- ent goes on, the more dynamic of the Modi clan are looking at new pastures. atish Kumar Modi who has done a credi- ble job in making Modi Threads profita- le once again, has, according to reports, been shortlisted as a co-promoter for a new project in Bihar. This is a Rs.40-crore carbon black project for which the Bihar State Industrial Development Corporation (BSIDC) has been issued a letter of intent.

According to the grapevine, Modi and Rama Prasad Goenka are running neck to

S.K. Modi: probably little cause for joy

neck for this prestigious project, the product of which is an important input for the tyre industry and is in constant short supply. Although R.P. Goenka already owns Philip Carbon Black in Calcutta, sources close to N.K. Singh, chairman of BSIDC, place their bets on S.K. Modi.

Whoever bags the collaboration, however, will have little cause for joy; running a profitable company in Bihar is a case of more brickbats than bouquets.

New match

Royal Duetch Shell, the giant multinational, was amongst the first to enter the petrochemical field when it floated Nocil along with Mafatlal over two decades. Thereafter, its refineries and oil distribution were nationalised to form Bharat Petroleum.

Shell is clearly disappointed that Nocil is stuck with its expansion plans for lack of environmental and other clearances. It is now almost an open secret that Shell have been casting around for new partners. With talk of a Vishakhapatnam complex going to Vijay Mallya they have opened discussion with his group. At the same time, they have held more than preliminary discussions with the Ambanis for their giant petroleum project.

Who will be Shell's new match therefore is anyone's guess yet.

Pure market play

In the last two weeks stockmarkets have been abuzz with rumours of an impending takeover threat to Mahindra & Mahindra, flagship of the Mahindra group. Immediately fingers were pointed at the Ambanis who, according to the bazaar, were buying in into Mahindra & Mahindra (where the Mahindra family holding is relatively small) to teach the Mahindras a lesson for joining with arch rival Nusli Wadia in proposing an alternative proposal for a tunnel across Bombay harbour.

Soon enough it became clear that the real buyer of the shares was Nemish Shah. Once again the rumours surfaced that Shah was acting on behalf of Ambani. Shrewder market observers have dismissed the idea. According to them, Shah has in the past also purchased shares of companies with sound fundamentals whose price has been undervalued. After cornering the small quantity of floating shares and causing prices to rise sharply, Shah turns a neat profit.

With GIC, for some unkonwn reasons, selling a significant block of Mahindra & Mahindra shares, Shah grabbed the shares having smelt an opportunity.

By all counts, a pure market play.

What's the signal?

In recent weeks the finance minister S.B. Chavan and his successor chief minister of Maharashtra, Sharad Pawar, made a well publicised foreign trip to drum up NRI investments in India.

Taking the queue, a group of NRIs including Manu Chhabria and Ram Buxani, have organised a big NRI investment conference in Dubai later this month.

Strangely, the RBI is dragging its feet in releasing foreign exchange for a few key senior officials from Maharashtra and the financial institutions. Apparently a file has been referred to Delhi.

So what's the signal Mr. Malhotra?

GNP growth rate may exceed 9 per cent

The deputy governor of the RBI, P.D. Ojha is hopeful that the overall growth of the gross national product (GNP) would be more than 9 per cent in the current fiscal year. He was of the opinion that the industrial sector could achieve a growth rate of 8 per cent while agricultural production was likely to be "very good" following good rains.

Ojha said that there was a need to step up exports, and the RBI had decided to give hundred per cent refinance on an incremental basis to commercial banks to boost earnings. While he felt that the export sector was doing a good job, there is scope for substantial improvements if the garment, leather, gem and jwellery industries were to modernise.

Export of synthetics up by 90 per cent

A quantum jump of 90 per cent has been achieved in the exports of synthetic and rayon textiles to reach Rs.111.67 crores. This was achieved during the first six months of the current financial year, compared to the exports of Rs.58.86 crores during the same period in the previous year.

Encouraged by this performance, the Synthetic and Rayon Textiles Export Promotion Council is now aiming for an all-time high export of Rs.250 crores for 1988-89. In order to achieve this the council has identified 30 manufacturing units with significant export potential for large scale expansion and is looking into solving their problems at a unit level.

Growth centres being planned

Market borrowings of upto Rs.10 crores will be permitted for financing growth centres in backward areas of 16 states and nine union territories. Initially, 61 centres will be set up, with an investment of Rs.30 crores in each of them. Over the next five years, 100 such centres are planned. The centres will be provided with the best possible infrastructural facilities.

Besides the market borrowings, the centre will put up Rs.10 crores in equity, state governments Rs.5 crores, public financial institutions Rs.4 crores and nationalised banks Rs.1 crore.

The final selection of the centres will be made by the union government based on proximity to water and power supply, rail roads, highways, and civil administration headquarters. State governments have been asked to send proposals for centres.

Public sector accounts revised

About 65 public sector units were asked by the comptroller and auditor general (CAG) to revise their accounts for 1985-86, resulting increased losses of Rs.140 crores. The companies had inflated their profits or shown reduced losses by using accounting principles which the CAG disapproved of.

The companies included Bharat Earth Movers, Eastern Coalfields, Hindustan Aeronautics, HMT, Andrew Yule, Cement Corporation of India, Hindustan Copper, State Trading Corporation and Steel Authority of India.

Kuwait may aid shrimp farming

An appraisal mission of the Kuwait Fund for Arab Economic Development toured Kerala recently to study the state government's ambitious scheme for integrated development of brackish water prawn farming. Since marine shrimp landings have been stagnating, India has not been able to fully exploit the potential for exports to Japan, the US and western Europe. Kerala has several natural advantages to develop shrimp culture. Aid for shrimp farming from the Kuwait Fund would help revitalise the state's seafood processing industry, now mostly in the small-scale sector.

Bankmen wages hiked

After 16 months of protracted negotiations, the Indian National Bank Employee's Federation (INBEF) has reached an accord with the Indian Banks' Association (IBA) on the bankmen's wage revision.

While bankmen will benefit in terms of taking home higher wages, ranging from Rs.85 to Rs.300 for clerical staff and Rs.70 to Rs.127 for subordinate staff, they will on their part have to put in longer working hours, or so it is envisaged.

On account of the higher wages, the banks will have to pay about Rs.250 crores to nearly 750,000 employees, which accounts for 14.5 per cent of the total wage bill. In addition, the provident fund contribution has been raised from 8.33 to 10 per cent, effective from the beginning of the next calendar year.

Easy norms soon for NRI bonds

Because of the lukewarm response to NRI bonds till now, the government is likely to liberalise norms for these. The issue which opened on 14 November has so far accumulated only $ 10 million. These bonds are expected to mop up as much as $ 200 million and shore up the weakening balance of payments position.

One of the features of the altered norms is the withdrawal of the three year lock-in period of premature encashments. Premature encashment of the seven year bonds will now be allowed even before three years are over, though with reduced interest. Another important feature of the altered norms is that investors will be allowed to use the bonds as security or collateral for loans before three years are completed. Payment of interest on the bonds will now be allowed annually instea only on a cumulative basi maturity. The reason for th that payment of interest a ally, which is expected to b added inducement for in tors, will stem the heavy out of foreign exchange from exchequer at the end of the riod when the bonds matur

OECF soft loan for IISCO

In addition to Rs.900 cro that has been pledged by Japanese government, the O seas Economic Co-operat Fund (OECF) has pledge soft loan of Rs.60 crores for gineering services in connect with the modernisation Indian Iron and Steel Comp (IISCO).

The IISCO modernisati plan was approved by the g ernment in January 1988. amount of Rs.30 crores was i tially sanctioned for prepa tion of a detailed project rep and preliminary works.

The result of discussions h by prime minister Rajiv Gand with the Japanese authorities April this year, five Japane companies formed a consc tium for implementation of t project. A Japanese tea headed by the managing dire tor of Nippon Steel Corpor tion, one of the companies i the consortium, visited India i July to finalise details about th engineering studies.

Pig iron output to be hiked

M.L. Fotedar, union minister fo steel and mines said that in ad dition to import of 200,00 tonnes of pig iron, the govern ment is planning to step up pro duction from the integrate steel plants to ease the avail ability position in the remain ing past of the current financia year. Fotedar was addressing the consultative committee of members of parliament at tached to his ministry.

Regarding the aluminium sector, Fotedar said that the

performance of both Bharat Aluminium Company Ltd (BALCO) and National Aluminium Company Ltd (NALCO) has improved during the last seven months, as compared to the corresponding period in the previous year.

MNCs can enter on export condition

On the agreement that they will export 75 per cent of their production, multinationals will be allowed into the micro-electronics sector. The major thrust areas of the proposed micro-electronics policy, awaiting clearance at the highest levels, is foreign investment and technology imports.

Appreciating the fact that the domestic market for integrated circuits (ICs), which forms the core of the industry, is highly limited, the committee of secretaries who are discussing the policy have come to the conclusion that development of micro-electronics will have to be with an eye on exports. The foreign exchange inflow will serve to finance the imports of components and ICs.

A report submitted by an Indo-US joint committee suggests that India should liberalise its foreign investment policy, particularly in respect of sophisticated policy technology areas like micro-electronics. The committee remarked that an investment of Rs.1,500 crores by 1990-95 and Rs.2,000 crores by the turn of the century was feasible, with a heavy dose of foreign investment.

New scheme for handloom sector

Replacing the rebate scheme which allowed handloom apex agencies and handloom corporations to sell their products at a 20 per cent rebate for 30 days in a year is a new market development assistance (MDA) scheme. V.K. Agnihotri, development commissioner for handlooms, said the new scheme was designed to sort out the problems of the old scheme and introduce a measure of flexibility.

Linked to performance, under the new scheme, a lumpsum will be allocated to apex agencies and co-operatives on a fiscal year basis for marked development.

The assistance can be used for a variety of reasons including interest subsidies, rebate or discount, capital or margin money for setting up showrooms, etc.

RBI warns against liquidity rise

There may be a sharp increase in liquidity during the second half of the current financial year, primarily because of a rise in internal public debt, a steep rise in credit from the RBI to the government, and the fallouts of excessive government spending and deficit financing.

Till September, RBI credit to the government recorded a steep rise to nearly Rs.5,280 crores compared to Rs.3,976 crores lent during the corresponding period last year.

Despite the well defined busy season credit policy, money supply and term deposits totalled over Rs.11,000 crores in the first half of the 1988-89 fiscal year, compared to Rs.9,700 crores in the corresponding period of the previous year.

ICI to retain IEL stake

ICI of the UK has no plans to pull out or even dilute its 50.8 per cent stake in IEL limited. Jahar Sengupta, IEL chairman, told the press in Calcutta recently that ICI is fully satisfied with the IEL management.

According to Sengupta, IEL is presently on the path of recovery after the lack lustre performance in the recent past. This opinion is based on the company's ambitious expansion and diversification plans for the next decade. Some of the projects that will be taken up in the next two to five years include FM-21, a chlorine membrane cell technology, to be developed in the West Bengal unit and resins for photocopiers in Thane in Maharashtra.

Chloride tie-up with Universal

Chloride Industries Ltd is planning to manufacture a limited range of uninterruptible power supply systems,under a joint agreement with Universal Electric Limited.

The foreign holding of Chloride Industries is held by the Singapore based Chloride Eastern Industries Limited in which S.K. Birla has a stake. Universal Electric belongs to the S.K. Birla group.

According to the agreement between the two companies, Chloride Industries is to get the systems manufactured at Universal's factory in Calcutta.

Grasim gets MRTP okay

Grasim Industries' plans to manufacture glass shells for 20-inch colour picture tubes have been granted MRTP clearance. Grasim Electronic Ltd, a new company, has already been registered for implementing the project. The new company is being set up at a cost of Rs.180 crores in technical collaboration with Asahi Glass of Japan.

The company, which is licensed to produce 3 million glass shells for CTVs, will produce 1.73 million in the first phase. The project is expected to go on stream by December 1991.

Maruti launches joint venture

India has taken a major step towards self reliance with the setting up of the Maruti Joint Venture Complex. The joint venture complex is part of the ambitious plans of indigenisation programme of Maruti.

The four companies which comprise this joint venture complex are Bharat Seats Ltd, Machino Plastics Ltd, Mark Auto Industries Ltd, Jay Bharat Maruti Ltd. All four joint ventures are to produce seat sets, heavy duty injection moulded parts such as dash board panels and bumpers, assembly of critical components like fuel tanks, suspension frames, car engine frames, chassis components, sheet metal components and other allied assemblies.

All four companies shall be prime vendors to Maruti and would initially supply critical components to it.

Excess capacity of these ventures would cater to the requirement of components and assemblies of the new Maruti 1000 cc model to be introduced shortly.

Shreyans to make MDF boards

The Shreyans group of Ludhiana, which manufactures printing and writing paper and all kinds of hosiery and knitting yarns; plans to set up a medium density fibre (MDF) boards project.

Shreyans Paper Mills Ltd, a group company, has signed a memorandum of understanding with the Gujarat Industrial and Investment Corporation Ltd (GIIC) for setting up a project for the manufacture of 14,500 tpa of MDF boards. The project is proposed to be set up in a centrally notified backward area in Gujarat.

To be manufactured from agricultural residues, the MDF boards, characterised by homogenous construction, higher strength, fine surface, solid core and better screw-holding capacity, find wide domestic and institutional application. These are used for the manufacture of all kinds of furniture, industrial shelves, high load flooring, pattern-making, sheathing and partitioning.

A separate company is being floated to implement the project. The Rs.14-crore unit will be

financed by way of equity capital and loans from financial institutions and is expected to have an annual turnover of Rs.15 crores.

Merchant banking subsidiary to be set up

The Bank of India, together with the Union Bank of India, the Bank of Maharashtra and Dena Bank, will be floating a subsidiary company. The subsidiary will be involved with merchant banking, equipment leasing, project advisory services, portfolio treasury management, mutual funds, credit cards, travellers' cheques, gift cheques and allied financial services.

Participation in the joint subsidiary will be in the ratio of each bank's domestic deposits to the total deposits of the four banks. This works to 45 per cent equity for Bank of India, 25 per cent for Union Bank of India and 15 per cent each for the other two.

Record performance at TEC

The Tata Electric Companies' 500 mW unit at Trombay generated 2,023.3 million units of power during the six-month period from April to September 1988. The plant recorded the highest plant load factor in the country — 92.1 per cent — and on-line availability was 100 per cent. The all-India average plant load factor for thermal stations during the same period was 52.4 per cent.

Dempo diversifies

The Dempo group of Goa, with interests in shipping barge building and iron ore mining, has now diversified into the manufacture of automobile accessories in collaboration with Armstrong Patents of UK.

The company — National Auto Accessories Ltd — has an installed capacity of 200,000 sets of steering linkage assembles, 300,000 tie rod ends and suspension joints and 50,000 drag link assemblies.

Trial production has already started in the Rs.5.5-crore plant in Goa. A market study by Tata Consultancy has shown that the total auto accessories market, both for original equipment and replacement is around 10 million pieces at present. Of this the organised sector currently meets 40 per cent and the unorganised sector, about 15 per cent.

Chhabria tie-up with GNFC

Gujarat Narmada Fertilizers Corporation (GNFC) and Manu Chhabria have reportedly tied up to set up a Rs.200 crore colour TV glass shell project in Gujarat. A separate company will be formed in which GNFC and Chhabria will both hold 25 per cent each of the Rs.85 crore equity. The balance will be offered to the public.

GNFC holds a license to manufacture 1.7 million colour TV glass shells per annum. The industry however has now been delicensed. The company has sought registration for expanding capacity to 2 million pieces.

Shaw Wallace to expand business

M.R. Chhabria, chairman of the Shaw Wallace group, in his annual review of the company for 1987-88 said that the group is planning to expand operations in consumer products and real estate business. A complete range of men's toiletries including cosmetics and skincare, is to be launched under the brand name of Aramusk. In the real estate business, development is to commence soon. Three prime locations in Madras and Calcutta have been acquired for the purpose.

At the annual general meeting of the company on 12 December next a special resolution will be adopted to alter the articles of associations to accommodate this diversification, in conformity with the recommendations of the Bombay Stock Exchange.

DCM trifurcation begins

In conjunction with the recommendations of the managing directors, the board of directors of DCM have taken the first step towards trifurcation of the company into three independent subsidiaries by regrouping their operations under the three members of the Shriram family.

Under the regrouping, Bansi Dhar, chairman and managing director, will look after Shriram Fertilizers, Shriram Rayons, Hindon River Mills, Daurala Sugar Works. Siddarth Shriram will manage Shriram Foods and Fertilizers and Mawna Sugar Works. Vinay Bharat Ram will look after DCM's Bara Hindu Rao textile unit, the engineering products division of DCM, DCM Data Products and the operations of Shriram Fibres Group.

Indal's golden jubilee plans

The Indian Aluminium Company (Indal), celebrating its golden jubilee this year, has announced that the company wishes to invest Rs.350 to Rs.400 crores over the next five years in the areas of foils, sheets, extrusions and captive power.

The amount of investment planned will be more than three times the amount invested by the company over the last five to seven years.

The company has chalked out diversification projects in non-aluminium areas too. Among these is a Rs.14-crore printed circuit board project, based on technology provided by Kollmorgen Corporation of the US to be set up in Karnataka and expected to be commissioned in early 1989.

A 67.5 mW captive power plant is also being constructed at Hirakad in Orissa, and a second in Karnataka. Besides these, the company is planning two joint ventures — Orissa P trusions Limited with the g ernment of Orissa a International Advanced Proc Technologies Limited with t government of Karnataka.

Large CDC credit line for SCICI

The Shipping Credit and Inves ment Company of Ind (SCICI) has finalised a line credit of sterling pound 15 m lion with Commonwealth Deve opment Corporation (CDC London. The CDC loan carries fixed rate of interest of 8.5 pe cent per annum. The fu amount is likely to be used b SCICI by the end of April 198

Export orders for Orson

M.R. Chhabria's Orson Elec tronics Ltd, which has a techni cal and financial collaboratio with Sony of Japan, has with it Black Belt range of colour tele visions established a strong na tional presence. Amidst sever competition, the company ha also received orders for colou televisions from Yugoslavia an Bangladesh — an export busi ness of over US $ one million.

Orson is also presently negotiating export business with a host of West European countries besides East Europe for televisions, stereo and mono radio recorders and a number of contemporary products drawn from Sony's innovative audio range.

In 1989, new export orders are likely to exceed over US $ 5 million.

Soviet order for BHEL

Leningrad Metal Works, USSR, have placed an order on Bharat Heavy Electricals Ltd for supply of alloy steel castings for turbines. The export order worth Rs.3 crores is the first of its kind bagged directly by BHEL from a Soviet manufacturing plant under long term agreement for di-

AHLSTROM PYROFLOW *(CFB) BOILERS

To be manufactured in India under Licence from A. AHLSTRÖM Corporation FINLAND by

ISGEC JOHN THOMPSON

When ISGEC John Thompson chose AHLSTÖRM as the collaborators for *Circulating Fluid Bed Boilers, there were many reasons, but the most important ones were the galaxy of highly reputed Licensees, Co-operation Partners and Associate Companies of Ahlström for manufacturing PYROFLOW *CFB Boilers, and the enviable number of their boilers sold in various parts of the world which, as of June '88, stood at 66!

The outstanding features of **IJT—AHLSTRÖM PYROFLOW** Boilers are :

- ★ Good fuel mixing, long residence time by recycling and high heat capacities of circulating material
- ★ Environmental protection against SO_2/NO_x emission
- ★ Erosion and corrosion of heat transfer surface is prevented, and there are no in-bed tubes
- ★ Low consumption of bed material and high heat recovery from these
- ★ Simplified Fuel Feed System
- ★ Natural circulation, no external heat exchanger required
- ★ Multi-fuel capability
- ★ Adaptability to conversions and retrofits

The Chola Sheraton Business trip

There is a fine difference between a business trip completed and a complete business trip.

It takes more than just a hotel to prove it. It takes the Welcomgroup Chola Sheraton. And the discerning business traveller.

For whom we have created the **Executive Club,** a new world of hospitality with specially appointed rooms and suites, extensive business support facilities and personalised valet service.

And the **Executive Club Lounge.** Quiet, elegant and distinctive. Ideal for informal meetings and private entertainment.

But the 'complete' business trip means more than business. And we at the Chola know this.

The new, fully equipped **Health Club** not only smoothes away the creases of your hectic schedule, it also helps you unwind—for the leisure hours.

So that you can revel in the pleasures of dining at our speciality restaurants, and, of course, the **Peshawri**—the North-West Frontier restaurant that brings you an unforgettable gourmet experience!

All this in an environment which exudes the inimitable Chola warmth and hospitality.

rect co-operation, pursuant to the policy of *perestroika* under which Soviet plants have been given rights to directly negotiate with overseas suppliers.

The order envisages supply of intricate castings for high temperature application in 210 MW steam turbines. These will be manufactured at the central foundry forge plant of BHEL at Hardwar. Supplies are scheduled to be completed by the end of 1990.

New Klockner factory

Klockner Windsor India Ltd the market leader in the manufacture of all types of plastics processing machinery in India has set up a factory with an initial investment of Rs.5.5 crores in GIDC industrial estate, in Chhatral, near Ahmedabad, for the manufacture of sophisticated injection moulding machines with microprocessor controls, the technology for which has been acquired from West German collaborators, Klockner Ferromatik Desma GmbH.

Neoluxe-Mafatlal marketing tie-up

Mafatlal Plywood Industries Ltd has entered into a tie-up with Neoluxe India Marketings Pvt Ltd, a part of the Neoluxe group of companies for the marketing of its entire range of plywoods on an all-India basis.

Neoluxe India Marketings will be fully backed in the venture by Neoluxe India Ltd the flag-ship of the Neoluxe group. Neoluxe India is an aggressive player in the decorative and industrial laminate industry, with a nationwide marketing network of over 400 retail outlets and its own full-fledged branch offices cum depots at Delhi, Calcutta, Madras, Bangalore, Hyderabad and Ahmedabad. The group also manufactures prelaminated medium-density fibre board, in collaboration with Mangalam Timbers.

Colour monitors from Essen

Gujarat-based Essen Peripherals Ltd has begun to produce the complete range of computer colour monitors, at the company's manufacturing facility at Gandhinagar at an approximate project cost of over Rs.1 crore.

The range of monitors include models compatible with the CGA (colour graphics adapter), the EGA (enhanced graphics adapter) and the VGA (video graphics array), all of which are the latest standard products worldwide. These models are in addition to the full range of monochrome monitors already being manufactured. The company has a technical tie up for monochrome monitors with the South Korea-based Samsung Company.

The company will make 6,000 colour and over 20,000 monochrome monitors during 1989, and double production within three years. "The demand for colour monitors in India is over 10,000 today and is increasing by more than 50 per cent per annum. Currently, there are no large-scale manufacturers of colour monitors and the demand is fed by imports.

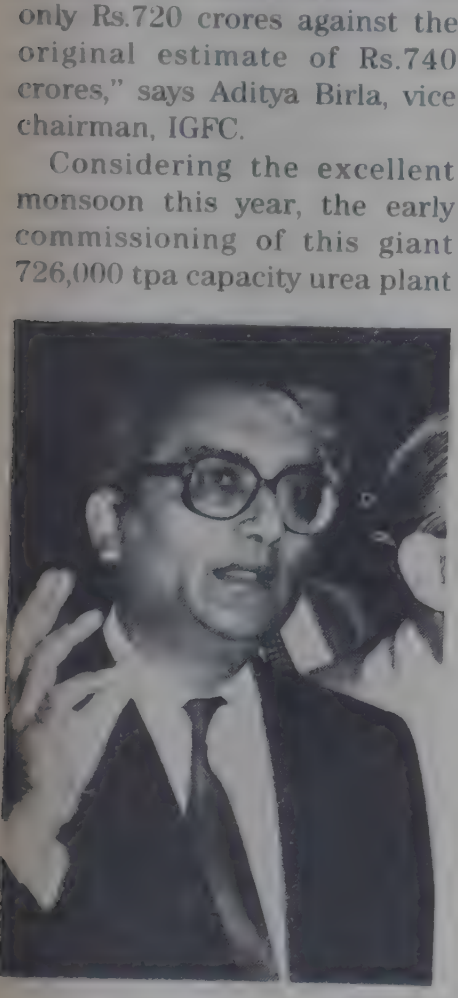
ADITYA BIRLA

The gas-based fertiliser complex of Indo Gulf Fertilisers and Chemicals Corp (IGFC) which went on stream last fortnight, was completed in 38 months — 3 months ahead of schedule. "Thanks to speedy project implementation and top quality management skills from our group companies, the plant cost only Rs.720 crores against the original estimate of Rs.740 crores," says Aditya Birla, vice chairman, IGFC.

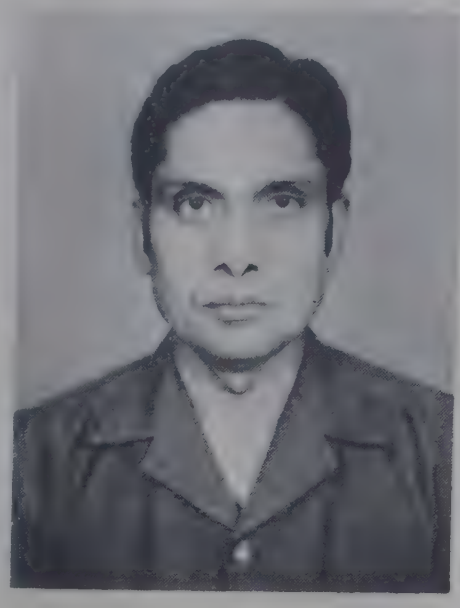
Considering the excellent monsoon this year, the early commissioning of this giant 726,000 tpa capacity urea plant



could not have been better timed. And, as Birla says, "The demand for fertilisers in the Indo-Gangetic plain where we are located is much more than production."

Birla is optimistic about the prospects of the fertiliser industry, as long as there is no adverse change in the way prices are fixed by government. There is some talk of reducing the depreciation rate allowed on fertiliser plants (from 10 to 5 per cent) for the purpose of fixing prices. This would lower prices and reduce subsidies. "Such a move would be retrograde," asserts Birla. "Technology is changing very fast and if we want to keep abreast, plants should be written off at a faster rate."

R.S. AGGARWAL



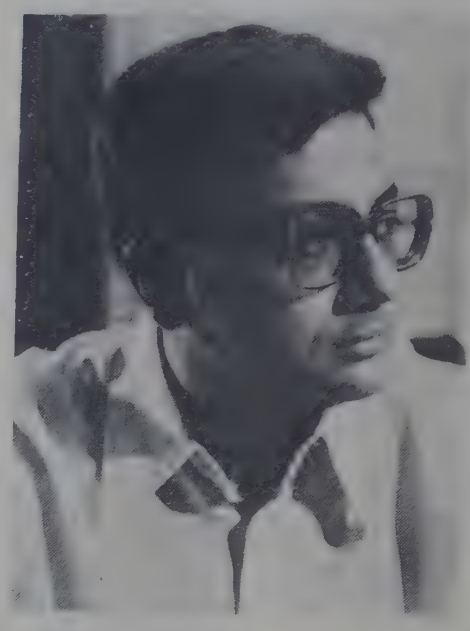
Haryana Petrochemicals, which was incorporated a few years ago and went into commercial production in April 1986, is now ready for expansion. According to R.S. Aggarwal, managing director, the company is more than doubling its spinning capacity from 3,000 to 7,000 million tonnes (mt). Also, the company is diversifying into bright trilobal/speciality yarn.

The total cost of the expansion will be Rs 17 crores. Of this, Rs.2.5 crores will come from a rights issue to be made in January 1989, Rs.3.5 crores from internal accruals, and Rs.11 crores from loans, says Aggarwal. The company has been doing well on the financial front and is likely to announce its maiden dividend of about 10 per cent this year.

N. SANKAR

The board of directors of the Madras-based Chemicals and Plastics India Ltd (Chemplast) and the Mettur Chemical and Industrial Corporation (MCIC) have decided to merge the two companies with effect from April 1988. The subsidiaries of Chemplast hold about 24 per cent of the share capital of MCIC and these subsidiaries are also being merged with Chemplast. The ultimate paid up capital of the merged company would be Rs.887.29 lakhs.

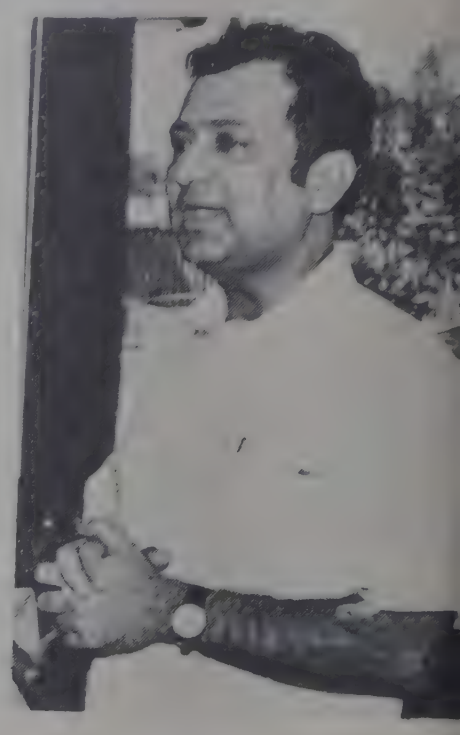
"There is a lot of synergy between the companies," says N. Sankar, managing director of Chemplast, and vice-chairman of MCIC. Chemplast manufactures PVC resins and water treatment chemicals. MCIC is a 52-year-old company which manufactures caustic soda, chloromethanes, trichloroethylene, and refrigerant gases.



Over the years, the two companies have been working together and have established very close links. The operations of the two companies are interdependent in terms of supply of critical raw materials, energy, etc. The combined cycle power plant set up by Chemplast at a cost of about Rs.12 crores is supplying power to MCIC which helps the company to produce caustic soda, a power-intensive product.

NANIK RUPANI

Last fortnight, the Bombay-based Roopmeck Electricals Pvt Ltd set up the country's first telephone, telex and telefax centre authorised by the Mahanagar Telephone Nigam Ltd (MTNL) in the private sector an idea that Roopmeck's managing director Nanik Rupani conceived and implemented in less than six weeks. Contact Point, a division of Roopmeck that is located in Bombay's Nariman Point, will offer its services at MTNL's rates, and receive telex and fax messages for clients for an additional fee.



"Contact Point will provide a total package of communication services under one roof," says Rupani, who has also set up Enkay Teleshop in the same premises to retail a range of office communication equipment. Contact Point's profits are built into the charges -- MTNL will bill it with a 20 per cent rebate. MTNL chief general manager M.C. Venkatram, who flagged off the new facility, hopes to authorise about a 100 such centres in Bombay in a year's time.

A.N. RADHAKRISHNAN

The Madras-based Shriram group of companies, is now gaining a foothold in the fields of hire purchase, leasing and chit funds. "Shriram Industrial

Holdings Private Ltd (SIHPL) was set up in 1986 to broadbase the group's activities and to provide venture capital to technocrat entrepreneurs with viable projects," says A.N. Radhakrishnan, director of SIHPL.

The first venture SIPHL extended support to was for the manufacture of polyethylene terephthalete (PET) bottles. The Rs.1.50 crore project has been set up at Gummudipundi, with a capacity of 6 million bottles and jars per annum.

SIHPL has extended similar assistance to a metal bending unit in Hyderabad. "The trial runs are now in progress," says Radhakrishnan. The third venture — a 100 per cent export unit — is involved in computer software exports.

HENRI GEIGER

Every age has its own myths. A modern myth, that traditional systems of medicine like homoeopathy are unscientific and ineffective, has been disproved by men like Dr.Alfred Vogel who founded Bioforce AG, Switzerland in 1963. Today, Bioforce is a world leader in the manufacture of natural homoeopathic remedies. It has won acclaim in 32 countries where it markets its products.

Says Henri Geiger, vice president, Bioforce, "We see India as a major market for our products. Indians appreciate the value of non-allopathic medicines unlike in Europe where some countries have imposed a ban on homoeopathic remedies." Bioforce products are being marketed in India, mainly Bombay city, by a local firm — Holistic Remedies (P) Ltd, headed by Dr. Mukesh Batra, a leading homoeopath — for the last three years and have gained acceptance.

"The major problem we face in India is the very high rate of import duty at 65 per cent on our medicines," laments Geiger." And the doubling of the Swiss franc in the last three years vis-a-vis the Indian rupee has only worsened things." Bioforce plans to tackle the problem of high cost in two ways. In the short run, it plans to sell its products in bulk to Holistic Remedies which will package them locally in saleable quantities. In the medium term, it proposes to set up a joint venture with Holistic to formulate the medicines locally.

CHARLES MILLER SMITH

What makes a rose smell like a rose? Such are the questions that Charles Miller Smith, president of Quest International, is constantly seeking answers to. Quest is the result of a merger last year between Naarden International and PPF International, both Unilever subsidiaries. With an annual $ 700-million turnover, it is world No.2 in the fragrances and flavours industry, a $ 6-billion (Rs.9,000 crores) business worldwide.

India, in comparison, has a fractional share — about Rs.150 crores. And Quest International India Limited, the Indian subsidiary earlier known as Naarden (India) Limited, has a turnover of Rs.12 crores. The world market growth rate is 10 per cent annually. With the Indian processed foods industry taking off, Miller Smith expects a growth rate of atleast 10 per cent or more out here.

Miller Smith was here not only to promote the company's new identity — "that was one of

the riskiest decisions we've taken" — but to emphasise Quest's growth objective in this "highly creative, research intensive industry". About 7 per cent of Quest's turnover goes into R&D.

ALEXANDER ROSEN

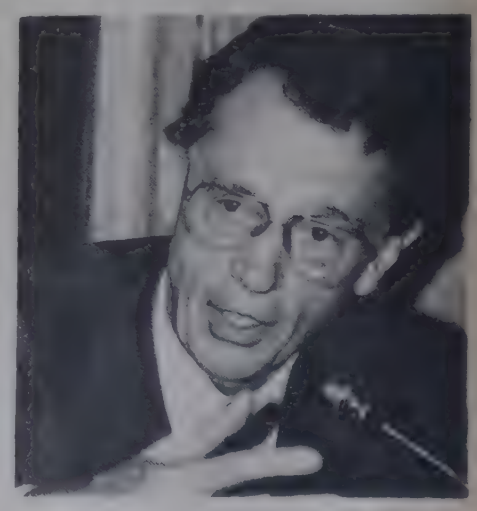
The newly inducted director of Omni Prints India Ltd (OPIL), Bombay, Alexander Rosen, is an expert in the field of MICR technology from the US. Stated Rosen recently, "MICR cheques are the technological need of the year in India. In the US, everyone, even the lowest paid worker, is paid by cheque."

OPIL, with its new plant in Murdbad, Thane, and latest foreign equipment, is all set to undertake printing of MICR cheques, airline traffic documents, business forms, data mailers, etc. The Rs.7.82 crore project will be financed by obtaining a Rs.1.74 crore foreign currency loan and another Rs.1.74 crores from the financial institutions. In addition, the government of India has granted permission for an external foreign currency loan of Rs.1.58 crores through Bank of India, Singapore. The government of Maharashtra has sanctioned Rs.20 lakhs as special incentive for the project. The balance cost is being raised through issue of shares valued at Rs.2.56 crores.

The Reserve Bank of India has included the company in the panel of security printers for printing of MICR cheques required by the banks. "Omni Prints is committed to meet the demand," avers Rosen.

RICK FIRTH

Rick Firth, a leading expert in information technology at the National Computing Centre (NCC), United Kingdom, and vice-chairman of its Computer Education and Training Committee, believes that computerisation, instead of creating



unemployment problems, will actually increase the employment potential by opening new areas even in developing countries like India.

In Bombay in connection with the NCC diploma accreditation by Apple Leasing Industries Ltd, Firth said "I believe that India is in a privileged position as it faces the prospect of increased uses of computerisation. Proper use of computers and information technology, can benefit individual organisations as well as the economic development of India at large."

Your permanent POWERHOUSE

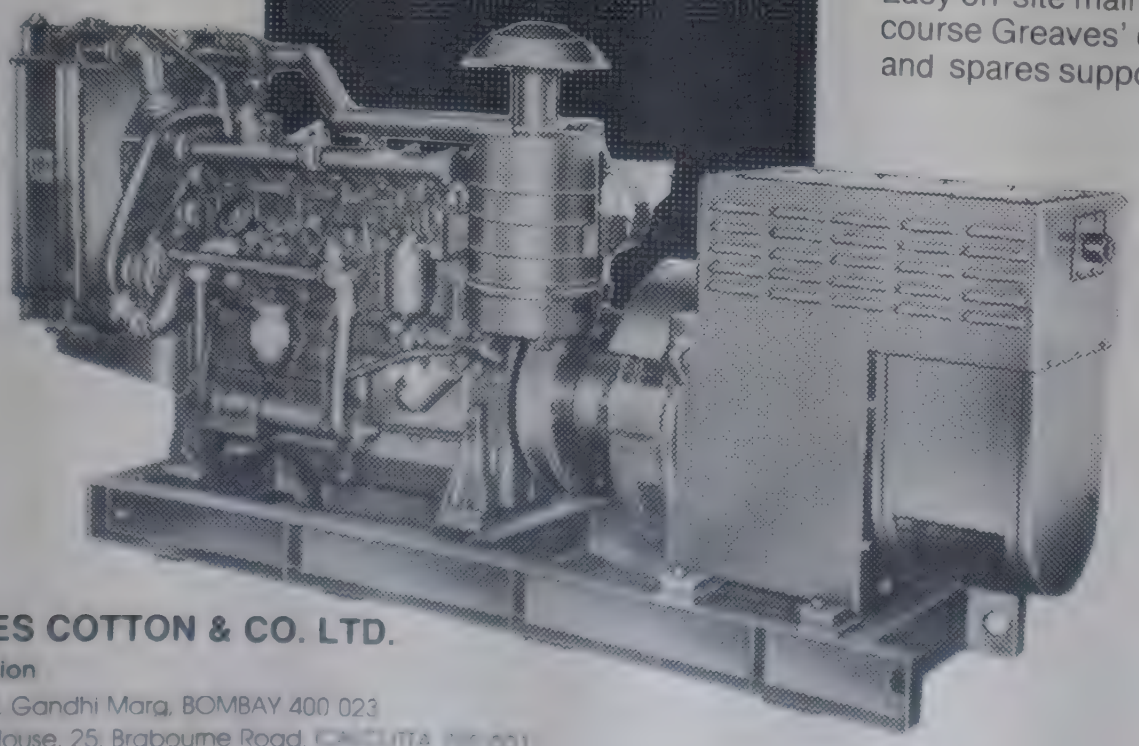
Install a rugged reliable

RUSTON GENSET

for dependable power!

Let's face it! The power crisis can hit you any day ... any time! Resulting in heavy losses to your industry.

Plan ahead now! Install a heavy duty Ruston genset to run your key machines. Your long-term solution to the increasing power shortages facing industry in future.



WHY IS RUSTON THE BEST CHOICE?

Compare Ruston gensets with the others! And you'll see their unique advantages. Round-the-clock performance at full load. Outstanding fuel economy. Longer period between overhauls. Factory engineered, assembled, tested and guaranteed. Certification to international standards like Lloyds, ABS, Bureau Veritas, IRS and MMD. Easy on-site maintenance. And of course Greaves' efficient service and spares support countrywide.

SOLD & SERVICED BY GREAVES

FARMERS' AGITATION

At what cost?

Rasayani, a small village in Raigad district just off the Bombay-Pune highway is like any other small Maharashtrian village. Roads are unpaved and dusty; there is little drinking water. The village gets water for four hours a day from the Maharashtra Industrial Development Corporation, because the Patalganga river nearby is too polluted.

Rasayani appears to have gained little from being located next to the polyester capital of the country. The MIDC industrial estate contains Reliance's PTA, PFY and PSF plants, Bombay Dyeing's DMT plant and the Orkay PFY factory. The three units produce a significant proportion of national production of man-made intermediates and fibres.

Now, the sleepy village might find itself embroiled willy-nilly in a fight over cotton. The Shetkari Sanghatana, a farmers' movement lead by Sharad Joshi, has threatened to gherao the Patalganga industrial estate from 12 December 1988.

Joshi: a symbolic statement

Cotton vs synthetics. The agitation is primarily symbolic — it is intended to highlight the government's pro-synthetic and anti-cotton textile policy and the nexus between the government and synthetic textile manufacturers in the formulation of the policy. The Sanghatana hopes to peacefully prevent the removal of synthetic fibres and other raw materials from the estate. According to Joshi, the Sanghatana will make no attempt to stop actual production at the estate. Most of the units in the area have little knowledge of the Sanghatana's plans. Says Harish Bijawal, managing director, Bombay Dyeing, "There is only one road into the area. Any significant influx of people into the area will affect all industries in the area."

Besides making this symbolic statement, Joshi has certain concrete demands of the Maharashtra government. He would like the state's monopoly procurement scheme to pay a price which is 20 per cent above the support price for cotton; an improvement in the efficiency with which the scheme is run; and a reduction in its cost of administration.

The Maharashtra government has come part of the way in meeting the Sanghatana's demands. It has increased the guarantee price for cotton by a minimum of 20 per cent. "The government increased the guarantee price to make sure that the federation procures sufficient cotton to cover its overhead costs," says B.K. Aggarwal, managing director, the Maharashtra State Cotton Growers Marketing Federation. This follows the decision of the state government to allow farmers to sell cotton in neighbouring states if they get a higher price for their produce then they can get from the federation.

A superb tactician, Joshi doesn't conduct an agitation without being able to wrest tangible concessions. However, when asked whether he will call off the stir following the state government concessions, he is non commital. Joshi recognises that there will be a significant human cost if the agitation is actually going to take place. Anywhere from 40,000 to 100,000 Sanghatana supporters are expected to arrive in Rasayani on the first day of the agitation. They are expected to arrive from the cotton growing areas of Vidarbha and also from the districts of Nasik, Dhulia and Pune and just getting to Rasayani is going to be a task.

The Sanghatana has drawn up detailed plans for the agitation to help reduce the hassles that its supporters have to face. This includes information on how to get to Rasayani, what they should bring along in terms of food and clothing. Suggestions have been made on how they can entertain themselves, including a list of local tourist spots! Supporters have been asked to bring enough supplies for at least an eight-day stint, after which plans will be drawn up to bring in reinforcements in batches. This will allow the satyagraha to continue without anyone having to stay too long.

The major problem that the Sanghatana will face will be infrastructure. "We barely have enough water for ourselves," says Nana Karavale, the sarpanch of the panchayat. River water polluted by effluents from the industrial estate is undrinkable and the supplies that the village gets from MIDC is barely sufficient for its own needs. Karavale adds that he has already told Sanghatana leaders that an influx of people into the area would force the village's tiny market to shut down — it just wouldn't be able to cope.

Given the hassles that the Sanghatana will have to face, it is unclear whether it will press on with the agitation. Any gains from the agitation would be at best nebulous; the costs could be high.

SIGNATURE MATCHING

Simpler with microfiche

When Reliance Industries closes its books every year it is faced with a stupendous task. Its share department has to finalise about 300,000 share transfers within 15 days. Reliance has a signature bank con

DATABYTE'S TLX-10

ELECTRONIC TELEX/TELEPRINTER

Why did State Bank of India, Indian Airlines, United News of India, Videsh Sanchar Nigam, Press Trust of India, Indian Airforce and Bank of India select 'Databyte' for their Bulk requirement of communication terminals ?

The answer is simple:

1. **WIDEST RANGE —**
   - * Single Port: Telex/Teleprinter
   - * Multiport: A Single machine can handle upto four telex/teleprinter lines simultaneously.
   - * Bilingual: You can now send/receive your messages in English as well as in Devnagari.
   - * Receive only teleprinters: Here again we offer English as well as Devnagari.
   - * Short Haul Modems/Lines Drivers.
   - * And now PC-Telex Box too!: Our Telex box does not have the drawbacks that others do,for instance you do not have to leave your PC on in order to send messages at night.
   - * Soon to be introduced: PSTN terminals.
2. **RUGGED & RELIABLE** — TLX-10 confirms to stiff environmental specifications of defence.
3. **USER FRIENDLY** — so simple, anyone can operate.
4. **INDIGENEOUS TECHNOLOGY** — The entire range has been developed by our in-house R&D team — Comparable to the best in the world — Approved by DSIR.
5. **FIELD PROVEN** — over 500 installations.
6. **SERVICE NETWORK** — The best is backed by a matching All India Sales & Service network.
7. **FUTURISTIC** — TLX-10 can be field upgraded to communicate with networks such as PSTN, X25, X400 Etc.
8. **EXECUTIVE MAIL BOX** — Busy Executives can call their telex number from anywhere in the world at any time and pick up their mail.
9. **NEVER BEFORE FEATURES** — * Battery backed up memory * Memory upto 160 KB * Multiport * Security Lock * Pre-Transmission time * Reliable * Power fail mode * Multi tasking * Word processing * On line traffic * Status * Different type Style * Autodial * Fixed Time calls * Message scheduling * Broadcasting * Refile * Message & Time stamp * Speed dialling * Compatible with all telex exchange * Executive mail box.

The microfiche makes verification easier

taining 2.2 million signatures; matching the signatures on the share transfer forms against the specimen signatures was a lengthy, complicated procedure. With the manual card system it was then using, Reliance was running into a backlog of 25 days and hence decided to shift to microfilms and a computer-aided retrieval system put together by Image Microforms and Systemates Ltd.

New application. Microfilming is the technique of storing images of documents on film in a reduced size. It is generally used for storing engineering drawings, service manuals, reference documents, etc. Microfilming of signatures of shareholders and account holders is a fairly new application area. The advantages are several. For one, an enormous amount of space is saved — Reliance stores 2,520 signatures on a 6x4 inch film, technically known as a microfiche. The saving in time is equally significant when dealing with large volumes.

Once the signatures are down on a microfiche, the time saved in accessing the signatures depends on the method of retrieval. Reliance's computer-aided retrieval system is quite efficient in that the computer can not only pick out the required microfiche from a batch but also zero in on a signature occupying a space barely a couple of millimetres wide. The whole process starting from the keying in of a shareholder's ledger folio number to the display of the signature on a video screen takes less than 10 seconds. The system can handle an incredible 200,000 accesses a day.

The Reliance system has been designed so that, in case of system failure, the operator still has the option of manual access via a card index.

The Tata Share Registry, on the other hand, has opted for manual retrieval of microfiches, where the computer supplies only the location of the signature on the film and everything else is done manually. "We are very happy with the system," says S.D.P. Framroze, an officer at the Registry. "We no longer have to work with bulky registers and we can have as many copies as we want for back-ups."

The Hongkong Bank has a totally different tale to tell. S. Kanagaraj, head of the technical services division, says that the old card index method was much faster. "We have only about 150,000 signatures on microfiche. What was initially a simple procedure has now become complicated."

Unexpected problem. The bank ran into an unexpected problem with the microfiches. "In spite of a shelf life of 50 years, we found the films becoming patchy after a couple of months," says Kanagaraj. After a lot of time and effort the problem was traced to the quality of the jackets enclosing the microfiches. The bank is now looking for another solution.

One reason for the differing reactions could be the difference in the sizes of the signature banks. Both Reliance and the Tata Share Registry have to handle large volumes of signatures whereas the Hongkong Bank's signature bank is relatively small. In fact, Reliance is planning to put the 2.4 million signatures of the Reliance Petrochemicals Ltd shareholders on microfiche.

The major disadvantage of using microfilm in India is that it is not considered primary evidence in a court of law. A microfilm of a document is given the same weightage as a xerox copy and hence companies cannot discard the original documents.

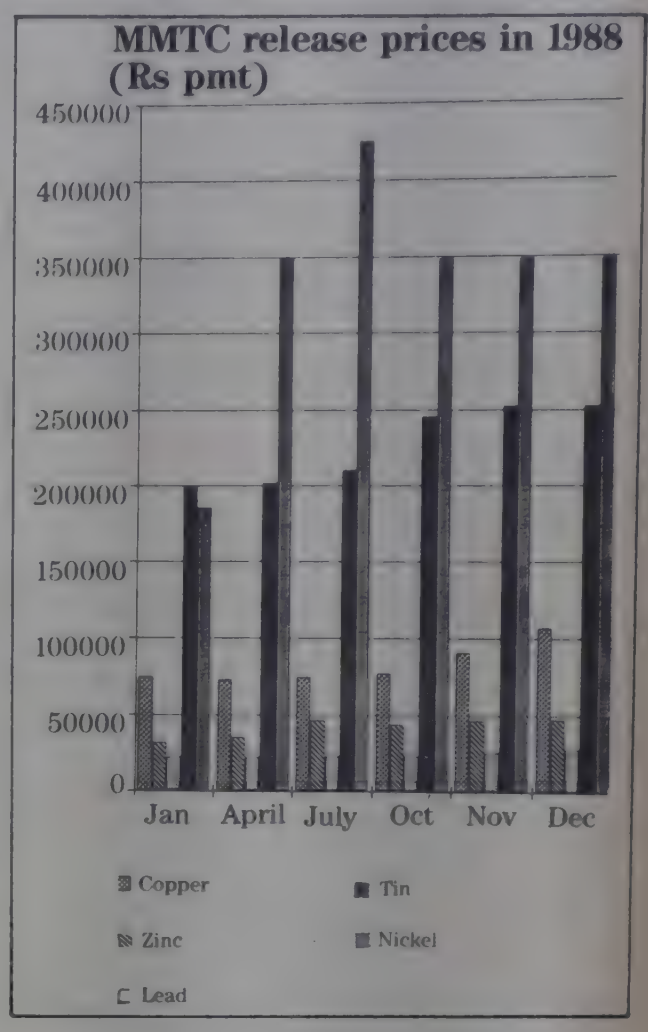
The Micrographers Congress of India has been trying for the past 25 years to get microfilm the status of primary evidence. So far, it has not succeeded.

■ GAYATRI BHANDARKAR

NON-FERROUS METALS

Fighting price inequities

It has been a terrible year for the non-ferrous metals industry. During the past 12 months, prices set by the Minerals and Metals Trading Corporation (MMTC) for copper, zinc, lead, tin and nickel have all jumped by an average 46 per cent. While



the price of nickel has skyrocketed from Rs.1,85,000 per tonne (pt) in January to Rs.3,48,000 pt in December — an increase of 88 per cent — it is the hike in the price of copper that has hurt the industry most. Among the non-ferrous metals, the consumption of copper and aluminium is maximum.

Last straw. "The latest hike of Rs.16,000 pt in the MMTC release price of copper, effected from December 1988, pushing the price level to Rs.1,07,000 pt, is bound to be the last straw, comming as it does on top of previous hike of Rs.14,000 pt just last month (November 1988). The latter itself was enough to break the backbone of the copper consuming industry," says Sevantilal Morakhia, president of the Bombay Metal Exchange (BME).

The nation's own resources are inadequate for the total demand: while the country needs 130,000 tonnes of virgin copper every year, Hindustan Copper Ltd provides only 50,000 tonnes. The balance is procured from the London Metal Exchange (LME) by the MMTC at the international price. The same is true of most non-ferrous metals which are not available in sufficient quantity in India. The price rise here is thus directly related to the bullish trend at the LME which is facing an extreme shortage of copper following protracted strikes at some copper mines in Peru, one of the chief suppliers. The demand for copper has also risen sharply during the past decade, espe-

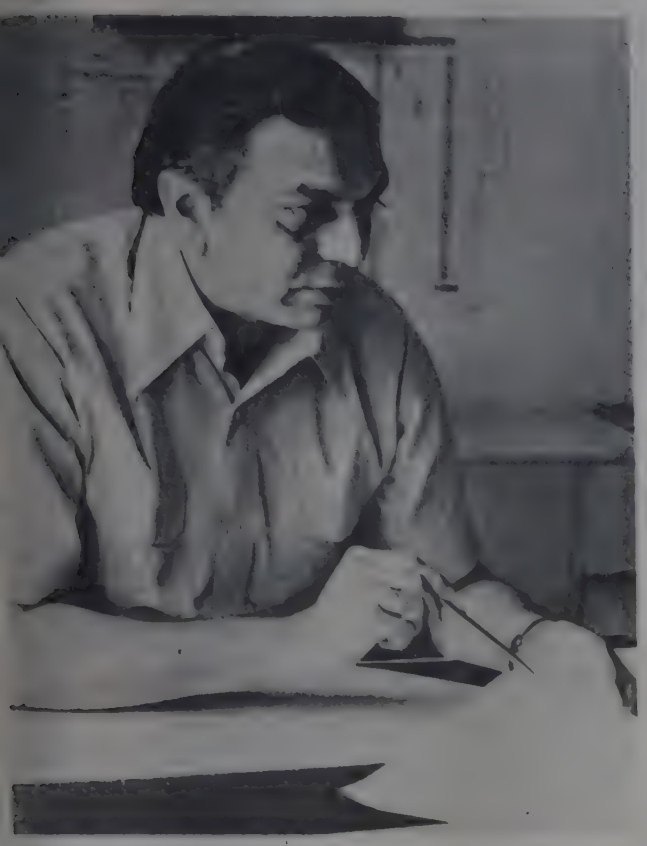
Shems/6056



Kamani: objecting to 100 per cent duty

cially in Japan, China and Korea. The devaluation of Indian rupees, vis-a-vis sterling pounds and US dollars, has further contributed to the price escalation.

While industry insiders are aware of the global situation, they do carry a grudge against the duties that are included in the MMTC release price. When the price of copper had touched Rs.80,000 pt in December 1987, the government had provided a relief by reducing the import duty from 140 to 95 per cent. In addition to that is the countervailing duty (CVD), which amounts to Rs. 6,200 pt for copper. In effect the total customs duty equals almost 100 per cent of the price of copper.

Two birds. "This is what we are objecting to," says Ashish Kamani, president of the Indian Non-Ferrous Metals Manufacturers' Association (INFMMA). Presently the duty is fixed on an *ad valorem* basis. With galloping international prices, this duty element which depends on the price, goes up hand in hand. The copper consuming industry is therefore demanding a change in the duty policy from the present *ad valorem* basis to specific duty per tonne. "This will kill two birds with one stone. With the adoption of specific duty regime, the duty will not be subject to fluctuations in the international price and the currency. It will also eliminate any tendency of over-or under-invoicing by unscrupulous elements, if any," Kamani explained. The INFMMA, along with the BME, have pleaded with the government to cut the customs duty by 25 to 30 per cent and alter the present system to a specific duty regime.

Failure to supply the required quota by the MMTC is another complaint of the copper industry. While only half the quota was supplied by the corporation in October, the delivery in November amounted to only 25 per cent of the required amount. "Even at such a high price, if the MMTC is not able to meet its commitment of quota, what is the point of a central procurement and canalising agency?" they ask. Officials in the MMTC were not available for comment. The industry, in fact, would welcome an open general license (OGL) for the import of non-ferrous metals. "At least we'll be able to meet our requirements and there will be no shortage, thus preventing artificial rise in prices," says Morakhia.

Instead, the OGL has been granted for the import of aluminium, whose price abroad is higher than that in the domestic market. Despite the 17.5 per cent hike in the aluminium price in November from Rs. 25,309 to Rs. 29,749 pt, the domestic price is still lower than the Rs. 36,000 pt abroad. Production of aluminium in the country under the purview of National Aluminium Corporation (NALCO) is still not upto the mark. The backlog is nearing 40,000 tonnes. NALCO's production estimate for the year has also been scaled down from 130,000 to 80,000 tonnes.

Highly unlikely. The government, however, claims a surplus of aluminium and intends to export the entire production of aluminium by NALCO during 1988-89. "The export will hit the small and medium factories the hardest, who will have to import the metal at a higher price. That NALCO will be able to generate a surplus beyond the backlog in one year is also highly unlikely," says a manufacturer.

The future appears bleak for the non-ferrous metals industry. That the international price hike is beyond any control is evident. However, industrialists are demanding a review in the internal price policies of non-ferrous metals. Pressure is also mounting on the MMTC to maintain a buffer stock of about 30,000 tonnes of copper, so that users are not hit unawares by volatile changes in the international market prices and supply position. Ironically, the largest consumers of non-ferrous metals are in the public sector themselves. "If steps are not taken to regulate the pricing policy, the ultimate sufferer will be the taxpayers," industry insiders warn.

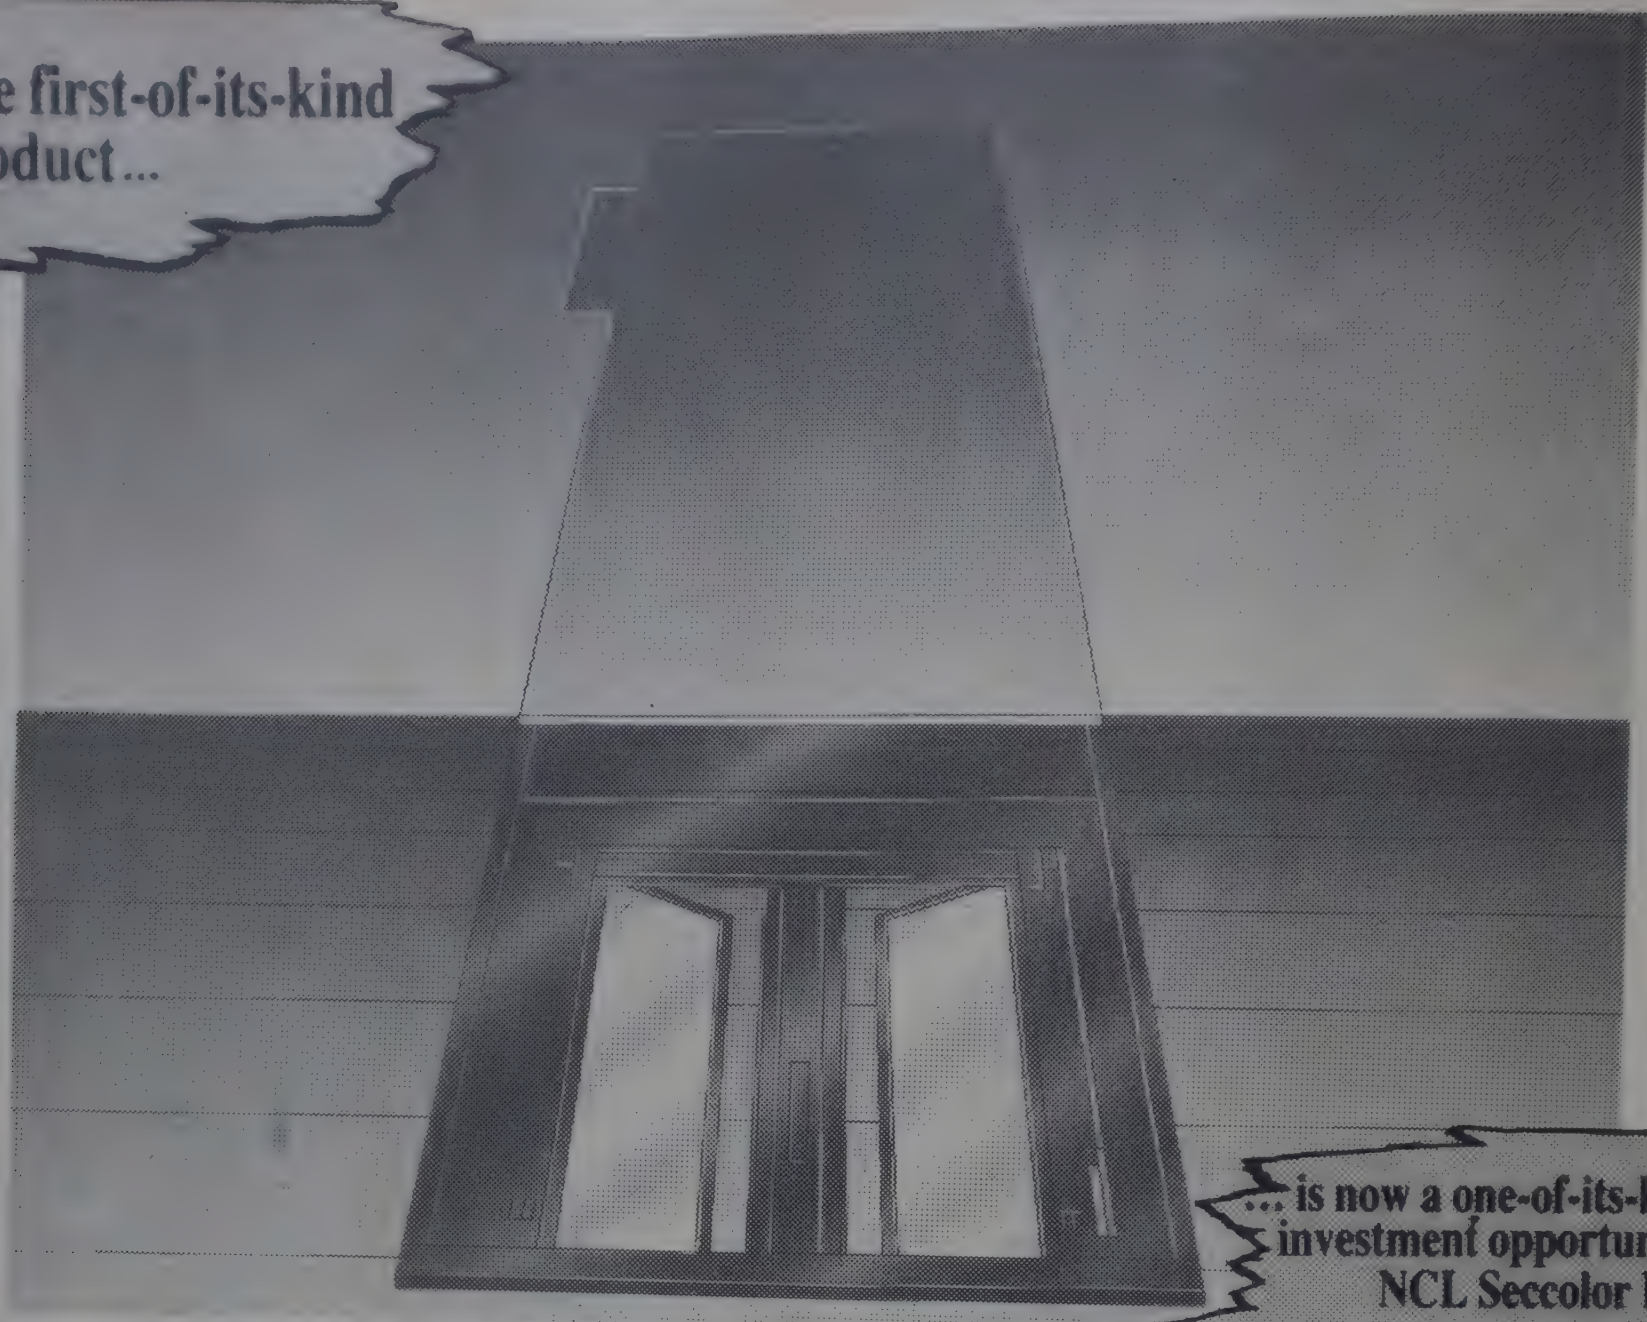
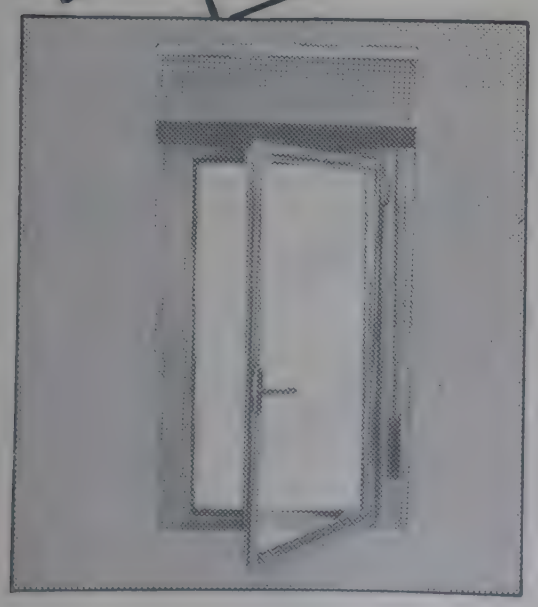
Leatherman. Next to none. No.1.

The first-of-its-kind product...



... is now a one-of-its-kind investment opportunity. NCL Seccolor Ltd.

ISSUE OPENS ON 4TH JAN 1989



NCL Seccolor Limited introduces, a revolutionary range of prepainted, cold rolled steel, door, window and railing profiles. For the first time in India.

Stylish and strong, elegant and versatile, these products are ready to re-define the aesthetics of Indian construction.

NCL Seccolor brings these profiles to Indian homes and offices in collaboration with international leaders — Industrie Secco, SpA, of Italy. Secco profiles are market favourites in over 30 countries worldwide

In India, demand for door and window profiles is put at a phenomenal 84 lakh sq.m. in 1991. NCL Seccolor Ltd. at full capacity will meet only 7% of this demand.

NCL Seccolor Limited is an affiliate of the successful NCL Industries Limited. NCL Industries has a remarkable record of performance that includes paying 70% dividends in its first three years. The share has a book value of Rs. 27/- and the company is in the process of doubling its capacity.

Successful promoters, world leaders as collaborators and a wide open market. Sound reasons why NCL Seccolor Ltd. is your door to prosperity.

Highlights of the issue

- **Excellent track record of promoters.**
- **First-of-its-kind in the country, stylish product.**
- **Growing demand in booming construction industry.**
- **Collaborators — world leaders.**
- **UTI participating in the equity of the company.**
- **No gestation period — product ready to enter market.**
- **80CC 80L and Wealth Tax benefits.**
- **Listing on Bombay, Delhi, Bangalore, Madras and Hyderabad Stock Exchanges.**

Issue of 23,40,000 equity shares of Rs. 10/- each for cash at par.

CORPORATE VOICE NCL 3884

CAUSTIC SODA

Bitter wars

The agro-based paper industry is accusing caustic soda manufacturers of operating as a cartel. Caustic soda, an essential raw material for agro-based paper, constitutes 20 per cent of its cost of production. The other main users are the soap, aluminium and cotton textile industries.

The Indian Agro Paper Mills Association (IAPMA) has charged that the indigenous manufacturers have been hiking prices arbitrarily, taking advantage of the high customs duty, currently at a fixed Rs.3,500 per tonne plus an auxillary duty of 45 per cent ad valorem. The international price has been steady at around Rs.3,000 per tonne, whereas that of indigenous caustic soda has gone up from Rs.5,000 per tonne a couple of years ago to Rs.7,500 per tonne now, they allege.

Viability threatened. "The increases have upset the entire economy of the 800,000-tonnes-a-year agro-based paper industry, which is on the verge of sickness," said an IAPMA spokesman. 'About 15 of 60 mills remain closed.

To safeguard their interests, the industry has sought the intervention of the government and urged it to refer the issue to the Bureau of Industrial Costs and Prices (BICP). Not only is the price of caustic soda very high, but it is not easily available even at the very high ruling price, they say. In a communication to the Alkali Manufacturers' Association of India (AMAI) the agro-based paper mill owners have sought a discussion on the issues.

The other users of caustic soda seem to have accepted the price hike. In the soap industry for instance, caustic soda is a major ingredient. A spokesman of Tata Oil Mills said that though the industry had been affected, the feeling was that the caustic soda manufacturers' claim was justified. VJ. Ojha, chief executive (purchase) for Mafatlal Industries, was of the opinion that though the supply of caustic soda was erratic, the price hike had not caused a major difference to the cost of production for textiles.

The Alkali Manufacturers Association has despatched a communication to the Directorate General of Technical Development (DGTD) giving its reasons for the price increases and offering to solve the problem of non-availability of caustic soda on a case-to-case basis. Caustic soda producers say that they have been forced to increase prices because of the steep increase in the electricity tariff rates, which went up from 61 paise/kWh in 1984 to 95 paise/kWh by the end of 1987. Between 3,500 and 3,700 kWh of energy is required to produce one tonne of caustic soda.

Moreover, the caustic soda producers say, the figures of price increase given out by the agro-based paper industry have been "grossly exaggerated". The industry has been functioning under a voluntary price regulation scheme since 1964, and the upward revisions recommended in the selling prices by the Alkali Manufacturers' Association have been only Rs.400 per tonne in January 1987 and Rs.300 per tonne in February, 1988, much less than the figures that the IAPMA has been stating.

False charges. According to Y.K. Modi, president AMAI, "a cartel in the caustic soda industry is impossible because there are about 32 units which are widely dispersed". Also, he says, the demand for caustic soda is barely 800,000 tonnes whereas the capacity is about 1.2 million tonnes. And, he says, capacity is up by 100,000 tonnes after the entire industry has switched over from graphite anodes to metal (titanium) anodes at a cost of nearly Rs.4 crores per unit.

Modi also said that the charge that the caustic soda producers were passing on the cost of their inefficiency to the consumers was baseless; the industry has now started exporting in a highly competitive overseas market. For instance, Modi Alkalis exported about 600 tonnes of caustic soda in October 1988. And the exports were not subsidised by the government. The industry was going to supply nearly 60,000 tonnes of caustic soda to the National Aluminium Company (NALCO) on a deemed-export basis, he pointed out. Says Modi, "The agro-based paper industry must set its own house in order rather than blame others for its troubles."

Though the agro-based paper millers have made representations to the government, an immediate decision to resolve the issue is unlikely.

ULKA-11377

traders have just simmered down after a fight over the minimum release price (MRP). And some planters, especially the smaller growers of Kerala, are sore with the Coffee Board for scrapping the outright purchase scheme.

MRPs have never been easy to arrive at. Growers push for higher levels, while traders resist all the way. On 12 October things came to a head when coffee traders decided to boycott the pool sale auctions of the Coffee Board. What had raised their hackles was the hike in MRP consequent on the government's pegging it to a per kg basis instead of the per point basis previously followed. The new revised rates are: Rs.19.81 per kg for Arabica coffee and Rs.15.90 per kg for Robusta.

Traders' fear. These new rates are expected to jack up the price of raw coffee by Rs.6 per kg and that of coffee powder by Rs.8-Rs.9 per kg. Consumers would surely begin to resist and therefore, plead the traders, the MRP should be reduced by at least 18 per cent. But the Coffee Board says that the last time round, in December 1986, a 15 per cent increase in the MRP led to only a 5 to 6 per cent rise in consumer price.

Growers feel that the new price just about covered the cost of production for the 1986-87 period. They in turn charge traders with profiteering. They point out how the retail price of coffee powder rose even before the traders participated in the coffee auctions to buy at the revised MRP.

The Coffee Board has become the common enemy. The Karnataka Planters Association chairman D.V. Viswanath bemoans the high marketing costs of the Board, despite it being in a sellers' market. The board, for its part, points to hidden costs (such as infrastructure) and its efforts to eliminate middlemen.

The Coffee Act permits growers an internal quota which they have not yet effectively utilised. The big growers may not find direct marketing tough. Others are toying with the idea of forming co-operatives to market their produce. The powerful United Planters Association of South India (UPASI) too supports the moves of planters to sell directly in the market outside the Coffee Board's pool marketing system. Only this will allow the industry to clear the estimated 54,000 tonnes of stocks which will pile up by the end of the 1988-89 season, say planters.

Another grouse. The other bone of contention is the scrapping of the outright purchase scheme which accounts for about a quarter of the total purchases of coffee in the country. Under the scheme growers received a flat rate, irrespective of the quality of the coffee, when they delivered their coffee to auction centres.

Now the Coffee Board has adopted a new system of grading coffee according to quality. In the past, says the board, smaller growers were usually losing out to large plantations through the averaging system which lumped the good quality coffee with the bad. The small growers, however, are not overjoyed with the new system. They feel that they will now have to wait much longer because the final payment will depend on realisation by auctions.

The export prospects have been cheering enough, though. In early October, the ICO fixed higher export quotas for coffee producing countries on the basis of exportable production, rather than past export performance.

The ICO has decided that next year's total world exports would be limited to 56 million bags (of 60 kg each). This level will be raised or lowered to maintain the coffee price above 115 cents a pound. (The current average coffee price is 114 cents.) But the global quotas will stay within the range of 53 million to 63 million bags.

India has been given a share of 1.65 per cent of the global quota. This means that in 1988-89 India can export 51,596 tonnes — an increase of 27 per cent over the 40,633 tonnes for last year. This will help partly offset the glut at home. As things stand, India's coffee production is expected to hit a new high of 200,000 tonnes in 1988-89. But the alarming fact is that domestic consumption is not growing apace.

The other threat comes from consumer countries, notably the US and those in the EEC, which apparently do not wish to renew the International Coffee Agreement when it ends next September. If this happens, there will be fierce competition among producer countries. Will India be able to hold its own against the two biggest producers, Brazil and Colombia?

Clearly, the current situation of glut does not permit India to just sit pretty. It will have to beef up marketing, not just in the quota countries, but also in the non-quota countries of Eastern Europe. The Coffee Board will also have to persuade more Indians to drink more coffee.

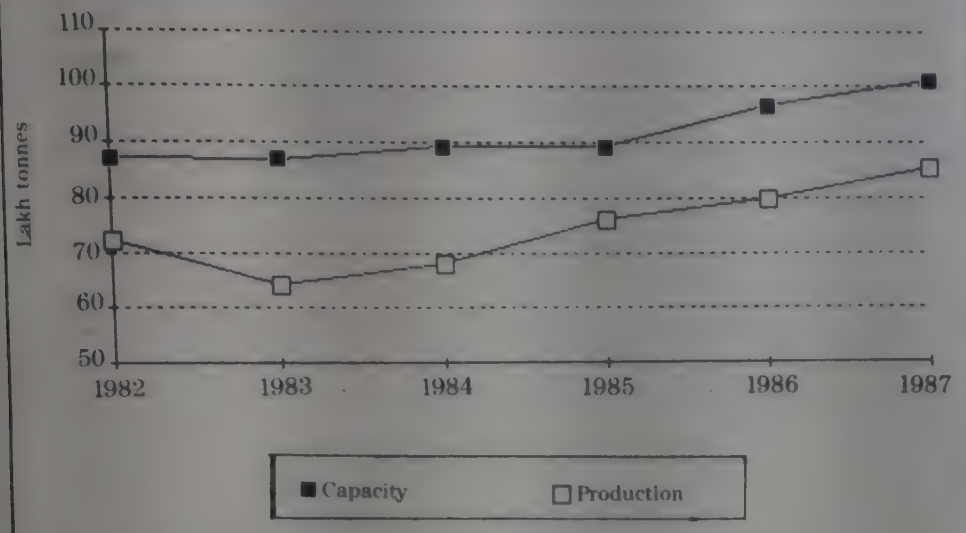
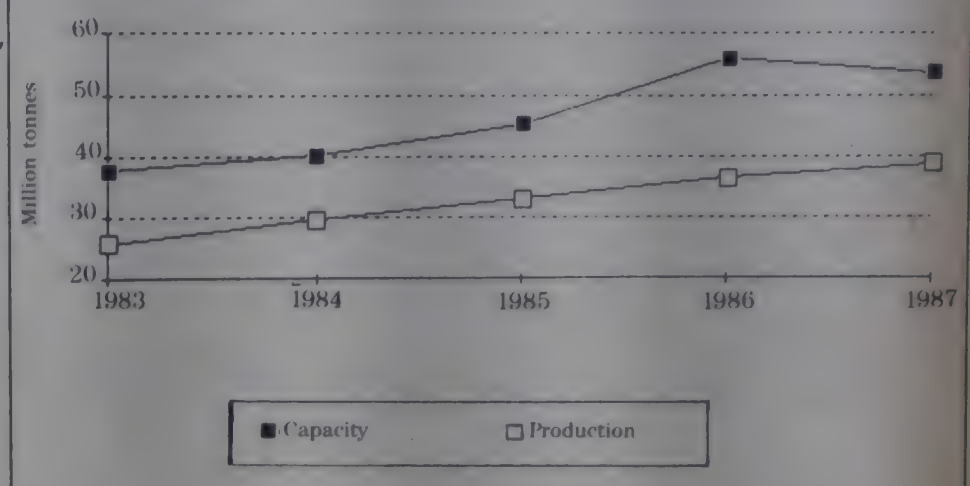
Saleable steel



The capacity of saleable steel in the country has crossed the 10 million tonnes mark in 1987. With the increase in production the gap between capacity utilisation and production has narrowed and currently stands at 84 per cent.

Cement



Cement capacity has risen from 37.8 million tonnes in 1983 to 53.7 million tonnes in 1987, up by 42 per cent. With the rise in capacity, production has also increased by about 9 per cent per annum since 1983, to reach a high of 38.8 million tonnes in 1987. In 1988, cement production is expected to cross 40 million tonnes.

Wholesale price index: The WPI-all commodities has fallen marginally by 0.61 per cent. In the month under review the index for primary articles has been increasing in recent months. The prices of pulses has increased by 7.5 per cent while that of fibres has declined by 5.2 per cent in the month under review. The year has witnessed a jump of almost 50 per cent prices of pulses. Petroleum crude and natural gas prices over the year has fallen by 17.4 per cent during the month. The price of sugar khandsari and gur fell by 12.4 per cent, although on a year to year basis it has risen by 4.4 per cent.

(1970-71=100)

	5 Nov 1988	8 Oct 1988	7 Nov 1987	% change over month	% change over year
All commodities	436.4	439.1	412.3	−0.61	5.84
Primary articles	416.7	412.4	392.8	1.04	6.10
Mfg products	413.0	422.1	390.7	−2.15	5.70

Industrial production index and infrastructure: The industrial production index in July has fallen sharply by 5.1 per cent to 170.9 per cent in July. But it is higher than what it was a year ago. Both steel production and power generation have increased in October over the previous month. There was a marginal fall in production of crude oil in September. It is interesting that all the infrastructure industries have shown a rise over the previous year.

	Latest month	Previous month	Year ago	% change over month	% change over year
Ind prod index (1986-87=100)	170.9(7)	180.10	166.80	−5.10	2.5
Rly. freight (mn tonnes)	22.98(9)	22.71	22.36	1.20	2.8
Crude oil prod ('000) tonnes	2,587(9)	2,653	2,480	−2.50	4.3
Power generation (mn units per day)	591.6(10)	574.4	537.3	3.00	10.1
Coal production (lakh tonnes per day)	4.20(8)	4.23	3.95	—	6.3
Steel production ('000 tonnes)	774(10)	721	709	7.40	9.2
Cement production ('000 tonnes)	3,314(9)	3,298	2,999	0.45	10.5

Figures in bracket indicate month

Consumer price index: The consumer price index for industrial workers has increased by 5 points to 800 in August 1988. The percentage increase is, however, much less than what it was in the previous three months. The index for urban non-manual workers has also increased by 0.7 per cent in August.

	Aug 1988	July 1988	Aug 1987	% change over month	% change over year
Industrial workers (1980=100)	800	795	736	0.6	8.7
Urban non-manual workers (1984=100)	136	135	125	0.7	8.8

Money and banking (scheduled commercial banks): Broad money is up by 1.9 per cent during the month under review. This is the highest increase in recent months. With the rise in M3 there has also been a rise in aggregate deposits and food credit by 0.88 and 0.23 per cent respectively. Food credit is up by 9.4 per cent, but its still much lower than what it was a year ago.

(Rs crores)

	18 Nov 1988	21 Oct 1988	20 Nov 1987	% change over month	% change over year
Broad money (M3)	1,79,771	176,465	153,257	1.90	17.3
Agg deposits	131,436	130,285	112,147	0.88	17.2
Bank credit	75,788	75,612	65,632	0.23	15.5
Food credit	1,198	1,095	3,281	9.40	−63.5
Credit/dep ratio	57.66	58.04	58.52	—	—

Bullion prices and stockmarket index: The prices of gold and silver in the domestic market over the month have risen by 3.2 and 2.0 per cent respectively. Over the year the prices of silver in Bombay and London have moved up whereas those of gold has slumped. The Bombay Stock Exchange index has crossed the 700 mark at 709.65. Within a month the index witnessed a jump of 26 points.

	2 Dec 1988	2 Nov 1988	2 Dec 1987	% change over month	% change over year
Gold (Bombay)	3,235	3,135	3,475	3.20	−6.9
Gold (London)	2,034	1,987	2,055	2.30	−1.0
Silver (Bombay)	6,512	6,382	6,053	2.00	7.6
Silver (London)	2,928	3,041	2,902	−3.70	0.9
Bombay stock exchange index (1978-79=100)	709.65	683.78	427.16	3.88	64.7

The price of gold is in rupees per 10 gms and silver in rupees per kg

Under control

The performance of the world economy in the past two or three quarters has been rather satisfactory. All three parameters output, world trade and inflation are under control. This was the summation of the World Economic Outlook published by the International Monetary Fund (IMF).

In the developing countries, economic activity was stronger than estimated in 1987. Growth in 1988 and 1989, according to revised estimates will be around 4 per cent. But this growth performance is expected to vary considerably, according to the report. The impact of low growth rates will be felt more in fuel exporting countries because of the fall in the price of crude, which is expected to remain low even in 1989.

The countries that are benefiting most from the demand growth in industrial countries are those that are exporters or manufacturers.

Growth in the newly industrialised countries such as Singapore, South Korea, and Taiwan is going to be in the region of 8 per cent. The report is also optimistic about the growth rates in India and China. Among the developing countries in Europe, only Turkey's growth rate is projected to average 5 per cent in 1988-89, largely due to strong exports. On the other hand, growth rates in East European countries will be rather modest because of serious domestic adjustment problems and also rapid inflation.

The Asian primary product exporting countries have done well because of higher commodity prices. But the reverse is true in the case of African countries because of adverse terms of trade development and a narrow export base. Many of the African countries depend on just two or three and in some cases even one commodity as a major export earner. But there are a handful of countries like China, Kenya and Morocco that are expected to achieve growth rates of 5 per cent or more.

It is interesting to note that India is classified as a country whose exports of manufactures accounted for over 50 per cent of total exports. This list includes other countries such as the Asian tigers Singapore, South Korea, Hong Kong, and Taiwan among others. Only a decade back India was classified as a primary product exporter.

Much of the economic malaise of the developing countries in the western hemisphere is due to a delayed policy response to inflation. A case in point is Brazil, where output growth is projected to slow down to one per cent in 1988.

The fuel exporting developing countries are also facing a difficult situation. This is mainly due to falling oil prices, rising import costs and a high debt burden.

The industrial countries have also maintained economic growth. The current expansion which is now in its sixth year is exceptionally long by historical standards. Real GNP in the seven major industrial countries is expected to have increased at around 4.5 per cent over the year up to June 1988. But growth in 1988 is expected to be around 3.9 per cent due to a slow down in the latter half of 1988. However, because of high capacity utilisation in manufacturing in the seven countries — Japan, USA, UK, Canada, West Germany, Italy and France — there is the possibility of overheating in the economy which could result in inflation. But with the tight controls over monetary and fiscal policy to curb demand the danger of hyper inflation is remote.

For developing countries total debt outstanding is still a major problem and at the end of 1987 stood at US $ 1,218 billion. But due to growth in exports the aggregate ratio of debt to exports has declined from 169 per cent at the end of 1986 to 158 per cent at the end of 1987.

The encouraging thing is that both in the developing and industrialised countries economic policies followed by the respective governments are positive. Many countries have embarked on a structural adjustment programme that will combine measures of "fiscal coordination"and "monetary control" to bring about price stability and growth.

A people-oriented framework

PARTHA GHOSH

Publicly available information indicates that the Eighth Plan — which is admittedly more progressive than its predecessors — nonetheless suffers from many of the same shortcomings as previous plans. Unless we are content to repeat the mistakes of the past, and allow India to remain in a low-growth mode, we must take steps to reform the fundamentals of the five-year planning process itself. It is particularly important that we adopt an economic model and/or strategic framework which takes into account India's competitive strengths and weaknesses, as well as the needs and aspirations of its diverse population.

Success stories around the world have proven that externally oriented micro-economic strategies based on a country's competitive strengths and weaknesses are most effective in channelling people's energy into nation building activities. Economic strategies and plans in Japan, the Asian NIEs, ASEAN and more recently China are all driven by micro-economic realities. In the same spirit, after some initial trial and error, Mikhail Gorbachev's *perestroika* movement has made major progress by focusing on micro-economic realities in designing and implementing reforms. Globalisation of industries, technologies, and most importantly, capital markets, are making conventional macro-economic aggregates less and less relevant as countries draw up their economic plans.

In adopting a new strategic framework, India too must end its reliance on traditional macro-economic aggregates, and look instead to more realistic micro-economic variables. Furthermore, it must find ways to increase its understanding of the habits, needs and aspirations of Indian people at different economic levels. Finally, it needs to agree on a strategic framework which is people-oriented, builds on our competitive advantages, and aims at systematically removing the constraints on faster growth.

Erasing the delusion

Steeped as they are in the Keynesian tradition, macro-economic policymakers have a difficult time working with variables smaller in size and scope than the gigantic figures for gross national product, money supply, aggregate ICOR, savings rate, aggregate demand, and so forth. Policymakers tend to believe that these parameters capture the real essence of economic life, forgetting that they are nothing more than aggregates of micro-economic results documenting collective and individual economic behavior.

In order to escape the "aggregate trap" and bridge the "perception gap", we must begin our strategic thinking and planning at the industry level. For each industry, we must first identify the key factors for success, and then assess our competitive edge vis-a-vis the most competitive nations in relevant industries. In order to carry out this exercise, we must first examine the profit/loss and asset/liability structure of the most significant companies in the most competitive nations.

If, for example, we want to develop a globally competitive automotive industry, we must first understand the cost structures of the Japanese, Korean, and Yugoslav automakers. If we wish to build a globally competitive textile and garment industry, we must analyze leading textile and garment companies in Taiwan, Korea, Hong Kong and China. Likewise, if we want to focus on agro-based industries, we must turn to the major agro-business players in China, Thailand, Philippines, Malaysia, Indonesia, Argentina and Brazil.

Well-informed decisions

Through this process, we will be able to come to grips with true micro-economic forces, and then make well-informed decisions on which areas we wish to pursue, based on our current or potential competitiveness. After that, we can design various incentive programmes to channel entrepreneurial initiatives and financial resources into the priority areas.

In addition, in order to remove the "rate determining constraints", we should develop what could be called "perpendicular policies". As the name implies, these policies should function perpendicularly to mainstream industry-specific policies, facilitating efficient use of capital, entrepreneurship, management skills and resources in the priority areas. For example, if the ICOR appears lower than desired for several priority industries, specific productivity improvement programmes need to be designed to be implemented nationwide. Similarly, perpendicular policies should include initiatives to improve savings rates, promote industrial discipline, and so forth, to ensure effective execution of industry-specific strategies.

Before we draw up a new economic framework, we must develop a clearer and more pragmatic focus on our own people. Instead of working with generic statements such as "social equality", the Indian government needs to develop insights into the economic habits and aspirations of its citizens in order to set appropriate national objectives.

Communication at all levels

We need to identify innovative ways to communicate with people at different economic levels, tapping their ideas about the future, their opin-

The Kirloskar Electric Challenge Series

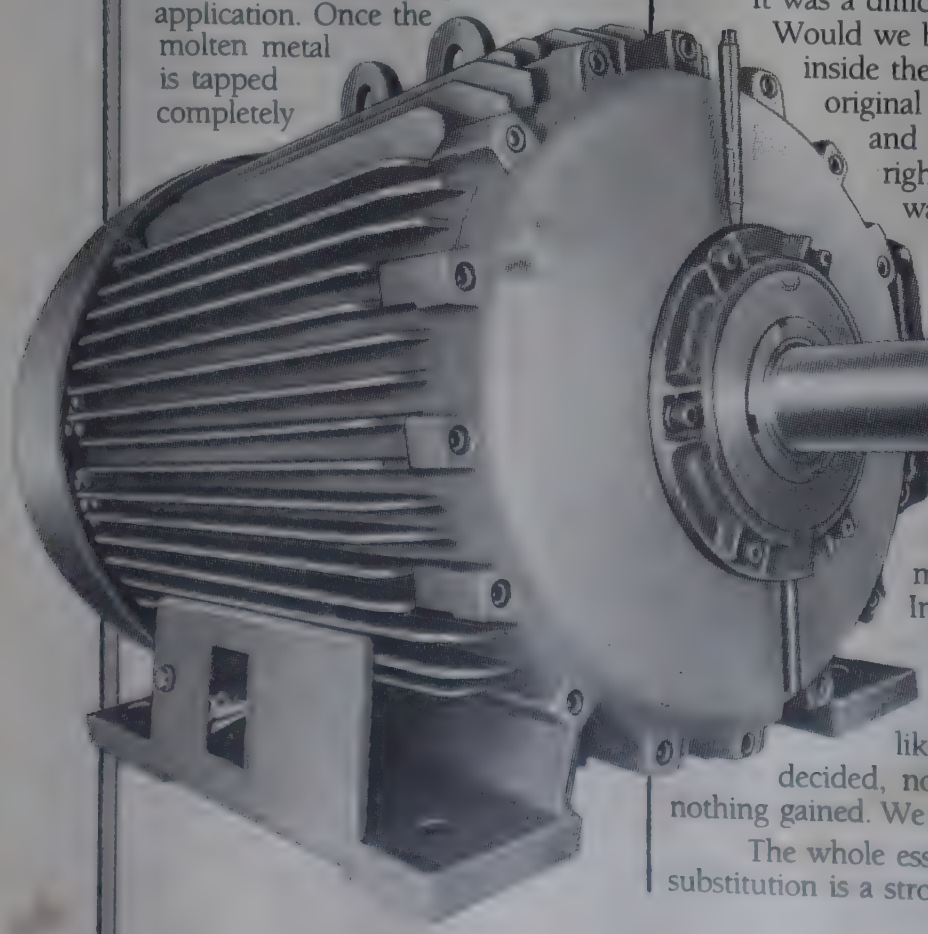
Sure, you know that Kirloskar Electric is a leading manufacturer of AC motors in India.

But did you know that Kirloskar Electric designed and developed the replacement for Russian mudgun motors with hardly any specs for the first time in India?

The story of the mudgun motor we supplied to the Bokaro Steel Plant is one of bizarre coincidences. But the moral of the story is clear: there is more to the specifications of a motor than just the rating.

Some time back, Heavy Engineering Corporation obtained our standard 50 kW motors for the Bokaro Steel Plant through one of our agents. Some time later a Kirloskar Electric technical team held a seminar on the selection of motors for specific applications, at Bokaro. By chance, the Bokaro engineers asked them about the suitability of the standard 50 kW motors for mudguns. This was the first time we learnt what job our motors were supposed to perform.

Mudgun motors as you know are for an extremely specialised application. Once the molten metal is tapped in a blast furnace, a mudgun has to seal the outlet with wet clay instantly. A failure of the mudgun motor can be disastrous.



Our engineers pointed out that mudgun operations require motors of a highly specialised design since these motors require an extremely high torque for short periods. They work with multiple starts and stops in high ambient temperatures. They also have to withstand extended stalling conditions because of the sticky nature of the clay.

We explained that it would take a few months to design a new motor. Would they still be interested? They said yes but they added that there were hardly any specs available. It was their turn now to ask "Would we still be interested?"

It was a difficult question. Would we be able to get inside the minds of the original Russian designers and draw up the right specs? And that was not all. Even the mounting dimensions of the Russian motors had to be adhered to. These motors had never been manufactured in India. Were we then rushing in where angels fear to tread? Quite likely. But, we decided, nothing ventured, nothing gained. We said yes.

The whole essence of import substitution is a strong and experienced engineering team with the patience and the commitment to work for years till they design and manufacture an identical replacement for the original. Plus one other critical factor: the total involvement and continuous guidance of the customer. We were lucky. We had both.

We went back to the drawing board and designed a completely new motor to meet the special requirements of this application. Our new mudgun motor has been working faultlessly since then.

All the trouble we took was well worth it. Because Bhilai Steel Plant and others placed orders with us for similar motors.

What, you may well ask, makes us take on such challenging jobs that others won't touch? The truth is standard motors — small, medium and large — are our bread and butter. We make them with an enormous amount of care because our livelihood depends on them. But it's the really tough jobs that give us our kicks. We don't just thrive on them, we need them to feel alive. What we are doing is developing technological muscle and invaluable expertise and experience. It saves the country crores in foreign exchange. And it does wonders to our self-confidence and the confidence our customers have in us. They know that when nobody else can do the job, Kirloskar Electric will.

Prabha/KEC 25/88

ions about the present, in short, their hopes and their frustrations. Given the low level of literacy, an economic questionnaire would be a poor choice for gathering the required data and stirring the right response. Instead, we should mobilise our high school and university students to conduct one-on-one interviews with people at all economic levels — a sort of "national economic poll". This approach would not only guarantee feedback from people at every level of society and make them feel that their views matter, but would also spark widespread interest in the new, future India and give educated Indian youth a better understanding of the large section of our population which is underprivileged. Furthermore, if we can reach out to people in this way, and make an effort to collect and record their ideas, we should be able to design specific incentive programmes, rehabilitation programmes, and fiscal and monetary instruments to make different population segments active participants in the nation's economic life. It is clear that we need to arouse the enthusiasm of the Indian people, and give them the tools they need to push forward.

If properly organised, the national economic poll would provide, for the first time in the history of India, a "census" of the people's views and aspirations about their own future. It could very well bring about a fusion of different perspectives — a unity of spirit — for a common cause. Both in the short and long term, this poll would prove enormously valuable to India. Japan and a few other Asian nations have carried out similar polls (although not with the help of students or as extensively as proposed here) with considerable success. Now, it is our turn.

Working with the framework

The new strategic framework should first explore how India could link itself with the rest of the world, and then determine how to work with different segments of the population to realise our full potential in the global economic system.

For example, for major economic/industry policies, we could divide our people (both at home and overseas) into the following ten segments based on economic activity/status: owners of large businesses, owners of small and medium size businesses, government bureaucrats, middle class salaried persons, semi-skilled workmen, unskilled rural dwellers, unskilled urban dwellers, students, non-resident Indians who are owners of businesses, and non-resident Indians who are professionals. A sound industry strategy would include fiscal and often "perpendicular" policies which would mobilise all ten segments appropriately. Of course, different population segments would play different roles in the execution of each industry-specific strategy. For example, to support agro-based industry policies aimed at small and medium businesses, we would need to focus on semi-skilled and unskilled labour in rural areas. To develop our software industry, we must design incentives which specifically appeal to our middle-class, to small and medium sized entrepreneurs and to non-resident Indian professionals.

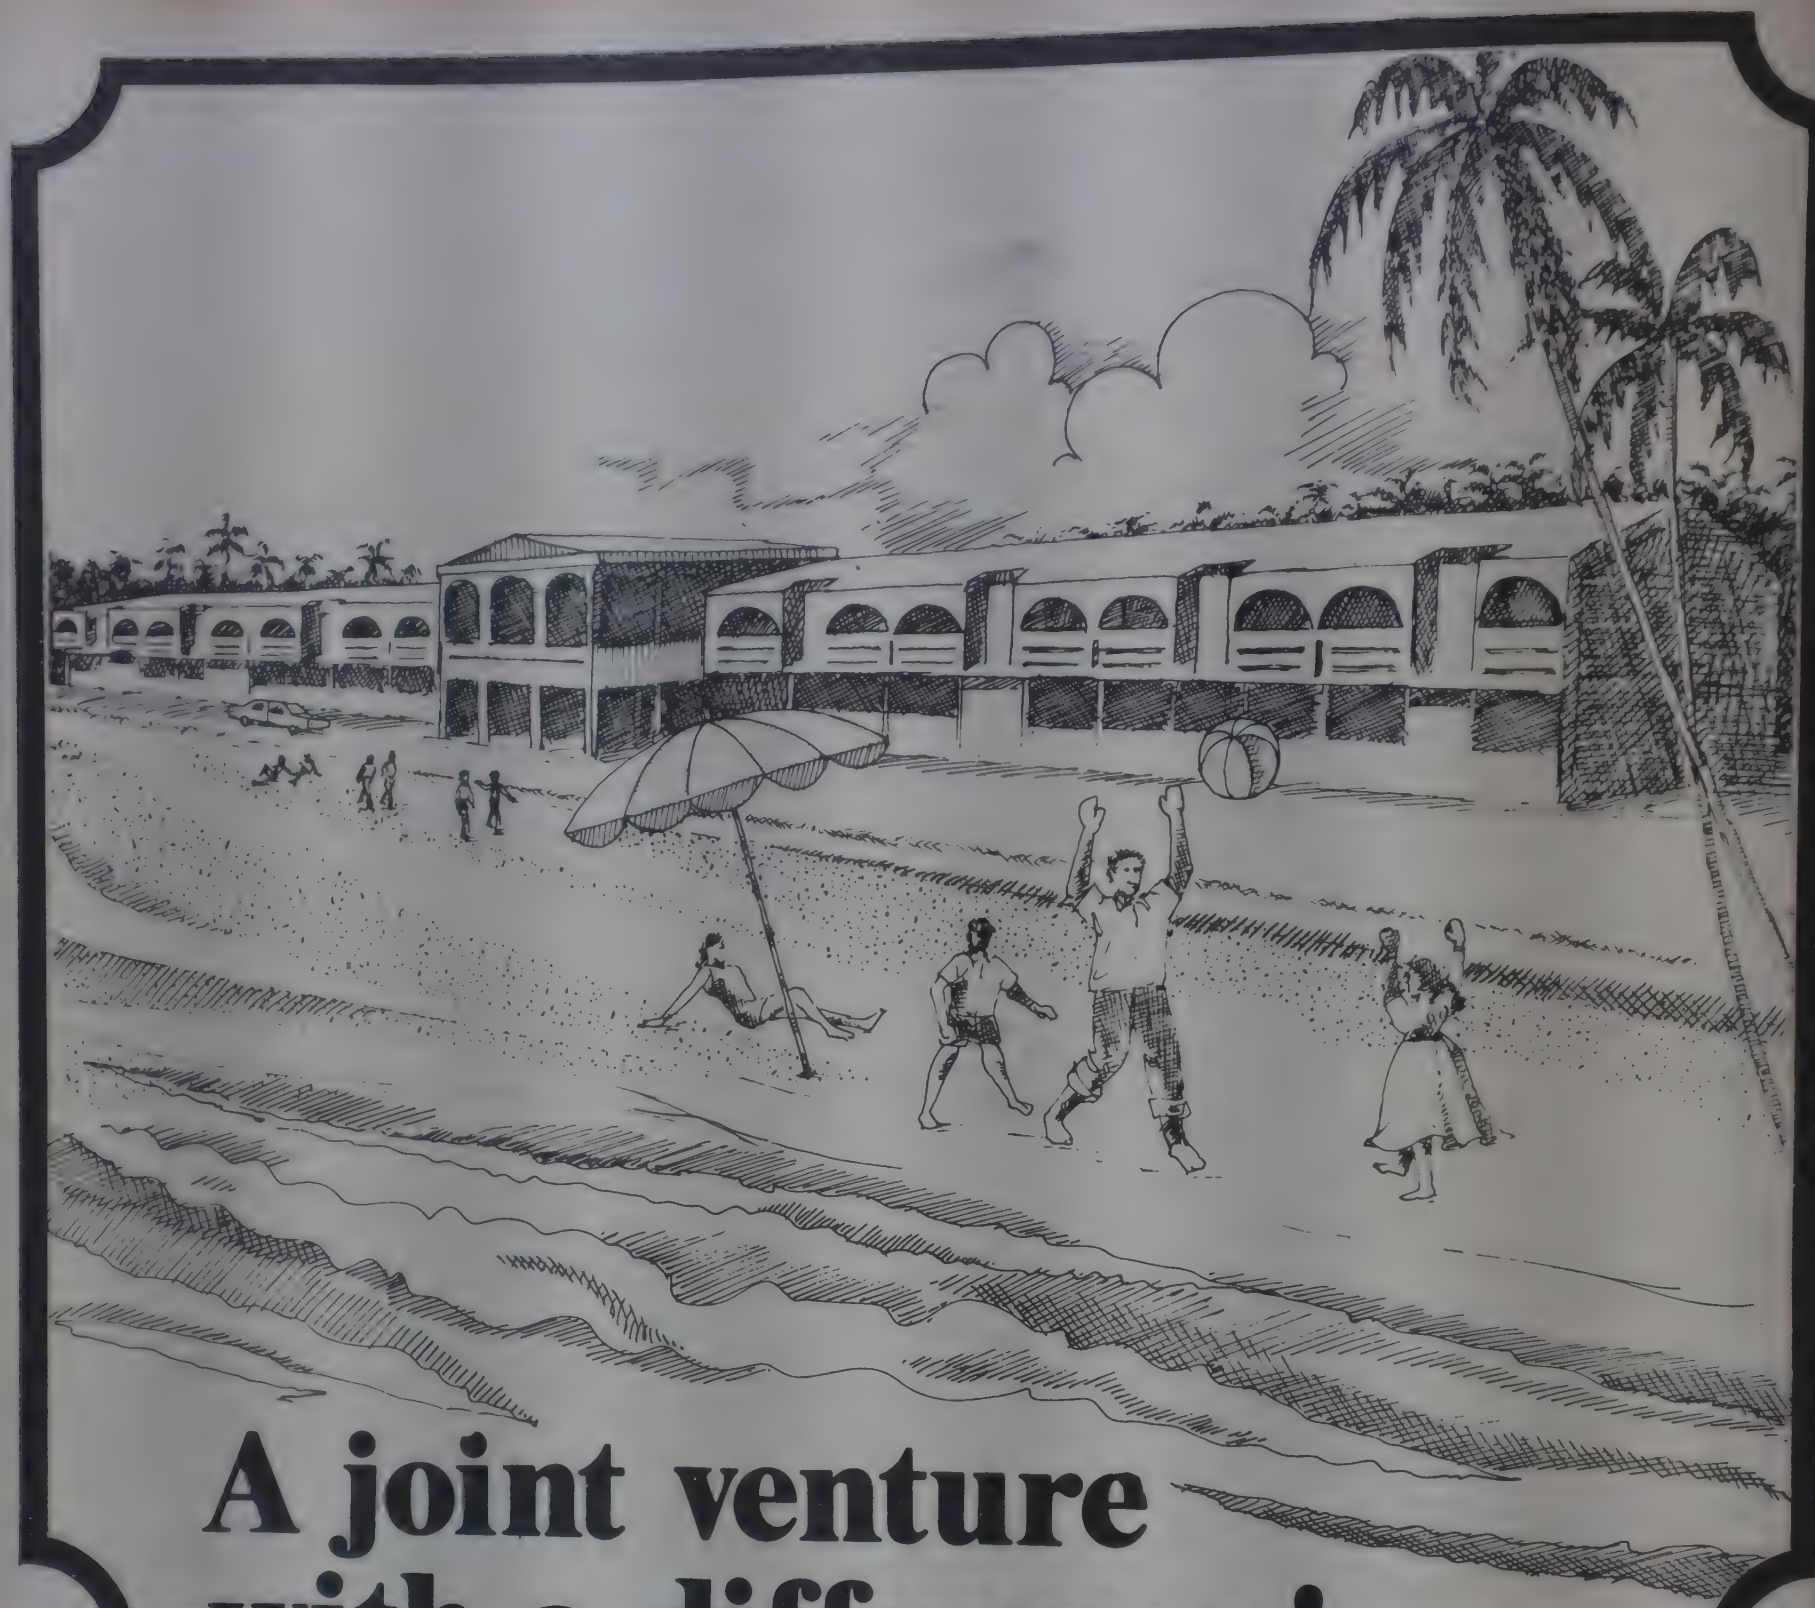
The idea would be to draw our people and our priority industries into an integrated strategy for human resource utilisation and skill development. After all, our own people are our biggest asset base. But they must be properly managed and encouraged if they are to help, rather than hinder, the successful execution of national economic strategies.

In order to ensure that our people can make the most effective contributions to building the economy, we also need to consider the logistics of "people movement" between urban and rural areas and within each commercial centre. Having expensive professionals, government bureaucrats and industry leaders waste 40 or 50 per cent of their time in urban traffic jams, stand for hours in queues waiting to buy tickets or secure approvals, etc, is an enormous drain on our scarce national resources.

Improve infrastructure

The problem stems from lack of people-oriented infrastructure planning, the inadequate commitment of our bureaucrats to the realities of micro-economics, and the legacy of the past British rule (which focused on controlling, rather than catalysing). In the past 40 years, very little has been done in cities like Bombay, Calcutta and Madras to accommodate the common man's logistics. As the population of these cities has increased four-to-fivefold, crowds have spilled over onto the roads, business centres, stations, and ports, clogging the flow of high value-added economic activities. And the continued reliance on labyrinthine approval processes and burdensome paperwork only slows our progress further. Rather than throwing up our hands and continuing to perform in a mutually hindering way, we need to take steps to improve our infrastructure, so that we can all work together in a mutually co-operative and reinforcing way.

In summary, the approach proposed here emphasises on an understanding of the fundamentals of industries and the basic needs and aspiration of our people, and taking steps to develop macro-economic policies which take those micro-economic realities into account. By being sensitive to our young and old, and privileged and unprivileged, by selecting priority industries, and by removing infrastructure obstacles, we can pave the way for a more and more dynamic Indian economy. ■



A joint venture with a difference !

KSTDC invites private sector participation in the Malpe Beach Resort Project.

Situated about 70 kms from Mangalore and just 6 kms from Udupi on the western coast of Karnataka is Malpe. A peaceful haven amidst sun'n' sand. And in this tropical paradise is the sprawling structure of the Malpe Beach Resort. Almost ready for use. With a backdrop of swaying palms and a panorama of golden sands and blue seas. An ideal holiday place for lovers of sun and sand. With the picturesque St. Mary's Island just 3 kms away. Where KSTDC is acquiring land to be developed as a tourist spot.

Covering an area of 3½ acres, this project envisaged as a 3 star hotel, has 48 double bedrooms, a conference hall, shopping arcade, swimming pool and dining and kitchen blocks. The civil work has been completed. Flooring, electricity and sanitary fittings remain to be done.

KSTDC is looking for entrepreneurs to help develop this complex which has great tourist potential. Joint venture conditions are negotiable. Sale or lease can also be considered. Interested parties may please contact:

Over to Madras

Gandhi: whistle-stop TN tours

The enormous efforts being expended on Tamil Nadu by the Congress Party are the direct result of prime ministerial enthusiasm for the assembly elections that are due there soon. The number of visits, six or is it seven so far, of considerable duration, made by the leader-maximus, is of course an obvious indication of how seriously the election there is being taken. And, as expected, various Congress MPs have been making frequent and long trips to their constituencies. The visits, which will no doubt inspire an electorate unused to such ministrations, are of course most visible and energetic where there are plans for a prime ministerial sortie into the area or constituency.

Backing such activity of the purely physical variety are a series of measures on the economic front. The governor, P.C. Alexander, had of course set the ball rolling by a dose of economic incentives that had been warmly welcomed by the people. Industry in Tamil Nadu had for long felt the cold shoulder of Central indifference. This indifference backed by local entrepreneurial diffidence, had seen the state gradually slip in industrial ranking over the last decade. Given the recent spate of tax breaks and other fiscal inducements, fresh investments and new start-ups are likely. Though this may take a while to fructify, there is no doubt that the looming elections have played a role in energising the economy of Tamil Nadu.

The new Madras petrochem project has been awaiting the last few nods from New Delhi and may be honoured with prime ministerial blessing in the near future. There is also news that business houses like the Birlas are contemplating fresh investments in the state. All of which could augur well for Tamil Nadu, where for the last few years attention has been centred mostly on the activities of the Tamil Tigers in the Sri Lanka insurgency.

But economics is hardly likely to be the driving force in the election in Tamil Nadu, when it is announced. While the Congress Party in the state has never had the machinery to win elections and form the government, this time round a major effort is said to be on to get the hustings on an organisational basis. While this seems to be the official party line, the evidence so far suggests though that Rajiv Gandhi is once again attempting the personal charisma card and using his whistle-stop tours to ensure maximum personal exposure. And, matters of policy, like electoral alliances and such like, remain on the back burner.

Whether the Tamil Nadu elections will be the harbinger of a national election, whether the party will be able to bear a defeat, whether Rajiv's personal magic can afford a drubbing and who will finally form the government, are the questions that now hang heavy in the air — both at the Centre and in that state.

Patent pressure

Pressure on the patents' front had begun to mount in New Delhi, well before the current meeting in Montreal of ministers from developing and developed countries. Though the meetings have a larger canvas than just the issue of patents, there has been much worry in New Delhi that loal industry may get anxious over the government's stance on the vexations patents policy. That explains to an extent the public pronouncement last week from ministerial quarters that India was not on the verge of buckling under pressures on the intellectual property front.

Ministerial reassurances, however, have come rather late. Most watchers of the situation were aware that a senior US administration official was in New Delhi last month to do some not so gentle arm-twisting. On one visit to a senior secretary the official was ticked off rather sharply for making the suggestion that economic sanctions on the trade front were perhaps inevitable against countries that did not toe the US administration's line. The visiting US official had to be reminded rather brusquely that India did happen to be a sovereign country that had to decide such issues on its own terms.

The worries that dog Indian industry on the subject are however on account of the fact that such a vein of dogged nationalism does not run consistently through the bureaucracy. Sources in New Delhi suggest that the commerce ministry is one area where official thinking seems to be veering towards a softening of India's rigid stand on the patents' issue.

Though commerce minister Dinesh Singh, currently in Montreal, is an old hand at the GATT negotiation game, the precise stance that India is likely to take is still not very clear. To make matters worse, it is understood that within the prime minister's secretariat too there are doubting Thomases who believe that a flexible approach is essential if India is not to incur the wrath of the US.

For the moment though, there seems to be sufficient official insistence that developing countries like India deserve special treatment where patents are concerned. The industry ministry in particular seems to be conducting itself with remarkable doggedness in the matter, and no wholesale sellout is likely to occur. And, though patents and complex issues surrounding intellectual property are unlikely to be a popular election issue, given the current political scenario the Rajiv government is expected to tread cautiously in these areas for the moment.

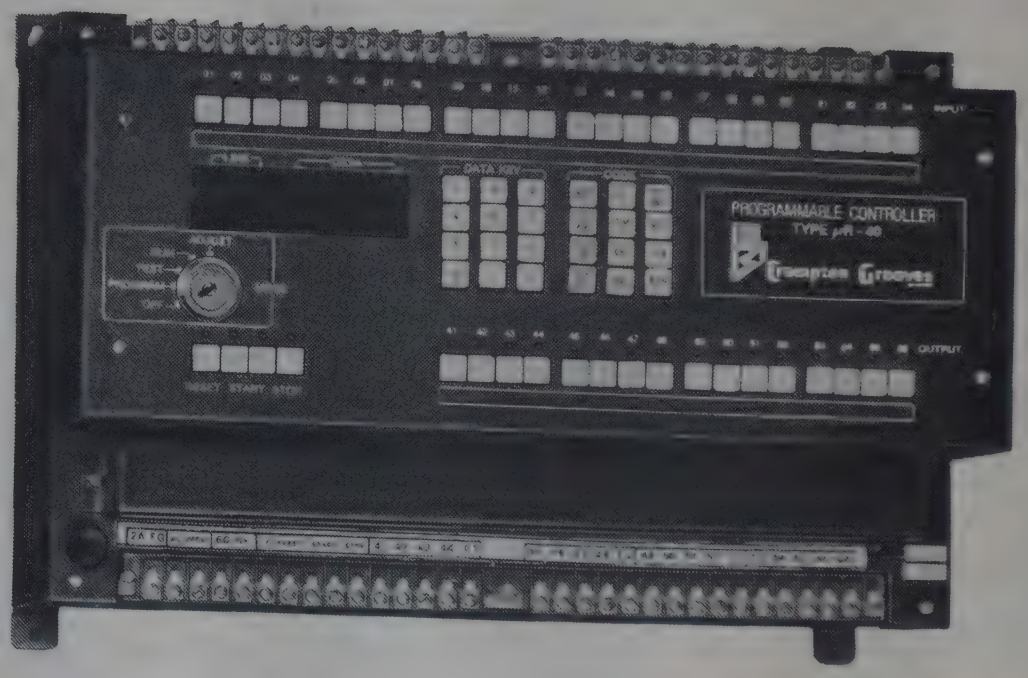
Crompton Greaves

If your process demands high quality output with minimum downtime

Let Crompton Greaves Programmable Controllers take over!



Crompton Greaves introduces Programmable Controllers to co-ordinate all pre-timed, logical and sequential operations. With a wide range of input-output devices and a dedicated programming module that enables you to reconfigure your system to suit changing process requirements.

The power of Programmable Controllers

A single, compact Programmable Controller, the size of a suitcase, can replace upto 50 relays and its intelligent hardware understands user-friendly ladder diagrams.

Now you can time your production process to optimise efficiency and productivity.

Programmable Controllers reduce maintenance effort and save on power and space. They are expandable and programmable for a wide range of applications like process industries, sugar, cement, steel, packaging, machine tools, fertilizers and more.

However complex your process requirements, there is one to suit your need — from stand-alone 40 input-output units to modular systems upto 2048 input-outputs.

To offer prompt and effective service to our industrial clients, we would like to appoint value added system houses or technocrats, all over India. Interested parties please contact us immediately.

BHOPAL LITIGATION

Still running around in circles

The four-year-old litigation of compensation claims arising from the December 1984 Bhopal gas disaster has entered a critical phase with proceedings having finally been transferred to the Supreme Court. A five-judge bench headed by chief justice R.S. Pathak is currently hearing cross appeals by the principal parties to the suit, Union Carbide Corporation (UCC) and the government of India. The appeals are against an order of the Madhya Pradesh high court holding UCC liable for compensating the victims and ordering the corporation to pay 'interim damages' of Rs.250 crores, pending a fuller determination of the compensation due. UCC has challenged the order as arbitrary and as a pre-judgement of issues that have yet to be tried; the GOI has sought to restore the higher amount of Rs.350 crores awarded by the Bhopal district court last December as 'interim relief', but without prejudice to the question of liability.

If the question of interim relief has dominated proceedings over the past year, to the exclusion of every other issue in dispute and has brought the case to a virtual standstill, it is for good reason. A curious paradox in the Bhopal litigation is that while the plaintiffs have a strong case against Union Carbide, they singularly lack the means to enforce their claims against the defendant corporation. It is widely recognised that the victims, for the most part, lack the resources to pursue a legal remedy on their own or for that matter, even sustain themselves through prolonged litigation without material assistance.

Only partly solved

With the enactment of special legislation, empowering the government alone to represent the Bhopal victims, the problem was partly solved. However, the government, for reasons best known to itself, refused to accept the concommitant responsibility of providing for them till they had been adequately compensated for their loss of health and employment. By substituting itself in place of the individual victim the government has effectively bound him to whatever choice it makes in respect of both the level of compensation sought and the means adopted to secure it.

If the government opted to litigate the claim rather than compromise it for some immediate recompense, it was duty-bound to sustain him for the duration. The government's failure to acknowledge this responsibility has gradually undermined its claim to represent the victims and in turn, compelled every court that has to date entertained the suit, to recommend a quick settlement as being in the victims' best interests.

Attempts to settle the claims out-of-court have, however, come to naught. Union Carbide's top offer of $ 615 million, reportedly made last December, might have been acceptable to the government, but the two sides couldn't agree to a payment schedule. In the event, the judge then presiding over the case, M.W. Deo had little choice but to initiate trial proceedings. But, first, he had to ensure that the victims were suitably provided for till such time as all issues were satisfactorily resolved.

Interim relief

The government claimed it had already spent the equivalent of $ 87 million on relief and litigation; Union Carbide had publicly offered $ 350 million to settle the case without its going to trial. When the two parties were unable to come up with a satisfactory scheme of interim relief, Judge Deo took it upon himself to do so. UCC, he decreed, would pay $ 270 million as 'reconciliatory interim relief' without prejudice to its defence in the suit and this sum would be either adjusted against or recovered from the amount finally decreed.

UCC appealed Judge Deo's order as a 'judgement without trial' arguing that the award of such a large sum against one of the parties to the suit amounted to a *de facto* determination of liability and a decree of damages. Justice S.K. Seth of the Jabalpur high court upheld UCC's plea that Judge Deo had in fact exceeded his jurisdiction in awarding what amounted to damages under the guise of interim relief. (In fact, he later accepted UCC's contention that Judge Deo was 'biased' and actually removed him from the case).

Instead of reversing the interim relief ruling and getting the hearing restarted, Justice Seth proceeded to summarily try the case himself! Applying the principle of absolute liability established by the Supreme Court in the Sriram case, Justice Seth found UCC *prima facie* liable in the Bhopal case. Its 50.9 per cent equity holding in its subsidiary, which operated the plant in question, was sufficient to directly implicate UCC, he argued. Finally, borrowing a convenient UK statute, he decreed that UCC would have to make a down payment of Rs.250 crores or $ 195 million (which curiously equals the corporation's insurance cover) as 'interim damages' pending a more accurate determination of damages.

Thus the case before the Supreme Court includes all the crucial elements involved in the Bhopal litigation, whether the principles governing liability or damages, the procedures to be adopted in the trial of the case or the enforceability of a final decree. Were it to uphold the absolute liability standard, the Supreme Court would still have to determine the standard of compensation applicable as well as the procedure to be followed in evaluating over 500,000 claims.

Thus far UCC has refused to commit itself as to whether it would be bound by the Supreme Court's decision, and the bench has also chosen to ignore the Attorney General K. Parasarn's plea that UCC first furnish such an undertaking. But even so, the court has been given an opportunity to place the case as a whole on a firmer foundation, by looking to the victim and to his immediate needs.

The challenge before the Supreme Court lies in ensuring that the Bhopal victim is not subjected to undue privation in the name of seeking compensation and fixing liability. The government can be compelled to meet the entire relief needs of the victim population as a condition to its pursuing the case against Union Carbide. But equally, it is for the court to guarantee that the Bhopal victim is not denied his right to a legal remedy only by reason of his poverty.

The government having arrogated to itself the right to seek justice for the victims, clearly hasn't been very effective. In the meantime, as time passes, interest in the case gradually wanes both in India and overseas. There is the greatest likelihood that this case will then be just one other case in our law courts.

One only has to ask, what would have been the outcome to date had the disaster occured in the west, to realise how little has been done so far for the victims.

Oswal: capital market savvy

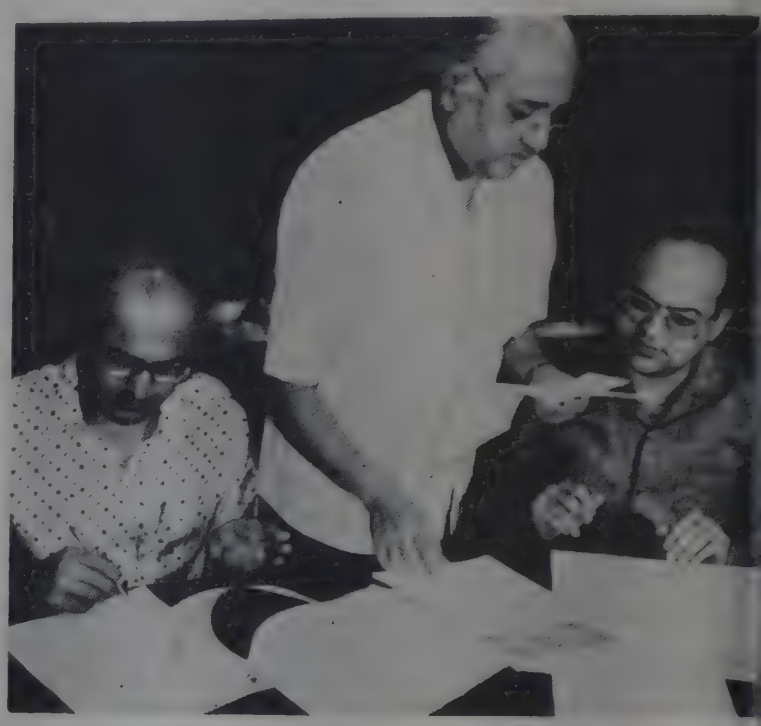
THE OSWAL MAGIC

Will it last?

The rapid growth of the Ludhiana-based Oswal group, engaged in the agro-based industry, demonstrates that managing projects has become as important as managing corporate finances. The recent entry into petro-chemicals will put to the test the managerial capabilities of Abhey Oswal and his team in a different environment

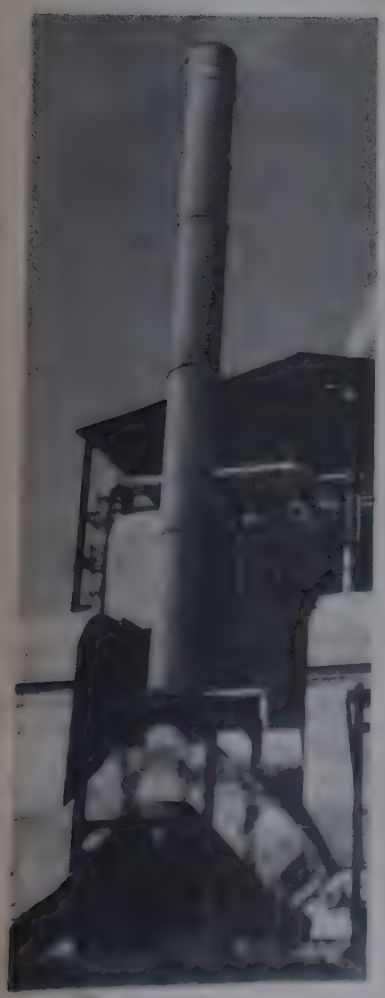
It wasn't exactly a party, but the atmosphere was certainly festive in the UCIL chairman's suite at Mehta Mahal Bombay, on 27 November. On that day at 6 in the evening Vijay Gokhale, chairman and managing director of UCIL (Union Carbide India Ltd) and Abhey Oswal, chairman and managing director of Oswal Agro Mills Ltd (OAM) signed a formal agreement transferring the assets of UCIL's petrochemical plant at Chembur, north-east Bombay to OAM.

The event marked the formal entry of Ludhiana's best known company into the petrochemical industry which many consider a goldmine. An acute shortage of end-products — ethylene, PVC, HDPE, LDPE among others — has driven prices through the roof in India and abroad.



Ghokale (UCIL) and Oswal: historic deal

The deal was clinched a month ago when OAM made corporate history by successfully bidding through a tender for the Chembur plant and paying the entire purchase consideration of Rs.58.5 crores out of its own coffers. "This is perhaps the first time that any company in India has bought assets in this open manner," Oswal had proudly proclaimed to a gathering of journalists in Bombay in October.



Boiler plant of Oswal Agro Furane

Some view the acquisition as questionable: "A too high a price for such an old plant with a book value of Rs.7 crores for which Reliance had offered Rs.30 crores in 1984," says one analyst. Insiders have a different view. They say it is a good deal. Comments a UCIL executive, "Take any existing petrochemical plant in the private sector, Herdillia, Nocil — they are of similar vintage. This is the quickest route for a new entrant into petrochemicals — no licence, no hassles of putting up a greenfield project, no delays, no gestation period." And, as one manager says, "There is also a lot of potential after modernisation." Depending on what the new owners want to do with it, additional investment could range between Rs.5 crores and Rs.150 crores.

Another feather

Coming after the inauguration of the Rs.51-crore complex agro-furane plant in the Sangrur district of Punjab in the last week of October (albeit after a year's delay which Oswal says was unavoidable given the complex nature of the plant), this was one more feather in Abhey Oswal's already much-adorned cap. Oswal Agro Furane Ltd was set up as a joint venture company with the Punjab State Development Corporation. It gives corporate analysts more evidence of the 39-year- old Oswal's obsession with commodity — based projects combined with capital market savvy. Comments Sam Palia, executive director, IDBI. "I visited the plant and was thoroughly impressed. The project conception is very good, with furfural (that will be 100 per cent exported) being a very small part of the project." And all waste matter is used. Spent rice husk after extracting furfural will supply the plant's 5.5 MW power requirement. Similarly rice bran will be used to make rice bran oil and the deoiled cake, a residue of the oil extraction process, will be sold outside.

The Oswal group (not to be confused with Oswal Woollen Mills Pvt Ltd and associated companies managed and controlled by Vidya Sagar Oswal and R.C. Oswal, father and uncle of Abhey Oswal) has become the cynosure of the investing public in just six years. It comprises three companies: Oswal Agro Mills manufacturing toilet soaps, vanaspati in bulk packs and sugar, Bindal Agro Chem making soya oil and soon to embark into the production of LDPE from alcohol once the recently acquired IEL plant at Rishra begins

roduction, and Oswal Agro Furane.

Since the time the flagship company Oswal gro made a maiden public issue of Rs.1.13 rores in 1983, the group has returned to the apital market ten times either through rights or ublic issues of convertible debentures and quity shares. The total collection of money from he public was Rs.166 crores including a fat remium of Rs.60 crores. Passage to the vast eservoir of public savings became smoother ith every offer of capital, for Oswal "saw rapid rowth by increasing my family of shareholders nd taking care of them, which philosophy my ather and brothers did not share".

onvincing success

oday, OAM, Bindal Agro and to an extent the ascent Oswal Agro Furane scrips, though not he hottest on Dalal Street, have certainly be- ome some of the most controversial scrips/ ompanies. The sweeping success of the group as caused wonder and envy among a large umber of stock brokers, investors and other orporate analysts.

The Oswal magic has produced returns to hareholders at a blistering pace. Rs.1,000 in- ested on OAM in 1983 has multiplied into s.1,35,000 in July 1988 at current market prices.

Singhania, Oswal and Kaul: good business opportunity for banks

If the share prices of the three companies are quoted many times above face value, the reason is simple: the companies have produced results which have left the competition gaping.

During the year ended 30 July 1988, OAM reported a turnover (unaudited) of Rs.197 crores and net profit of Rs.15 crores. Bindal Agro Chem's turnover during the year ended 31 December 1987 was Rs.54 crores, with a net profit of Rs.4.5 crores. This does not reflect the contribution of the newly-installed vanaspati plant. Add to this the potential sales and profit contributions from the LDPE unit at Rishra which was

World's largest paddy processing plant

INDIA'S UNIQUE GRANITE PROJECT

Total Technology upgradation

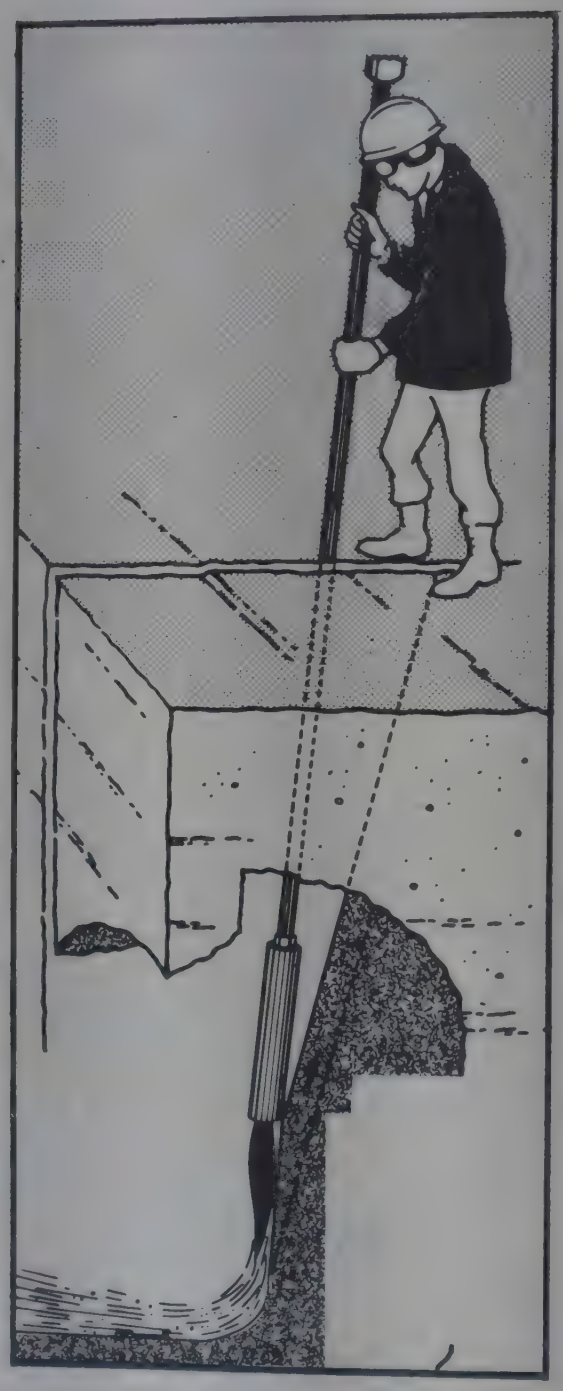
INDIA'S UNIQUE GRANITE PROJECT: JOHNMEYERS is an unique granite project with total technology upgradation planned on par with industrially advanced countries. The company has entered into a technical collaboration agreement with Carl Meyer GMBH & Co., West Germany, who are internationally renowned for advanced stone working technology, equipment and allied services. Under this agreement, Johnmeyers will establish the most modern granite processing plant in the country. Johnmeyers has already concluded a purchase contract with Pellegrini Meccanica SPA, of Italy, who are world leaders in the field of integrated quarrying technology; having erected plants successfully in over 54 countries the world over. Under the direct supervision of Pellegrini, Johnmeyers will erect India's first fully mechanised granite quarry which is expected to go into stream shortly.

LARGE RAW MATERIAL ASSET BASE: Black granite is a scarce raw material in the world. Johnmeyers possesses 14 quarry sites of which 10 are black granite quarries spread over Andhra Pradesh and Tamil Nadu. Detailed investigation conducted by foreign collaborators show JM owns large export quality black granite. This is a major strength area of the project.

HIGH PRIORITY INDUSTRY: Export is India's No.1 priority today. As a Green Card holder, JM's EOU operations are entitled to a host of incentives and concessions which among others include: i) duty free import of capital goods, tools and components, ii) exemption from Central levies, iii) tax holiday for a period of 5 years, etc.

MARKETING TIE-UP: It is estimated that the world demand for granite is over Rs.6000 crores annually. Johnmeyers has successfully concluded marketing tie-up with DSP Traders Inc., of USA who have agreed to underwrite sales valued at Rs.30 crores initially. The company has received confirmed purchase orders to the tune of US Dollars 1.5 million or about Rs.2.10 crores with advance payments on hand.

A TRULY PROFESSIONAL MANAGEMENT: Johnmeyers Management consists of top notch technocrats, industrialists and professionals, each one a leader in his own chosen field now taking professional competence towards making Johnmeyers a resounding success.



HIGH GROWTH POTENTIAL: With India emerging as a No. 1 exporter of high quality black granite and world prices taking a quantum jump of over 300% during the last 5 years, there is an extremely bright future for Johnmeyers.

BOARD OF DIRECTORS:

Mr. T.T. John	.. Chairman and Managing Director
Mr. A.N. Haksar	.. Director
Field Marshal Sam Manekshaw MC	.. Director
Mr. K.K. Pai	.. Director
Mr. P.K. Choksey	.. Director
Dr. W. Hannak	.. Director
Prof. Carlo Costa	.. Director
Mr. J. Griesel	.. Director
Mr. B. Victor Monteiro	.. Director
Mrs. Suma John	.. Director
Mr. C.N. Damodaran Nampoothiri	Director

Highlights:

- ★ **Johnmeyers is a 100% Export-oriented Unit.**
- ★ **Black granite is a scarce raw material in the world. Johnmeyers hold large export quality granite deposits.**
- ★ **Pellegrini Meccanica SPA of Italy to support Johnmeyers to erect India's first fully mechanised granite quarry and Carl Meyer of West Germany to provide the most modern processing plant from concept to commissioning stage.**
- ★ **As a Green Card holder, 100% exports are eligible for a host of incentives and concessions which among others include: I) duty-free import of capital goods, II) exemption from Central levies, III) tax holiday for 5 years from commencement of commercial production, etc.**
- ★ **Marketing tie-up with DSP Traders Inc. of USA who are a major equity shareholder of the company.**
- ★ **Exports to the tune of Rs.30 crores concluded. Confirmed purchase orders valued at US $ 1,500,000 (about Rs.2.10 crores) with advance payments on hand.**
- ★ **80 CC and other tax benefits (approval awaited).**
- ★ **Easy liquidity. Listing at Hyderabad, Bombay, Ahmedabad and Delhi Stock Exchanges.**
- ★ **Impressive dividend expected during first full year of production in 1989.**

Public Issue of 8,70,000 equity shares of Rs. 10/- each for cash at par.

Instant decisions is the name of the game

In his quest for growth, ***Abhey Oswal*** *continues to prove the Cassandras — who have made dire predictions of this agro-based group's fortunes turning from wealth to waste — wrong again and again. The chairman of the Ludhiana-based three company group gives a first person account of his views on his obsession with growing big, the bounties of the capital market, on how he mastered the commodity business. This is based on two long discussions in Bombay and Delhi, with Basudev Dass*

My decision to leave my family, which controls Oswal Woollen, Punjab Concast, Punjab Woolcombers, Malwa Cotton, Vardhaman Spinning, came because they are conservative. They did not want to grow with the public. They wanted to do business and confine wealth within the family. Except for Oswal Woollen Mills Ltd, closely held by my father Vidya Sagar Oswal and his brother and their families, all the others are joint sector companies with very small public shareholding. This was because the Punjab government had the letters of intent and invited the Oswal group to join hands with the state industrial development corporation to set up the units. My family did not have a choice but to become a partner in these companies.

They consider me rash. Actually I am not rash but prone to quick decision-making. I started the vanaspati division at Oswal Agro when it was a subsidiary of Oswal Woollen Mills. The oil business, unlike the textile industry requires instant decisions. Purchase of raw material (commodities) in a fluctuating seasonal market enables companies to make money or lose it. This is not the case with today's textile business which does not require dynamism in any form.

Trading down. Initially we did engage in trading. The idea was to make profits and give returns to shareholders without making them wait. At that time we had manufacturing units only in Ludhiana and Bhopal. We bought import licences in the open market for import of edible oils and portable gensets. We refined and packed and sold the oil in the market for high profits. But our trading activity has now come down sharply. In 1987-88 only 5 per cent of profits came from trading.

Public participation. I saw that the day was not too far when growing companies could do little without public support. Escorts in the north and Reliance Industries have been good examples of corporate growth linked to public participation in project funding. I came out of the group at the right time with Oswal Agro Mills which was a wholly owned subsidiary of Oswal Woollen Mills Pvt Ltd. At that time (late 1982) Oswal Agro's sales were Rs.3 crores. The net worth of the company was Rs.1.75 crores against the group turnover of Rs.200 crores.

People say that Abhey Oswal is a commodity trader and not an industrialist. To that I may add : yes, Oswal is a commodity trader, but do you know what it takes to be a successful trader? A lot of companies in the soya business have repeatedly made the same mistakes. In the process they have been weakened and many of them face ruin.

Why did this happen? It is because the management lacks the understanding and knowhow of a very critical function — the purchase of raw materials. In the agro-based industry, the cost of raw materials is as high as 85 per cent. In the textile and petrochemicals industries, raw materials account for only 25 to 35 per cent. That gives these industries the flexibility to cut costs in fuel consumption, labour and processing. But for us, investment in plant and machinery account for only 6 per cent of the total cost. So we don't have the scope to make cost adjustments elsewhere.

The key to the success of the Oswal group is shrewd and timely purchases of raw materials, which in our case is soyabean and rice bran powder. For this we have a full fledged department led by an executive director. We have our people based in Bhopal who are in constant touch with the soya, and edible oil mandis. They feed our people in Delhi and Ludhiana with information on a continuous basis about stocks, prevailing prices, and other relevant details.

No manipulation. The Oswal group has given top attention to return on shareholders' investment. Whenever companies do well financially and this starts getting reflected in the share price, allegations start flying around. One of the common allegations made against me is that I manipulate share prices, which is incorrect. Manipulation of share prices is never in the best interest of the management or the share holders and could lead to very high shareprices at unrealistic levels. Which in turn would raise the expectations among the investing public. But, yes, if support of share prices is required, it should be given up to a point. Shareholders must not panic about their investments declining in value, on account of factors unrelated to company performance. But supporting share prices is not the same as manipulation.

We have always looked for suitable industries for diversification. Why have we chosen petrochemicals for diversification? The scope for expansion in agro-based industries is limited. Besides there always is uncertainty about the monsoons. And the threat from smaller units with low overheads cannot be ignored. I believe petrochemicals is a high volume industry where demand is great and so are the chances of growth in the near future.

But I don't believe in looking beyond a three year horizon. Planning too much into the future can be futile.

Mehta: using distributors' channels profitably

Jain: mastering the commodities market

bought from IEL for Rs.18 crores in early 1988, and the colour of the bottomline changes to a healthy black.

Both the companies' Rs.10 scrips command market prices of Rs.120 and Rs.110 respectively (28 November), and both paid a dividend of 50 per cent each in the last year that accounts have been published. The ruling share price of Oswal Agro Furane, which commissioned its plant only in October 1988, was Rs 80 on the same day.

Then what is the controversy all about? It has everything to do with the financial performances of OAM and Bindal Agro Chem. Oswal's detractors (and he has collected many) allege that "there is no way he can make the profits he claims. The soaps, deoiled cakes, and edible oils markets are very competitive."

And yet the performance of OAM's toilet soaps division has been quite something. How did the three brand names — Oasis, Kalpa, and Tarun — virtually unseen and unheard of in the national media (at least in recent years) capture a sizeable market share, touch sales of Rs.90 crores during the year ended 31 July 1988, and make profits despite their selling price being lower than other manufacturers?

Cost-effective processes

Abhey Oswal sees nothing surprising: "Why should we be in business if we are not making money?" Says M. Satyanarayana, technical director of OAM, who has spent 20 years with Tata Oil Mills Company Ltd, "We have a highly integrated toilet soap making operation in Ludhiana which makes our products highly cost effective. Therefore we are able to sell at very economical prices and yet make profits." According to him, the soaps are made mainly of rice bran oil, which is cheap. The company has seven soap drawing lines of 15 tonnes per day each with four soap vacuum drying units. "Most of the competition do not have the technology to make soap from this oil. Moreover, outside Punjab, say in a city like Bombay, where the soap units are clustered, rice husk/bran is not available. Most of the rice bran is available in Punjab and there is a ban on taking it outside the state," says Satyanarayana. Thus while most other major toilet soap manufacturers bring oil and fatty acids (neutralised by caustic soda in the suponification stage) from outside, OAM makes both these critical ingredients inhouse.

To take the soap to the market, the company had set up an elaborate marketing infrastructure. The company started with a three tier system — distributors, wholesalers and retailers, and a host of salesmen. "But that did not work and has been done away with," says B R Mehta, vice president, marketing.

Says Mehta, "We found this was not producing results and was actually bleeding the company. We would need an army of salesmen to make a dent in the market. We then opted to use the distributors' own channels." Today the company claims it is the only one to sell soap

Bhalla: instant decision

Kaur: sugar and success

BOX 2

The route to quick profits

Asset purchase is a quick route to profits provided the plant is in running condition and does not require large investments for reaching optimal capacity utilisation. Oswal Agro's diversification into sugar is a good example.

In August 1987, Oswal Agro Mills (OAM) took over the sugar mill complex of The Jagatjit Sugar Mills Co Ltd, Phagwara, Punjab. "The first phase of modernisation and expansion costing Rs.40 crores has been completed in a record time of nine months," says Raminder Kaur, corporate manager, sugar division, OAM. The entire cost has been taken care of by the company's own funds. Before the end of December the mill's cane crushing capacity will increase from 1,100 tcd to 4,000 tcd.

The mill is a 55 year old museum piece, but was in working condition. After OAM bought it, the mill has been working even better judging from the profit of Rs.65 lakhs that has been reported in the first nine months of working after ten years of losses.

Main attraction. Why did OAM buy this unit? The idea was to diversify into sugar. The Punjab government (like the others) grants new licences only to the co-operative sector. But it has no objection if existing units expand capacity. Given the incentives available to new sugar units, it made the business very attractive. "The main attraction was that such units are permitted to sell 95 per cent of their production in the free-sale market where the realisation is higher than under the levy quota. Therefore we did not miss the chance and acquired the unit," says Kaur. To ensure that the expansion was completed very quickly, "we decided to go in for equipment purchase and therefore did not give the contract for expansion on a turnkey basis," states Ajit Bhagat, chief executive of the sugar division.

For a sugar mill to run profitably the active co-operation of the farmers is important. Soon after acquiring the unit, a cane development programme was initiated in September 1987. It included the grant of Rs.2 crores in loans to farmers and supply of subsidised insecticides and pesticides. "For this the company had budgeted an expenditure of over Rs.50 lakhs per year," recollects Kaur.

And the results are already encouraging. In the last six months the cultivable area for cane has increased from 10,000 acres to 35,000 acres. (The available cultivable area is 200,000 acres.) The company is already planning to expand capacity up to 6,000 tcd. Kaur does not expect marketing of sugar to pose any difficulty. "Currently our sugar attracts a premium of Rs.10-15 per bag (of 100 kg) because of its superior quality and the bolder grain."

When the modernisation, expansion and diversification into furfural and industrial alcohol is completed by early 1990, this unit is expected to contribute Rs.75 crores to OAM sales and profits of "at least 15 crores."

Satyanarayana: economical prices, yet profitable

The group has also made clever locational decisions. Take the vanaspati plant of Bindal Agro. It is one of the two plants (the other one is in the co-operative sector) which is located at Mandideep in Bhopal. By a state government notification, Mandideep enjoys complete sales tax exemption for seven years. Says K.L. Jain, executive director Bindal Agro, "this helps us to compete effectively and sell our products at competitive rates."

Also a good knowledge and experience of the commodity market (soya beans and edible oils) has stood the group in good stead. During 1987-88, when the soya crop was poor because of the drought, the company changed its commodity purchase policy. We bought soya on a daily parity basis all the nine months while most of the other companies went headlong into the market and accumulated stocks," recalls Jain. Consequently OAM and Bindal Agro incurred an average cost of Rs.5,000 per tonne while the industry average was minimum between Rs.5,800 and Rs.5,900 per tonne.

The typical reaction to the group — profitable, giving good returns on investment, yet skating on thin ice — has yet to change. "Oswal is a mini Dhirubhai, and he is known for his financial wizardry," says Chittaranjan Kaul, assistant vice president, Bank of America, Bombay, one of the first bankers to the group.

Does the group have a clearcut strategy? Yes. And that is to:

- raise equity at high premium
- shun virtually all forms of loans, short-term and long-term.
- pay high dividends which it can afford to do as cost of funds of the company has been declining — currently at 8 per cent.
- go for asset purchase, not companies, to avoid gestation periods and enable the

gainst cash in advance through a net-ork of 3,000 wholesale buyers.

The company, which used to advertise s products widely, slashed ad budgets. We prefer to direct that money to re-ailers by way of higher commission, par-icularly in the rural markets," says)swal. The other factor of course is that)AM soaps are cheaper than most other n the same price category. Admits a mar-eting manager of one competing com-any, "They do sell on a price platform — ut our sources of data (the ORG retail udit report) indicate that OAM sales ould not have been more than 20,000 onnes in 1987-88 against the claim of 0,000 tonnes."

Mehta has his explanation for the conflict between ORG and Oswal figures. "We sell a large amount to institutions — hotels, government institutions, canteen stores departments, the Indian Navy, and also undertake job contracts for other soap companies. These go unaccounted to our credit, given that ORG's is a retail audit." OAM is currently the largest suppliers of miniature pack soaps to the hotel industry, worth Rs.10 crores a year.

High volumes, smart decisions

One of the cornerstones of the success strategy has been to ensure high volumes of production through maximum utilisation of capacity. All group plants — vanaspati/solvent extraction, toilet soap, sugar have been running at full capacity.

company to start production quickly.
• issue the shortest-maturity fully convertible debentures.

The equity route

Viewed as an innovator who refuses to stay on the beaten track, Abhey Oswal has by effective use of the equity route progressively reduced the cost of funds of his operation. A method which is today becoming popular with the private corporate sector, eg. Great Eastern Shipping, Essar and others. "Our business requires large amounts of money on call. For us to take positions at opportune moments is crucial," he says.

By replacing costly bank loans with equity shares and convertible debentures, issued at a premium, the group's effective cost of capital is "about 8 per cent currently, where other companies' cost of funds is 15-16 per cent," says R.K. Singhania, director finance of the group.

The size of issue increasing with every entry into the market, merchant bankers have been drawn to the group like iron filings to a magnet, quite undeterred by the controversies. Says one manager, "We are in business and the Oswal group presents a good business opportunity for us." A senior manager from SBI Capital Markets, which is likely to manage a major forthcoming issue says, "We would not take up a business proposition, without looking at the details — current demand in the company's products, importance to rational priority and whether it is a well managed company. We find this true of the Oswal group."

The group has relied heavily on acquiring assets of existing companies instead of going for greenfield projects or buying companies. The term 'gestation period' does not exist in Oswal's dictionary. Says Singhania, "Our strategy has been to raise funds through debentures with early conversion (three months). To match this we must have quick returns through early production. In a new project the minimum waiting period is two years," observes Kaul. "Abhey could have gone slowly accepting a four year gestation period. In which case he would have his current level of turnover in 10 years."

Like other industrialists, the options before Oswal were and are bank loans, equity, NCD&CDs, with short maturity. "Raising equity (or short maturity CDs) appears eminently suitable for financing acquisition, because he is not going to stop at one, two, three... It gives him the cash flow and the capacity to borrow later if the needs arise," says Kaul. Observes another banker, "So far Oswal has had a comparitive advantage in selling equity. That is not enough. If he is thinking of selling debt tomorrow, all will depend on the performance of the petrochemicals plant in Bombay and Rishra."

While Oswal is the first one to admit that the group is 'Abhey-driven' and is a one man show, his senior executives are of the view that they have the flexibility and full liberty to make quick decisions. According to Anil Bhalla (in charge of OAM's Ludhiana and Phagwara units), the decision to buy the sugar unit from Jagatjit Sugar Works was made in one day.

Today the group which had started out on trading operations "to keep the business going and reward shareholders" in the early eighties has come a long way. 1984-85 Rs.8.31 crores were earned imports of emergency lighting units (po table generators with panels). In th year, the profits from trading in this ite helped the company to subsidise its oth operations — soap, cakes, edible oils and it closed the year with a net profit Rs.2.58 crores. By 1987-88, the figure h altered considerably.

A trip to the market

Once again it is time for Oswal to retu to the market. The UCIL plant nee funds for modernisation. Plans are bei finalised to raise the capacity of t naptha cracker from 80,000 tonnes p annum to 150,000 tonnes per annu LDPE from 20,000 tpa to 32,500 tpa a XLPE grade from 1,500 tpa to 10,000 tp As the transformations take place, t group which has seen quick growth c hope to make the quantum jump to jo the big league.

Is Oswal being too hasty? Time alo will tell. But there are others who a willing to hazard a guess today. Says senior executive from a bank, "The grou has shown amazing managerial savvy an a certain resilience. In today's context isn't enough to manage projects well Finances also should be managed equal well."

With the group having embarked in what is referred to as "serious manufa turing", the odds are that whatever trac of doubt remain will soon be erase Chances are that the magician will co tinue to conjure wealth for his investor

Capital market boom and thereafter

The mood during this year's pre-Diwali trading in the Bombay Stock Exchange was in sharp contrast to that which prevailed in the preceding two years.

In 1986 and 1987 the Indian stockmarket went through a long listless phase. All efforts of the authorities were seen as steps to prevent a further slide rather than to give the market a boost and largely failed to cheer up market sentiment. This year, however, the excellent monsoon, good corporate results, and the government policy of gradual liberalisation on many fronts, have succeeded in clearing the gloomy clouds hanging over the Indian capital market.

By all accounts, both primary as well as secondary markets are gearing up for a boom. In 1985, a number of mega projects were conceived in the private and joint sectors with an eye on the responsive capital market. The Reliance Petrochemicals issue has proved that such projects can now be speeded up.

Changes required urgently

A buoyant capital market is a primary prerequisite for achieving the ambitious growth rate of 6 per cent being proposed for the Eighth Five Year Plan. In order to ensure a qualitative and quantitative quantum jump in the Indian capital market, a few fundamental changes are required urgently. Most marketmen believe that the policies and procedures of the Controller of Capital Issues are as out of date and of as dubious value as the recently dropped CAS formalities of the RBI. There is great need for a more professional and modern approach, both in the office of the CCI as well as in the stock exchanges.

During the 1985 boom, while the authorities were busy congratulating themselves, speculators and unscrupulous promoters were having a field day. In response, the authorities continuously tinkered with matters like the number of prospectuses to be supplied, merchant bankers' fees, underwriting commission and brokerage, issue premium, etc, which should have best been left for market forces to equalise. During the inevitable slump that followed, however, the authorities demonstrated their capability for constructive action by setting up the Securities and Exchange Board of India (SEBI), the Credit Rating Information Services of India Ltd (CRISIL), the Stock Holding Corporation of India Ltd (SHCIL), etc. At an early stage of the current upward trend in the capital market, SEBI should demonstrate that it has set itself clear goals and intends to act swiftly towards them. It has already developed an outline for comprehensive legislation which will have far-reaching consequences. It will be worthwhile for SEBI to pla for another boom; it is of critical importance upgrade the infrastructure and the overall lev of managerial competence in the stock e changes so that they are able to comprehend ar implement the new approach.

While it is natural for the government to b concerned about the health of the capital ma ket, it should restrict its role to creating a cond cive atmosphere and system for healthy growt Fluctuations in the stockmarket are natura Government should resist the temptation to d bble in the market to create an artificial boor Direct government intervention in the stoc market can only restrict its growth.

The special treatment and terms of referen enjoyed by public sector institutions engaged merchant banking, mutual funds, leasing, ve ture capital and other financial services bree inefficiency and malpractices. It should be a preciated that even in the highly regulated fina cial market in India, the private sector ha always taken the lead in introducing new prod ucts and services.

Not venture capital

While public sector companies should be cor trolled while raising huge amounts from th capital market, with the help of unequal fisca concessions, private sector companies shoul also be discouraged from treating the capita market as a venture capital fund. Venture capita financing is the job of specialists.

If the Big Bang really takes place in the India capital market, the need for a greater variety o instruments of different maturities will be fel immediately. The Indian market is now matur enough to welcome the introduction of commer cial papers, note issuance facilities, options an warrants. At the same time, the market player must have adequate financial resources for thei respective levels of activities. Stock brokers an merchant bankers must have a strong capita base. Corporate membership in the stock ex changes should be allowed without delay.

As in the case of the manufacturing industry financial service companies should also be al lowed to enter into foreign collaborations t bring new technology to the Indian capital mar ket.

With a little courage and effort, it should b possible to ensure sustained growth and sophis tication in the Indian capital market. It shoul then be possible to successfully float India funds or NRI funds without paying an unduly high price.

HANTILAL SONAWALA

The gold trade must be freed

The jewellery industry is a traditional one, existing in this country from ancient times. The stories in *Ramayana* and *Mahabharata* and in the scriptures both in North and South India references to the jewellery made in those days. Paintings and sculptures in the caves like Ajanta, Ellora and such other monuments in the South and in the temples all over India show the flourishing of this ancient art.

The jewellery trade touches all sections of Indian society. Though it is a small scale industry it gives employment to lakhs of people. As many as 400,000 licenced goldsmiths along with their families and about 20,000 licenced gold dealers are engaged in the gold trade. Besides, people engaged in gem cutting, gem setting and rough gem mining constitute a big community contributing to the trade. Such a trade needs recognition as an industry of consequence.

Lately, the Central government has been conscious of this trade and has realised its export potential. A policy liberalisation to help the export of diamond and gold jewellery is likely to go a long way to boost the exports of these items. India figures as a big centre for rough diamond cutting and is considered second in the world after Israel. The efforts of the Gem and Jewellery Export Promotion Council to get maximum concessions to this trade requires special mention. If there are any impediments, it is not in the policy but in its application and procedure which will have to be overcome. The grant of financial help, starting of development of productive centres, promotion of designing, and permitting import of machinery and technology for this trade and offering export incentives by tax relief would all be efforts in the right direction and would help to boost exports of jewellery.

Steady demand

The demand for gold in India is steady due to social and economic reasons. An estimated 200 to 250 tonnes per annum of gold is required for local consumption for fabrication into gold ornaments. There are 400,000 goldsmiths who manufacture gold jewellery -- about 300 gm per four goldsmiths per month. This demand is to be satisfied by recycling of old gold existing in the country and through mine production. The remaining gap is covered by import of gold or by sales etc. Yet 50 to 60 tonnes and mine production brings in hardly two tonnes. The remaining gap of 150 to 200 tonnes is met by way of smuggling as official imports are banned.

The government's lethargic attitude is not amending the Gold Control Act, in spite of its continuous failure since inception some 30 years ago, and in not realising the havoc it has caused to the country's economy in general and the gold trade in particular, is particularly baffling. Even the two committees appointed by the government to take in-depth review of the Gold Control Act have recommended official imports of gold, on a moderate scale to begin with. But sadly enough the government has not yet taken any decision in the matter.

On the contrary, the government is reported to be contemplating a second review of the whole thing. In this national interest this situation should not continue. It is needless to say that whenever gold is smuggled into the country it is paid for in foreign exchange. How is this exchange earned? It may be underinvoicing or overinvoicing of goods imported or exported as the case may be, or through clandestine exports of items like drugs, narcotics, armaments, etc. The foreign exchange needed for payment of smuggled gold is bought in the open market at huge premiums.

It is abundantly clear that artificial barriers on gold imports help neither the goldsmith nor the gold dealers. It does not benefit jewellery buyers, and least of all the government. Somebody else usurps all the benefits at the cost of the nation's economy. The government is taking its own time in coming to a decision on the issue of imports of gold too. It should be realised that the economy of the country will get a tremendous boost if gold imports are liberalised, even if on a limited scale

The Act is only creating havoc with the economy and trade

The author is vice-president, The Bombay Bullion Association

Liberalisation will encourage legal consumption

as recommended by the official committee.

With liberalisation, first, the unofficial foreign exchange reserves being used currently to finance gold smuggling will immediately become redundant.

Second, it will energise export efforts further. Whenever any item is imported the exchange spent on the same has to be earned by exports of goods. The illegal import of gold does not create any potential for exportable goods at present. The lacunae will be removed once gold imports are regularised.

Third, free import of gold will curb the generation of black money. The profit in the sale of smuggled gold in India in the form of rupees is spent financing more imports of smuggled gold, thus perpetuating a cycle. This will be arrested by freer imports of gold.

Fourth, imports of gold would reduce the rate of inflation in the official money market. The investment in official imports of gold could eventually lead to funding of a Gold Bank, from which supplies could be drawn by the licenced goldsmiths or dealers for fulfilling their orders.

A fifth advantage will be the creation of national wealth which will be accounted for. Because it encourages legal consumption of gold in jewellery making, industrial uses, etc. Moreover, it will generate huge employment potential as jewellery making will get a boost. The government revenue will also increase in the process by way of sales tax, import duties, income tax etc. If the rate of sales tax is made less prohibitive (two-and-a-half per cent as in Maharashtra) and is reduced to half a per cent it would result in far greater revenue to the state governments, since the jewellery business is estimated at Rs.12,000 crores a year.

Encouraging crafts

Free availability of gold to gold dealers and goldsmiths would encourage them to develop their skills and exclusive designs in order to remain in a highly competitive market. This is all the more essential as jewellery exports have been given a prominent place in the overall scheme of the country's exports.

It has also been suggested that passengers coming from abroad should be allowed to bring gold in their baggage. The government may also consider allowing NRIs to bring a portion of their money into India in the form of gold. The NRIs selling this gold within the country and using the income thereof within the country may, over a period of time create a block of foreign exchange reserves.

Let us hope that the day is near when the gold trade is freed from the bondage of the Gold Control Act and that the industry may breathe fresh air soon.

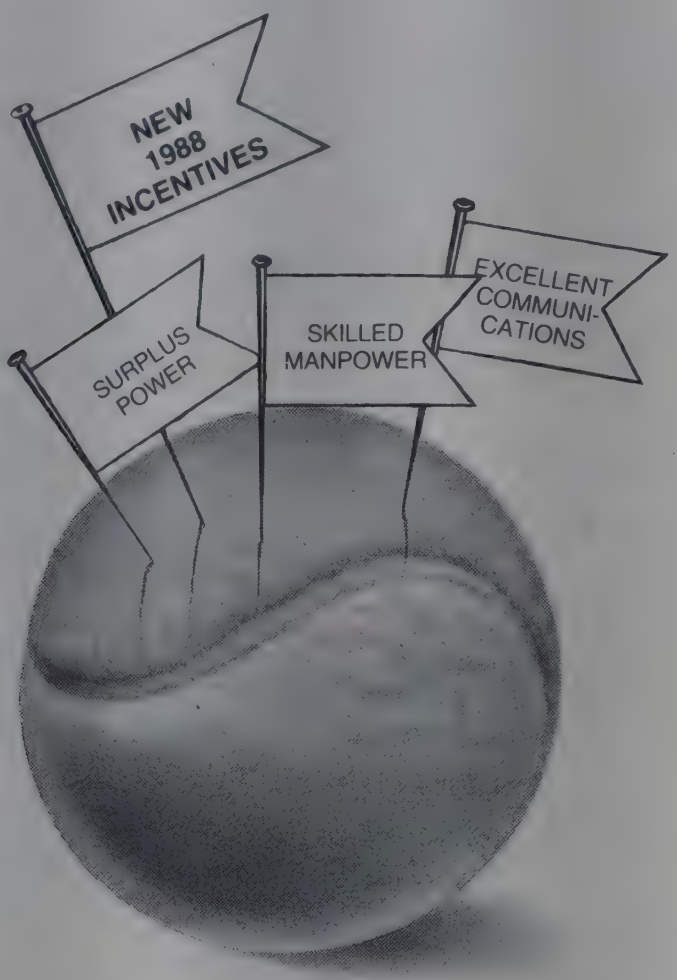
◆THAT'S ADVANTAGE MAHARASHTRA◆



WHEN YOU THINK OF INDUSTRIES

Set up your industry in Maharashtra. And avail of the new 1988 package of incentives. Super incentives you would have hardly imagined any State would give.

Extraordinary features:

Substantial increase in Sales Tax incentives and Special Capital Incentive. Incentive periods raised upto 10 years. Sales tax exemption/ deferral made available where expansion/diversification is undertaken with minimum Rs. one crore investment. Extra incentives provided for energy saving devices, pollution control measures and for local employment. For power intensive units, there's exemption from electricity duty. Resource-based industries get incentives on par with other industries. You get these incentives practically all over Maharashtra except Bombay/Pune and some nearby areas.

For details contact:

SICOM

The ingredients for success

Besides, Maharashtra offers your industry everything it needs to thrive. Unrestricted power. Abundant water. A readymade communications network. Infrastructure complete with modern amenities in the Growth Centres. A ready market and most of all, an industrial culture that provides skilled productive labour.

SICOM – to top it all

Whatever the size of your unit – medium or large – you can depend on SICOM for plant location, technical guidance, finance and escort services. Everything you need to get your industry off to a flying start.

ORKAY SILK MILLS

Troubled times

Despite the Rs.32-crore bail out by the banks last July, Orkay continues to spin in trouble. Its latest annual report has become a "model case" of how far financial reporting norms can be stretched. The company may well slide into sickness unless the shareholders bail it out

There is a lot of trouble at the once high-flying Orkay Silk Mills Ltd. The company's annual report for 1987-88 released last fortnight has become the talk of the "city" of Bombay. This much coveted report is being carefully filed away "for future reference", as one banker put it. Reason: it carries a string of qualifications by the auditors, H.N. Mehta, that are fast making it a "model case" of how far the rules of financial reporting can be stretched.

Some of the major qualifications of the auditors to Orkay's accounts:

- underprovision of depreciation by Rs.4.22 crores
- non-payment of dividends for 1986-87 within 42 days from the date of declaration and non-funding of the unpaid dividend account thereafter
- advancing interest-free loans without any recovery schedule
- non-compliance with every major rule governing fixed deposits including non-repayment on maturity
- non-payment for 8 months of the tax deducted at source (Rs.55.28 lakhs) from dividends to the tax authorities
- non-provision of several contingent liabilities arising from the alleged evasion of excise, customs and income tax running into several crores of rupees

"Behind us now"

Enough to shake many businessmen. But not Kapal Mehra, the smooth-talking chairman of Orkay Silk. "Don't keep looking at the past, look at the future," said Mehra at the 20th annual general meeting of shareholders held in Bombay on 6 December. "I am not denying that we had a severe liquidity crunch, but that is behind us now." He revealed that Orkay had already made a profit of Rs.5.5 crores in the five months to August this year which was proportionately much higher than during last year.

But despite all the smooth talk not many shareholders were convinced. Many felt, intuitively, that despite the pat replies, there must be something seriously wrong with their company. As one aged investor asked: "When I look at the sales, profits, assets, net worth of our company, it looks very healthy. But then why can't you pay us our interest and dividends on time? I just can't understand." Another investor, younger and more fiery, left no holds barred: "Shame, shame, shame! What you say in the annual report about having paid interest on deposits is all lies. I have come to your office twenty times but I have yet to receive my interest. Do you think I am a beggar?"

Clearly, the chickens have come home to roost for Orkay and the reckless Mehra. As is now well-known, the troubles of Orkay began in 1986 when Mehra lost around Rs.50 to Rs.60 crores in trying to manipulate Orkay's share price on the Bombay Stock Exchange through some "associate" concerns (see *Business India*, 25 July 1988). A large part of this loss (around Rs.25 crores) was squared up by Orkay acquiring the assets (mainly land and buildings which do not contribute any sales or cash flow) of these associates in March 1987. The depreciated value of these assets was only Rs.4.10 crores. These assets were simply transferred to Orkay's books: there was no cash inflow. Moreover, even after this transfer, the associates owed and still owe Orkay Rs.9 crores.

The State Bank of India (SBI), which has lent over Rs.27 crores to Orkay, has remarked in an internal assessment that these were "dubious transactions of (a) questionable nature, which resulted in a diversion of working capital funds to the extent of Rs.24.60 crores." Mehra now justifies this, saying that he will sell the acquired real estate which will fetch a much higher price. "We brought in the cash crop to harvest it," he says.

Bled white

This huge diversion of funds coupled with the arrest of Kapal Mehra in late 1985 for alleged excise and customs duty evasions bled Orkay white. So much so that to date it has still not been able to pay customs duty and clear 89 out of the 100 sulzer looms imported more than two years ago, for which it now needs more than Rs.15 crores. Compare this to the c.i.f. value of the hundred looms — Rs.23 crores. Meanwhile, the government hiked the import duty from 45 to 95 per cent. And the Swiss franc, in which the loom acquisition was financed, has doubled against the rupee. So whether these looms would still make a viable project is a big question.

Kapal Mehra: "forget the past"

But today, with the proceeds of the Rs.32 crore NCD issue available, why hasn't Orkay defrayed the customs duty and cleared the looms? According to reliable sources, the banks are not releasing the required funds because the company has now applied to the government for a concessional duty of 25 per cent instead of 95 per cent on the ground that these looms will be used only for export production. Earlier, the looms were imported for the domestic market. However, the office of the Textile Commissioner is yet to give the go-ahead. Once the permission comes through, it will take around six months to install the looms, i.e. well into the next financial year.

The remaining part of the NCD pro-

Mr Kapoor had 8 Dobermann Pinschers, 10 armed guards and a 22 foot high wall... yet they couldn't protect his factory from being eaten away.

Yes. Mr Kapoor's factory was attacked... by rust. Because he neglected one vitally important security measure: lasting protection against corrosion. So what with unending repairs and renovations over the years, his profits kept getting swallowed up.

Fortunately, 7250 factories, 310 dams, 1830 underwater structures and many other constructions in India have escaped the same fate... Thanks to STP Limited. The most trusted name in corrosion protection: pioneers and leaders for over 50 years. Only STP has developed such a wide range of durable products and systems. Like Tarstil Tar for general corrosion protection, Tankmastic for steel and concrete, and solutions to specific corrosion problems like Carseal.

STP Limited also offers a range of high-quality mastic asphalting treatments, both for roads and industrial floors. And it has an equally impressive record in pipe coating and waterproofing.

So, invest in STP protection for your factory today—and avoid the continuous maintenance expenses that eat away your money.

Because STP protection means the longest-lasting protection.

LINTAS:CAL/STP 43C. 2820

ceeds (Rs.17 crores) has also not been released to Orkay. It has been "appropriated" by banks to reduce the company's account "irregularities", ie, its excessive borrowings from the banks. The shareholders, including the Mehras, did not respond to the NCD issue. Their subscription only amounted to Rs.10 lakhs! Thus the devolvement of underwriting on the banks was virtually 100 per cent.

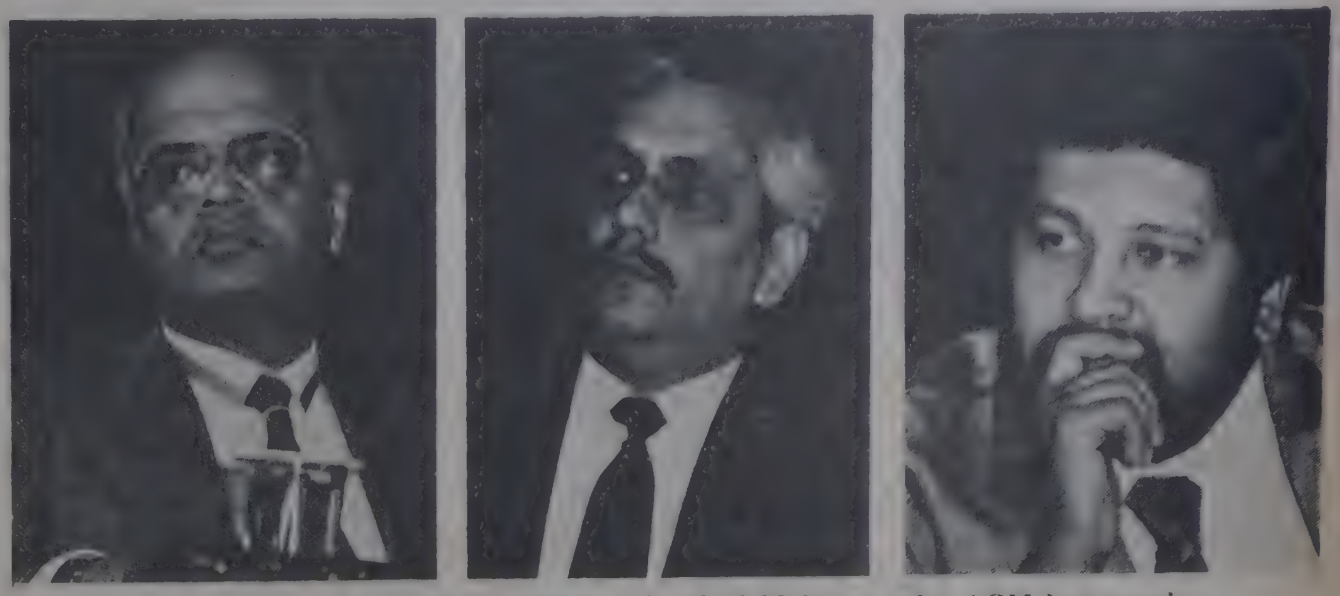
So Orkay's "irregularities" with the banks will be brought down by none other than the same banks! But in the process, the form of the loan will change. The excessive drawals from the cash credit account, for instance, will now be converted to debentures. The major advantage here is that debentures unlike cash credit are marketable, even if at a hefty discount. But the total exposure of the banks in Orkay has further gone up.

Yet another indicator of the continuing cash crisis is the fact that the Mehras have recently taken up timber trading through some "associate" concerns. One of these is Texo Timber (P) Ltd (Texo is the brand name of Orkay's suitings). These companies import teak from some East bloc countries into the Kandla port under OGL and sell it in the domestic market. Since timber is in short supply locally, it is sold on a cash basis. But it is imported on a 180-day credit. So the whole operation works more like a financing scheme.

There are also strong rumours that the Mehras continue to borrow large sums of money at high interest rates. Earlier, the Hindujas are believed to have financed the Mehras. But now, the Chhabrias top the list and there is talk in corporate circles of the Chhabrias acquiring Orkay shares.

The investor, again?

So the key fact remains: Orkay needs a large infusion of cash to survive and to get back on track. The multi-crore question: where will the money come from? In all probability from the 100,000-odd shareholders and investors who have repeatedly supported the company's capital issues ever since it went public. According to reliable sources, several rights issues are on the cards. Mehra admitted last fortnight that Orkay had applied for CCI approval of a rights equity issue on attractive terms. This is likely to be a Rs.33 crore issue in a 1:2 ratio at a premium of Rs.5 per share, to open during the first quarter of 1989. Later will come a Rs.83 crore convertible debenture issue and a Rs.42 crore NCD issue. If all these issues come off on schedule, the company could rake in nearly Rs.150 crores within the next two years.



Directors C.K. Parkash, Jitendra Mehra, Pankaj Mehra at the AGM last week: anxious moments

The major object of these issues, apart from "working capital requirements", will of course be the "expansion of polyester yarn capacity from 6,000 to 15,000 tonnes per annum." Since 1986, this has been the stated purpose. In September 1986, Mehra told shareholders that convertible debentures would be shortly issued to part finance the PFY expansion. Last year, he was not so precise, but clearly misleading. He said: "These two issues (ie, the Rs.19 crore rights equity and the Rs.36 crore NCD issue, both placed this year) would go a long way in putting the company on an absolutely strong footing and with the economies of production to be achieved in the expansion from 6,000 to 15,000 tonnes.... the long term outlook of the company is fairly bright."

To date there has been no increase in the yarn capacity. Moreover, despite the shareholders repeatedly contributing to the company's working capital needs 89 of the 100 sulzer looms imported more than two years ago have yet to be cleared. In September 1986, Mehra told the press that these had already been installed and 500 more looms were planned.

Chronic malaise

An analysis of Orkay's finances during the last three years shows up the chronic malaise afflicting the company. Between April 1985 and March 1988, total product sales have more or less stagnated around an average of Rs.234 crores. At the same time, the fixed assets have risen by Rs.137 crores, working capital by Rs.73 crores, net worth by Rs.50 crores and borrowings by Rs.89 crores! So the "new" assets are not generating any income and the massive increase in working capital is not related to any rise in the scale of the company's operations. Yet, these have been financed largely from borrowings at a heavy interest cost. Last year, Orkay earned a cash profit of Rs.14.19 crores, but had to pay out Rs.12 crores as interest.

Not surprisingly, Orkay fares poorly on almost every major performance yardstick. The efficiency with which assets are used, be it fixed assets or working capital, has halved during the last three years. An interesting feature is the sharp rise in credit sales from 29 days in 1985-86 to 74 days in 1987-88. Most observers find this surprising since the company's major product, polyester yarn, has been in great demand in recent years and its sales are virtually on a cash basis. (Synthetic industry insiders suspect a large part of these outstandings to be bogus). Profitability has also suffered: the return on net worth has nosedived from 17 to 7 per cent. All this despite a brisk demand for polyester yarn, unlike fibre. As one industry insider said: "Thank heavens, Orkay is not in the polyester staple fibre business. Otherwise, it would have collapsed long ago."

In the context of the poor operating performance and the severe cash crunch, the company has followed a reckless payout policy. Last year, Orkay paid out 74 per cent of its net profit as dividend. As the SBI assessment remarks: "Despite dwindling cash generations, Orkay were liberal in dividend payments" and "have not been following a prudent financial management policy". The objective here is clear: keep the shareholders, who are now the life-line to the future, happy

IMI INTERNATIONAL MANAGEMENT INSTITUTE-INDIA

INVITES APPLICATIONS FOR

POST-GRADUATE PROGRAMMES

ABOUT THE INSTITUTE : IMI India is an autonomous non-profit educational Society (President Shri Dinesh Singh, Minister of Commerce) under Societies Registration Act, 1860 The Institute has academic collaborations with International Management Institute-Geneva and with McGill University, Montreal.

For adding depth and purpose to its teaching/training, the Institute has a continuing programme of research and consulting. IMI has a distinguished full time faculty, who are assisted by visiting professionals from abroad, and its programmes have attracted participants from a number of countries in the developing world (eg, Afghanistan, Burma, Ethiopia, Ghana, Jordan, Sri Lanka, Vietnam and Zambia). The Institute is building its own Campus in south Delhi and, till the campus gets ready, the programmes are conducted in rented premises in Kailash Colony in south Delhi.

1 SIXTH POST-GRADUATE PROGRAMME IN INTERNATIONAL MANAGEMENT (Recognised by Government of India)

STARTING ON 1 JULY 1989, this one year programme, comprising three terms, is residential and full-time, and its curriculum is designed to impart core management skills and to prepare bright and promising young men and women to operate in a business environment which is becoming increasingly international. The faculty and participants—mix of the programme are international. A wide variety of learning methods are adopted to promote awareness and sharpen understanding of critical issues in all areas of management.

ELIGIBILITY: A candidate desiring admission should have a Bachelor's degree or equivalent in any discipline and, preferably, three years of work experience. In cases of outstanding record of achievement in academic/extra curricular activities, the work experience requirement may be relaxed.

FINANCIAL ASSISTANCE: The Institute will arrange limited financial assistance in the form of loans on the basis of merit/need. In addition, Scholarships will be awarded to participants for outstanding academic performance.

PLACEMENT : The Institute has a campus recruitment programme to assist its graduates to secure challenging career-opportunities. Graduates of the four previous batches are employed with some of the leading international banks, multinational corporations, as also large Indian companies in both the public and private sectors.

LAST DATE for receiving completed applications is 15 FEBRUARY 1989.

2 FOURTH (PART-TIME) POST-GRADUATE PROGRAMME IN MANAGEMENT

STARTING ON 1 JULY 1989, this three year Programme (equivalent to an MBA degree) is meant for those working managers in public/private sector industry, government, or public systems who have not had the opportunity to acquire formal management education. Being a part-time (evening) programme, it is best suited for persons living in and around Delhi. The recognition of the Programme is under the active consideration of the Government of India.

THE CURRICULUM consists of a set of compulsory courses in basic and functional areas. In addition, there are elective courses to enable participants to pursue their special interests in depth.

ADMISSION REQUIREMENTS are a Bachelor's degree and, preferably, 3 Years' executive experience. The final selection will be made on the basis of past academic record, length of relevant work experience, leadership potential, and performance in the personal interview.

HOW TO APPLY: The brochures and application forms for each of the above Programmes can be obtained by sending Rs 50 by bank draft / money order in favour of International Management Institute-India at B-31/B Kailash Colony, New Delhi-110 048 Telephone : 643-9080, 641-4651, Cable : ACHIEVING NEW DELHI. Telex : 031-66657 MACM IN.

BRITANNIA INDUSTRIES

Rajan Pillai: the new biscuit baron

J.M. Rajan Pillai has acquired Nabisco Brands UK's 38 per cent holding in Britannia Industries last week to become the country's new biscuit king

Nabisco's branded products: will they come to India?

In the shadow of the 'deal of the century' — leverage buy-out firm Kohlberg, Kravis & Roberts' 25 billion dollar acquisition of food and cigarette giant RJR Nabisco in New York — a 41-year old Indian engineer from Quilon, Kerala, has quitely pulled off his own coup.

J.M. Rajan Pillai, non-executive chairman of Britannia, is the new biscuit baron of this country. The London-based son of India's "cashew king", Janardhan Pillai moved fast last fortnight to acquire Nabisco Brands, UK's 38 per cent holding in Britannia only days after the British firm's own American principals RJR Nabisco was taken private by Kohlberg, Kravis & Roberts.

In a telephone interview with *Business India* from New York's Regency Hotel where he has been camping while his lawyers worked out the deals, Pillai who is currently area president, Nabisco Brands Ltd UK, for Asia, Africa and the Pacific, refused to reveal the exact amount he paid for his takeover saying that "the consideration is far higher than the US $50 million reported in Indian newspapers."

Straight transaction

Unlike the leveraged buyout of RJR Nabisco, Pillai claims that his acquisition was made in a 'straight' debt-equity transaction. A leveraged buy out is one where the acquisition is made with the help of bank loans which are normally repayed by selling off the acquired company's often grossly undervalued assets. Pillai says he put in his own money to buy the shares and borrowed money from banks to tie up the package. "There is no group involved in the takeover," he says.

As part of the deal, Pillai will also acquire Nabisco's interests in its Hong Kong, Singapore and Malaysia subsidiaries. While the Hong Kong company distributes Nabisco products such as Planters Nuts and Kellogs Breakfast Cereals, the Singapore and Malaysian companies manufacture as well as distribute these products. Collectively they accounted for sales of US $50 million last year and turned in a profit of $5 million.

Judging by Pillai's claim, his passage into the roster of shareholding of the four companies has been unusually smooth unlike the takeover drama enacted in New York. Legal agreements between him and the Nabisco group "dating back to 1976 and 1985" ensured that in case of a change in the US company's management, he would have the first option to buy RJR Nabisco's holdings in BIL and the three south-east Asian companies.

At the time of going to press, however, reports from New York investment bankers indicate that the deal was yet open and there were other suitors for the four companies. This puts to question Pillai's "exclusive" legal arrangement with Nabisco.

But undoubtedly, Pillai's plump acquisition is the 38 per cent stake in Britannia. The company is India's largest biscuit manufacturer with sales of over Rs.200 crores in 1987-88. He already has had a near 10 per cent stake in the company, and his new acquisition makes him BIL's single largest shareholder, a status so far enjoyed by the financial institutions with a 26 per cent holding.

Pillai: takes a bigger bite

Pillai joined the BIL board in January 1983 after the company's erstwhile principals Huntely & Palmer Ltd, UK, were taken over by Nabisco Brands, UK, as the nominee of the latter. He took over as chairman in February 1985. His association with Nabisco dates back to 1974 when he moved to Singapore from Kerala. In 1976, with obvious help from his prosperous cashew trading family, he teamed up with Nabisco Brands in a 50:50 participation to set up 20th Century Foods in Singapore, to manufacture snack foods and oil roasted nuts as also to distribute Nabisco's other products.

Suprising move

In 1985 in a surprising move he sold his holding in the company to Nabisco itself and moved to London to take up an executive position as area president in charge of all Nabisco Brands' activities outside Europe and the Americas.

Why did Pillai liquidate his holding in a company which presumably was doing well? "I wanted to take up a senior executive position in London. And also because I wanted to invest the money I received from the transaction in the principal company. His current holding in RJR Nabisco he claims is of an "insignificant" nature.

What does the change of ownership mean to Britannia in India. "The existing arrangement between BIL and Nabisco will continue which includes BIL's right to be the first user of this name in India and transfer of technology for new products. A host of new food products and diversifications will follow in the near future," says Pillai. These would include convenient and packaged foods, snacks, oil roasted nuts, extruded snacks etc. "We hope to introduce the Nabisco and Kellog brand of products in the country within the next 12 months," he adds.

■ BASUDEV DASS and N. RADHAKRISHNAN

GREAT EASTERN SHIPPING

Shipshape and steaming ahead

Buoyant freight rates, cheaper oil, low gearing and a low-cost fleet have propelled Great Eastern Shipping Co into a new growth phase. The market-wise company, which is more shipshape now than ever before, is cautiously implementing a Rs.250-crore fleet expansion programme

Unlike the Indian government which waits for the annual Republic Day functions to distribute its awards to the hundreds of citizens selected for the awards, the Norwegians act immediately after selecting the awardees. And the award of the Royal Norwegian Order of Merit conferred by Norway's King Olav, on Vasant Jagjivan Sheth, the 60-year-old chairman of Great Eastern Shipping Co Ltd on 7 September this year, could not have been timed better. Great Eastern, the country's largest private sector shipping company had, in 1987-88, posted record freight earnings and profitability, in a fitting celebration of its 40th anniversary.

Cyclical booms and slumps

The highest award from Norway to a foreigner went to Vasant Sheth for furthering Norwegian interests. Vasant Sheth's 40-year-long business links with that country is highlighted by his chairmanship of the Indian arm of the Norwegian classification society, Det Norske Veritas, for 11 years now.

Back home, it has been a period of consolidation and further insulation in a business that is notorious for its cyclical booms and slumps. Besides adding 11 ships to increase its fleet strength to 36 over the last two years, the company has also reduced financial gearing with substantial expansion of its equity base, and pruned operating costs to shore up profitability. The bottom line for the year ended 30 June 1988 tells all — while total income rose 13 per cent over that of 1986-87 to Rs.116.14 crores, pre-tax and post-tax profits jumped 142 per cent each to Rs.19.5 crores and Rs.16.43 crores. Dividend has been hiked by 2.5 points over that of 1986-87 to 15 per cent.

It has been the first year of comfort in the eighties for Great Eastern — after incurring losses totalling Rs.9 crores in 1982-83 and 1983-84, its profits were far from respectable in the subsequent two years. Now on safer ground, the company is in the thick of a massive Rs.250-crore fleet expansion programme that took off in 1986, when the world freight markets were in the penultimate phase of a 14-year-old recession, and tonnage was cheap. "Our timing could not have been better," says K.M. Sheth, deputy chairman and managing director of Great Eastern, reputedly a tough negotiator. "We got good quality ships at bargain prices." The disagreement among members of the Organisation of Petroleum Exporting Countries (OPEC) over production-sharing helped pull down bunker (oil for ships) prices. This, along with the improvement in the freight markets, helped shipowners increase margins substantially. "Now oil is a cheap commodity, and a fuel-efficient ship is not a necessity," says Vasant Sheth. "What you need is an interest-efficient ship, that is bought cheap with the minimum downside risk."

Vasant Sheth

Rich dividends

In shipping, heavy interest burdens invariably bring about a downfall. So, Great Eastern's policy of low financial gearing has paid rich dividends. "We have taken a conscious decision of raising our equity capital," says N.P. Gidwani, advisor to the group. The company's equity capital, only Rs.15.33 crores in the early eighties, has grown to Rs.55.6 crores, with one bonus issue and two rights issues, including the 5 million shares allotted to the World Bank affiliate, the International Finance Corporation (IFC), Washington. This is the first investment made by the IFC in any shipping company. If one takes into account the IFC option of subscribing to 3.25 million shares more, and the uncalled for monies from the last rights issue, the capital will stand at a formidable Rs.71.26 crores.

With reserves of nearly Rs.40 crores, Great Eastern's net worth crosses the Rs.100 crore mark. "Our hidden reserves are much more," says Vasant Sheth. "We are probably the only company whose

fleet has a written down value of Rs.219 crores, but a market value of about Rs.350 crores."

In its hurry to clear its debt, the company has also been repaying loans at a pace faster than originally scheduled. During 1987-88, the company repaid about Rs.30 crores of loans, and plans to shed another Rs.30 crores in the current year. By 1990-91 it would have paid off an additional Rs.57 crores, if things go according to plan.

Great Eastern's skills in managing its finances stand out in an industry which has, over the years, wiped out its entire net worth. "One of the most positive features about Great Eastern is its financial structure," says Naresh C. Singhal, managing director of the Shipping Credit & Investment Co of India (SCICI). "It has not resorted to extreme levels of borrowing. Its low gearing has helped tremendously during the recessionary period." The company's debt-equity ratio is now at a healthy 1.37:1 against the industry norm of 6:1.

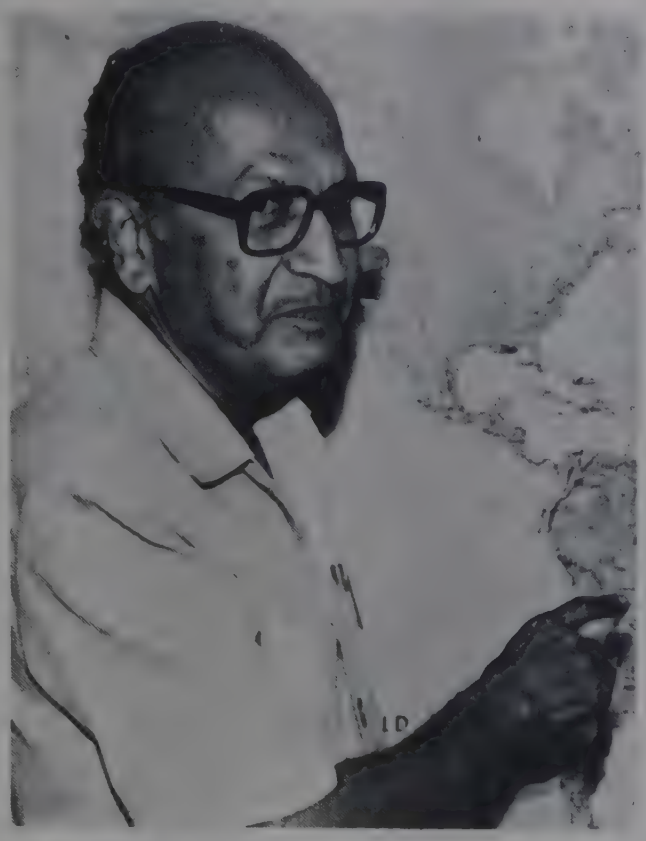
Promising years ahead

The technical status of the world fleet also places Great Eastern at an advantage. "The real promising years for the company are ahead," says Vasant Sheth. "The world fleet is ageing, and something like 100 million deadweight tonnes will have to be replaced by the turn of the century. But people are not daring to order ships yet...newbuilding prices are at fabulous levels."

With an average age of 17 years for its 23-strong dry cargo fleet and 9 years for its 14-strong tanker fleet (including four offshore supply vessels), Great Eastern is comfortably placed to exploit market opportunities. The Baltic Freight Index, which was in the region of 1,200 about a year ago, is now in the region of 1,500, while the tramp trip charter index during 1987-88, averaged around 193.75 as against the levels of 105.22 between 1982 and 1985.

"The freight market has still not reached a stage where newbuildings can be supported," says Vasant Sheth. "A boom-like condition would be required to trigger off newbuildings. I have a faint suspicion that it is round the corner. World trade has gone up by almost 25 per cent over the last two years, and if this tempo continues, there would be a shortage of tonnage, which would result in a flare-up of the freight markets."

Against such a back-drop, the company's proposed investment in fleet expansion will necessarily have to slow down. Ship prices in both the second-hand and newbuilding markets rise along with any firming up in freight markets. The company plans to acquire 18 to 20 ships over the next two to three years, including six bulk carriers, three offshore supply vessels (OSVs), an LPG carrier, and some other petroleum product carriers. With more and more refineries being set up in oil producing countries of the Middle East, the demand for specialised petroluem product carriers is slated for a big increase, according to company officials.



K.M. Sheth: tough negotiator

Best buying time

Gidwani agrees that the best time to buy ships is during periods of slump. "To give you an example, we bought five ships that are similar in terms of vintage, size and specifications, over the past two years or so. The first cost us $2.55 million, the second $3.05 million, the third $4 million, the fourth $5.5 million, and the fifth $6.5 million," he says. A sixth ship with similar specifications that was bought last fortnight cost the company $.8.1 million.

"We may have to go slow on expansion," says B.N. Adappa, executive vice-president in charge of dry cargo at Great Eastern, "but if you put a complete brake on all acquisitions, there is a possibility of missing out in a good freight market." Already, the company has abandoned plans to sell off two ships — it sees more profits in refitting them and running them.

The company plans to finance its expansion with subsidised loans from the SCICI, which is currently stipulating a promoter's contribution of 20 per cent. "We have 14 per cent of the Indian fleet, and it is only fair that we get an equivalent amount of the subsidised funds," says Vasant Sheth. "Currently, we have only about 0.33 per cent of that." The company management does not favour a rights issue in the immediate future to support the expansion. "We don't want to dilute the earnings of our shareholders so quickly," says Vasant Sheth.

The outlook for the current year appears to be bright. Freight earnings during the first six months of the current year that will close on 31 December 1988, will be in the region of Rs.70 crores, with the dry cargo fleet contributing about 66 per cent of it. K.M. Sheth says that profitability is likely to be better than that of last year. "Last year we did not have the full impact of the improvement in the freight market," he says. "I am personally optimistic that it will improve further."

Clean deals

Even as the company is consolidating it is diversifying — civil construction and hotels are the two areas identified. The Great Eastern Developers, a cell formed for the construction business, has already built an office complex at New Bombay and a residential building in suburban Bombay. "We intend managing the division professionally, and there will be clean deals," says Gidwani. "There is a certain amount of logic in this. Like shipping, the buying and financing of the asset is the key to profits in construction." He claims that the company is also looking at a couple of "future industries" for further diversification, but decline to identify them.

Meanwhile the policy environment in the country for shipping is also improving, due to the setting up of the SCICI in 1986, and the streamlining of procedures for the buying and selling of ships. "Great Eastern has earned the silent respect of the government," says Gidwani. Vasant Sheth sees more accolades on the way. "If the heroes of yesteryear were those in import substitution industries," he says, "the heroes of tommorow will be those who bring in export earnings. Our shipping industry is now getting to be internationally competitive." He, of course, expects Great Eastern to be among those heroes.

If you travel Executive Class in the air, shouldn't you stay Regency Class on the ground?

At Hyatt Regency Delhi, the book of hospitality translates into the global language of business travellers.

The Hyatt Business Centre, replete with hi-tech facilities, awaits your urgent command. With personal computers, telex and telefax machines, and a discreet secretarial service in attendance.

For those of you who wish to fly higher still, the Regency Club presents an entire floor of corporate luxury.

Thoughtful little touches like special elevator passkeys, a concierge service and personalised stationery complement elegantly appointed rooms and suites. While an exclusive lounge and a conference room complete the ideal executive environment.

If a workout is part of your daily schedule, step into the Hyatt Fitness Centre. A nine-station multi-gym, jacuzzis, chill pools, saunas, steam baths, massages and a swimming pool rejuvenate your tired muscles. While tennis courts beckon the sports-minded.

Four restaurants pamper the executive palate. Valentino's serves the flavours of Italy. Pearls, authentic Chinese. Aangan is a taste of India. While Cafe Promenade brings you the world.

At the end of a long, hard day, unwind at the million-dollar club discotheque, Oasis.

You'll soon find that Regency Class at Hyatt Regency Delhi takes on a special meaning. Hospitality redefined for business travellers.

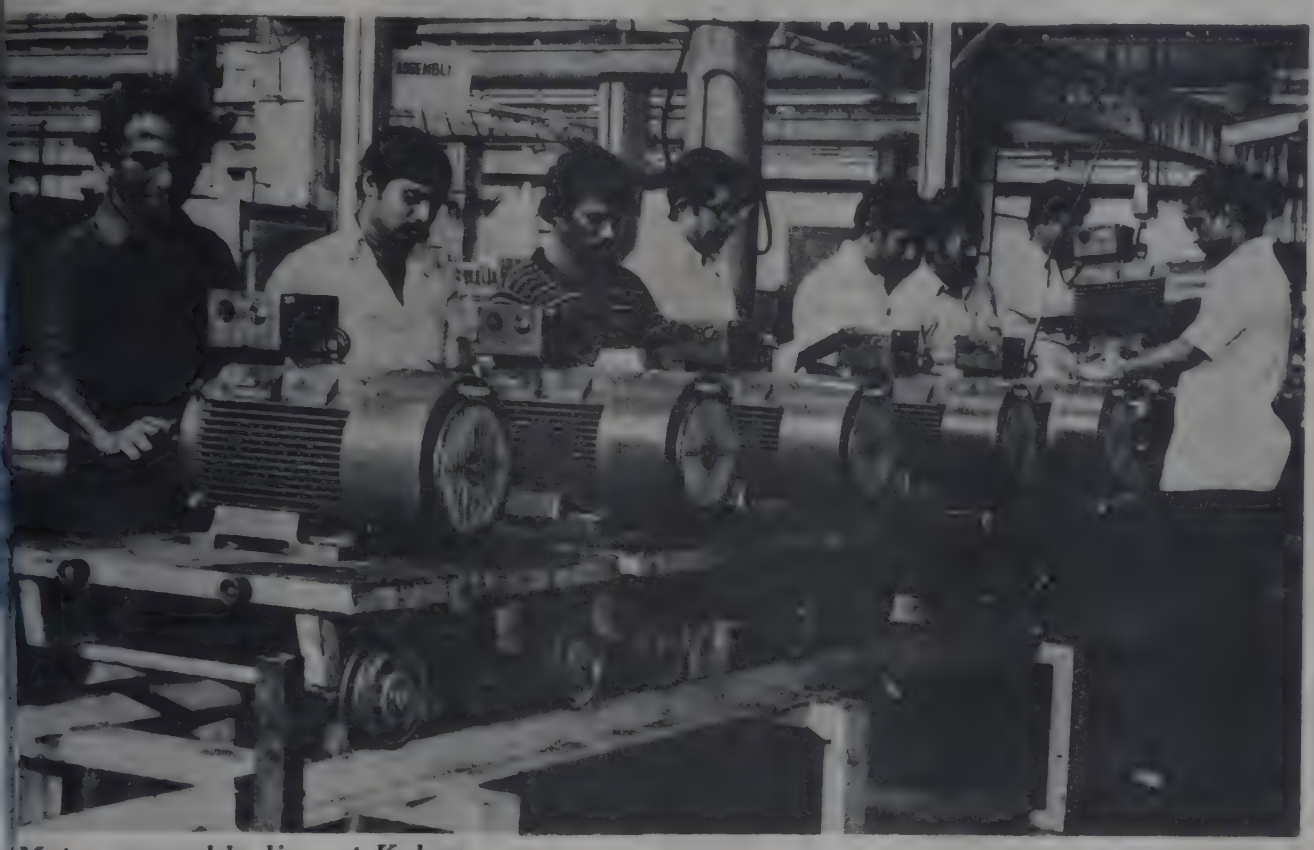
SIEMENS

A change of current

Stockmarket speculation in recent weeks about attempts by the Ambanis to gain a foothold in Siemens Ltd has been quietened by prompt denials by both sides. While corporate gossip is focused on the prospects for this FERA and MRTP company in the event of a strong Indian partner coming in, it is pulling up its socks by restructuring existing operations and setting up joint ventures



Motor assembly line at Kalwa

Close on the heels of the irrepressible Ambanis of Reliance picking up about 12 per cent of Larsen & Toubro's equity and subsequently wangling berths on the company's board in September this year, rumours were rife that Siemens Ltd may be next on their shopping list. Corporate circles expanded upon this to foresee the West German parent Siemens AG unloading a part of its 51 per cent stake in the Indian company's equity in favour of the Ambanis.

For the Reliance group which is keen on entering core sector industries, and has plans to set up a Rs.750-crore 600 MW power generation plant in Gujarat, market watchers saw useful access to Siemens' expertise in the power industry. For Siemens, they speculated upon a release from the shackles of the Foreign Exchange Regulations Act (FERA) and the Monopolies & Restrictive Trade Practices Act (MRTP), if Reliance uses its skills in persuading the government to look its way.

Much of this was fuelled by the sharp increase in Siemens' share price — from around Rs.70 in July this year, it jumped to Rs.120 last month. Denials from both Siemens (jointly with Siemens AG) and the Reliance group, however, pushed the price down to its current level of Rs.108 or thereabouts. Even as marketmen alleged that the Reliance group had bought about 25,000 shares of Siemens, the former stated that "Reliance has no intention of acquiring a stake in Siemens". It must, however, be pointed out that the Ambanis had made a similar denial in the case of Larsen & Toubro, before they changed their mind.

"Planted rumours"

"There is no reason for us to dilute," says Albert Hoser, managing director of Siemens Ltd. "It would be stupid for me to request my parent company to dilute because then I would not be considered to be a part of the Siemens family. If they have less than a 51 per cent holding, I am not allowed to carry the name Siemens any more — it would become a portfolio investment for them." He explains that Siemens in India has access to patents that Siemens AG has negotiated worldwide with other companies. "This advantage I would immediately lose if Siemens AG dilutes its holding," adds Hoser. "I am afraid that the rumours are being planted by somebody who wants the price of Siemens' shares to go up."

Top Reliance officials maintain that their group would not invest in any company where they will have no active role to play. "We operate in more than 100 countries," says Hoser, "and we run all our operations on our own. It is not possible for any Indian shareholder with less than 25.1 per cent to have an active role in the running of this company." (A shareholding of over 25 per cent allows the right to move or block a special resolution.) Most important, Hoser says that the Ambanis have no hope of making it to Siemens' board as a conflict-of-interests situation would arise because of their seats on Larsen & Tourbo's board — Siemens and L&T are fierce competitors in the markets for low tension switchgears and switchboards.

Despite these assertions from both sides, there have been significant shifts in the shareholding pattern of Siemens — between March and November this year, the holding of the Thackersey group has fallen from 1.87 per cent to 1.72 per cent, while that of the Kapadia group has fallen from 2.09 per cent to 2 per cent. The gainers have been some non-nationalised banks, whose holding has gone up from 0.11 per cent to 1.3 per cent. This has lent credence to the theory that the Thackerseys and the Kapadias may be keen sellers. Both Sudhir Thackersey, former Siemens chairman, and N.N. Kapadia, a director of the company, were unavailable for comment. Other significant shareholding groups led by Dilip Khatau (0.33 per cent) and P.C. Mehta (0.85 per cent) say that they have no intention of selling their holdings in Siemens' equity.

Warning bell

Even as Hoser maintains that the company is not in need of a strong Indian partner, he is well aware that unless Siemens sets its house in order, it could face declining profitability in the years to come. In fact, the warning bells were sounded back in 1980, when FERA regulations compelled the company to give away the marketing of cables and transformers manufactured by the Cable Corporation of India and Bharat Bijlee Ltd, respectively, under Siemens' licences. Net turnover fell from Rs.123.53 crores in 1979-80 to Rs.104.98 crores the next year,

before increased production at existing facilities and the commissioning of a new plant at Nashik began to lift the turnover figures in subsequent years.

For the last year, which closed on 30 September 1988, the company's board is expected to report a turnover of Rs.225 crores, about 13 per cent higher than the Rs.198.44 crores achieved in 1986-87, and improved profitability (pre-tax profits in 1986-87: Rs.9.55 crores) when it meets to consider the accounts on 12 December.

"Last year's performance has been up to our expectations," says Hoser. Union negotiations were concluded much quicker than in earlier years, and there were no disturbances on the shop-floor. In a major restructuring of production, the Nashik factory was revamped to concentrate on industrial electronics, while the Kalwa facility consolidiated the manufacture of switchgear, switchboards and motors. The Worli plant in Bombay was designated for medical electronics.

CAT scan manufacture

"Another high point of the year was the Technogerma fair in Delhi, where we managed to get substantial orders for industrial electronics," says Anil K. Shrivastava, chief manager, managment services, at Siemens. "The prospects for medical electronics are also good." The company hopes to start the manufacture of CAT scans for which it recently obtained a letter of intent, in the current year. All this is not enough reason for cheer. The company's energy and automation division, which accounts for roughly 85 per cent of the turnover, is the poorest contributor to profits — the telecommunications division tops the profitmakers, followed by the medical electronics division. Within the energy division, in which switchgear is dominant, followed by switchboards and motors, the latter two groups are being given a run for their money by the intense competition in the marketplace. Industrial electronics, which chips in about 8 per cent to the turnover, enjoys a modest profitability.

Besides switchboards, it is the motors range that is getting battered in the markets. "Competition for motors has now reached saturation point," says Shrivastava, "and we are giving ridiculous discounts of 45 and 50 per cent. Each one of us in the market is bleeding to death." Shrivastava, who is busy preparing a five year perspective plan for Siemens, sees switchboards and motors playing an increasingly reduced role in

Hoser: taking stock of operations

the future, while industrial electronics will be given a push to eventually match the size of the switchgear division, which could be in the region of 30 per cent. With the introduction of newer products such as CAT scans and angioscopes, the medical electronics division is also slated to play a larger role than that of the telecom division, although its share in the turnover is not likely to exceed 10 per cent.

Restructuring exercise

In fact, the restructuring at Siemens in India is taking place at a time when even Siemens AG is engaged in a similar exercise the world over. "The multinational will see sweeping changes in its management and overall organisation, far reaching changes that Siemens has not experienced over the past two decades," says a recent report in a West German magazine, *Manager*. The report foresees the splitting up of the Siemens organisation's seven large divisions into a larger number of "more flexible and operatable units" in time to come.

In India, Siemens is finally finding ways to exploit its technological strengths in areas barred for it on its own, by setting up joint ventures. Webel Telematik Pvt Ltd, a joint sector venture with the West Bengal Electronics Corporation Ltd holding 51 per cent of the equity and Siemens the remaining 49 per cent, will start the manufacture of electronic teleprinters with Siemens knowhow by March 1989 — a Rs.4-crore order from the Mahanagar Telephone Nigam Ltd is already on hand. Deltel Communications Pvt Ltd, a three sided joint venture among Siemens, GTE Atea of Belgium and Delton Cables, is awaiting government clearances — th company proposes to manufacture elec tronic private automatic branch ex change (EPABX) systems with GTE-Ate knowhow to start with. Siemen watchers feel that the company has belat edly woken up to the opportunities o entering into joint ventures for product and technologies in which it has exper tise. The company has a string of li cencees such as Bharat Heavy Electrical (power turbines and generators), Bhara Bijlee (transformers), Cable Corporatio of India (cables), and Bharat Electronic Ltd (X-ray tubes and vacuum interrup ters), among others. The BHEL tie-up i the most significant, and Hoser admit that Siemens did try to forge a joint ven ture, and failed.

Missed opportunity

Another missed opportunity for the com pany was supply of knowhow for the man ufacture of public telephone switchin systems, which CIT-Alcatel of Ital bagged against competition from Sie mens (this was before the Centre fo Development of Telematics was set up t develop public telephone switching sys tems in the country). Siemens, however was selected as one of the three com panies to supply knowhow for the manu facture of telephone instruments in th country, along with the Swedish Ericsso and the Italian FACE.

Hoser still maintains that "there is n area where an additional push" in Delh could help. "Except public telephon switching systems, all areas are open t us," he says. The company has, however asked Webel Telematik to apply for a licence to manufacture these systems — the only route is through a joint ventur where a public sector company has a majority shareholding.

For the long term, Hoser is pinnin substantial hopes on the government' liberalisation policies, although he is no entirely happy with the progress achieve so far. "Liberalisation, in Germany mean that you can do whatever your briefcas or your billfold allows you to do," he says "Here, you are allowing those people t do something who don't have the mean to do it, or the technology," he says. "Yo are allowing people to go into a poo when they cannot swim." For a compan that is often swimming against the tide i Delhi, a change of current will help in a small measure. ■

In your concern for their happiness

You deserve a bank which equally cares – VYSYA BANK

Their happiness — your concern, it is intense. Setting your children in the right direction — guiding and supporting to ensure success. We care. Relating ourself to your need, with experience and foresight.

That is — through the varied and flexible schemes of Vysya Bank — designed to support success to sustain.

And this has been the secret of our success — in being responsive, in being proactive to challenges, in going beyond banking through equipment leasing and credit cards, in occupying the premier position in the private sector.

In your pursuits, team up with the winner — Vysya Bank.

VYSYA BANK
Now ranked
150th
in ASIA

5 GOOD REASONS WHY YOU SHOULD TAKE THE MACHINERY BREAKDOWN INSURANCE POLICY FROM UNITED INDIA

1 The Production Reason

"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry. Targets can't be met. Downtime goes up. Everything goes haywire."

2 The Finance Reason

"Cash flow disruption. Short-term financing. Locked-up working capital. All this can make a big difference to profits."

3 The Personnel Reason

"Deployment of labour becomes a problem. Overtime later to make up for production loss. Employee morale goes down. If we can't manage machines, we can't manage men!"

4 The Marketing Reason

"Availability and flow of products into the market can make or break a company. Loss of credibility among distributors and customers will allow competitors to get their foot in. It'll be marketing suicide!"

5 The Maintenance Reason

"Turbines,compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses. I'm not God, I'm only a man. I'm not even a machine!"

Avoid management by crisis. Make insurance a part of your policy.

Any kind of mechanical and electrical machinery — at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

Some surprises at SEARCC

Despite the absence of some of the top international computer companies, the four-day South East Asian Regional Computer Conference (SEARCC) had a few surprises in New Delhi. Some new software packages were visible, sophisticated hardware was on display and more than 100 companies bought stall-space in all the available halls at the Taj Palace hotel. An added bonus was the presence of a handful of computer "gurus" from the west who made perfunctory appearances at the conference held concurrently with the exhibition, from 28 November through 1 December this year.

Yet, there seemed to be some spirit missing in the event. The usual crowds were present, the presentation papers had the right audiences and most visitors to the exhibits seemed satisfied with what was on display. But, compared with the other major event in computer melas, the Computer Society of India (CSI) annuals, SEARCC '88 did not exactly take off in New Delhi.

The signs were evident right from the beginning. In spite of SEARCC being among the most prestigious shows held throughout the 11-member Asian community, key heavyweights stayed away, the most important being prime minister Rajiv Gandhi, a self-confessed high-tech fan himself. Perhaps if he had formally inaugurated it, SEARCC may have got more publicity than it did.

Vice-president Shankar Dayal Sharma also stayed away. The conference was formally inaugurated by the low-profile minister of state for science and technology, K.R. Narayanan. The exhibition was opened by the Lieutenant Governor of Delhi, Romesh Bhandari. Key absentees included Sam Pitroda, special advisor on technology mission to the PM, K.P.P. Nambiar, secretary of the department of electronics, and P.S. Deodhar, chairman of the Electronics Commission and ET&T (Electronics Trade and Technology Development Corp).

Members absent

The other anachronism was the skewed proportion of exhibits from SEARCC members. The group includes Hong Kong, Indonesia, Malaysia, Thailand, Singapore, Pakistan, the Philippines, Sri Lanka, Bangla Desh and India. Yet, over 90 per cent of the exhibitors were Indian companies.

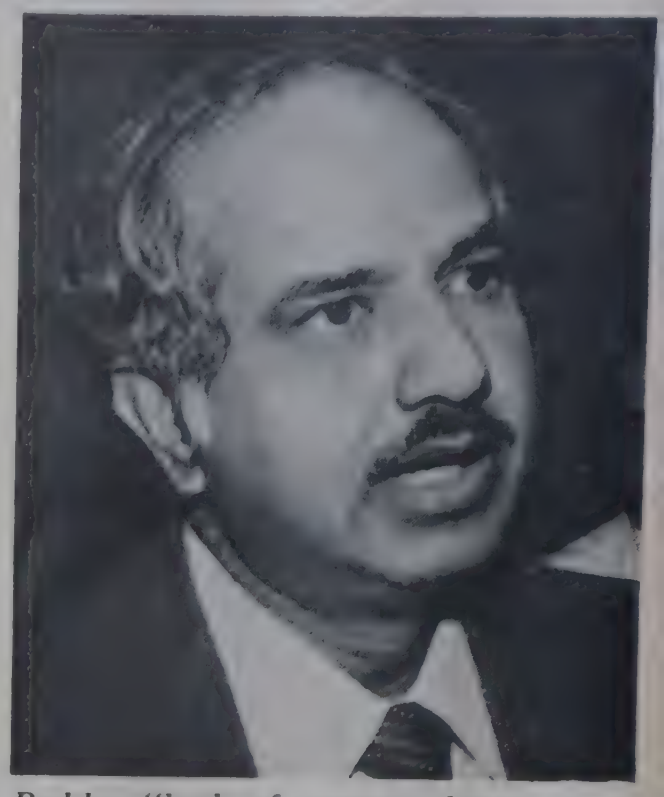
International Business Machines Corp (IBM) kept out of the stall area and its only contribution to the event was a small "manufacturer's presentation slide show" with the AS/400 (Application System/400) supermini series. Other significant absentees were Apple Computer Company, Unisys Corp, Compaq Computers Inc, Hewlett-Packard Inc, and Nippon Electric Company. Significantly, there were almost no exhibitors from any other SEARCC countries, prompting one visitor to remark that SEARCC seemed to be a "scaled-down CSI show".

On the positive side, 1,100 delegates from 18 nations pooled papers at the conference held in the adjoining Maurya Sheraton hotel. The conference was kicked off by Raj Reddy, director of the Robotics Institute at Carnegie-Mellon University in Pittsburgh, Pennsylvania. Reddy spoke on the lack of a common language being a barrier to growth in developing countries and later analysed the relationship of gross national product to information technology. "About 15 to 20 per cent of the United States' GNP is accounted for by the information industry," he said. "In the USSR, this is just around one per cent, and in India it is probably even less than that."

Narayanan struck a cautious note in his inaugural address, calling for "bridges to close our poverty levels, education gap, exports gap and the emotional gaps." One way the government was tackling this anomaly was by developing a network of computers throughout the land, under the National Informatics Centre (NIC), now headed by N. Seshagiri. "We have to use computers to elevate people from ignorance to enlightenment," he said. "One symbol of our faith in doing this is in getting advanced systems from the west. The latest Cray X/MP has just arrived. That proves our determination to enter the supercomputer race and prove our capabilities."

Computer still not trusted

"Our major concerns in the Asian region will be on how to keep up with technology, train more people, create more computer awareness and address social concerns," said F.C. Kohli, dubbed the "father of SEARCC" and chairman of the conference. Kohli, who first mooted the idea that led to the first show in



Reddy: "lack of common language, a barrier"

Kohli: father of SEARCC

Sonawala: "share our resources"

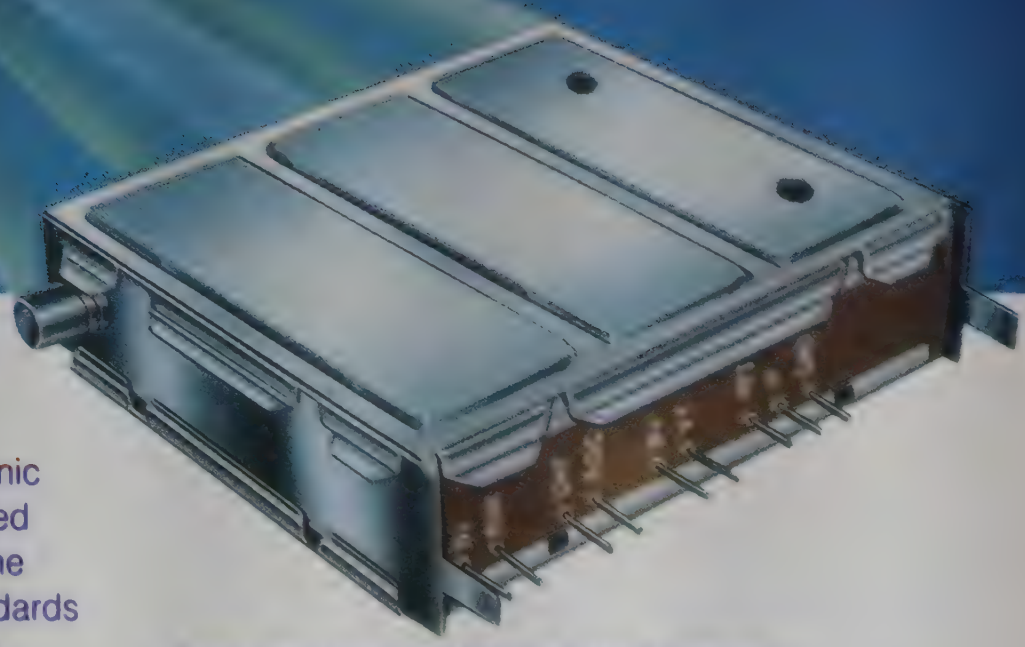
If you are still importing VHF/UHF tuners for your colour television sets ...



... put your foreign exchange to better use.

Pricol introduces a world-class colour TV Electronic tuner. Designed by Siemens – West Germany. Tested and certified by Regional Test Laboratories under the STQC programme. With certified performance standards on par, and even exceeding international standards.

The Pricol tuner is your opportunity to save substantially on the landed cost of an imported tuner.

The tuner is adaptable across a wide range of kits. And output response can be tailored to suit any TV.

Features:

- Reception channels in both VHF and UHF.
- Minimum gain of 30dB, for excellent fidelity even in fringe areas.
- IF and Image Rejection better than 60 dB.
- CMOS circuitry for noise suppression.
- Fully tropicalised.
- Pins compatible with most European tuners.
- Custom designed PCB's available on request.
- Cost-effective package – quality on par with international standards.

Cash in on the opportunity to cut down on manufacturing costs, without the slightest compromise on quality..

Manufacturers all over the country are discovering the magic of Pricol, today.

Introducing

the only low-cal sugar substitute that's taken the world by storm... and appeal.

More people in more places prefer Sweet 'n Low to sugar or any other substitute. It's the chosen one in 29 countries.

Presenting

the only substitute that gives you the sweet taste of sugar without the bitter aftertaste.

One sachet of Sweet 'n Low sweetens just as well as two teaspoons of sugar–and it doesn't leave behind a bitter aftertaste. What's more you get less–just 4 calories versus the 32 you get from sugar.

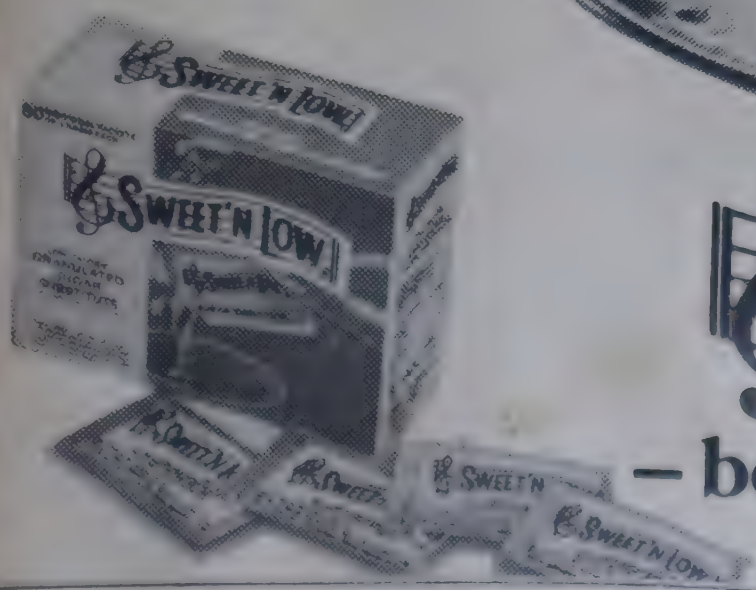
Announcing

the go-ahead for beverage guzzlers, sweet lovers, weight watchers, desk-bound exercisers and diabetics.

Sweet 'n Low spells good news for everyone. Because it doesn't have the extra calories that cause the excess weight that causes the complications that may cause fatal problems.

SWEET 'N LOW

America's largest selling sweetener.



SWEET 'N LOW®

– because life's a lot sweeter without sugar.

Mudra:A EAM 4496

Singapore in 1976, said, however, that "some people and some states in the Asian region still suspect the role of computers. Yet, on the whole, governments are encouraging computerisation as a means to solve developmental, social and economic problems."

Other questions remained unanswered, the prime being whether developing economies in the Asian region are ready to co-operate among themselves. Hemant Sonawala, chairman of the CSI, queried, "Are we in the region prepared to work in a host of co-operative ventures, in sharing our resources, expertise, knowledge and experience? Do we have the courage? Are we prepared to sacrifice today for a better future?"

One answer came from Boonrod Binson, president of the SEARCC Confederation, who said, "In the area of computer technology, it is clear that SEARCC has confronted and accepted the challenge to become a vehicle of growth for all its members and for others not its members yet." Binson also warned about how "difficult and costly it is for countries to recover the technology initiatives once the opportunity to capitalise on technology is not responded to." He added, "Unless countries, particularly developing countries in Asia, take serious steps to become a part of this vital technology for the future, they will forever forsake their rightful places in world progress and enter into a new dark age of unending dependence upon others."

That some companies could stand up to the world computer forces was evident. The top one being Hindustan Computers Ltd (HCL), which this year emerged as India's largest computer company, topping Rs.100 crores in gross sales. HCL had the Magnum on display, perhaps the latest hardware of its kind in the world. Beamed HCL chairman Shiv Nadar, "Magnum has bagged $ 16 million in American orders and about 30 more orders from Indian companies."

Ready solutions

The other high-profile exhibitor was the new Digital Equipment India Ltd (DEIL). The company simulated a networked CAM (Computer Aided Manufacturing) environment, using DECNet and state-of-the-art software. It also had on display its range of MicroVAX and CAD-station systems, all interconnected. "Every aspect of a typical manufacturing and office environment can be seen in this network," says Pravin Gandhi, a DEIL director. Added Arvind Shah, another director, "We offer ready and tested solutions."

Wipro Information Technology Ltd (WITL) staged a coup of sorts by announcing legal availability of the just-released dBASE IV and Framework III. James Lewis, managing director of the Asia Division, of Ashton-Tate Inc, developers of the two packages was present during the conference.

Azim Premji, chairman of WITL, told the press that an official copy of dBASE IV would cost Rs.15,950 and Framework III, Rs.11,950 for the Indian user. Added Lewis, "Ashton-Tate and Wipro will provide training, support, application assistance and product consultancy. As for the pricing of these products, for the technology that (one is) getting, it is dirt cheap."

Other significant surprises in training technology came from two companies: the Secunderabad-based Indotronix Computers Pvt Ltd and the Delhi-based National Institute of Information Technology. Indotronix put up an impressive laser-disc based computer-aided training station, called ICAT. Said Chandra S. Turaga, an NRI who set up shop in India with other NRIs a year or so ago, "Each laser disk can give 54,000 still pictures or a half-hour long movie picture with sound. A 12-inch laser disk with pre-programmed recorded matter and the hardware would cost around Rs.1.20 lakhs." NIIT, on the other hand, offered a similar sort of laser-based training tool with a touch-screen facility. However, in both cases, visitors balked at the prices.

Enough queries

In software, OMC Computers Ltd showed off high-resolution graphics from its Iris CAD (Computer Aided Design) workstation. The Bangalore-based SRG (Software Research Group) unveiled the WorldLord Super. Said SRG chief T.S. Muthu Krishnan, "We are now looking at the US markets, after some successes in West Germany, Holland, Belgium, Switzerland, Singapore and Malaysia."

Overall, what did SEARCC '88 achieve? According to a *Dataquest* survey, 91 per cent of the exhibitors reported that they had been able to generate adequate business enquiries and 87 per cent of the visitors said that they were satisfied with the event. That, if not anything else, ought to be some comforting news to the organisers.

An International Hotel that values guests as individuals.

Ramada Inn Palm Grove, Bombay

Is that London?
Hello Steve. It's me, Sanjay ... calling from the Ramada Inn Palm Grove. I've just seen the technical team off. They spent the day at the plant and were very impressed.

Only problem ... they didn't want to leave the hotel. Wanted one more swim in the pool ... one more walk on the beach. Spencer wanted to go windsurfing again!

Oh yes! They made it in time for their flight. The airport's just 8 kilometres away!

They really loved it here. The rooms, the service, the food in the restaurant ... praised it no end. A really good 5-star hotel at most affordable tariffs, they said.

When are you coming to India?
Of course ... next time I'll put you up at the Ramada Inn Palm Grove.

MOTOR RALLYING

Mileage from sport

In less than a decade, motor rallying in India has shifted gears. From being amateur events dominated by the rich and the idle, they now attract professional and international participation. Take the Himalayan Rally for instance. Starting in 1980, it is now considered a major motor sport event not only on the national circuit but is also a part of the Asia-Pacific Championship of the Federation Internationale du Sport Automobile (FISA).

Corresponding to the increasing number of participants is a growing community of sponsors. Indian manufacturers of cars, tyres and auto ancillaries seem to have woken up to the fact that a motor rally can get them maximum mileage for their product.

Going for broke

Opening up

The evolution of motor sports has to a great extent been fuelled by the general "opening up" of the Indian automobile industry after 1985. In the late 1960s when the first all-India rallies — or "tulip" rallies as they came to be called from the nature of the routes — were organised, the sport did attract sponsorship, but to a limited extent. Multinationals like Castrol or Exxon, because of their association with rallies abroad, would donate trophies or, at most, sponsor a particular event. In 1980, when the first Himalayan Rally was organised, some tyre companies were venturesome enough to provide tyres to participants at discounts of 20-25 per cent. But no one would go so far as to provide tyres free of cost. For most part, the rallyists had to spend from their own pockets. The amounts ranged from half to three quarters of a lakh of rupees for a typically trying rally such as the Himalayan, with very little in return except perhaps a glittering trophy, if they won.

The situation has altered dramatically since. Consider, for example, what MRF tyres — one of the chief patrons of motor rallying — does for the sport today. The company maintains a permanent five-member rally team, spending Rs.4 to 5 lakhs on each member for facilities ranging from preparation of the cars for rallying, maintenance between events, free tyres and parts to even, out-of-pocket expenses and a participation fee of Rs.40,000. Winning an event would entitle the participant to an additional cash prize of an equivalent amount. During 1986-87 MRF's motor sport expenses amounted to Rs.38 lakhs, which was 15 per cent of the annual advertising budget.

"It is not really a rich man's sport any more," affirms Ravi Mammen, managing director, MRF, pointing to the fact that his company has sponsored teams in virtually all the major motor sport events in the last two years. (see Table)

MRF is not alone in this. Competitors JK Tyres entered the field cautiously by donating Rs.5,500 for the Coupe des Dames — the women's trophy — in the Himalayan Rally. In 1986, JK ventured forth to sponsor the First Safdarjung Race in New Delhi forking out approximately Rs.5 lakhs. Their first major involvement in motor rallying was the sponsorship of the Great Desert Himalayan this year. In addition to this, JK also raised a team for the Himalayan Rally, providing members with perks like free tyres and cash. The company's commitment to motor rallying in terms of outlay has by virtue of this sponsorship, increased threefold since their 1986 experience at New Delhi.

Perceptible change

"We feel that there has been a perceptible change in the situation and we have been giving a greater thrust since this year to

Major rally events in India

Name of rally	When held	Where held	Distance (km)	No of participants	Major sponsors

HOW TO OWN THE BEST BUSINESS ADDRESS IN U.P.'S FASTEST GROWING TRADE CENTRE.

GET THE EDGE OVER YOUR COMPETITORS. BOOK YOUR OFFICE SPACE NOW.

Lucknow. The business centre for India's single largest market.

Lucknow is today Uttar Pradesh's fastest growing business centre, with improved communication and transport facilities, and an ever widening sphere of commercial possibilities.

Pioneer Plaza—the modern commercial complex in the heart of Lucknow.

The Pioneer Plaza is just the kind of commercial complex Lucknow needs.

Located in the centre of the city, it is just a few minutes' walk from Hazratganj, the major shopping mall.

So every public and business amenity is within your reach. Making it the ideal address for banks, public sector undertakings, government and corporate offices.

Facilities that make business sense.

At the heart of the Pioneer Plaza is the Business Centre which provides every kind of secretarial facility. Everything, from FAX to computers is being installed for the convenience of the occupants of the Plaza.

Other distinctive features of the Plaza include free hold land, a spacious lobby in marble, covered basement parking and open parking, six automatic elevators, fire-fighting facilities with three independent fire escapes, attached toilets for all units and stand-by generators for essential services.

Fidelia Constructions— impeccable credentials.

The Pioneer Plaza project has been undertaken by Fidelia Constructions (P) Ltd., a company promoted by the well known industrialist family—the Jaipurias. Dr. Raja Ram Jaipuria, who has rich and valuable experience in Financial Planning and Management heads the show as Chairman & Managing Director. Until recently, Dr. Jaipuria was also Chairman & Managing Director of Swadeshi Polytex Ltd., proven the most cost-efficient polyester fibre plant in the country. The Board includes Dr. Ramesh C. Vaish, who is a Chartered Accountant & Vice Chairman of Jaiprakash Industries Ltd., one of the largest construction companies in the country, with several prestigious overseas contracts. Shri Shailendra Swaroop, who is a Director in companies like Modi Xerox, Ester India Ltd., Bihar Sponge Iron Ltd., and Samtel Colour Ltd., and Senior Advocate Supreme Court of India, is also on the Board. Assisting the Board is a team of highly qualified Civil Engineers and other professionals—all with impeccable credentials.

Renowned architects.

The Board has also engaged the designing and structural expertise of M/s. Kothari & Associates to benefit its activities. The firm's list of architectural achievements includes the designing of the Bank of Baroda—New Delhi's 14-storeyed office building, Reserve Bank of India Headquarters, Jaipur, office building for Deptt. of Electronics, New Delhi, ONGC Works at Dehra Dun, Hotel Centaur, New Delhi, Shakti Bhawan, Lucknow's 15-storeyed office building, Escorts Heart Institute, New Delhi, Indira Gandhi Institute of Medical Sciences, Patna,and other buildings that have come to be known for their architectural excellence.

Pioneer Plaza. A profitable investment.

Today, real estate is the most profitable investment you can make. Especially when you consider the added benefits of Pioneer Plaza. So it makes sense to invest now and watch your money multiply as the construction progresses.

Space availability and payment modes

You can book office space of a minimum size of 500 sq. ft. At prices that will make you smile. For your convenience, two payment plans have been introduced. An Interest Free Payment Plan and a Cash Down Payment Plan.

For more information, mail the coupon below. And book your space in the best business address in Lucknow.

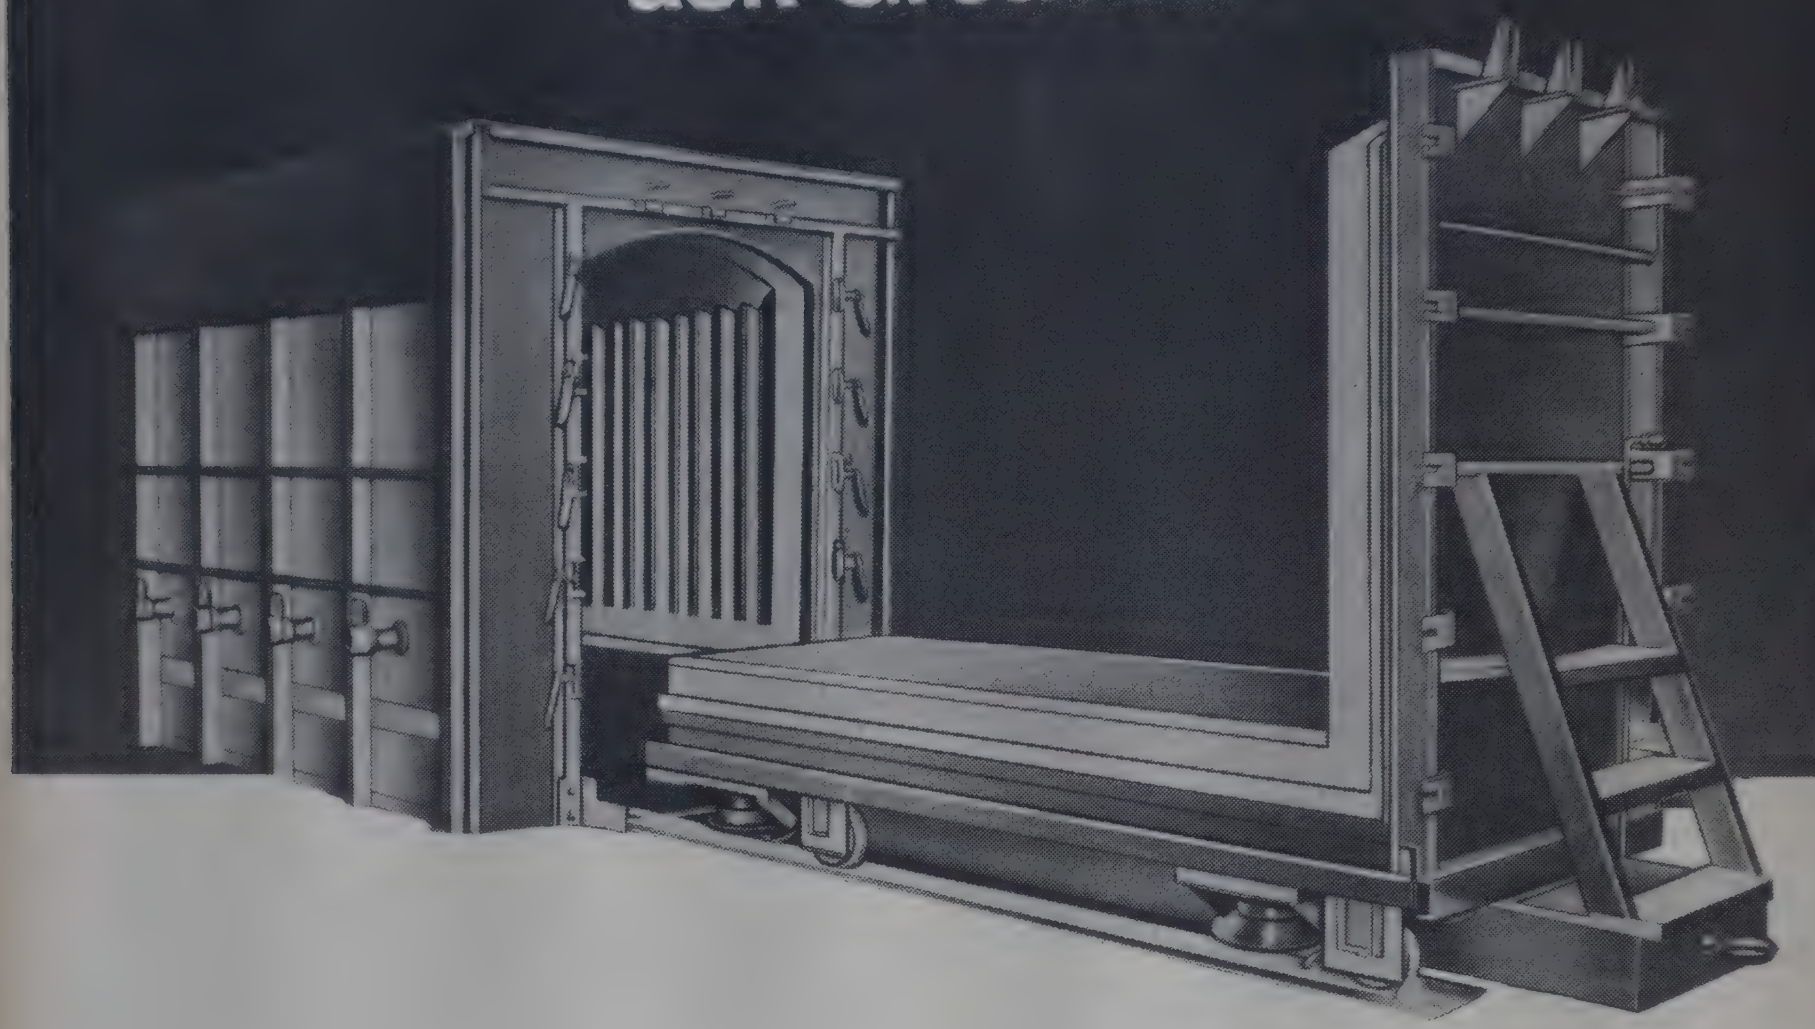
If you're looking for cost-effective and thermally efficient furnaces... ask Greaves



for Precimax.

Greaves Cotton, in its role as a marketing organisation, has brought to Indian industry, some of the finest equipment and machinery. Both from home and abroad

And now Greaves will market through its nationwide network, the rugged thermally efficient Precimax furnaces

Precimax means high quality furnaces – a result of sound concept and effective engineering, coupled with reliable manufacturing methods and rigid testing procedures

Precimax furnaces from Greaves meet exacting standards, yours and ours. So that you have the twin advantages of Precimax experience and expertise and Greaves sales and service support

Our range:

- Galvanizing Furnaces
- Bell Furnaces
- Pit Furnaces
- Roller Hearth Furnaces
- Bogie Hearth Furnaces
- Car Bottom Kilns
- Car Tunnel Kilns
- Pusher Furnaces
- Continuous Lines
- Rotary Hearth Furnaces
- Chamber Furnaces
- Ovens
- Accessories

  Plus
- Other furnaces for a range of sophisticated applications

A tough test of capability

motor sports", admits S.N. Sharma, general manager (publicity) of JK Tyres. According to Sharma, JK is finalising plans for sponsoring important motor sports events in the coming years.

In similar vein, Ceat Tyres Ltd spent Rs.10 lakhs this year on motor sport promotion. Next year the bill is likely to be higher, according to Vincent Vaz, publicity and public relations manager. In fact since 1986, Ceat has been organising its own exclusive rally, the Ceat Car Rally for the Blind. Six such rallies have been held in Bombay and Delhi and the next one is scheduled for January in Calcutta. "For us, encouragement of the sport is our primary objective," says Vaz.

Altrustic motives apart, there is the fact that a rally is an excellent product testing ground. "One can't get a better opportunity to test our tyres and new product innovations," admits Mammen. "Besides, since the cars are driven by professionals, the feedback is sound and reliable. "Instead of having a tyre fail in the marketplace, this gruelling test is worthwhile." He believes that the company's involvement in the sponsorship of motor sports has rubbed off well also in terms of ad mileage.

R.C. Bhargava, managing director, Maruti Udyog Ltd, whose Gypsy is the most favoured vehicle among Indian rallyists, concurs with Mammen that a rally is the toughest test of capability. "For vehicles such as the Gypsy, a rally is a good test for proving the soundness of new engineering developments and is hence taken seriously," he says. According to him, the Gypsy too has gained from the feedback they have received from rallyists, specifically in the improvement of shock absorbers and alternator brackets.

That sponsoring motor sports is an effective promotion and image building exercise, was effectively proved by the Gypsy experience. According to Bhargava, "Earlier the Gypsy was not the most favoured vehicle only because it looked too good. It is meant to be a vehicle to be used in tough, off the road conditions. But it was not perceived as such."

Image improving

"So, we entered the Gypsy in the Himalayan Rally of 1985 to improve its image. Our participation in successive rallies since then has been extremely successful, proving that the Gypsy is the most reliable vehicle for cross country operations." Significantly, of the 55 vehicles which took off at the 9th Himalayan Rally last month 48 were Maruti Gypsies, a fact which Maruti highlighted in their press advertisements on the eve of the rally.

Confirms Rajeev Khanna, a leading rallyist on the Indian circuit, "Car manufacturers do try to develop the image of ruggedness of their vehicle if the vehicle performs well." Khanna was the only Indian driver in the prestigious Mitsubishi team in the Himalayan Rally this year.

Pandurang Chintamani, recently left the employment of JK Tyres to set up his own promotion agency, Sportrak, which has as its objective the concept "marketing through sports". In his view, promotion through motor sports is effective not only for the auto related sector," but can be extended to other products too.

A good many sponsors are drawn to motor rallying because of the exposure of their stickers on rally cars. "Wherever you go, the colourful stickers on your car attract attention. People refer to your car by the most prominent sticker displayed on it. This makes such an advertisement far more cost effective than a 15 second spot on prime time television," says Badri Krishnamurthy. Krishnamurthy, an engineer-MBA and ex ad man, Krishnamurthy is now wholly committed, professionally, to rallying and preparing cars for rallies at his Chanakya Service Station on a prominent thoroughfare in south Delhi. There is naturally a price on such stickers, so much so that a commercial or works sponsored entry would normally have to pay a much higher entry fee for a rally to ensure that other product stickers (except the number stickers) are not pasted on the car.

A lament

Despite the increasing trend, Nazir Hoosein, chairman, Himalayan Rally Association, laments that the average sponsor in India has not yet realised fully the potential of motor rallying as a medium of promotion. "The Indian promoter thinks only in the short term, whereas the Japanese, for instance, think 10 years ahead. Which is why Mitsubishi enters the Himalayan Rally every year as a works entry." Khanna agrees with Hoosein and cites the example of the Great Desert Himalayan Rally where all the major Indo-Japan collaborations — Eicher-Mitsubishi, Swaraj Mazda and Maruti-Suzuki — had put up their teams.

Hoosein feels that apart from the auto industry, the other industry which can cash in on motor rallying is tourism. "The Himalayan Rally goes through some very picturesque terrain and is being filmed by French and Belgian TV crews.

Even if the Indian promoter is way behind his western counterpart in realising the benefits thataccrue from motor rallying, it cannot be denied that he is quickly catching on. The Himalayan Rally, which started in 1980, was financially in the red till 1985. But from 1986, the sponsors started coming in with firm commitments and the Rally organisation began recovering costs. Today the cost of organising the Himalayan Rally, which is between Rs.40-50 lakhs, is fully recovered from promoters and advertisers. Which proves the unalterable fact that motor rallying in India is not merely an expensive, thrilling and pleasurable sport, but is becoming a sound business proposition.

ICFAI ANNOUNCES

A Unique Correspondence Course

DIPLOMA IN BASIC FINANCE

(The DBF Programme)

ADMISSION NOTICE

Encouraged by the phenomenal success of the CFA Programme (Chartered Financial Analyst) meant for Financial Executives, The Institute of Chartered Financial Analysts of India (ICFAI) now launches a new and unique programme in Basic Finance, entitled the DBF Programme (Diploma in Basic Finance) through correspondence.

DBF Programme Design & Structure

The DBF Programme is designed to help the candidates get a good insight into Finance through structured self-study at home. The Programme covers the essentials of finance through a mix of four compulsory and two elective modules. Two-day Weekend Workshop Sessions will be conducted at major cities periodically to facilitate direct interaction between faculty and the participants.

Eligibility

Corporate executives, self-employed persons, entrepreneurs, bank and insurance executives, Government officers, defence personnel, teachers and others without a formal professional/academic qualification in finance. The Institute welcomes sponsorship of candidates from employers.

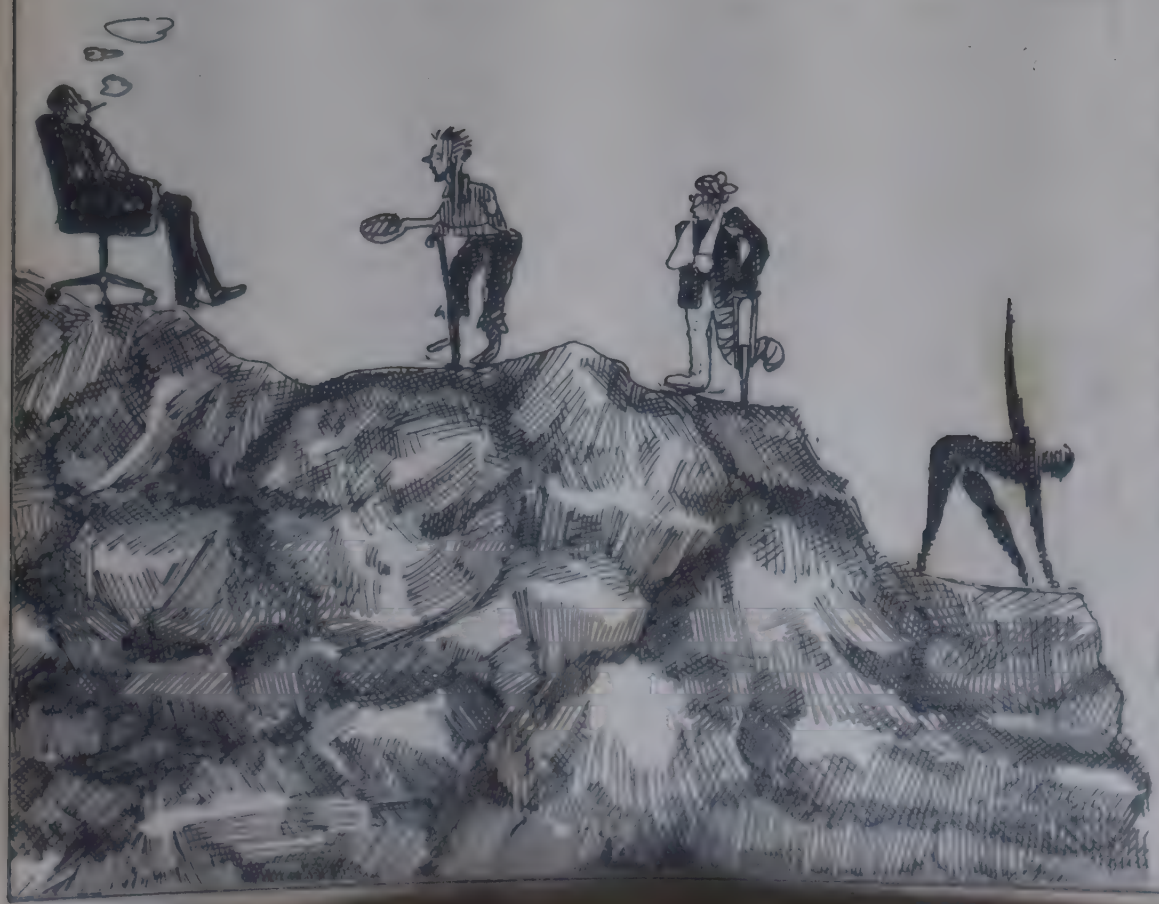
Prospectus

For Prospectus and Application Form, please write to the Administrative Officer (DBF) giving your address and enclosing a demand draft for Rs. 40 drawn in favour of 'The DBF Programme A/c ICFAI' payable at Hyderabad.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

Road No. 3, Banjara Hills Hyderabad-500 034.

Can you spot Littlemore's Client?



The gentleman, sitting comfortably on the chair, is one of Littlemore's client. Today, he has very few worries and has all the reasons to smile.

For, Littlemore, Detectives and Investigators, has made his business secure. Thanks to Littlemore's team of exceptionally talented investigators, advanced diffusion techniques and over 28 years of experience.

So, whatever be your problem - **strike settlement, violence, wage negotiation, industrial investigation, leakage of technical information etc.**—pay Littlemore a visit today, to discuss the same in a confidential atmosphere.

You can also appoint Littlemore on retainership basis, for just Rs. 2 per employee, per day.

How the Empress was sold

Whether it's Bulgari in New York or the Empress at Zaveri Bazaar, Bombay, a visit to either of these exclusive designer jewellery showrooms is by appointment only. A certain number is dialled, a particular person is spoken to, after which at the appointed time, a chauffer-driven car and valet land up at the prospective buyer's doorstep. Naturally, complete privacy at the point of purchase is guaranteed.

The carefully executed, glitzy launch of Tribhovandas Bhimji Zaveri's (TBZ) new line of branded jewellery had two main ingredients: dollops of snob appeal and a dash of secrecy. For people who mattered, the invitation took dramatic shape — a silver salver in a silken pouch, each screen-printed with the invitee's name. Lesser mortals were sent an eight-page booklet announcing the birth of TBZ's Empress.

The idea was born, according to Nirmal Zaveri, partner at TBZ, a year and a half ago. Perceiving that there was a good overseas market for Indian hand-made jewellery, Zaveri decided to collaborate with Japanese designer Kazuo Ogawa and thereby "open our window to Japan". Care was nontheless taken to base each design on an Indian theme to cater to ethnic tastes. And the Empress collection was so named with a specific purpose: "to create a top of the line image for our product".

The fashion pageant displayed two nights in succession before an audibly gasping 300-odd audience was slickly executed and universely acknowledged as top notch. Four Japanese models, especially flown in for the jewel spectacle, and select Indian models showed off upto 40 exclusive designs in gold, diamond and *kundan* jewellery. Designer Ogawa orchestrated the show's choreography and production. Obviously there is no catalogue or even price tag for this kind of range since then "people would copy our designs", points out Zaveri.

Undisclosed cost

The collection is now on view at it's specially created setting. Based on the concept of a palace garden, the showroom has a stark, uncluttered interior dominated by polished marble and ordinary glass; the usual velvet trappings are conspicuous by their absence. "We wanted something totally different in which our jewellery would get highlighted," explains Zaveri. This brief took interior decorator Parmeshwar Godrej approximately four months to execute at an undisclosed cost.

Contrary to the general perception, most of the Empress collection is meant for overseas buyers and only a small percentage is for domestic retail. It represents, according to Zaveri, TBZ's export thrust. The biggest markets today, are the UK and the Middle East. In the last three months, the export effort has yielded a turnover of Rs.3 crores besides which there is a confirmed order from Taj Enterprises, Tokyo. In addition, with the 18,000 sq ft export oriented unit coming up in SEEPZ, the figure should increase.

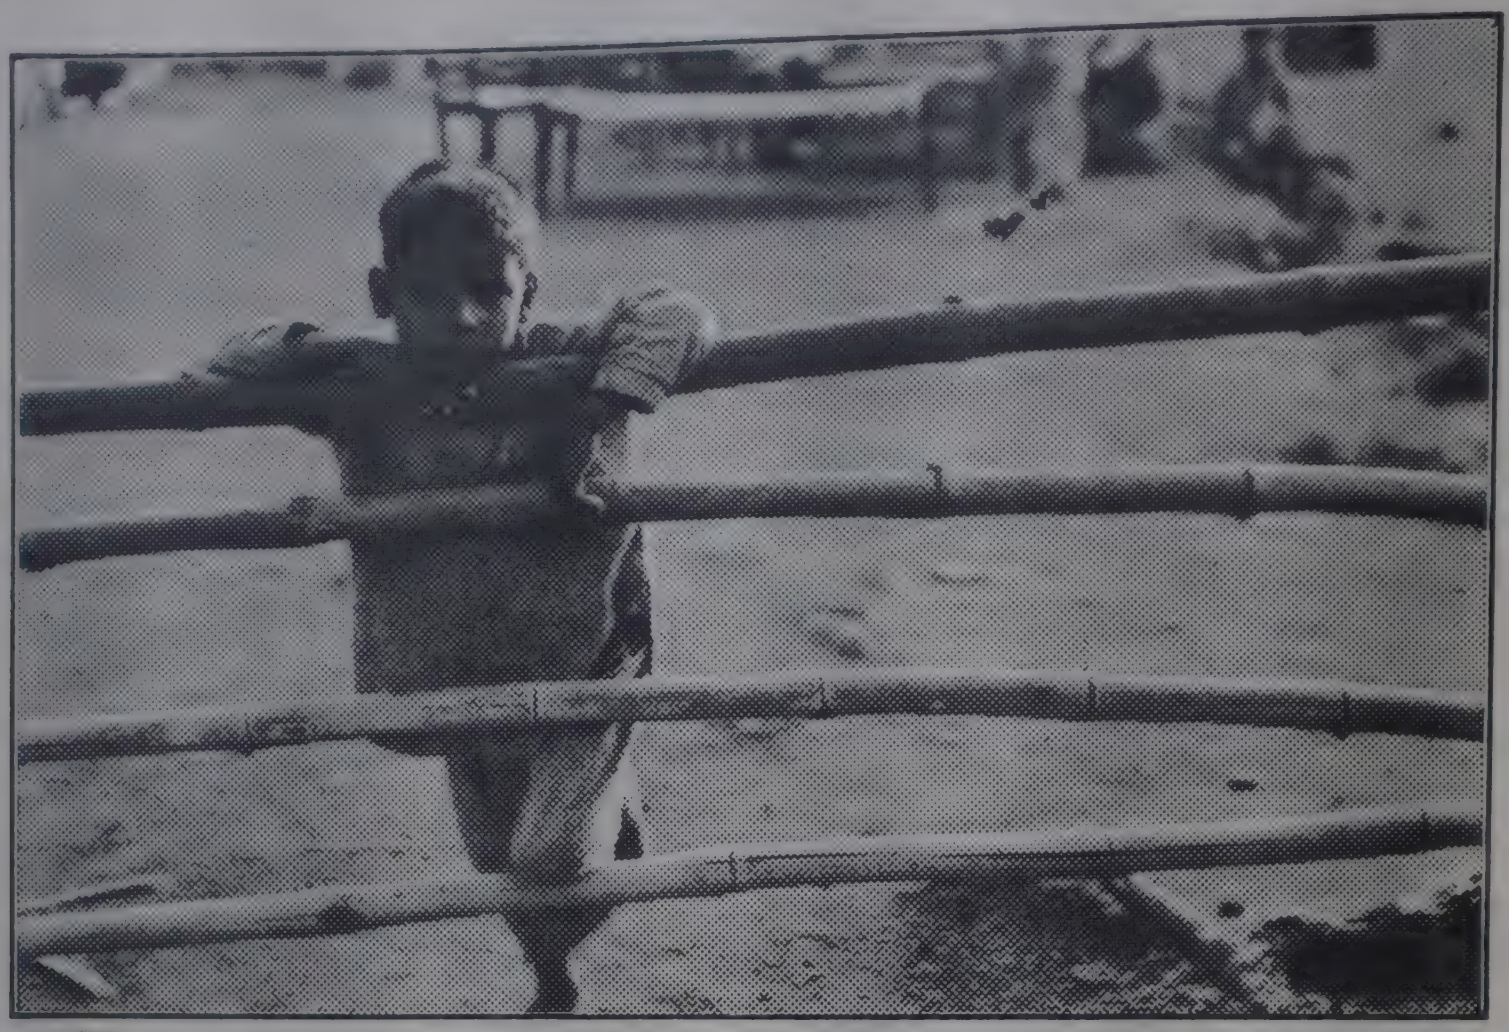
Glitzy launch

A leading Bombay-based jeweller discounts the export orientation claim. At the same time he concedes that with each piece reportedly priced at Rs.5 lakhs and upwards, there will be few, if any domestic buyers at official prices. Significantly *kundan* jewellery with its wax content cannot be exported. Therefore, according to him, TBZ will necessarily have to find customers here.

Behind the sales spiel and media hype are a couple of unalterable facts. The road that leads to the Empress treasures is deeply congested and one that would be a tight squeeze finding parking space for even a Maruti. Located, as the showroom is, in the heart of Bombay's gold district, the bustle of business and traffic hardly make for exclusive surroundings. But such is the magic of marketing. And 125 year old TBZ, with an estimated annual turnover of "over Rs.50 crores" has spared no expense, nor left any selling trick unturned to prove quite conclusively that it is still the first emperor in the Indian jewellery business.

■ NAK

Uncluttered and stark: the showroom



By the time he's six years old a child has to fend for himself. All because we squander money–enough to provide a decent education to 100 million children like him.

Ironically, the magnitude of the fact doesn't affect you. You've got better things to worry about. There's another word for this attitude. Apathy.

Yes, everyone of us has contributed to the loss of Rs. 2000 crores — every year!

By wasting petroleum. On the road. In the kitchen. In the factory.On the farm. Through the use of obsolete fuel-guzzling equipment. Poor maintenance practices. Inefficient methods of operation.

A conscious effort from you can stop this waste. Effort that not only conserves petroleum but also bands together solitary voices. We want you to write to your newspapers. Form action groups. In clubs and colonies, offices and organisations.

We need your help to spread the message of petroleum conservation.

And we hope, you're not going to be a part of the silent majority. Who'll turn this page and say, **"Who Cares!"**

Write to us. Talk to us. Come and meet us

ADVERTISING

Ad agencies in a squeeze

Shilpi Advertising went out of business a few days ago. Though unfortunate, the demise of this Sarabhai-backed agency with billings of Rs.6 crores, has not exactly startled observers. Its financial woes had been following a pattern that has become increasingly familiar. Earlier this year another well-known agency — Advertising Consultants (India) Ltd with annual billings of Rs.2.5 crores — sank without a trace.

The predicament of these two companies dramatises the problems bedevilling ad land. Every agency in the country is complaining that it is becoming increasingly difficult to meet the demands of media creditors hammering at their door. Most agencies are facing a liquidity crisis.

The current crisis has its roots in the very nature of the ad man's role. An advertising agency is a sort of middle man. On one side stands the manufacturer or "client" who appoints the agency to advertise his goods or services. On the other are the media (Doordarshan, the newspapers, magazines, etc) which carry the advertisements created and released by the agency. The client pays the agency for the cost of the advertisements. The agency then pays off the media after retaining 15 per cent to cover its costs.

The crunch lies in the credit period allowed to the agency. The media stipulate that payments must be made within a given period — usually a few weeks. But many clients take months to settle with the agency. This puts a squeeze on the unfortunate go-between. If it fails to meet its credit deadline, the media can impose penalties; in extreme cases they withdraw the credit facility altogether and demand advance payment. To prevent such an eventuality, agencies are anxious to settle a defaulting client's dues even by advancing monies from their own coffers.

Why this alarming trend among clients to delay payments to agencies? It may be said in their defense that clients themselves are often stretched for cash. They are therefore prone to first set aside funds to meet those costs which they regard as most pressing: raw materials, packaging, labour, factory, administration, distribution and selling expenditure. Advertising dues are at the bottom of the priority ladder and clients feel that they can postpone their payment without risking an immediate breakdown in operations. As a leading ad man puts it, "Many clients see us as an interest-free source of advertising funds on extended credit."

Some agencies have begun to take a firm line with clients. For instance, Sistas, Enterprise and Frank Simoes have filed summary suits in a bid to recover their money. But that does not prevent some clients from shifting business to another agency which may innocently extend credit without knowing of the previous agency's predicament.

The growing tendency of some clients to play musical chairs has finally persuaded agencies to get together. The Advertising Agencies Association of India has taken on the task of acting as a clearing house of information on delinquent clients. Its members are now being warned about accepting a client which has failed to settle dues with its ex-agency. This move is expected to reduce the number of hit-and-runs.

The Indian Newspaper Society has also thrown its weight against erring clients. It has begun advising its publisher members to refuse carrying advertisements from clients who have built up a backlog of non-payments. For example, an INS circular dated 4 October 1988 addressed to over 150 publications advises that eight companies in the Modi group of industries have outstandings of over Rs.45 lakhs with Interads Advertising, New Delhi. In view of this, "it has been decided to place an embargo on the advertisements of the client with immediate effect". In another instance, the INS has come to the rescue of the relatively small Edge Advertising, struggling with Rs.50 lakhs of arrears from the Double Cola company. An embargo has also been placed on future press ads of Ski Lemone and Orenjoy.

None of this, however, solves the all-pervasive problem of clients, like the Sarabhais, for one, who though willing to pay are often compelled by cash constraints to delay settlement beyond the deadline. Many advertising agencies may persist in seeking a way out of this predicament (the Shilpi-Sarabhai experience notwithstanding) by merging with large business houses who are better able to withstand mounting financial liabilities. For instance, Trikaya recently agreed to a takeover by the Lalbhai group. Two other large agencies were also reported to have been negotiating buyouts with Manu Chabbria and Srikant Ruparel. Mudra already operates under the protective wing of Reliance Industries. Lintas enjoys a special relationship with Hindustan Lever. ASP is chaperoned by Birlas. Seasons Advertising is believed to have the patronage of Bombay Dyeing.

The list goes on. The era of the independent ad agency may be ending. It will be a sad day if the advertising specialist is forced for reasons beyond his control to lose his professional independence.

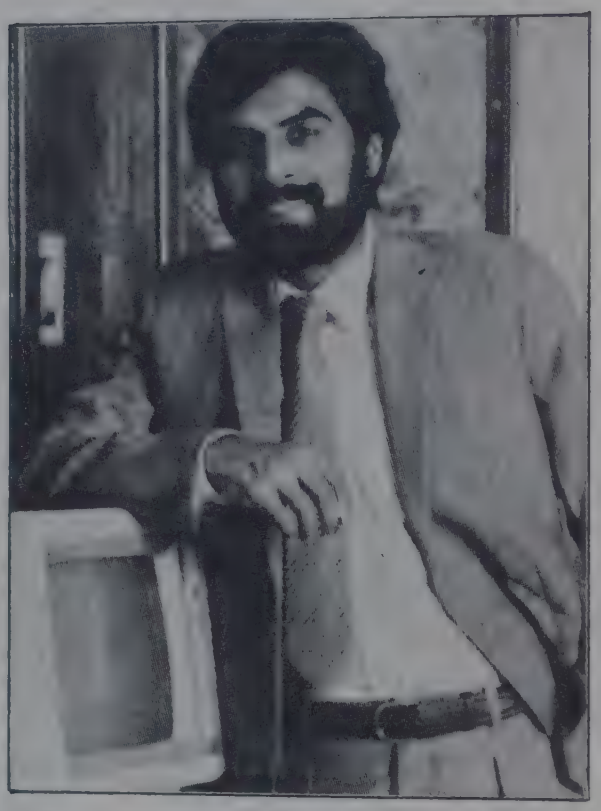
YOUR SEARCH FOR HIGHLY TRAINED COMPUTER PROFESSIONALS ENDS HERE.

The NIIT National Placement Network



Do you need professionals in your EDP department in a hurry? Or a person to develop Systems and manage your PC operations from tomorrow? Have you had to spend time & money and still not been able to get the right kind of trained computer professionals?

NIIT National Placement Network has a bank of trained computer professionals available at each of its centres in Bombay, Delhi, Calcutta, Madras, Bangalore, Hyderabad, Pune and 14 other major cities.

You can now select for your requirement from this bank by just calling up NIIT.

NIIT-ians — carefully selected & expertly trained. NIIT does your job for you. Having screened students before entry, NIIT puts them through a scientifically designed course using its special training cycle methodology. Courseware is developed using inputs from world leaders like Yourdon Inc.and ALI, USA.

This methodology & courseware ensure a high degree of learning and aim at developing skills that enable NIIT-ians to commence work from day one.

NIIT National Placement Network — quick, easy access to trained computer professionals — Write in today for your requirement. If you have a continuous need for trained computer manpower register at the Network and we will periodically send you a detail of new additions to the bank.

These services are free of charge.

BINNY

Labouring towards profits

When N.P.V. Ramaswamy Udayar and his group acquired 15 per cent of the equity of Binny Ltd from S.N. Hada, the former chairman, in July 1987, industry sources predicted a change in approach, especially in relation to labour. By February 1988, the group had succeeded in reopening the engineering unit, which had been under lockout for 21 months; agreements were signed with individual workers, reducing the role of the duly elected CITU union to that of a spectator. Labour problems, which had been cropping up at sporadic intervals at the group's B&C mills at Madras, have been non-existent since the takeover.

However, the company's Bangalore mill has been under a lockout since 28 October. Later the management put up a notice, in late November, informing the workers that the mills would remain closed from 26 December this year. The state government has passed orders prohibiting the continuation of the lockout. The management, on its part, has filed a writ in the High Court against this order.

The management justifies its stand at Bangalore on the grounds that "the financial institutions want Binny to display signs of an improvement in performance and display some possibility of a return of their investment, before parting with the necessary funds. Therefore the need to tone up the operations at Bangalore."

Increasing losses

One of the reasons forwarded by the management for the present lockout is that losses in the mills have increased from Rs.25 to 30 lakhs per month around March this year to Rs.70 lakhs in September. Productivity norms are also low; in spinning, efficiency stands at just 58 to 59 per cent while that of weaving is 62 to 67 per cent. The management claims that absenteeism is as high as 30 per cent.

The Binny Karmikara Sangha (BKS), which is affiliated to the CITU and is spearheading the movement against the closure, refuses to accept the contention that the mills are in the red. The management, on the other hand, maintains that the Bangalore mills need a turnover of Rs.4.25 crores a month to break even, while it was reporting a turnover of Rs.3.5 crores by September 1988.

The BKS also alleges that salaries for the month of September were not paid in time, and then only half was paid in mid-October. Almost simultaneously the canteen was closed down; in late October credit facilities for rationed items from fair price shops were withdrawn, and in late November came the notice of closure.

"While they have funds to pay bonus to workers at the rate of 8.33 per cent in Madras, they plead lack of funds to pay salary to workers in Bangalore and run the canteen," complains a BKS press release. However, both the union as well as sources in Binny recognise this move for what it is — a ploy to bring the union to the negotiating table.

Main conflict

The main conflict is likely to centre around the pruning of the work force. "Binny's wage bill is 21.5 per cent against an ideal component of 12 per cent," says M.E. Ethurajan, chairman of Binny Ltd. The management assesses that 1,200 workers are surplus at Bangalore. It is confident of cutting this down by at least 500 in the course of the current negotiations. The management also maintains that it will need Rs.10 crores as working capital, either from the financial institutions or the state government or a combination of both, in order to reopen the mills. "Suppliers alone have to be paid Rs.3.5 crores in order to get the necessary raw material to reopen the mills," says Ethurajan. He also expects concessions in water and electricity charges from the Karnataka government, similar to those granted by the Tamil Nadu government. For instance, the latter bears 50 per cent of the interest waiver on a Rs.7-crore term loan; the management expects similar interest waivers from the Karnataka government.

It is obvious that the management is going to take a tough stand, and is unlikely to budge until it gets most of its demands. The Karnataka government, on its part, has refused to discuss these concessions and proposals until the lockout is lifted.

Labour rationalisation has been identified as a necessity by the present management in Madras as well. At the B&C mills there, 500 workmen have been identified as surplus. This issue is likely to be thrashed out in January 1989, when a new agreement has to be signed with the labour union.

Thus trouble is not likely to spread to the Madras units and though the BKS has been trying to enlist Kuchelar's support, the response from his side has been lukewarm. Kuchelar has also been chosen to lead the union at Binny Engineering. The erstwhile union office bearers at Binny Engineering (belonging to the CITU) have moved the courts regarding the leadership issue.

Binny's attempts at rationalising labour are only the beginning; further exercises in this direction will be carried out with the implementation of the Rs.70-crore modernisation package. "A sum of Rs.8 crores out of the total has been set apart for compensations and payments to workers," says K.V.R. Balakrishnan, general manager, finance.

Fire fighting

As per the current thinking, processing will be shifted to Bhuvanagiri, where natural gas and water are available in plenty. The bulk of the company's spinning operations will be located at Bangalore, while most of the weaving operations will be located in Madras. It will take a period of two years to implement this programme. The Udayar group, unlike earlier takers, is willing to contribute 10 per cent of the modernisation cost as margin money. This will be in addition to the Rs.2.5 crores it has brought between July to June 1988. It has also guaranteed Rs.9.5 crores of additional facilities from the SBI. The intention is to reach a turnover of Rs.400 crores by 1991 and to generate profits.

As things stand, Binny is still a long way from such a position. The company has reported a loss of Rs.6.78 crores, against a profit of Rs.6.68 crores during 1986-87. The accumulated losses now amount to Rs.44.27 crores. "The increase in raw material costs is largely responsible for the losses. Cotton prices have been 60 per cent higher than in the previous year," explains Balakrishnan.

Once the Bangalore problem is sorted out, the management hopes to increase productivity further at the B&C mills. It also claims that Binny Engineering will begin to generate profits from January 1989. It seems that the fire fighting will continue for some more time at Binny.

■ DHARANI K. PANI

All Digital EPABX Systems Are Created Equal. Only This One Is More Equal Than The Others.

At first notice you will find that all EPABXs are similar. But when you look deeper, you will discover differences.

Differences that don't seem apparent in the hardware but are evident in the back-up services offered.

To make these differences, the House of Tatas created a totally new company.

A company that offers EPABX Systems, manufactured on the finest available machines. A company that provides the best in service.

A company called Tata Telecom.

Technology From Oki of Japan.

Tata Telecom is working with technical assistance from Oki Electric of Japan.

Oki is a world leader in the field of telecommunication.

Oki's technology is state-of-the-art, which makes it relevant to today's needs — and to those of the future.

Rs. 12 Crore Worth Of Back-Up For Quality And Service.

Besides the hardware, Tata Telecom has built a comprehensive infrastructure for quality service to customers.

The company has invested Rs.12 crore in this project, in sophisticated computerised test equipment — so that every component can be checked for 100% performance. And that diagnosis is immediate and rectification rapid.

The Tata Commitment.

Tata Telecom is here to stay — with an automated assembly and testing facility at Gandhinagar, Gujarat.

Key personnel have been intensively trained in Japan.

Tata Telecom has done all this to meet the challenge of the future. To bring you EPABX Systems that will change your life. For the better.

TECHNOLOGY FOR THE FUTURE WORLD

The mainframe muddle

In India, the process of computersiation has been the most painful in the banking industry. Almost all agree that despite the big money spent, automation has not been a resounding success.

Even so, Indian public sector banks, yet to justify their investments on micro and mini computers, might now lock up some more funds to buy powerful mainframe computers. An RBI committee has recently opined that as per the existing action plan, banks should get ready to order mainframes for their head offices. Banks, or rather the top management in banks, have not been known to go against the RBI in the past and are thus likely to comply this time too.

In fact, on this count, the fate of the banks was sealed long ago. In its report submitted in 1984, the committee on mechanisation in the banking industry, headed by C. Rangarajan, deputy governor of the RBI, had recommended computerisation at three levels in commercial banks: advanced ledger posting machines (ALPMs) or micro computers for branches, minis for zonal and regional offices, and finally, mainframes for head offices.

Thus, as in the case of smaller computers, the RBI swung into action at the instance of the government and set up a mainframe committee; the latter submitted its report in 1985. The recommendations of the committee were then circulated among the 28 public sector banks. Based on their feedback, a second RBI committee submitted its report in May 1987, laying down the required configuration of the mainframes for bank head offices.

Benchmark report

Subsequently a panel comprising a member each from the RBI, Department of Electronics (DoE), the State Bank of India and CMC were asked to benchmark available machines for suitability for Indian banks. The benchmark report has been since circulated.

Somewhere betweeen 1985 (when the first mainframe committee had recommended that the banks buy imported IBM, Cyber or Honeywell macnines) anc this year, when the benchmark panel was set up, two companies in the country got the government go-ahead for mainframe manufacture. The public sector Electronics Corporation of India Ltd (ECIL) tied up with Control Data Corporation (CDC) of the US to initially assemble and then manufacture the Cyber 830 and 930 models. And in January this year, International Computers Indian Manufacture (ICIM), an affiliate of the ICL group of UK, put out its first mainframe in the Indian market.

In the light of the above, the DoE instructed the RBI benchmarking committee to restrict its options only to Indian-made (or assembled) machines. However, in the words of the benchmarking report, "as neither of the two manufacturers had the requisite configuration available in India for testing purposes, benchmarks were arranged at the manufacturing locations of the collaborators, viz, ICL at Ashton in UK and CDC at Minneapolis in USA. Couple of visits each were also organised by ICL and CDC at some of their installations in Europe and States."

Several foreign trips later the benchmark panel ended up with what they started with — buy Indian. The panel told the banks in Category I (ie, those banks with more than 1,000 branches) to buy the Cyber 930 machine from ECIL and those in Category II (ie, banks with less than 1,000 branches) to buy Series 39 from ICIM.

Mandhyan: personally responsible

Another jaunt

Since the panel submitted its report, Bangalore-based PSI Data Systems, has announced that it has signed a collaboration with Honeywell-Bull of France to set up a new unit for mainframe manufacture. The panel promptly set off on another jaunt abroad to assess the Honeywell machine; from all indications PSI is also likely to be allowed to sell to Indian banks.

At the end of this exercise, however, a lot of questions are being asked by bankers for whom the machines are actually meant. Says the EDP head of a large nationalised bank, which is supposed to buy an ECIL machine, "The Cyber 930 machines have yet to arrive in the country. We are supposed to look at the Cyber 830 machines in ECIL's factory in Hyderabad and place our orders for the 930." ECIL has reportedly written to banks saying that the 930 machines can only be delivered within 16 to 20 weeks. When it was pointed out to B.J. Mandhyan, adviser to the RBI and member of the benchmarking panel, that the banks were being asked to place orders for machines worth over Rs.3 crores without even looking at them he said, "RBI has done the benchmarking; there is no need for individual banks to do seperate evaluations."

However, as bankers and EDP officials point out, the "benchmark observations' which the report lists are more or less bits of information lifted from product literature and not really conclusions of an evaluation. Mandhyan is surprisingly defensive when faced with this criticism, "I am not aware of any product literature. You are talking as if I am in the dock and I have to prove myself." The question raised about evaluation observations remained unanswered..

Besides a few of the larger banks, most nationalised banks, however, would be quite willing to be advised by the RBI on what machine to buy primarily because they themselves have little or no opinion on the matter. But the moot point is, do they feel the need for the mainframes in the first place, ie, are the micros and minis they already possess inadequate for their data processing needs?

Says G.S. Dahotre, chairman of Dena Bank (1,003 branches as at the end of December 1986), "We are a small bank and we do not feel the need for a mainframe. Maybe we can share one." His sentiments were echoed by EDP personnel of even the large banks like Bank of Baroda and Central Bank. However, Mandhyan points out that the agreement that the Indian Banks Association signed with the clerical or 'award staff' union lays down that banks cannot commission large data crunching work to software houses (as banks currently do) after September 1989; and thus there is an urgent need for all banks to have their own mainframes.

Based on this consideration and the progress achieved till 1987, banks were asked to prepare their mainframe sites and EDP personnel. Thus, according to a master action plan prepared by the RBI, based on computerisation progress in individual banks, each bank has been assigned a quarter of this year or next by which time their mainframe must be installed. By this year end, reportedly, Indian Bank, Allahabad Bank, Union Bank, Bank of India and Indian Overseas Bank are supposed to be "ready" for mainframe installation. Some of these banks have indeed placed their orders but others have not. They are understandbly being "urged" by the RBI to comply with the action plan.

Bankers allege that timely implementation of the action plan is crucial for the promotions of RBI personnel associated with it. Mandhyan, on the other hand, points out that if banks fail to show progress in their head office computerisation, which is not as hamstrung by union conditions as branch office computerisation, the bank management might well have difficulty in the next round of computerisation talks. Hence the need to push the action plan.

Software adrift

If the RBI feels that the banks need handholding as far as buying hardware goes, the same doesn't seem to hold true for software. Many EDP officials point out that CDC and ICL are not exactly known for bank installations worldwide (as are IBM, Unisys or DEC) and can therefore provide little software support. C.K. Bapiraju, general manager at SBI and a member of the benchmark panel agrees. But, he points out that with the Indian banking situation being what it is, the software has to be highly customised. But how long does he think it will take? "I think six months at the minimum but probably much more," he says. Since SBI's turn to buy a ECIL comes only in the third quarter of 1989, Bapiraju is probably safe.

But what about the banks which are buying the machines now? Do they invest Rs.3 crores for the hardware and more on the installation and then wait for software to be developed? And that when the banks are already low on profitability?

"Good question," says Mandhyan. "But our experience in the past shows that unless the hardware is installed, the banks never take software development seriously." This gives rise to another question: are the banks which couldn't choose their own machines capable of developing mainframe software? Yes, with a little help from ECIL. According to Mandhyan, the latter, which is reported to have about 15 mainframe support personnel, is rapidly expanding the department. In the meanwhile, however, ECIL has sent feelers to CMC to "co-operate" on software development. So, as always in the past in the banking sector, CMC becomes both a consultant on the benchmark panel and a software vendor. (Probably even a hardware vendor, because CMC is supposed to have indicated to banks that they can import the Cyber machines through the company too).

Mandhyan agrees that "not all is right" with a consultant simultaneously being a vendor, but then he points out, there is little choice. He says, "CMC is a public sector organisation. There could be other implications if a private sector company is involved." Thus, there is little choice but to let the incestuous relationship between the DoE, RBI, ECIL and CMC continue!

Before long, the 28 public sector banks would have spent close to Rs.90 crores on adding more pieces to their expanding hardware museums. The greatest pity is that there is no commercial motivation towards computerisation, thanks to the total lack of accountability in the nationalised banking sector. Machines are being bought, not because business dictates it, or because systems solutions are imperative, but because the RBI dictates it, the government dictates it. That there is therefore a total lack of purpose in the whole exercise is hardly surprising. But the RBI has little choice -- if it had to wait for the initiative to come from banks, it would probably have to wait for years.

■

KEYA SARKAR

A question of "moral suasion"

B.J. Mandhyan, *adviser to the RBI, personally responsible for the implementation of the mainframe action plan, and a member of the mainframe benchmark panel, had interesting comments on the whole mainframe issue.*

On why the RBI sees the need to do the benchmarking for banks.
Mainframe benchmarking is not simple — it calls for incisive resources which the individual banks do not have. We could pool together resources from banks and the computer profession.

On whether banks, who are supposed to install their mainframes, are ready with their sites and personnel.
I wouldn't like to comment.

On where ECIL machines are currently being used in the country.
In defence accounts or somewhere else in Delhi.

On whether newer mainframe manufacturers in the country would also be benchmarked as they get into production.
That is a hypothetial question so it cannot be answered.

On ECIL's current strength in software support.
ECIL doesn't have a marked presence in the banking sector. But they have created a seperate division now and since DoE is interested in ECIL's project, CMC might be involved in installing the machines and helping with software.

On whether banks have to buy the machines recommended by the RBI even if they have their own ideas, especially since Canara Bank and SBI have got permission to choose their own mainframes.
Canara Bank had applied to the DoE much before the benchmark panel was set up and therefore was given the permission. SBI's mainframe is not for head office computerisation. For head office purposes it would be better if banks comply with the RBI's recommendations. However, the benchmark report is one of moral suasion; the RBI cannot make it mandatory for banks to buy the recommended machines.

Cathay Pacific gratefully acknowledges the participation of all the executives involved in testing the New Marco Polo Business Class.

THE NEW MARCO POLO BUSINESS CLASS

BUILT TO HELP THE CORPORATE BODY ARRIVE IN BETTER SHAPE

This November Cathay Pacific introduces the finest business class in the skies.

The New Marco Polo Business Class.

It's a completely new environment, tested before launch by a group of leading business executives.

The seats are wider. One seat has been removed from each row. On long-haul flights, there's the additional comfort of foot and leg-rests. And a new, business-like atmosphere where executives can work. Or rest. Or dine. In absolute comfort.

But there's one thing we haven't changed.

Our gracious, attentive and charmingly Oriental service.

Arrive in better shape

Bharat takes on India's Reliance

Shetkari Sanghatana leader Sharad Joshi has given a call to picket plants belonging to Reliance and other synthetic yarn and fabric manufacturers at Patalganga near Bombay starting 12 December 1988. Thousands of farmers and many prominent politicians are expected to join the agitation. It will highlight the conflict between the economic aspirations of millions living in the countryside, Bharat, and the relatively small but powerful elite. In the name of "growth and modernisation" these elite are putting to the sword the largest employer in the country — the cotton textile industry.

The textile mills are the single largest employer in the organised sector, employing 1.2 million or 16.2 per cent of the total workforce. Though both cotton and synthetic textiles are finally woven using similar technologies and quite often in the same factories, the manufacturing processes leading to this final production stage are entirely different. In fact, if the final stage were to be disregarded, no two industries could be more dissimilar.

Synthetics on support

The cotton textile industry, though still the mainstay of the Indian textile industry, has been experiencing a severe crisis for the past decade mainly due to the rapid expansion of the synthetic fibres industry, supported largely by favourable government policies. The cotton textile industry, which includes the handloom, powerloom and mill sectors, is the largest direct employer in India with over 12 million people in it. This does not include the millions of peasant proprietors and workers, the cotton processing industry and the cotton trade. Being almost entirely self-reliant, the cotton textile industry can be termed as truly "swadeshi".

The synthetic fibre textiles industry by contrast is dependent on foreign countries for feedstock and other raw materials, plant and machinery, and technology. If one were to go by the Reliance advertisements, it would seem that the synthetic sector needs foreign fashion models even to sell their goods. Whereas the cotton textile industry earns foreign exchange the synthetic textile industry is a foreign exchange guzzler. In 1984-85 cotton piece goods (mill-made and handloom) and cotton apparel exports together amounted to Rs.1,270.70 crores. The exports of synthetic textiles are so small (Rs.23 crores) that they are not even recorded under a separate head.

The cotton textile factory sector employs over 80 per cent of the workmen in the organised sector of the textile industry. The manufacture of cotton textiles is a high value-added activity; with only 4.5 per cent of the capital it accounts for 8.3 per cent of the value added. By contrast the synthetic textile sector, with 2.2 per cent of the invested capital accounts for only 3.4 per cent of the value added. The turnover to capital investment ratio is also very favourable to the cotton textile industry which accounts for 7.3 per cent of the gross output as opposed to 3.6 per cent for synthetics. This means that for every rupee invested the cotton textile industry employs more people, generates more wealth, and earns money abroad.

Step-brotherly treatment

In 1986-87 the output of the cotton textile sector was 10.9 billion metres, of which 7.6 billion metres was produced by the unorganised sector. The synthetics sector by contrast produced only 2.1 billion metres. The cotton sector thus produces more than five times as much cloth as the synthetics sector. But in value terms the ratio is only 2:1. It might be of interest to state here that in the economically advanced countries cotton textiles are considered superior and being more expensive are considered to be for the affluent classes. But in India because cotton fabrics are still relatively inexpensive it is still the fabric of the common man.

All economic logic suggests that the cotton textile industry must be supported. But the present government with its elitist orientation has been truly inimical to the interests of the cotton grower, weaver, mill worker and even the cotton millowner. It often does seem that the government has decided that the cotton textile industry is a twilight industry and that the sooner it is finished off the better.

On the other hand the synthetic textile industry has been handed out concession after concession. One has just to see the remarkable swiftness with which the government removed the differential excise duty of 15 per cent on pure terepthalic acid (PTA). All that was needed was one year of weak performance by Reliance Textiles. Another gift to the vertically-integrated synthetic fibre and fabric industry is the recent reduction in the import duty on caprolactum and polyester fibres. But the unkindest cut of all is the latest "rationalisation" of the excise duty structure on blended and synthetic fabrics. The result is that the duty on cloth costing Rs.20 per metre has gone up by 387 per cent while the duty on cloth costing Rs.120 and above has come down by 60 per cent. This is rationalisation indeed!

Cotton mills are being forced to shut down for

The spark that forges a future

18 years ago, a company was born. A company that grew with the country to make India's aspirations its own.

Jindal

Setting its sights on self-sufficiency in Steel, Jindal has grown dynamically. Today the Group manufactures Stainless Steel plates, hot rolled coils, cold rolled sheets and Stainless tubes and pipes...ushering in a new world of steel. A pace-setter for the rest of the industry, Jindal today has fully-integrated Stainless Steel manufacturing facilities. From a modern new plant for the manufacture of ferro-chrome to precision Stainless Steel cold rolled sheets, Jindal uses the latest technology to provide Indian industry with almost all principal grades of Stainless Steel for a wide range of applications.

A company of steel..with a heart of gold.

What started as a spark has grown into an organization with a joint family of over 2500. Jindal believes its people are its most valuable assets. The company is known for its 'open door' policy which gives every employee access to top management. Free housing, heavily subsidised meals, generous medical, recreational and a host of other facilities make Jindal a company that cares. And it shows. The extra productivity that has thrust Jindal forward in the forefront of Indian companies.

Today Jindal is breaking national boundaries by exporting ferro-chrome to countries far and wide.

Fiercely proud of being Indian, Jindal is committed to forging an exciting future of Steel for the India of the 21st century.

JINDAL

Pioneering the world of steel

lack of financial support, the handloom weaver is penalised for persisting with his craft, and the cotton grower is squeezed relentlessly.

If the plight of the cotton mills is bad, the condition of the cotton grower is worse. The Shetkari Sanghatana is in agreement with many agricultural experts that agriculture in India has by and large become weather-neutral. Thus even in the worst drought of the century last year, the cotton grower produced another bumper crop — about 9.1 million bales. With an opening stock of 1.9 million and a total domestic requirement of about 9.5 million, the year's requirement could have been easily met. Yet nearly a million bales were imported to beat down the price of cotton. And though the country could have exported lint or yarn equivalent to 600,000 bales, it did not do so, once again due to the pressure of the mill sector. To compound matters, the government further reduced the import duties on synthetic fibres and raw materials. The current year's production is expected to be around 10.8 million bales. With a carryover of 1.8 million bales and with demand not expected to rise beyond that of the previous year, farmers might be in for a financial disaster even though harvests have been plentiful. Unless, that is, large-scale exports are permitted. As it is, international prices have declined by as much as 16 per cent due to the rise in world production this year by 5 million bales. If the new export policy is not announced in days, all opportunity to export in the current year may be lost. The government of India, however, seems preoccupied with other things.

It is not ignorance alone which leads this government to betray millions for the sake of a few. The financial muscle and clout of the new robber barons has much to do with it. There is little doubt that many in the government, and some of these are highly placed individuals, are susceptible to allurements. The recent exposures of the activities of Reliance, Bombay Dyeing and Orkays give a fairly good corroborative picture of this.

Long struggle

The Shetkari Sanghatana has been leading an agitation for equitable cotton prices for the past four years. The agitation began with the announcement of the new textile policy. In the very first year of the new textile policy, cotton prices fell by as much as 23 per cent. The guaranteed price offered to the farmers in Maharashtra was reduced by Rs.50 a quintal.

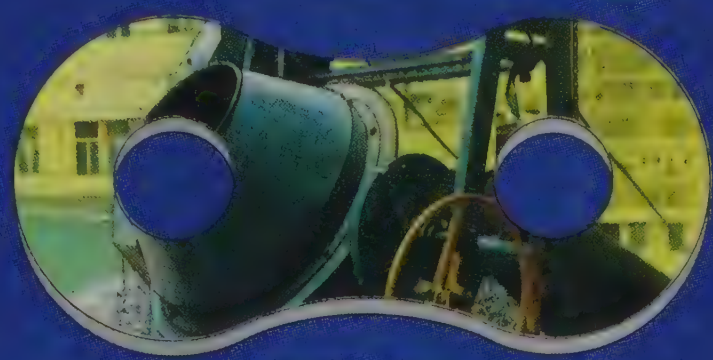
The dispute over the level of guaranteed prices under the Maharashtra Monopoly Scheme remains unresolved. The central government has not budged from its position that the guaranteed price should not exceed the support price, while both the Sanghatana and the Maharashtra government hold that it has to be 25 per cent higher than the support price. That the central government is persisting with its anti-farmer cotton policies at the behest of the millowners is quite obvious. A typical instance of this is the abandonment within a year of the much-touted long-term cotton export policy under which the export of 600,000 bales of cotton was assured for three years. Even the quota for the first year has not been fulfilled.

An examination of the balance sheets of several leading cotton textile mills shows that the generally higher profitability in the last year has been due to higher sales largely because of selling price increases and lower raw material costs because of lower expenditure on cotton purchases. This shows that the demand for cotton fabrics remains good and that the industry with the connivance of the government is merely exploiting the grower.

The cotton millowners have generally not cared about the long-term larger implications of lower cotton prices for the industry because of conflicting interests and the availability of other options. The cotton growers' well-being on the other hand, is inextricably linked to the continued good health of the cotton textile industry. It is this that makes us espouse the cause of the mills even if the millowners almost always act against the interests of farmers.

Last year the Shetkari Sanghatana conducted a three-week programme in rural Maharashtra to highlight these issues. The main part of the programme was a farmers' *prachar yatra* which started on 19 November and wound its way through western Maharashtra, Marathwada and Vidarbha gathering marchers all along the route. It culminated in a rally of thousands of farmers, joined by textile mill workers in Nagpur, at Kasturchand park on 12 December. Those present say that not since Mahatma Gandhi's rally at the same venue over half a century ago was such a large gathering seen at Nagpur. This is a good indication of the support the cause commands among farmers and, therefore, about what is to be expected when the gherao of the plants at Patalganga begins on 12 December. All the top leaders of all the major national parties have been invited to address the rally and lend their powerful voices and authority in support of the cause. The complete spectrum of Indian politics will be there — with the exception of the ruling party. And why should the Rajiv Gandhi regime act any differently? After all, Reliance provides it sustenance. The rally promises to be a historic event for it will be the first time that Bharat will confront the ugly face of Indian capitalism and, possibly, the iron fist of the Indian state that backs it.

The Big.



The Small.

And hundred others in between have a common link.

Diamond Industrial Chains. From 3" to ¼" for hundreds of application areas...

From giant oil rigs to concrete mixers... paper mills, cement plants, textile mills, fertilizer plants and many, many more.

Diamond Industrial Chains is the one name that has chains in pitches varying from 3" to ¼" manufactured to both AS and BS specifications.

Widest range of transmission chains

☐ Single and multi-strand chains ☐ Leaf chains ☐ Carding chains ☐ Extended pin chains ☐ Heavy duty chains ☐ Conveyor chains ☐ Special purpose chains ☐ Standard application chains

A team of highly trained engineers, 17 warehouses around the country and hundreds of outlets give easy access to Diamond Industrial Chains.

Application Engineering Cell for special needs

Diamond Industrial Chains' Application Engineering Cell will innovate the perfect solution — with a custom-built chain for very specialised requirements.

HCL'S NEWEST COMPUTER IS FULLY EQUIPPED TO MEET FUTURE SHOCK

You don't need an Alvin Toffler to see computer chips becoming obsolete faster than ever today.

Just a few years ago, computers based on the '8086' and '8088' chips ruled the roost. Till users were rudely shocked by the much more powerful '68030' and '80386' based machines.

Today, RISC and SPARC chips wait in the sidelines. And today's superchips will inevitably be replaced by these newer ones.

What does this do to the investment in computers worth lakhs or crores.

HCL's new computer Magnum offers a solution.

Magnum is based on the most powerful chip today. But it's built with an 'open' or 'chip independent' architecture.

Which ensures that Magnum will still be working in your organisation when other computers of today are a mere memory.

Designed for the Unix future, too.

Hardware design alone is not sufficient to see a machine into the future.

The computer should be compatible with the software of the future, too.

Magnum is designed around the world-standard Unix operating system.

So your office will always have access to the largest bank of minicomputer software in the years to come, too.

The elastic computer.

HCL's computer Magnum is the perfect example of an expandable computer.

Today, like any other mini, it will support ten to twelve users.

Tomorrow,when your needs grow, you can simply add on a processor board, and Magnum will almost double its power. Supporting twenty five users.

As your organisation grows, you can keep adding more than a hundred and fifty simultaneous users.

The equivalent of a mini-mainframe computer's capacity.

Five computers for the price of two.

To start off with, Magnum costs just a little more than any other minicomputer in the market.

But the addition of each subsequent processor board adds the power of one more mini to the Magnum — at one-tenth the cost of a new mini.

If you see Magnum through to its full capacity, you'll have a computer with more than the power of five minis.

Which would have cost you less than two minicomputers.

Two heads are better than one. Three heads...

Magnum is a product of multi-processor technology.

More than one 'brain' goes into operation at the same time in this machine, solving problems faster, and creating greater capacity for work than ordinary machines.

Magnum's unique design allows easy expansion from one to six 'brains'.

It's a computer that's designed to grow with you.

Outperforming DEC, Unisys, Hewlett Packard...

Magnum recently came in the top five computers in the world in an internationally established performance test.

Beating some of the most respected names in the business. (And, to rub it in, costing 70% less than any of those machines).

So impressed were an American company that they immediately ordered Magnums worth $ 16 million (Rs. 23 crores).

Magnum is the price-performance solution for an organisation's growth plans.

People across the Atlantic have already realised that.

It shouldn't take you too long to absorb it's impact.

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable
* Maintenance - free * 100% Leakproof and Rustproof
* Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes.
* Backed by excellent installation and after sales service through a wide network of dealers.

NARMADA VALLEY PROJECT

Too many unanswered questions

The Narmada Valley Project (NVP), consisting of the Narmada Sagar Project (NSP) and the Sardar Sarovar Project (SSP), is said to be the largest and most complex irrigation and hydel system ever contemplated anywhere in the world. The magnitude and the complexity of the projects gives one the shudders — especially as it involves ecology, geography and human habitats. It is imperative to make sure that there is no possibility of a mistake.

But our planners seem to be undeterred by 'words of wisdom'. One of the Planning Commission members couldn't even bear to hear any criticism because the project involved "state-of-the-art technology not attempted anywhere else in the world".

It has been easy for the government to approve the project on paper with World Bank funding. The World Bank in any case likes to give large loans which of necessity involve multinational corporations. But the going may not be as easy as the contractors and the paper planners thought it would be.

The resistance on the ground is growing. People do not want to move. Nor do they want to see trees, flowers, hills and homes submerged. Some people have an emotional attachment to such things. A few may even give their lives for them. Contrary to what economists like to think, not everyone puts a price on everything.

Opposition from voluntary group

A voluntary action group has come up with a statement on the NVP which has been supported by many renowned academics. In this statement, submitted to Rajiv Gandhi on 12 September, it was contended that one should not get carried away by the enormousness and hi-tech aspects of the project but must give it a second thought because "if such solutions are undertaken without a proper understanding of all the possible consequences, they could leave in their wake a trail of destruction which could aggravate the crisis further".

What the mercenary engineers, economists and administrators involved find difficult to understand is that a very large proportion of the people in this world don't like to move. How else could we explain people living in some of the most "inhospitable" areas of the world? When such people are forced to move, some lose their bearings, their zest for life. This is the human dimension. A humane government and a humane society does not disrupt the lives of so many people who are not willing to "adapt" as the NVP intends to do. The lakhs of people who are displaced may supposedly be "rehabilitated" later. What if these people don't want to be "rehabilitated" because they are certain that the major benefits of the project will not go to them?

The statement even questions the government's claims on the amount of power that will be produced. It quotes a former irrigation secretary of Madhya Pradesh: "This (power generated) in the final phase would actually be only one-tenth of that publicised. Even in the initial phase (ie, just after construction of the two dams) it would be only about one-fifth."

Danger of waterlogging

The more damning criticism of the project hits at its very raison d'etre — irrigation. It appears that a study on the NSP done by the Indian Institute of Science, Bangalore, shows that 40 per cent of its command area faces waterlogging if the original designs are followed. Waterlogging is already causing havoc in many heavily irrigated areas of Haryana and in many of the regions irrigated by large dams all over the world.

Once an area gets waterlogged, salts get deposited on the ground surface and eventually the land becomes unsuitable for cultivation. In addition the soil becomes clayey and therefore impervious to water. So during the monsoons most of the rainwater runs off instead of seeping into the ground resulting in erosion, depletion of subsoil water and floods.

Large dams also cause quite unexpected changes in local ecology. This can affect the lifestyles and health of people living in the region surrounding the reservoir. In addition to increasing the possibility of earthquakes, the stagnant water of the reservoir can cause dreadful diseases like river-blindness as in the Aswan Dam area in Egypt and kala-azaar, a disease that deforms and disables permanently as in dam areas in India.

The citizens' report on the NVP is an eye-opener for citizens of India. It is frightening enough to demand a moratorium on the NVP so that more independent groups can examine the merits of the project. It is high time that businessmen and industrialists got together and sponsored another set of experts known for their integrity and independence to study the government's claims on the Narmada Valley Project.

The issue is too important to be left to government-sponsored agencies and "experts" only. It has such wide ranging ramifications that a government of any political persuasion in India would do well to look before it leaps. □

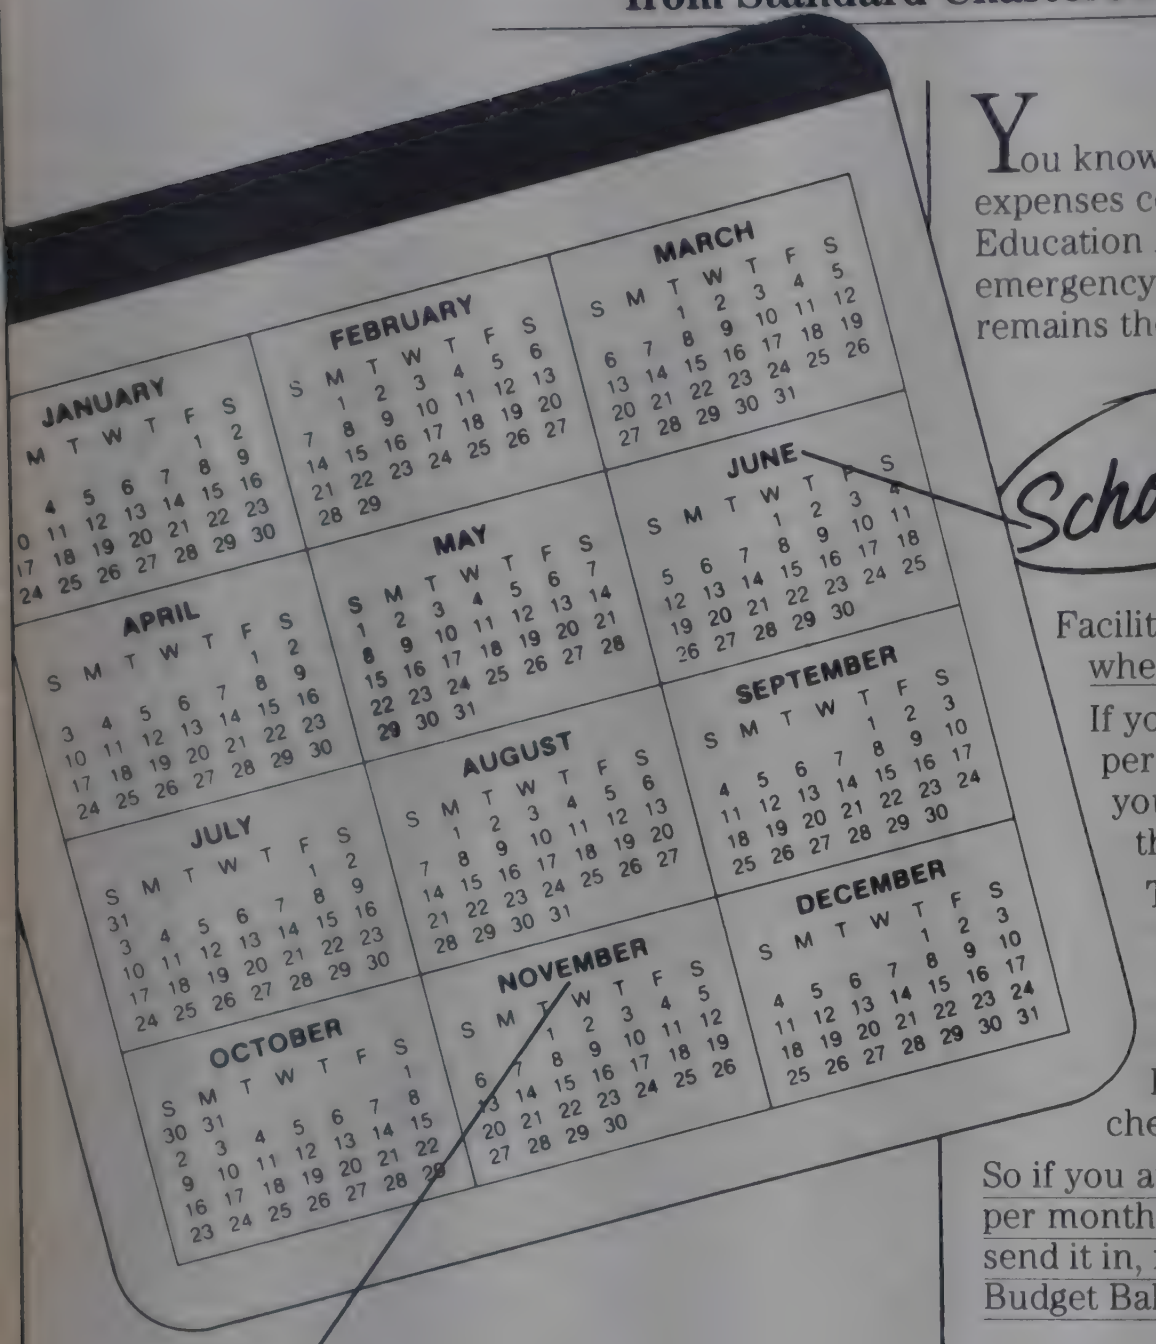
Now you don't have to wait for a windfall to balance your budget.

Introducing the Executive Budget Balancer from Standard Chartered Bank.



You know how it is every month. A number of big expenses coming together. A family ceremony. Education fees. Or (heaven forbid) a medical emergency! While the figure on your salary cheque remains the same. That's when you need money double-quick.

At Standard Chartered Bank, we understand your needs. That's why we have introduced the Executive Budget Balancer Facility. Now you can be assured of money whenever you need it.

If you are earning more than Rs. 5,000/- per month and satisfy a few simple criteria, you will be entitled to an overdraft worth three times your salary.

To avail of this facility all you have to do is fill in a cheque and draw the money.

There will be no red tape and no delays.

Standard Chartered Bank's Executive Budget Balancer Facility is your rain cheque in times of emergency.

So if you are earning more than Rs. 5,000/- gross per month, just cut out the attached coupon and send it in, marking the envelope "Executive Budget Balancer".

VENTURE CAPITAL GUIDELINES

Only a statement of intent

On 25 November the office of the Controller of Capital Issues (CCI) department of economic affairs, union ministry of finance, finalised and circulated guidelines which venture capital companies/funds (VCC/VCFs) would have to comply with in order to be eligible for concessional treatment of capital gains available to non-corporate entities. By remaining silent on the exact quantum and incidence of this concessional treatment, the finance ministry has however only given lip service to this nascent financial activity.

Since the public financial institutions (IDBI and IFCI's Risk Capital Technology and Investment Co, which are engaged in this activity in a small way) are exempt from capital gains, they remain unaffected by the proposed new tax exemption. The ICICI which is not exempt, went ahead and established a venture capital fund (which it subsequently hived off as Technology Development and Information Company of India) for funding high-risk technology extensive ventures.

The guidelines now set the scenario for limited companies under the Indian Companies Act to set up VCC/VCFs. Capital gains, the major stumbling block, is sought to be diluted (or may be removed).

Further, the guidelines lay down that companies that wish to promote VCC/VCFs activities may be established using the term "venture capital" and approval for such establishment must be sought from the CCI.

Financal institutions, banks, both nationalised and foreign will have to seek the permission of the Reserve Bank of India. Joint ventures between the institutions and between institutions and non-institutional promoters will be permitted provided the equity holding of such promoters does not exceed 20 per cent. The management of these VCCs/VCFs should be by professionals with adequate experience of industry, finance, accounts etc.

Interestingly, the guideline lays down that if the VCC/VCF is established by subsidiaries of banks or institutions or started as in-house schemes they should maintain their independence and "an arms length relationship" with their parent institutions. "This indicates the governments' awareness that venture capital financing is an activity which is inherently different from normal credit sanctions," points out R. Kannan, executive vice-president, Canbank Financial Services. "It calls for a different approach and personnel with different orientation."

The guidelines makes it amply clear that venture capital financing in India is to follow the technology route. "New or relatively untried or very closely held (technology), or that being taken from pilot to commercial stage, or which incorporates some significant improvement over the existing ones in India" will be eligible for venture capital finance.

In India the guidelines on capital issue have made the capital market easily accessible to the corporate sector. As a result the role of doling out venture capital falls on the shoulders of the individual investor in India. In the US and the UK, only existing companies with profit and dividend records are allowed to go to the market.

This was roughly the situation till the Bombay boom of 1985-86. Since then largesse from investors has been drying up as they got wiser. The following bear phase and investor savvy put into sharp focus the absence and need for venture capital for setting up untried, high risk ventures. The need for creating vehicles to fund first generation entrepreneurs caught the imagination of the government.

The minimum size of the VCC/VCF has to be Rs.10 crores, according to the circular. ("A minimum of Rs.10 crores is essential to ensure that every other person doesn't start a VCC," says Udayan Bose, promoter of the proposed Creditcapital Venture Fund.) Since it would not be commercially viable for a VCC/VCF to deploy its total funds only in venture finance, the government has allowed 25 per cent of its funds to be invested in new issues of new or existing companies, debentures, bonds and other approved securities. A part may also be employed for leasing equipment, etc. But this cannot at any time exceed 15 per cent of the total fund.

The 75 per cent that the VCC/VCF will have to invest in what are deemed venture capital units may be reached in three stages. In the first year 30 per cent should be deployed for venture capital activity, to be raised to 60 per cent by the end of the third year and 75 per cent at the end of the fifth year of operations.

While in the first year of operations the profits that can be set off against depreciation in leasing is unlikely to be very large in the later years when the VCC/VCF has possibilities of earning profits from selling its equity holdings in the invested companies the 15 per cent allowed for leasing is expected to be useful.

There is also a provision made in the guidelines that "a preferential tax treatment would be available to the approved VCC/VCF only in respect of financing such assisted units as one eligible to be treated as venture capital units. For this purpose the unit seeking equity support from the VCC/VCF should obtain a letter of eligibility from IDBI/ICICI or any such agency that may be nominated by the government." This provision is expected to ensure that any VCC/VCF promoter does not pass off any project as eligible for venture capital in order to avail of the capital gains tax exemption.

There is also a provision for an exit route for the VCC/VCF once the assisted companies are on the road to profits. The guidelines note that in case of disinvestment through a public issue by the VCC/VCF, pricing may be subject to criteria such as book value, profit earning capacity etc which are disclosed to the public.

"This is the first hint that pricing, so long in the domain of the Controller of Capital Issues, may not remain so. "The normal CCI formula which takes into account market value and book value of a company's share among other criteria will be replaced by purely market considerations," says a merchant banker. Recognition is expected to be given to the high-risk VCC/VCF, which should be related to high reward if pricing is freed from formulas.

The guidelines are only a broad statement of the government's intent -- till legislation actually lays down the quantum of preferrential treatment to VCC/VCFs in the matter of tax on capital gains, and spells out whether both the corporate entity and the investors in it are eligible for such exemptions. Also, the formulae for calculating will have to be elucidated. Only then will venture capital financing in India gather momentum.

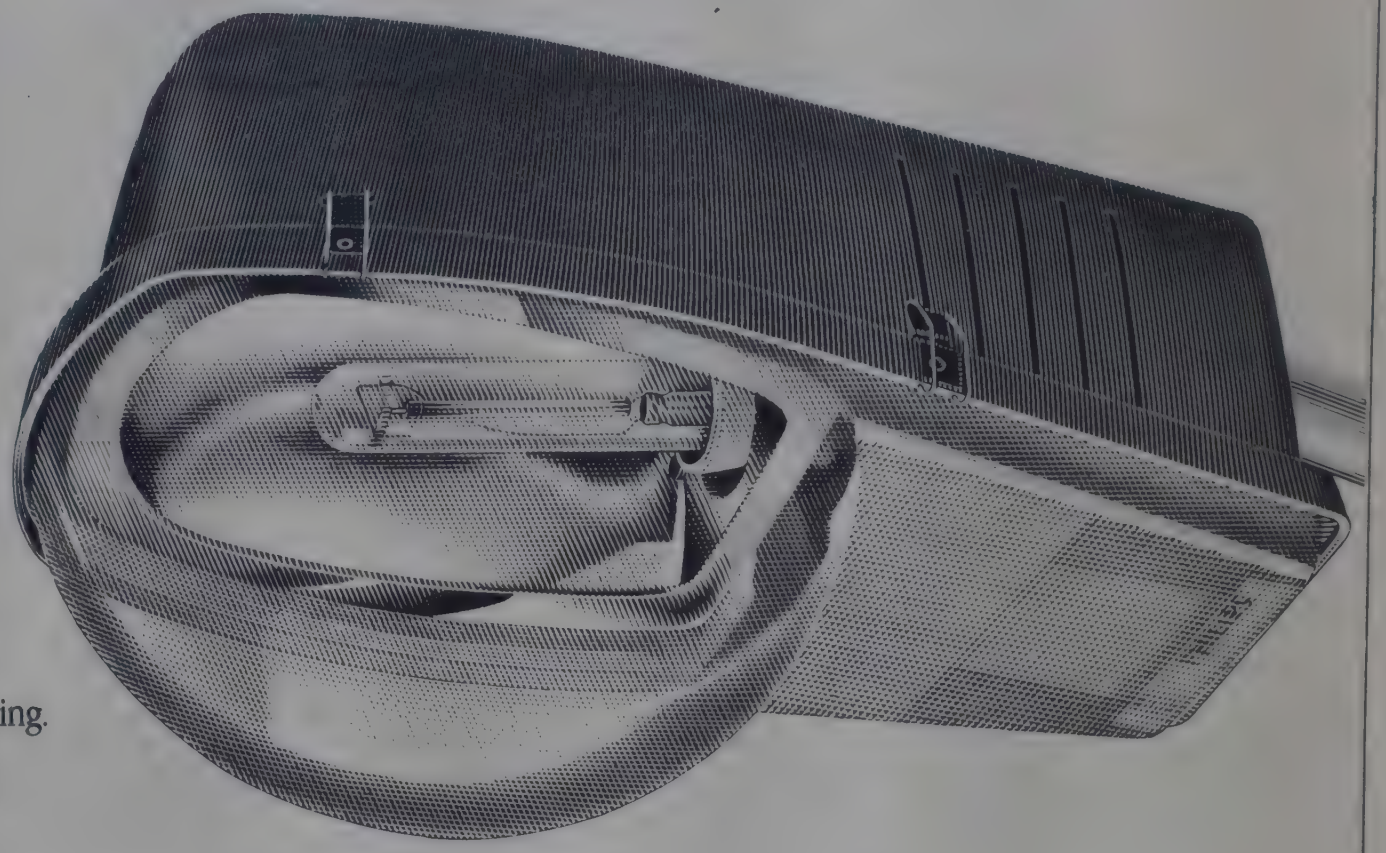
PHILIPS

A Breakthrough In Streetlighting



The Superstar— another first from Philips

1 Sturdy lightweight die cast aluminium housing.

2 Clear weatherproof acrylic cover.

3 An optical system to give more efficient optical control than conventional luminaires. Enabling higher mounting heights and larger spacings between luminaires.

4 A lampholder system allowing a wide choice of positions depending on different road situations.

For the first time in India, a new optical system specially designed for more efficient streetlighting, with tubular sodium vapour lamps. Superstar, the luminaire that brings the benefits of better streetlighting right to your doorstep.

The Superstar is lightweight, weatherproof and easy to install and maintain. In addition, it cuts down on the number of luminaires used and thereby on system cost.

It is innovations like the Superstar that have made Philips the leaders in lighting worldwide.

I would like to know more about the Superstar. Please send me further details.

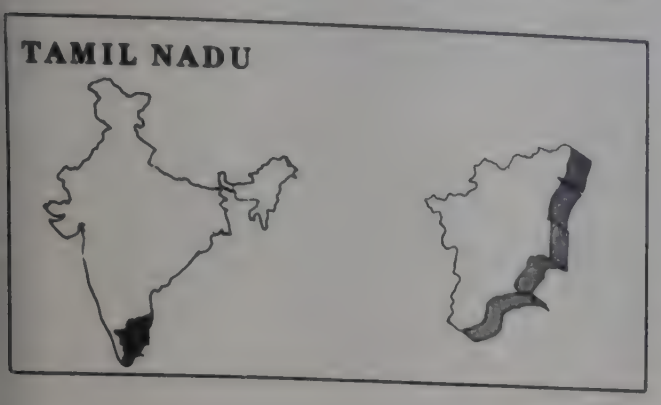
MRL's big step with SPIC



The coming elections in Tamil Nadu have helped speed up the decision on a co-promoter for the aromatics complex of Madras Refineries Ltd (MRL). In the last few months, it was quite apparent that the Madras based fertiliser giant SPIC was to be chosen. The government has chosen this opportune moment to make this announcement.

Initially, IPCL was mooted as co-promoter. However, it wanted to split the project into two units — a xylene manufacturing unit to be managed independently by MRL and a PTA unit to be handled by IPCL. However, "MRL was keen on a joint venture because an integrated project with common facilities and utilities should come under a single management. Though IPCL was willing to enter into a permanent agreement to share profits, we felt conflicts could arise in day to day management," explains V.R. Deenadayalu, chairman and managing director of MRL. So, by September 1987, IPCL was firmly edged out of the picture.

MRL thus invited 19 private sector companies to participate. Of the seven who responded, MRL shortlisted three, SPIC, Reliance and J.K. Synthetics. MRL sources feel that SPIC was chosen because it is a "local company with a local organisation". They add that SPIC also has enough experience working with government organisations at the state and central levels and would not have a problem in dealing with a public sector organisation.

MRL's new aromatics project envisages production of 30,000 tpa of orthoxylene, 15,000 tpa of PTA (from 105,000 tpa of paraxylene) and 21,000 tpa of benzene. MRL will provide 2,40,000 tpa of its naphtha.

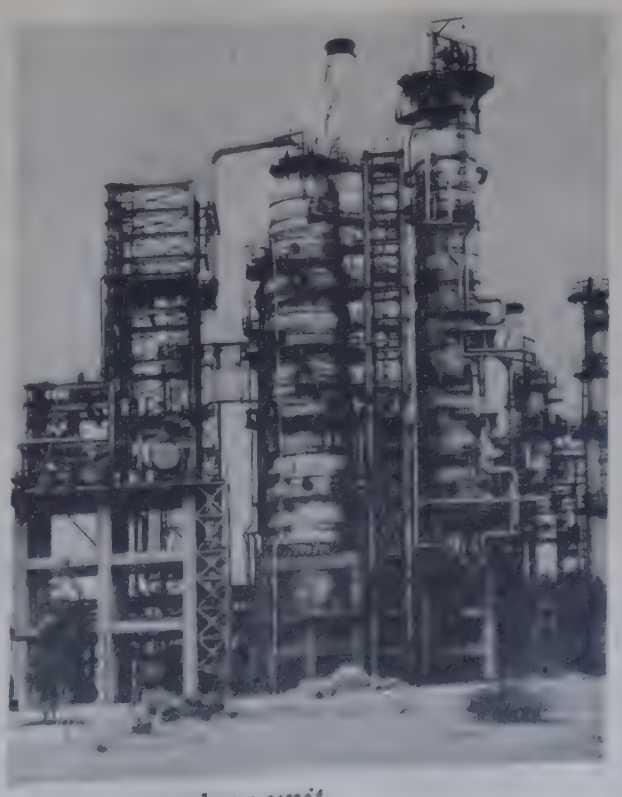
A new company will be formed for the purpose, with MRL holding 26 per cent of the equity and SPIC 25 per cent. The project will cost Rs.836.71 crores and have a debt equity ratio of 3:1. A detailed project report will be completed in six to eight months for the second stage clearance. Once this is received, it will take three years to implement the project.

The project will create direct employment for 600 in the aromatics complex, and indirect employment for an estimated 5,000 in downstream units. "MRL is emerging as a mother industry in the region," says Deenadayalu.

Industrialists in Madras are excited at the possibility of setting up downstream units; MRL estimates that about seven units can be set up to manufacture polyester staple fibre or polyester filament yarn based on the PTA produced. This would involve an investment of Rs.700 crores. It is possible to set up smaller consumer units at an investment of Rs.1 to 2 crores.

The other important product is orthoxylene, mainly used in the manufacture of phthalic anhydride (PAN), an important intermediate both for plasticisers used in flexible PVC processing and dyes. There are three PAN units in the south — Tirumalai Chemicals, Ambuja Petrochemicals and Mysore Petrochemicals with a total capacity of 40,000 tonnes of PAN which could absorb the orthoxylene produced. Besides, orthoxylene also finds use as an industrial solvent for pesticides printing inks and surface coatings.

The benzene produced from the xylenes could be used by TN Petroproducts' LAB plant. Other possibilities are the establishment of plastic terephthalate (PET) and PET film; this could attract an investment of Rs.100 crores.



MRL's propylene unit

Deenadayalu: "only the beginning"

"The intention is to become a regional based growth centre," says Deenadayalu. Eventually MRL hopes to pool its resources with the Cochin Refineries Limited, "to offer our feedstock to industries."

Already several large projects are using MRL's feedstock. Tamil Nadu Petroproducts (a SPIC venture) involving an investment of Rs. 180 crores has already gone into production. Its propylene plant, involving an investment of Rs.14 crores, was inaugurated recently. Kamar Chemicals and Manali Petroproducts Ltd (also a SPIC venture) will receive feedstock from this unit to manufacture propelene glycol and polyols. In addition to this, MRL plans to supply Butene 2 from the FCC (fluidised catalylic cracker gas) to Ceetex — an R.P. Goenka venture which will provide MEK (methyl ethyl ketone). MRL will supply isobutenes to the H.C. Kothari group to manufacture polybutenes. This group may go in for the manufacture of a phthalic anhydride manufacturing unit, as well. "In all these instances, MRL will recover its investment along with the feedstock price," says Deenadayalu.

MRL does not rule out the possibility of a naphtha cracker. While no surplus naphtha is available at present, expansions under the ninth plan, which is dependent on oil finds in the Cauvery and Krishna Godavari Basins, could invest MRL with the necessary surplus. As Deenadayalu says, "Aromatics is only the beginning."

OWENS – CORNING FIBERGLAS

World's **largest** company in Glass Fibre and GRAPHITE VICARB

bring India's **first** project to manufacture Large Diameter GRP Pipes and Tanks

A Successful Profile

Graphite Vicarb pioneered successfully the manufacture of Impervious Graphite Equipment in the country in technical and financial collaboration with **Vicarb S.A. of France.** The company declared a dividend in its first full year of operation, and rapidly forged ahead to achieve commendable production and financial targets. There has been a quantum growth in Gross Income and Profits in the last year which were up by 50% and 126% respectively, over the previous year. And there are plans to expand the product range further with the addition of Metallic Heat Exchangers.

A Thrust Forward

Yet another pioneering venture is the project to manufacture Large Diameter Glass Fibre Reinforced Plastic Pipes and Tanks in collaboration with **Veroc Technology A/S of Norway.** The World Bank has approved these superior and cost effective products which will replace the traditional asbestos cement, cast iron and mild steel products presently used in sewage and irrigation systems. GRP / FRP Pipes and Tanks will also be used in the carriage of potable water and in the storage of a wide variety of fuels like gasoline, furnace oil, aviation fuel, diesel and also corrosive chemicals and water. These new generation products enjoy substantial economic benefits and superior technological advantages. The company will also manufacture Polyester Resin – a major raw material required for these products

Renowned Foreign Collaboration

India's first project to manufacture Large Diameter GRP/FRP Pipes and Tanks is being set up with technology from the **world's largest company in fibreglass : Owens-Corning Fiberglas, U.S.A. through its subsidiary Veroc. A reflection of Veroc's strong commitment is their participation to the tune of Rs.65 lacs in the Company's capital.** Backed by a foreign currency loan of Rs.4.01 crores from the Royal Norwegian Ministry of Development Co-operation (NORAD), at a concessional rate of interest of 3.75% p.a. – **the first of its kind to a private sector company in India.**

An exciting future

The Rs.14.40 crore project at Gonde, near Nasik in Maharashtra is almost complete and is likely to commence production in the first quarter of 1989. From one success story to another ... Graphite Vicarb is all set for an exciting and growing future.

GRAPHITE VICARB INDIA LIMITED

PRESSMAN

Blacking out the White Paper

The Rajiv Gandhi government is in a fix: a consensus on the much-publicised White Paper on the public sector, which was promised to Parliament in the 1988-89 budget session, is proving to be elusive. From all available indications, the White Paper has got caught between the politicians and bureaucrats on the one hand, and chief executives and managers of public enterprises on the other.

The issue has been further confused by the coming election year, when the government will find it extremely difficult, in the interests of political expediency, to take hard decisions, let alone tinker with the basic structure of the economy. No surprise then, that Union industry minister J. Vengala Rao in his latest speech in the winter session of Parliament once again deferred a discussion on the public sector with the bland statement that the government would "come out with a White Paper soon".

Even so, the government's current thinking on the public sector is amply manifested in the intermittent pronouncements of Prime Minister Rajiv Gandhi, who tends to burst out in frustration and put all the blame for all the ills of his regime on the non-performance of public enterprises. Said Gandhi: "We were unable to achieve socialism since we laid emphasis on one aspect. Ignoring the conditions of the poor, we concentrated on the role of the public sector to achieve socialism. Can we afford socialism where the public sector instead of generating wealth is absorbing and sucking the wealth of the people?" He added: "Are we going to carry on subsidising small groups of workers because it is politically inconvenient to shut down a particular factory? I think some very hard decisions will be called for and, if we are not willing to take these decisions it is going to be very difficult for our industry."

Weak ideological base

The foundation of India's industrialisation and the peculiar brand of socialism called the socialistic pattern of society was laid in the Second Five Year Plan by Nehru. It was stated that "essentially... the basic criterion for determining the lines of advance must not be private profit but social gain, and the pattern of development and structure of socio-economic relations should be so planned that they must result not only in appreciable increase in national income and employment but also in greater equality in income and wealth".

In practice, what emerged was a public sector with a very weak ideological base because the motives for setting up some of the critical enterprises turned out to be widely divergent.

As such, the public sector cannot be regarded as a homogenous entity and treated accordingly by a single policy proclamation. What has however happened recently is that though the objective mix of the public sector has remained as varied as ever, the government has suddenly changed its stance from "no profit no loss" to profit.

Freedom of operation

The Industrial Policy Resolution of 1956 clearly laid down that the management of public enterprises should be run on commercial lines, earning profits and contributing revenues to the state. But it also stipulated that the public sector units should be judged for their total results, and subject to performance criteria they should have full freedom of operation. For this, wherever possible, there should be decentralisation of authority and their management should be along business lines. It is to be expected that public enterprises will augment the revenues of the state and provide resources for further development in fresh fields. But such enterprises may sometimes incur losses. Public enterprises have to be judged by their total results and in their working they should have the largest possible measure of freedom.

The growth of public enterprises has been phenomenal in terms of investment, production, and range of activities. From only five enterprises in April 1951 with a total investment of Rs.29 crores, the number rose to about 220 with an investment of Rs.61,430 crores at the end of 1986-87. The 220 enterprises are made up of 154 manufacturing/producing units and 60 service rendering enterprises; six enterprises were still under construction at the end of 1986-87.

(Rs crores)

Plan	Public sector	Private sector	Total	% of public sector to the total
I	1,960	1,800	3,760	52
II	4,672	3,100	7,772	60
III	8,577	4,190	12,767	67
IV	13,655	8,980	22,635	60
V	31,400	16,161	47,561	66
VI	69,380	46,860	116,240	60
VII	180,000	168,148	348,148	52

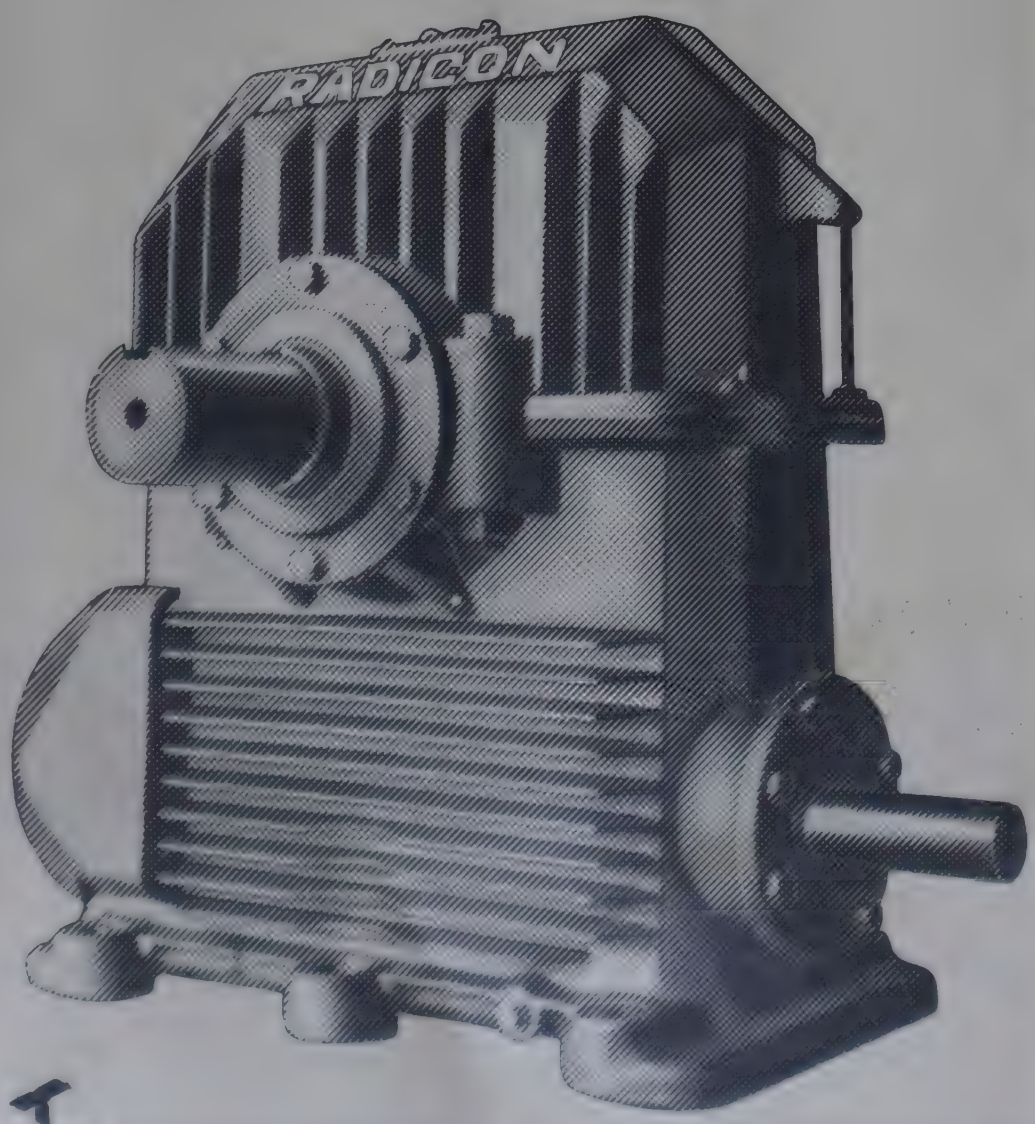
The decline in the share of public sector investment from 60 per cent in the Sixth Plan to 52 per cent in the Seventh Plan (see table one) has been construed by its proponents as a conscious attempt by the government to dilute the role of the public sector from the "commanding heights of the economy" and thereby give a bigger slice of the cake to private enterprise. The general tenor of government policies of liberalisation and opening up of the economy have led to the speculation that it is seriously contemplating gradual privatisation in tune with trends the world over.

Apparently, Gandhi's thinking about the public sector has been influenced by a simple arithmetical calculation which shows that the public sector has the capacity of turning the entire budget deficit into a surplus. A 12 per cent return on assets is quite usual in the commercial world. With Rs.61,430 crores of capital employed, (1986-87 data) in about 220 enterprises, a 12 per cent return would work out to Rs.7,371.60 crores. Obviously, confronted with such statistics, Gandhi has seen red all over and launched a tirade against a "non-performing" public sector.

The onerous task of actually preparing it was handed over to a panel of chief executives of public enterprises headed by V. Krishnamurthy, chairman of the Steel Authority of India Ltd. That the job was assigned to a reputed public sector manager and not a bureaucrat or a politician shows the initial sincerity of the government. But, once Krishnamurthy had done his job, the conflict of interest between the bureaucrats and politicians and the public sector managers came up with all its intensity. Krishnamurthy's original draft was vetted by a secretaries' committee which is believed to have whittled some of the unpalatable portions. After the bureaucrats had had their say, the document fell into the hands of the politicians -- a ministers' committee is reported to have made "significant" contributions.

So the original draft is believed to have

HOW YOU CAN BENEFIT FROM DAVID BROWN GREAVES' 26-YEAR EXPERTISE IN RADICON WORM REDUCTION GEARBOXES



The Thapar Group

Every David Brown Radicon worm reduction gearbox has been engineered to offer you lasting efficiency and reliability... with minimum maintenance.

In fact, Radicon gearboxes installed more than 25 years ago are still performing as satisfactorily as ever.

This high quality is a result of David Brown Greaves' experience and expertise. In the design and manufacture of an ever-increasing range of gearboxes.

Widest range for greatest choice

- 15 sizes.
- Three types – horizontal, vertical and double-reduction.
- Speed ratios from 5:1 to 4900:1.
- Maximum versatility and convenience – due to high interchangeability of gearboxes.

Custom-made gearboxes, too!

Apart from its standard units, David Brown Greaves also offers you custom-built gearboxes. To suit your specific needs.

This is possible because of its access to the latest international manufacturing technology and equipment. Through its world-famous collaborator, David Brown Gear Industries Ltd. (U.K.).

Quick delivery, prompt service

Today, you can get prompt deliveries of Radicon gearboxes. Through any of Greaves Cotton's 21 Sales and Service Centres spread across the country.

While Greaves' qualified and experienced personnel give you speedy and efficient after-sales service.

The next time you buy a gearbox, ensure high quality and good service. Insist on a Radicon.

been revised four times already. And Krishnamurthy is reported to have washed his hands of the entire affair. And, reportedly, the Prime Minister has been advised by his coterie of advisors to shelve the White Paper in the election year. Some of the policy proposals put forth in the third draft (September) and the changes made in the fourth (November) draft clearly call for hard decisions on the part of the government.

Will the government have the courage to present the November draft to Parliament? Or will it tone it down further, and thereby dilute the very exercise of producing a White Paper.

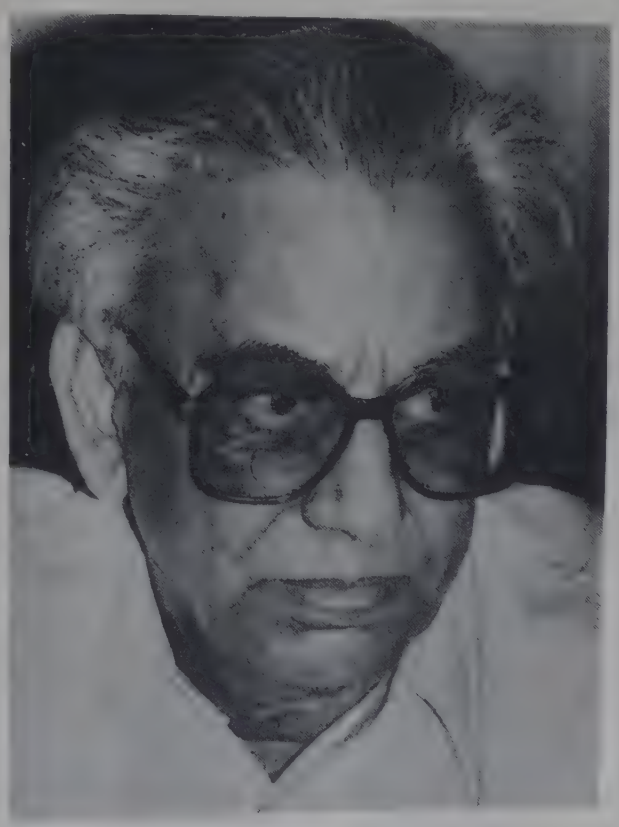
When he began, Krishnamurthy had sufficient references to begin work on. There were the recommendations of the Economic Adminsitration Reforms Commission (EARC), the Arjun Sengupta Committee on Public Enterprises and the Economic Advisory Council to the Prime Minister. Besides, there was the thinking of the ruling party embodied in the document of the All India Congress Committee (I) titled "Public sector, an overview". This document incorporates the thoughts of the late Indira Gandhi, who had categorically stated that "the test of political management lies in achieving higher productivity". All the administrative monitoring will not help unless we provide the critically needed political push and guidance for management to show results". Political management and political push were defined as:

- Desisting from soft options in order to gain popularity or as a measure of expediency;
- Encouraging innovative efforts and technologies available from within the country and within the public sector rather than buying from outside;
- Defending the public sector and public sector managers in all forums when they are subjected to slander or unjustified attack by irresponsible elements in the country;
- Insisting, at the same time, on their performance as per targets and expectations as also as per standards of integrity beyond doubt and removing those who fail;
- Interacting with workers and trade unions in particular, making them appreciative of the role and benefits of the public sector, requesting and ensuring that they do not indulge in acts or practices which would damage the enterprise and, on the other hand, setting up systems which will ensure speedy disposal of grievances by the individual and the trade unions and ensuring that the legitimate trade union rights are not trampled upon by management.

Indeterminate amber

Despite such clear cut guidelines, what has actually emerged in the third and fourth drafts are glaring inconsistencies which fall far short of what could justifiably be called the constituents of any White Paper which is supposed to blaze the trail for years to come. In fact, the signal given by the November draft is neither green nor red but an indeterminate amber which will permit traffic to pass either way.

The November draft has toned down and even eliminated some of the key elements of the September version which could prove to be embarrassing to the government. For example, para six,



Krishnamurthy: fed up now

which underlines the need for a public sector which should be flexible and responsive to the changing compulsions of time has been altogether removed.

Another critical section left out refers to the action related to the restructuring of the Public Enterprises Selection Board (PESB), delegation of powers, tenure of chief executives, memorandum of understanding, revision of Bureau of Public Enterprises guidelines, placing of goods and services, streamlining of investment approvals system and holding companies.

All these are sensitive issues on which public sector managers have been for long clamouring for a policy statement. Though some of the points have been tackled, it has not been done comprehensively enough.

Unlike the September draft, the November version reasserts that "the public sector will continue to occupy the commanding heights of the economy and will, therefore, continue to remain a major plank of government's policy."

The fourth draft reaffirms the Industrial Policy Resolution of 1956 and lists out the priority areas for the growth of public enterprises in the future:

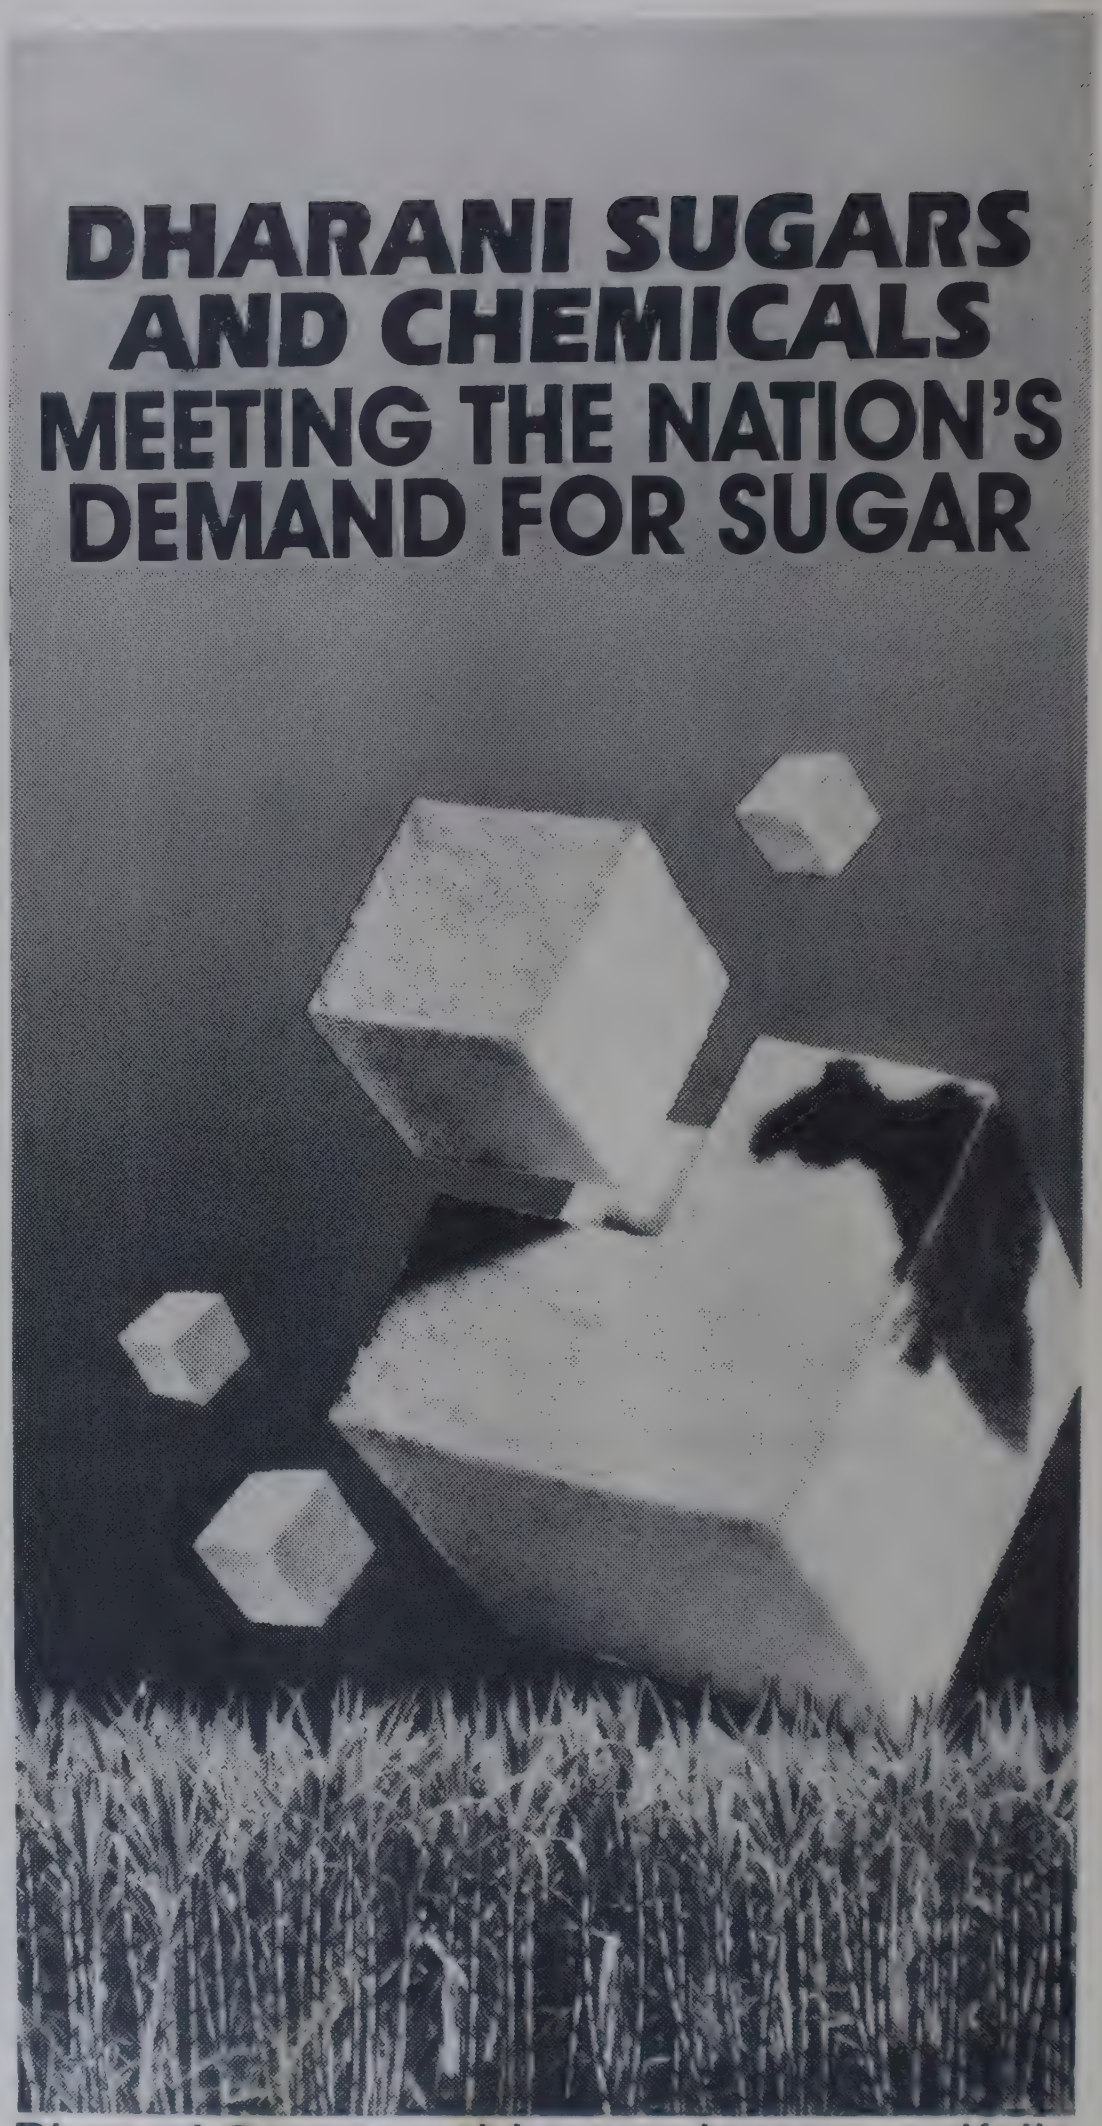
- Investments in infrastructural services, particularly when they are a part of a integrated network.
- Investments in megaprojects involving the discovery and exploitation of mineral resources, particularly when these resources are scarce and need to be utilised in the context of long-term perspective for depletion.
- Major investments in technology acquisition and development and capability building in critical sectors which influence the prospects for developments in the whole economy e.g., machinery manufacture, electronics and information technologies and bio-technology.
- Investments in the manufacture of products -- where strategic considerations preclude dependence on private sources.
- Selective investments in areas which are largely in the private sector, where a countervailing power to monopolistic or oligopolistic practices is felt to be necessary and where other methods of regulating these practices are ineffective.

In the light of these, the draft calls for a "review of the existing portfolio of public investments". "Public enterprises should consider vacating low technology, small scale and non-strategic areas of operation so that they can concentrate their resources and focus their capabilities on high priority and technologically demanding areas".

On profitability, the September draft states that "financial profitability (other than in exceptional cases) is both relevant and important and ought to be one of the key yardsticks of public sector performance evaluation provided certain distorting or handicapping features are moderated or eliminated. The November draft is without the portion "provided certain distorting or handicapping features are moderated or eliminated."

Similarly, the statement in the September draft that "the issue of overmanning

DHARANI SUGARS AND CHEMICALS MEETING THE NATION'S DEMAND FOR SUGAR



Dharani Sugars and Chemicals Limited is promoted by an enterprising group of highly successful U.S.-based NRI businessmen led by Dr. Palani G Periasamy. Dr. Periasamy is the Chairman of PGP International Financial and Industrial Consultants Inc., USA – a corporation providing a wide range of consultancy services in USA and the world over. In USA, the group has set up shopping complexes and is also in the hotel industry. Dr. Periasamy and his associates are the people behind the successful Dharani Cements which has already turned in profits in the first nine months of its operations.

To meet the huge demand-supply gap, Dharani Sugars is setting up an ultra-modern factory at a cost of Rs. 21.10 crores, at Sivagiri Taluk in Tamil Nadu with an installed capacity to crush 2500 tonnes of sugar per day. Located in the heart of the cane belt, the plant will enjoy 220 days of high- recovery crushing, as against the all-India average of 150 days.

It is an opportunity that can make your life sweeter.

Public Issue of 37,00,000 Equity Shares of Rs. 10/- each for cash at par.

ISSUE HIGHLIGHTS

- Promoted by successful U.S.-based NRI businessmen.
- Located at the centre of high yielding sugarcane belt rich in water resources.
- 220 days of high recovery crushing period annually as against national average of only 150 days.
- Commencing production in January 1989.
- Special Concessions: Free sugar quota, purchase tax deferment, electricity generation tax exemption.
- Low capital cost; shortest implementation period.
- 80CC and other tax benefits.
- Listing at Madras and Bombay.

in some of the public enterprises has to be confronted and a consensus reached on measures to resolve it" does not find a place in the November draft. Any retrenchment of surplus staff would be unpalatable to the political bosses in an election year. Hence its deletion.

However, some other portions of the September draft have been retained intact. These are:

"Social obligations are often best discharged by producing efficiently and ensuring availability of resources for future growth and expansion..... Not only will the government undertake to speedily initiate the induction of new technology and changes in product-mix in loss-making units to enable them to turnaround.....In future, any deviations from commercial considerations transparent in investment decisions have to be made possible whenever the source of these deviations is outside the domain of enterprise manager (for example, location)..... In case, it is not able to compensate an enterprise for the extra cost involved in the non-commercial obligation which would be the ideal-solution, it would make explicit the impact of such objections on profitability to ensure that the objective of generating resources for future investment is not neglected."

"Hard decisions"

On a case-by-case basis, government has chosen to "restructure the capital base of such public enterprises that continue to make losses ..... Government as owner would consider absorbing the capital loss arising from the venture and suitably write-down the capital which needs to be serviced; and thereafter insist on capital servicing" ....And, in units which just cannot be turned around, it would "actively seek a political consensus on some hard decisions needed to plug the continuous drain on public enterprises in keeping them going."

Such a proposal clearly hints at closure of units perpetually making losses, no matter for what reason. Does the Gandhi government has the courage to take such a proposal to its logical conclusion?

About the crucial issue of checks and counter-checks on the functioning of public enterprises, which could undermine their autonomy, both the September and November drafts have conveniently passed on the buck to Parliament and sought the establishment of "a convention that questions concerning matters that are not within the direct purview of government should not be admitted". Needless to say such a suggestion, if it is pushed through in parliament, will effectively remove from the public gaze all the misdeeds of public sector managers who actively collaborate with bureaucrats and politicians.

The justification given is that the ministries have to furnish information to parliamentary committees concerning day-to-day administration or executive action in public enterprises.

Close scrutiny

Ministries have in turn to address such enquiries to the public enterprises, which may some times affect the operational autonomy. The close scrutiny by the Comptroller and Auditor General of India (CAG) is sought to be diluted by the assertion that "the audit which is essentially an ex-post activity should not become an ex-ante control on managerial initiative and decision making, as indeed it has".

It is proposed to establish effective systems of parliamentary committees to examine overall efficiency and working of public enterprises as well as reorientation of the scope of CAG's reports which would enable them to have a better perspective. Thus the guilt of interference is conveniently transferred to parliament by the statement that "if Parliament defines its scope of scrutiny clearly, then the administration will have reduced scope for interference that erodes the operational autonomy of public enterprises".

In effect, the draft merely wants to restrict the purview of the CAG on the flimsy argument that the public sector is subject to double audit. The reality however is that the public sector has become the proverbial golden goose for politicians. As an ardent supporter of the public sector put it, "A decade ago someone apparently very high up made a remarkable discovery: that the ruling party does not have to run after the private sector for election funds when it has an inexhaustible goldmine in their backyard, the backyard being the public sector."

The public sector as a whole has suffered from umpteen wrong decisions taken by the government, the various agencies of the government and the enterprises themselves. The quality and character of some of these decisions have been brought to the fore by the Committee on Public Undertakings and the CAG. Every year the audit report (commercial) issued by the CAG highlights the deficiencies in the operations of the Central government controlled companies, which are pointed out in the context of the fact that the management of these enterprises are not responsible for the problems. As such, management control has been substantially curbed by the bureaucrats and politicians rather than the CAG or the CPU.

In wage settlements with trade unions, the November draft accepts that governmental guidelines and their approval undermines the authority of the management and vitiates the negotiating process. However, the noteworthy proposal that "government could by and large concern itself only with the D.A. formula to be applicable to the public sector" which is in the September draft has been deleted. The reason for the deletion is obvious: it pinpoints the role of the government and leaves little scope for later manipulations and interference.

The statement on productivity in the September draft which states that the government expects overall productivity, both employee and managerial, to substantially improve so that the products become internationally competitive has been deleted from the revised fourth draft. This has been a controversial issue throughout, with the trade unions complaining that the workers are made to pay the costly price of an inefficient management. The September version of the draft had also stated that unless productivity is improved, "the increase in employee remuneration in the public sector will become totally uneconomic rendering the enterprises uncompetitive and a drain on the economy." Such a sensitive suggestion would also be unpalatable in an election year and hence its deletion. Nevertheless, the November draft is of the vied that the logic of having a completely uniform wage structure in the public sector needs to be examined.

The draft proposes amendment of Article 12 of the Constitution to exclude all government-owned corporations and companies under the jurisdiction of CPU. This would remove public enterprises from the jurisdiction of the state and amenable to writs. It is such proposals and more which have so far prevented the government from placing the White Paper before Parliament. The White Paper may never see the light of day, some observers feel, atleast during the present tenure of the government.

MOULDS

We have been designing and manufacturing moulds and dies since 1970 and have 250 employees including engineers, designers, machinists, tool makers and moulders. Our engineers have been trained in the best tool rooms in the U.S.A. and are fully conversant with the latest techniques of precision mould manufacture.

We have a fully air-conditioned computer controlled tool room which is equipped with the best EDM's from Switzerland, three dimensional die sinkers from W. Germany, inspection and quality control machines from Japan and all other precision back-up machines.

We hold large stocks of the best imported alloy steels which are heat treated in our modern heat treatment plant. We can case-harden, harden, nitride and stress relieve all steels.

We are specialists in moulding the whole range of thermo-plastics and can ensure supply of moulded components to your requirements. Our moulding shop is equipped with ten Toshiba 150 ton fully automatic moulding machines, a Kautex blow moulding machine and a team of experts to run them.

Contact us for further information.

- High quality moulds for plastics and die casting industries.
- Moulded plastic components for general purpose and engineering plastics.
- Precision and electric discharge machining (spark erosion).
- Complex jigs and fixtures.
- Heat treatment of steels.

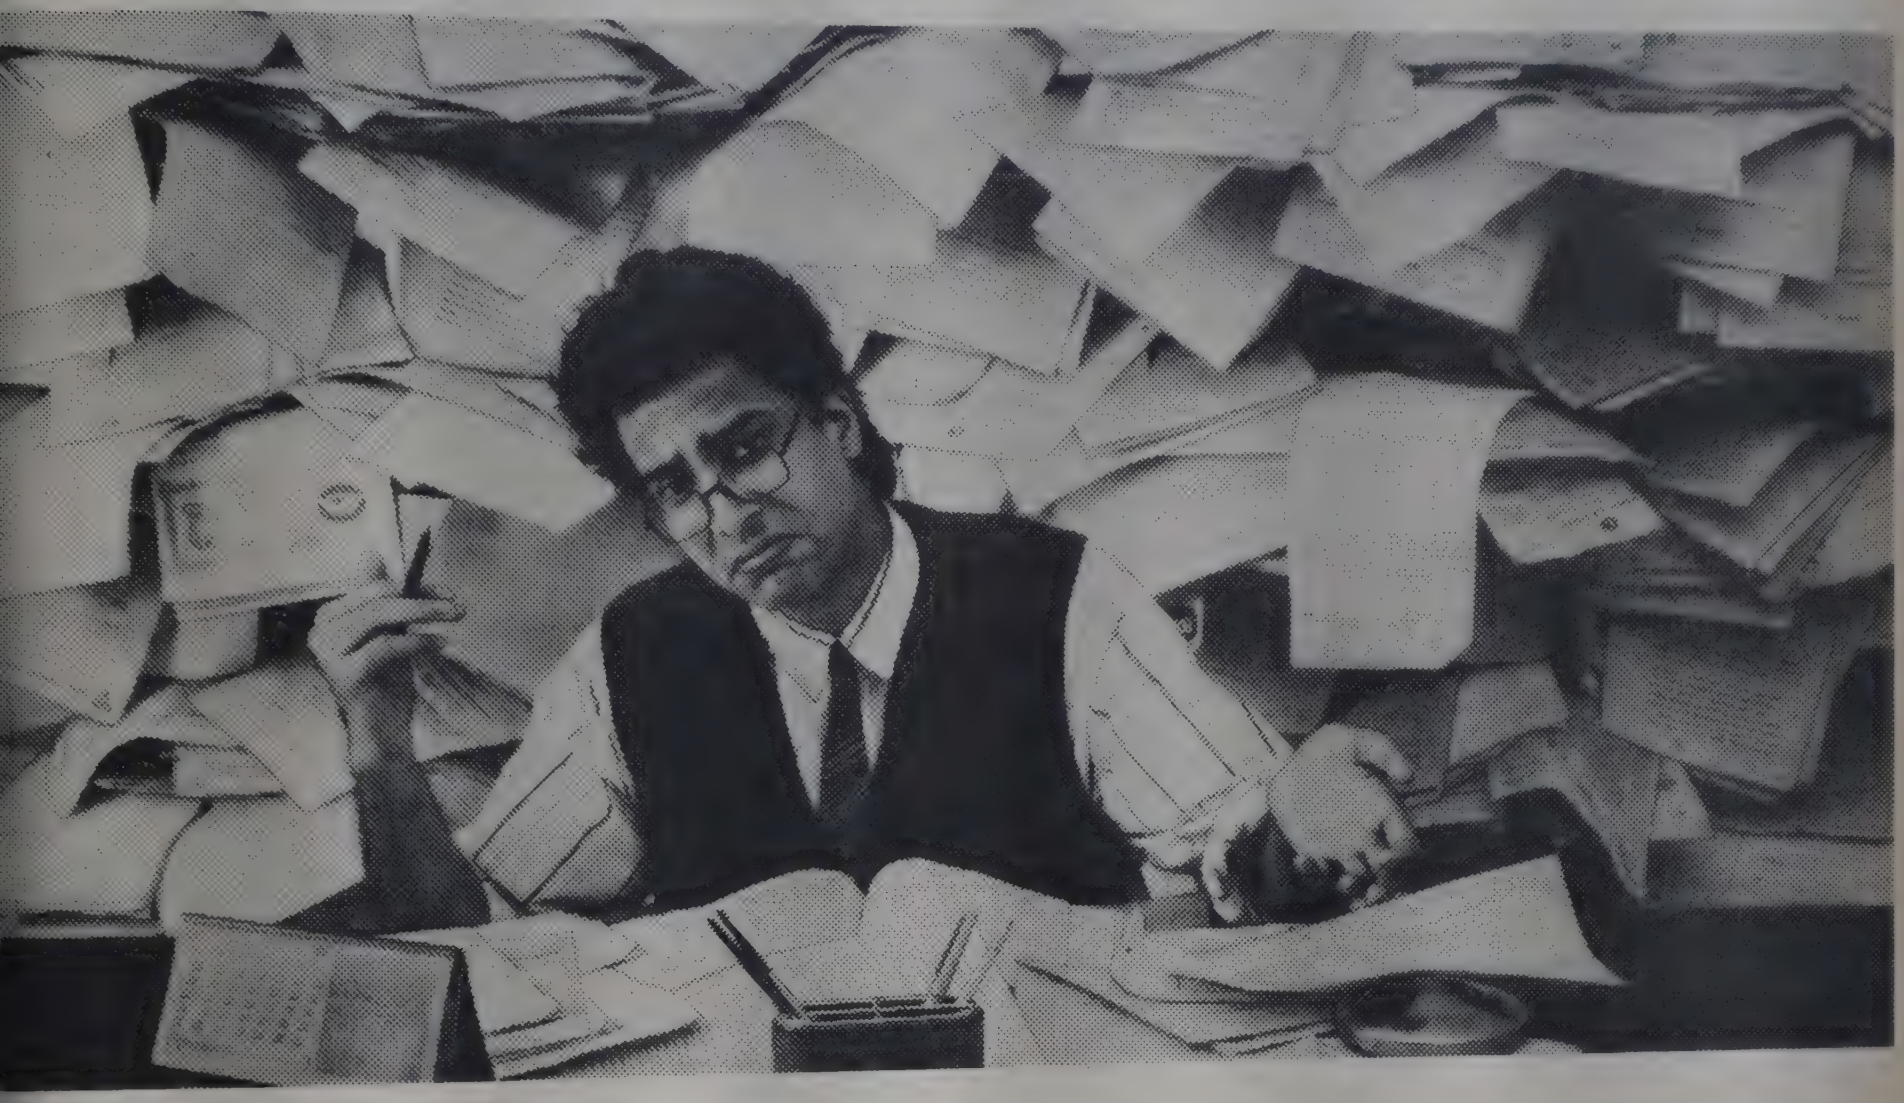
A paper explosion in the office will burden a lot more than just office space.



An important document is lost. An urgently required paper takes impossibly long to find. Confidential information leaks out...

When unwanted papers are allowed to pile up and spill over everywhere, minor disasters occur. Reducing office efficiency and productivity — and threatening the security of your company.

Pilot Paper Shredding Machine: the fast and simple solution

The Pilot Paper Shredding Machine is the surest, most convenient way to check paper explosion and preserve information security.

It speedily reduces large quantities of paper to unreadable bits, preserving confidential information.

And it gives you a choice of five models — so you can select one to suit your needs.

Manufactured by:
Pilot Business Machines Pvt. Ltd.

LAWRIE PLANTATIONS

Reduced profit

The Lawrie Plantations group showed a sharp fall in pre-tax profit from £3.47 million last year to £677,000 this year. The drop in profits is attributed to lower coffee prices from the group's African plantations and reduced sales from tea plantations in Bangladesh. The Lawrie group has sold off most of its once extensive interests in India.

BUDGET RENT A CAR

Leveraged buy-back by Ford

The third largest vehicle rental group in the world, Budget Rent a Car, is going through a $ 300-million leveraged buyout. Budget, which used to be owned by Trans America Corporation, went public two years ago. It is now again going private through a management-led leveraged buyout, principally financed by the Ford Motor Company. Last year, Ford had funded a similar management buyout of the leading car rental company, Hertz. The No.2 in the car rental business, AVIS, also went through a management buyout backed by General Motors. With the buyout of both Hertz and Budget, Ford will have a very strong position in the car rental market.

DAIMLER BENZ

Air Bus tie-up

The West German government has cleared the proposal for the giant auto maker Daimler Benz (manufacturers of Mercedes Benz) to take over MBB, the leading West German aircraft manufacturer. MBB is the German partner in the European Air Bus Consortium. The takeover proposals include a 75 per cent West German government guarantee on exchange risks on the Air Bus project until 1998. After the merger, the Daimler Benz-MBB group would have a combined turnover of DM 80 billion per annum.

SAATCHI & SAATCHI

Sued by Arthur Anderson

The world's largest advertising group, Saatchi & Saatchi, is being sued by Arthur Anderson, America's largest accountancy firm. Arthur Anderson alleges that Saatchi and Saatchi is luring away it management consultants and in the process taking away its consultancy business. Saatchi and Saatchi is fast developing its consultancy division which is headed by Victor Millar, formerly a top consultant with Arthur Anderson.

TEXACO

Joint ownership with Saudi Arabia

The world's largest oil producer, Saudi Arabia, seems determined to extend its present oil business into refinery and marketing activities in the consuming countries. Saudi Arabia has recently signed a $ 1.8 billion deal with the leading US oil company, Texaco, for joint ownership of three major Texaco refineries in the US, and for a chain of 1,400 US service stations. The $ 1.8 billion from this transaction will help Texaco iimprove its cash position. Texaco was almost driven into bankruptcy following a $ 10 billion court award against it, in a suit filed by rival oil company Pennzoil.

SEARS ROEBUCK

Sears Towers up for sale

The American retailing giant, Sears Roebuck, has put up for sale its 110-storey head office building in Chicago which is reputed to be the world's tallest building. Sears' asking price is $ 1 billion. The Sears Tower was constructed in 1974 when the company was riding high. Now the company is facing a takeover threat and plans to utilise the sales proceeds from the Tower block to buy back 10 per cent of its own shares. Edward Brennam, chairman of Sears Roebuck said that it was a prudent time to sell the building and earn revenue to expand the stagnant company.

NIHON TOCHI

Bankruptcy over Konica

One of Japan's most aggressive corporate raiders, Nihon Tochi, has been declared bankrupt by the Osaka district court, with debts of $ 1.2 billion. Nihon Tochi had built up a 22 per cent stake in the film and camera company Konica, in the expectation that Konica would seek to ward off this takeover threat by buying back its shares at a profit to Nihon, but this did not happen. Last year Nihon had made substantial profits through similar greenmailing techniques with the shares of Mitsui Chemical and Toyoda. However Konica refused to give in to the greenmailing threat and the blockage of funds by Nihon ultimately led to its financial bankruptcy.

METAL BOX

European link

Metal Box is merging its packaging business in the French packaging company Carnaud, to form a new company, CM Packaging. This merged company will be the largest packaging group in Europe and will have its shares listed on the Paris and London stock exchanges. Earlier there had been speculation of an Australian bid for Metal Box when Elders Group of Australia announced that it had acquired a 5 per cent stake in Metal Box.

KLOCKNER

Loss on oil futures

Klockner and Co, the leading West German steel and oil conglomerate, has lost DM 600 million on trading in oil futures. The enormous loss has jeopardised the interests of the whole group. The company's executive dealing with oil futures trading has been arrested. It is likely that the Deutsche Bank may step in with a rescue operation to fund the loss on an interim basis.

GEC

Joint bid for Plessey with Siemens

Siemens of West Germany and GEC of UK have joined hands to make a takeover bid of £ 1.7 billion for Plessey, the UK defence and telecommunications giant. Only two years ago, GEC had made a £ 1.2 billion bid on its own to take over Plessey, but was turned down by the British Monopolies Commission. Plessey has rejected the current bid and a long-drawn-out battle is likely.

A secretary, a telephone, a telex machine, a calculator and increasingly, a personal computer. You'll agree that an executive can hardly function in today's world without these facilities. But there's something else that's even more essential. It's made of plastic, measures 2"x 3", and operates smoothly to make life easier and more convenient for you.

Flying to any point in India or abroad? It buys your airline ticket (and automatically gives you free flight insurance for Rs. 1 lakh). It pays for your hotel room, picks up your restaurant and shopping bills. It comes to your aid in an emergency– you can even cash in on it. It is recognised at 7,000 outlets in the country and makes sure that you are recognised too. It makes you a member of the world's most prestigious club and gives you continuing benefits. Like discounts at select hotels in India and abroad, and on medical insurance. It rewards you with a purchase bonus when you pre-pay for expected expenses. It's a thoughtful little machine that even lets you phone and have flowers, fruit, mithai, chocolates or cakes delivered to someone special.

It makes a lot of business sense and is just your style. The Diners Club card.
You have no business being without it!

EID Parry

Higher dividend in bicentenary year; well entrenched in a firm and well-diversified base; several modernisation and expansion plan on hands; substantial rise in bottom line; better performance due to reduced interest and liabilities

For the year ended June 1988 the company has recommended payment of dividend on equity capital at the rate of 20 per cent against 15 per cent paid in the previous year. The dividend includes 5 per cent special bicentenary dividend. The group, known as Parry group completed 200 years of operation in 1988.

The company's founding father was Thomas Parry, who set up the house of Parry's in 1788. The company has now dug deep into such diversified business activities as sugar, confectionery, fertilizer, sanitaryware, farm inputs, gensets, investment and electronic connectors.

The company has improved its sales by 19 per cent compared to the previous year at Rs.186.09 crores (Rs.155.88 crores). However the operating margins have reduced from 7.09 per cent to 5.23 per cent. The company has reduced its interest liability from Rs.4.10 crores to Rs.2.82 crores. After reduced depreciation at Rs.1.81 crores (Rs.2.6 crores) and taxation at Rs.1.78 crores (Rs.2.50 crores), profit at the net level has improved from Rs.1.80 crores to Rs.3.34 crores.

		(Rs crores)

1988: HIGH	45.00	
Low	29.00	

The company's ammonium phosphate fertilizer "Paranfos" registered higher production at 71.849 tonnes. During the year the company crushed a record 8.41 lakhs tonnes of cane, it was made possible due to the company's efforts to improve cane acreage and yields.

The company's alcohol production was maintained at a satisfactory level. In view of the low demand for alcohol in Tamil Nadu the company had to export it to other states. As for the company's ceramics division this is the first full year of operations of new kilns. The production has increased by 10.6 per cent over the previous year. The company has launched the cascade range of products, which has been extended to all parts of India.

The company has decided to sell the land, building and machinery pertaining to the tools division. The sulphuric acid and phosphoric plants have been commissioned after modernisation. This will enable the company to increase productivity. The company is currently working on a proposal to modernise the Paranfos granulation plant and hope to complete this project by March 1990. Moreover the company has received the government approval for expanding the crushing capacity of sugar plant to 5000 tonnes canes per day.

As for the controversy regarding the purchase of Coromondel Fertiliser shares EID Parry was the only Indian promoter of Coromondel Fertilizer and the industrial licence had been obtained in its name. The company directly and through its subsidiaries hold about 8 per cent shares of CFL.

Indrol Lubricants

Sales cross Rs.100 crores; net profit up by 54 per cent due to power depreciation and tax liability. Foreign shareholders gain from issue of rights shares

Indrol is engaged in the processing and marketing of industrial and automotive lubricants. Its products are sold under the brand name of Castrol. Castrol Ltd UK holds 40 per cent equity of the company.

For the year ended 30 June 1988, Indrol's sales crossed Rs.100 crores for the first time; sales volume going up by 21 per cent. The total income increased by 26 per cent to Rs.115.36 crores. Dividend was stepped up by 6 points to 26 per cent.

Nearly 75 per cent of Indrol's sales came from automotive lubricants and 20 per cent from industrial lubricants. Its main raw materials is base oil. Unit cost of base oil rose marginally to Rs.10.1 and that of various additives by Rs.1.20 to Rs.28.9. With its reputation for quality products, Indrol is able to pass on the increase in raw material costs to the consumers. However, during the year higher sales volume coupled with lower depreciation charges resulted in 54 per cent increase in net profit.

Depreciation during the year was lower at Rs.1.19 crores. Gross profit went up by 20 per cent to Rs.8.83 crores. With lower depreciation and reduced tax liability (from 47 per cent to 42 per cent), net profit at Rs.4.45 crores represents a 54 per cent increase over the previous year. In 1983-84, Indrol's tax liability was as high as 71 per cent of its pre-tax profit. With various tax planning measures (including IDBI deposits), tax liability during the last five years has been reduced substantially.

During the year, borrowings has been restricted and as much as Rs.4.32 crores ploughed back. While gross block increased by Rs.2.48 crores, working capital went up by Rs.3.29 crores. Sales tax deferment loan from SICOM (interest free) has increased by Rs.1.34 crores. Gross margin declined from 8 per cent to 7.7 per cent but net margin improved to 3.9 per cent (from 3.1 per cent).

In July 1988 it offered lastly convertible debentures of Rs.150 each aggregating Rs.9.62 crores. Despite the fact that all the shareholders (belonging to the same

A new era is about to dawn

We will probably never be manufacturing Blankets, Carpets, Clothes, Knitwear or Upholstry.

But in the near future you will feel our fibre in these.

Six pointers on road safety.

(Or, how Srichakra's unique 'Lock-in' Tread brings you home safe.)

Pump out water from the roads
With the special high-suction design that vacuums its way to a grip on wet roads.

Keep your balance at high speeds
The 'Lock-in' Tread is wider, and continues around to the sides of the tyre.

Stop yourself from skidding
With the angular pattern that gets maximum grip.

Avoid bald spots on your tyres
The 'Lock-in' Tread is flatter and wears evenly, unlike rounded designs.

Take corners with perfect grip
The shoulder tread blocks firmly hold down the tyres to the ground.

Keep your tyres perfectly clean
The innovative design constantly channels air (and water) through the grooves, removing dust and sand.

TVS SRICHAKRA TYRES

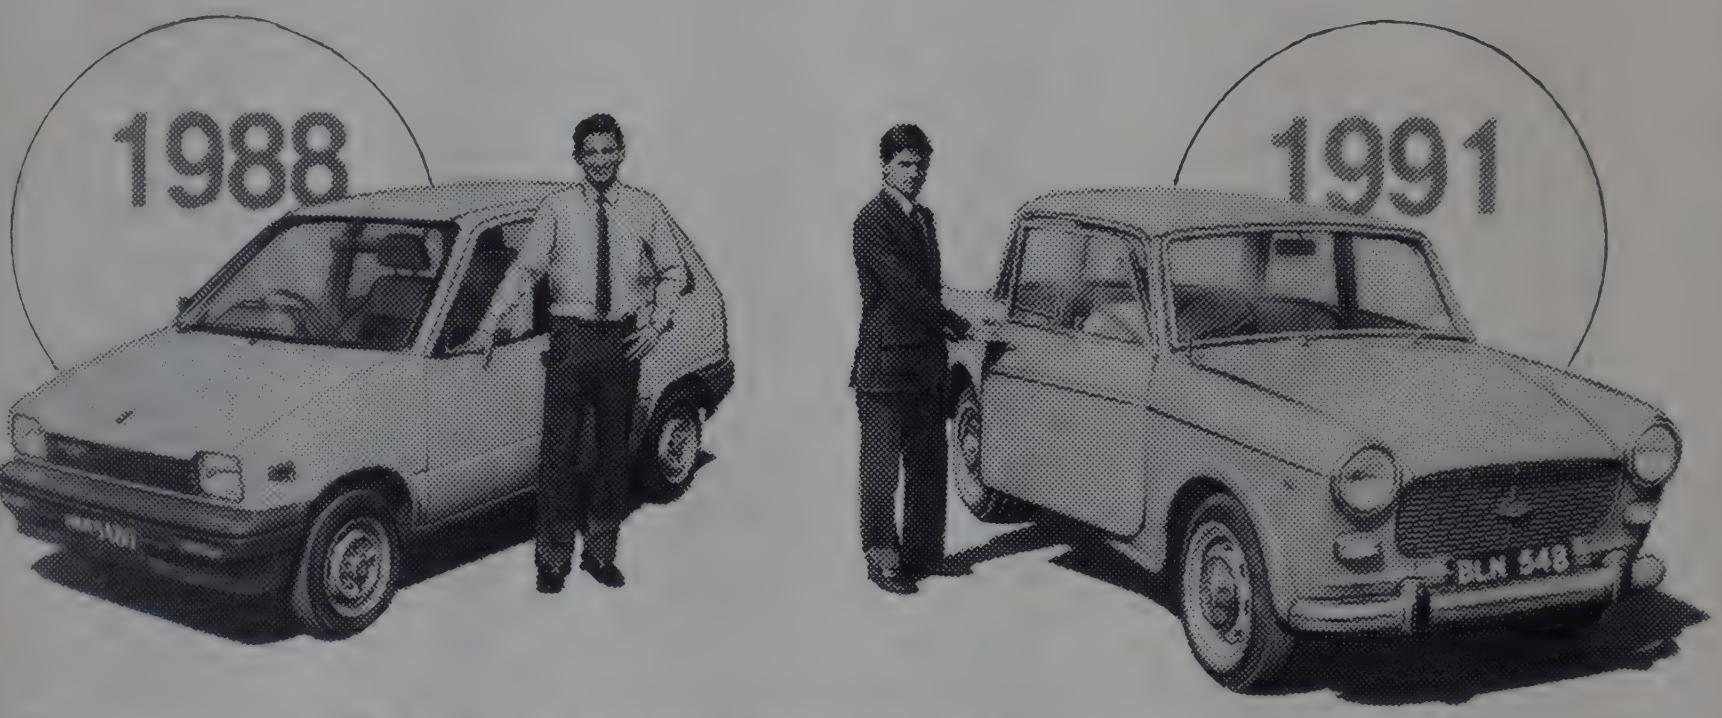
Safety you can trust.

INCREDIBLE BUT TRUE !!!

THE 20TH CENTURY AUTOPLAN II

100% Finance at just 6.29% p.a.....

.... And your next car paid for too!



Buying a Car has never been so simple

20th Century Autoplan is a Hire Purchase Scheme which enables you to acquire a car without making an outright purchase, yet enjoying ownership benefits such as depreciation etc.

HIGHLIGHTS

- Upto 100% finance available.
- Remarkably low net cost of financing at 6.29% p.a. flat.
- No Guarantor.*
- Security Deposit (25%) grows at an attractive rate (14%) enabling you to pay for your next car.
- Flexible repayment period ranging from 24 to 48 months to suit your budget.
- All established Indian & Imported Cars covered under Autoplan.

* Autoplan I gives you the option of a lower Security Deposit (15%) with one Guarantor.

Sodhaya-888

lass) have equal rights, the resident shareholders of Indrol were at disadvantage. The foreign shareholder was directly offered right shares (instead of convertible debentures) to enable them to retain their 40 per cent holding. The Indian shareholders will have to hold the non-convertible part of Rs.100. The overall prospects are reasonably good.

Mather and Platt

Higher dividend on enlarged capital; increased cash profits and growth in fire protection division; bright future in food processing and packaging; satisfactory order book position

The company has recommended a dividend of 25 per cent for the year ended June 1988 against 20 per cent paid for the previous year ended June 1987. The bonus shares issued and allotted in the ratio of 3:5 in August 1988 will also be eligible for dividend.

The sales and other income has gone up to Rs.46.92 crores from Rs.42.04 crores. Although sales turnover increased by 12 per cent, the operating profit is up by only 9 per cent, even when the operating margins are the same. This is because the previous year's profit included an element of tax free capital profit of Rs.40.72 lakhs. The Rs.2.65 crore tax the company has paid is 33 per cent more than that paid last year.

The company has made a net profit Rs.3.69 crores (Rs.3.92 crores). Cash profit is higher by 8 per cent up from Rs.4.22 crores to Rs.4.56 crores. The bonus issue has not been reflected yet. Hence the equity is the same as last year. After the bonus the equity will be Rs.10.34 crores and reserves Rs.6.48 crores. The investment is less at Rs.0.65 crores (1.10 crores) because the company has sold some units of Unit Trust of India.

In the fire protection field the year under review has been successful with a 23 per cent growth in turnover over previous year. The company has recently completed installation at Commerce Centre and the IDBI building in Bombay.

The turnover of the machinery division vis-a-vis pump department increased by 15 per cent. The company continue to be a major supplier to the core sector industries. During the year the company has received large orders from Maharashtra State Electricity Board. Similarly Neyveli Lignite Corporation has placed orders for vertical pumps.

Other notable orders include fire fighting pumps for the HBJ Pipeline and large multistage pumps for collieries. A new range of end suction pumps has been introduced and the range of sewage pumps has been extended.

The textile machinery department has had a very disappointing year due to the recessionery trend in the textile industry. With the well deserved national thrust now being given to food processing industry the company foresees a sound future for food processing and packaging machinery.

The orders booked during the year amounted to Rs.57.20 crores as against 54.56 crores in the previous year. There is a record order backlog of Rs.73.85 crores as at the year end.

Kalyani Brakes

The company turns to the black; current year's results encouraging; increased turnover leads to economies of scale and nominal operating profits; consistent losses over last five years causes company to come under the ambit of the Sick Industrial Companies (Special Provisions) Act

The company has reached higher levels of operations. This has made a turn around in results possible. The turnover achieved was Rs.12.29 crores (Rs.5.81 crores). In come from other sources has risen to Rs.1.03 crores (Rs.0.56 crores). The operating profit is Rs.2.62 crores (Rs.0.25 crores) against a loss of Rs.1.22 crores last year. It has managed a nominal profit of Rs.51 lakhs (loss Rs.1.83 crores).

The raw materials cost has risen to Rs.7.69 crores (Rs.4.02 crores) and the wage bill to Rs.1.03 crores (Rs.0.69 crores). The interest burden went up nominally to Rs.1.55 crores (Rs.1.47 crores) and a marginally lower depreciation of Rs.0.56 crores (Rs.0.61 crores) has also been provided.

Current year operations have brought in economies of scale. Also the import content in raw materials and components has come down from 44 per cent to 39 per cent while the value has doubled.

The working of the two halves of the year are evenly balanced. In the first half, sales and operating profit were Rs.5.93 crores and Rs.1.35 crores respectively, as against Rs.6.36 crores and Rs.1.27 crores respectively in the second half.

Margins in the first half were 22.77 per cent of sales and in the second half were 19.96 per cent. The reduction in import content of raw materials and components, and economies of scale, have reduced the raw materials cost as a percentage of sales to 60.22 per cent from 65.09 per cent in the first half.

The consistent losses in the immediately preceding five years, have eroded at least 50 per cent of the company's net worth. As such the company comes under the Sick Industrial Companies (Special Provisions) Act, 1985.

However, this year's results are highly encouraging, so is the outlook of the automobile ancillary industry as a whole.

During the year the company has developed front disc brakes and 4-way joints for the Maruti car, front brakes for the van and rotors for the Gypsy. Besides, hydraulic brakes cylinder was developed for Bajaj Matador-MAX and the tandem master cylinder for Hindustan Motors, Bajaj Tempo and PAL-118NE.

The indigenisation plan of all the new models of various vehicles has come as a boon to this company. Front caliper assembly contributed significantly to the turnover for the first time.

The agreement with the employees should ensure a trouble-free year. The general boom in the auto ancillary is also going to boost the profitability of the company.

TRENDS

TELCO

The company's performance in the first half year ended 30 September is encouraging. Net sales are higher at Rs.603.54 crores (corresponding period in previous year: Rs.502.84 crores). With an income of Rs.16.02 crores (Rs.11.96 crores) from non-manufacturing sources, the total income for the period is Rs.619.56 crores. The net earning after providing for substantially higher depreciation of Rs.21.28 crores (Rs.15.50 crores) and taxation at Rs.1.20 crores (Rs.60 lakhs) is Rs.6.20 crores. This is Rs.3 crores more than the figure of Rs.3.20 crores in the corresponding period of the previous year.

Manufacturing costs have been on the rise with sales. Raw materials at Rs.342.03 crores (Rs.258.40 crores) and wages at Rs.86.05 crores (Rs.79.80 crores) together account for 71 per cent of sales, compared to 67 per cent in the corresponding previous period. Interest is however lower at Rs.31.65 crores (Rs.37.80 crores). The gross profit at Rs.28.68 crores (Rs.19.30 crores) is 4.75 per cent of sales, a better margin than the 3.84 per cent of the previous six months.

The company's sustained efforts at improving the quality of its product has paid off. The total number of vehicles sold during this period is 23,417 (19,475) out of which 1066 were exported, a significant rise from 477 in the corresponding period of the previous year. The total number exported in the last accounting year was 2,386. The company expects to sustain this trend for the remaining part of the year.

The company reports that the Tata 206 pick-up has cleared the fuel efficiency norms set by the government. The vehicle which was launched in July 1988 is expected to be well received by the customers. Another product, the Tata Estate, is now in the development stage, and is expected to be launched sometime late next year.

Grasim Industries

Grasim Industries has reported excellent results for the first half of the current year.

Sales at Rs.307.34 crores are 14 per cent higher compared with the corresponding period last year. The company has earned an operating profit of Rs.49.93 crores (Rs.38.70 crores), an increase of 29 per cent. After providing Rs.12.68 crores for interest and other financial charges (Rs.13.82 crores), Rs.18.10 crores for depreciation (Rs.15.05 crores), and Rs.3.60 crores for taxation (Rs.1.53 crores), the net profit has risen to Rs.15.55 crores (Rs.8.30 crores) an increase of 87 per cent.

The operating margins have increased to 16.25 per cent (14.39 per cent), mainly because the share of raw materials as a percentage of sales declined to 46.74 per cent (50.67 per cent).

The raw materials cost went up by 5 per cent to Rs.143.65 crores (Rs.136.27 crores), wages constituted Rs.24.97 crores (Rs.23.80 crores) while manufacturing, selling and distribution expenses shot up by 30 per cent to Rs.96.28 crores (Rs.73.82 crores).

The company has plans to invest Rs.950 crores on new projects in the next four years. Among them are the sponge iron project, the colour TV picture tubes glass shell project, the hydrogen peroxide project and the Mangalore refinery project. It is also doubling its cement capacity at Jawad to 2 million tpa.

To finance its cement expansion plan costing Rs.145 crores, it has offered Rs.60 crores worth of convertible debentures. There are also plans to raise another Rs.100 crores in the first half of 1989.

Raymond Woollen

The company has performed exceedingly well in the first half year ended September 1988. Sales and profitability have jumped appreciably. Sales at Rs.118.49 crores are 17 per cent higher. The operating profit is Rs.17.27 crores (corresponding period in previous year: Rs.14.23 crores), an increase of 21 per cent. The interest burden has declined substantially to Rs.7.01 crores (Rs.8.35 crores). This has allowed the company room to make higher provisions. The provision for depreciation rose to Rs.7.57 crores (Rs.7.04 crores) while the higher profits warranted a tax provision of Rs.42 lakhs (nil).

Thus, the company ended its first half year with a net profit of Rs.2.27 crores compared with a loss of Rs.1.16 crores in the corresponding period last year. This is in spite of an increase in the ratio of raw material cost to sales from 22.58 per

cent to 25.33 per cent. The wage bill has risen by 26 per cent to Rs.14.87 crores.

The company is in the process of setting up, in a new division, a plant to manufacture textiles wholly or partly from synthetic fibres or yarn by installing 50,000 spindles and 1,500 looms in phases. The plant will be located at Chindwara in Madhya Pradesh and not at Balaghat as planned earlier.

The company's PFY project has suffered due to the appreciation of the yen, resulting in a 25 per cent jump in the project cost to Rs.150 crores. This has made the company change its earlier plan to implement the project as a division of the company. A new company, Raymonds Synthetic Ltd, is being floated to implement the project. It will have an equity capital of Rs.50.54 crores. Of this Rs.10.11 crores is being contributed by the Japanese collaborator. The promoter's contribution will be Rs.20.21 crores and the public participation will be Rs.20.22 crores.

The company proposes to raise at least 50 per cent of the rupee capital through a rights issue of debentures.

Kinetic Honda

This new generation two-wheeler company has turned the corner at last, during the half year ended July 1988. It has managed to earn a net profit of Rs.56 lakhs

Sales have risen by 86 per cent from Rs.17.15 crores to Rs.23.92 crores. The company has entightened its grip over expenditure and raw material costs have increased only by 38 per cent to Rs.16.49 crores (Rs.11.92 crores). The indigenisation programme has been helpful and the wage bill too is lower.

Thus the company has earned an operating profit of Rs.2.35 crores against a loss of Rs.3.75 crores in the corresponding period of the last year.

The interest burden too has come down to Rs.0.96 crores (Rs.1.22 crores). This is significant, as the depreciating rupee had played havoc with the company's interest burden on its yen loan. The company has made a provision of Rs.68 lakhs for depreciation.

The reduced costs and improved sales have combined well to allow the company to close the half year with profits. Production and sales figures confirm the profitable working. The company produced 15,662 units (9,894) and sold 16,284 units (10,107).

First Leasing

The company has ended the first half year ending May 1988 on a highly encouraging note. The total turnover is higher and profitability has improved.

The turnover of the company has risen by 27 per cent to Rs.8.38 crores (corresponding period of previous year: Rs.6.60 crores). The company is servicing a very high interest burden of Rs.3.13 crores (Rs.2.67 crores). Despite this, the gross profit is higher at Rs.4.67 crores (Rs.3.50 crores). The company has made higher provisions for depreciation and tax. While the provision for depreciation rose to Rs.3.09 crores (Rs.2.57 crores) the provision for tax was Rs.25 lakhs (Rs.14 lakhs). After all the provisions, the company managed to earn a handsome net profit of Rs.1.33 crores (Rs.0.79 crores) on an equity capital of Rs.3.80 crores.

The company's earning per share was 35 per cent. Moreover, the cash earning per share was over 100 per cent in the first half itself.

RESULTS ANNOUNCED

Anagram Finance

An integrated finance company also engaged in manufacturing activities, Anagram Finances has handsomely rewarded its shareholders by stepping up dividend by 6 points to 30 per cent for the year ended June 1988 combined with a 1:2 bonus issue subject to the consent of the controller of capital issues. After the capitalisation of Rs.43 lakhs from reserves the company's equity base will stand at Rs.1.31 crores.

During the year, the company's leasing and hire purchase divisions had steady returns. The manufacturing turnover rose after the commissioning of the polyester filament yarn sizing plant in February 1988.

Though gross income increased by 31 per cent to Rs.7.81 crores (Rs.5.96 crores), profits after tax jumped by 60 per cent to Rs.79 lakhs (Rs.49 lakhs). In order to augment long-term resources the company proposes to announce an issue of rights convertible debentures by February 1989.

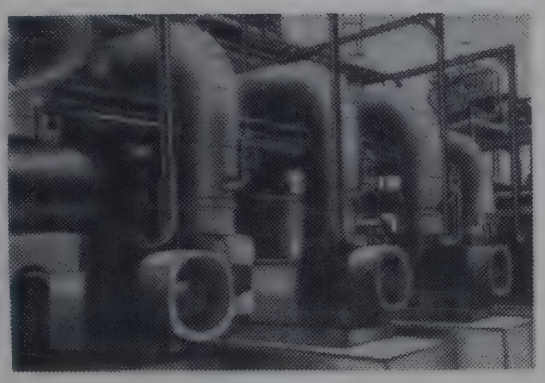
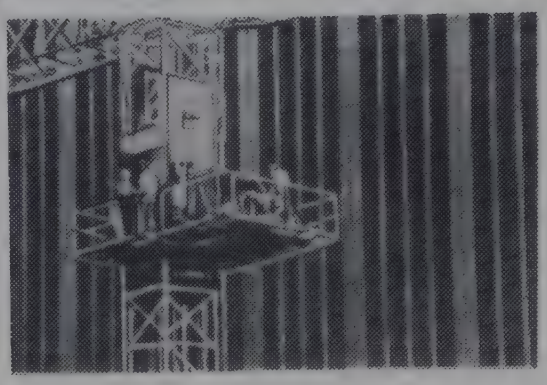
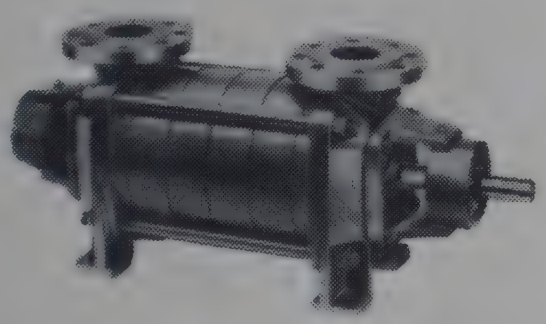
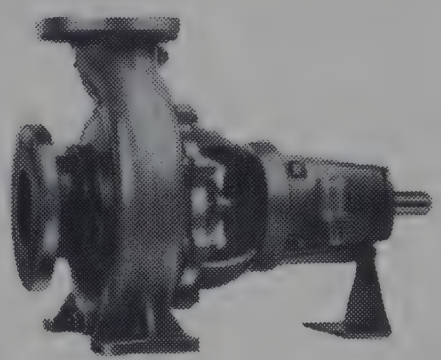
STORK PUMPS GET SET TO TAKE INDIA BY STORM









Stork Pumps India Pvt. Ltd., is a joint venture undertaking with Stork Standard Pumps International B.V. of Holland. The Dutch collaborator is a member of the gigantic Stork Group of Holland which, among its many splendid achievements, has established successfully, joint ventures in countries all over the world.

Stork's equity participation and technical know-how, ensure for the Indian Company a continuous inflow of latest technology which will play a vitally important role in the regular upgradation of the Indian manufacturing programme and the techniques deployed in manufacture so that those technicalities are always abreast of latest international developments in the specialised field of Pump manufacture.

A unique feature of the Stork 'Combisystem' Pump is its modular construction by which a high degree of flexibility is imparted to the design for easy and quick conversion of the product at minimum cost, to suit different needs. The obvious advantages are reduction in inventories, manufacturing and order processing time.

The local introductory programme commences with the manufacture of four basic models. More models will be added from year to year and the range will eventually be extended to cover all the Pump models included in the wide range developed by Stork.

An interesting facet of local production is that there is a buy-back arrangement by which Pumps of indigenous manufacture will be shipped regularly to Stork in Holland. To ensure top quality and rigid adherence to the high standards imposed by Stork, Holland, products from Stork India are subject to frequent checks by Stork Engineers on the staff of the foreign collaborator.

The establishment of Stork Pumps India brings to the Indian market a fund of invaluable data on application know-how, an effective solution of all problems related to liquid transfer, the advantage of latest technology and the ready availability at a reasonable price of reliable products of fully proven design.

Deepak Fertilisers

Deepak Fertilisers & Petrochemicals Corporation Ltd, a Rs.40 crores, one product unit, has decided to join the big league. A Rs.346 crores expansion plan is on the anvil, which is expected to push Deepak up and beyond Rs.200-crore level, with a forwardly integrated, multiproduct base.

At present the company manufactures and sells ammonia, primarily to RCF and Zuari Agro. After expansion, the ammonia is going to be used inhouse to produce Ammonium Nitrophosphate (ANP), Low Density Prilled Ammonium Nitrate (LDPAN), Dilute and concentrated Nitric Acid (DNA & CNA) and Methanol — all with different collaborators.

The project financing is interesting. Roughly fifty per cent of the money is going to come from financial institutions, banks and internal accruals, and the balance is going to be raised from an innovatively structured Rs.190 crores 14 per cent convertible debenture issue, second largest since Reliance.

The debentures with face value of Rs.100 is divided into three parts, A, B and C. Part A valued at Rs.20 will be converted in January 1989 immediately after the issue to one equity of Rs.10, the balance Rs.10 being the premium. Part B, valued at Rs.30, will be converted in January 1991, to one equity of Rs.10, with Rs.20 going to the premium account. These two conversions are compulsory and automatic.

The choice of fare comes with Part C, valued at Rs.50. This part can either be converted into one equity of Rs.10, at a premium decided by the CCI, but not exceeding Rs.40, at a time determined by the company between 1993 and 1995, or can be retained in the form of a debenture payin 14 per cent p.a. If the equity and premium of Part C is valued at less than Rs.50, the balance amount will continue as debenture.

Part C will also have, for the first time in India , a detachable and tradeable warrant attached and the holder will have the right to apply for one equity at a price fixed by the CCI, either by surrendering Part C, or paying in cash/cheque. Part 'C' and the warrant will be seperately listed along with the equity and this offers the investor a number of options. They are: 1. Convert Part C along with the warrant into one equity, 2. Acquire one equity by payment against the warrant and sell the debentures, 3. Do the same, but retain the debenture and earn interest, 4. Sell the warrant, and retain the debenture portion 5. sell the whole of Part C.

While the project is really well conceived and Deepak has a definite cost advantage in terms of supply of basic input, ie, of gas from Uran by using their own pipeline, the present demand and supply gap of the products may narrow down when the project goes on steam. Other producers are joining the fray and Deepak may require active marketing support to sell.

Unicorn Organics

Unicorn Organics Ltd is entering the capital markets with a public issue of 12,50,000 equity shares of Rs.10 each for cash at par. Aggregating Rs.1.25 crores, it is to raise a part of the capital required for its Rs.8.5 crores sorbitol project.

The project is being co-promoted by Bhanu Sanghani, Sanjay Sanghani and the Andhra Pradesh Industrial Development Corporation Ltd (APIDC) who will collectively put in Rs.1.7 crores. The issue opens on 12 December. Sorbitol is polyhydric alcohol which uses tapioca or maize starch as a raw material. Sorbitol is widely used in the pharmaceutical and toothpaste industry.

Unicorn Organics is setting up its project for the manufacture of 7,200 tpa of sorbitol at Waddepally, Warangal district, Andhra Pradesh. Tapioca is extensively grown in and around Salem in Tamil Nadu and East Godawari district in AP apart from Kerala. "This will ensure a ready supply of raw material at lower transport costs," says B. Sanghani.

In an environment of supply far exceeding demand and falling prices, Unicorn Organics hope to market their product using "superior technology" and hence a better quality of sorbitol. Unicorn plans to manufacture sorbitol using low pressure hydrogenation. Sanghani claims that low pressure hydrogenation results in substantial saving in energy cost, catalysts, utilities etc.

The prices of sorbitol in the international market are more than half of those prevailing in the domestic market. So while manufacturers claim to have hundreds of enquires from foreign parties, real exports are minimal. Unicorn Organics are no exception but Sanghani is at pains to explain that the special grade of sorbitol they plan to manufacture will find a good market overseas. "However, first we plan to cater to the domestic market," he added.

Hinditron Tektronix Instruments

The company is offering 7.87 lakh equity shares of Rs.10 at par to the public. The issue opens on 15 December. Tektronix Inc, USA and the Hinditron group of companies will subscribe to Rs.14.63 lakh equity shares. The total project cost is Rs.6.56 crores.

Tektronix Inc of the US, which reported a turnover of $1.8 billion in financial year ended May 1988, is an acknowledged leader in the field of testing and measuring instruments. The Hinditron group is in a wide range of activities including instrumentation, computer and computer software, process control and telecommunication equipment and services.

The new project will manufacture portable real time and storage oscilloscopes. The project is located at Peenya Industrial Estate, about 10 km from Bangalore. According to Hemant Sonawala, deputy chairman of the company, though the company will initially import most raw materials and components from Tektronix the company will attempt to reach a 40 per cent indigenisation in a period of 3 years.

The project's major strength is the reputation that Tektronix's Oscilloscopes have reliability and excellence. According to Sonawala, every attempt will be made to maintain international standards in manufacture.

There are several other manufacturers of oscilloscopes in India including Peico, BPL and APLAB. According to Sonawala, Tektronik's oscilloscopes are used even by other oscilloscope manufacturers for purposes of benchmarking. As oscilloscopes are used in trouble shooting in practically every activity where electronics is involved, the market for oscilloscopes is potentially large.

Sonawala expects a turnover of approximately Rs.2.5 crores in the first year of operation, Rs.5 crores in the second year and Rs.15 crores in the third year. Though Sonawala, is reluctant to state when the company will pay dividends, he expects the company to make a profit in the very first year.

Cash scrips in focus

(For the period 21 November to 3 December 1988)

BSE Index on 2 December= 709.65, down 1.5 per cent. ET Index on 2 December= 374.90, up 1.8 per cent (record)

The past fortnight definitely belonged to cash scrips. While turnover on the Bombay Stock Exchange continued to be very strong at an average of Rs.90 crores per day, business shifted in favour of cash scrips. The B group recorded 23 per cent of total business translated by the end of November as against 20 per cent during October. Also, within the cash list, the percentage of total turnover in the five most active (and speculative) scrips, viz. Finolex, Modi Xerox, Oswal Agro Furane, Rathi Alloys and Vindhya Telelinks, fell from 12 per cent in early November to less than 5 per cent by early December.

The activity in cash scrips resulted in sharp rises, given the relatively poor liquidity of these scrips. Even some well-traded scrips, such as Madras Petro and Premier Tyres recorded large rises, with Madras Petro up 50 per cent at Rs.15 and Premier Tyres up 103 per cent at Rs.325. Several newer scrips also recorded substantial rises, such as Su-raj Diamond up 30 per cent at Rs.79 and Punsumi up 38 per cent at Rs.52.50.

Prime position. Meanwhile, A group shares tended to move little in price, although volumes continued to be strong. Surprisingly, even a share like Telco, a recent speculative favourite, fell by Rs.10 to Rs.765 in spite of announcing a rise in LCV prices of Rs.7,500. Trading in Reliance, which used to be about 10 per cent of turnover till October, fell to less than 6 per cent over the fortnight under review. Tata Steel, however, continued to occupy its prime position as the favourite of hedgers and speculators, and was actively traded, closing at Rs.1,100, marginally up from Rs.1092.50. The exception of the fortnight was ACC in the 'A' group. It rose strongly in active trading to Rs.410, up from Rs.389. This was in spite of its shift from the forward to the spot delivery list on 1 December. Even after this the official closing price showed a rise of Rs.9 to Rs.410 (although there was undoubtedly a fall from kerb rates). There are a spate of rumours about ACC that have arisen in spite of slackness in the cement markets. One is about a possible split of the Rs.100 paid-up scrip to Rs.10. The other is that the company's name may be changed to a more "popular" one. These should be resolved at the annual general meeting later this month.

The opposing movements of the BSE Index and the ET Index mirrored the opposing situations in forward and cash shares: while the A group based BSE Index fell off, the ET Index, which is broader-based, went on to a new record.

It seems that bull speculation is less these days. What could be the reason? Several could be suggested. The first is the raising of **daily margins** on forward trades. These were doubled to 20 per cent for bulls and 10 per cent for bears for 32 scrips from 20 November, and again raised to 30 per cent for bulls and 20 per cent for bears from 5 December. Meanwhile, 9 "speculative" scrips in the cash list came under a 20 per cent daily bull margin on 20 November. Finally, daily bull margins were levied on a further 18 forward scrips at 20 per cent from 5 December. The high daily margins may well have caused a flight to cash shares. However, this is belied by the sustained high level of turnover in the forward list.

Playing catch-up. A second reason could be that cash shares are merely playing **catch-up**. While the market as a whole has gone up for good reasons (strong corporate performance, good monsoon, etc.), the effect was first felt in the forward group. This was because the constraint of liquidity did not deter those buyers who thought the market should rise. Now that forward shares have risen substantially, good deals are available only in hitherto neglected shares. Hence, the belated — but well-deserved — rise in cash shares like Alfa-Laval and Nicholas Laboratories.

A third reason could be the change in the pattern of institutional buying. Financial institutions — charged with restoring investor confidence in stockmarkets — started buying in the forward group perhaps because they felt that their buying power would combine with that of bull speculators (while countering that of bear speculators) to cause substantial — and reassuring — rises in the BSE Index. With investor confidence restored, institutions shifted their buying activities to cash shares about two months ago as a deliberate move to induce a broad-based market rise.

The final reason could be high badla rates. Markets are not expected to rise at rates anywhere near the (recent) high badla charges of 50 per cent per annum. This means that forward buyers expect to lose money at these rates and have held on to their forward positions solely in expectation of a fall in badla rates.

Encouraging news. However, the most recent badla rates have recently been 36 per cent per annum in Calcutta. This should help overall market sentiment. Meanwhile, corporate news and results continued to be encouraging. Genelec, which has been rising slowly over the past few months, was taken over by the Shaw Wallace group which has acquired 25.2 per cent of the shares from General Electric at Rs.65 per share. The Chhabrias of Shaw Wallace have agreed to pay all shareholders Rs.65 per share, a deal which ought to overcome the major objection of minority shareholders. The scrip closed at Rs.70, up from Rs.65, but the deal with the Chhabrias was announced after the market closed on 2nd December and the share price could fall.

Meanwhile, Rallis announced good half-yearly results. The scrip rose to Rs.120, up from Rs.110. Garden Silk and Vareli Textiles announced significantly worse half-yearly results. Garden fell by Rs.10 to Rs.60, while Vareli fell by Rs.3.75 to Rs.30. S.I.Viscose rose sharply on reports of good working to Rs.850, up from Rs.635. Dunlop was actively traded in Bombay and Calcutta and rose to Rs.105, up by Rs.11. Dunlop chairman Chhabria denied knowledge of the rumoured Ambani involvement in the share, but its rise is a paradox given that the strike at its Sahagunj unit has hurt the company with six-monthly earnings per share plummeting to ten paise per share.

The market is still strong and trading is active. If badla rates fall, speculative shares could well return in focus given their greater liquidity. The market is still awaiting news of the effect of the good monsoon on aggregate demand, following which further rises are possible. However, this will probably start becoming clear only in the first quarter of 1989.

NOTICE

It is hereby notified for the information of the public that KERALA DISTILLERIES AND ALLIED PRODUCTS PVT. LTD. proposes to make an application to the Central Government in the Department of Company Affairs, New Delhi, under sub-section (2) of Section 22 of the Monopolies and Restrictive Trade Practices Act, 1969, for approval to the establishment of a new undertaking/unit/division. Brief particulars of the proposal are as under:

1.	Name and Address of the Applicant	**KERALA DISTILLERIES AND ALLIED PRODUCTS PVT. LTD.** **K. Pudur, Kanjikode** **Palghat 678 621** **Kerala**
2.	Capital Structure of the Applicant Organisation.	**Authorised** **Ordinary Rs. 12,00,000** **Subscribed** **Ordinary Rs. 12,00,000**
3.	Management Structure of the Applicant Organisation indicating the names of the Directors, including the Managing, Wholetime Directors and Manager, if any.	**Mr S K Damodaran** **Mr T R Rajagopalan** **Mr R Ramani** **Mr K Subramanian** **Mr S Solayappan** **Mr G Thangaraj** **Mr L Venkatesan**
4.	Indicate whether the proposal relates to the establishment of a new undertaking or a new unit division.	**Establishment of new undertaking**
5.	Location of the new undertaking/unit/division	**District Palghat, Kerala**
6.	Capital structure of the proposed undertaking.	**Same as in item 2**
7.	Incase the proposal relates to the production, storage, supply, distribution, marketing or con of any goods/ articles, indicate: i) Names of goods/articles. ii) Proposed licensed capacity iii) Estimated Annual Turnover	 **Potable Alcohol** **50,00,000 Bulk Litres per annum** **Rs. 7,53,00,000**
8.	In case the proposal relates to the provision of any service, state the volume of activity in terms of usual measures such as value, income, turnover, etc.	**N.A.**
9.	Cost of the Project	**Rs. 4,27,00,000**
10.	Scheme of finance, indicating the amounts to be raised from each source.	**Will be raised from internal resources of the Company, borrowing and issue of Rights Shares**

Any person interested in the matter may make a representation in quadruplicate to the Secretary, Department of Company Affairs, Government of India, Shastri Bhavan, New Delhi, within 14 days from the date of publication of this Notice intimating his views on the proposal and indicating the nature of his interest therein.

Dated This 12th September, 1988

BOMBAY STOCK EXCHANGE

Load shedding on Dalal Street

The stockmarket may be buoyant after two years. But all is not well at the Bombay Stock Exchange (BSE). Beginning December, there was a rumour that the brokers had threatened to strike work. The provocation: abrupt suspension of trading for the third time in the new Samvat year 2045, and the umpteenth time in the last six months.

The official reason for the closure? They needed time to clear the backlog of settlements that had piled up since the market thawed out. "We are having problems coping with the spurt in business over the last few months," says M.R. Mayya, executive director, BSE. "Besides, we have also had a number of holidays recently."

Piles of work. No doubt, the business has risen tremendously. As Mayya points out, the number of daily transactions has shot up from 30,000 a few years ago, to over 100,000 and during the settlement ended 24 November, the average daily turnover was Rs.76.83 crores.

The market fraternity, however, is not impressed. "The number of transactions were higher during the boom of 1985-86," says a broker who preferred to remain annonymous. "They should have expected the market to bounce back after the bull and utilised the slack time to build up the infrastructure."

The governing board of the BSE has not been idle. "We did provide for the boom in 1985-86 with an ICIM-2904 computer system," says Mayya. "When that was not enough we installed a bigger ICIM-6000 system in March last year. We are still not able to cope with the growing business and are now thinking of a more sophisticated mainframe computer.

Some brokers do concede that the number of holidays in quick succession were responsible for throwing the BSE machinery out of gear. There were three public holidays and six weekly offs (two at each week end) between the 10 November 'moorat' session and 30 November. Add to this the two days when trading was suspended, which left the exchange working for less than half the time.

Besides, the authorities had also extended the settlement period on several occasions, giving a boost to speculative trading by enabling bull operators to carry forward outstanding business without paying up the contango charges.

The closure of the market also led to a pent up demand, especially for the cash scrips, and consequently the volume of business increased further on subsequent trading days.

Investor baffled. The genuine investor was baffled by the developments and even suspected that there was something going on behind the scenes. On 1 December, for instance, rumours were rife that the authorities had suspended trading to bail out a couple of big brokers. The fact that the ACC shares were buoyant despite a glut in the cement market added grist to the mill.

The lack of confidence is reflected in the fact that investors were unwilling to send their certificates for registration till the eleventh hour, causing a pile-up on the company registrar's desk and a further delay in clearing the backlog. "How can I leave my certificates with the broker when I do not know when the settlement period will end?" asks Dilip Shah, a small investor.

Usually, sagging investor confidence is marked by subdued trading and a resultant drop in share prices. But this time institutional support prevented this happening and instead there was a boost in speculative trading and a hike in share prices.

Many brokers are unhappy with the role of the financial institutions. "They are supposed to protect the investor by cooling an overheated market," says a broker who was formerly on the BSE governing board. "On the contrary they are warming up a cool market."

The spurt in speculative trading led the BSE authorities to step in and "cool" the market either by a hike in daily margins on frequently traded scrips or, as some brokers would like to believe, by suspending trading activities. A distinct measure taken on 2 December by the BSE was to shift the ACC shares to the 'spot' delivery counters and prohibit any fresh trading in the scrips.

Ironically, while the uncertainty in the settlement programmes led to a spurt in speculative trading, it also resulted in losses to badla financers, thus curbing the growth in volume.

Thus, while the market has been quite cheerful, the small investor has yet to participate in a big way. The two big players are the speculators and the financial institutions. It is hoped that it will not be long before the wrinkles are ironed out and the market steadies itself, making it safe for the genuine investor to return.

■ ALOYSIUS FERNANDEZ

It's slack time at the BSE

4 DECEMBER 1988
Ballet on ice

History will have to be reworded. Not only did the Russians finally manage to come, but they came ever so gracefully, gliding on that sheet of ice. For a moment there I felt like leaping on to my feet and yelling the praises of "Mikhail! Micky Mikhail". But then there are certain rules of conduct to be followed by us merchant bankers and yelling in public, unless one is indulging in some kerb dealing, is certainly a rule we are very particular about. I mean, you can break a code or two about the kind of public issues you handle and advertising material that is allowed to be released, but yelling in public is just not cricket — atleast not the way we leisurely Indians seem to have gotten used to playing it.

"So", I proclaimed to the silent SK who seemed to be captivated by the seemingly effortless twirls and flips, "this proves that Micky Mouse is not the only Micky in the world who can entertain and Europe not the only continent that can draw crowds of tens of thousands."

"Tell me," said SK, "what is the melting point of ice?"

I looked at this hapless man in amazement. Here we were watching this extraordinary performance and yet his mind went on to elementary science. "The melting point of ice," I parroted, trying hard to remember the science stuff my nanny taught me," is zero degrees centigrade. Of course, if it is impure, it will melt even sooner — above zero degrees."

"And pray", said SK looking intently at the effortless grace before our eyes, "what is the temperature in Bombay now?"

"It is about 17 degrees centigrade," I replied, grateful for having watched yet another episode of that boring re-run called The News.

"How do you keep a substance which melts at anything above zero degrees centigrade from melting at seventeen degrees centigrade?" queried SK, not missing a single twirl of the performance.

I gasped in amazement. SK had a point. How were these guys doing it? I looked around the stadium for the tell-tale signs of a giant silent airconditioner but there was none. Maybe they had a magician or a godman somewhere chanting *mantras*. I scanned the bejewelled crowd but did not find any black capes or orange robes. Finally, in sheer resignation, I turned to SK. "Alright, alright. I'm intrigued. How do you keep ice from melting in this weather?"

"If you had a fire," quizzed SK, "and you wanted to put it out, who would you call?"

"The fire brigade, of course."

"But," continued SK, "if you did not want anyone to know that you had a fire on your hands but, instead, wanted to let the world feel that everything was just fine and normal, then whom would you call?"

My instincts told me to say "Ghostbusters", but somehow logic got the better part of me. Intrigued by this exercise and wondering where it was all leading to, I decided to admit my ignorance — something that would please SK.

"I give up, SK. Now please tell me who I should call."

Not only did the Russians finally manage to come, but they came ever so gracefully, gliding on that sheet of ice. For a moment there I felt like leaping on to my feet and yelling "Mikhail! Micky Mikhail"

"That's easy", said SK, munching on his popcorn, "you would call our very own version of Father Christmas — Deepak Chacha. Actually, it's a bunch of them — a team effort."

"Please, SK, could you talk simple English for a change?"

"Well, one more clue. What is the one place in Bombay that is flaring up today?"

"Bombay High?", I replied like one of those nervous not-so-sure contestants on those quiz shows.

SK was in splits. "How many times have I told you that there is a time and place for everything. Can we keep your jokes for after dinner or for occasions when some boring politicians decide to address members of our community?"

"Alright, SK, I give up once again. Who is helping these chaps keep their ice together?"

"That's simple. It's the guys who run the Bombay Stock Exchange! Look how well they've done in keeping the BSE under control. Although it is on fire, they act as if nothing has happened. In fact, they're sending out invitations for a mammoth barbecue party, never mind that some investors will get roasted in the bargain. And, given the fact that the ice hasn't yet melted, they are doing a pretty good job of it, wouldn't you agree?"

7 DECEMBER 1988
Churchgate Station

The lobbies are at it again. Here were a these institutions all ready to go and hav some fun on the floor of the BSE whe those guys had to spoil the fun, onc again. I mean we all know that a little b of exercise is highly recommended f everyone and so if some guys want to g out of their armchairs once in a while a wave their hands about like our ancesto did 6 million years ago, why stop them

Yelling, my psychoanalyst had advise me quite some time back, clears the co fusion of the mind and the lethargy of t limbs.

But my brethren have once again d cided to derail the ambitious plans those moneyed people. Apparently, t brokers do not mind accepting instit tional members on the BSE provided th do not trade. Now, can anyone find an thing wrong with that? I mean we all ha to take care of our own families and th stuff about sacrifice and good of the pe ple is alright for Sunday morning TV, b life is not a soap opera.

But all is not lost. At least not yet. Wh the institutions should do is take the membership cards and frame it and ke it along with the other tombstones th have acquired over the years for all the foreign currency transactions. At le this card will have been less costly.

The other alternative is to go out to t smaller towns and drum up interest shares amongst the local inhabitants.

Supply, said the original supply-sid J.B. Say, creates its own demand. T institutions should learn from those ment companies. A few years ago eve one was clamouring for cement licen and when they all got it — much to th dismay — they didn't sit down and su They decided to promote the idea building new cities and new roads. N only that, some bright fellow even d cided to build cement partitions and ro dividers that cause the maximum d comfort to the poor pedestrians but g a lot of comfort to these cement chap

It's easy to complain and cry about t obstacles in one's way — ask the g who have to weave through those mo strous cement blocks outside Churchg every day, two times a day — but what t institutions should do is take the c and visit the floor every afternoon fo leisurely stroll since Hanging Gard and the Race Course are pretty crow these days.

When the going gets hot, keep your engine cool.

The rigours of peak hour traffic place a heavy burden on your engine. That's when you need high performance VEEDOL lubricants to keep your car cool... even if you lose yours.

Your executives can now fly to work. At ground level.

Presenting the luxury of the new Tempo-Traveller

Tempo-Traveller is the new executive perk

It offers senior personnel the comfort and status that ordinary company buses can never match – and a car-pool could never give.

A spacious interior offers the luxury of upto 15 ergonomically designed seats and large, airy windows.

There's ample room for baggage. And a high curved roof allows for greater freedom of movement.

And it has been specially built for Indian roads by Bajaj Tempo – in collaboration with Daimler-Benz, the creators of the classic Mercedes range.

As cost-conscious as it is status-conscious

The new Tempo-Traveller is equipped with the advanced 72 BHP Mercedes OM 616 diesel engine, which functions like a built-in accountant. It stretches your company's every rupee – delivering the highest level of fuel economy with the lowest level of noise.

The Tempo-Traveller even minimises other maintenance costs. Spares are cheaper and more readily available. And regular service is close at hand. Because you are backed by the 150 experienced dealers established by Bajaj Tempo over a period of 25 years.

So before you stake business capital on company buses or corporate cars, give the new Tempo-Traveller serious thought.

And let your executives 'arrive in better shape'.

BAJAJ Tempo LTD.

The new Tempo-Traveller.
Anywhere else, they'd call it a Mercedes Transporter.

Company fixed deposits (current for December 1988)

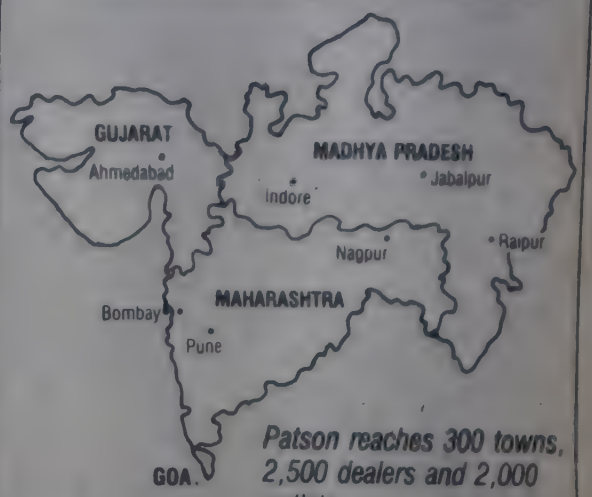
Note: The list given above is a selection of many companies which accept deposits from their shareholders or from the public companies which offer somewhat lower rate compared to many quite sound private limited companies of partnerships. Readers are advised to take suitable professional advice.



Patson reaches 300 towns, 2,500 dealers and 2,000 outlets.

Successful products go to market with PATSON DISTRIBUTORS

Patel Roadways, one of India's leading road transport organisations, has diversified into Clearing & Forwarding through its associate company Patson Distributors which was established in 1986.

Clients Include:
Wander Ltd., Khaitan India Ltd., Kissan Products, Optonica TV, Pyramid TV.

Facilities Offered:
* *Transportation — quick, reliable delivery*
* *Warehousing — a total of 30,000 sq. ft. godown space located within and outside octroi limits.*
* *Re-packing*
* *Invoicing*
* *Stock control*
* *Tax matters and banking*
* *Extensive communication network.*

Benefits with Patson:
* *Better market penetration*
* *Savings in distribution and staff costs*
* *Single-point control for Western India.*

Get your products moving towards success in Western India! Team up with Patson.

No one made it

Although the stockmarket has recently been buoyant, we have many contestants unable to breast the tape in Investor Contest 278. The prices of five out of six scrips fell. On Friday, 25, November, Bajaj Auto closed at Rs.397.50 from Rs.400 (21 October). The variation permitted was Rs.2, yet many contestants felt that the price should have crossed the Rs.400 mark. The Hindustan Lever share price has come up to the contestants' expectations.

All said and done we continue to have no winners.

How to enter
On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict the prices of each of these shares as on 6 January 1989, and send in your entry by 27 December 1988. The winner in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry which has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of 6 correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

Rules:

1 There is no entry fee.

2 The list has been selected on the basis of what we consider are actively traded and interesting scrips on Indian stockmarkets.

3 The price mentioned last in the official quotation list of the stock exchange (if there is a series of such prices against the name of the share) will be taken as the correct answer. The official list of the particular stock exchange, which will be referred to, is given against the name of each scrip. If for some reason the stockmarket is either closed on 6 January 1989, or there are no transactions for the six scrips chosen below, then the quotations for the nearest working day prior to 6 January 1989, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 27 December 1988.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of **the Business India group of publications** is entitled to enter the contest.

MICO. The spark that moves millions.

Millions of vehicle owners all over the country get off to a flying start. Everyday. With MICO.

MICO spark plugs incorporate the late: international technology from Bosch, West Germany – pioneers and leaders in spark plug technology.

An excellent example of this is the MIC Super – India's first bi-metal electrode spar plug.

MICO spark plugs are available in eve part of the country.

So when you fit a spark plug, stick to proven quality. Buy MICO. And ride on confidently!

MICO

LICENCE BOSCH

MICO makes a matching spark plug for *every* Indian vehicl

There's no power on this globe that can make losers survivors, and survivors winners.....

but the underworld has always disagreed

A disagreement that stems from the hidden depths of the Orient. From the fertile soils of Korea. From an enigmatic man-shaped miracle root. From a legend that modern day scientists have already put to the test, proved and accepted with awe. A legend called... GINSENG.

Ginseng. Over the years it's come to mean vigour, vibrance, vitality, plain good health or even energy plus. International pop legends have sung its praise. Celluloid giants have become fans. Celebrity authors write about it. Oriental athletes improve their track records with it. And Russian Cosmonauts use it in space to combat fatigue.

Ginseng. Across the counter, in Russia, China, Japan, Korea, West Germany, UK and USA, it's gained total consumer acceptance. And in every form, inspired hard-core medical confidence too.

Ginseng. To many it's the elixir of life. To others it's the key to sexual virility. While the Orientals have believed in it for years, the rest of the world is still waking up to its prowess. And discovering that Ginseng is much more than the aphrodisiac it's reputed to be. ★ It's good for body tone. ★ Protects the liver ★ Great for the heart. ★ Helps normalise blood pressure. ★ Reduces stress ★ Stimulates the nerves. ★ It has known anti-diabetic properties. In short, it's an ideal weapon to fight the rigours of today's demanding lifestyles.

Now, the original, most potent Korean Red Ginseng. In capsule form. Under the brand name JENSHENG, comes to you from Biological E Limited.

JENSHENG. Use it to make flights of imagination, exciting journeys of reality. Use it to open up the frontiers of your mind. Use it too, to surpass your own concept of the ultimate. But use it. Most of all, for your better health.

If you want to know more about JENSHENG do write to us for a complete illustrated booklet.

A five-star performance

Vinita Bali *(32) heads the marketing department of Hindustan Cocoa Products Ltd (better known as Cadbury's) as general manager (marketing)*

When Vinita Bali, an honours graduate in economics, decided to plunge into the corporate world armed with an MMS degree, the loser was the civil services. She recalls, "I did attend the Delhi School of Economics for about a week to do an MA in economics. Then I'd most probably have applied for the IAS." But fate willed otherwise, and in 1975 she came to Bombay to do a two-year course at the Jamnalal Bajaj Institute of Management Studies.

At the end of the course, Bali was recruited by Voltas Ltd as a management trainee. Her first assignment was the groundwork for the launch of Rasna, then a new and innovative product. Recalls Bali, "The concept of a soft drink concentrate in the form of a powder and liquid package was then totally new. Hence, it required a more innovative marketing strategy."

The launch of Rasna is now marketing history. And for Bali, being involved was a very satisfying start to a marketing career; it exposed her "to everything that goes into the launch of a product, from the market point of view".

In March 1980, Bali quit Voltas to join Cadbury's as product manager in their confectionary department. "I was not really on the look out for a change," she says. "I answered an appointment ad just for the heck of it. It came through and seemed like a good opportunity to work with a multinational organisation that had both a manufacturing and marketing base."

Marketing chocolates was a novel experience for Bali. She worked closely with OBM, the advertising agency, and made significant changes in the promotion and advertising of chocolates. Recognition came in the form of the Ad Club Campaign of the year award in 1982 for the umbrella campaign, "Sometimes Cadbury can say it better than words".

In August 1983, she took time off from Cadbury's to do a one-year course on international business and economics at the Michigan State University in the US. This was followed by a graduate internship programme at the UN headquarters in New York. Subsequently she obtained a secondment to Cadbury Schweppes, UK, Hindustan Cocoa's parent company, for a year. During that time, Bali handled the marketing of Wisper, a relatively new brand of chocolate.

November 1985 saw Bali back in India with Cadbury's as marketing manager. She has been with them ever since and has gained much respect in the marketing field. She travels extensively and has her hands full with planning the marketing activity for the company. She is also closely involved in various training and development programmes run by the company from time to time.

Every Saturday she conducts marketing lectures for the MMS students at the Bajaj Institute and the Sydenham Institute of management "to keep in touch with academics". Her other passion is writing on marketing; her interviews with marketing heroes like David Ogilvy, Theodore Leritt, Al Ries and Keith Reiuhand have appeared in publications like the *Economic Times*. "I'd like to do a little more writing," she says, "otherwise, I'm quite happy with the way things are."

RAMA BISHNOI

FRONTRUNNERS

"I worked hard to get where I am," says **Manav Bose** who, at age 39, is the personnel director of Colgate Palmolive (CP) Ltd. Fascinated by the behaviour of the characters he was reading about while doing his MA in literature at Jadavpur University, Bose got trained in personnel management and behavioral science and joined Rohtas Industries in Bihar in 1981 as personnel manager. Here he was involved in a programme for boosting employee morale. In 1983, he moved to Bombay to work in Bharat Petroleum's HRD department. He joined CP as personnel director in May this year and is working on training programmes for sales and management personnel. Bose also teaches personnel management at the Xaviers Institute of Communications, Bombay.

To be on the top of things has been **Mario Lobo's,** 34 obsession. It has been a long way from hawking stationery and setting up a poultry farm on the terrace of his parents' home in Agra as a teenager, but today as managing director of Personnel Search Services (PSS), the largest head-hunting organisation in Bombay, and probably in the country, he is pretty much there. A graduate of XLRI, Jamshedpur, Lobo is on a first name basis with many corporate heavyweights having recruited top notchers for many major foreign banks and large multinationals. In seven years since he founded it, PSS has grown from a seven man team to a 45-strong organisation with the largest available manpower database. But Lobo is not resting on his laurels yet — the agency has diversified into recruitment advertising and on the cards are branches in New Delhi and Bangalore.

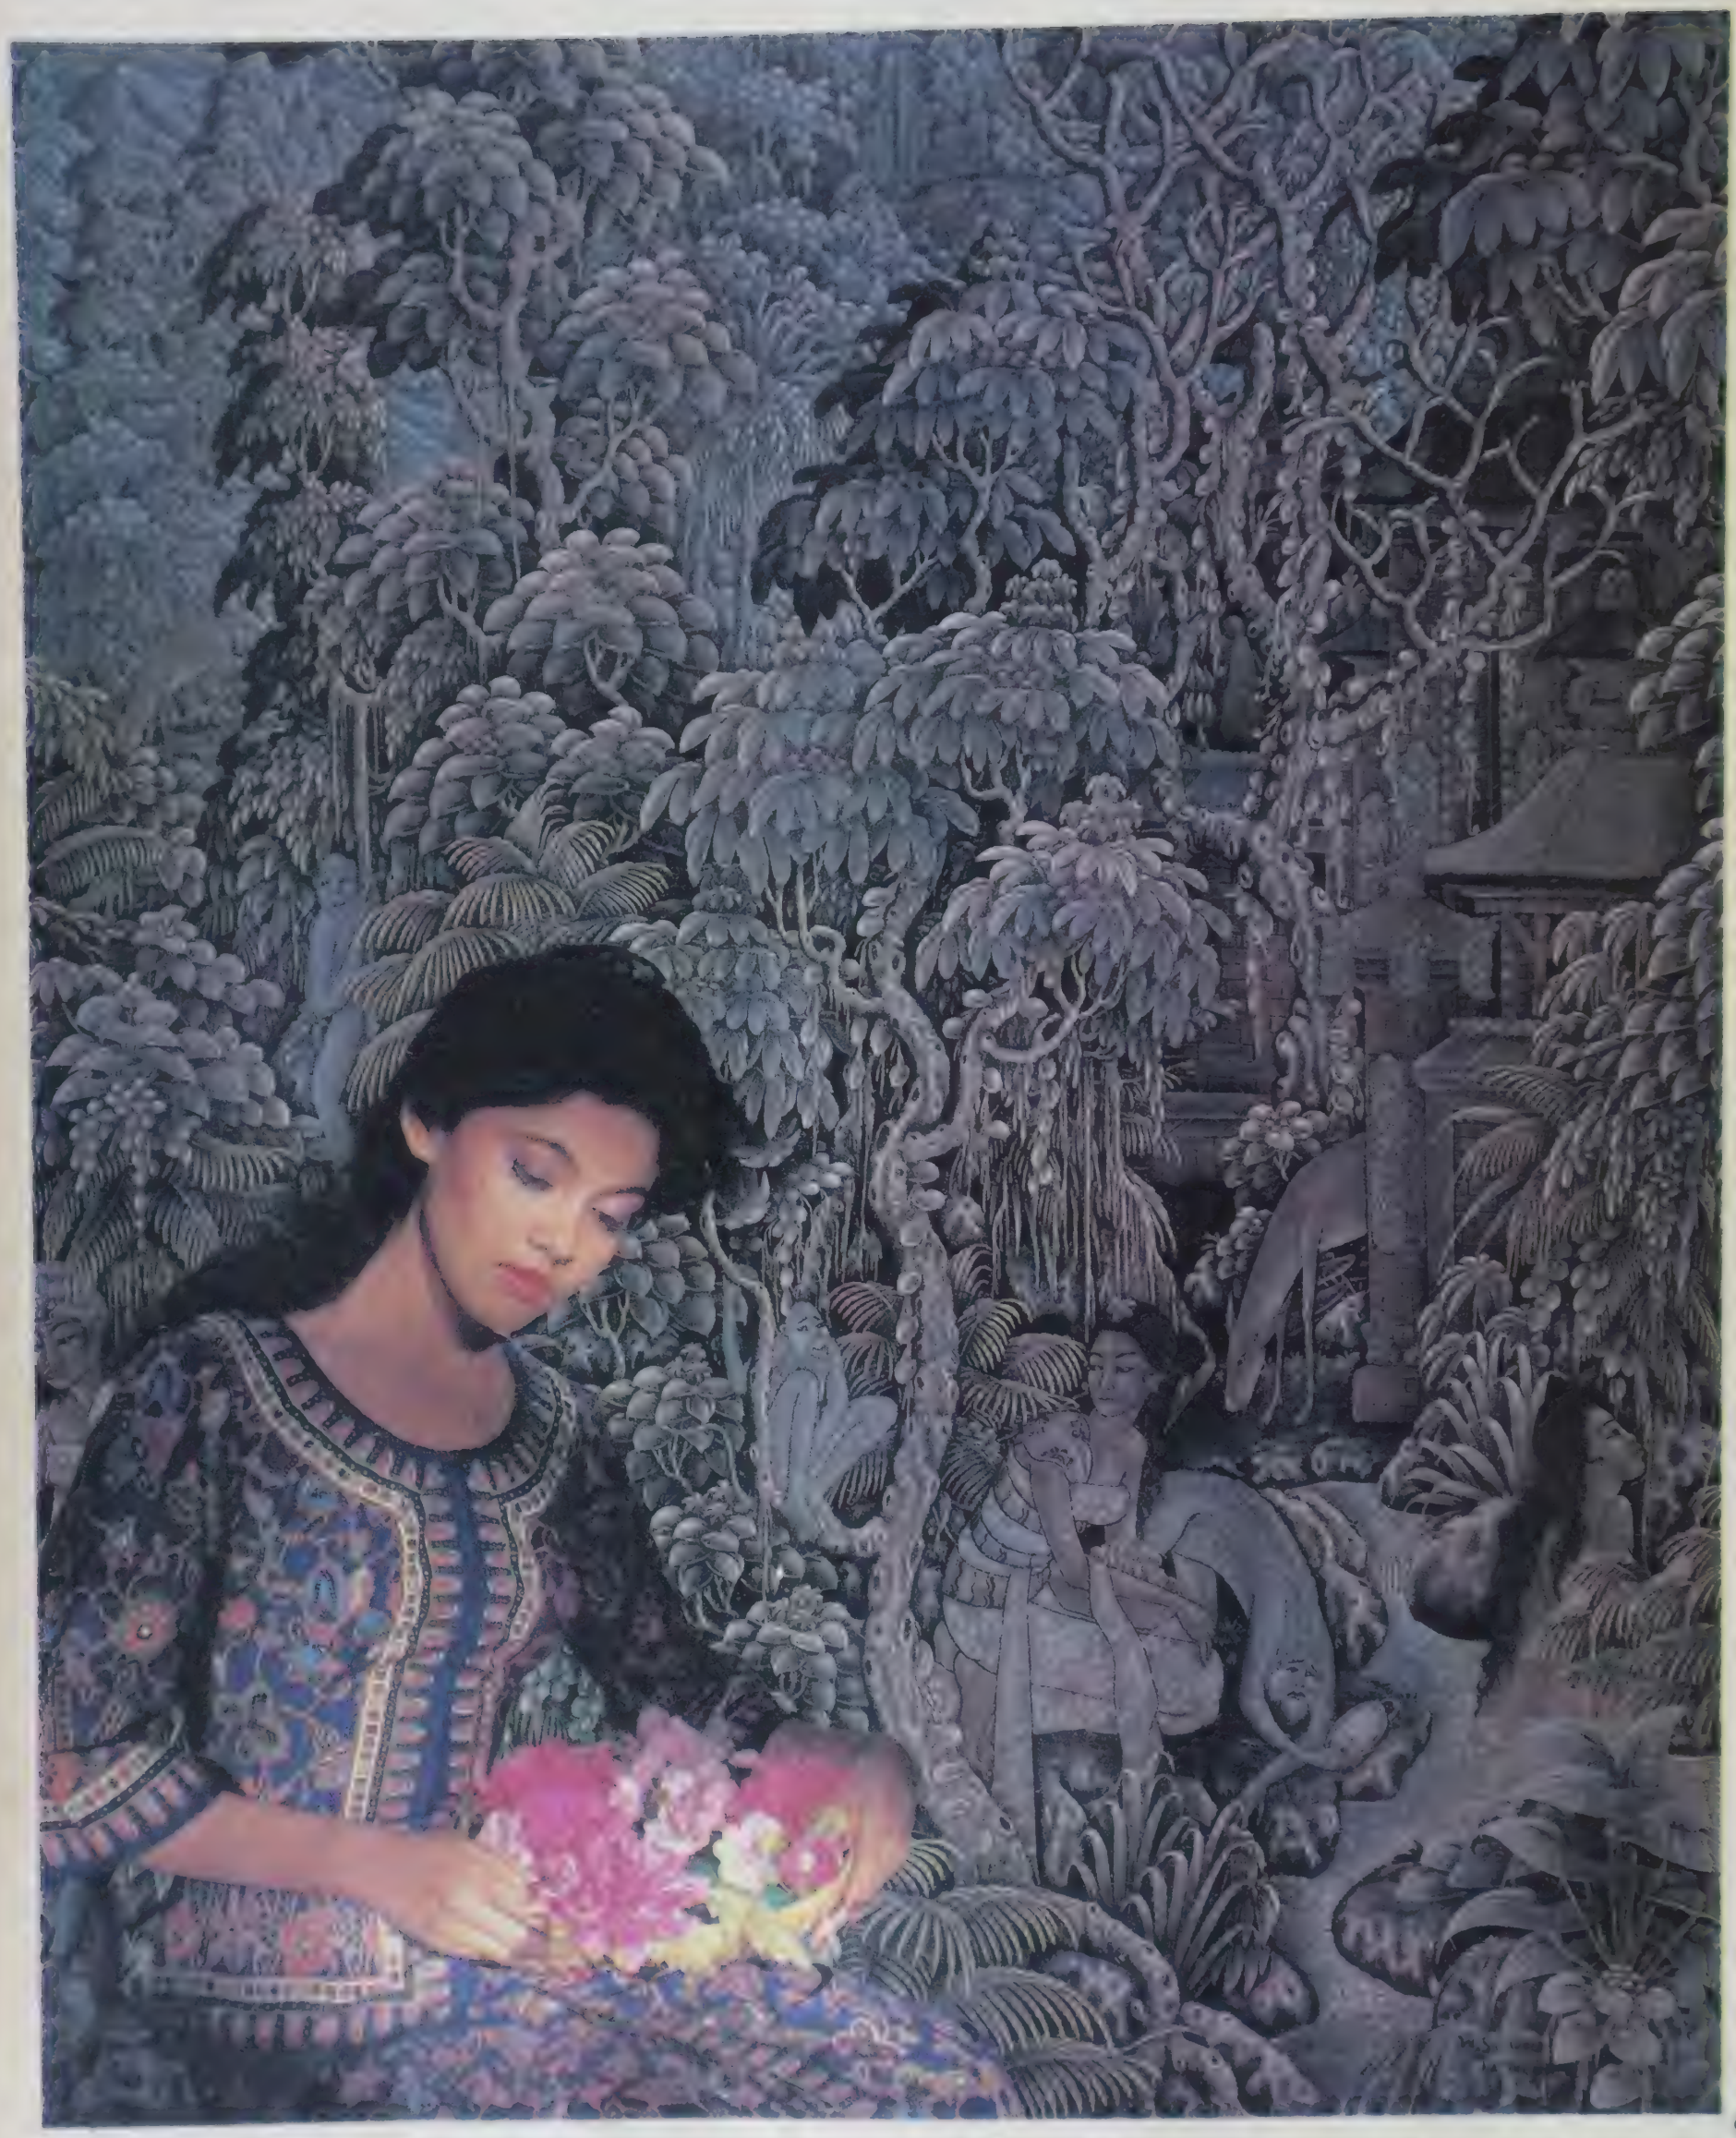
India's largest selling ceramic floor tiles



So what if worldwide the ans of Europe, the Swedish ard rock band, are predomiantly teenagers. At their nuch ballyhooed show in Bombay last fortnight fans of ll stripes turned up. Those vho rocked the night included (on their respective chairs) — from left: Neerja Shah, public relations manager of *The Times of India*, **Pritish Nandy,** publishing director of the Times of India group and editor of *The Illustrated Weekly*, Pradeep Guha, manager, response, of the group, Samir Jain executive director of the group and an unidentified guest.

It was hard work all the way for Bombay socialites last fortnight. Attendance was mandatory at the two-day jewellery show at the Taj Mahal Hotel organised by Asia's

Padmanabh Mafatlal

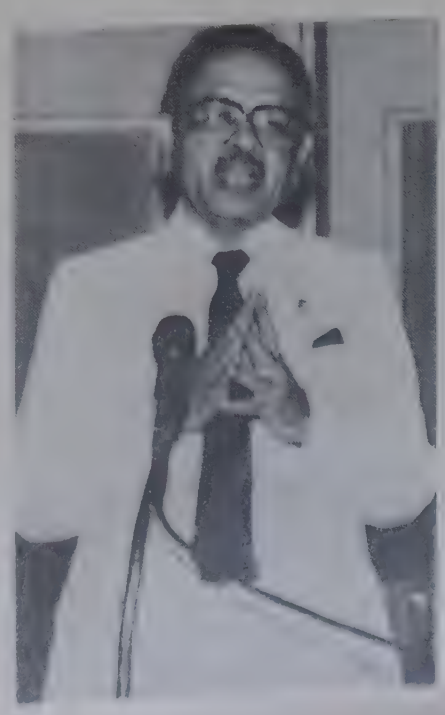
largest jewellers, Tribhovandas Bhimji Zaveri. But before that there was the not-to-be-missed Mafatlal wedding. **Atuliya Mafatlal,** the 23-year-old vice-chairman of the Sunrace group of companies and son of Yogindra Mafatlal, married **Payal,** daughter of a prominent city jeweller, Girdharlal Chaganlal. The guests, depending on the degree of closeness to the family, were invited to ten different celebrations which ranged from a garba dance at the Mafatlal family residence to a disco dance party at Oberoi Hotel's Supper Club. The last was organised by Atuliya's four sisters who called themselves "The Big Sis Quartet". Conspicuous by their absence at the festivities were Yogindra's feuding brother, Arvind Mafatlal, chairman of NOCIL, and his sons, Hrishikesh and Padmanabh.

Arvind Mafatlal

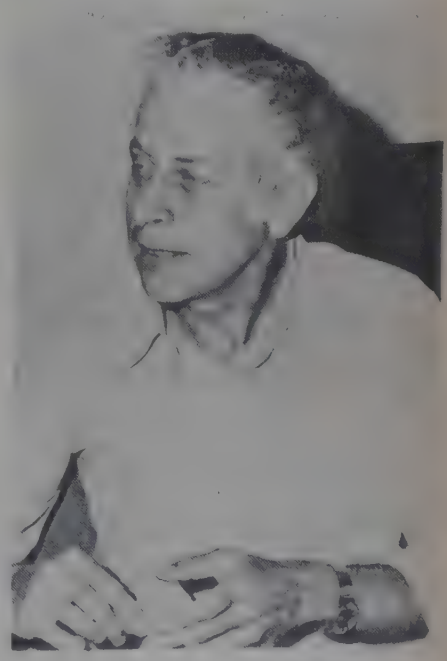
Quipped Atuliya, who is also referred to as Ayatollah by his friends, when asked where his uncle and cousins were, "Don't remind me of them on this day."

Talking of conspicuous absentees, the **Ambanis** were not to be seen at Larsen & Toubro's 50th anniversary bashes. And that, considering their recent purchase of controlling blocks of the engineering giant's shares, is surprising. Present however, at the do in the Presidential Room at Hotel President on 5 December, were **Holck Larsen,** N.M. Desai, Grete, wife of the late Soren Toubro, senior employees and, reportedly, over 30 foreigners, collaborators all. Larsen, in an obvious reference to the Ambani purchases, said in his speech that "the emergence of dominant shareholders is fine, so long as the power and influence they will wield is used for the benefit of the company". Though Larsen cannot be too happy about the developments in his Indian brainchild, his utterances do seem to signify a certain resigned acceptance.

Bombayites know **Nana Chudasama** by his prominent cloth banner on the city's Marine Drive; for the last 15 years the banner has carried many witty and some not-so-witty comments on the country's political scene. Founder of Giants International, Chudasama is also the owner of the popular Thackers Book Shop and sits on the board of various companies, including Raymonds and Empire Industries. Now, with his coming appointment as Sheriff of Bombay, its citizens will hear more of him. The fact that it is going to be a largely ceremonial post does not bother Chudasama. "I love this city," he says, "and I am determined to leave my mark on it."



Will private sector managers ever get the recognition they deserve? Usually, they don't seem to be the consensus in most quarters. But **Ram Laxman,** who took over the top job at ITDC a few weeks ago, has reason to think otherwise. Laxman who had a long stint at the competitor hotel chain of ITC, will now have the unenviable task of leading the public sector tourism corporation. Says Laxman, who is beaming confidence at the moment, "Hotels are and will continue to be ITDC's basic business." And, given Laxman's enthusiasm, the promise of support all around, and most important, the inherent advantages the chain has, this may well be the public sector corporation to watch in the near future.

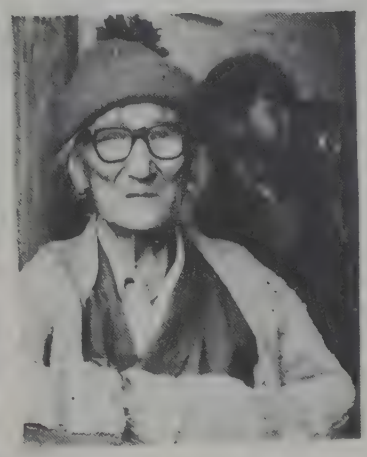


Jet age reaches dragon land

On November 21 Bhutan entered the jet age. On touch down the BAe-146 series 100 aircraft was given a traditional blessing and consecration by monks at Paro Airport. The age-old Caravan Road had given way to the jet age: a new route had been opened to the land of the peaceful dragon.

Nestled in the heart of the Eastern Himalayas, Bhutan is surrounded by high mountain ranges and richly endowed with great natural beauty. With about 70 per cent of the country under forest cover, it is one of the few places where man still lives in harmony with nature. Its predominantly Buddhist population of about 1.3 million is scattered in small settlements. It is an agrarian economy with paddy, maize and wheat as the main crops. Oranges and apples along with cardamom and asparagus, bring in foreign exchange earnings. But the forests constitute Bhutan's main wealt

Contact with t outside world has be slow and cautiou Bhutan is a member the United Nations, h missions in son neighbouring countri and diplomatic rel tions with Japan in t east and some Eur pean countries. Ho ever, it is with Ind that Bhutan has t closest ties. The rece commissioning of t Chukha hydel proje (Rs.244 crores) was landmark in Indi Bhutan relations. U



like some other countries, Bhutan has resisted the temptation of an economy based on tourism. Few tourists are allowed and the stay is expensive.

The purchase of the BAe-146 jet, however, may change all that. An investment of about US $ 30 million, by Druk-Air the national airline, will have to be recouped. The 80-seater jet will operate twice a week between Delhi and Paro. Druk-Air's Dornier aircraft bought in 1983 already operate flights to Calcutta. UN personnel, consultants and officials will fill part of this capacity.

But the choice of aircraft, the dedication, purposefulness and enthusiasm of the airline management and staff may make this a happy experience.

J. K. Industries Ltd.

SHRI HARI SHANKAR SINGHANIA

It gives me great pleasure to welcome you to the Annual General Meeting of the Company.

PERFORMANCE HIGHLIGHTS

I am extremely happy that the Company's performance during the year ended 30th June 1988 has been quite good. Sales and other income were higher at Rs. 227 crores. Gross Profit before depreciation was Rs. 31.6 crores as against Rs. 24.7 crores last year. Profit before taxes at Rs. 18.58 crores was substantially higher than the last year's figure of Rs. 3.07 crores.

Your Directors are pleased to recommend a higher equity dividend of 20% as against 15% last year. This is in addition to the dividend on Preference Shares. During the year, your Company has contributed Rs. 101.34 crores by way of duties and taxes to the national exchequer.

The working of the Company during the current year so far has been quite satisfactory. I am confident that your Company will be able to achieve better results in the current year.

SETTING THE TRACKS OF THE FUTURE

Every Company, particularly one engaged in a capital intensive industry like Tyres, has had to pass through a period of struggle in the early stages. Your Company has not only successfully overcome that early stage but has consolidated its position in the Industry. The Company's installed capacity has gone up from the initial 4 lakh tyres per annum to 12.84 lakh tyres per annum thereby attaining an economic size and competitive strength. Today it is in a position to enter the next stage of further growth and diversification. A scheme of modernisation and marginal expansion is under active implementation at the existing Tyre Plant in Rajasthan. Apart from this, the Company is planning to set up a new Tyre Plant for further augmenting its capacity. This would enable the Company to maintain a position of leadership in the Tyre Industry.

The Company also proposes to diversify into other areas. A project for manufacturing Penicillin G., an essential basic drug for a number of formulations in the pharmaceutical industry, is being actively pursued to be located in Tamil Nadu. Further, the Company is planning to take up high-growth oriented petrochemical and other projects. For this purpose, the Company has proposed widening the scope of its 'Objects'.

BRIGHT ECONOMIC OUTLOOK

Last year, the country passed through the worst drought in a hundred years. Coming as it did after four successive years of poor monsoons, it made things even more difficult. The Government of India deserves praise for tackling this natural calamity effectively. Despite this setback in the agricultural sector, it is heartening that tractor production and sales went up significantly in 1987 and 1988. The industrial production went up by 10.2% in the year 1987-88. This is significant and speaks of the strength of the Indian economy.

Now that the country has been blessed with good monsoons, we can look forward to a year of all-round prosperity and growth both in the agricultural and industrial sectors of the economy. With increased activity in these two sectors, the road transport sector will benefit.

In the recent years, the Government of India has initiated various policy measures to liberalise the economy. It is hoped that the Government will take follow-up action and take further administrative measures to see that unnecessary restrictions and controls which impede economic growth are completely abolished.

It is heartening to note that the Planning Commission has projected a growth rate of 6% in the 8th Five Year Plan as compared to 5% during the 7th Plan. This would require an outlay of Rs. 650,000 crores compared to Rs. 348,148 crores during the 7th Plan. Over fifty per cent of this investment will have to come from the private sector.

TYRE INDUSTRY PROSPECTS

Tyre is a growth industry. The demand for tyres is directly related to vehicle production and growth in road transportation. With the advent of the automobile revolution in India, the prospects of the Tyre Industry have improved. The new generation of cars, light commercial vehicles, trucks, tractors and two wheelers require a large number and types and sizes of tyres. It is a matter satisfaction that the first item that could mediately indigenised by the new ger automobiles was Tyre, which eloquently about the quality of Indian T

Tyre Industry is fully geared to m expected growth in demand for tyres modernisation and expansion. Howe my view, the industry scenario would one of competitiveness which may intensify further. Your Company has overcoming severe competition and tablished a name for itself in the mark not only wish to keep our present share but improve upon it and mai position of leadership in this industry. intend to do by modernisation and exp as mentioned earlier. I can assu shareholders that we will make it happe

OUR STRENGTHS

Commitment to Excellence in product and ensuring customer satisfaction is heart of JK's corporate philosophy philosophy is reflected in the Company mitment to continuous upgradation of quality. Quality is an attitude of min more than doing things right. It mean things right at the right time – all the tim is the attitude that must prevail in the en ganisation – every worker, employe manager. To succeed in a competitiv ronment demands more creativity and i tion in developing new products, processes and systems to serv customers better.

Your Company has been practisi philosophy. This is evident from the fac brought in the latest tyre technology in and launched the Radial revolution eleven years ago. A lot of investm research and development has been n perfect Radial Tyres suitable for India. the Company enjoys a unique posi leadership in Radial Tyres. We ma largest range of Radial Tyres, both Belted and Fibreglass belted, for a va imported and Indian cars and light comm vehicles.

The growing popularity and strong ence among consumers for JK Tyres i of the Company's commitment to g customers the best value for mone Company has spared no effort or cos tablishing the most modern Tyre Plan country equipped with the latest an sophisticated machinery and equipmen

glass Belted Radials launched a couple of years ago are performing exceedingly well. Eighty per cent of the luxury model Contessa Classic cars are fitted with JK Galaxy Radials. JK Steel Belted Radials have performed well on Maruti Gypsy and on LCV's manufactured by Mahindra & Mahindra, Bajaj and Standard Motors.

HUMAN RESOURCES DEVELOPMENT

We believe our people are our greatest assets. The Company is committed to the development of our human resources at all levels through a well thought out and executed plan of appraisal, training and development. We endeavour to provide our employees an environment conducive to encourage creativity, innovation and greater productivity. An appropriate system of rewarding and motivating people is being followed in the Company. A lot of investment has been made to provide housing, schooling, medical and recreation facilities at our Works at Jaykaygram.

EXPORT STRATEGY

In our strategy and plan for growth, export has a great role. Over the last few years, we have been able to establish a firm foot-hold in the international markets. The Company's exports rose sharply from Rs. 4.12 crores in 1985-86 to over Rs. 7 crores last year. Our tyres have earned a good name and are in demand in countries like USA, USSR, Canada, UK, Afghanistan, Egypt, Bangladesh, Mauritius, etc. We have developed new sizes and patterns of tyres specially suited for the export market. In order to substantially increase our sales in the overseas markets, we are creating additional capacity exclusively for exports. We intend to make a name in the export market as we have done in the domestic market.

IMPORT OF TYRES

In this context, I must make a reference to the Government's recently announced policy of allowing import of tyres and lowering of import duty on tyres from 145% to 105%. The logic of it is difficult to comprehend. After some of the tyre units which had been closed due to labour problems were re-opened, availability of the tyres in the domestic market has improved. There is absolutely no shortage of tyres of any kind in the country. On one hand, the Government wants exports to go up to reduce the trade deficit and earn foreign exchange. On the other hand, precious foreign exchange will be wasted by unnecessarily importing tyres when there is no need for the same.

If the Government's intention is to make tyres cheaper to the consumer, the better way would be to reduce import duties on raw materials so that the resultant reduction in cost can benefit the Indian consumer. The very high element of taxes and duties that add up to 81% of the tax excluded price in the case of a truck tyre needs to be reduced substantially. While there is shortage of critical raw materials required by the tyre industry, there is no shortage of tyres. Indian made tyres are preferred by our truck operators as they are stronger and carry more loads and run even on bad roads. In any case, there is no justification whatsoever for keeping import duties on raw materials higher than on the finished tyre. For example, why should the duty on imported nylon tyre cord be at 179% while it is 105% on tyres. In fact, the right thing to do would be for the Government to reduce duty on raw materials to 65% and place their imports under OGL.

RAW MATERIALS SHORTAGE

The Tyre Industry has faced the problem of chronic shortage of critical raw materials like rubber, chemicals, carbon black and nylon tyre cord required for tyre manufacture. Urgent steps must be taken to see that these shortages are totally eliminated by adequate capacity being created in the country. This is absolutely necessary from the point of tyre production for both the domestic and the overseas markets. If shortages of raw materials are removed, it will have a healthy effect on the price of raw materials and the rising escalation in cost of inputs can be reduced. The price of natural rubber has shot up in the domestic as well as the international market.

It is very necessary that the Government should take urgent steps to ensure availability of natural rubber at a reasonable price level. For this, it would be necessary to review and reduce the import duty on natural rubber immediately. The import duty on Nylon Tyre Cord should also be reduced substantially to make the imported nylon tyre cord available at an acceptable price in view of domestic shortage of nylon tyre cord. This is the only way further rise in prices of tyres can be somewhat contained.

INVESTMENT ON ROADS AND ROAD TRANSPORT

Road transportation is so vital to the nation's economy and yet it has been allowed to suffer from neglect. I would plead for the removal of all obstacles like octroi, so that movement of vehicles is not restricted from one State to another. Massive investment in Building new roads and modernising and improving roads is necessary.

CORPORATE RESPONSIBILITIES

Your Company has been discharging well the corporate responsibilities expected of it. It provides quality goods to the consumers, fully meets its obligations towards its employees, shareholders and the public. It is of immense satisfaction that your Company's contribution to the national exchequer by way of excise duties, customs duties and other taxes during the period 1977 to 1988 is of the order of Rs. 644 crores.

The Company has also been doing its mite in the matter of social obligations. You are aware, Rajasthan where your factory is situated, was worst hit by severe droughts during the past four years when your Company took several measures for providing drinking water to the drought affected people by deepening wells, installation of hand pumps and spraying of chemicals on Raj Samand Lake for minimising evaporation losses. Besides, the Company has also been providing essential requirements to the people around your factory through mobile fair price shops.

ACKNOWLEDGEMENTS

I would like to convey my sincere thanks to the all-India Financial Institutions, Banks, the Government of Rajasthan and M/s. General Tire International Co., USA for their continued co-operation and assistance to the Company.

I would also like to acknowledge the hard work put in by the employees at all levels and thank them for it. I am confident that they would continue to strive to reach higher levels of performance.

I would also like to offer my grateful thanks to the shareholders and to our customers and dealers all over the country for their continued support and co-operation.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

We believe in Constant RESEARCH & DEVELOPMENT

Sub : Use of Metal Arc Welding Electrodes in NTPC Projects

Dear Sir,

This has reference to your previous correspondence on the subject including your letter dated 17-2-86.

The issue has been examined in totality. The shielded metal arc welding electrode 'Multi-rod 6013' of your company was approved and was included in the 'rationalised list of welding consumables' circulated to our project sites by our Q.A. department on 10.8.84.

Thanking you
Yours faithfully

(K.M. GUPTA)
Manager (Core-Contracts)

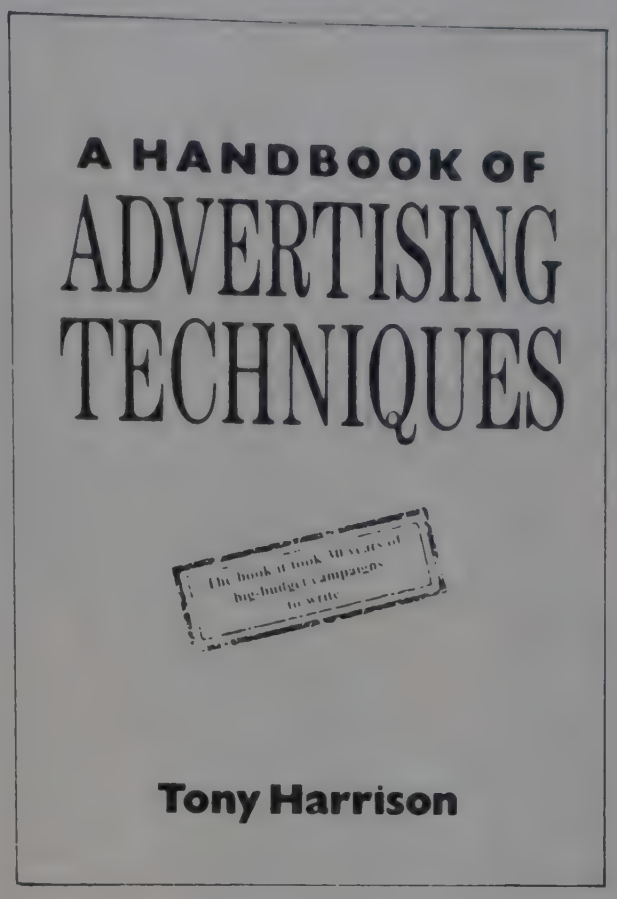
PEHACHAN

nsider's view of an adman

handbook of advertising techniques
y Tony Harrison,
ogan Page, UK, hardback, pp 239 £ 17.95
Rs.436)



Vith the proliferation of magazines and ailies and the quantum leap in TV adver-ising, a lay person in India is constantly ubjected to ad blitzes. This book pro-ides such a reader a fascinating insider's iew of the advertising world. Produced in he manner of a handbook, it provides a iew of what goes on behind doors in ad offices.

Tony Harrison, an adman for 30 years, as "produced advertising worth more han 100 million in a career with some of he world's largest agencies". The author says: "We cannot start by saying 'let us hink of an ad'. First you must under-stand the environment in which your product or service exists, an environment made up of your product, the other prod-cts that comprise the market and those customers that you and your competitors are trying to impress...After all, in most markets today, customers have a great choice as to what they buy, so why should they buy yours." Advertisers try to find a uniqueness in a product or a service and then find a way of communicating it to predestined customers.

In this book, even though we may be unfamiliar with the British ads discussed, we do not feel 'left out' as these ads are reproduced. The adman needs to under-stand how the consumer sees a product and why it gets selected. Products and services are classified according to the modes of consumers' selection. Func-tional products, 'impulse' items (ie those placed near the cashier, eg small packets of sweets), high ticket items, conspicuous consumption items and services are cate-gorized each according to its own rules as described by the author.

On fact finding, Harrison emphasises that it is an ongoing process in market-ing, and after positioning, the evaluation and the use of the gathered information is most effective. Interestingly, one exam-ple used is that of Sharwoods Indian Products, whose condiments and curry powder ads are reproduced and analysed.

The voice of experience comes through when he comes to introducing the selling idea. To clever slogans, attractive pic-tures, intriguing headlines and all the highly creative things, the author says "no" because his experience shows that

> "As a consumer, do you choose a product that suits you best or buy something that seems less appropriate simply because you want to pay tribute to the cleverness of the advertising?"

content is more important than style. He asks: "As a consumer, do you choose a product that suits you best or buy some-thing that seems less appropriate simply because you want to pay tribute to the cleverness of the advertising?" To con-sider how a selling idea is built, an exam-ple used is Richardson Vicks' night time cold remedy marketed with the name Ny-quil, launched in Europe as Medinite. Beechams, with their competing product, Night Nurse won because their name con-veyed the product idea significantly better.

On communication, he poses a riddle. Communication takes place in the ear of the listener, not in the mouth of the speaker. Copywriters have a fatal fascina tion for things that are subtle and indi-rect but the cunning implication often remains a total mystery to the average reader or viewer.

Only after considering all these topics does Harrison come to the point at which an advertising campaign can be started. He mentions a well-worn acronym AIDA (Attention Interest Desire Action) and expresses that it is too simplistic to be the whole secret of advertising. He gives his own, far more detailed method, again with descriptions and illustrations of ac-tual ads and suggests ways to achieve convention. The individual advertisement is broken up into its component parts: effective headlines, claims, copy gambits, humour, etc, and he discusses techniques of the art director, techniques of TV, cin-ema, radio, posters, direct mail etc.

For executives and businessmen who are involved with advertising in some way, either for marketing or budgeting, this book provides better understanding of the mechanics. For admen, it is a pro's viewpoint of their world. Others, who have always been irritated by the on-slaught of ads on Doordarshan or the media, can get an idea of what is being attempted in each one, play critic and assess its effectiveness.

A guide to importers

BIG's Easy Reference Customs Tariffs 1988-89 (updated till July 1988);
BIG Database Publishing Pvt Ltd, New Delhi; pp: 803, Rs.160

The updated edition of the BIG's Easy Reference Customs Tariffs contains the new valuation rules applicable on all im-ported goods from 16 August 1988. The rules give effect to the GATT code on valuation to which India is a signatory. The previous rules, called Customs Valua-tion Rules, 1963, were replaced by Cus-toms Valuation (Determination of price of imported goods) Rules, 1988 on 16 July. The principles of the new methods of valuation are in agreement with the key elements in valuation laid out by the Customs Act, 1962.

The new rules differ from the super-seded rules since export prices to coun-tries other than India can no longer be used in value assessment. Domestic prices in the exporting country cannot also be taken as the basis. In fact, the rules require that only data available in India be used in the various valuation methods.

Apart from the valuation rules, the book gives the three duties (basic, auxil-iary and additional) and the total duty on each product which can be of help to an importer in calculating import duties.

YOUR CORPORATE GIFTS COULD EARN A BAD NAME FOR YOUR ORGANIZATION!

The corporate gifts that you give to your clients and business associates are your gesture towards the relationship that you have with them.

A gesture, that you care. And think of them with fondness.

If, what you gift is substandard and does not perform, then think, what your clients and associates will feel?

More important — how would you feel?

To avoid embarrassment follow the tried and trusted idiom:

PREVENTION IS BETTER THAN CURE.

So, when you select a corporate gift based on digital watch modules, make sure it has a SCL digital watch module in it. And not a spurious smuggled one. Insist on the gift manufacturer showing the SCL digital watch module to you.

For, if you decide in haste you may repent at leisure.

Don't decide in haste. Don't repent at liesure.

aying by erformance

reasing competition, squeeze on fits, inflation and a greater need for ults persuaded several managements contemplate compensation policies ked to performance. In the West these ve been commonplace, and schemes ch as annual bonuses or stock option nemes ensure that the employee has a sted interest in the company's results d at least a part of his payments are sed on tangible results. In India how-er, there has been some hesitation on ne part of both managers and top man-gement regarding such schemes and, of ourse, stock option schemes have yet to rmount several legal hassles.

It is interesting that whilst workers are outinely forced to accept productivity-nked incentives or give guarantees of erformance levels with each settlement, ost managements have shied away from imilar schemes for managers. Of course, ssessing managerial performance is ometimes difficult because of several en-ironmental factors, governmental ac-ions, etc, that may adversely affect the erformance of a company. But it is not mpossible.

The Diwali bonus

everal family managed companies have istorically followed the practice of giving Diwali bonus often linked to the perfor-nance of the company and the level of atisfaction of the owner with the work of he employee. But the employee invaria-ly does not know the targets that have een set for him or the criteria by which e is assessed. And these need not neces-arily be the visible financial or business argets. They therefore do not always erve the purpose of motivating em-loyees or ensuring goal-directed rformance.

The only concrete and well-imple-ented performance-linked schemes in India today are the sales incentive chemes; even most of the so called pro-uctivity-linked schemes signed with workers have been failures since the norms have been set at fairly low levels. Sales incentive schemes have in most cases been individual schemes and have even accounted for 50 per cent of the earnings of the individual. Of course, group incentive schemes have also been implemented but nearly always in combination with individual schemes. There is as yet considerable difficulty experienced in implementing purely group schemes on a scale that significantly affects earnings.

Several of the older companies that are in stagnant industries are toying with the idea of incentive schemes for their managers rather than the annual increment system. However, none of them have made much headway partly due to the rejection of such concepts or schemes by managers and partly because of the absence or poor system of performance evaluation.

Managers in most companies hesitate to accept such schemes since they have not fully grasped the concepts. Besides, most of them are not used to such a high degree of accountability and result-orientedness. There is also considerable apprehension about the manner of implementation, since appraisal systems in most companies are either virtually non-existent or not objective and also because the goals of the management and the owners may also be at cross purposes.

The success of any system of incentive payment lies in having fair and well understood parameters on which the incentive is to be based. The individual whose efficiency is being evaluated must also have the authority to be able to make decisions that will affect the performance parameters. Often top management are merely implementers of decisions made by the owners and hence conventional financial parameters may not be an indication of the individual's performance. The other important aspect is to ensure that such a system does not start a rat race within the organisation.

Several new companies, especially those in sunrise industries, are looking at profit sharing schemes. This is as much to ensure commitment to the organisation as to preclude the possibility of the individual being pinched by competitors. These schemes are as yet informal since even the current directors' salaries provide for only a limited amount of profit sharing (1 per cent of net profits within certain prescribed upper limits). The high tax burden for the employee results in such schemes being operated in a very hush-hush manner.

Stock option schemes have long been talked about though yet have not been implementable due to a host of legal issues such as the ban on companies buying their own shares, the restrictions on funding of purchase of shares, the taxability of such income, etc. Some companies have experimented with having their employees form associations which have invested in shares from the market. But these do not serve the objective of getting the commitment of senior management to the long term financial health of the company.

Managements have also considered issue of shares to employees as a tool to prevent hostile takeovers. However this could be a double-edged sword. But the legal issues have to be first sorted out to make stock option schemes feasible in the country.

In the meantime, companies have experimented with other means of rewarding employees. During the stockmarket boom of 1985 several companies gave their employees shares in newly-floated group companies. But this was not subject to the employee achieving a defined performance standard.

Attractive schemes

Financial services companies have been able to successfully put together attractive schemes of investing a portfolio of funds for a select group of employees. The annual sum put forward by the company depends on the individual's performance and the company routinely manages the individual's portfolio. These are however not investments in the company's own stock.

However the real issue before several managements is, surprisingly enough, what criteria of performance to use. Most companies being functionally organised, the bottom line responsibility is often that of the owner alone or of the chief executive. The traditional problems and issues of assessing line and staff jobs therefore surface even at the highest level.

Managements would therefore have to first establish the ground rules for evaluating the performance of their managers. This has to be linked to the financial health of the company rather than the personal goals of the entrepreneur especially in companies that have a public shareholding.

For finally the performance of top management has to be subject to the normal parameters of profitability, market shares and return on investment. And if the tone of management and leadership is set at the top, in due course it has to percolate down.

■ ANITA RAMACHANDRAN

NOTICE

It is hereby notified for the information of the public that SKOL BREWERIES LIMITED proposes to make an application to the Central Government in the Department of Company Affairs, New Delhi, under sub-section (2) of Section 22 of the Monopolies and Restrictive Trade Practices Act, 1969, for approval to the establishment of a new undertaking/unit/division. Brief particulars of the proposal are as under:

1.	Name and Address of the Applicant	**SKOL BREWERIES LIMITED** **Udyog Bhavan** **29, Walchand Hirachand Marg** **Ballard Estate, BOMBAY 400 038**
2.	Capital Structure of the Applicant Organisation.	**Authorised** **Preference : Rs. 30,00,000** **Ordinary : Rs. 1,70,00,000** **Subscribed** **Preference : Nil** **Ordinary : Rs. 1,26,00,000**
3.	Management Structure of the Applicant Organisation indicating the names of the Directors, including the Managing, Wholetime Directors and Manager, if any.	**Mr M R Chhabria, Chairman** **Mr K R Chhabria** **Mr P G Daftary** **Mr A S Malik** **Mr C M Maniar** **Mr A C Mukherjee** **Mr R K Poddar** **Mr V C Vaidya** **Mr T S Venkatesan**
4.	Indicate whether the proposal relates to the establishment of a new undertaking or a new unit division.	**Establishment of new undertaking**
5.	Location of the new undertaking/unit/division	**Dist. Pune, MAHARASHTRA**
6.	Capital structure of the proposed undertaking.	**Same as in item 2**
7.	Incase the proposal relates to the production, storage, supply, distribution, marketing or con of any goods/ articles, indicate: i) Names of goods/articles. ii) Proposed licensed capacity iii) Estimated Annual Turnover	 **Potable Alcohol** **90,00,000 Bulk Litres per annum** **Rs. 15,20,00,000**
8.	In case the proposal relates to the provision of any service, state the volume of activity in terms of usual measures such as value, income, turnover, etc.	**N.A.**
9.	Cost of the Project	**Rs. 7,20,00,000**
10.	Scheme of finance, indicating the amounts to be raised from each source.	**Will be raised from internal resources of the Company and from borrowings.**

Any person interested in the matter may make a representation in quadruplicate to the Secretary, Department of Company Affairs, Government of India, Shastri Bhavan, New Delhi, within 14 days from the date of publication of this Notice intimating his views on the proposal and indicating the nature of his interest therein.

Dated This 2nd November, 1988

A.S. MALIK
DIRECTOR

BECKMAN – WIPRO

JOINT VENTURE IN ANALYTICAL INSTRUMENTS

Beckman Instruments Inc. is a world leader in providing analytical instrument based solutions to the life sciences and health care markets. To step up customer service and to meet the growing needs of the Indian market, Beckman's Bioanalytical Systems Group is promoting an Indian venture in financial collaboration with Wipro, a leader in the computer business in India. The joint venture will be based at Delhi and will establish manufacturing facilities to cater to the Indian and export markets. Our product range includes centrifuges, HPLC's, spectrophotometers, nuclear and DNA instruments. We are looking for a:

CHIEF EXECUTIVE

Delhi

Responsibilities include: • Setting up the project within the budgeted cost ahead of schedule • Building an excellent team • Managing the operations effectively to achieve the company's profit objectives • Providing the best customer service in the industry • Establishing the venture as the leader in the Indian analytical instrument business. The position reports to Board of Directors of the joint venture.

We are looking for an achievement oriented manager who can integrate the marketing, manufacturing, service and support functions, lead the team and deliver results. Senior management experience in a high technology industry in a reputed company is essential. Sales and Marketing knowledge of the analytical instrument business is an advantage. The preferred age is around 40 years.

The compensation package is designed to attract top quality talent and includes potential for stock option in the venture. Please apply with a detailed resume and contact telephone number, within ten days to:

The Executive Vice President, Wipro Ltd., Bakhtawar, 229, Nariman Point, BOMBAY-400 021. Tel: 287 0352

THE TITAGHUR JUTE GROUP

This sterling group, in the wake of controlling interest changing hands in the U.K., resulting in major management restructuring and envisaged turnaround of the group having jute mills near Calcutta, have retained our services for assistance in selection of the following senior management personnel:

CHIEF EXECUTIVE: MCS-820
(2 positions)

The incumbents must be high-calibre professionals in the age group of 30-45 years having proven track record of leading a team of managers for achieving corporate goals, with high task orientation and a flair for man-management. They will be entrusted with the overall management of the respective companies reporting to the Group Chairman. While persons from any discipline can apply, preference will be given to incumbents having professional qualifications and/or experience in jute or related industry. The positions will be located at the respective factories.

MILL MANAGER: MCS 821
(2 positions)

They must be proven shopfloor managers in the age group of 35-45 years having 10-15 years relevant experience. Preference will be given to professionally qualified candidates.

Heading the production functions, they will be responsible for ensuring that production targets are met. An aptitude to motivate workmen and supervisors and the ability to effectively co-ordinate with both sales and purchase personnel is a specific requirement.

FINANCIAL CONTROLLER: MCS 822
(2 positions)

Candidates must be mature Chartered/Cost Accountant or MBAs in the age group of 30-40 years having 10-15 years' relevant experience. These positions will be located at the respective factories.

Heading the finance functions, they will be responsible for formulation and implementation of financial planning and management. In addition, they will have to provide sound supportive management systems in the areas of accounting, costing, budgetary control and management information. They should be capable of handling the position requirements independently and will report to the respective chief executives.

The compensation package for the above positions will be commensurate with proven ability and experience and will not be a constraint for deserving incumbents.

Please apply giving full details of age, qualifications, experience, and salary drawn within 10 days, superscribing MCS code to:

LIGHT ENGINEERING INDUSTRY
GENERAL MANAGER
ELECTRICAL PRODUCTS

South India **Excellent Terms**

Our client is a reputed multi-unit, multi-product and professionally managed company manufacturing a range of Electrical products with a turnover of around Rs.150 crores. They are now on the lookout for a high calibre technical professional with general management background to take charge of operations of one of their units with an employee strength of around 700. The growth prospects are excellent for the right individual with possibilities of taking over as **Chief Executive of the unit** in course of time.

The incumbent will report to the Chief Executive and responsibilities will cover production engineering, facilities planning, production planning, design engineering, production, industrial relations, etc. Accent will be on high level of technical inputs and achieving consistently high productivity and production targets through well directed efforts. He will lead, guide and motivate a team of professionals for achieving the results.

Candidates should be Graduate Mechanical/Electrical Engineers preferably with PG qualification in production technology/management with 15-20 years of production experience at senior levels. Sound technology background in machining & die casting and good managerial ability are a must. Design background of rotating machinery would be an added asset. Age Group : 40-45.

The company offers an excellent working environment and an attractive remuneration package which will include substantial retirement benefits. Please write with detailed resume marking envelope & application with job title & code GML/MDS/1525 to M Madhusudan, General Manager. ALL APPLICATIONS WILL BE TREATED IN STRICT CONFIDENCE.

ABC CONSULTANTS PRIVATE LIMITED

4, Jagannathan Street, Madras 600 034. Tel.470778

STANDARD BATTERIES

GENERAL MANAGER (PROJECTS)

Bombay/Madras

Rs. 1.25 lakhs
+ Housing
+ Company Car
+ Retirement Benefits

The Standard Batteries Limited is a leading manufacturer of lead acid storage batteries for industrial, automotive, submarine and mining applications, in technical and financial collaboration with Oldham Batteries Ltd., UK. The present turnover is at the level of Rs. 60 crores per annum and is expected to double in the next four years. The company is extensively involved in modernisation of its three factories located in Bombay and Madras, including induction of the latest technology from Oldham France S.A. and The Furukawa Battery Co. Ltd., Japan.

The incumbent will be given independent charge of implementing a new project. Successful completion of the project will lead to profit centre responsibility of a product group or division. This is an outstanding opportunity in general management with excellent growth prospects.

Applicants should be graduates, preferably in Chemical or Electrical Engineering.Postgraduate qualifications in Business Management will be an advantage. The ideal candidate would be around 35-40 years, currently occupying a similar positicn. He should have successful techno-commercial experience including the implementation of new projects. Exposure to the lead acid storage battery industry, particularly in manufacturing, would be a distinct advantage.

All applications will be treated in strict confidence.

Please apply within 15 days enclosing your bio-data to:

The Managing Director,
The Standard Batteries Ltd.,
Vakola, Santacruz (East), Bombay-400 055.

the concept

have been retained by one of their clients to select top notch manufacturing professionals; our clients have one of the largest Chemical Process plants of its kind in the world engaged in international business, competing with the best in the world. The group has crossed a turnover of Rs. 80 crores and is expected to reach Rs. 100 crores this year. This division under the group is doing a turnover of Rs. 6-7 crores in international marketing and is targeting to reach Rs. 15 crores.

The Company is proposing a joint venture with a large U.S. based Fortune 500 company in similar business, to add to and update manufacturing facilities and grow rapidly in size in related/allied product lines.

Product sophistication, quality and customer service, strong reliance on professionalism and individual creativity, human resource development, are the core values stressed by the Company.

G.M.-WORKS/WORKS MANAGER
(Process Industry)

The Job: The Incumbent will be responsible for complete management of the Plant, achieving production targets, quality control, plant maintenance, productivity improvement, pilot plants management, etc. The assignment would call upon special strengths in the area of men-management including Industrial Relations, management of Technology, Diversification and developing new products.

The Candidate: A young and dynamic Manufacturing Professional with M.Tech in Chemical Engineering with 10 to 12 years of experience in chemical process industry preferably in a medium sized company, is the kind of candidate we are looking for. He must be an achiever having proven ability to perform; an M.B.A. would be preferred.

MANAGER — QUALITY ASSURANCE
(Process Industry)

The Job: The selected candidate will take charge of the complete quality assurance function. He will develop, implement and monitor quality assurance systems to ensure quality consistent production matching to customer needs. The job involves developing and leading a group which will set the quality standards, evolve and implement systems and procedures and generate inputs for high level of quality conformance. Inward materials inspection, in process inspection, good manufacturing practices as well as final product quality would be part of the responsibility. This is a senior position and a very crucial responsibility centre.

The Candidate: He should be M.Sc. in Chemistry with aptitude towards making a career out of Quality Assurance and Industrial Engineering. The challenge is to build a group which utilises the best of local talent and the Collaborator's wealth of experience to achieve excellence in Quality Management & set an example for the Industry to follow. Experience in Analytical Instrumentation and methods development, natural products/agro products isolation and Quality development is important.

The Environment: Both the positions are in the Senior management cadre. The organisation offers an environment of challenge and responsibility within a young and professional team. Outstanding performers are assured of rapid growth opportunities. Personality traits like motivation, quick grasping power, mental flexibility, maturity and balance, self confidence, ability to effectively deal with people at all levels would be of value. Total commitment to work is a pre-requisite.

Both positions will report to the Chief Executive of the division.

The Location: Both the positions will be based in an 'A' Class city in South India.

Remuneration: An attractive package will be offered including perks like house, car, club membership, etc. with both the positions.

Applications will be treated in strict confidence. Please write within 7 days along with Telephone contact numbers to:

CHANDER BATHEJA

Standard Chartered

Standard Chartered Bank
Merchant Banking Division

ACCOUNTS AND ADMINISTRATION MANAGER

(BOMBAY)

An experienced executive is required to be responsible for the financial control and administrative support functions within the successful expanding merchant banking operations of Standard Chartered in India which currently employs about 40 executives and staff.

His responsibilities will include developing and maintaining sophisticated financial and management information and control systems for the merchant banking operations as a whole, as well as for the individual product areas and branches, within the context of the worldwide Group systems. He would also be directly involved in office administration and personnel management functions for the growing operations.

Candidates should have a sound accountancy/financial background and direct relevant experience, including experience of computer-based financial control and information systems. They should ideally have experience of working in, or operating these systems, and in office management, preferably in banking/ service organisation, and of management of people.

Candidates should be about 35-45 years of age. The remuneration package will be commensurate with experience.

Please apply in strict confidence within 10 days to:

A. F. Ferguson Associates
P. O. Box 1786
Bombay 400 001

giving full details of age, qualifications, experience and salaries drawn. All applications and envelopes should be marked "Ref. MS/5003".

PROJECTS MANAGER

MUSCAT

Rs. 17,000/- per month plus benefits

We have been retained by an established group of companies to select a Projects Manager for one of their companies which represents several leading European manufacturers and suppliers of specialised equipment and services for the petrochemical industry. The products currently traded by the company include valves, actuators, pressure gauges, relay equipment, instrumentation, etc. In addition, operations and maintenance contract service companies are also represented.

The Projects Manager will report to the General Manager and will be responsible for developing these lines of business through expansion of both the product and customer bases within the industry. This will include liaising closely with customers and identifying their specific requirements vis-a-vis existing principals and where necessary, sourcing principals on a global scale. The Projects Manager will also be expected to diversify the activities of the company into trading of non petrochemical related products and services primarily on the basis of tenders floated by the various ministries/departments of the government and sourcing supplies internationally.

Candidates will be qualified engineers preferably with additional qualifications in management and marketing and who have around 7 to 10 years experience in institutional selling of industrial products. Candidates who have relevant product/ industry experience would have a distinct advantage. Maturity, the ability to interact effectively at the highest level in client organisations and self motivation are essential pre-requisites for this position. The preferred age is 30-35 years.

In addition to the tax free salary indicated above, the company will offer an attractive commission scheme based on performance and will provide furnished family accommodation, company maintained car, annual air passage besides medical and end of term benefits.

Please apply in strict confidence within 7 days, depending on your location, to:

A. F. Ferguson & Co.
P. O. Box 1786
Bombay 400 001

or

A. F. Ferguson & Co.
6H, Hansalaya
15, Barakhamba Road, New Delhi 110 001

giving full details of age, qualifications, experience, salaries drawn, passport particulars and passport size photographs alongwith contact telephone numbers. All applications and envelopes must be marked with reference number "MS/5006".

Openings available in an organisation for its new modern factory, very near Delhi, which manufactures an extensive range of electrical grade insulating materials in technical collaboration with GENERAL ELECTRIC CO., U.S.A.

The production units consist of chemical process plants for manufacturing high technology varnishes & various other plants for manufacturing flexible tapes from glass yarn, mica paper & glass cloth.

IF YOU'VE MADE YOUR MARK IN COMPUTERS OR ELECTRONIC IT'S TIME TO SET YOUR SIGHTS ON THE FUTURE.

Telecommunications is changing the way the world handles information. Extraordinary developments in the field have made it possible to hook up computers where previously they worked in isolation, transm data and facsimile at high speeds,and even hold video conferences. From merely handling voice traffic telecom has become the spearhead of a revolution that has outpaced even computers in the rapidity of its advances.

In India, the telecom revolution revolves around the amazingly versatile EPABX. Packet switching, tex processing and protocol conversion, data transmission (at speeds as high as 2 megabytes/sec), and Wi Area Networks, have all been made possible by the EPABX. And above all, compatibility with Ethernet a X.25—the global datacom protocol—makes it possible to establish local and trans-continental links at t push of a few buttons.

All these facilities have led to tremendous leaps in demand, and the Indian telecom market is projected to worth Rs. 3100 crores by 1990!

Unitel—ATEA, Belgium: A triumphant new force

Spearheading this revolution is Unitel—a joint venture of the Rs.800-crore United Breweries Group (wh includes companies like Hoechst, McDowell, Carew, Herbertsons, Punjab Breweries, Roussel, Kissan a Phipson) and ELCO. Unitel's collaboration with ATEA of Belgium (a GTE-Siemens venture) has given access to the most contemporary technology available worldwide.

The challenge is on at Unitel

The race is on to usher in the future in telecommunications—today. The effort to introduce state-of-the systems and propel India over the threshold of a new era.

We are a young, professionally managed organization with a mission to become leaders in Retailing. Started by people who launched computer retailing in India, we have already opened five stores and finalised eight more "LITTLE KINGDOM" stores at various locations in the country. Each store is situated at a prime shopping location modelled on similar stores abroad. We plan to have 50 stores by the end of 1990 and do a business of over 50 crores.

The manager would be primarily responsible for achievement of sales targets at the store and efficient administration of the store. To this end he would be required to lead and motivate an enthusiastic shop team, create and execute local promotions, plan reordering of merchandise, and control the commercial and account operations.

Candidates would be Graduates/MBA's with about 2-4 years' experience in managing sales/branch operations. An ability to quickly grasp the dynamics of consumer behaviour and a willingness to put in long hours would be a basic prerequisite.

We offer an attractive compensation package, a professional work environment, and excellent scope for career advancement linked to performance on the job.

digital

Digital Equipment (India) Limited, is a joint venture between Digital Equipment Corporation, USA, the world's largest manufacturer of networked computer systems, and Hinditron Computers. DE(I)L will manufacture and market the popular Micro VAX series of Super Mini computers at its facility in Bangalore, develop software for domestic and world-wide markets and provide need-based computing and networking solutions to match international quality standards.

The Company has an abiding commitment to customers because it believes that nothing testifies to its success better than their satisfaction. To make this success possible, it nurtures employee creativity, initiative and dedication. Honesty, responsibility and excellence are values that are promoted by the company which adopts a managerial approach that is strongly employee-oriented.

We are looking for outstanding professionals to fill the following positions at Bangalore.

NATIONAL SALES MANAGER (Code: SAM/04)

The National Sales Manager will be responsible for formulating and implementing innovative short and long term policies and strategies to achieve sales targets and market share on an all-India basis, besides planned growth and market leadership for both locally manufactured and imported computer systems. We are looking for a result-oriented dynamic self-starter with a high degree of personal motivation. The incumbent will be an Engineer, preferably an MBA having around 15 years of relevant experience, with at least 5 years at a senior level and a successful track record. Ability to provide leadership towards developing a highly motivated and result-oriented sales organisation will be an essential attribute.

Preferred Age: Around 40.

INDUSTRY MANAGERS - 2 FINANCIAL SERVICES & MANUFACTURING SERVICES (Code: CMD/05)

The incumbents would be responsible for identifying the industry needs, assessing market potential and conceptualising, evolving and implementing business strategy to secure and establish market leadership for the company's products and services in their respective industry sectors viz., Financial Services (banking, insurance and capital markets) and Manufacturing Services (automotive, aerospace, electronics, heavy engineering etc.).

For Industry Manager – Financial Services, we are looking for graduates with professional qualifications in banking or finance with a minimum of 7 years experience in the financial services sector. Hands-on experience and intimate knowledge of the functioning and management of the financial services sector, such as a large nationalised bank is desirable.

Thorough understanding of information processing needs of the financial services sector in a computer based environment would be an asset.

Preferred Age: 30-40.

For Industry Manager – Manufacturing Services, we are looking for graduates in Mechanical Engineering with post-graduate qualification in Mechanical/Industrial Engineering/Production Management, with a minimum of 7 years experience in a large engineering organisation with hands-on experience in conceptualising, managing and implementing Computer Aided Design and Computer Aided Manufacturing programs involving multi-disciplinary teams. Professional training in CAD/CAM/MRP applications would be an asset.

Preferred Age: 30-40.

PRODUCT MANAGER (Code: CMD/06)

The incumbent will be responsible for providing product support to sales teams, involving support information on new product releases, product features, relative comparison with competitors' products, besides analysing win/loss situations against the competition and evolving strategies to counter competitors' products and strategies. The right candidate will be a graduate in Engineering with post-graduate qualification in Management with 4-6 years direct sales/product management experience in the computer industry.

Preferred Age: 28-32.

All the positions carry attractive salary and benefits in line with the best in the industry and will not be a limiting factor for the right candidate.

High performers can look forward to rewarding career prospects in a totally professional environment.

Please apply in strict confidence, superscribing the envelope with the appropriate code to:

Deputy Executive Director

The Position : The Deputy Executive Director will report to the Executive Director, who is the executive head of the Council. The Council provides an environment whereby the person will blossom to his full potential as he achieves results. The environment is essentially suitable for self-motivated, autonomous people.

The Job : The Deputy Executive Director will be responsible for the Consultancy, the EDP and Finance & Administration Divisions of the Council. His prime responsibility will be to keep up the growth of the Council (which has grown 6 times in the last 9 years).

Qualifications, experience and other requirements : A degree in Engineering from a recognised university/IIT with higher qualifications in General Management (preferably EKS) or Industrial Engineering. Exposure to EDP and Finance & Administration is desirable.

A minimum experience of 10 years in industry in General Management, Industrial Engineering or EDP/Systems is a must. We are looking for a person who is endowed with an overall perspective of and grip over business as a whole. He should have an innate ability to locate bottlenecks in whatever functions and areas they may lie (in a variety of industrial/business situations) and be able to get the solutions to these bottlenecks to implementation. Obviously, clarity of concepts, the ability to communicate them clearly and effectively and the ability to get along with people is a must.

Uncompromising dedication to Customer Services - to which the Council stands committed - is an essential requirement.

Age : Not exceeding 45 years.

The Compensation : The package is negotiable; the right candidate will find it challenging.

Please apply within 15 days to :

The Executive Director,
Baroda Productivity Council, Productivity House,
Productivity Road, Baroda-390 005

Nagarjuna Finance Limited

Location : Bombay **Age : upto 35 years**

Nagarjuna Finance Limited, one of the largest finance companies in the country with a gross asset portfolio of over Rs. 45 crores, belonging to the dynamic, well-diversified Nagarjuna Group, wishes to recruit a high calibre **Assistant Manager/Deputy Manager** to spearhead the Company's thrust in the area of TRADE FINANCING.

The position calls for atleast 5 years of hands-on experience in the area of Imports and LC transactions. Knowledge of Import-Export procedures, banking aspects of overseas and inland LCs is essential. He would be required to develop the TRADE FINANCING activity from scratch and generate sizeable business volumes in keeping with the Company's plans. Specifically, the job responsibilities would be to :

i) Identify and develop a client-base amongst importers;
and
ii) Identify and promote related services.

A professional qualification in Business Management or Accountancy is desirable but not essential. The position is in the Management cadre and offers excellent growth prospects. A high degree of initiative, integrity, commitment to tasks, a sincere determination to accomplish ambitious targets, sound commercial acumen and negotiating skills are essential attributes of this position. In addition to an attractive compensation package, the Company provides a professional work environment and ample scope for demonstrating individual merit. Housing will however, not be provided.

Please apply in strict confidence, within 10 days to :

The Manager - HRD
Nagarjuna Finance Limited
Nagarjuna Hills
Hyderabad - 500 482

giving full details of qualifications, experience, age, salary and atleast two references.

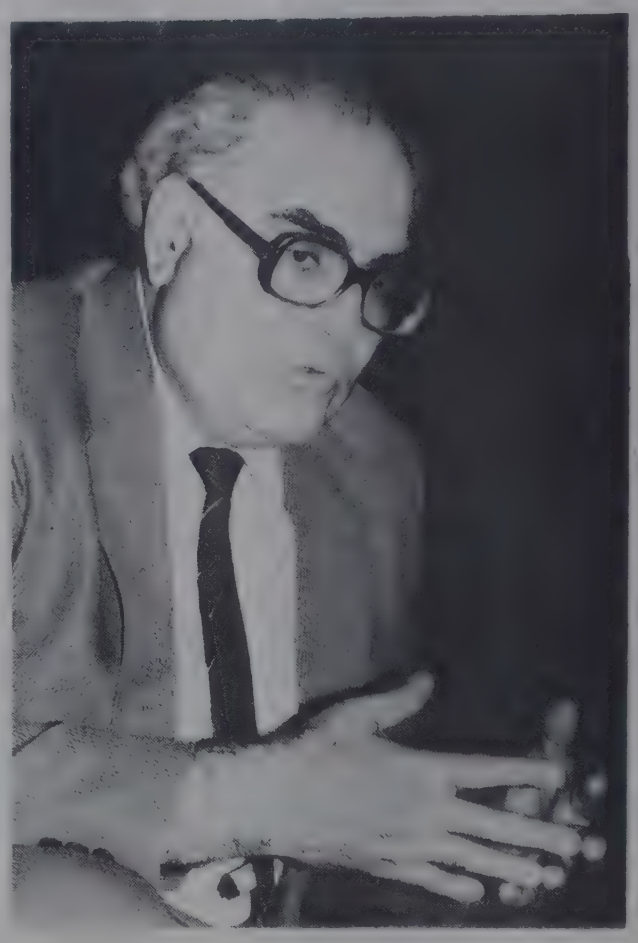
Please apply in strict confidence within 10 days to:

Post Box No. 5201,
Bangalore.

Food technologies for changing times



With the rapid induction of foreign technology in food processing, the role of pioneering institutes like the Central Food Technology Research Institute (CFTRI) needs to be reviewed. In view of near self-sufficiency in the food processing sector, what has prompted the government to go in for foreign know how? Saroj Pandit spoke to **Dr. B.L. Amla,** *director, CFTRI on behalf of* Business India *to find out about the swadeshi response to foreign knowhow and the challenges ahead*

What has been the CFTRI's contribution to the development of indigenous technologies?
We have had something to do with almost all the indigenous processed foods available in the market. We have either been involved in developing the recipe or designing the package or the processing. We have been striving to build technologies appropriate to the changing times. Women are going out to work, the joint family is disintegrating and the institution of servants has almost died out; it has become imperative to provide foods which reduce the cooking time to the minimum. Besides, there is a need to conserve fuel. Food processing technology is unique in the sense that it is a social transformation.

What challenges do you foresee?
In the past, our attempt used to be to provide food which could satisfy the consumer psychologically. For instance, wheat had a high quantity of bran which could appease hunger because of its bulk. Today, however, there is surplus food so the shortage psychosis is no longer relevant. Our concern now is to process as much food as possible so that it can be held in the trade channel. This is because it is more difficult to hold the food in its raw form. Processing renders the food more stable and it is, therefore, easier and less expensive to store.

Do you have any thrust areas?
In the Indian context, cereals have a distinct edge over other foods for the simple reason that they constitute 85 to 90 per cent of the food consumed. Our thrust area in the coming years will, therefore, be the processing of grains. The concentration will be on how to make cereal products which will ease the drudgery of cooking. Another area will be legumes.

What about processing of fruits and vegetables?
A majority of the people do not get to eat fruit and vegetables regularly. They also do not form a integral part of the rural diet. And, in any case, it is best to consume them fresh, which works out to be the cheapest as well. Our weather conditions are such that we have some fruits or vegetables throughout the year. So where is the need to preserve them?

How would the latest thrust by t government in food processing a the ordinary consumer?
It should not have a significant in because we grow far more than is processed. In any case, advantag processing should be passed on t consumers.

How do you feel about the recei influx of foreign technologies?
We are doing a fairly good job of processing. Perhaps the governme feels that companies like Pepsico an edge over us in some areas. Bu then again, in the Pepsi case it wa giant Indian concerns — the Tata Punjab agro which wanted to brin the multinational. I have a feeling it was not because of the technol that Pepsi has but because of the marketing advantage the tie-up is bound to give them to compete w the established brands in the cou

Foreign technology will have or limited impact in the country bec it will be restricted only to periph situations. Cereals and legumes r the mainstay of our diet. Nobody tell us how to make instant idlis dosas or chappatis. This technolo only be developed indigenously.

Gokul Patnaik, managing direct Punjab Agro, has stated that CF technology was inadequate and Pepsico had to be called in.
Patnaik has been inducted to the management of Punjab Agro only recently and may be as ill-inform many others on this issue. Anywa have asked him about his statem

What role do you foresee for th domestic food processing indus
It will play an extremely importa the moment we reorganise our ta excise structure to give advantag the taxed products. The governm has now realised that by taxing i heavily it is preventing this indus from growing. So the tax structur being revised. I have a feeling tha will give a boost to the food proc industry. Unfortunately, small sc industries are facing the handica not being able to compete with t established companies which hav resources to advertise their prod Steps should therefore be taken t that these small industries are n crushed

LETTER FROM THE PUBLISHER

Business India is proud to announce Sumant Moolgaokar as Businessman of the Year 1988.

In accordance with our tradition, V. Krishnamurthy, last year's Businessman of the Year, chaired the panel to select his successor. The other distinguished members of the panel were P.R.S. (Biky) Oberoi, Aditya Kashyap, Kalyan Banerjee, Madhu Patwardhan and Shiv Nadar. Given the different backgrounds of the panel members and the wide choice of candidates, it is surprising that on every occasion the selection, in the end, is unanimous.

When the panel met at the end of November, while we knew that Sumant Moolgaokar had been a little unwell, we had no idea that he would step down as chairman. It is thus only fitting that he was selected Businessman of the Year at the end of his long and very successful career.

Considering his achievement, Moolgaokar, who has a very low profile, is little known to the general public. Of course he is very well known and highly regarded in business and government circles.

Moolgaokar is universely acknowledged as the chief architect and builder of Telco, the automotive and engineering giant occupying the pride of place in the Tata empire. The scale of Moolgaokar's achievement can be judged from the fact that Telco is India's second largest company. It is amazing to think that one person backed by J.R.D. Tata and the board could create this giant institution.

It is equally important to remember that Telco has been built painstakingly over a period of 40 years. During this time our industrial growth was slow, particularly since we started with a very small industrial base after independence. It was also a time when purchasing power was low and markets were small; and above all because of the general economic conditions, it was an era of rigid government regulations. Yet, in spite of all these handicaps, Moolgaokar built Telco into an engineering giant which produced a product, the Tata truck, that the country could be proud of.

The firm tenets of Moolgaokar's success are seemingly simple. Training workers before buying machines; investment in high-technology; production first but no production at the cost of quality; growth; self reliance; and there's more to life than making money.

It is these qualities that have made Telco his Rs.1,400 crore baby. We are indeed proud to have Sumant Moolgaokar as our Businessman of the Year 1988.

Ashok H. Advani

OUR AIR-CONDITIONING IS SILENT.
OUR SERVICE IS SILENT.
NEED OUR ADVERTISING MAKE A NOISE?

Silence is the language of efficiency. Observe any of our central air-conditioning plants, packaged air-conditioning units or humidification systems.

Silence is also the hallmark of dedication. Meet any of our 150 committed engineers.

And finally, silence is also the sign of satisfaction. Even a single dissatisfied customer can make more noise than the collective smiles of our 500 satisfied customers in India and abroad.

No wonder, we'd like it more if instead of the trumpet, you heard the pin.

Vayudoot probe?

he ministry of civil aviation has equested the government of Gujarat to tart a judicial enquiry into the ccidents to the Indian Airlines Boeing 37 aircraft by a high court judge. urprisingly, the ministry has not rdered such an enquiry into the fatal ccident of the Vayudoot aircraft at uwahati on 19 October. Why this iscrimination?

Convenient reform

our piece "Can we reform?" (Labour, 8 November) made good reading. here was the political will to bring an anti-defection law. We have the political will for election reforms. If only the Centre exhibits the political will to bring about labour reforms, then, and only then, will the labour scene change.

• Rice claims

With reference to the letter of K. Vellaichamy (28 November) I would like to react to two points, viz, introduction of IR 50 and popularity of the "J" 13 rice variety in Madurai district.

IR 50 was introduced in Tamil Nadu in 1981 by the "J" Farm in a specially organised function and was a well reported event.

Vellaichamy says that farmers in Madurai district have rejected "J" 13 variety. In fact with prospects for rice cultivation in the second crop season (November-February) in Madurai district brightening, farmers have taken to "J" 13 cultivation. Quite a number of farmers are asking for the supply of the variety because of its short-term nature as also due to the fact that it is cold tolerant and blast resistant.

• The marketing man

I do not agree with Anita Ramachandran's comment that marketing people have always been paid more than their counterparts (Jobwatch, 28 November). In fact, a marketing man gets nothing extra for the lonesome nights spent far away from his family. I am also surprised that she asks: "What is the future of a sales rep after 15 years?" A sales representative would certainly become sales manager if he religiously performs during these 15 years. In marketing, personal growth is maximum. And transfers and travel are an essential part of the job which a marketing man takes on right from the beginning.

ARVIND KHARE

• Informed activism please

"How Fruity are they anyway?" (Business Notes, 31 October) was very informative. The consumer needs protection. Fair enough. But who is to blame when the food products legislation in the country is archaic and has not caught up with imperatives of the modern perception of human health?

Tetrapacks are a boon to this country in terms of hygiene and shelf life but their marketers have to fight hard to enter the market against the well entrenched bottlers. Any move on the part of consumer bodies against tetrapack brands should therefore be balanced by a sound understanding of technology today.

The technical hitch

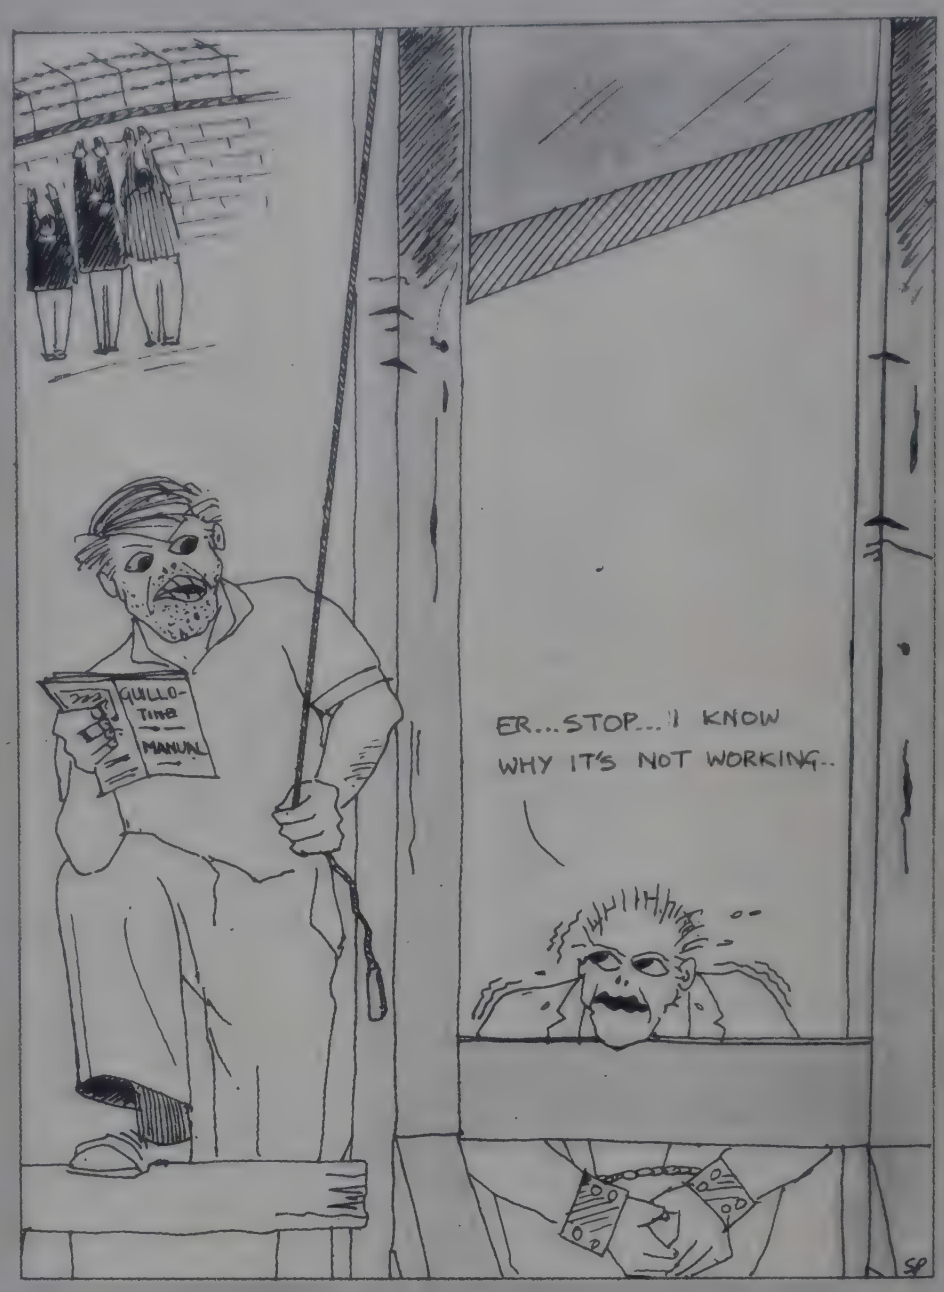
That the technical mind is trained to see the trees rather than woods is amply evident from the following:

In some far off newly independent country the government had decided to nationalise all foreign-owned industry and to execute the top executives for anti-national activity. But in fairness, the government announced that if the blade of the guillotine failed to fall the particular executive concerned would be set free.

Scores of foreign executives lost their heads. But one, keeping his head, so to speak, bribed the executioner to save himself, and the finance and technical directors.

The 'miracle' for which he had paid was duly performed. For both himself and his finance director, the blade failed to fall.

Fearfully, the technical director put his head on the block. Then, looking up at the mechanism, he suddenly cried "Stop, I see why it is not working."



On the cards

Greeting cards are lucrative business today. But the response to the first commercial greeting card was lukewarm. In 1843, Sir Henry Cole, the founder of Victoria and Albert Museum, commissioned artist John Calcott Horsley to design a card so he could send it to his family and friends and also offer it for sale.

A thousand copies were printed by lithography on stiff card and hand-painted depicting a convivial scene of men and maids quaffing ale with the legend: "A merry Christmas and a happy new year to you." The cards were put out for sale at a shilling each. Puritans denounced it and Cole did not repeat the experiment.

The following year, W.A. Dobson, an artist of the Royal Academy, sent out hand-coloured cards. In 1849, William M. Edgley, son of a painter of miniatures, also published a card. Thus progressing slowly, it was only in 1860s that the Christmas card became a viable proposition. Sizes grew and new designs were introduced.

In 1860s and 70s new colour printing process improved the cards and lowered the cost. In 1880 prizes were offered to the original designs and contemporary artists had their works reproduced on Christmas cards. Above all in 1880 the Post Master General appealed to the public with the call: "Post early for Christmas."

Logical conclusion

A copywriter was once asked to prepare a detailed report on fleas so that an ad-campaign for a particular brand of flea killer could be created. He took a flea home.

First he plucked out two of the flea's legs and said, "hup"! And the flea jumped right over his finger. He then proceeded to remove another two of the flea's legs and again said, "hup"! Again the flea jumped over his finger. Finally the copywriter removed all six of the flea's legs and said "hup"! Alas, the poor flea, minus his legs, could not jump.

The copywriter nodded his head sagely and wrote in his report, "When a flea loses all six of its legs, it turns deaf"!

LIC's self insurance!

Recently advertisements w released in leading newspapers by the Life Insurance Corporation (LI of India, inviting applications from its polic holders for the outright purchase of houses built b the corporation in a posh locality in Bangalore. The minimum policy amount w only Rs.10,000 and the ad said that LIC would even arrange for the housing lo New policies could also be taken for the purpose of taking advantage of the scheme, subject to the minimum specified.

Policy holders, including many who took new polici lined up in a big queue in the hope of getting a dece shelter, and paid Rs.25 ea for the relevant applicatio forms, only to find out aft the prices, which were not the ad, were skyhigh and way out their reach. The houses were priced at Rs.4 5 lakhs each — beyond th purchasing powers of even people drawing salaries ov Rs.5,000 per month.

The corporation, in the process, made a handsom packet in application mon and added many new poli holders to its fold. Now that's a smart way to insu the life of LIC.

For a safer environment

Some people or — groups of them — just don't know when to stop. One of these groups is the Loss Prevention Association of India Ltd (LPA). And by golly, we should be glad they don't.

We Indians, as a nation, are probably the least safety-conscious in the world. Look around you! If the sheer carelessness and callousness in every walk of life — from unsafe work environment to unruly children to rash (and worse still drunk) drivers to lack of civic sense — don't bother you, then you too are guilty of ignorance about safety.

THE NEW COMMANDMENTS

Most of you are familiar with The Ten Commandments. Well, here we have a new set of edicts — The Ten Commandments of Safety Management. These are not meant to replace Moses' version. But if your company believes and follows the new commandments, you will certainly help create a safer environment for us to work and live in.

1. Thou shalt have safety graven in thy management philosophy.
2. Thou shalt not relegate safety to the bottom rung of thy priorities.
3. Thou shalt not dismiss accidents as Acts of God.
4. Remember that thou propagate safety every day and not just on National Safety Day.
5. Honour thy commitment to the safety of thy employees.
6. Thou shalt not pollute the environment with damaging effluents from thy plant.
7. Thou shalt not hesitate in giving due importance to thy safety professional and his profession.
8. Thou shalt not flout the safety laws of thy land.
9. Thou shalt not shirk thy responsibility towards society for thy own parochial gain.
10. Obey the real Ten Commandments.

Amen. ▲

For a decade now, the LPA has been at the forefront of the effort to promote safety and loss control. It has dedicated itself to the tasks of "creaing a safer environment to live and work in". It has been publishing a journal, *Loss Prevention News*, with a regular feature on safety.

On its tenth anniversary, the LPA has released a tidy little handbook titled Some Safety Thoughts. Get yourself a copy, for home or workplace. Even if you learn one, only one, lesson from it you will find your environment improving for yourself, your family, your colleagues and the rest of us.

You can get in touch with LPA at Warden House, Sir P.M. Road, Bombay 400 001.

Mahabharatha's boon

B.R. Chopra's *Mahabharatha* has come as a boon not only to the toy manufacturers who market bows and arrows but also to the Tamil vernacular press. Tamil newspapers and magazines are vying with one another to publish the dialogues of the forthcoming episodes of *Mahabharatha* in Tamil, complete with stills and interpretation of each episode by experts.

Newspapers and magazines as varied as the daily *Malai Murasu*, which is known for its sensationalism, to *Tuglak*, the political fortnightly of the Janata party veteran Cho, are all in the race, and through banners announce the presence of *Mahabharatha's* Tamil dialogues in the edition.

Newspaper agents say that people are lapping it up and that newspapers which do not carry these dialogues on Sunday mornings do not move. Critics of Hindi and atheists of the Dravidian parties have not commented on this phenomenon, lest they hurt the sentiments of the *Mahabharatha*-crazy Hindu populace, especially with elections round the corner.

A TV education?

The other day I had asked my wife to sign a paper (a bill to be precise). I was in a hurry and my nine-year old daughter volunteered to get it signed by my wife, who was busy in the kitchen. While she was signing it, the little one questioned her, "what does this signing remind you of?" My wife drew a blank, not having a clue as to what the little one had in mind. After a while, my daughter said, "Doesn't this remind you of signing divorce papers, like in those TV serials?"

Good grief!

B.S.H. SUBRAMANIAN

Jasmines in the co-operative sector

Early in the morning everyday, in the Shankarpura, Shiva and Mudarangadi belt in Dakshina Kannada district, large numbers of men, women and children can be seen plucking jasmine flowers.

They then sit around heaps of flowers and tie them with banana stem threads into bundles. By noon, the bundled jasmines are collected and despatched to airport by agents, for functions in the evening and next day, via a network very similar to newspaper distribution.

This fetches families in the area a monthly income of Rs.1,500 during the season — is now a seasonal profession which does not disturb their regular occupation and agriculture. Rates are decided daily, depending on the market and returns are handsome.

FRANCIS D'SOUZA

Sweatiest decade

If you think the weather is getting hotter and sweatier year after year, you're in good company — the whole world seems to think so too! Scientists say the world is passing through the hottest decade of the century. Never has the weather been as warm in the past 127 years as in the eighties with 1987 being the hottest year recorded. The southern hemisphere, in general, is warmer.

But why are things warming up? Experts point to increased concentration of carbon dioxide, methane, nitrous oxide and other gases in the atmosphere. These absorb the earth's thermal radiation, preventing its escape into space. This "greenhouse effect" warms the lower atmosphere. Atmospheric scientists fear that this global warming will increase.

Ah, well, add this one too to the list of the costs of industrial 'progress'.

Come on, miss, I haven't got all day...don't you have a copier?

Should panic buttons and frayed tempers be normal routine?

If your answer is 'No', call Team Xerox

You have to send out a tender urgently. Since you don't want your secrets leaking out, you can't trust the local jobber. And carbon copies can easily be smudged or misread, so your secretary is typing out original after original.

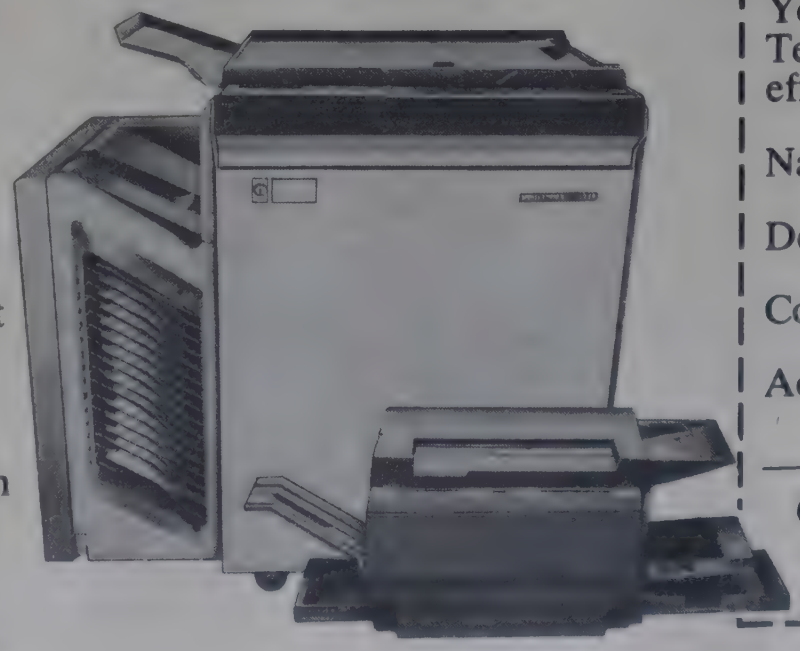
The risk of mistakes multiplies with each retyping, but you don't have time for more than a cursory glance at each copy. The courier is pacing impatiently while you're tearing your hair out with the tension. Missing the despatch could cost you the contract... and couriers are not known for waiting.

Now pause a while and consider. When things have to be done very fast, panic and raised tempers rear their ugly heads. Errors ensue. And if all this becomes routine, you won't function efficiently and your organisation will start slipping.

Speedy communication is vital for efficiency in today's high pressure world. And that's where a Modi Xerox photocopier comes in. Within minutes of finalising your tender quote, you can despatch all the copies you need to.

With a Modi Xerox copier you don't have to check copies repeatedly. You don't lose one iota in clarity. And information can be communicated rapidly which means more effective decisions, faster action and the end of panic.

Calculate what a Modi Xerox copier can do for you and your organisation's efficiency. And the way your organisation is perceived.



So call Team Xerox. From manufacturing to after-sales support, we provide cost-effective solutions to communication problems.

You'll bid goodbye to last-minute panic and chaos.

Fill in the coupon and post it today to :

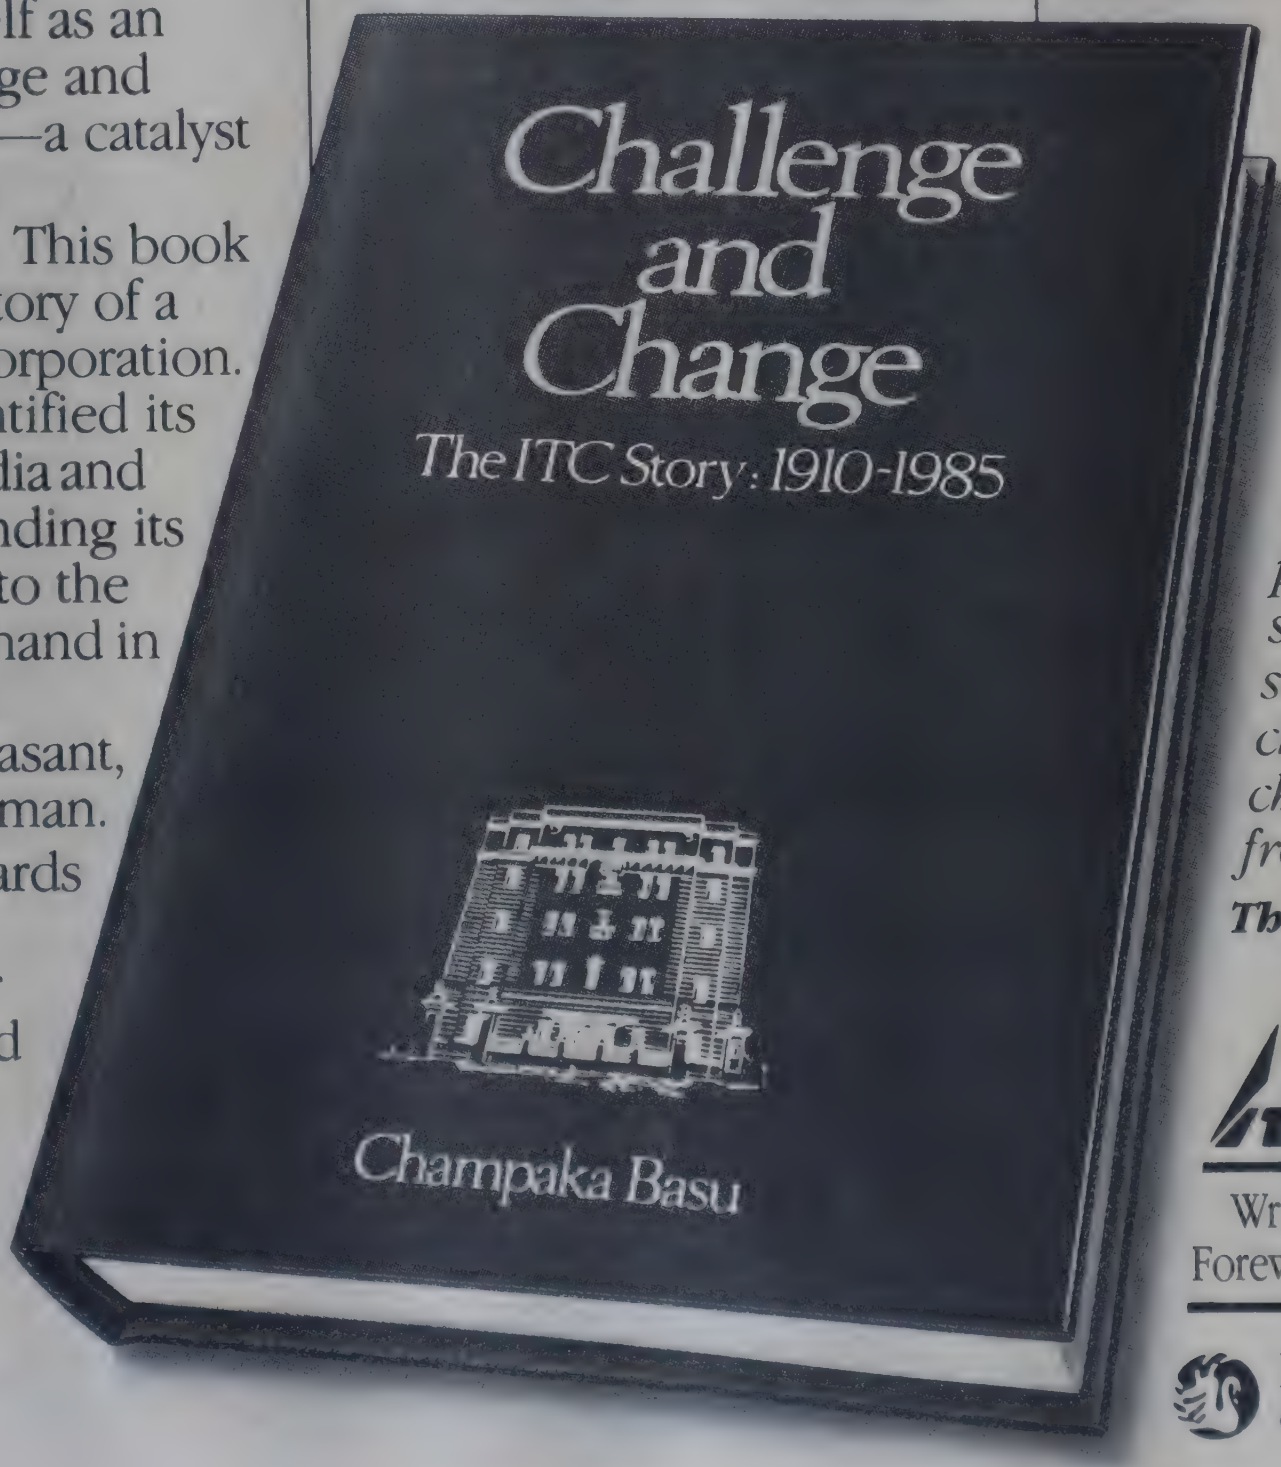
A compulsively readable book for all those in management or interested in management.

Even in the pioneering years, well before Independence came to India, ITC perceived itself as an agent of change and acted as such—a catalyst in a changing subcontinent. This book traces the history of a remarkable corporation. One that identified its cause with India and its people, sending its roots deep into the soil. Working hand in hand with the farmer, the peasant, the common man. Working towards growth and prosperity for the nation and its people as much as for itself.

A fascinating study of an enterprise and the part it has played in the economy of a nation.



"Business history is a newly burgeoning subject in India and ITC's 75 year history is by any standards a valuable contribution in building a foundation for growth of this subject. As might have been expected from ITC, the production standard is superb. So is the choice of the chronicler judging from the results."

The DCM syndrome again

The Hindustan Development Corporation is understood to be one of the companies that may come up with the cash to acquire the entire troubled DCM empire. While market sources speak of a prominent Bombay-based giant being interested, so far HDC seems to be the only one with whom negotiations of any kind can be said to have taken place.

Nobody quite believes that the warring members of the Shri Ram family will cut their collective noses to spite their face. But the way the battle lines are drawn up at the moment, it seems that the entire company may also be offered to a buyer with enough cash. What this will do to the financial institutions as well as to other plans of trifurcation is anybody's guess.

Storm brewing

The board meeting of Indian Airlines expected to be held on 26 December is likely to be a stormy one. The troubled airline, which has a high-flying board, will be asked to review customer service probably for the first time.

The board, which consists of several eminent public sector managers, has been on the verge of resigning on several occasions in the last few weeks. Only the personal intervention of the prime minister's office has staved off a mass resignation.

On several occasions in the past, the Indian Airlines board has found itself saddled with rather pointless minor decisions. Going by reports in the capital, this time's board meeting may well have fireworks that could possibly yield results.

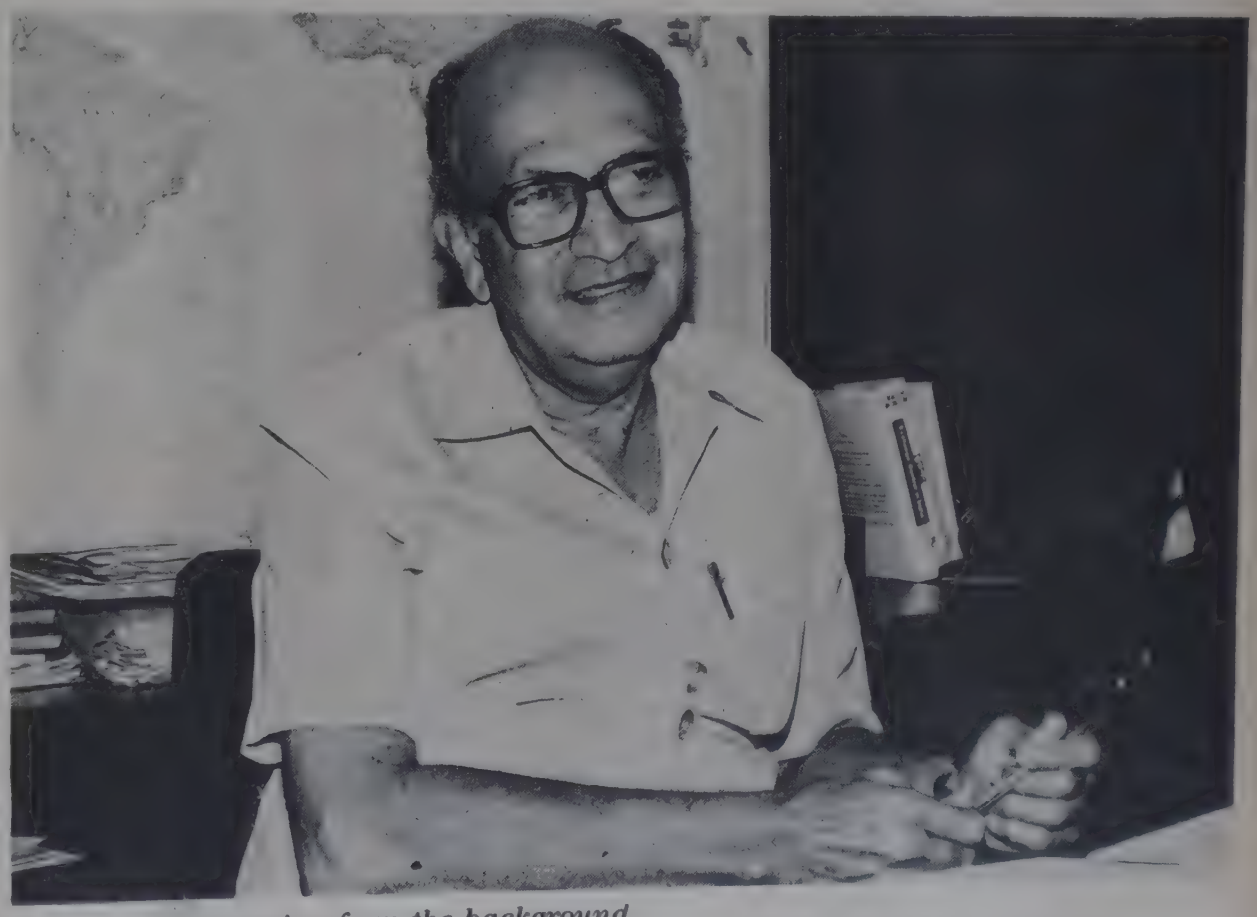
Banking musical chairs

With a CBI enquiry against M.V. Kini, executive director of Union Bank, the chances of his succeeding chairman and managing director J.S. Bhatnagar, whose term ends on 31 December, are slim. While Kini has stationed himself in Delhi to plead his case personally, Bhatnagar is reported to be pushing his own candidate - the current CMD of Allahabad Bank, S.L. Wadhwa for the post. The other likely contender is T.K. Sinha, deputy managing director of State Bank of India, now on deputation as CMD of State Bank of Bikaner and Jaipur.

SBI might lose yet another senior officer to Bank of Baroda (BoB). Premjit Singh, the BoB chairman, finishes his term in March 1989, and rumours are doing the rounds that a deputy managing director from the State Bank might be asked to take over. With the BoB executive director, A.C. Shah, also retiring in two more months, the possibility of an outsider taking up the reins is indeed high.

The new helmsman

Vasant Sheth has traditionally played the leading role, particularly in the public eye, at the Great Eastern Shipping Co. His cousin Kanu Sheth has stayed more in the background, immersed in operations. This might change soon.



Kanu Sheth: emerging from the background

Reportedly, with Vasant due to retire in a few years, Kanu will begin to shoulder greater responsibilities in the company.

Apparently, he may also acquire a part of Vasant's shareholdings.

Another Indian promoted

Hindustan Lever continues to provide talent for the top echelons of its parent company, Unilever, the giant Anglo-Dutch multinational. It already has one Indian, T. Thomas, on its board. Now, another Indian is also tipped for a top post.

Reportedly, Mathew Panikar, presently a top executive on the management committee of Hindustan Lever, is likely to move to the parent company as treasurer.

Clearly, the main Uniliver board seems to fully appreciate Indian talent.

Tata-Honda?

One of the unintended fallouts of the "reorganisation" in the Shri Ram family is that Shri Ram Honda, may be up for sale.

Launched with much fanfare only recently, the Shri Ram family reportedly feels that it might be best to sell off their stake, particularly in the context of the sluggish market for portable gensets.

Who are the likely buyers? According to reliable sources, it is Telco. Negotiations are at an advanced stage and an MOU is likely to be signed shortly. As is well known, Telco and Honda had agreed to manufacture Honda Accord cars in India. But the government withheld approval. So by taking over an existing company, which is a joint venture with Honda, the Tatas hope to consolidate business relations with the Japanese auto maker, say corporate watchers. There is also talk that other group companies (Tisco, Tata Chemicals) may chip in.

Once the deal is wrapped up, Shri Ram Honda is expected to be rechristened Tata Honda

IFCI raises 20 bn yen loan

The Industrial Finance Corporation of India (IFCI) has raised a 20 billion yen loan to meet its requirements for the rapidly increasing foreign currency operations. This loan has been arranged through a consortium of foreign banks — ANZ Merchant Bank, Bank of Tokyo group, Dresdner Ltd, Security Pacific, Hoare Govett Asia — with Sogan Asia as lead manager.

The loan has been availed of with an interest rate swap in dollars which has been arranged by Merril Lynch Capital Services Inc. DSP Financial Consultants, Bombay have been appointed advisor to Merril Lynch.

The loan has a maturity period of seven years with bullet repayment terms and is guaranteed by the union government. The main loan carries an interest rate 0.25 per cent above yen libor, but after arranging interest rate swap, IFCI has to pay a very fine sub-libor rate of interest in dollars.

Levy sugar to cost more

The price of levy sugar in the public distribution system will go up by 15 paise a kg from Rs.5.10 to Rs.5.25 from 1 January 1989. This hike comes in the wake of an increase in statutory minimum price for sugarcane. The statutory minimum price of sugarcane for the 1988-89 season was raised to Rs.19.50 per quintal — an increase of Re.1 per quintal over the price fixed for last year.

The ratio of levy to free-sale sugar for the 1988-89 sugar year, has been changed from 50:50 to 45:55.

Thermal power station for Kerala cleared

Kerala state government has received a formal communication from the Planning Commission giving investment clearance for the 2400 MV superthermal power station. This power station is to be set up at Kayamkulam in Kerala.

All projects (except the long awaited Pooyankutti hydroelectric project), had been cleared. Clearance from the government's forest department is awaited.

Fresh steel licensing norms

On 4 February this year, the industry ministry announced certain guidelines for the steel industry. Subsequently, detailed norms for ferrous metallurgical industries and general instructions were issued by the department of steel. The union government has now announced a new procedure for availing of the facilities extended to industrial undertakings in the steel and metallurgical sector.

Under these fresh licensing norms, steel making units and cold rolled (CR) strip manufacturing units are allowed to enhance their capacities up to the maximum limit. The wire-drawing industry was delicensed for non-MRTP and non-FERA companies.

The main objective of the new norms are to keep pace with the technological advancement in the industry, so that the units' economic viability will improve, reducing specific power consumption at the same time.

New norms

A costlier spoonful

National Software Centre opened

The National Software Centre (NSC) of the department of electronics (DoE) has been set up to promote consortiums a other organisational structu to meet specific software quirements of sophisticat market segments.

K.P.P. Nambiar, secreta DoE, said that the idea was enable development of softw systems for atomic ener space and defence segments, enable India to become an portant world leader for pa lel computing architectures.

Apart from offering a vari of latest hardware and ope ing systems to the ministry testing their programmes packages, the Centre would a provide complete documen tion of Indian softw packages.

C-Dac to fund software developing

The Centre for Development Advance Computing (C-Da which is developing the pr

pe super computer based on arallel processing technology, ill fund both private and pub- c sector organisations to take p production of hardware and oftware for its requirements.

About 70 per cent of its total udget of Rs.37.5 crores, spread ver the next 3 years would be pent on developing software.

Go slow on NRIs

peaking at a one-day seminar rganised by the Indo-NRI hamber of Commerce and Cul- ure in Delhi recently, S.B. havan, the union finance min- ter, suggested a cautious ap- roach towards NRI vestments. He said that while heir role was important it hould not be over estimated.

While the inflow of funds un- er various NRI schemes have eached Rs.3,000 crores, most of hese funds, were in the form of ank deposits. There was con- derable scope for direct and ortfolio investment by NRIs. owever NRIs had already been ven lots of concessions and here was a growing feeling mong domestic investors that heir needs were being eglected.

Business network to be set-up

The business subscriber net- ork has finally been cleared by he government and will be aunched in mid-89. The project ill be completed in three hases the first being establish- g communication links bet- een head offices and remote stallations. According to ources, some subscribers have lready registered.

The services will include deotext, and electronic mail.

Cement export decanalised

The government has decided to decanalise the export of cement nd put it under open general cense. A public notice to this ffect was issued by the chief controller of imports and exports on 7 December 1988. The government had earlier cleared the export of 40,000 tonnes of cement on an experimental basis.

A pile up of stocks

R&D outlay inadequate

The total research and development expenditure in the industrial sector, at 19 per cent of national R&D expenditure, is inadequate and has not made any significant contribution in raising the level of productivity in the industrial sector.

A Federation of Indian Chambers of Commerce and Industry (FICCI), says that productivity increases have come mainly as a result of technology upgradation through imports of machinery and equipment.

Subsidies for garment export

The government has announced schemes to subsidise airfreight and the provision of samples to prospective buyers. Under the airfreight subsidy scheme a freight subsidy of 25 per cent of freight cost will be allowed for export of garments to Latin America.

The sample subsidy scheme permits a sample subsidy to the extent of the cost of such samples. But there will be a ceiling of Rs.5,000 per consignment of samples and an overall limit of one per cent of the annual FOB value of exports.

New crop insurance plan

The government hopes to introduce a modified crop insurance scheme in the next season, which could cover all crops including cotton and sugarcane.

A cotton area of 327,000 hectares had been adversely af-

Samples subsidised

AN ELECTRONIC TYPEWRITER SO ADVANCED, IT CAN EVEN CHECK YOUR SPELLINGS

ACN. INDIA'S ONLY ELECTRONIC TYPEWRITER WITH THE SPELL CHECK.

Buy an ACN Electronic Typewriter with Spell Check and you will never make a spelling mistake again. Because the moment you do, the ACN Spell Check will stop you. Then refer to its mammoth, over 80,000 word dictionary and, before you know it, correct the mistake.

Now imagine how it can improve the efficiency of your office. Give you clean, crisp, flawlessly typed documents. Even when you're rushed for time.

After all, it's technology from Nakajima All, Japan. The world's largest electronic typewriter manufacturer. The technology behind the success of best-sellers like Triumph Adler, Smith Corona, Sears, Olympia and now ACN.

ected by floods or heavy rains n Andhra Pradesh, Haryana nd Punjab. Pest attacks on cotton have also been reported rom Andhra Pradesh, Gujarat nd Punjab. The government as decided to reschedule the oans given to cotton farmers. In ddition the government has anctioned an input subsidy of s.7.3 crores to help combat the est attack and has also alowed the import of effective esticides like triazophoo and anate to Andhra Pradesh.

Fund raising for housing

The National Housing Bank has plans to open a new scheme called the home loan account to mobilise resources from the public for the construction of one million housing units a year. Under the scheme, any individual either major or minor could contract to save as much as he could in multiples of Rs.50 subject a ceiling of Rs.2,000 per month, for a minimum of 5 years. The saving would earn an annual interest of 11 per cent.

At the end of five years or any time thereafter, the member would be entitled to a loan upto Rs.3 lakhs. The interest ranges from 11.5 to 13 per cent for loans of Rs.50,000 onwards. The scheme still has to receive final clearance.

Safeguards for plantation workers

A bill for ensuring the safety of workers was introduced in the Lok Sabha on 16 December, 1988 by the labour minister Bineshwari Dubey. According to the statement of objects and reasons of the bill, the Plantations Labour Act, does not contain any specific provisions dealing with the safety of plantation workers.

One of the major hazards workers face is the growing use of chemicals, especially fungicides, insecticides and herbicides. Amendments in the present bill would provide safeguards in the use and handling of such substances by workers.

IAAI makes profit

The International Airports Authority of India (IAAI) has made a pre-tax profits of Rs.82.75 crores during 1987-88, 43 per cent of its contribution to the exchequer during the last 16 years. IAAI has generated gross international resources of approximately Rs.72 crores at the four international airports; it has handled 19.5 million passengers, 1.4 million more than last year.

AmEx encourages TC acceptance

American Express has launched a unique programme to encourage wider acceptance of travellers cheques and provide better customer service to foreign visitors.

As many as 1.08 million foreigners came to India in 1986 alone, spending nearly $ 1.4 billion (Rs.1800 crore) in foreign exchange, mainly in the form of travellers cheques. American Express's new Acceptor's Reference Guide aims at making it easier for Indian banks to encash these travellers cheques.

The guide explains that TCs are easy to encash — all it takes is for an alert teller to watch the customer countersign them, and compare the signatures with the original.

Various safety procedures, as well as methods of handling different kinds of encashers and unusual situations, are also explained. The guide also points out common methods of forgery,

new loan scheme to come

ORG launches readership survey

Operations Research Group has launched a three-phase media survey. The first phase, NIRS-ORG 89, is a survey of the Hindi belt, which includes the entire north zone and Bihar and Madhya Pradesh. Rural areas will be included in the coverage.

Stake in Berger Paints reduced

The stake of the UK-based Consolidated Paints in Berger Paints will be reduced to less than 30 per cent following Consolidated's decision to renounce the rights to the equity shares that Berger Paints will be issuing shortly. The decision is believed to be prompted by the high premium rate of 350 per cent at which the issue is to be subscribed.

Even the financial institutions who hold about 22 per cent of the Berger Paints equity are said to be raising questions about the high premium. The Rs.27.2 lakh equity will be used to generate funds for a Rs.3 crores project at its Howrah factory.

Reliance taken to court

A writ petition over the failure of the government to take action against Reliance Industries Ltd (RIL) for its alleged fraud involving over Rs.100 crores has been filed in the Bombay high court by Anil Gote and Pandurang Rajaram Kinare.

The respondents in the petition are the Union Government and the Central Bureau of Investigation (CBI), CBI director general Mohan Katre, former additional director general Radhakrishnan Nair, RIL and the state of Maharashtra.

The petitioners have charged some executives of RIL of having entered into a criminal conspiracy with officials of a bank and forged letters of credit for a total value of $ 100 million and for a quantity of 114,000 tonnes of purified teriphalic acid (PTA) to circumvent the ban on imports.

Maruti 1000 cc to be indigenised

Suzuki Motor Company of Japan has agreed to indigenise within two years 70 per cent of the new three-box 1,000 cc capacity Maruti cars slated for production from the second half of 1990. The same model is being introduced in Japan in 1989.

The initial production would be around 1,000 vehicles per month for the first six months. Thereafter, it would be gradually increased to peak 35,000 annually

Escorts tie-up with Claas

Escorts has promoted a joint venture with Claas of West Germany, world renowned harvester combines manufacturer. The German equity participation in the venture will be less than Rs.3 crores. The collaboration, initiated in 1982, will set up a company in Rajasthan to manufacture harvester combines whose requirement would reach 7,000 units by the end of the century.

Centre clears IOCL projects

Under the broadbanding scheme, the Union government has cleared two proposals of Indian Organic Chemicals Ltd (IOCL) for a change in the description of its industrial licences. The company wanted to diversify into the manufacture of aromatic and alcohol-based chemicals in Maharashtra.

While the government has allowed IOCL to produce 1,150 tonnes of benzyl acetate, benzyl alcohol, benzaldehyde, and cinnamyl alcohol, the permission to manufacture benzo trichloride, benzyl benzoate and benzyl chloride was refused. The other proposal of IOCL that was granted was for the change in industrial licence for making acetic acid, acetic anhydride and ethyl acetate.

Anti-viral drug to be made in India

For the first time in the Indian market, Wockardt Ltd, a leading drug company, will be introducing immunovir, an anti-viral drug which is believed to be highly effective against broncholitis, acute viral hepatitis and all other viral respiratory infections.

The drug is already being marketed in 80 countries around the world. Wockhardt has made an application to the Drug Controller of India for the necessary permission for the manufacture of the drug in the country. The basic drug is to be imported.

Siemens promotes new company

Apart from promoting a joint venture with ATEA of Belgium, a cent per cent subsidiary of Siemens AG, and Delton Cables of Delhi for the manufacture of EPABXs, Siemens Ltd is jointly promoting a company with t West Bengal government.

This joint venture company expected to commence produ tion of electronic teleprinters March 1989. The venture, We Telematik Ltd, has already r ceived orders for 1,000 ele tronic teleprinters fro Maharashtra Telephone Nig Ltd (MTNL).

• Awards

For the second year in succe sion, Zuari Agro Chemicals L has bagged the Fertiliser Ass ciation of India (FAI) award f best production performance nitrogenous fertilisers in 198

The FAI award is in recog tion of Zuari's outstanding pacity utilisation, operatio efficiency, energy conservati safety and pollution cont efforts.

THE FINE ART OF FLYING

by Pavlos.

"The Magic Table." Devoted as we are to the Fine Art of Flying, we commissioned the Greek artist Pavlos to make his own interpretation of our concept. Dividing his time between Athens and Paris, Pavlos has gained an international reputation for his beautifully sensual paper sculptures. And his magic table is the perfect evocation of how it feels to be flying in the lap of luxury: Air France.

Coffee, tea or champagne?

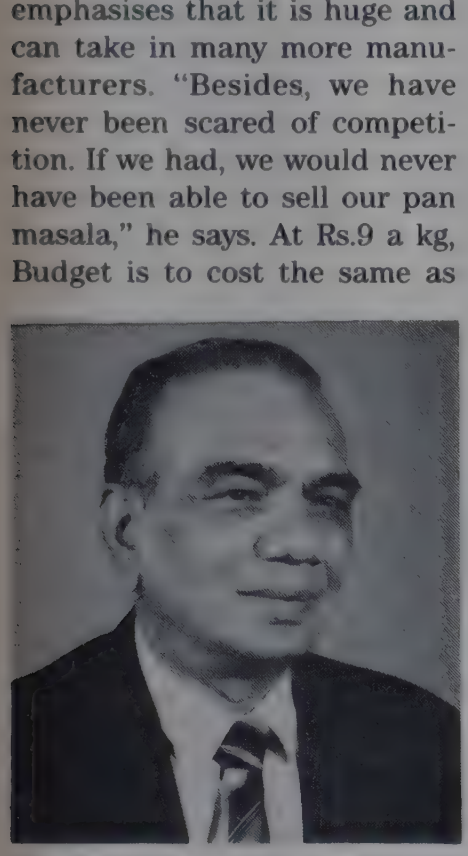
M.M. KOTHARI

"Marketing has been and is our forte. We can sell any consumer product at a much lesser cost than the multinationals," says M.M. Kothari, the manufacturer of Pan Parag. His company (turnover: Rs.40 crores) is now gearing up to manufacture Budget, a synthetic detergent powder, in its first effort at diversification.

The detergent market is very competitive, agrees Kothari, but emphasises that it is huge and can take in many more manufacturers. "Besides, we have never been scared of competition. If we had, we would never have been able to sell our pan masala," he says. At Rs.9 a kg, Budget is to cost the same as



Nirma.

"We believe in working with lower overheads and with our own money. And we also feel that taking up intense marketing before the product has been accepted by the consumer is pointless." So the launch has been a low key one. Advertising is limited to a few handbills and advertisements in newspapers.

"In due course," says Kothari, "we expect turnover from Budget to outstrip that from Pan Parag.

VICTOR ALBUQUERQUE

The Alcon Resort Holdings (P) Ltd. Goa, has launched its 'rent-a-villa plan' to enable tourists to book accommodation in Goa

for 15 years.

Explaining the scheme, which is to be commissioned by 1991 Victor Albuquerque, the director of the Alcon Group, says, "The provisions are flexible. A week booked in one season, can be exchanged in another without prior notice. Membership can be shared, gifted, bequeathed or transferred." Spread over 25 acres of land at Cavelossim, Goa, Resort Dona Sylvia will comprise 120 villas constructed in the true Goan architectural style. The project is expected to cost Rs.10.50 crores, 50 per cent of which is being financed by Industrial Finance Corporation of India (IFCI). The rest will be generated by deposits from customers.

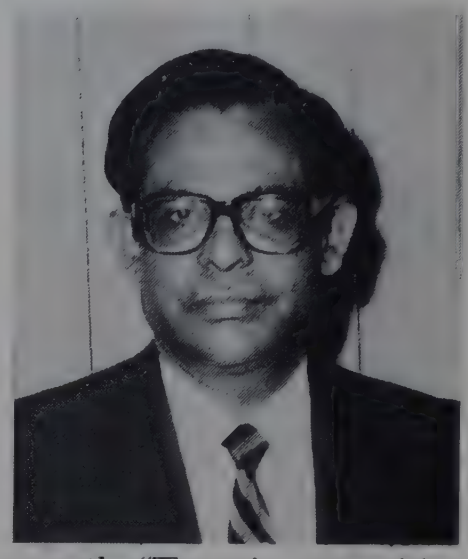
A civil engineer by profession, Victor Albuquerque started the Alcon group in partnership with Anil Counto in 1973. Today the group has grown into a civil construction firm that has executed projects worth Rs.50 crores in Goa, and Rs.25 crores in the Middle East.

K. SIVARAMAN

"The south Indian air cargo market has a high potential," says K. Sivaraman, Air-India's manager for Tamil Nadu, "especially after the growth in leather and garment exports." To exploit this market, Air-India has introduced a direct 747 freighter flight between Madras and New York, with a capacity of 90 tonnes. Plans are also afoot to operate two shuttle services between Madras and Bombay in order to offer connections with the various 747 Combi aircraft operating from Bombay.

The air cargo traffic from Madras increased steadily from 12,952 tonnes in 1985-86, to 16,731 tonnes in 1986-87 and 20,048 tonnes in 1987-88. It now accounts for 40 per cent of the total cargo traffic from Madras. Air-India earns a revenue of Rs.20 crores a year.

But the going is not totally



smooth. "There is competition from scheduled and unscheduled airlines," says Sivaraman. The government of India has also announced an open skies policy from 1 January 1989, whereby any airline can operate flights to lift cargo from Indian airports during the peak season from January to May. Sivaraman is unfazed though. He says, "The policy is not likely to affect our business since any airline which operates a freighter flight will ask for a surchage on the existing rate to make it commercially viable."

PRATAP REDDY

Pratap Reddy, chairman of the Apollo Hospitals group, has ambitious plans. Reddy opened his first hospital in Madras in 1983. Over the next three years, he wants to construct 20 more corporate hospitals in various parts of the country, each to be set up as a separate corporate entity. The company will be coming to the market in February 1989 to finance the Rs.26.5 crores Apollo Hospitals, Hyderabad, which is already com-

plete.

There are five other Apo hospitals under construction present, to be modelled on t first one in Madras. The hosp tals have a substantial NRI i vestment as well as N physicians working there.

"We are often accused of b ing five star but we are not a more expensive than a go quality private hospital," Redd emphasises. And the quality service is comparable with t best in the world, he adds.

ATUL NISHAR

Apple Leasing and Industri Ltd has done well since it we public in 1986. "Our turnov for the year ending Septemb 1988 has practically double from Rs.4.18 crores to Rs.7.3 crores; our profit before tax up two and a half times Rs.2.24 crores," says At Nishar, managing director the company. And the cred goes to the growth of the co puter division which has mo than doubled its income fro

Rs.1.4 crores in 1986-87 to Rs.3 crores in 1987-88, thereby accounting for 41 per cent of total turnover.

The company has a tie-up with National Centre for Information Technology UK, to run computer courses. There are plans to expand the coverage of these courses from the current eight major cities in India to ten more. "Our expansion plans also include setting up a separate division for software exports, marketing of training packages for corporations, publishing of computer books, and computer consultancy," says Nishar.

On the leasing front Apple intends to start financing consumer durables for corporate employees and to finance the acquisition of automobiles.

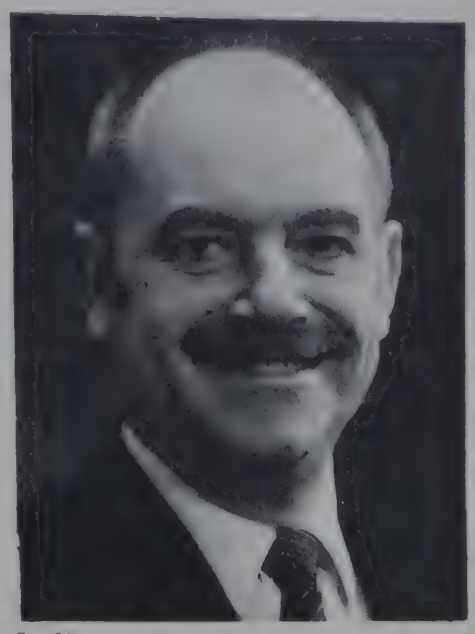
To finance these plans, Apple will raise Rs.8.75 crores through a rights issue of 500,000 debentures of Rs.100 each, and a rights cum public issue of 250,000 secured convertible debentures of Rs.150 each for cash at par.

FRIEDHELM N. SARTORIS

"The last time we were here, me and my wife had entire hotels to ourselves," says Friedhelm N. Sartoris, executive director of Cologne International Trade Fairs. The Sartorises were here then as tourists and Mrs.Gandhi had just been assassinated.

Sartoris is here now to sell the Cologne Fairs to Indian companies. An office boy who's risen to head one of the world's largest trade fairs, Sartoris has a wide variety of exhibitions to offer. The Cologne Trade Fair covers an area roughly equivalent to the size of 35 football fields and has an annual turnover of over Rs.250 crores; 38 different fairs are held here every year — the largest ones for food products, furnitures, motorcycles, photography and men's fashion.

The fashion fair is high on the agenda for Sartoris's visit this time, "After all 60 per cent of all



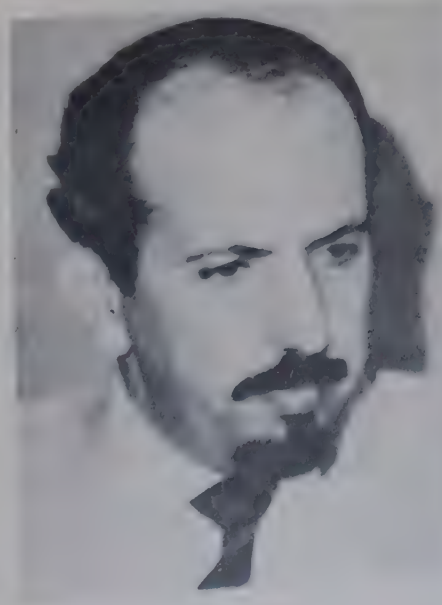
Indian exports in 1987 involved articles of clothing and leather. And participating in our fairs could give them huge exposure," he says.

ABDULLAH NOJAIDI

"My visit is in response to an invitation of the petroleum secretary, government of India, who was in Saudi Arabia with a delegation in March," said Abdullah Nojaidi, president Sabic Marketing Ltd, who was in Bombay and Delhi last fortnight heading a five-member delegation.

Sabic sells petrochemicals and fertilisers (LDPE, HDPE, Styrene, etc) to about 60 customers in India. The list includes Reliance, Indian Petrochemicals, Orkay, VIP, STC, RCF.

Total sales to Indian buyers in 1988 were around US $ 150 million. "Sabic has always adhered to stable prices and does not take advantage of shortages," asserts Nojaidi. "In 1988, the prices of our products were lower than the prices charged by other producers in the world. The mono ethyl glycol that we sold was cheaper by US $ 60 per tonne on an average," he says.



According to Nojaidi, a chemical engineer from the University of Colorado, there is a case for lowering duties on Saudi petrochemical products — in line with duties on similar products from other countries. "For India Saudi products are more expensive by an average of US $ 100 per tonne," he says. "We feel there is a case for incentives to Indian customers and Saudi suppliers for continued supplies to India."

WILLIAM K. WONG

William K. Wong uses the word "technology" at the drop of a hat. Director, international marketing, the Intel Corporation of the US — the technology driven pioneer of the IC and the chip — Wong was in India recently to open a liaison office. The choice, naturally, was Bangalore, "the hi-tech hub of this country".

Wong hopes that the office will help Intel service Indian customers better and explore "exciting market opportunities", for, according to Wong, after the US and Pacific rim, India is the next market heading for explosive growth

Intel's beginnings in India are modest, with a small office staffed by five. But then, as Wong says, "Intel began humbly in the US to eventually become a $ 2 billion giant." Hi-tech apparently, is the magic recipe.

MASARU GOTOH

Indigenisation may be Indian industry's password to the good books of the government, but it means trouble on the sales charts of foreign suppliers of technology. "In each country where we have operations, indigenisation affects our sales," says Masaru Gotoh, general manager, sales (Middle East, Africa, and Southwest Asia), of Japan's Honda Motor Co Ltd.

Gotoh, who was in India last fortnight on a visit to his company's Indian collaborator, Kinetic Honda Ltd, however, accepts indigenisation as a logical step after technology transfer.

In fact Gotoh, whose portfolio includes Honda's passenger car, motorcycle and scooter operations in 70 countries worldwide, feels that India is high on the agenda of Honda's plans. "India is one of the biggest markets in the world," he says, "and I have great expectations here."

He does feel, however, that further Japanese investment in Indian industry may be inhibited by infrastructural problems and cumbersome government regulations. The Telco-Honda proposal to make the Honda Accord is gathering dust in New Delhi — Gotoh does not see any decision being made before 1990

GUARANTEED TECHNOLOGY

Roto Twin Screw Pumps are manufactured to the time tested design of the World Leader

Stothert & Pitt

Stothert & Pitt Ltd., U.K.. The patented double profile of screw flank leads to higher volumetric efficiencies.

GUARANTEED PERFORMANCE

Roto Twin Screw Pumps guarantee a superior, proven, internationally accepted solution to bulk pumping of Fuel Oil. Reflecting

ACCEPTANCE

the international trend, installations in India are switching over from the conventional Gear Pumps to Roto Twin Screw Pumps. In India, Roto's performance is well established and recognised in industries like Power, Refineries, Steel, Fertilizer etc.. Roto Twin Screw Pumps conform to International Standards of API 676, VDMA 24284 Class VII or any other equivalent.

GUARANTEED LONG LIFE

The total elimination of any physical contact between the screws, and between screws and the casing, ensure substantially longer life of the pumping

Fit & Forget

elements and the casing. The Stothert & Pitt pioneered dual flow design advantage eliminates axial thrust, thereby increasing the life of the bearings considerably. These combined features have earned Roto Twin Screw Pumps the reputation of 'FIT AND FORGET' pumps.

*CFB CIRCULATING FLUID BED BOILERS

In Technical Collaboration with and under Licence from

A. AHLSTRÖM CORPORATION FINLAND

The World Leader in *CFB Technology

The operating principle of conventional bubbling fluidized bed combustion (FBC) has been known for several decades, but only since the 1970's has this technology been recognised for its potential to provide economical and environmentally acceptable combustion systems. The SECOND GENERATION *Circulating Fluidized Bed (CFB) Boilers are characterised by a circulating bed. They utilise higher air/gas velocities to extensively entrain the bed particles which are recycled to the combustor.

The *Circulating Fluidized Bed (CFB) Boilers developed by A. Ahlstrom Corporation is known as AHLSTRÖM PYROFLOW.

By the end of the 1970's the first two commercial Ahlstrom Pyroflow boilers were put into operation. The successful operation of numerous Ahlstrom Pyroflow Boilers has led to the acceptance of the technique the world over. Since 1979, some 66 Ahlstrom Pyroflow Boilers have been sold to electric power stations, process industries, district heating stations, for generation of electricity, cogeneration and process heating applications. Over 30 boilers are in operation, some for several years.

Major advantages of the **AHLSTROM PYROFLOW *CFB** system are :

1/ **Good fuel mixing, long residence time, recycling and high heat capacities of circulating material**

2/ **Environmental protection against SO_2/NOx emissions**

3/ **Erosion and corrosion of heat transfer surface is avoided**

4/ **Low consumption of bed materials and high heat recovery from bed materials**

5/ **Simplified Fuel Feed System**

6/ **Natural Circulation, no EHE**

7/ **Multi-fuel capability**

8/ **Adaptability to conversions and retrofits**

A. AHLSTROM Corporation's world-wide Licensees, Co-operation partners and Associate Companies rank as the major boiler-makers in many countries, namely:

- ★ A. Ahlstrom Corporation, FINLAND
- ★ Pyropower Corporation, USA/CANADA
- ★ EVT, W. Germany
- ★ Waagner-Biro AUSTRIA
- ★ CNIM FRANCE

COMPACT OVERHEAD PROJECTOR FOR GRAPHIC COMMUNICATION MANAGEMENT

FILL IN THE COMMUNICATION GAP ...

At Sales Conferences, Training Programmes or Human Resource Development Sessions, much has to be conveyed than said within a limited time. Here's an Overhead Projector by which multi coloured visuals speak louder than words. Transparencies of typed or xeroxed documents can be projected on a large screen. Matches International Standards and has features:

- Rotating Head for Vertical or Horizontal Presentations
- Advanced Optics – High Resolution, Bright Picture
- Low cost Halogen lamp easily available, economical in the long run.

CAP: COMPUTER AIDED PRESENTATION
Project Computer Text, Graphics with the help of LIQUID CRYSTAL DISPLAY PLATE (an Electronic Transparency) connected to P.C and placed on Overhead Projector. Large screen presentation can be offered even in room light for group viewing.

With appropriate Software, programmes run like a Slide Show featuring, Animation and Special effects in a predetermined time and sequence for Visual impact.

More exposure, more money, more films

The National Film Development Corporation has been enjoying a particularly good year abroad. *Salaam Bombay*, Mira Nair's film set among Bombay's street urchins, has been having a spectacular run throughout the world. Not only has it been the toast of film festivals, it is also turning out to be one of the top money spinners of the year. According to the US film weekly *Variety*, the film earned Rs.70 lakhs in the US alone in its first six weeks. And NFDC has a Rs.10 lakh stake in the film, for which it is to receive a 25 per cent share in the profits.

Rights sold. The ever bankable Satyajit Ray might never be able to capture an audience as wide as Nair's, with his punctilious classics. But his first film in four years, *Ganashatru*, whose shooting has got under way in Calcutta, might prove to be another good money earner for NFDC. The corporation is producing the film at the cost of roughly Rs.25 lakhs. Even before the clapper board was sounded, the British rights for the film had been sold for a minimum guarantee amount of Rs.5.5 lakhs. The overflow will be shared on a 50:50 basis by the producers and the British company. A similar offer by a Paris film company to buy the rights for France was rejected by the corporation because as Malati Tambay Vaidya, its managing director, puts it, "We are sure of getting a better offer from someone else." In fact NFDC is hoping to recoup the entire production cost before the film is ready in April 1989.

Ray's popularity in Europe and the American continent can be gauged from the fact that his 1950s classic, the Apu trilogy, proved to be a runaway success after NFDC started marketing the films abroad two years ago. To date, the three films, *Pather Panchali*, *Aparajito* and *Apur Sansar* have grossed over Rs.10 lakhs in foreign exchange.

Even the films of the lesser known of the Indian film geniuses, Ritwick Ghatak, are making more money a decade after his death, than when he was alive. His classic, *Meghe Dhaka Tara*, was recently sold to a British television company for over Rs.2.5 lakhs. And five years after it was made, Richard Attenborough's *Gandhi*, continues to rake it in for the NFDC, which was one of the producers of the film. During 1987-88 it earned Rs.12.87 lakhs in foreign exchange from *Gandhi*, and to date the film has generated a profit of Rs.2.45 crores for the corporation after full recoupment of investment and interest.

Better budgets. NFDC's total foreign exchange earnings in the last two years has been over Rs.6 crores. This might not seem a big figure in today's corporate terms, but what is more important is that this trend of selling Indian films to buyers in Europe and America augurs well for the so- called "serious film makers" in the country. Thus directors like Mani Kaul and Arvindam, who make films on shoestring budgets, but are not able to recoup their spending through domestic release, now have the opportunity not only to recover their investment, but also to make profits.

This benefits NFDC also in a big way. The corporation itself produces a large number of films, and also provides generous loans to independent producers. In the past, because the films were only released domestically, they invariably bombed on the box office, resulting in a loss for both the film maker and NFDC.

Now with the opening up of a new market, things have changed dramatically. In the last seven years, though the amount of loans disbursed to film makers more than doubled to Rs.53 lakhs in 1987-88, the bad debt written off came down from Rs.49 lakhs in 1980-81 to Rs.3.6 lakhs last year. Says Tambe Vaidya, "The foreign exchange earnings by these films have provided a measure of financial stability for the corporation."

Ironically, in a sense it has been the mainstream of the popular cinema that is responsible for opening newer markets for the serious films. All films exported from India, including the popular ones, have to be canalised through the NFDC. Till about 1980, the market for these films were restricted to what is termed as the traditional countries — North Africa, the UK, the Middle East, the Caribbeans etc, which have a large Indian population. But after peaking at around Rs.15 crores in 1980-81, the export of these films fell drastically in the following years on account of video piracy.

That is when NFDC started looking at the non-traditional markets to sell Indian films, particularly continental Europe. But unlike audiences elsewhere, Europeans were more interested in cinema of the Ray and Ghatak kind than the song-and-dance Manmohan Desai thrillers. And as a result, while NFDC's export of serious movies rose from Rs.41 lakhs worth in 1980-81 to Rs.1.51 crores last year, the figure for the popular films fell from Rs.15.07 crores to Rs.9.07 crores.

Chance to recoup. Says Nitin Keni, deputy general manager of NFDC, "An entirely new market is gradually opening up for Indian film makers, and I think we are moving towards a stage where at least the smaller film makers will be able to recoup their entire expenditure from export earnings alone."

Among the people who benefited the most from this development were the re-

bajaj group

When time stops for a little sweetness...

We are there to share those moments with you.

Bajaj Hindusthan brings you the finest sugar crystals manufactured from sun-kissed sugarcane.

With an expertise perfected over 50 years from one of India's foremost sugar manufacturing units, has enabled Bajaj Hindusthan to crush 12 lakh tonnes of sugarcane annually by working in close harmony with 60,000 farmers.

Keeping you in close touch with the best things in life everyday in everyway!

bajaj hindusthan ltd.

Sweetening an entire generation.

ional film makers. In the past, an Oriya ilm maker's market would have been estricted to his state. But since for Euro-ean audiences it doesn't make a differ-nce if the film is in Pushtu or Bhojpuri, s long as it is subtitled in their native anguage, these regional film makers are inding a ready audience abroad. Jahnu Barua's Assamese film, *Halodhia Choraye Baodhan Khai*, which for exam-ple, went virtually unnoticed in India, is currently doing well on the European circuit.

The net effect of this development is that the NFDC is able to finance films with more confidence of being able to recover its money. Thus, at the moment it has a record 15 films on the floor. Every major Indian film director ranging from Ray to Mrinal Sen, from Aparna Sen to Mani Kaul and Saeed Mirza to Kumar Shahni is now working on an NFDC-financed film. So things might finally be looking up for India's serious film makers after the rough and tumble days of the early eighties.

N. RADHAKRISHNAN

COCA-COLA

Piggy-back with Pepsi?

Now that PepsiCo has made a successful entry into India, Coca-Cola, the world's largest soft drink manufacturer, is also making a bid to regain a foothold in the country's fast-growing soft drinks market. During 1977, Coca-Cola left India because of the Janata government's insistence that it dilute its equity from 100 to 40 per cent and make the secret Cola concentrate locally.

Not that Coca-Cola has now decided to agree to that. Instead, it's trying to make the best of both worlds by taking advantage of the new government policy on export processing zones (EPZs). Last March, the government decided to allow up to 25 per cent of the production of EPZ firms to be sold in the domestic market provided the value addition is at least 30 per cent. Cent per cent foreign equity holding was always permitted in EPZ units. "We have always maintained a strong interest in resuming our links with India," says Stuart Eastwood, director business development for Coca-Cola in South Asia, Middle East and Africa.

Chauhan: if you can't beat 'em join 'em

Will things go better with Coke?

Quick work. Coca-Cola moved fast. By September, even before PepsiCo had got the go-ahead, the company was in touch with the new ministry for food processing and had offered to set up an export oriented unit. The ministry asked for a formal proposal which was submitted on 16 November.

Under the proposal, the company's first priority will be to set up a 100 per cent owned unit at the Noida EPZ to manufacture the Coca-Cola concentrate. This plant will cost $ 2 million (Rs.3.3 crores) to be invested in hard currency by Coca-Cola. Approximately 90 per cent of this investment will be sourced in India. Three-fourths of its output will be exported to Coca-Cola's concentrate manufacturing plants in Europe and elsewhere. In the tenth year, the company expects to export Rs.70 crores worth of product.

By then, it can sell Rs.23-odd crores worth of concentrate, and hence roughly Rs.200 crores worth of Coke in the Indian market. "Our domestic sales will not exceed 10 per cent of the soft drink market," says Eastwood. "We believe our proposal not only benefits our business but also meets the Indian priority of long-term exports to hard currency areas."

So far so good — Coca-Cola has 100 per cent equity and it makes sensitive proprietary ingredients under its control. But the major consideration of locating this plant in India (a hot and populous country in Cola's view) is obviously to get a big swig of the local soft drinks market. This is what the policy change of March now permits: up to 25 per cent of the EPZ unit's output can be sold in the Indian market.

Search for a partner. So Coca-Cola is now on the look-out for an Indian partner to set up a local concentrate plant which will supply the cola formula to scores of bottlers all over the country. This plant will buy the key ingredients from the Noida unit, make the balance ingredients (reportedly a flavouring agent and caramel) and combine them into the complete concentrate.

Almost every major soft drink baron is believed to have approached Coca-Cola for the local franchise: Ramesh Chauhan of Parle, Charanjit Singh of Campa-Cola (he was earlier Coke's local partner) Vijay Mallya of United Breweries, and Adi Godrej of Noble Soya. Whether Coca-Cola will have any foreign equity is yet to be seen. But clearly it would not mind having a minority stake in this venture, unlike in the Noida plant.

Unlike the fizzy three-year controversy over PepsiCo's proposal, largely whipped up by domestic soft drink interests, Coca-Cola's proposal is sailing smooth. Going by their keenness to join hands with Coke, the local soft drink bosses seem to

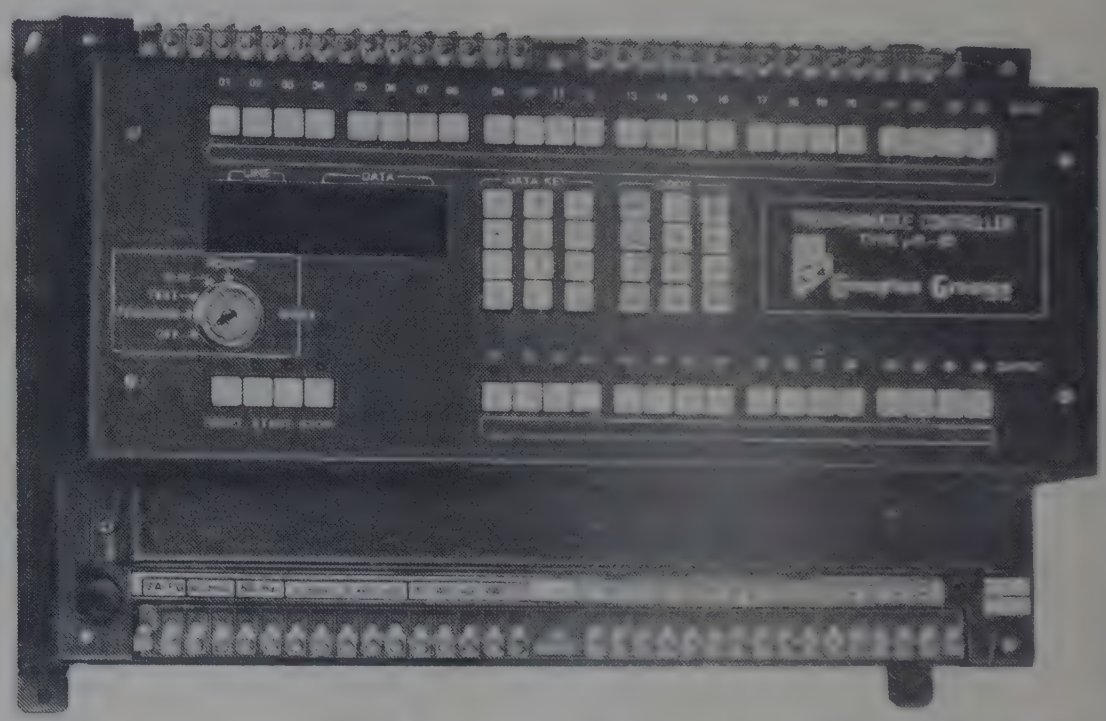
Some comparisons

Item	PepsiCo	(Rs crores) Coca-Cola
Project cost	21.50	3.30
of which: a) Soft drink plant	5.50	3.30
b) Term loan	10.75	
Foreign investment	3.69	3.30
Projected exports (in tenth year)	190.00	70.00
Net value added (%)	N.A.	68.00
Cost of technology, fees etc.	1.40	

Crompton Greaves

If your process demands high quality output with minimum downtime

Let Crompton Greaves Programmable Controllers take over!



Crompton Greaves introduces Programmable Controllers to co-ordinate all pre-timed, logical and sequential operations. With a wide range of input-output devices and a dedicated programming module that enables you to reconfigure your system to suit changing process requirements.

The power of Programmable Controllers

A single, compact Programmable Controller, the size of a suitcase, can replace upto 50 relays and its intelligent hardware understands user-friendly ladder diagrams.

Now you can time your production process to optimise efficiency and productivity.

Programmable Controllers reduce maintenance effort and save on power and space. They are expandable and programmable for a wide range of applications like process industries, sugar, cement, steel, packaging, machine tools, fertilizers and more.

However complex your process requirements, there is one to suit your need — from stand-alone 40 input-output units to modular systems upto 2048 input-outputs.

To offer prompt and effective service to our industrial clients, we would like to appoint value added system houses or technocrats, all over India. Interested parties please contact us immediately.

Mail this coupon to our address given below.

have accepted the inevitability of international competition. The bosses seem to reckon that if you are going to have one multinational, you might as well have two.

Under the EPZ policy, the government must clear project proposals in 90 days' time. By mid-February, the suspense will be over. And a green signal means an immediate selection of a local partner. Until then, Coca-Cola will keep its fingers crossed and hope for the best.

TEA BOARD

More power for regional execs

The union commerce ministry has decided to strengthen the Calcutta-based Tea Board's regional offices at Guwahati in Assam and Coonoor in Tamil Nadu by delegating comprehensive financial and administrative powers to its two chief regional executives (CREs).

Undermine board's role. The proposal has met with stiff resistance from Tea Board officials in Calcutta, who fear that the board's powers will be severely curtailed. The proposal, says Pramode Chatterjee, vice-president of the Tea Board Employees Association, will undermine the Tea Board's role in developing the industry, since it implies slashing the chairman's powers by nearly 75 per cent. However, P.K. Tripathy, chairman of the board, considers the reorganisation a routine issue. There is no conflict between the board and the commerce ministry, he says.

The West Bengal government appears to be one too happy about the scheme since it could mean losses in revenue for the state. The feeling is that the move is intended largely to placate the Assam and Tamil Nadu governments, and especially the former since it has been vociferously demanding that the headquarters of tea companies which have gardens in Assam be shifted to Guwahati.

For companies based in the south and Assam, the commerce ministry's decision is good news. They hope that the delays in sanctioning loans and implementing schemes will be reduced as will be the need for periodic trips to Calcutta. Since the proposal involves considerable decentralisation, their expectations are likely to fulfilled. The reviewing and monitoring of all schemes, liaison with state governments, and marketing and research will henceforth be under the jurisdiction of the CREs. The chairman of the Tea Board, though, will continue to lay down strict financial guidelines.

Commerce ministry officials say that the decision to delegate powers to the regions is part of a drive to enhance productivity. R.K. Sivaraman, joint secretary in the ministry, said in a note to Tripathy, "With the utmost stress being laid on increasing production and productivity, delegation of powers to the CREs would enable the Tea Board to have better extension and developmental facilities. The CREs are very senior IAS officers and should be used as effective instruments for this purpose. If they are retained without adequate delegation of powers then their retention as CREs would not be justified."

Tea Board officials are not too happy about the 'balkanisation'. The board, with a promotional budget of Rs.9 crores, and an employee strength of 950, has since its formation in 1953 been a strong, centralised body exercising total financial and administrative control over the industry.

Officials also feel that the practical difficulties in strenghthening the CREs are going to be endless. A majority of the tea companies with gardens in Darjeeling and in Assam have their headquarters in Calcutta; for them the new move will mean either shifting the headquarters to Guwahati or much to-ing and fro-ing between Calcutta and Guwahati.

Strong centralised body. Tea Board officials question the need to have IAS personnel as zonal heads in the first place. The issue was raised earlier also by the Public Accounts Committee. According to observers, the Tea Board already has two IAS officers — the chairman and the deputy chairman. At the regional level what is needed is professional or technical people with field expertise. Instead, the commerce ministry has now created what will virtually be "mini Tea Boards" in the regions, it is felt.

The country has a production target of 1,100 million kg by 2000 AD and a foreign exchange earning target of Rs.1,000 crores. Will the fresh powers given to the chief regional executives help in achieving this?

■ MADHUMITA BOSE

HORSE RACING

Computers make it racier

Even on a week day, when the rest of Bombay city is humming with activity, there is a group of people who take the afternoon off as a matter of course — at the green turf of the Mahalaxmi race course. Gambling is serious business: clear class differences between the well-heeled in the members' enclosure at the Royal Western India Turf Club and the less wealthy in the general enclosure notwithstanding, it is the willingness of both that provides the money to keep the race track going.

Substantial income. The Turf Club, which conducts the races in Bombay and Pune, accepted bets which were worth Rs.8.88 crores in 1987-88: its revenue in that year, net of all taxes on bets placed on it for races conducted both in Bombay and Pune and on intervenue betting, was Rs.2.43 crores. The club earns substantially more from bookies who operate on the club's own premises; but its own betting income is nothing to be sneezed at.

In November this year, the club became the second in the country to computerise its operations. Both hardware and software for the exercise were provided by ORG Systems, the computer division of Sarabhai Electronics Ltd.

"The idea was to improve the quality of service to racegoers," says Ajit Gulanikar, an independent consultant who assisted the club. The club's betting operations, unlike those of the individual bookie, are fairly complex. A bookie typically offers a bettor fixed odds, based on his own evaluation of a horse's ability to win. The club on the other hand does not offer any fixed odds.

What the Turf Club does is, it offers a series of betting pools, concurrently in Bombay and Pune. A punter could choose to place a bet on a horse winning in a particular race (called a win pool), or on the second horse in a race (second horse pool) or on the winners of five races (jackpot), on predicting the first, second and third horse in a particular race.

As the name 'pool' suggests, a winner's dividend depends on the amount that he and his fellow racegoers have been willing to invest in a particular pool. From the gross amount invested taxes and the club's commission are deducted, and the balance is divided among the winning

A betting terminal: info at their fingertips

tickets.

Laborious process. When the club operated betting manually, keeping track of bets, especially in pools where a variety of combinations is possible, was a laborious process. Declaring a final dividend could take anything from half an hour to one and half hours. Now the same results can be declared in a matter of minutes.

At the heart of the whole system are four Super-Max super mini-computers manufactured by ORG Systems. Two of these are installed in Bombay and two in Pune. At each place, one of the computers stands as a fallback in case the primary system fails. "We can't afford to have any breakdowns," say Sanjiv Mittal, marketing manager of ORG Systems. A breakdown could lead to a total disruption of betting and hordes of angry racegoers.

To avoid this, the four computers run diagnostic programmes on each other and the secondary system can declare the primary system 'down' if it detects an error in its operation.

The computers are linked to 200 betting terminals in Bombay and 50 in Pune. The terminals have been specially designed by ORG for betting operations so as to simplify the job of accepting bets. For instance, the terminals, have keys with which the kind of pool in which the bettors want to participate can be registered by punching one key. The terminals also have built-in printers which automatically print out tickets once the bets are placed. All information from the terminals is fed to the computers which process the information and display it on closed circuit TV.

As of now, all information is processed separately in Bombay and Pune and then amalgamated, but there is hope that the two systems will be linked by a dedicated line in a short time

It is too early to say whether the system will function effectively in encouraging more betting; all that M.R. Surti, deputy general manager of the club, is willing to say is that it has speeded up the whole process. Now, the club also has the ability to conduct more pools, which means more money for it and better service for racegoers.

PETROCHEMICALS

PDS gets off to a shaky start

The Petrochemicals Data Service (PDS), inaugurated on 30 November 1988, performs the useful function of collecting and collating data on petrochemicals. Summing up the need for such a data bank, IPCL chairman and managing director Hasmukh Shah said, "We used to operate on gut feelings. But the industry has grown rapidly and become much more complex. We need readily available, organised data."

The information PDS will supply includes capacity, production, domestic and international prices, availability and commitment of feedstock, excise and customs duty, import and export figures and general trends in the industry, published in the form of a weekly and a quarterly magazine.

Reliable data. The PDS will not only help manufacturers and entrepreneurs in their marketing, export or expansion plans but also provide reliable data to financial institutions for their project appraisals. According to Lalit Doshi, joint secretary in the department of chemicals and petrochemicals, the PDS will also help the government to formulate their excise and import/export policies by providing authentic, comprehensive data on local and foreign markets and the demand-supply situation.

A data bank was first recommended by the Kapoor committee on perspective planning for petrochemicals. IPCL was considered the most appropriate agency to set up the service as it already had an economic analysis group which compiled data relating to IPCL products. On 1 April 1988, the group formally became the PDS team.

The scheme has received whole hearted support from IPCL. The PDS team is not only paid by IPCL, it works on IPCL land and with IPCL funds. And yet, not everyone is happy with the PDS. Certain members of the industry feel that confidential information filed with the PDS will soon make its way into the hands of competitors. After all, they say, the PDS is a government-controlled body and everyone knows that the government has its favourites.

Some of them question the significance of the PDS in view of the fact that relevant information on certain segments of the industry is already being published by the concerned associations. For instance, the Association of Synthetic Fibre Industry publishes data on synthetic fibre production, consumption etc. In fact, the PDS itself gets its information from the ASFI.

Serious hurdle. The PDS team is finding the resistance from the industry a serious hurdle. Out of 110 manufacturers making 80 products all over the country, only 20 have volunteered information. "Given the fact that we are IPCL employees, it is only natural that they are suspicious of our motives for asking information," says V.R Mehta of the PDS team.

The PDS has encountered problems in verification of data too. The validity of the information it has gathered cannot be checked because reliable alternative sources are very few. The team hopes to be allowed access to the Directorate General of Technical Development and the customs and excise departments, but their request appears to be lost in bureaucratic quagmire.

In spite of its teething troubles, the PDS team is working out the details for expansion of its services. An annual issue is on the drawing board — the contents will include major product and company profiles. Other plans include organising studies and project appraisals to be sponsored by companies and building up an in-house panel of experts for evaluation and analysis of data. Shah feels that the PDS may also be able to fulfil the third world's long felt need for comprehensive data on international markets.

Before the PDS can start contributing to the petrochemicals industry, the organisational details have to be hammered out. The fund has to be set up, membership arranged and the industry's resistance overcome. All this will take time. Another three or four years are likely to pass before the PDS is ready to take off.

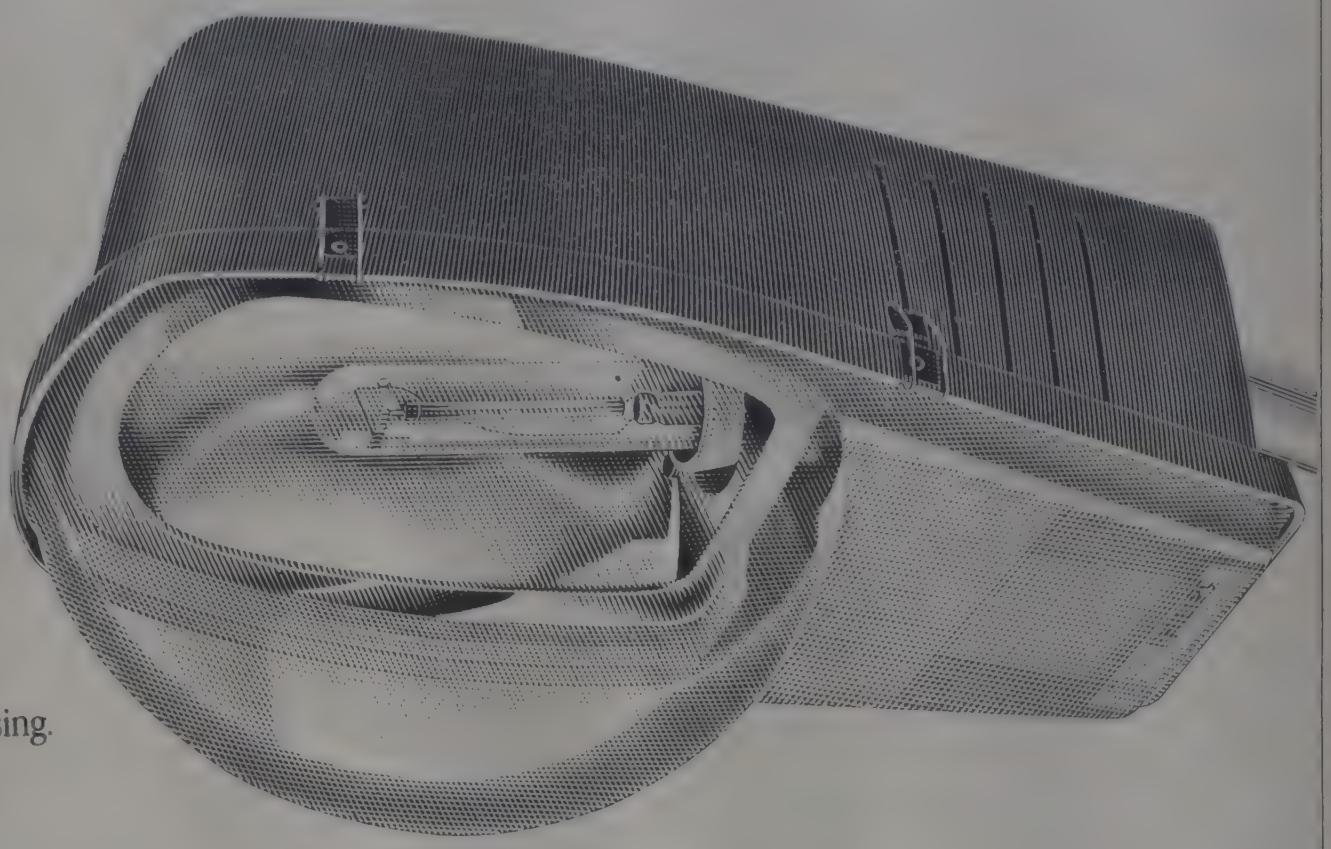
PHILIPS

A Breakthrough In Streetlighting



The Superstar— another first from Philips

1 Sturdy lightweight die cast aluminium housing.

2 Clear weatherproof acrylic cover.

3 An optical system to give more efficient optical control than conventional luminaires. Enabling higher mounting heights and larger spacings between luminaires.

4 A lampholder system allowing a wide choice of positions depending on different road situations.

For the first time in India, a new optical system specially designed for more efficient streetlighting, with tubular sodium vapour lamps. Superstar, the luminaire that brings the benefits of better streetlighting right to your doorstep.

The Superstar is lightweight, weatherproof and easy to install and maintain. In addition, it cuts down on the number of luminaires used and thereby on system cost.

It is innovations like the Superstar that have made Philips the leaders in lighting worldwide.

I would like to know more about the Superstar. Please send me further details.

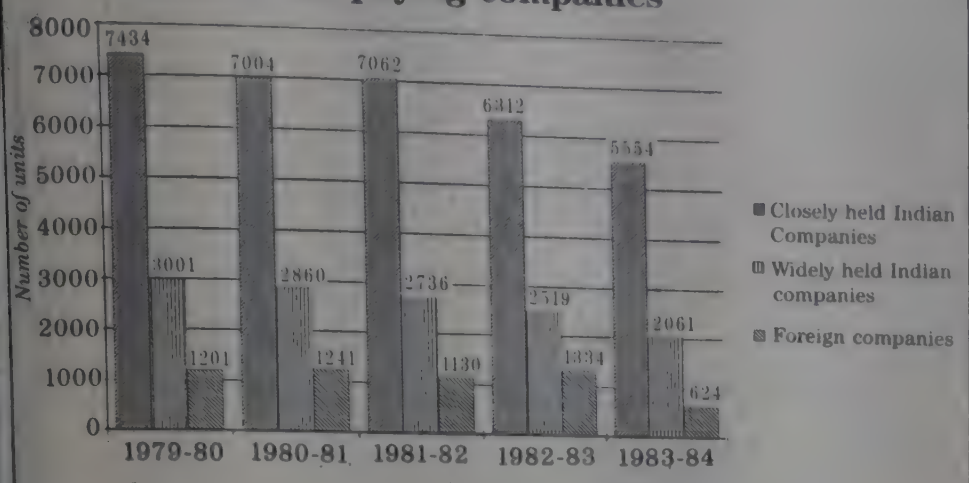
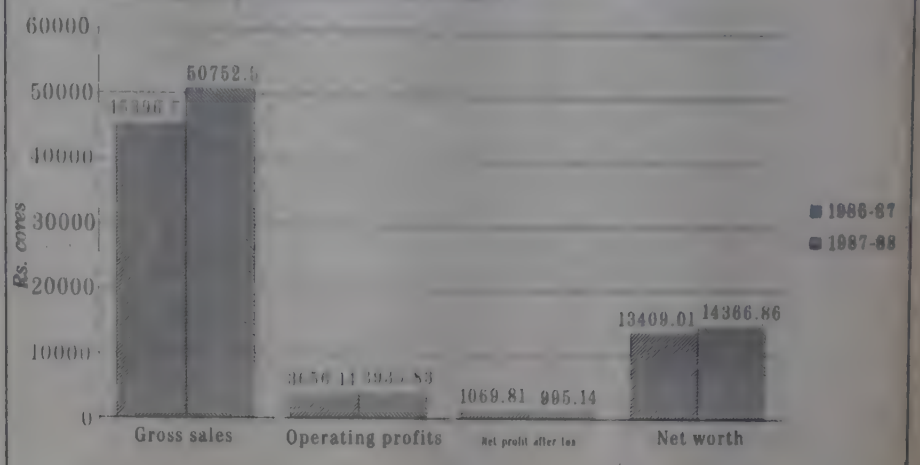
Profile of tax paying companies



Over recent years the number of units in terms of taxable profits has been dropping. The number of foreign companies has more than halved at 624 units (1334 units in 1982-83) in 1983-84. The total number of Indian and foreign companies with taxable profits of Rs.1662.8 crores was 8239 units. The widely held companies, accounted for over four-fifths of the total corporate taxable income even though in number of units they were only one-sixth of the total. Corporate profits accounted for 2.4 per cent of national income during 1984-85, up from 1.1 per cent in 1983-84.

Company finance trends



Growth rate of gross sales in the corporate sector during 1987-88 has been maintained at 11.8 per cent. Operating profits increased by 7.6 per cent to Rs.3935.83 crores (Rs.3656.14 crores), whereas net profit after tax has declined by 7 per cent to Rs.995.14 crores (Rs.1069.81 crores). Although the net profits retained has fallen to Rs.417.59 crores (Rs.578.35 crores), the net worth has moved up by 7.1 per cent to Rs.14366.86 crores (Rs.13,409.01 crores). The companies have paid higher dividends of Rs.577.55 crores (Rs.491.46 crores), inspite of lower net profits. This has affected retained earnings.

** Based on CMIE sample of 740 industrial companies*

Money and banking (scheduled commercial banks): Broad money has increased marginally by 0.69 per cent during the month under review. The rate of increase in aggregate deposits has been maintained over the months at around one per cent. Bank credit has increased by Rs.6858 whereas food credit has dropped by Rs.1,592 crores over the year. The credit deposit ratio has also declined.

(Rs crores)

	2 Dec 1988	4 Nov 1988	4 Dec 1987	% change over month	% change over year
Broad Money (M3)	1,79,849	1,78,611	1,54,844	0.69	16.15
Agg. deposits	1,32,458	1,31,090	1,16,685	1.0	13.5
Bank credit	76,727	76,310	69,869	0.5	9.8
Food credit	1,299	1,146	2,891	13.3	−55.0
Credit/dep. ratio	57.93	58.21	59.88		

Wholesale price index: The all-commodities wholesale price index has marginally declined during the period under review. The price of most commodities in primary articles and manufactured products have either declined or remained steady.

(1970-71=100)

	12 Nov 1988	15 Oct 1988	14 Nov 1987	% chave over month	% chave over year
All commodities	437.5	441.0	412.6	−0.79	6.0
Primary articles	418.3	418.4	393.6	—	6.3
Mfg. products	413.8	420.8	390.6	−1.7	5.9

Bullion prices and stock market index: The price of gold in the Bombay market has declined by Rs.96 in the month to 16 December. However, silver has ruled steady at around Rs.6450. The Bombay stock exchange index has declined by 40 points to 668.12, largely due to lack of institutional support for pivotals. But the market is still up on a year to year basis.

	16 Dec 1988	16 Nov 1988	16 Dec 1987	% change over month	% change over year
Gold (Bombay)	3124	3220	3325	−3.0	−6.0

Bombay stock exchange index (1978-79=100)	668.12	708.20	416.75	−5.7	60.3

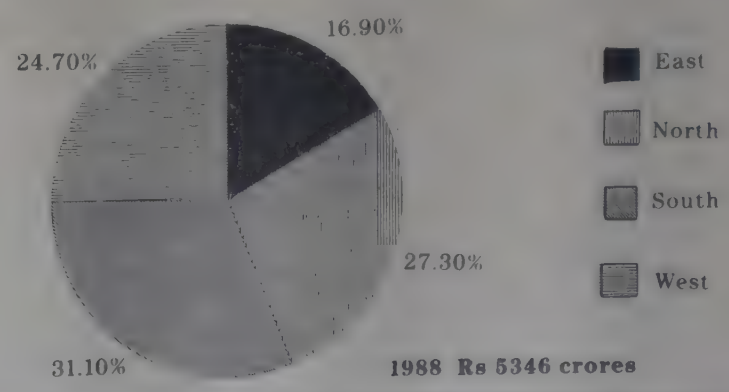
The price of gold is in rupees per 10 gms and that of silver in rupees per kg

Packaged consumer products market

The packaged consumer products market in India is in the region of Rs.6,685 crores. Which means per capita consumption is Rs.83.6. Packaged consumer products include personal care products, washing materials and other household items.

Packaged consumer products — urban market

In 1988 the urban sector accounted for 80 per cent of the total market. Within the urban sector, South India accounted for 31.1 per cent, followed by the north (27.3 per cent).



Packaged consumer products — market segments

Packaged food accounts for the largest segment (45.8 per cent) of the total market. This is followed by personal care products (25.1 per cent) and washing material (20.2 per cent).

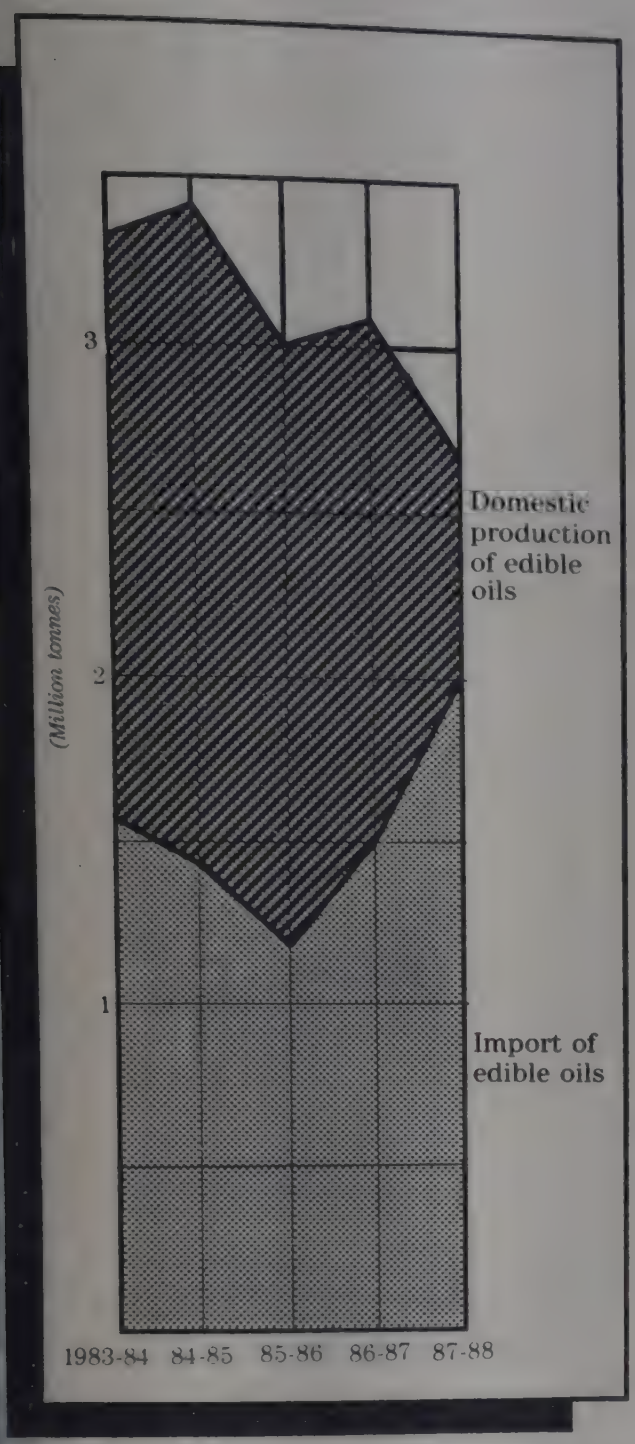
HEADSTART/MER/1031



New thrust in edible oils

The new edible oil policy aims at cutting imports and boosting indigenous production. This has been triggered off by strong expectations of a bumper oilseed crop this year.

India was self sufficient in edible oils till 1975-76. It was only in 1976-77 that 169,000 tonnes were imported at a cost of Rs.100 crores. Since then imports have steadily increased, and in 1987-88 the government imported 1.9 million tonnes valued at Rs.1,000 crores. The very fact that oilseeds is one of the missions under Sam Pitroda indicates the importance that the centre has given to this sector.

The area under oilseeds crop in 1986-87 was 18.88 million hectares. The maximum production achieved so far was 12.95 million tonnes in 1984-85 which has fallen to 11.74 million tonnes in 1986-87. This year (1988-89) oilseed production is expected to cross 15.00 million tonnes.

Productivity has also not increased significantly during the period 1972-73 to 1986-87. Per hectare production of 579 kg in 1970-71, has increased to 622 kg per hectare in 1986-87 which is one of the lowest in the world. In fact, the highest productivity was 684 kgs per hectare, attained in 1984-85. This rather dismal scenario in productivity is because around 83 per cent of the area under oilseeds is unirrigated and is heavily dependent upon adequate rainfall. The situation is further aggravated by the fact that less or excess rain can both affect the oilseed crop.

As a result of poor oilseed production, edible oil production has also stagnated: it was 3.10 million tonnes in 1986-87, up from 2.51 million tonnes in 1971-72. With the growth in population over time, the result is that per capita availability has stagnated around 4 to 4.5 kg.

In order to mitigate the shortfall in production, imports of edible oils have been stepped up over the years. In 1976-77 imports were a meagre 16,900 tonnes valued at Rs.100 crores. However, since then, imports have increased due to burgeoning demand, and in 1987-88 they were around 2.00 million tonnes amounting to Rs.1,000 crores. Due to increased production in 1988-89 it is expected that edible oil imports may come down to 1 million tonnes. The oilseed production targets for 1988-89, fixed by the oilseeds technology mission, is 17 million tonnes comprising of 9.3 million tonnes in the kharif crop profit and 7.7 million tonnes in the rabi crop.

Among oilseeds, groundnut is the major oilseed produced in the country, accounting for nearly 50 per cent of total production. The area under groundnut cultivation during kharif is estimated to be around 6.2 million hectares. Statewise, Gujarat heads the list with 1.7 million hectares, followed by Andhra Pradesh with 1.4 million hectares. Gujarat is expected to produce around 1.8 million tonnes in 1988-89. The other major oilseed producing states are Tamil Nadu (700,000 tonnes) and Karnataka (600,000 tonnes).

In order to stabilise prices of edible oils and curtail imports, domestic production has to increase substantially. In view of the thrust to increase production of foodgrains, the possibility of expanding the area under oilseed cultivation beyond a certain point is unrealistic. India has one of the lowest yields in the world. Therefore, the scope for increasing yield per hectare is a viable proposition.

The reasons mooted for the low yields are lower availability of high yielding seeds, inadequate post-harvest technology and the lack of extension services at farm levels. The union government on its part has launched a Rs.250-crore programme to step up production of oilseeds through better seed distribution, irrigation facilities and crop protection measures. It is also planning to impose a levy of Rs.150 per tonne on imported edible oils for supply to the vanaspati industry to build up an oilseeds development fund. These measures should bring about an increase in production and reduce imports over the next few years. But, whether it makes us self-sufficient in oilseeds production, remains a moot point.

ASPI T. CONTRACTOR

David Brown 'H' Series Helical Gearboxes.

David Brown's 'H' Series.
A wide range of fully metric helical gearboxes.
Engineered for efficiency, economy and versatility.

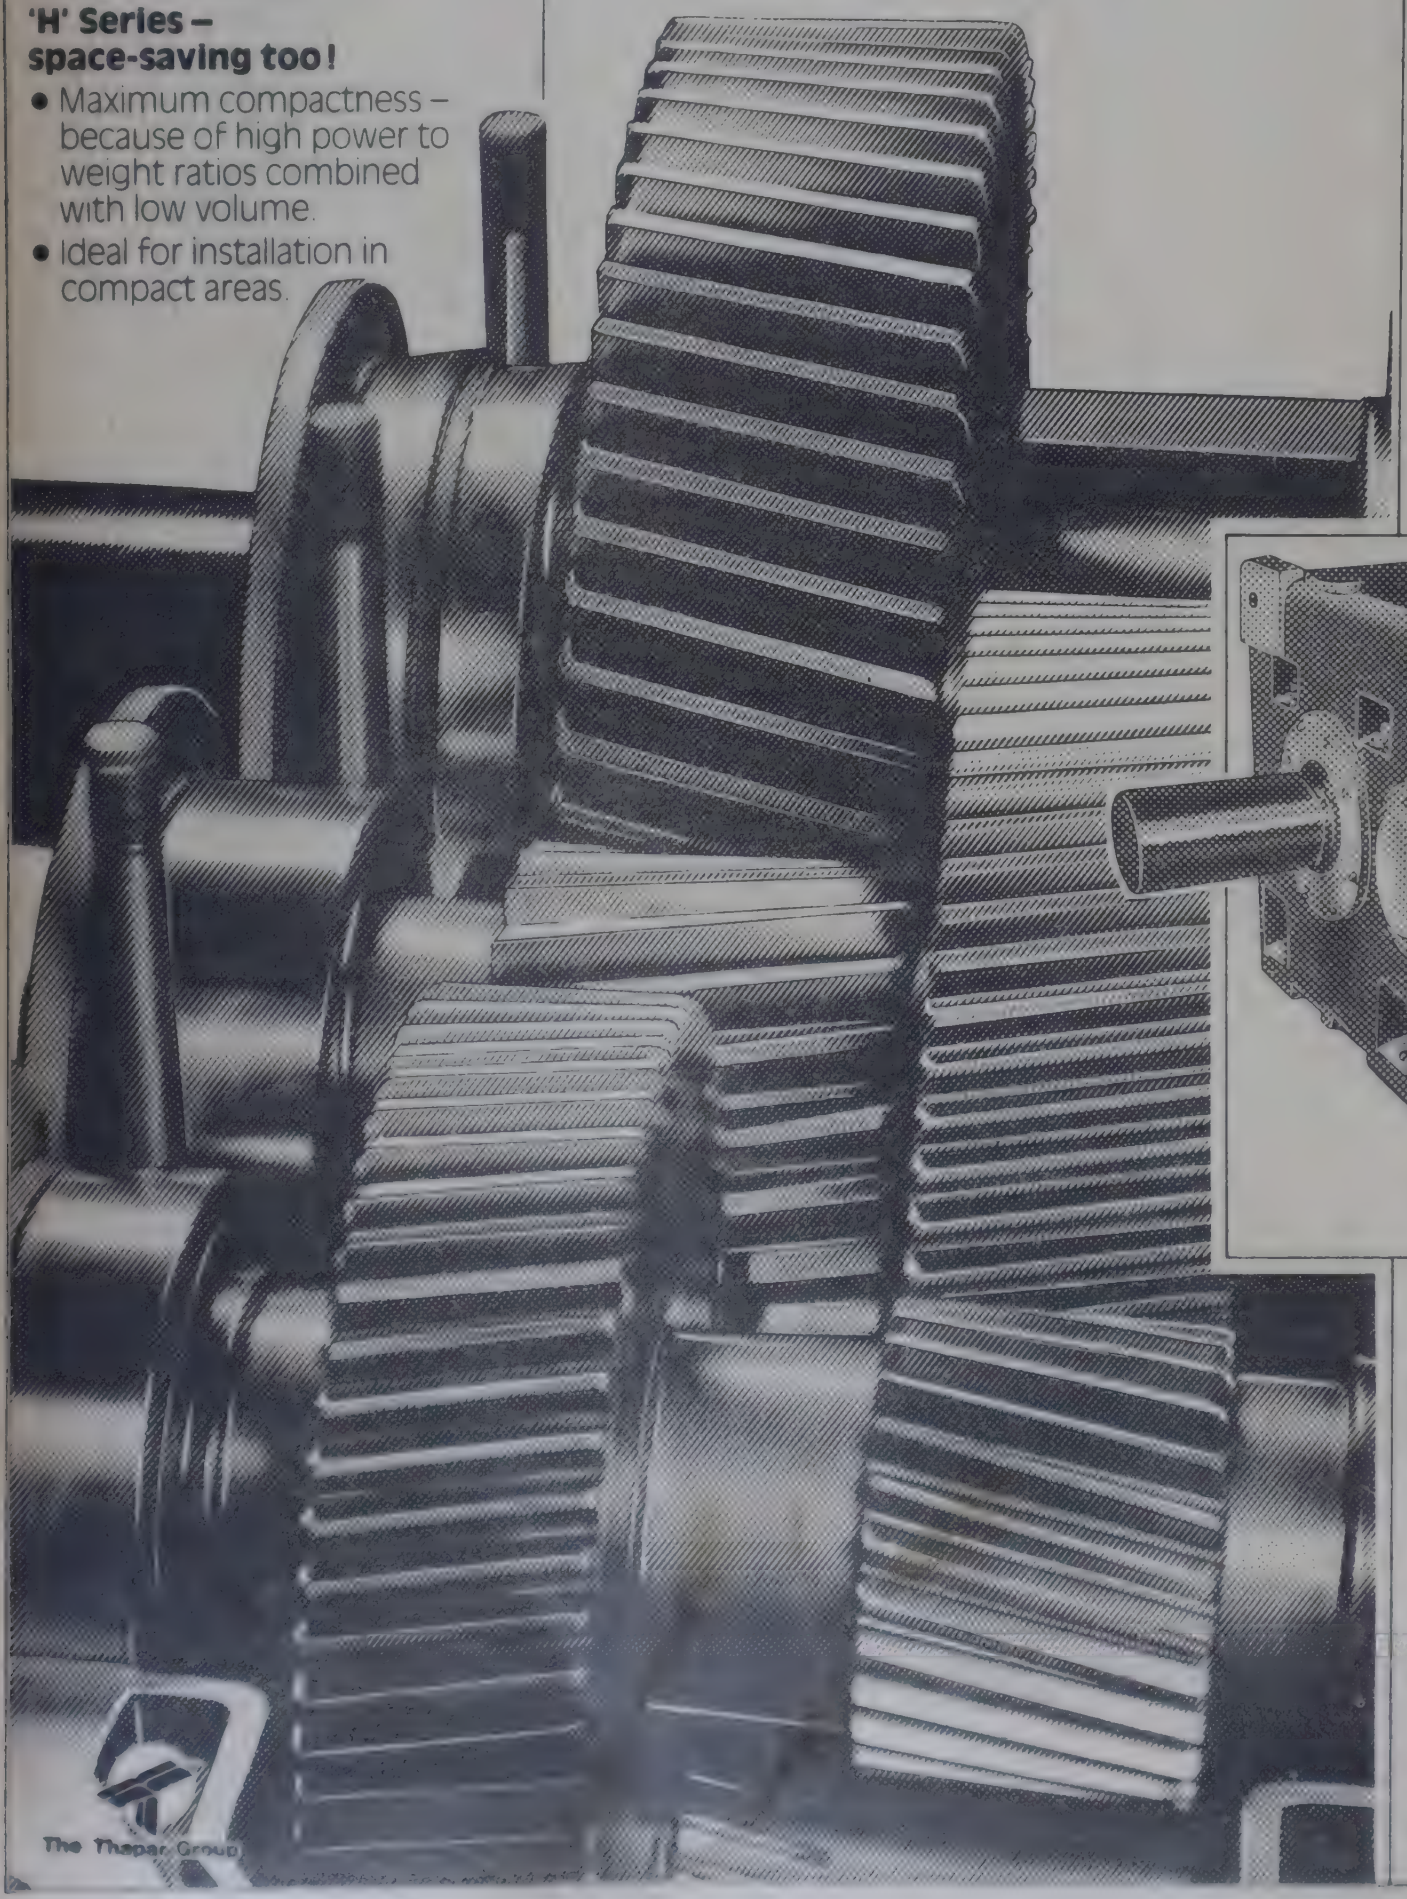
'H' Series – your industry's power-savers

- Very high efficiencies (97-98 5%) – because of perfectly matched and aligned components.
- Greater load-carrying capacity – due to highly optimised gear geometry.
- Long life and operational reliability – because of high quality materials.

'H' Series – space-saving too!

- Maximum compactness – because of high power to weight ratios combined with low volume.
- Ideal for installation in compact areas.

Helping you save energy and space.. in many more ways than one.



'H' Series – amazingly versatile

- Highly interchangeable parts and sub-assemblies – because of modular design and construction.
- Suitable for both horizontal and vertical drives – with right angled (Spiral Bevel) and parallel shafts.
- Choice of foot/shaft mounting with optional right/left hand shaft arrangements.
- Answers every need – available in extensive close ratio ranges (AGMA) with additional half-ratio steps.

Nationwide sales and service

David Brown 'H' Series Helical Gearboxes are sold and serviced by Greaves Cotton, leaders in power transmission equipment.

Greaves' countrywide network of 21 Sales and Service Centres, manned by qualified and experienced engineers, can help you select the right helical gearbox.

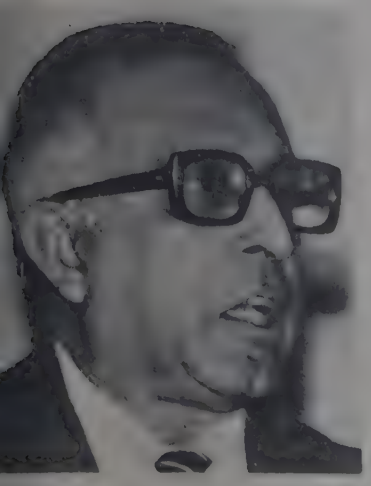
David Brown – mastery in gears



A.M. KHUSRO

In need of macro-management

The basic problem of the Indian economy, and for that matter, of all developing economies, is to augment supplies, despite severe constraints. Demand management is of course important but even more important is the management and augmentation of supplies. Demand itself becomes an impediment in supply augmentation and its equitable distribution, and that is a running theme of this lecture. The other running theme is supply augmentation itself and here I focus on aggregate supply.

In the management of the Indian economy in the last two decades, it is laudable that attention has come to be focused on the management of demand, supply and prices in individual commodity markets or sectors. But what is regrettable is that attention and expertise has shifted away from the management of aggregate demand, aggregate supply and the general price level. In other words, while micro-economic analysis and practice has held its own and even got strengthened, macro-economics has lost ground and has come to be badly neglected.

When shortages develop in a commodity market like sugar or steel or oil, the matter comes to be noticed in due course. If it is a critical commodity, some ministry may restrict or ban its exports to ease domestic supplies or liberalise import quotas; the ministry of finance might impose an export duty to retain larger supplies at home or reduce the import duty to get more quantities from abroad; some other ministry might augment the delivery quotas for procurement or release quotas in the public distribution system; the Reserve Bank may liberalise credit to the suppliers or importers and restrict credit to the potential hoarders... and so on.

Of course, even in the management of these individual markets not all is well. When a commodity or an industry is put on a priority list in this country, it tends to remain on that list for all time, irrespective of its varying shortages and surpluses. It is astonishing that whole monolithic sectors like agriculture or small scale industry or exports are made to qualify for concessional treatment, say, in credit disbursement without suitable commodity-wise discrimination. And there are more deserving segments, which are crying out loud for attention.

RBI's concern

It is on macro-economic management that attention has now to shift. The RBI is probably the only agency in the country that has regard for macro-management and a series of distinguished governors, from C.D. Deshmukh to L.K. Jha, from S. Jagannathan to I.G. Patel and from Manmohan Singh to R.N. Malhotra, have certainly bothered about the macro-stability of the economy.

Economists in government, that is those working in and advising individual and sectoral ministries are, of course, concerned with the micro-issues of their sector and sub-sector. But those working in more central positions and whom we know to be experts in macro-economic as well as in other realms of the subject, do not seem to be advising the government about the need for macro-stability. And even if they are, nobody seems to be listening. Aggregate demand remains well and constantly above aggregate supplies and the general price level keeps rising.

But price stability is not the only objective of a growing economy. Another objective, at least as important as price stability, is to achieve a rapid rate of growth of output itself. The problem of economic statesmanship is how to make output grow rapidly while at the same time not letting effective demand rise much faster than output itself.

What is it that leads sometimes inevitably and at other times fortuitously to persistent inflationary tendencies with all their evil economic consequences? There are four major causes of instability in a growing economy.

But price stability is not the only objective of a growing economy. Another objective, at least as important as price stability, is to achieve a rapid rate of growth of output itself. The problem of economic statesmanship is how to make output grow rapidly while not letting effective demand rise much faster than output itself

As for the first cause, we note that when investment is undertaken in a planned economy over a wide front it obviously has two effects — one on the demand side and the other on the supply side. Investment activity, ie, the construction of goods which produce more goods, inevitably requires the hiring of resources — engineers, designers, builders, contractors and workers in the public and the private sectors. When these are paid their remuneration and spend it in the market place, they create the incomes of yet other functionaries... and so on. In other words, the multiplier process goes into action.

Now if the multiplier effect of investment on the demand side was equal to its output generating effects on the supply side, the general price level will stay put and the economy will remain stable. But it so happens invariably that while the multiplier effect or the demand generating

The author is a prominent economist and chairman of the National Institute of Public Finance and Policy, New Delhi

effect runs fairly smoothly and expeditiously and the demand stream begins to emerge, the supply side works from the day investment begins, with time lags. For one thing, every investment has a gestation lag before it yields output and during this period while output is not yet available, demand nevertheless runs away with itself. Hence prices rise. For another, in developing economies there are always shortages of raw material, land, capital goods, spare parts and technologies.

There is a second cause of inflation which planned regimes bring upon themselves, sometimes owing to their ignorance or lack of experience but quite often due to a non-regard for macro-economics and indulgence in bad macro-management — by undertaking larger and larger mammoth sized plans and putting undue pressures on resources.

The trouble with large-sized plans is that in chasing real resources the public and the private sectors compete within themselves and with each other and bid up the prices of resources in land, labour and capital. But large-sized plans have other more important effects on the demand side. Even if the government budgets remain balanced and there is no deficit financing, a succession of larger and larger budgets per se leads to inflation.

Cascading effect

As tax hikes become counter-productive and borrowing programmes raise the interest rates and become debt traps, governments hike the price of public enterprise goods. As these are infrastructural goods with wide ranging forward and backward linkages, the cascading effect of their price hikes become very extensive.

There is no deficit spending, which is deficit spending itself. All finance ministers have paid lip-service to financing the plans from taxes, internal and external borrowings and public enterprise surpluses. But none has succeeded so far and large credit from the RBI has invariably been obtained. Some finance ministers did try the alternative approach of reducing tax rates to get a larger tax compliance. This was done by Y.B. Chavan, C. Subramaniam, Pranab Mukherjee, and V.P Singh. In most of these cases, tax compliance improved considerably. But there was a failure to control expenditure, and large volumes of funds were frittered away, especially in subsidies.

The fourth major cause of the general price rise is price control itself. When prices rise inordinately, well meaning governments sensitive to public clamour proceed to impose price controls on key commodities.

The macro effects of such micro controls emerge in a fascinating manner. Under a price-cum-quantity control system, there is always a tendency for demand to be strengthened and

There is a second cause of inflation which planned regimes bring upon themselves, sometimes owing to their ignorance or lack of experience but quite often due to a non-regard for macro-economics and indulgence in bad macro-management — by undertaking larger plans...

demand curves to shift rightwards. But there is nothing in the control system which will give incentives to producers and shift the supply curves forward and rightwards. On the other hand, the supply curves tend to shift backwards and leftwards. The day never comes under a controlled system when the suppliers supply more, the prices are reduced in the free market and controls eliminated. Thus price-cum-quantity controls not only create shortages, not only are they self-expanding, but they are also self-perpetuating.

If inflation, as judged by some genuine price index were to be kept at bay, say within a rate of 5 per cent a year, it would be necessary to undertake some of the following measures:

- make more realistic sized development plans;
- break the bottlenecks of capacity utilisation through balancing equipment, marginal investment, managerial improvement and appropriate input supplies;
- a culture of avoiding cost and time overruns;
- explore further the possibilities of obtaining larger tax compliance with lower tax rates, especially in indirect taxation;
- for a year or two at least, cut down government expenditures on administration;
- give larger responsibilities in respect of selected infrastructure;
- reduce food and fertiliser subsidies in particular;
- explore the possibility of rationalising defence expenditure;
- explore the possibility of a 1 1/2 to 2 per cent reduction in the whole structure of interest rates;
- reduce deficit financing to about half its present size;
- do away with all those price and quantity controls where the supply response is likely to be high consequent upon de-control;
- explore the possibility of many more dual-pricing systems;
- ask all central and state ministries dealing with commodities and services to simplify laws, rules and procedures.

Cold comfort

It looks like it's travel time once again. The prime minister's peregrinations have begun on a high note. After all, Rajiv Gandhi did tramp along the Great Wall. The *bonhomie* and exuberance exhibited on the China trip does signal, if official sources are to be believed, the start of the great Sino-Indian thaw. But those who do know the Chinese insist that their system simply does not function that way. Even a thaw could take a long time to set in.

Yet, there is no denying the fact that a prime ministerial visit to China after a gap of 34 years is significant, however one chooses to interpret the diplomatic doublespeak. Given the Chinese penchant for obfuscation, analysis of the real gains from the five day sojourn will take quite a while.

What is noteworthy though, in the longer term view, is the doubts surrounding the timing of the current visit. Even till the last few weeks before the prime minister's departure, there were continuing attempts to downplay the visit. One section of the foreign office, which opposed the visit, had pushed its case strongly. However, the prime minister's office and, more important, Natwar Singh believed that the die was cast and that "go he must" was the need of the hour. As a result of the dithering (albeit temporary) and the doubts (inevitably ignored), the foreign office kept its fingers crossed right through the visit.

With good reason too, since as one senior official in North Block said, "Never has a visit of this scale started with this level of under-preparedness." The backroom boys in the ministry have specially been bothered by nagging doubts about China's readiness to deal seriously with a regime that has only one year left before it goes to the polls. So, while slim pickings may be the order of the day, the PM's PR boys hope that adequate mileage can be extracted from the Beijing sojourn.

In a sense though, the next prime ministerial sortie to Islamabad for the SAARC conference, holds promise of yielding better results. With a confident Ms Bhutto installed in Pakistan, there is hope that the paranoia about India will begin to dissipate. This, say foreign office officials, may finally give SAARC a fighting chance to become an effective local co-operative. Though big business is hoping that an enlivened SAARC will instantly open up new business opportunities, officials in North Block believe that this is unlikely in the short run. But, though trade may be slow off the mark, the opening of a dialogue between a confident Benazir and an eager Rajiv could make for a meaningful journey.

Which for our winter traveller may provide a measure of cold comfort.

Coke's no joke

The attempt by Coke to enter the Indian market is alarming in its sheer brazenness. By seeking to use the free-trade zone route, Coke has, for a start, made a monkey out of Pepsi. (Also see Business Notes.) Blockaded by local softdrink manufacturers, Pepsi has had to battle every millimetre of the Byzantine path before the project was approved. Pepsi made concessions, promised investment guaranteed exports and disvowed the use of a foreign brand name before it was allowed to enter.

Coke dispenses with all such preliminaries. It has spotted a loophole and it plans to push through. And for some inexplicable reason, it seems that it may actually get away with it. If the rumours in New Delhi are given any credence, Coke has sought and acquired a powerful protector and promoter in its quest to reenter India. By all accounts, the patron that Coke has found is somewhere in the upper echelons of the bureaucracy in North Block. Nobody is willing to reveal any more for the moment.

The signs of intercession by North Block, rather than from Parivahan Bhavan (where the ministry of food processing sits), indicate to those who know the ways of Delhi that the sponsorship of Coke is for reasons unconnected with championing the cause of the food processing industry. Though the parent ministry for the Coke application is technically the commerce ministry, interest from across Raj Path suggests that some desperate signal is simultaneously sought to be conveyed about foreign investment *per se*. Whether all this will work and how long the Coke proposal itself will take to clear the as yet invisible hurdles is something only time will tell.

The worries about Coke, aside from those expressed by people involved in the industry, are however about the whole business of multinational brand names in our consumer goods industry. Officials in the industry ministry, who are supposed to monitor such things, are only now beginning to get exercised over this issue. The lethargy in the industry ministry, which sources suggest has now ended, was all the more inexplicable, because the normally somnolent department of electronics had some years ago made sufficiently stringent rules with regard to the use of brand names in electronic goods.

Coke, in its current incarnation, is only the most obvious instance of killing local brand names softly. If reports available are true, it is understood that Wrigley's is all set to do to local chewing gum, what Coke and Pepsi plan to do to soft drinks. In the meantime, in the area of garments, entrants like Benneton and Van Heusen are well on their way to give local brand names a bad time.

There are those who would argue that such battles are truly what liberalisation is all about. There are those who believe that such concessions signal the death of local enterprise. Whichever the line one choses to espouse, the mandarins who man the ministries had better look sharp if the rules they have framed already are not to be made a constant mockery of.

The call for cash

Is fund collection on already? This is the question on the lips of industrialists in most cities at the moment. Word seems to have emanated from some senior ministers that an election fund drive has already begun.

On the other hand, ruling party sources contend that no such call has been put out as yet. The staggering demands that have reportedly been made seem to suggest however that some kind of major effort is on — however well disguised it may be. And industrialists, for the moment from Bombay and Delhi, have received the signals loud and clear.

The reason why fund collection has become an on-now-off-again affair is because everybody knows that the Tamil Nadu elections are going to decide a lot of things as far as the national poll is concerned. So, for the moment, New Delhi is concentrating all its energies on the shape of things to come in the southern state. Once the results come in the Congress leadership can begin the process of gearing up for the national elections. So, all you money-bags had better realise that the current reprieve is only a temporary one and that the call for cash will come. Await your turn.

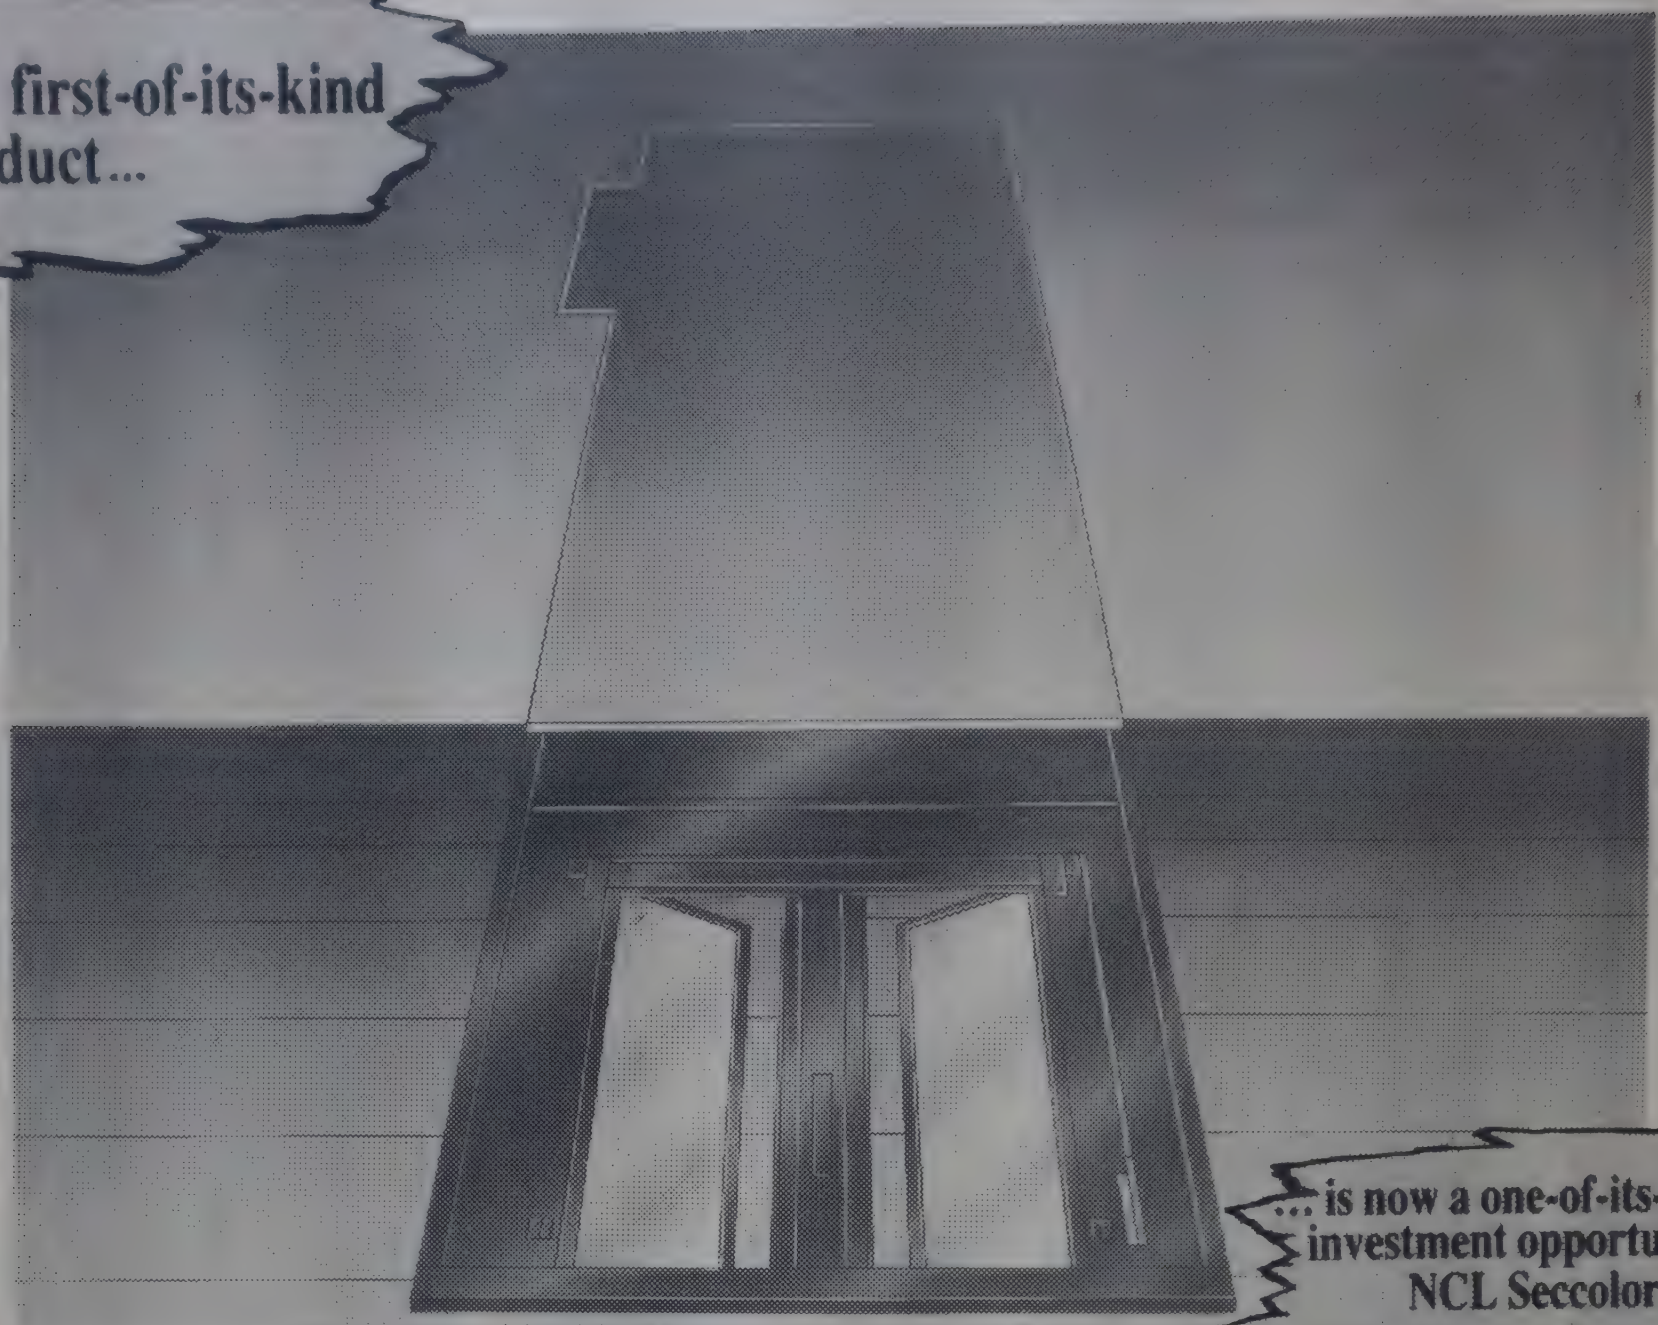
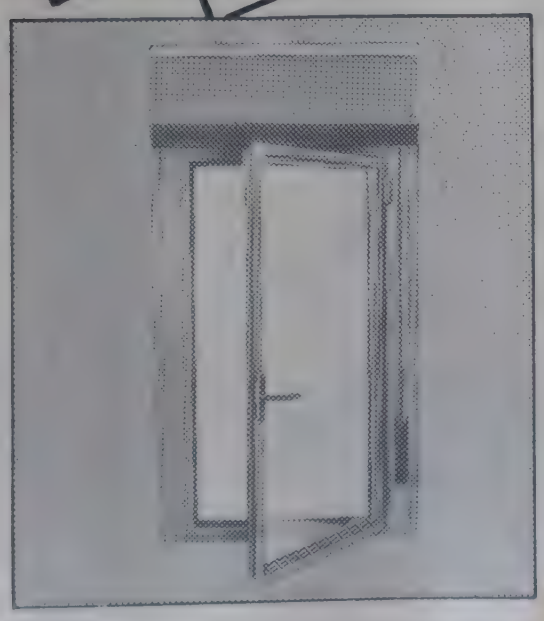
The first-of-its-kind product...



...is now a one-of-its-kind investment opportunity.
NCL Seccolor Ltd.

ISSUE OPENS ON 4TH JAN 1989



NCL Seccolor Limited introduces, a revolutionary range of prepainted, cold rolled steel, door, window and railing profiles. For the first time in India.

Stylish and strong, elegant and versatile, these products are ready to re-define the aesthetics of Indian construction.

NCL Seccolor brings these profiles to Indian homes and offices in collaboration with international leaders — Industrie Secco, SpA, of Italy. Secco profiles are market favourites in over 30 countries worldwide.

In India, demand for door and window profiles is put at a phenomenal 84 lakh sq.m. in 1991. NCL Seccolor Ltd. at full capacity will meet only 7% of this demand.

NCL Seccolor Limited is an affiliate of the successful NCL Industries Limited. NCL Industries has a remarkable record of performance that includes paying 70% dividends in its first three years. The share has a book value of Rs. 27/- and the company is in the process of doubling its capacity.

Successful promoters, world leaders as collaborators and a wide open market. Sound reasons why NCL Seccolor Ltd. is your door to prosperity.

Highlights of the issue

- **Excellent track record of promoters.**
- **First-of-its-kind in the country, stylish product.**
- **Growing demand in booming construction industry.**
- **Collaborators — world leaders.**
- **UTI participating in the equity of the company.**
- **No gestation period — product ready to enter market.**
- **80CC 80L and Wealth Tax benefits.**
- **Listing on Bombay, Delhi, Bangalore, Madras and Hyderabad Stock Exchanges.**

Issue of 23,40,000 equity shares of Rs. 10/- each for cash at par.

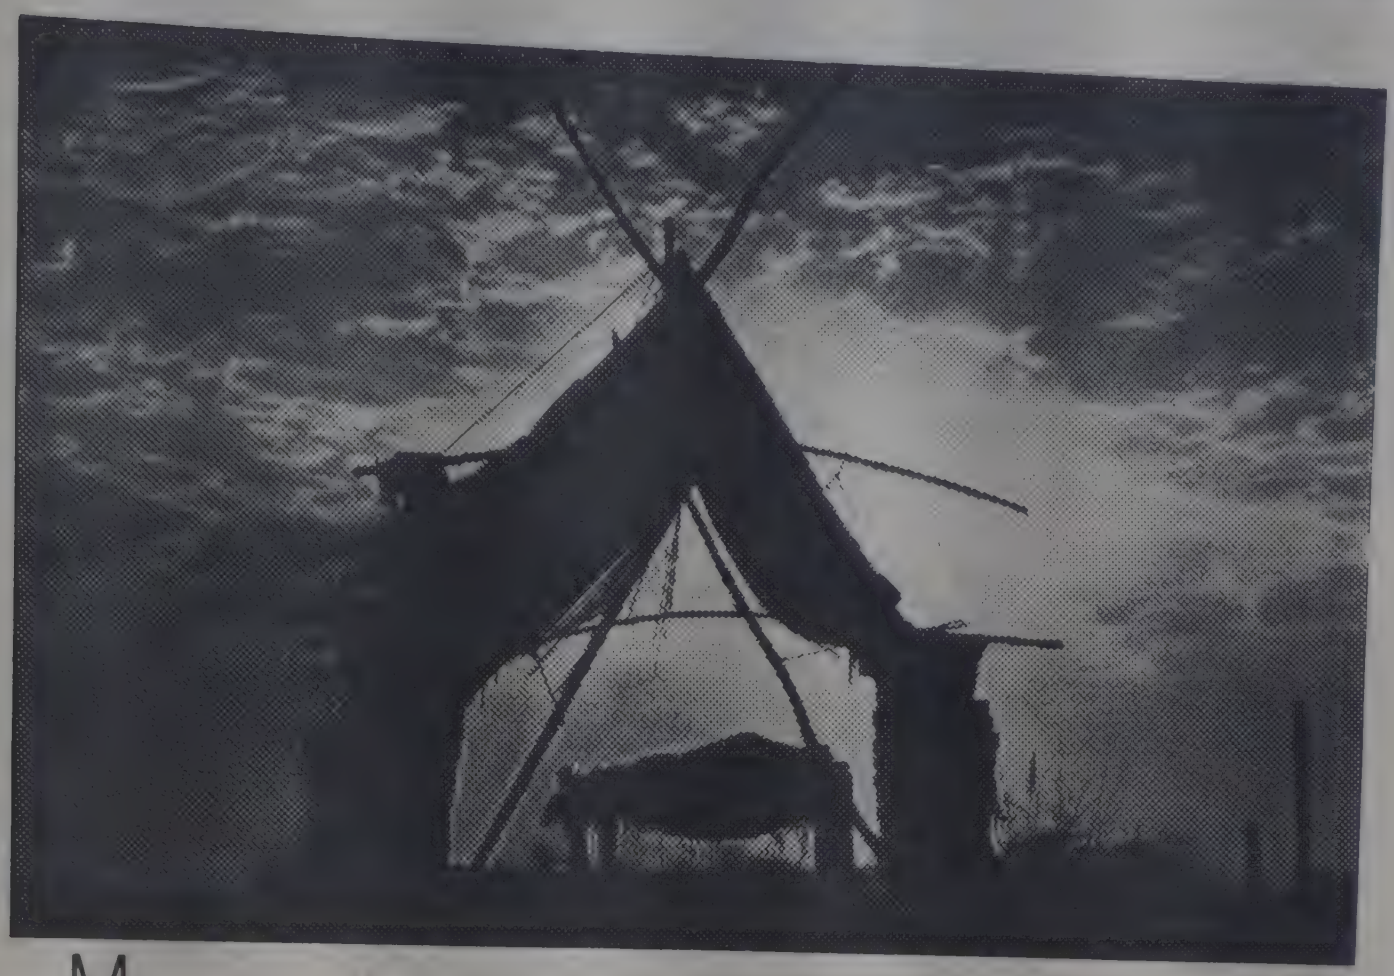
NCL – one constructive move after another.



Many in our country do not have even four walls and a roof to call a home. These people are forever at the mercy of the weather. All because we waste money—enough to build 1 million houses every year.

Ironically, the magnitude of the fact doesn't affect us. We've got better things to worry about. There's another word for this attitude. Apathy.

Yes, everyone of us has contributed to the loss of Rs. 2000 crores — every year!

By wasting petroleum. On the road. In the kitchen. In the factory. On the farm. Through the use of obsolete fuel-guzzling equipment. Poor maintenance practices. Inefficient methods of operation.

Conscious effort from you can stop this waste. Effort that not only conserves petroleum but also bands together solitary voices. We want you to write to your newspapers. Form action groups. In clubs and colonies, offices and organisations.

We need your help to spread the message of petroleum conservation.

And we hope, you're not going to be a part of the silent majority. Who'll turn this page and say, **"Who Cares!"**

Write to us. Talk to us. Come and meet us.

Panel discussion

Gruelling decision-making: heading the panel is Krishnamurthy (extreme right); to h right are Advani, Patwardhan, Banerjee, Kumar Advani, Pheroza Bilimoria

Can a good man be a great industrialist? "Isn't managing the environment a part of good management"? Would the Rockefellers have won kudos in their robber baron years? Can a creator of precedents exploit them and still be respected?

These and many related issues have dogged successive *Business India*, panels involved in selecting a Bussinessman of the Year. And given that the magazine's ideal of a businessman is one who's a kind of role model, the issue of morality has always been crucial.

This year was no exception. However, for the first time perhaps several panellists began to wonder whether the criteria themselves were not contradictory in a sense. Those of contribution to public policy and "business ethics" for instance. When chairman V. Krishnamurthy raised the question that in his days management theory placed great importance on managing the environment, he was merely reflecting a doubt that panels before his had had to face. One industrialist on the panel spoke grudgingly that growth itself was perhaps dictated — in some sectors of the economy at least — by an individual's ability to dictate public policy. And in a sense, the unsaid seemed to be that growth — even if it were to be by acquisition — needed the active cooperation of the government. And, that "ensuring" it, could often result in violating, often obviously, the criterion of business ethics.

Influencing government

The unspoken as it were, was that today influencing the government is often unwittingly the kind of activity that violates business ethics. So, who then is at fault? The government, because it requires business to flout ethics? Or business, because it needs the government to grow? The unsaid thought seemed to be that as long as government decision making stayed in the shadow of suspicion as it does today, the standards by which big business is judged could verge on seemingly quixotic idealism. As the standards of probity in government plummet, panellists in the coming years are likely to find their tasks ever harder. And, as this year's panel discovered — over a marathon three-hour working session — the standards by which men who matter are judged, could well be in need of some updating and perhaps reviewing — in the light of the changing reality.

Unquestionably, it was a tough year. Not much had happened in the economic firmament that could be regarded as healthy signposts to a better future. In a sense, this was evident from the names the panel had to deal with — almost everybody (except for two) in the list of fifteen had featured some time before. And so it was clear from the very start that it was going to be gruelling decision making.

The selection panel was headed, according to our convention, by last year's Businessman of the Year, V. Krishnamurthy. A chairman's chairman if ever there was one, having headed the boards of BHEL, Maruti and SAIL, Krishnamurthy's deft chairmanship was to stand the panel in good stead as the discussions got going. Along with him on the panel were Kalyan Banerjee, chairman and managing director, Exim Bank, Aditya Kashyap, vice-president, Tisco, Shiv Nadar, chairman and managing director, HCL, P.R.S. Oberoi, vice-chairman of the Oberoi group and M.S. Patwardhan, managing director, NOCIL. Spanning as they did both family business and professional management, hi-tech and soft-tech, banking and heavy industry, the private and the public sector, Krishnamurthy' election team seemed uniquely balance to cope with the lean pickings of wh was a remarkably tough year for India business.

List expanded

Ably assisted by publisher Ashok Advan the proceedings began by the pan making their own additions to the mag zine's short listing of contenders. Tv mainline businessmen — one from th public sector, the other from the sma scale turned giant scale — were the fir additions. Thereafter came three mo contenders — men who had influenc the morale of the nation. In other word men who made the environment in whic business had to work in 1988 and wh headed organisations other than corpo rations. So that expanded the list of can didates to fifteen.

Given the mixed bag of selectable ind viduals and the backdrop of a relative uneventful business year, Krishnamurt began by trying to re-evaluate the sele tion criteria. What had begun as a set six criteria some years ago, now ex panded to seven with "contribution social good" being the new measure success. New criteria, in addition to t easily acceptable seven, were discussed detail. One suggestion, which proved su sequently to have been largely ignore was the emphasis given to creating ne business — rather than just going f

rowth. It was also suggested that creating an organisation that could survive the man was a key consideration. It was also recommended that the ideal businessman should have an outlook that, while rooted in the nation, included a feel for the international. Also, it was felt that the businessman should have an impact on the government's policy making, ie, he must have played an important advisory role.

The preliminaries seemed almost over, when one panellist suggested that a simple one-criterion test for the ideal Businessman of 1988 would be: would the panel nominate him as finance minister for a period of five years? This single criterion, which somehow seemed to sum up nuances of ability, national good, peer respect and integrity caught the entire panel's attention. This litmus test, it was hoped, would help the first elimination rounds quite swiftly. As it turned out, it did not. But, as an effective litmus test, it seemed to emerge every now and then when evaluation of a particular candidate seemed difficult.

Final shortlist

The chairman then suggested that the entire list of contenders be scanned individually before assembling a further shortlist from which the winner would emerge. As has been usual for several years now, discussion began about one of the country's fastest growing industrialists. Despite everyone agreeing that the year was undoubtedly his, one panellist pointed out that the company's return on equity was poor. This criterion was also applied in the case of another "takeover king."

The said industrialist, however, was eliminated because a majority of his peers believed that there were still too many doubts about the methods he employed to influence public policy for personal profit.

The next contender, an inheritor, was also eliminated rather rapidly on account of the returns his major companies provided. Despite the fact that he had gone abroad and made good, many panellists felt that as an inheritor he had yet to achieve spectacular success either financially or organisationally.

One NRI was thereafter eliminated after a brief discussion. In the case of the NRI, the panel felt that it was still too early to judge his track record. Similar arguments eliminated yet another family industrialist who had hit the headlines with his aggressive growth during the last year. In a sense, inadequate evidence of staying power and performance resulted in a similar elimination of yet another star performer of 1988.

to his left are Kashyap, Oberoi, Nadar, Malvika Singh

Two financial institution heads who were assessed seemed to win kudos all round for their ability to work wonders within the cloisters of governmental bodies. While the panellists unanimously acknowledged that both individuals had risen far above the call of duty in their willingness to take risks and create new products, one was eliminated on the issue of business ethics, while the other, it was felt, still had his best years ahead of him. In the case of both financial institution heads, the panellists noted that too often the risk of taking an innovative step was regarded later as either a wrong move or an unethical one.

Another elimination

The panel also considered two professional managers. One suffered from the disadvantage of having seemed to influence government policy even though the benefits of that may not have accrued to him personally. The other manager, who had some good years in the past, was soon out of the running since he had decided to step down for considerations that seemed to raise eyebrows amongst most of his peers.

Eliminating the candidates involved in the country's commercial policy formulation (heads of non-corporate organisations) required substantial discussion. In the case of two of them — the third was considered a long-acknowledged success — the touchstone seemed to be the prospects of long-term impact. The panellists, who agreed that their powers had grown believed however that the gains they may have recorded could prove to be both ephemeral and regime-specific. And, it seemed, too little was known about the measurable impact of their policy interventions.

As the pick of this pack, Sumant Moolgaokar came through as the strongest contender. The panel was unanimous in extolling his qualities. Moolgaokar had, they said, built up Telco, the engineering giant that has successfully weathered many a storm, survived adverse government policy and once again stood poised for growth. They felt that despite his advanced years, the triumph of the man was clear in the smoothness of his succession plan. (Subsequently, on 9 December, Moolgaokar stepped down from the chairmanship of Telco. His place was taken by Ratan Tata, who he had earlier chosen as his successor.)

The panellists marvelled at this professional manager's ability to have been deeply involved in policy making. Whether it was industrial policy under TTK or whether it was at the birth of Maruti, Moolgaokar's inputs were recognised. And, the panellists said, here was a manager who had an international outlook and yet took great pride in Indian technology. In short, the panel in nominating Moolgaokar recognised that the Businessman of 1988 had to be rooted in India even while he remained international, professional even where his own exit from the organisation was concerned, a public policy interventionist with the courage to stand by his views even when they were ignored. In short — a giant.

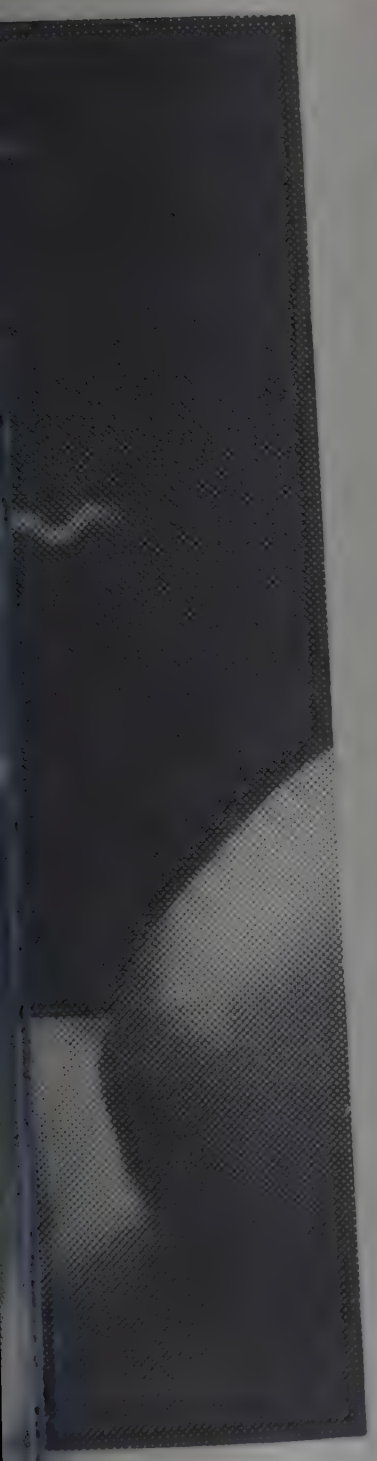
As the problem of choice vanished, the panellists felt relieved. Everyone felt that The Businessman of the Year 1988 would truly be a worthy role model for the future — for dark times as well as good times. ■

The die is cast for world-class forgings...

Premier Forgings tie
Meiji Drop Forge o
dies and forgings o

PERTAMA GROUP

p with
apan to manufacture
nternational quality.



Premier Forgings, a leading manufacturer of forgings for the automotive and other industries, has already earned a reputation.

For forgings of the highest quality : high internal strength and longer life, forgings preferred by OE manufacturers such as TELCO, Ashok Leyland, BHEL and other quality-conscious organisations.

With this collaboration, Premier Forgings will soon produce world-class dies in various designs for the manufacture of the most intricate and complicated forgings to close dimensional tolerances.

Meiji Drop Forge is a leading Japanese manufacturer catering to the elite of the Japanese industry : Kawasaki, Mitsubishi, Daihatsu Motor, Sumitomo and many other world-famous manufacturers.

With the installation of the new capacity, production at Premier Forgings is expected to touch 12,000 tonnes a year. Dies and forgings of truly international quality.

Another proof of Premier Forgings' motto : to manufacture products that make a difference.

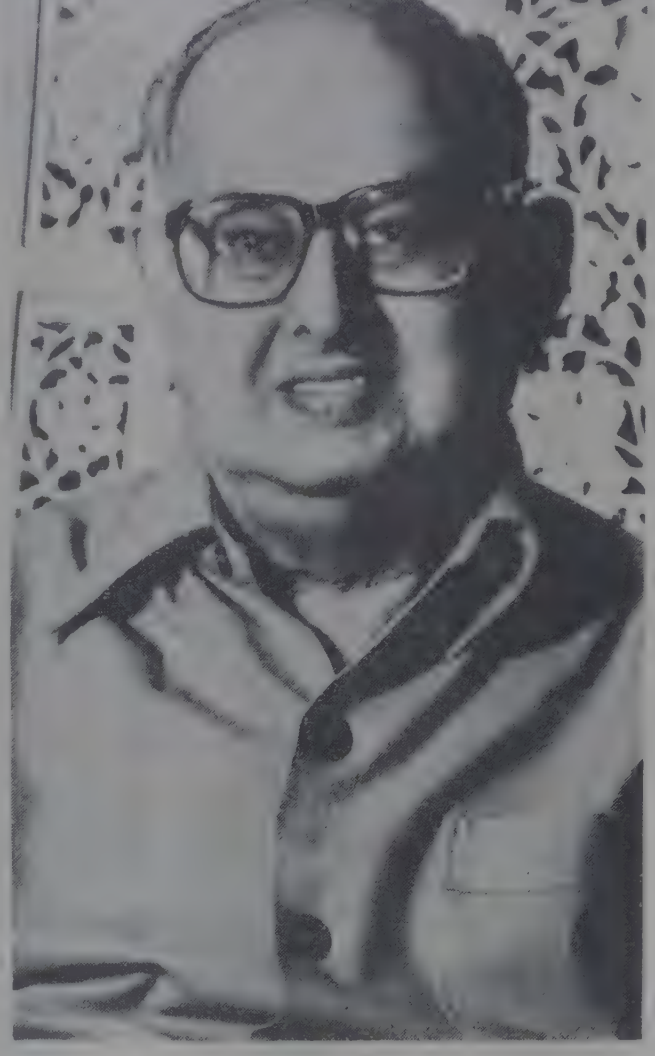
BUSINESSMAN OF THE YEAR 1988

Sumant Moolgaokar

When the seconds hand of the clock crossed the half way mark at 11.30 a.m. on 9 December, the directors of Telco realised that this was one of those rare board meetings their punctilious chairman was going to miss. All the more surprising because, despite keeping indifferent health, he had expressed a keen desire to be present. No one was quite prepared therefore when J.R.D. Tata began reading a letter of retirement from the absent chairman citing his poor health as the reason. The letter also recommended that the board accept Ratan Naval Tata as successor.

It was an emotionally charged moment. "We knew he was due to retire in March next year, nevertheless I felt a deep sense of sadness and personal loss," recalls V.M. Raval, resident director, Telco, Pune, echoing the common thread of sentiment running right down the line.

Thus an era spanning four decades ended at Telco. The era of Sumant Moolgaokar, universally acknowledged as the chief architect of this automotive and engineering giant, a technocrat *par excellence* and *Business India's* BUSINESS MAN OF THE YEAR 1988.



Eye to the future

A week later, on 16 December, in a letter addressed to *Business India*, the ailing Moolgaokar, who is under constant medical supervision wrote: "It is an honour for me to have been chosen as Businessman of the Year, 1988, by the panel of eminent businessmen which was constituted by you. I would like to believe that this award is occasioned not just by what the panel saw in me as a person but because they recognised that the goals I aimed for were worthwhile in themselves. My objective has been to prove, through results, that when we in India work together with commitment and an eye to the future, the organisations and products we build are second to none in quality and performance." The letter was signed simply 'S. Moolgaokar'

Though Moolgaokar has relinquished the chairman's post, he will continue to be a member of the board and act as technical advisor to Telco. Those who've worked closely with Moolgaokar over the years know that Moolgaokar and Telco can never be parted. Every brick and mortar at Telco's Jamshedpur and Pune plants, bear his unmistakable stamp. It is the imprint of perfection that extends beyond just the elegance and symmetry of plant layout. It is the creation and honing of a high pedigree of technical and engineering design skills.

If associates are asked to single out Moolgaokar's most outstanding quality, they are unanimous in their admiration for his relentless pursuit of excellence. Comments J.R.D. Tata, "He has this tremendous dedication to excellence and quality. He will not tolerate anything that is second best." Keshub Mahindra who has known Moolgaokar for over 30 years subscribes to the same view. "I admire him greatly not just for his obvious talents but also for the fact that he has always been led by a motivation to excel. He is that rare combination of a technical man who fully understands the commercial aspect. And he has a vision of the future

R.J. Shahaney, managing director, Ashok Leyland, feels that the award is well deserved "not only for what he h contributed to Telco but to the India industry. He is very meticulous and a tr gentleman at all times."

Immense contribution

Moolgaokar has adhered strictly to th adage that actions speak louder tha words. His actions and unparalleled v sion are reflected not just in Telco's ba ance sheet but also in the entire Indi automobile and engineering industrie which he has shaped. His contribution the national ideal of indigenisation a self reliance has been immense.

Unlike some of his counterparts with the Tata group, Moolgaokar is obsessiv about keeping a low profile and has a ways shunned publicity of any kind. fact, JRD recalls that he had literally thrust the chairmanship of Telco on to a unwilling Moolgaokar in 1970. The chi reason for his reluctance was that a chairman he would have to maintain public profile, interact with shareholde address public meetings. Nevertheless h commands the highest of regard in Bo bay House. A man of very few words b strong views, when it came to the crunc the Moolgaokar way has invariab prevailed.

Unbending in his principles, impecc ble in his character and dealings, the Ta empire has provided Moolgaokar the pe fect niche from where he could pursue h ideals.

Born in Bombay in 1906, Moolgaok alongwith his younger sister was broug up by their grandmother. He schooled St. Xaviers' and went on to study scien at St. Xaviers' college. His wife Leela calls that cars and motor-cycles were h passion and he would be seen more oft racing down the roads with his frien than in the confines of a college cla room. These extra-curricular interes did not however prevent him from secu ing a science degree. Armed with this a a friendly loan from a kindly uncle (whi he insisted on paying back on his retu Moolgaokar proceeded in 1925 to the C & Guilds College, London to secure degree in mechanical and electrical en neering. gathering important, practic shop floor experience.

Back in India, Moolgaokar discover

hat with the Depression jobs were not asy to come by even for a qualified engineer. He knocked on several doors, the Port Trust, the Railways, Tata Power. It vas Kymore Cement Works in the wilds near Katni, in the Central Provinces (now Madhya Pradesh) that opened its doors o Moolgaokar. It was an unusual first job — he was promised no salary. The Indian cement industry was in a bad state at the time since imports were freely allowed. Unable to compete, most of the existing half a dozen cement factories were on the verge of liquidation.

Uncompromising standards

After a six-month "honorary spell" Moolgaokar was confirmed as assistant electrical engineer at the handsome salary of Rs.250 a month. A short while later in 1932, his marriage with 15-year-old Leela was arranged. In 1936, the ACC was formed (by a merger of numerous cement companies) and that was when "my stars started looking up", Moolgaokar remembers. Before long he was placed in charge of constructing new factories (notably the ones at Chaibasa in Bihar and Shahabad in the erstwhile Hyderabad state), which according to him "gives you far more experience than merely running a factory."

Moolgaokar's first encounter with J.R.D. Tata was when both travelled together on an industrial mission to Europe and the USA in 1943. "How long will you go on making glue to stick bricks with?" JRD asked provocatively. Moolgaokar continued to make 'brick paste' until 1947, when he joined Telco at JRD's behest and later in 1949 became director-in-charge.

The Telco saga had begun a year earlier when the Tatas acquired the E.R. Railway Workshop with the intention of building boilers and steam locomotives for the railways. In all, Telco made 1,000 locomotives but the ruinous government contract ensured that the company made no profit in the first ten years. By then Moolgaokar, on behalf of Telco, was desperately scouting for a collaboration on a profitable new venture.

Shortly after World War II, when the German industry lay in tatters, hungry-for-business, Daimler-Benz looked eastward. It approached Telco with a proposal to manufacture diesel road transport vehicles. Moolgaokar remembers that T.T. Krishnamachari, then industries minister, flagged off the project in 1954 on the undertaking that within four years Telco would indigenise considerably — a commitment that was met. Thereafter the company never looked back.

At Bombay House with Naval Tata and Palkhivala: commanding the highest regard

Until 1969, when the collaboration agreement ended, Jamshedpur became virtually a German town. Daimler-Benz never stinted on providing their best technical skills, and it is believed that Moolgaokar picked up his uncompromising standards of quality and meticulous engineering from the Benz experience.

Before the collaboration ended and indeed in anticipation of the day, Moolgaokar prepared Telco to switch smoothly from being a mere observer of engineering detail to going it completely alone. Besides this, there was the government compulsion to indigenize.

The master plan to duplicate Jamshedpur began in 1966 when 800 acres of barren, rocky land was purchased at Pune. Today it stands as testimony to his long term vision and ability to look years ahead into the future. Variously described as an "industrial jewel" and a "grand masterpiece", it epitomises Moolgaokar's engineering tenets: vertical integration, self reliance, constant technical innovation, research and development.

After touring the Pune plant, P. Gyllenhammar, chairman of Swedish motor giant Volvo remarked, "I am stunned that such a set up could be constructed by Indians. It is of a quality that we rarely see even in our part of the world."

The various assembly lines at the Pune plant are supported all under one roof by divisions that design and manufacture state-of-the-art machine tools and press tools. The heart of the plant is what Moolgaokar considers as "the most sacred place" — the Engineering Research Centre (ERC) "Train your workshops before you build your machines", Moolgaokar has always insisted. So, interestingly, the first building to be constructed was the training centre which today runs not only apprentice training courses but refresher and retraining courses too. Every year, a quarter of the workforce acquires a higher skill — all promotions and increments being skill-related.

Ability to motivate

This is by far Moolgaokar's most laudable achievement, which surpasses the construction of physical assets: creating at Pune the perfect environment for engineering skills to do their best. Nani Pal-

M. W. BUTTERWICK

Taxation and excise policies on packet teas need reconsideration for consumer benefits and higher Foreign Exchange earnings.

Speech by Mr. M. W. Butterwick, Chairman, at the 12th Annual General Meeting of the Company held on 9th November, 1988 at Calcutta.

Ladies & Gentlemen,

I welcome you all to the 12th Annual General Meeting of the members of Goodricke Group Limited. I am told that today Diwali is going to be celebrated almost all over the country and although it may have caused some inconvenience to some of you, I think there could be no more auspicious day to hold the A.G.M. than today.

Before proceeding any further, I would like to tender my apologies for having missed the last A.G.M. due to extremely pressing commitments elsewhere.

The Annual Report & Accounts for the year 1987/88 have been circulated to you and I hope that you have studied those in your usual careful manner. The year under review was a comparatively difficult period in relation to the previous years in the sense that a fairly serious drought was experienced during January to June 1988 in the North Bengal region where most of your company's gardens are situated. A satisfactory crop position at the end of December 1987 was converted into a deficit by June 1988. Inspite of this substantial set back, the rigid standards of quality and equally stringent control on expenditure enabled the Management to keep the working profits at a reasonable level. As a result your Directors have decided to maintain the total dividend of 40% as was done last year.

I think you would all be anxious to know the details of the situation in Darjeeling, with special reference to the effect of the political agitation, on your Company's gardens. Darjeeling district has been through an extremely trying period and it required the highest degree of the managerial skills on the part of the garden personnel to tide over this and to keep up the garden operations. I am pleased to advise that except for some loss of crop in one of the gardens, the properties are, by and large in good shape.

It must be said to the credit of the workers that during all the upheavals, they took special care to protect the garden property and to ensure that neither the worker's quarters nor any other building or structure sustained any damage. The garden Managers, their Assistants, and their families, also deserve a very special vote of thanks for the exemplary courage that they showed during the entire period of uncertainty and turbulance, when not only did they stick to their posts, but also kept a semblance of discipline on the garden.

Now that the peace accord has been signed and most of the unauthorised arms and ammunitions have been surrendered, the situation is fast returning to normal. Garden operations are once again progressing smoothly, and both the production and quality of produce are expected to be fully upto the Goodricke standards, for the current year. I am confident that we can now look forward with optimism, to an era of stability, growth and prosperity in the district of Darjeeling.

Goodricke Tea Packets in good demand

As I had mentioned in my last report, our Tea packets and soft packs have become popular in various parts of the country and the demand is increasing. Special attention is, therefore, being given to strengthen the Marketing department in order to increase the turnover of packet teas. The sale of your teas in packet form have gone up from around 15 lac kgs. in the previous year to over 26 lac kgs. in the year under review accounting for a turnover of Rs.7.12 crores. We have set ambitious targets for the current year and I hope to report to you next year of the vastly improved performance on this front.

It is however, a pity that the authorities do not appreciate the effort of those producers who make the garden-fresh tea available to the public at reasonable prices cutting out the middle-men. Inspite of various representations, the two-tier excise duty levied by Central authorities remains unchanged—the first on production of tea and the second on packing the tea in packets instead of chests, although it is still in the same factory. A strong domestic market for packet teas could become a stepping stone to exports in value-added form, resulting in a great increase in the Foreign Exchange earnings.

While on the subject of exports, I must express my deep sense of disappointment over the fact that the State Government has still not relaxed its rules concerning Cess on export teas. Our suggestions, which would not affect the State's exchequer, but would encourage direct exports, have not found favour with the State Governement.

There is a piece of good news which I would like to give you in connection with the tax structure for the tea gardens situated in West Bengal. You would recall that West Bengal Government had passed legislation bringing 100% income of a West Bengal garden under Agricultural Income tax which is levied @ 69%. Your company along with other tea companies had appealed in the Supreme Court against this legislation. The Supreme Court has decided the matter in favour of the Industry and have reaffirmed that only 60% of the income will be subjected to the State agricultural income tax as was being done in the past. The balance 40% is under the Central Income tax.

Although this is a healthy turn of events, the problems of the tea industry vis-a-vis the tax structure remain largely unchanged. The States levy this tax at a very high rate-69% in West Bengal and 75% in Assam, and therefore, even when the Central income tax and State agricultural income tax are levied on 40% and 60% of the total income, the final tax figure for a tea company continues to be higher by around 8% than the tax paid by any other industry or commercial enterprise where the entire income is subjected to Central income tax under which the ceiling is about 50%. I would once again appeal to the authorities to ensure that the Centre and the State pursue an integrated policy towards the tax structure on the tea industry with a clear objective of allowing the industry to retain sufficient funds for plough back into the plantations.

Before talking of the future prospects, I should inform you that with the new amendments in the Income Tax Act, your Board have decided to change the financial year to coincide with the income tax year which ends on 31st March every year. This has been done in order to avoid the necessity of producing accounts for purpose of taxation as well as for the accounting year. Therefore, my remarks about the future prospects should be considered along with the fact that they relate to a 9 month period i.e. from 1st July '88 to 31st March '89. The actual figures for a shorter period would be lower but barring very unusual circumstances, I feel that the working for the 9 month period would be more or less in line with the current year, proportionately. The Group crop is marginally ahead of last year for the same period and although the price realisation is a shade lower, we are confident that this will not have an adverse effect on the overall performance.

I would like to mention that one of our very important Directors Mr. P.F. Pepperell retired from active service during the current year, although he would continue to be on the Board and I would like to place on record my appreciation (and I am certain you would all like to join me in this) of the sincerity and assiduity with which Mr. Pepperell discharged his duties. He was involved with the Goodricke Group from its very inception and in fact played a major role at the time of the amalgamation of the eight sterling companies which constituted the present Goodricke Group.

All of you would probably like to join me in wishing Mr. & Mrs. Pepperell a very happy and contented retired life.

While we will miss the services of Mr. Pepperell, I am very happy to introduce Mr. P.A. Leggatt, M.B.E. who has joined us on the Board with effect from 1.4.88. He has also taken over as Chairman of the U.K. company, Lawrie Plantation Services, who act as the U.K. marketing agents for Goodricke Group. Mr. Leggatt is a highly experienced India hand and I am confident that he will do us proud as your Director.

Last year I had made a brief reference to the possibility of our taking up a Project connected with the production of Instant tea. I am pleased to advise that a pilot plant has been installed at one of the tea estates and sample production has already started. Certain amount of research and development work has to be carried on till we can achieve a product which will not only provide the most convenient way of preparing a cup of tea but will also have the quality for which your Group is already known in India and abroad. Test marketing of the product may start sometime late next year and even if the progress may appear to be a bit slow to some of our keen shareholders, I would like to emphasize that the final Instant tea that we produce would have to be highly superior to anything currently available in the market, if it is to re-assert Goodricke's commitment to quality.

Finally, I would like to thank you all for attending this A.G.M. and giving me the benefit of your thoughts. I wish you all a very happy Diwali and a very prosperous new season.

Note : This does not purport to be the proceedings of the Annual General Meeting

khivala, who was associated with Telco as director since 1970 until 1987 when he resigned as executive deputy chairman, observes that Moolgaokar has the capacity to motivate the entire staff and workers of a large company. "He can galvanise them into action and make the job exciting for each one of them. This is the secret of his success at Telco. With him at the head, every worker is made to feel that he is not merely a cog in a big machine, he is not attending to a forge or a furnace but is helping to build and advance a great industrial enterprise, to erect a national monument."

Moolgaokar has maintained that inculcating in workers a sense of pride in their work and their surroundings is not just a key to greater productivity but a potent means of building industrial peace. Yet his approach to industrial relations was quite unlike that of Rusi Modi, chairman of Tisco, whose phenomenally close rapport with workers is legendary.

"It was anathema to Moolgaokar to see production facilities lying idle. At Telco, the most important thing was to get that truck rolling out and to some extent it was just assumed that labour would fall into place", points out Arun Aguiar, a former Telco executive.

When awarded the Sir Jehangir Ghandy Medal for industrial peace in 1984, by the XLRI, Jamshedpur, Moolgaokar in his acceptance speech asked candidly: "What has been my contribution to industrial peace? Have I really done anything to deserve this honour? I am not known in the personnel field. I have not spent my life expounding new theories or exhorting managers and workers to get together — I have only gone on working."

Totally dedicated

At the managerial and staff levels Moolgaokar has been able to create a well-knit team, who express a total devotion and dedication to the ideals he strives for. His attention to the minutest detail and his obsession with quality are most constantly referred to.

Arun Maira, executive director, relates an incident that occurred years ago. On one of his weekly visits to the Pune fa tory, Moolgaokar was quick to notice th the hydraulic pipes were not placed right angles. Cause enough for the cha man to issue a directive that hencefor every executive should carry a plumb b in his pocket!

The hallmark of his management sty some may even term it an idiosyncra was the manner in which he picked h senior cadre of managers. Neither hie archical structures nor age was the cri ria. A great judge of character, wh Moolgaokar's critical eye fell on someo whom he perceived showed a glimmer promise, it didn't matter that the pers was a junior officer or from the rank a file. Organisational charts were redra to accomodate the man, whose care was then put on an instant trajectory.

The chosen one would find a great d of responsibility thrust on him ve quickly. The unspoken dictum being: P form! Those who floundered were c aside. For every survivor, there we scores of castaways. Thus there was sco to rise in Telco but strictly on the crite of performance.

To an outsider it would appear t Moolgaokar was a ruthless disciplinari Asit Chandmal a former director in Tel says, "It is a misconception that he w ruthless. He once told me that takin decision was the easiest thing if one f

A keen eye for photography

The philosophy

Despite his illness, Moolgaokar under the watchful eye of a full-time nurse spoke to *Business India* on his beliefs, and the philosophy behind Telco.

On retirement: I don't think I've stepped down as such, only my health is the problem that's all; I'm still very much a part of it, you could say I am semi-retired. For new product development I have some inherent strengths.

On research and development: We spend a lot of money about, Rs.10 to 12 crores on R&D; it is our strong point. In a manufacturing industry, research and development is a series of mistakes by which you benefit. It gives our people excitment and real knowledge.

On his contribution: My singular contribution has been to build a team, to give the boys fun and excitement, to see that the train doesn't derail. Today we have a very strong team who has made their mistakes, profited, learnt and who can keep up with modern trends. In the auto industry the technical progress is enormous; no other manufacturing industry has that.

On his leadership function: I don't know whether I'm a leader. I like to consider myself as part of the team. But I try to help them. I can't tolerate anything that is not just right. It's the little fits and finishes that all total up to excellence. So that has now become a part of life with my boys.

On upgradation: People forget that in a manufacturing industry every day the machine gets older. It's inevitable no matter how well you look after it. As human beings age, so do machines. Accuracy falls, productivity falls. At Telco, we try to make our factory grow younger every year. Look at the textile industry. Why is it old and finished? Unless they make high-grade synthetic products they can't make a living. It's because they have not watched this aspect that technologically you must grow younger not older.

They tell me that the average life of a machine is 10 years. I don't accept that; not at all. According to me, the average age is what is technologically uptodate.

On Telco: We have set standards which the others will find difficult to meet overnight since we have done it progressively over the years. We regard our whole operation as one big training facility. You've got to look upon it that way.

owed the simple guiding principle: Do what is right for the organisation". Chandmal himself was handpicked by Moolgaokar in 1973 and placed in the unlikely slot of finance director — he had no background in accountancy and was an engineer by qualification.

Such measures contributed to internal dynamism, made the organisation ebullient and kept executives on the hop. All lines of communication were kept open and there was no question of toadying to the boss. "He would go out to seek information and get a hands-on perception. He did not believe in filters," explains Maira.

Other contributions

Moolgaokar took up responsibilities in other Tata companies. He was vice-chairman of Tisco and chairman of Tata Exports; the latter is believed to have been set up at his initiative. According to S.A. Sabavala, vice chairman Tisco, one of

A drive for technical excellence

Out of the albums: with Leela at the Bhoomi Puja *of the Pune plant*

Moolgaokar's greatest contributions to Tisco was mooting the idea of moving away from bulk steel to special steels and initiating the establishment of the largest maintenance shop in India. Tisco always had trouble for spares, a problem to which he offered the typical Moolgaokar solution: let's make it ourselves. "Consequently," says Sabavala, "today we have the capability of almost being able to build our own steel plant".

In 1981, when the government decided to reconstitute Maruti Udyog Ltd Moolgaokar was the natural choice for chairman. Unfortunately, his tenure lasted just six months. He so strongly believed that Maruti ought to make trucks that he preferred to resign when the government decided to go ahead with cars. He has contributed in other capacities: as director of Heavy Engineering Corporation, Ranchi, as member of the National Planning Council of the Planning Commission and as chairman of various government constituted committees.

Professional accolades include the Sir Walter Puckey Prize in 1967 awarded by the Institute of Production Engineers, and an honorary Fellowship of the Imperial College of Science and Technology, London in 1984

Money making has never enamoured Moolgaokar and his motives were clearly driven by considerations other than profit. According to Maira his belief was: "if you do the right things, the profits will naturally follow." On several occasions

With JRD on a factory visit: building an industry

his schemes were at first little understood.

For twelve years between 1966 and 1979 whilst Telco, Pune was being built, not a single truck was produced. Those were the painful years of gestation, setting up the infrastructure. If there were members of the Telco board who disagreed with his approach then they were silent in their disagreement as Moolgaokar had JRD's tacit approval. "I invariably supported him because I knew that he was building not just a factory but an industry" confirms JRD.

An "extravagance"

A typical example of what was then termed as Moolgaokar's "extravagance" was his decision to plant trees on the rocky land where the Pune plant was to be constructed. The idea was to convert this barren land into green land, for which chief horticulturist M.D. Sharma was given a free hand

Just off the busy highway is Telco's 150 acre bird sanctuary. The steady drone of trucks in the background does not seem to disturb in the slightest the 160-odd species of migratory birds that swim, feed and breed in peace on the two man-made lakes — the Sumant Sagar and Lake Sharma. More than 2,00,000 trees have been planted so far; in addition as part of a social forestry programme there are 60,000 trees in the 'tree bank', from which to date 50,000 fruit trees have been donated to neighbouring villages.

Moolgaokar's concern for social welfare is reflected in Telco's rural development activity and the voluntary institutions set up for its workers, their wives and also their unemployed male dependants. Taken together these welfare schemes provide employment to over 2,000 people. Moolgaokar's wife Leela is known to take special interest in them.

Neither age nor an eye surgery has dimmed Moolgaokar's private passion for photography. Weekends would usually find him at his old Khandala bungalow where he had his own dark room. An excellent photographer, his work could quite easily be reproduced in a coffee table volume. A keen *shikari* in his younger days, Moolgaokar is today an even keener conservationist. But he's never strayed far from engineering.

Advocate Charles J.E. Grundy, Moo gaokar's friend of many years, remembe that even on hunting expeditions in Ba tar, Madhya Pradesh, if Moolgaokar ha pened to spot a Tata truck he woul button-hole the truck driver for user feed back first hand! Comments another ol friend, Bobby Kooka: "If Sumant ev wrote a book it would be on the love life a turbo engine."

At the Telco officers' residential con plex at Pimpri, a modest bungalow under construction. This is where Moo gaokar plans to spend his days of sem retirement — close to his creation, ju across the lake named after him. It perhaps these words of Justice Holm that best sum up Moolgaokar and h vision:

"To see as far as one may;

To feel the forces which lie behind ery detail;

To hammer out as solid and compact piece of work as we can;

And to leave it unadvertised."

GLINDIA

Back in the fast lane

Glindia Ltd seems to have put the years of jerky growth firmly behind it. The largest pharmaceutical company in the country is now back on the high profits and fast growth track of the late seventies

Late next year, Glindia, the country's largest pharmaceutical company will, play host to a board meeting of its international parent, Glaxo Holdings. A rare honour, no doubt. The UK-based Glaxo is currently the fastest growing of the world's pharmaceutical giants. In 1985 it was the 16th largest worldwide, and this year with sales of over Rs.5,500 crores it has climbed to the second position. Helped largely by the success of its anti-ulcerant Zantac, which has become the largest selling therapeutic drug in history, accounting for nearly half of the company's turnover in 1987-88, Glaxo should, by the time its chairman Sir Paul Girolami leads his board on their Indian odyssey next year, have replaced Merck & Company from the top of the table as the world's largest pharmaceutical company.

Glaxo has only 40 per cent holding in Glindia and has subsidiaries in 44 countries. And it will only be the third time that its board would have met outside its UK headquarters. Says Glindia deputy managing director, Humayun Dhanrajgir, "This is tremendous recognition from a foreign company that has only a 40 per cent holding in us. It demonstrates their faith in us. It is a great feeling that we can continue to rely on their technology and managerial brilliance to carry the group through the next decade."

But unfortunately, as is well known, Glindia is probably one of Glaxo's only international associates that has not been able to harvest much benefit out of Zantac's success. The drug does have a 22 per cent share of India's Rs 30-crore anti-ulcerant market, but it constitutes less than 3 per cent of Glindia's sales this year. And strict government-imposed price controls have made sure that its contribution to the company's profits has been only marginal. Glindia's largest selling pharmaceutical product right now is Betnovate skin ointment, which forms about 8 per cent of the company's total sales this year.

But Dhanrajgir nevertheless should be a happy man. Zantac or no Zantac, Glindia's performance this year has been exemplary. It seems to have finally put the years of jerky growth behind it. It is now back on the high profits and fast growth track of the late seventies.

Thanks to the new Drug Price Control Order (DPCO) announced in August 1987 and improvement in the operational efficiency, performance for the year ended June 1988 marked an all-round improvement. Sales went up by 18 per cent to Rs.230.13 crores, gross profit by a thumping 49 per cent and net profit by 38 p cent.

One of the oldest pharmaceutical com panies in the country (started in 1924 a Glaxo) it was in more or less good healt till 1980 when it felt the impact of th Drug Price Control order 1979.

The company did manage better tha others, mainly because almost 97 pe cent of its formulations fell under th DPCO's category III, which allowed a 1 per cent mark up. In 1981 the mark up o a number of multi-vitamin formulatio was rolled back to 60 per cent from 1 per cent, but points out S.M. Kanwa vice-president (pharmaceutical marke

g), "We were badly hurt but we did not to court like others who got a stay on e directive." This kept the company in e good books of the government. hough the gross profit dropped a few oints during the period from 1979 to 987, Glindia did better than Pfizer, Hoehst and Burroughs Wellcome.

better order

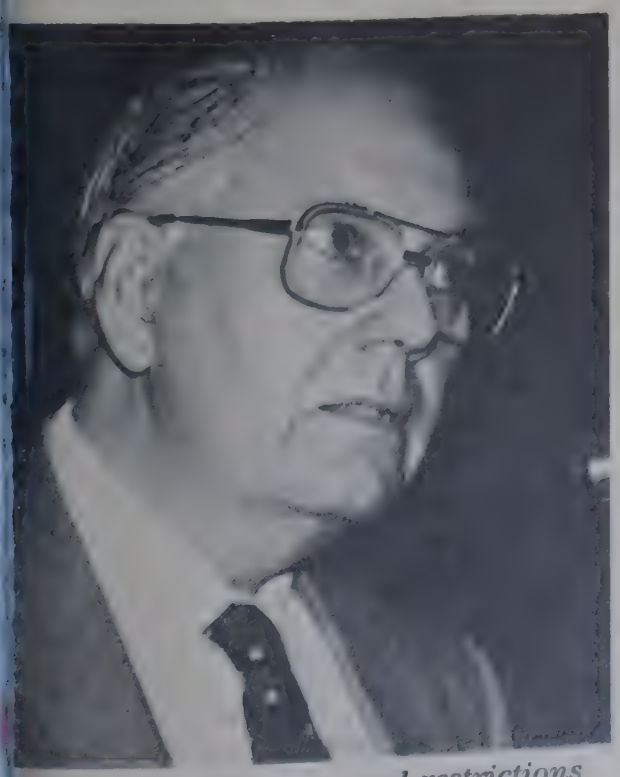
Now the days of uncertainty and restrictons on growth seem to be over. The new PCO is a quantitative improvement over he older one and in the long run we hope perform much better," said J.S. Khamata, vice-chairman and managing director, at the company's AGM held recently.

The DPCO of 1987 has reduced the umber of drugs falling under price conrol from 370 to 166. For Glindia this has eant that formulations under price conol have come down to 84 per cent from 8 per cent — so 16 per cent of its pharaceuticals sales are free from price ontrol.

All new drugs will also be outside price ontrol under the new DPCO. And Glindia lans to make five new drugs. eftazidime and cefuroxime sodium — wo new antibiotics — are the first in the ist followed by at least three more in the ext one and half years.

Glindia is investing Rs.30 crores in prouction facilities for five bulk drugs at its nkleshwar plant. Formulations of these rugs have already been introduced in he market by the company in the last two ears.

For example, Glindia introduced Zanac (as Zinetac) in India in early 1986.

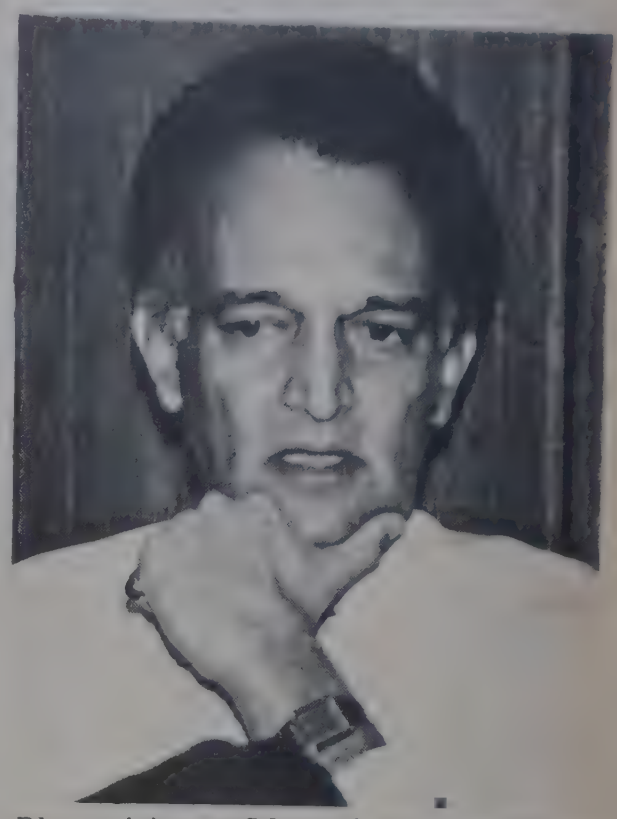


hambata: uncertainty and restrictions o more

But because it didn't have the necessary licences to manufacture, it had to import the basic raw material ranitidine and get the formulation itself made by a licence holder on a contract basis. Finally this year, after getting all the clearances, the company started manufacture of ranitidine at its brand new Rs.7-crore worth of bulk drug facility at Ankleshwar. And next year it will also start making Zantac at a Rs.1 crore plant being set up in Nasik. Says Dhanrajgir, "All these projects will considerably enhance profitability of these formulations sold by us."

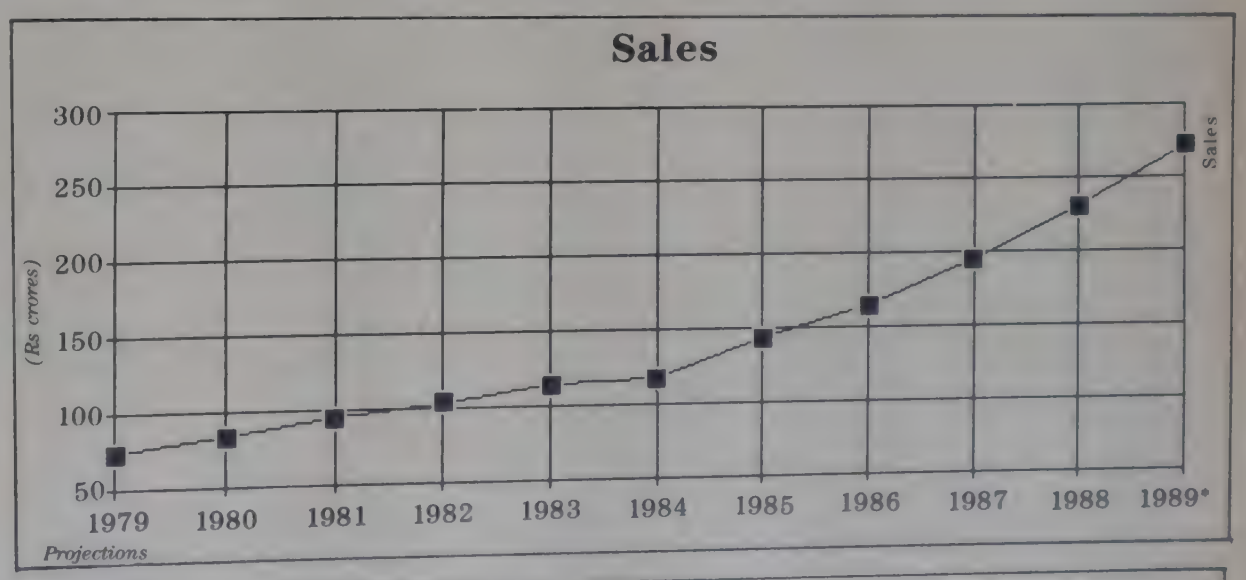
Glindia is also going into food products in a big way. It already has a family products division which contributed Rs.70 crores, that is a third of the company's total sales last year. Much of this came from its traditionally popular products like Complan, Glucon-D and Farex. Now the company plans to join hands with three other new companies and an existing one to produce a variety of food products.

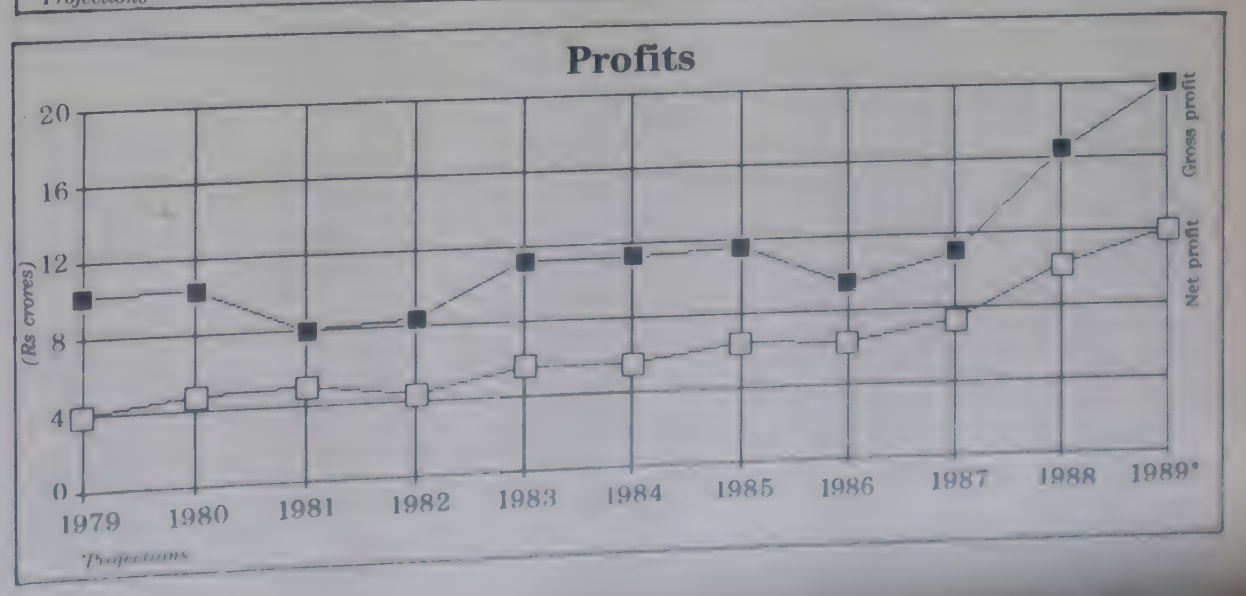
Dhanrajgir says that the company took this route instead of setting up the new projects under the existing food products division or as subsidiaries for two important reasons. "Most important of all, we didn't want the new company to be shackled by MRTP regulations. The moment it becomes a subsidiary, the fact that we are governed by the MRTP Act would affect the new company's growth. We want them to grow as independent entities. Of course we will be providing them with our management expertise."

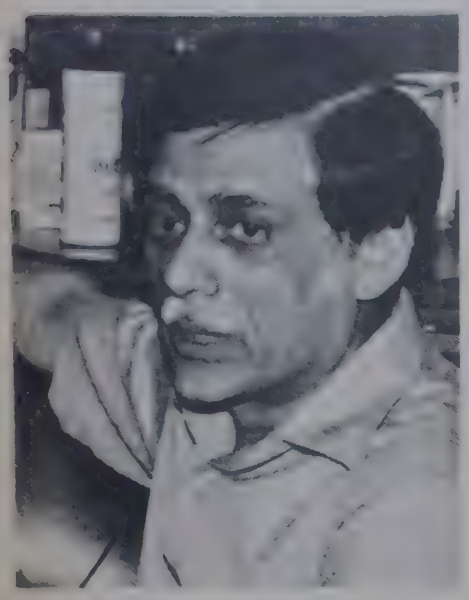


Dhanrajgir: confident of staying at the top

The second reason he says, is the need to spread the risk. Since these are joint sector projects involving totally new companies, their performance will not be re-

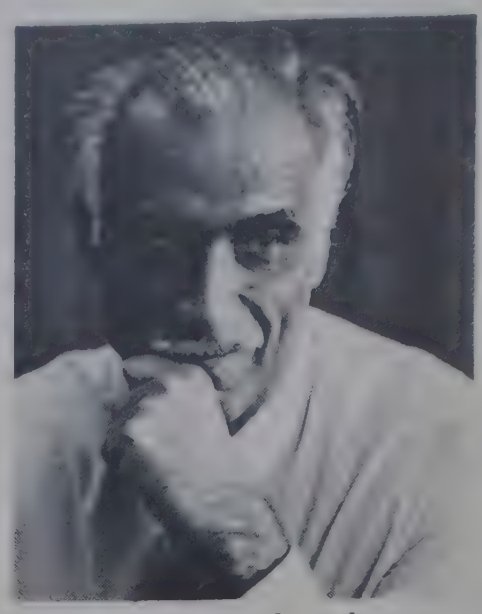




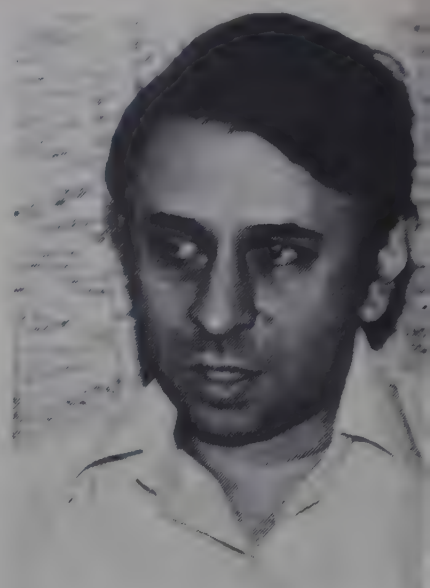


Vaswani heads the highly profitable food products

Bharucha: no major labour problems



Kanwar: "badly hurt but didn't go to court"



Khusrokhan: 45 per cent of profits from food products

flected in Glindia's balance sheet.

Of these projects, Hindustan Foods, a Rs.5-crore project in which Glindia has a 20 per cent stake, has been set up at Ponda, Goa, with the Marmagoa Shipping Company. The company will make breakfast cereals and high nutrition foods for growing children, which will be marketed through Glindia's distribution network.

Another project, Vegepro Foods and Feed Ltd (Glindia's stake: 24 per cent), is coming up at Orai, UP, with PICUP as partner. With a capital outlay of Rs.24.50 crores, the project will make soyabean oil, soya meal, soya flour and texturised soya foods. This project is expected to be commissioned in January 1989 and touch a turnover of Rs.60 crores at full capacity

The third project is K.G. Gluco Biols Ltd, a joint venture with Karnataka State Industrial Investment Development Corporation, in which Glindia has a 24 per cent stake. This project, set up at a capital cost of Rs.23 crores at Gokak, Karnataka, is expected to begin commercial production by May 1989. The company's main products will be dextrose monohydrate (DMH), liquid glucose and maltodextrine. DMH is mainly used for the manufacture of sorbitol which in turn is used in the manufacture of vitamin C, pharmaceutical syrups and toothpaste. Liquid glucose is also used for pharmaceutical preparations, and maltodextrin for calorific drinks and milk-based health beverages.

Rehabilitation programme

In 1987, Glindia took up 24 per cent (Rs.95 lakhs) the equity capital of a sick dairy company in Karnataka. Promoted by the Dempo group of Goa in 1979, Dempo Dairy Industries Ltd had been losing money right since its inception. "We were requested to join the rehabilitation programme undertaken by the financial institution, who have pumped Rs.1.60 crores into the company," explains A.T. Vaswani, senior vice president (family products), who took charge of the division about a year ago.

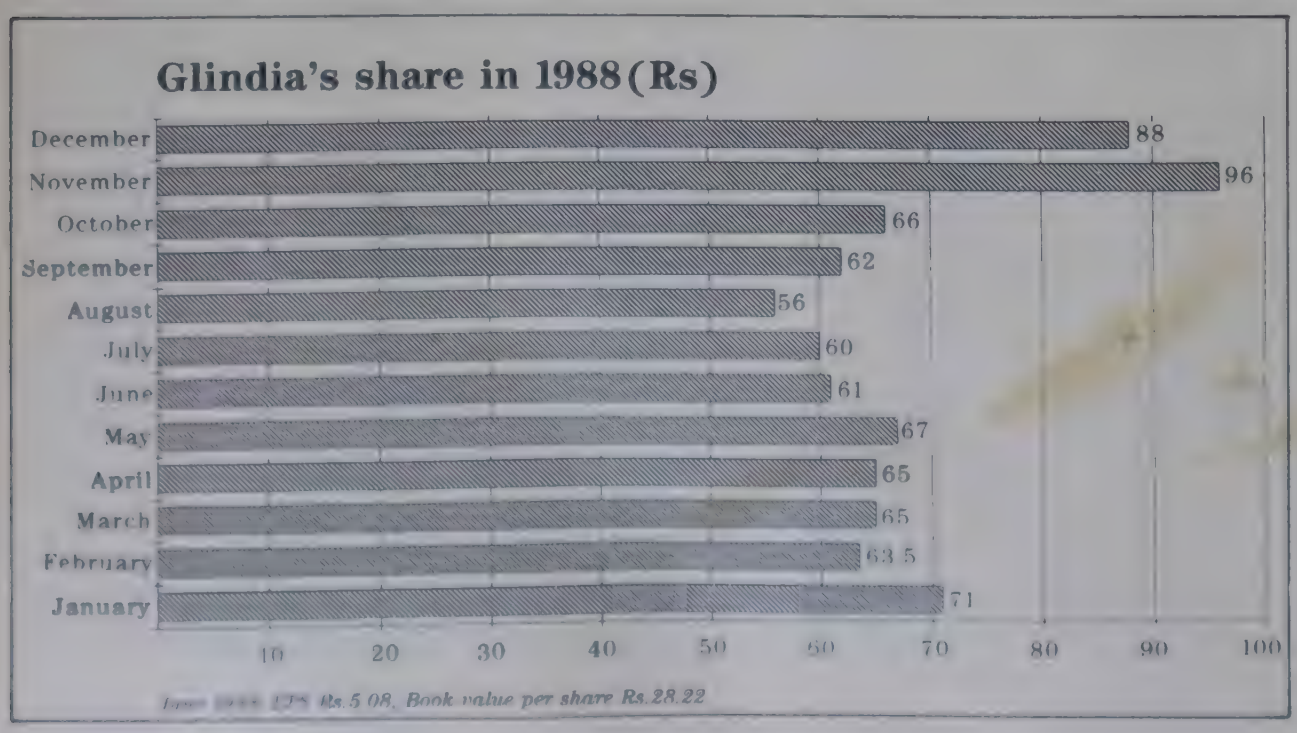
All together, Glindia is investing Rs.4.26 crores by way of equity and advanced Rs.37.50 lakhs as loans to th four projects — not big sums for a la company with reserves and surplus Rs.36 crores in hand. But the sha holders of the company, at its rec AGM, wondered whether it was a w business step, and with reason. In f products, especially in soya-based fo a large number of companies came u the last two or three years and almos of them have failed miserably.

But neither Dhanrajgir nor Vasw anticipate any problem with their s project. "The technology we are using make our product free from the be odour and this is the key to the succes soya," says Dhanrajgir. He does ac though that a number of new compa flopped because of the poor suppl soyabean in the country, and altho supply is easy now in future it may no so.

Glindia can pick up some of the duction of the other large project, Gluco, for its own requirement. For rest the market will be extremely com itive as there are already quite a few u in the industry and at least four new soon joining the fray. But Vaswani that the company has the distinct ad tage of proximity to the main raw m rial, maize, and is also close to the ma for its finished products in western In

Of the two smaller companies, acc ing to Vaswani, Dempo Dairy has alr made some cash profit for the year e June 1988, and Hindustan Foods soon launch its products nationwid

Apart from these joint ventures, G dia also has plans to introduce some products in its food products divi Ever since Glaxo UK sold off its products division in March 1986, Gl has not been able to introduce any



At more than 3 MIPS Aurelec's 20 MHz 2AT6-XL surpasses all AT's

Aurelec Data Processing Systems announces the fastest ever **AT**, the **2AT6-XL**, which at 20 MHz outperforms even an **80386** based system running at 16 MHz, or offers performance equivalent to a **3AT6** running at 20 MHz! It is impossible to ignore such outstanding performance, even in a confusing computer market where vendors emphasise price over quality, performance and technical support. The **2AT6-XL** is so powerful that Mainframe terminology is required to describe its power: the **2AT6-XL** offers **3.24 MIPS** (Million Instructions per Second) at an unbeatable price. No wonder **Aurelec** has sold, simply by word of mouth, more than 75 **2AT6-XL** systems even before its formal announcement. The perceptive buyers know that the time saved more than pays for this speedier computer.

The **2AT6-XL** offers you much more computer for just a little more cost. You get **Hercules** and **CGA Graphics, 1.2 MB 5-¼" or 1.44 MB 3.5" Drives, Enhanced 101-key keyboard, LIM-EMS 4.0 and OS/2 support, 3.24 MIPS performance**, and the best price/performance ratio ever offered on a microcomputer. Further, the **2AT6-XL** accompanies you in your growth path with its guaranteed **SUPERLAN** connectivity. **SUPERLAN** is the time proven, high performance multi-user Local Area Network on which hundreds of **Aurelec** computers are running all over the country, at a wide variety of prestigious locations.

The **2AT6-XL** is the ultimate result of the latest in computer technology.

Technical details are very important, but there is also an equally important question of back-up service. When you buy **Aurelec** products, you also buy into the finest computer back-up service network in South India, where **Aurelec** has more branch offices/service centres than any other computer manufacturer.

Aurelec **2AT6-XL: Naturally outstanding**

food product. It now plans to tie up with a foreign company to revitalise this division.

Hedging its bets

The present activity is a result of the efforts made by the company some years ago while it was reeling under the effect of price controls. "We were suffocating," says Dhanrajgir

Many in the industry, however, accuse Glindia of exaggerating its plight and of trying very hard to stay in the government's good books. For instance, several companies went to court over the change in mark up on vitamin formulations. Glindia didn't, because, firstly vitamins constitute only 5.6 per cent of its pharma sales; and two, it did not want to antagonise the government. And this, according to a senior executive of a multinational company which had opposed the directive helped "Glindia get licences for a number of new drugs unlike us."

Dhanrajgir admits that he did get approvals for the new drugs cephalexin, griseofulvin (both antibiotics) and ranitidine, but maintains that "it was not as easy as they say, we had to struggle a lot".

The company's wide range of formulations has also helped put up a better show than many others. Its close relationship with parent Glaxo UK has enabled it to introduce almost the entire range of Glaxo's research-based products here. Besides, by and large, most of its products are also cheaper than those of its competitors, says a Glindia dealer at Bombay's Princess Street.

Also, family products have been a consistently profitable line. "Last year, the division contributed around 45 per cent to the total profit," says Homi Khusrokhan, senior vice-president (finance administration and secretarial).

The division has however lost a large part of its infant baby food market (brand name Glacto, formerly Glaxo) to newcomers. Late entrants like FSL (Lactogen) and Amul (Amul Spray) have pushed Glindia's market share down to a meagre 4 per cent.

Glindia has had the good fortune of being quite free of labour unrest. "Since 1977 we have not had any major labour problem" says R.P. Bharucha, senior vice-president (personnel). Quite an achievement for an organisation of over 6,000. "We resolve issues through negotiations and not by confrontation" says D.N. Mayekar, president of the Glindia Employees

Glindia, Worli: plenty of plans and a giant parent to help

Union, though he does say that his company is not one of the best paymasters in the industry.

A distinct advantage

All these factors together have put Glindia ahead of the other multinational drug companies in the country. And two recent changes in the laws governing the introduction of new drugs could help Glindia considerably in the future. The government recently relaxed the rules concerning the clinical trial period for drugs. Earlier only those drugs that had already received their registrations abroad were allowed to be clinically tested in the country.

The company hopes to take advantage of this law with a new drug for migraine that is currently being clinically tested worldwide by Glaxo. There is no treatment available for migraine, and and the new drug, codenamed GR 43175, is expected to hit the market sometime in 1990.

The other important change in the law concerns patent protection in an indirect way. Right now there is no patent protection for new drugs in India. As a result, though Glaxo holds the patent worldwide for Zantac, by the time Glindia introduced the drug in India in 1986 there were several other smaller companies in the country which were marketing the same drug under different brand names. In fact there are 29 manufacturers of t anti-ulcerant formulation in India n more than in any other country in t world, though the total market size worth less than Rs.30 crores.

Now, according to a recent gazette a nouncement of the government, ma facturers who introduce "new" drugs w have to provide extensive documentati of clinical trials done on it by the fore company providing the technology. An new drug will continue to be considere new drug for a period of four years fr the date of its first approval of its inc sion in the *Indian Pharmacopoeia*. A result pirates will have a difficult ti selling technology to Indian compani Says Dhanrajgir, "If implemented, t law would give us a substantial lead ti in the introduction of all the drugs wh are currently in Glaxo research labora ries worldwide. And that should help growth substantially in the com years."

But for the moment at least, a couple wholly-owned Indian companies t have come up in the last 15 years or so growing at a pace much faster th Glindia.

Lupin Laboratories, a Bombay-ba company, which is also the largest p ducer of anti-TB and anti-leprosy dr for example, had a turnover of only Rs. crores in 1982. Now in 1988 it has gro to Rs.100 crores — an average growth 150 per cent every year. The other t companies that have grown betw 80-100 per cent every year are De based Ranbaxy Laboratories (sa Rs.111.76 crores in 1986-87) a Ahmedabad-based Cadila Laborato (estimated sales: Rs.75 crores). against this, Glindia has average growth of around 20 per cent in the ten years.

Will these fast growing companies s overtake Glindia? Dhanrajgir does think so. "I am quite confident that will be able to retain our number position for the foreseeable future, we are working hard," he says. His opt ism no doubt stems from the expectat that the government will loosen cont on the drug industry further. Also Gl UK is enjoying a tremendous surg popularity worldwide. "When you bel to an internationally successful gro Dhanrajgir says, "some of the glory sunshine falls on you whether you serve it or not."

■ DILIP MAITRA & N. RADAKRISH

Opting for the beaten track

Food processing is the latest buzzword in Indian industry. With an exclusive ministry now backing it, many corporate heavyweights are making a beeline for this "sunrise industry". But Indian Organic Chemicals (IOC), the flagship of the Ghia group, is beating a hasty retreat after burning its fingers in the potato wafers market

The rumours doing the rounds for quite a while have finally been confirmed. (See *Business India*, Listening Post, 25 January, 1988). The Ghias are looking for a buyer for the 'Futura' foods division of IOC, makers of the "Nik Naks" brand of potato wafers launched with much fanfare in early 1987. Not only this, the other IOC food processing venture, Convenience Foods, set up in Tamil Nadu as a subsidiary to manufacture banana chips, is also up for sale.

What went wrong? It's not common for a bluechip company to undertake a significant diversification and then within months, throw in the towel.

The low profile Ghias are extremely media shy. Unlike other listed public companies, news about IOC has largely been based on conjecture. The Ghias have rarely, if at all, talked to the press about major developments in their group companies. However, Shyam B. Ghia, joint managing director, IOC agreed to talk to *Business India* about the decision to sell the foods division. But predictably, questions about IOC's main lines of business — polyester staple fibre, yarn and organic chemicals — were stonewalled.

Intermediate products

The company, which started off in 1960 with the manufacture of organic chemicals, diversified into the manufacture of polyester staple fibre in the late 1960s, one of the earliest companies to do so.

"We have always been suppliers of intermediate products; we never interfaced with the end consumers," says Ghia. "So the thought going into consumer products would give us an exposure to consumer marketing."

Also, according to him, both the chemicals and synthetic fibre industry are subject to cyclical fluctuations while consumer products are not. "Brand names do take time to be established, but once they are you can tap a steady flow of profits," says Ghia.

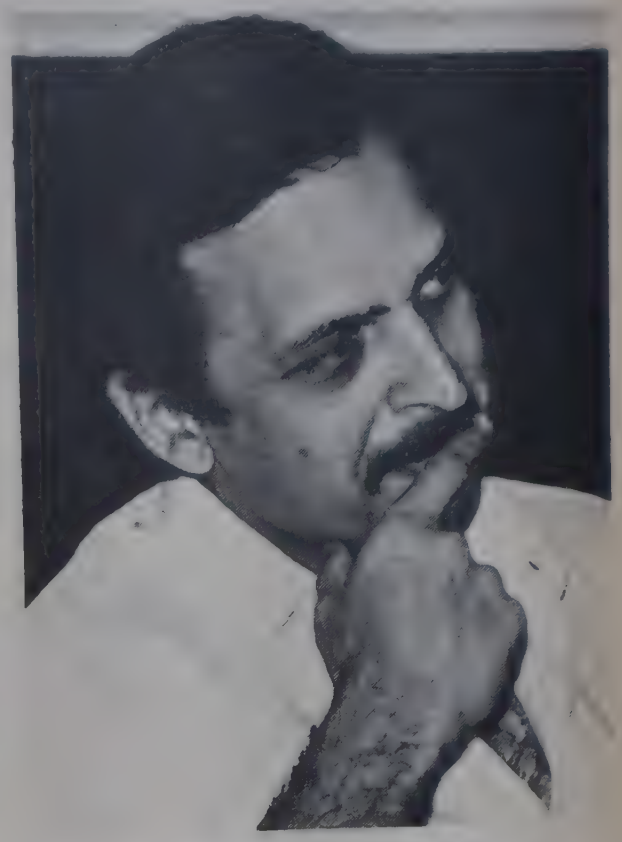
In late 1986, IOC decided to diversify into unrelated areas like branded potato products and packaged software, besides polyester yarn. When the Ghias decided to expand and diversify, the going was really good for IOC — the pre-tax margin on sales was a hefty 12 per cent (PBT in 1985-86 Rs.17.93 crores), up from 8.2 per cent in 1984-85 (PBT Rs.11.62 crores). The company decided to expand its PSF capacity from 12,200 tonnes per annum (tpa) to 30,000 tpa and set up new capacity for the manufacture of 3,500 tpa of polyester filament yarn. The company's borrowings zoomed from Rs.23 crores at the end of March 1985 to more than Rs.103 crores three years later. And interest payments more than tripled, from Rs.4.5 crores in March 1985 to Rs.15.6 crores by March 1988.

Unfortunately for IOC, the PSF industry capacity nearly trebled to 1.4 lakh tpa from 1985 to 1987. Despite excise duty reliefs, the demand for PSF failed to take off and currently stands at a mere 80,000 tpa.

For the first time in three decades, during the year ended March 1988, IOC plunged into the red (net loss Rs.11.12 crores). The finance costs (interest and depreciation) swelled with the jump in borrowings and fixed assets. To top it all, non-liquid assets like inventories and receivables amounted to a little less than half the sales of Rs.139 crores.

Lack of funds

By 1986, Rs.3 crores were invested in the foods plant that was to have manufactured French fries with equipment from Aveiko of Holland. However, an additional investment of over Rs.3 crores was still needed, according to Ghia. Thanks to the severe cash crunch, the plan to make French fries was abandoned and the less capital intensive wafers were launched instead.



Ghia: no more unrelated fields

Ghia still insists that potato chips can be profitably manufactured in the organised sector. "The sophisticated technology leads to substantial savings in the use of edible oil required for large scale frying. Also bulk purchases of raw materials reduce costs," he says. "It was only the lack of funds for marketing and promotion that sealed the fate of our food processing venture."

But those reportedly interested in buying the plant are sceptical about branded products like wafers and chips made by the organised sector being able to compete with excise exempted products of the unorganised sector. An erstwhile employee of the IOC foods division also mentioned difficulties in getting "optimal size" potatoes stored at the optimal temperatures required for mechanised potato processing.

Whatever be the merits of large scale wafer manufacture, the IOC project was probably not considered good enough. "If it was only a working capital problem, the Ghias could have easily sustained it," said one company insider. "After all, the funds required are small compared to the overall size of IOC's operations".

Other happenings within the company also point to the fact that something more was wrong. Prakash Ahuja who joined the company to start the foods division was, by all accounts, the management's blue-eyed boy. Apart from the foods division, Ahuja also spearheaded IOC's entry into packaged software (sold under the Sonata brand name). IOC's entry into retailing ventures such

Move up... to McDowell's
Unmistakably No.1... McDowell's
McDowell's

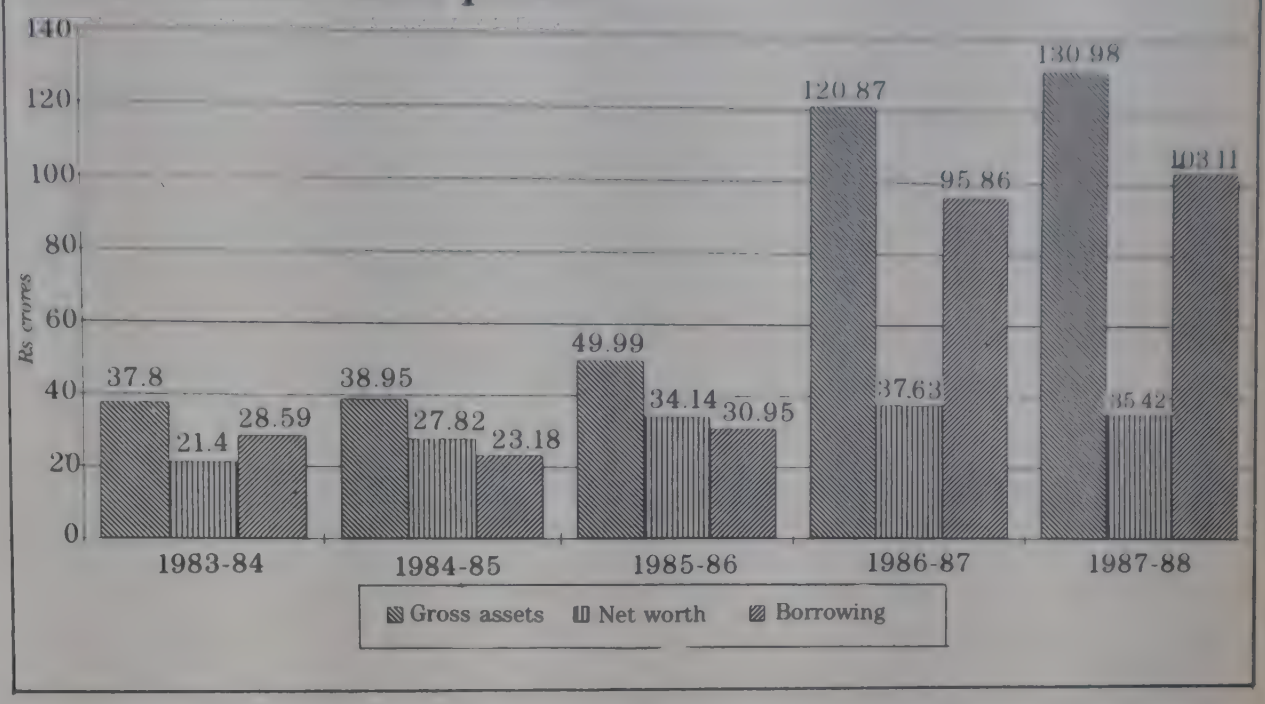
Computer Point and Mothercare was
so at Ahuja's behest. He has since
rted company with the Ghias. His inter-
t in "trading activities" reportedly
dn't quite match the "manufacturing
ientation" of the Ghias. So when
uja's only manufacturing venture, the
ods division failed to take off, he quit.
ith Ahuja calling it a day, the Ghias
cided to disinvest in Mothercare.

Says Ghia, "Prakash was given the first
tion to buy". And Ahuja, who now sits
the Mothercare office in Bangalore,
ld *Business India:* "I am basically in-
rested in retail marketing. When this
dn't work out, I decided to leave." He, of
urse, echoed Ghia's version as to why
e food plant failed: solely for lack of
nds. Ahuja's remarks however fail to
xplain the actual situation fully. For
mputer Point, Ahuja's brainchild and
ry definitely a retailing activity, con-
nues to be part of the Ghia group. Also
e decision to disinvest in Mothercare
as taken after the Ghias and Ahuja had
cided to part company.

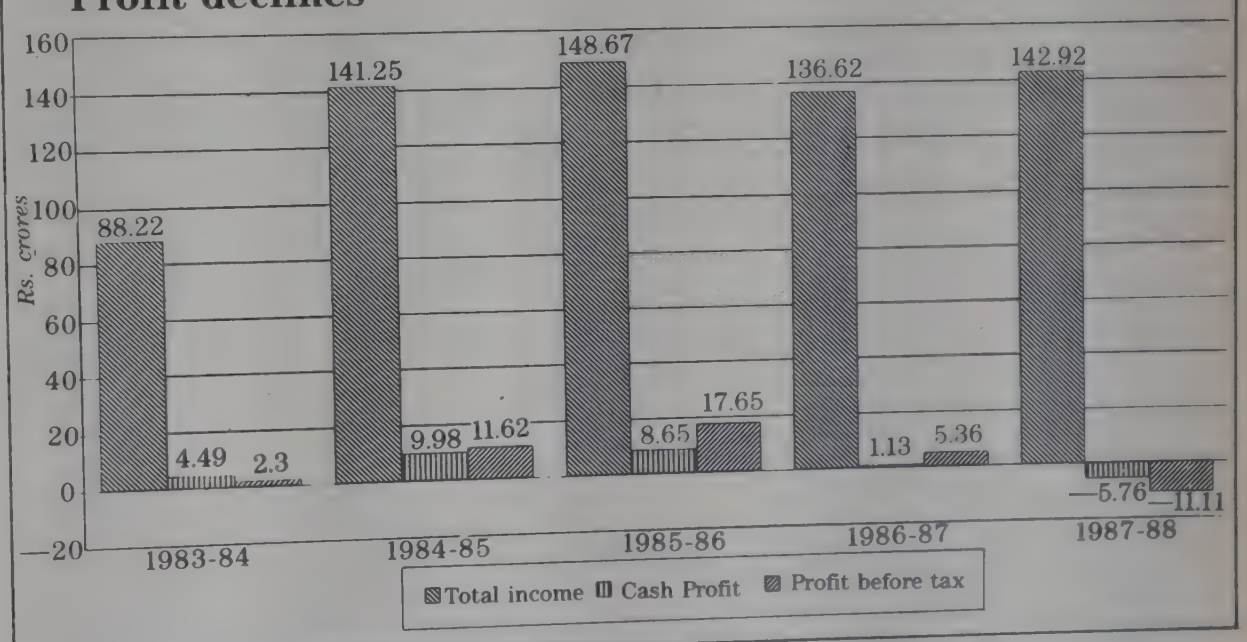
So it wasn't exactly that the Ghias
came disinterested in retailing and
erefore Ahuja decided to quit. All the
w ventures which Ahuja initiated were
extremely competitive consumer fields
here it is difficult to make profits, at
ast in the short term. Perhaps IOC,
hich has traditionally been in the com-
odities business didn't find the going
orth the time and efforts. This probably
d to the split although Ghia refuses to
aborate on the issue beyond admitting
at there were "differences".

Contrary to rumours and market ex-
ectations, the Ghias are currently not
inking of pulling out of their other di-
ersification — computer software. The
nata software division's contribution
Rs.63 lakhs to sales last year, is ex-
ected to more than double to Rs.1.5
ores by the end of next year. According
P. Ramaswamy, vice-president (mar-
ing) of the division, 80 per cent of the
rnover is expected to come from pack-
ged software and the balance from con-
ltancy contracts.

The balance sheet picture



Profit declines



High overheads

For an expected turnover of Rs.1.5 crores, Sonata's overheads, however, seem high in comparison to others in the same business. The Tata Consultancy Services' software package division, for example, has a comparable turnover but only employs 25 people against 130 in Sonata. Ghia justifies this by saying that Sonata is involved in doing "other development work" the details of which he "cannot reveal at present".

The one new venture that has really payed off is PFY, thanks to the PFY industry doing well. Last year, IOC's PFY plant operated at 75 per cent of capacity and contributed more than one-fifth of the company's sales. More significantly, in the process, IOC's dependence on PSF (which contributed as high as 80 per cent to turnover in 1984-85) got substantially reduced (to 47 per cent in 1987-88).

The contribution of chemicals to sales has also risen significantly in recent years (from 12 per cent in 1983-84 to 18 per cent in 1987-88). And, according to Ghia, organic chemicals like methanol, acetic acid, acetic anhydride, ester solvents, benzyl products and benzaldehyde, are today fetching the maximum profits.

During the six months to September 1988, IOC turned in a gross profit of Rs.6.1 crores against a Rs.1.4 crore loss during the same period last year. The net profit however was modest at Rs.40 lakhs. So the company still has a long way to go before it makes up for the Rs.11.12 crore loss of the previous year. The IOC scrip has looked up now that its fortunes are improving. It now quotes at around Rs.45 on Dalal Street against the low of Rs.15 last year.

The Ghias have learnt from experience — they are now concentrating on existing strengths. The moral of the story for IOC is clear — no more diversification in unrelated fields. At least in the near future.

The Print Quality!
The Speed!
The Impressions!

SME
SQUARE WRITER

Like nothing you've seen before

No one gives you print quality with speed as SME Square Writer.

SME SQUARE WRITER
–WORKS BETTER & FASTER
– LASTS LONGER

All of us who use Dot Matrix Printers know fully well, how sharply the printer speed declines if we want to print "Near Letter Quality" documents. Or how sketchy it looks, in "draft mode", for in-house consumption.

Now SME Square Writer offers you correspondence-quality print-outs, even in draft-mode at full rated speed of 160 cps. Lasts longer because it produces quality print–outs in one single pass, unlike conventional dot matrix printers, which make 3 to 4 passes for Near Letter Quality Print-outs.

CUSTOMER SUPPORT: CONSUMABLES AND SPARES

SME is the only printer manufacturer in India who manufactures consumables and spares, as a support service to consumers. SME Ribbon Cartridges are readily available in Nylon & Film, in single strike as well as multistrike types for all popular brands of printers.

SOLIDAIRE

A picture of growth

The Rs.40-crore Solidaire India Ltd went public recently. The picture for the next three years is clear: more TVs, possibly VCRs, an electronic tuners project, audio equipment and home appliances, and a team geared to take turnover to Rs.200 crores

Hi Beam Electronics Pvt Ltd, makers of Solidaire TVs, have switched to a new name — Solidaire India Ltd (SIL). "This will enable the consumer to identify the brand with the company," says A.S. Ramana Prasad, managing director of SIL. A private limited company till recently, SIL made a public issue in November, when it raised Rs.4.85 crores to part finance a new project for the manufacture of electronic tuners; that provided the opportunity for the change in name.

Solidaire has big plans — it is gearing itself to take its turnover of Rs.38.26 crores, achieved during the year ended 31 June 1987, to Rs.200 crores within the next three years. During this time, its new electronic tuner project will go on stream and, if things go right, so will a second TV manufacturing unit, at Bangalore. The company also plans to make a foray into the manufacture of audio-equipment.

An application made in 1983 to manufacture VCRs and VCPs, in collaboration with ITT of West Germany, was rejected by the government earlier this year. But the company is still hopeful. "We have definite plans to set up a Rs.50-crore company to manufacture VCRs and VCPs with Japanese collaboration," says Ramana Prasad

Anticipating the boom

If the company's track record is an indication, its targets look realistic. Hi Beam Electronics was started by A.N. Srinivasa Rao, a small scale industrialist with a unit manufacturing electrical equipment. Anticipating a boom in TVs, Rao acquired a licence to manufacture 7,000 sets a year in 1974.

Subsequently this unit was merged with two other units to form a consortium called Tristar Electronics. However, it ran into problems because of a delay in the opening of the Madras Kendra of Doordarshan. And a loss of Rs.14 lakhs forced the three units in the consortium to part company.

Hi Beam then began manufacturing 'Pria' TVs. In 1978, the brand name was changed to Solidaire. At this point Srinivasa Rao decided to induct technical personnel. This included A.K. Bhattacharya who, as managing director took charge of the crucial operations of the company. With more kendras becoming operational in the south, the demand for TVs also picked up, and by 1981 annual production soared to 32,000 TV sets. Turnover then stood at Rs.8 crores.

The Asiad and the introduction of colour TVs initiated the boom. The company began assembling CTVs from kits imported from ITT. By then Bhattacharya had left. (He went on to set up Sears Elcot Ltd.) The operations of the company fell largely into the hands of Rao and his sons — A.S. Ramana Prasad now handles finance, and Ravi Prakash deals with marketing. The technical aspects of production are looked after by Anoop Kumar (who is not a family member), while Rao himself oversees the entire operation. A third son, A.S. Ananth, is being introduced into the organisation as a director on SIL's board.

This team steered Solidaire on a growth course through the 1980s when several smaller TV manufacturers like Digiana in AP, and Mustang, Hatari and Krish TV in Tamil Nadu fell by the wayside — a spokesman of Dyanora, the other major brand in the south says, "The main reasons for these failures were lack of quality, after sales service and finance."

Abreast of the latest

Solidaire has managed to stay ahead through various strategies in production, marketing, etc. For example, Anoop Kumar points out, "Solidaire has frequently changed models. Almost nine models have been launched in four years, and the company has an image of keeping abreast of the latest technology." The introduction of the PIP (picture in picture) model is a recent example.

The company has also emphasised efficient servicing facilities. "After-sales service is quick since the company has service centres in metros, satellite service centres in smaller towns and resident mechanics in rural outposts. All this fa-

cilitates mofussil sales," observes Vasanth Kumar, proprietor of Vasanth & Co, Solidaire's largest dealer in Madras.

Disciplined and consistent growth has gained Solidaire a 30 per cent market share in the southern states and 5 per cent at the national level. Rivals peg market shares at a slightly lower level, but industry sources confirm that Solidaire and Dyanora rule the roost in black and white TV sales in the south; in CTVs these two share centre stage with BPL and Onida in the region.

With the issue in November, which was oversubscribed, SIL has made the transition to a closely held public limited company; the promoters will hold 60 per cent of the equity and the remaining 40 per cent, by the public. (The family, it appears, is still wary of inviting the equity participation of financial institutions). The issue was for 285,000 equity shares of Rs.10 each at a premium of Rs.10 per share and 57,000 14 per cent partly convertible debentures of Rs.200 each.

SIL: trying to stay ahead

Raring to go

By 1995, the country's total production of CTVs is expected to increase to 5 million units from the present level of 1.2 million, while that of black and white TVs is slated to increase to 10 million units from 3 million now. "We have to plan now," says Srinivasa Rao.

The customers of tomorrow will be a knowledgeable lot. "Today, the customer is more discerning and he expects a superior product. The companies that survive will necessarily be those with access to better technology and are able to offer better features," comments the Dyanora spokesman.

Thus, in the final count, only those withforeign collaborations or technology transfer agreements are likely to emerge stronger. A disadvantage to Solidaire obviously, but it has always pushed itself on its strength in product development, and expects to do the same now.

Srinivasa Rao and company feel that the period ahead will be one of consolidation in the industry. They anticipate the closure of smaller units, and hope that Solidaire's products will fill the gaps in demand thus created. Capacities therefore have to be increased. The company plans to set up a second factory at Bangalore with a capacity of 150,000 black and white and an equal number of colour TVs. The Rs.3 crores required will be internally generated. This plant is scheduled for completion in June 1989.

Also, as a result of the implementation of the electronic tuner project, the capacity of the Madras unit will be increased automatically from 1 to 1.6 million sets and 40,000 sub-assemblies annually.

The VCR factor

Solidaire is obviously nurturing hopes to improve its market standing by getting the VCR project going. Though the company is reluctant to reveal the identity of the collaborator, who will be Japanese, indications are that a new company will be promoted in order to enable equity participation by the latter. "The VCR factor will definitely have an impact on TV sales, at least in the short term, since it is likely that the present licences will link up allotment of VCR with the lifting of the company's CTV by each dealer," says Solidaire's competitor in the city.

Therefore, until approval for VCR manufacture comes through, Solidaire plans to use a small scale licence for the assembly of VCRs (45 were earlier allotted to manufacturers). Solidaire will utilise this licence to have a VCR/VCP bearing its brand name in the market at almost the same time as the others, like BPL-Sanyo, who have received approval in June.

By December 1989, Solidaire will commence assembling 500 kits, imported from National of Japan, to be sold under the 'Solidaire' brand name. The fact that Dyanora and UMS (a Coimbatore based company) also possess small scale licences in the south for VCR assembly is not bothering Solidaire much.

The electronic tuner project, will also assist the VCR endeavour. Explains Ramana Prasad, "The surface mounte devices which have been installed can b used for the manufacture of any ele tronic component, including those us in a VCR."

The import substituting tuner proje will go into production in February 198 and will initially meet inhouse needs; e cess capacity will be sold. However, it not likely to be a seller's market sin other parties like BPL-Sanyo and Crow NEC are also in the fray to take adva tage of a clamp on imports likely to imposed shortly.

Solidaire's other projects include t manufacture of audio equipment li two-in-ones; this is expected to involve investment of Rs.15 lakhs. In the ne phase of diversification, Solidaire pla to enter into the production of domes appliances: mixies, rice cookers a washing machines. "We are in the proce of signing a collaboration agreemen says Ramana Prasad. A public issue planned for this company, which will christened Solidaire Appliances Ltd. P duction is scheduled to begin in 1990

As a first step in gearing up the te for these new projects, the board l been reconstituted. "We also plan to duct more professionals in phases to h dle various functions," says Sriniv Rao. He is keen on retraining the w force at various levels to deal with greater automation which the new p jects will involve. If all goes well, SIL emerge as a company with a wider pr uct range within the next three years

■ DHARANI K P

"To prosper in a fast-changing world, top business leaders must think more like philosophers..."

Melvin Aushen sees a more expanded role for top executives—in the management of ideas.

It's no coincidence that the Executive Club offers the perfect environment conducive to this dual role.

The exclusivity begins with a separate check-in; and continues to the well-appointed rooms with a host of add-ons—an elegant worktable with an additional telephone extension; complimentary Continental breakfast; special toiletries; bathrobe and slippers....

A full-fledged Business Centre with its meeting rooms; and the Lounge Bar that offers just the right stimulus for work and ideation.

Undeniably, the accent is on comfort, luxury and convenience, set in very exclusive environs. On that score alone, the Club is fertile ground for the management of ideas.

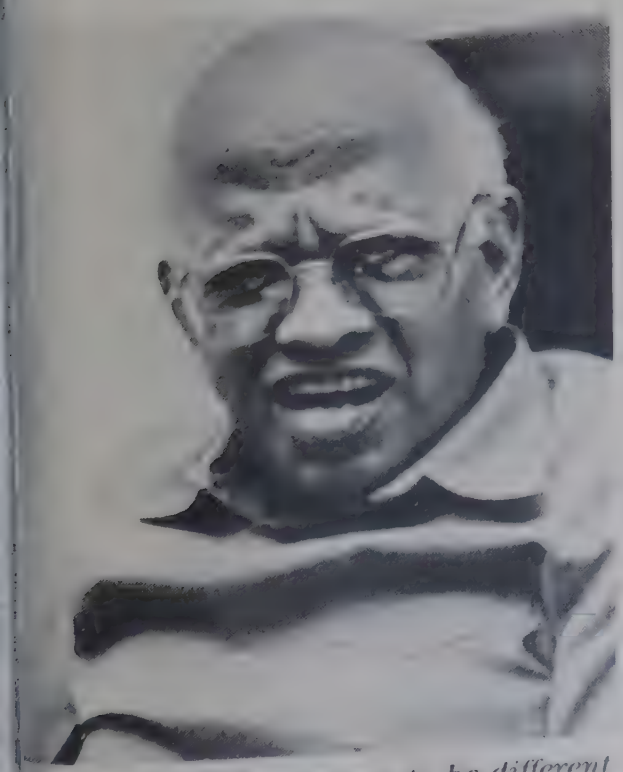
V.K. Pai: "a natural choice"



.N. Pai: it was necessary to be different

SAKTHI FINANCE

Responsive again

Till four years ago just an in-house finance company, Sakthi Finance is now an innovative and fast-growing organisation. And whatever its critics might say, SFL has made its competitors sit up

Last month, Sakthi Finance Ltd (SFL), a Coimbatore-based finance company belonging to the Sakthi group went on a publicity spree to celebrate two events: it had mobilised deposits of over Rs.50 crores, and the number of depositors had crossed the 100,000 mark. All in just four years after the company was revived.

Promoted three decades ago by N. Mahalingam, chairman, Sakthi Group, SFL was essentially looking after the limited needs of Mahalingam's family units, and was doing none too well. At the end of March 1983, the paid up capital of SFL was Rs. 16.5 lakhs, deposits Rs.1.24 crores and stock-on-hire Rs. 1.62 crores.

Challenge accepted

Mahalingam called upon S.N. Pai, who, as financial adviser to Sakthi Sugars (the flagship company of the group), had helped to turn that unit around in an unorthodox manner. The 74-year-old Pai, with over 50 years in banking and finance, had been coaxed out of retirement at 58. In 1983, when he was again ready to call it a day, Mahalingam offered him the challenge of putting Sakthi Finance back into shape. Pai took over as executive chairman, and moved swiftly to realise the tremendous potential for growth; he saw that there was a boom ahead.

The paid up capital of SFL was increased to Rs. 2.04 crores through a public issue in November 1984, and through two rights issues to Rs. 3.12 crores at the end of March 1988. Hire purchase was to remain the company's main line. Thus ten times the net worth could continue to be raised in the form of deposits and unsecured loans.

The Sakthi group of companies themselves, with their large transportation needs, afforded a lot of scope for financing the acquisition of vehicles on hire purchase. Simultaneously, Pai also took care to develop the leasing business. SFL is the first public limited leasing company to lay emphasis on consumer durable leasing. As of March 1988, the stock on-hire was Rs.31 crores and assets leased Rs. 21 crores.

As soon as the capital base was widened, it was necessary to strengthen the company's liquidity position. So SFL launched a massive deposit mobilisation programme. Pai was taking on established rivals like Sundaram Finance, Mercantile Credit Corporation and the First Leasing Company of India Ltd (FLCI).

It was necessary to be different. As Pai puts it, SFL had to give "a better product and a better set of benefits", and to do this it became the first finance company to offer the then permitted 15 per cent maximum interest uniformly on all deposits whether they were for one, two or three years. The interest was paid out every month with post-dated interest warrants sent in advance.

Special arrangements were made with its main bankers, Canara Bank, for the acceptance of cheques deposited in any one of the 2,000-odd branches of the bank at par. SFL also set up a series of safe deposit vaults for the use of its clients in major towns in Tamil Nadu.

Depositors attracted

Although critics dismiss these measures as gimmicks, the depositors certainly got attracted. The reputation of Mahalingam, a much respected industrialist in and around Coimbatore, also helped.

The company now has 34 branch offices, spread over six states. Another six offices, including a third branch in Bombay, are scheduled to be opened shortly. A pioneer in setting up a chain of safe vaults in the country, it commissioned three more during the current year, taking the total to 15. Eight more vaults, including two in Bombay, are now under construction.

The company claims that this diversification of its activities is becoming increasingly popular. It also plans to offer financial services such as portfolio management, investment counselling, merchant banking, factoring, etc in the near future.

Today, as Pai puts it with undisguised delight, SFL is the fastest-growing finance company in the country. "Our average rate of growth is very high: capital per annum 284 per cent, reserves and surplus

Mr Patel blocked 5 burglaries, 3 takeover bids and 4 sabotage attempts on his factory... but he couldn't plug the leakage of his profits.

Yes, Mr Patel's factory fell a prey to water leakage. Because he neglected one vitally important security measure: lasting waterproofing. So what with endless repairs and renovations over the years, his profits kept pouring down the drain.

Fortunately, over 5,25,000 constructions all over the country have escaped the same fate... Thanks to STP Limited. The most trusted name in waterproofing, pioneers and leaders for over 50 years. Only STP has developed such an impressive range of durable waterproofing treatments for every leakage problem. Like Shalimar Tarfelt BH for roofs, FG Felts for special waterproofing and Flash Strip for instant waterproofing.

And STP Limited has an equally impressive record in corrosion protection and pipe coating. It also offers a wide range of mastic asphalting treatments, both for roads and industrial floors.

So, invest in STP protection for your factory today... and avoid the continuous maintenance expenses that drain away your money.

Because STP protection means the longest-lasting protection.

STP Limited

SHALIMAR TAR DIVISION

** Comprises mainly stock-on-hire and leased assets*

ability affected

ut there are many who question Pai's ethods and feel that his innovations ay be inimical to the industry in the ng run. Pai has certainly shocked the nservative southern companies. By of-ring 14 per cent, as permitted now, to ents for even one year, SFL has been le to attract a lot of depositors. As a sult, a large percentage of SFL's deposi-rs are in the one-year deposit category. ompetitors claim that almost 90 per nt are in this group and that this is ther dangerous for the stability of the mpany. SFL maintains that it is only out 55 per cent.

There are rumours that SFL pays a gher commission than the permitted alf a per cent for deposits mobilised. It so believes in constantly drawing atten-on to itself. The uninhibited self-promo-on has created ripples in the publicity-y south, which thinks that SFL's fi-nce mobilisation drives are very expen-ve.

"All this leads to high cost of lending. hich is why Pai is not able to go to dustry, and is concentrating on con-mer durable leasing. The concept of asing is really meant only for productive ssets, assets with earning power. Not for s and two wheelers," says one insider in e financial services business.

Pai is unruffled. "What people are re-ly critical about is what I consider our us points," he says. According to him, it as a deliberate strategy to attract the e-year deposits. "We knew full well that eople would want to try us out. We were illing to be tested. That we have come t with flying colours is proved by the ct that 80-85 per cent of these deposits ave got renewed and more and more eople have come to us. Don't forget that 0 per cent of the funds of the nation-ised banks are in current accounts," he says. The rumour that SFL pays out a higher commission is dismissed as an occupational hazard which every finance company has to face at one time or the other.

A virgin field

Pai maintains that part of SFL's success lies in not hesitating to spend money on advertising. According to him the growth justifies the expenditure. For example, during 1986-87, SFL spent about Rs.48 lakhs on advertising and its deposits stood at a level of Rs.24 crores. During 1987-88 the advertising expenses went up to Rs.76 lakhs, but deposits increased to more than Rs. 41 crores.

The policy to concentrate on consumer durable leasing also was deliberate, says Pai. "We did not want to follow the well-trodden path of plant and machinery leasing. In the cutthroat competition of the early eighties, lease rates fell. Companies got wiped out. We therefore chose a virgin field. In fact there are far less problems in this area than in lending Rs. 2.5 lakhs to a blue chip company. Even if there is a defaulter, the cost of a colour TV or a scooter will not make a dent in our operations," says Pai.

He also adds that by concentrating on groups rather than individuals for consumer leasing his recovery rate has been very good. At the end of 1987-88 only 2 per cent of the arrears are of three instalments and above. In the case of hire purchase, the figure was four per cent.

According to Pai, the insinuations that the Sakthi Finance bubble will burst sooner or later has no real basis. The checks and controls on the operations have been strengthened considerably. An elaborate system of concurrent audit of all the 35 branches by several firms of external auditors has been planned. "We are a solid company. Our share capital is Rs. 3 crores, our bank borrowing limit Rs. 4 crores and reserves nearly Rs. 5 crores. In fact, the banks chase us for deposits," boasts Pai.

SFL is a one-man show, point out some critics. "After Pai, what?" they ask. Pai's answer: "Every institution is built by one person in the initial years. Even I didn't anticipate the kind of growth we have had. Now I am taking steps to professionalise the company. I have 17 senior officers at present. By next year, we will have 25."

Last year, Pai appointed his son, N.K. Pai, as president of the company. Pai junior, an electrical engineer with an MBA, spent the two years before he joined Sakthi as head of three finance companies promoted by an industrial group in Andhra Pradesh. "I didn't join this group just to get experience to move to SFL. It just happened that I was a natural choice, when my father was looking for a professional," says Pai. There may be those who disapprove of dynastic succession. But, says Pai senior, in his irrepressible manner, "If one Pai can achieve so much, imagine what two Pais can do."

Pai is extremely confident of good results for 1988-89. The year 1987-88 was disappointing only in regard to refunds — Rs.7.84 crores as against Rs. 3.00 crores in the previous year. This is attributed to the severe drought. Pai is hopeful of reversing this trend and ending the year with Rs. 75 crores in deposits and Rs. 4.5 crores as net profit

SUSHILA RAVINDRANATH

WINTER VISITORS

Merry weather for business

For the international business community, the winter months in India are the best for both business and pleasure With personal computers and amateur cameras vying for space in their travel bags, they throng hotels business centres and holiday resorts

For the tourism industry in the country, the longest days are in winter. Overseas visitors of all hues head for the winter sun in India, filling up hotels, airline seats and beach resorts to crisis capacities. The number of foreign tourist arrivals in India has been steadily looking up over the past few years — having crossed the one million mark in 1986, it is expected to touch 1.5 million by the end of this year.

Besides their sola hats and red shorts, many of the visitors come with pocket calculators and briefcases. Europe and America are virtually on holiday from the middle of December to early January and the weather couldn't be better for doing business in India. Also, the government's continuing liberalisation policies are attracting an increasing number of multinational companies to the country. Pushing the charts are also the fresh thrust on exports and the aggressive promotion of India as a tourist paradise.

Improved fare: Airlines gear up for the rush season

Crowded calendar

Not surprisingly, most of the major international business conferences, conventions and congresses that are held in the country crowd the calendar between November and February. Besides delegates to such events, there are also multinational company executives on annual visits to their licensees or subsidiaries in India, others scouting for joint venture or collaboration partners, and an assortment of importers, especially those from the diamond and garments trades. The season is also ripe for weddings — not a few non-resident Indians tie-up a wedding in the family with a business visit.

"This is the time for large departmental stores and other buyers in Europe to place their orders for the coming summer," says Gita Choksi, general manager, tours, at Thomas Cook (India) Ltd, leading international travel agents and tour operators. "India usually supplies tropical and summer-oriented products for the European months of June to September." Garment exporters, for example, are active meeting foreign buyers around this time, finalising deals for exports about six months before the fashion fairs begin to parade Europe's markets.

Of the total foreign tourist traffic to India last year, European countries accounted for nearly half a million visitors, followed by about 175,000 from the US and Canada, and about 140,000 each from West Asia and South Asia. In terms of growth, however, the East Asian region was the most encouraging — between 1986 and 1987, it registered a 28 per cent increase in tourist traffic to India. Tourism industry watchers say that business travellers constitute about 20 per cent of the total traffic of foreign visitors.

Weddings and government feelers to business aside, much of the traffic to India feels comfortable because of the stable political environment. "Compared to other countries in the neighbourhood such as Burma, Sri Lanka and the Maldives, India is considered reasonably safe, despite problems such as those in Punjab," says Adi Katgara, director of Travel Corporation (India) Pvt Ltd, arguably the biggest travel agency in the country. Control Risks, a UK-based agency th specialises in protecting businesses a executives around the world, gives Ind a low-risk rating along with Brunei, Ho Kong and Indonesia. The agency, which retained by about 30 multinational c porations in Asia to feed information 70 countries and assess the dangers bu ness travellers might face there, has ho ever elevated the Punjab and Kashm regions to medium rating.

Favourable factor

Another factor that goes in India's fav is the depreciation of the rupee agai the currencies of most of the develo countries, according to Katgara. So travel industry observers say that weakening of the rupee against the d lar, the yen and the pound sterli among others, affords even budget to ists a five-star holiday.

Delegates to conventions, congres and conferences are among the most ble of business visitors. These spenders — one study says that

IT'S A LONG HAUL WITH ANYONE ELSE.

British Airways new Club World has been created to ensure that you arrive relaxed and refreshed on all your long haul journeys.

WANTED CORPORATE SCULPTOR

How would you like to chisel out a corporate image for a Rs.300-crore industrial corporation?

How would you like to put your knowledge of communications and media to work in carving out a public profile for a company with a 50-year history of brilliant innovation?

How would you like to go beyond mere liaison and PR to conceive, plan and implement exciting new ideas, campaigns and projects which will unveil the several facets of Mukand?

How would you like to be Mukand's Corporate Communications Manager?

If you have a creative streak, a talent for communication, an affinity for technology and industry, along with the ability to think of, implement, and manage projects that help build Mukand a strong, distinct corporate image, this job is sculpted for you.

Just pick up your mallet and chisel us a letter.

Or, better still, tap out our phone number and make an appointment.

And start carving out a name for yourself.

Sukumar V. Shah
Sr. Vice President (Designate)
Mukand Iron & Steel Works Ltd., Bajaj Bhavan,
3rd Floor, Nariman Point, Bombay 400 021.

Erratic flight schedules upset tour itineraries

spend three times as much as other tourists — usually come with their families, and opt for package tours around the country either before or after their business event.

Convention delegates generate creamy business for the hotels they stay in. "The restaurants are under maximum pressure around this time of the year," says Sanjiv Tyagi, food and beverage manager of the Oberoi in Bombay. "We have to maintain a higher level of pass stocks (inventories) during these months." Partying in the business circuit also reaches peak levels — Tyagi says that there is a trebling of the average number of business parties held during the rush season, as against those in the slack summer months.

New Delhi is the favourite centre for business conventions — Bombay's hotel infrastructure simply cannot support more than two or three major conventions at the same time. Madras is another hot spot, especially for medical conventions, thanks to the famed C.S.I Medical College in nearby Vellore. In the recent past, other cities such as Bangalore, Goa and Srinagar have also begun to emerge as important convention centres.

Major conventions held over the last two months in the country include the World Trade Centre general assembly in Bombay, the International Hotels Association meet in Delhi, and two medical conferences in Bombay. Between now and March next, as many as nine major meetings are scheduled to be held in Bombay, Madras and New Dehli, including the International Leather Fair, the World Philatelic Exhibition and the packaging expo, Indiapack '89.

Work and pleasure

"The reason for so many business conventions taking place in these months is the fact that the foreigner does not come to India only for work," says Anup Israni, director, sales and marketing, at the Hyatt Regency hotel in Delhi. "Mixing work with pleasure is a part of their incentive. You cannot expect foreigners to come to India for work in June, when the temperature crosses 40 degrees Celsius, and expect him to have fun as well."

Besides convention traffic, there are also qualitative changes in the pattern of business visitors coming into the country. "With a lot more foreign collaborations and joint ventures, we have more senior level businessmen such as chairmen and managing directors coming in," says Dilip Puri, assistant front office manager at the Oberoi. He also notes that with Maharashtra chief minister Sharad Pawar's keenness on tapping NRI resources for the state, the number of NRI visitors is on the rise. "I keep drilling it into my staff that work really starts in October," he says.

Although five star hotels in the metros see occupancy levels ranging from 80 per cent to 90 per cent during the season (as opposed to about 40 per cent in the slack months), visitors rarely stay on for more than four or five days. "Bombay has little tourism value. It is just a hop-off point for other destinations such as Goa," says Tyagi. Besides the golden triangle of Agra, Jaipur and Udaipur, visitors also pack off to places such as Goa, Madras, and the various hill stations in the country. "Goa is packed today," says Firoze Darbary, assistant manager at the Oberoi. "You

SNEAK PREVIEW

Take a walk. Especially if you possess an eye for things beautiful, things aesthetic.

Along the corridors of the fourth floor (South Wing) and fifth floor (North Wing) lie delightful shapes of things that will soon adorn the entire Taj Mahal Hotel: artefacts, objets d'art and paintings.

After all, when you believe even excellence can be enhanced, you go ahead and do something about it.

Wouldn't you agree?

THE TAJ MAHAL INTER·CONTINENTAL BOMBAY

THE TAJ GROUP OF HOTELS

Tourists shopping: big spenders

can't get a room there for love or money."

While Goa has its beaches and free and easy ambience, Madras charms its way into the tourist market with music as well — the annual music festival in the winter months is a major attraction. "The festival draws Indian dancers and musicians living abroad," says T.S. Parthasarathi, secretary of the Music Academy of Madras. "This year, we have Rathnapapa Kumar, a dancer from Houston, Nageswara Rao, a veena artiste from Paris, and the violin maestro, S. Subramaniam, among others."

Chaotic conditions

While the rush season means a surge in business for the support service industry, it also has the ingredients for chaos. While tickets on the major sectors of Indian Airlines and Vayudoot are difficult to obtain (the railways are worse), the frequent changes in flight schedules throw a tourist's plans out of gear. "We have about 200 groups moving around the country today," says Katgara of Travel Corporation (India), "and they are all upset. So many Indian Airlines flights are getting out of schedule, it is too much of a joke."

International airlines are also chock-a-block with bookings, both for inbound and outbound flights. "It is difficult to get a seat during this season; bookings have to be made in advance," says K.S. Mhatre, chief public relations manager at Air-India. "The average load factor during this season goes up to as high as 80 or 90 per cent." As usual, the airline has introduced a new winter schedule effective 1 December. The new order will have a couple of new Boeing 747 aircraft, more non-stop flights, at wider choice of flights for businessmen, and increased club capacities. Suresh Gadoya, general manager, western India (travel) at Thomas Cook, however, points out that other major international airlines, like TWA and Iberia, servicing India have either pulled out completely or reduced capacities. Any increase in capacities must follow negotiations at the government-to-government level.

Even as tourist traffic to the country is on the rise, there is a feeling that India i not getting a fair share of the cake. Trave writer Jug Suraiya cites the example o the 36th convention of the Travel Agent Association of India — it was held i Kathmandu, not in India.

Poor impression

Katgara feels that the problem lies in no properly exploiting the opportunitie available. "We have the facilities, but w don't know how to use them," he says "The first impression of a visitor to thi country is usually bad...he is ill-treated b customs and immigration officials, he ha to stand in long queues as only half th number of counters at the airport ar working, and so on."

The international image of India as place to do business, is also not ver encouraging. According to a reader po conducted last year by the UK-base *Business Traveller* magazine, Air-Indi did not figure in the top 10 favourit airlines of business travellers. Neither di any Indian airport figure among the to 10 — in fact, Bombay was listed as amon

Tyagi: hands full of business

A weakening rupee means bargains for tourists

the worst airports for customs clearance, passport control and luggage retrieval. And no Indian city figured among the readers' choices of the best cities to do business or to hold conferences in.

Friendly people

Nevertheless, there is something special about this country that evokes a warm response. Stephen Longo, director of academic computing at the Philadelphia-based La Salle University, never wanted to come to India, but work brought him here last fortnight to Bombay. "The hospitality is great, and the people are very friendly," he says. "I felt spoilt...doors immediately open up, and you feel funny when they start grabbing your packages from you."

Longo's colleague Edna Wilson, assistant dean at the La Salle University, is also all smiles. "The reception in the country is wonderful, and I have never smiled as much as I did in Bombay, for years," she says. "Everyone goes out of his way to make you happy. Even the beggar who did not get anything from me said goodbye to me, and smiled before he left."

IQUOR LEVIES

Cauldron of corruption

State governments tax the liquor industry heftily. Both manufacturers and the consumers are screaming about the arbitrariness of differential taxation. And the politicians in the business are laughing all the way to the bank

Booze is big and dirty business. And its getting bigger and dirtier. Murky deals in the liquor business are numerous; and so are the anomalies in the policies governing the trade.

For state governments, liquor is an unfailing and major source of revenue — there can never be a public outcry against ever-increasing liquor taxes. Constitutionally too, the liquor trade is not included in Article 19(1)(g) of the Constitution which grants the citizens the right to practice any trade or business.

Liquor is a state subject. The states exploit this lucrative industry to generate as much revenue as they can. "The revenue policies of governments are still dictated by a hypocritical concept of prohibition," says one frustrated manufacturer. "Liquor is to the states what cigarettes are to the Centre. Both are exploited to generate surpluses for the governments' largesse on other fronts," he adds.

Colossal revenue

Nothing is dreaded more by liquor manufacturers than the announcement of the budget each year by state governments — the yearly hike in taxation has become inevitable. The revenue earned by the states is indeed colossal. According to RBI figures, the excise on all varieties of liquor in all the states amounted to Rs 2,416.17 crores for 1987-88. In Maharashtra alone, the revenue from liquor in 1987 totalled Rs 308 crores. "The taboo attached to drinking gives the state governments a carte blanche to impose levies as they please," says one manufacturer.

Those who are hit the hardest are the consumers of Indian Made Foreign Liquor (IMFL) — a term concocted to distinguish this liquor from the "country" and imported varieties. Unlike beer and country liquor, on which taxes are relatively low, the pinch is felt the strongest in the IMFL category, also referred to as "hard liquor". Total sales of IMFL is over Rs.1,100 crores a year, of which more than Rs.600 crores is swallowed by the state governments in the form of various taxes.

What angers the industry and is unfair to the consumers is the arbitrariness of the taxation. Rates vary from state to state. As most states levy this duty on the quantity of IMFL — in terms of bulk litre (BL) or proof litre (PL) — the total amount of duty within a state remains the same for all varieties and brands of IMFL. "The excise duty thus favours the more expensive brands of IMFL", says V.K. Luthra, vice-president of Herbertsons Ltd a United Breweries subsidiary.

In addition, the states also levy a sales tax ranging anywhere from 10 per cent in Orissa and Punjab to 45 per cent in Andhra Pradesh. However, in certain states like West Bengal, Maharashtra, Rajasthan, Nagaland and now even Orissa, the sales tax has been merged with the excise duty. There are also some states which levy an additional sales tax and a further surcharge on the same.

Ingenious methods

Further, each state has its own method of imposing taxes. While in Maharashtra, a transport pass fee of Rs.1.50 per bulk lit is levied on the IMFL going out of distillery, in Assam there is a gallona tax of Rs.2.84 per bulk litre on IMF Chandigarh has an assessment tax Rs.40 per bulk litre, whereas Jammu Kashmir, levies a total tax of Rs.0.04 p kg and an additional toll tax of Rs.6 p quintal. In Karnataka the governmer levies a turnover tax of 1.5 per cent whe the annual turnover exceeds Rs.2 crore The state also charges a litre fee of Rs per bulk litre beside various other ad ho taxes introduced whimsically, whenev it wants to rake in extra revenue. All i all, this maze of taxes has led to a tota incidence of anything from 200 to 600 pe cent.

The differential duty structure has cre ated a difference in the price of the sam brand of liquor, leading to large scal inter-state trading of IMFL. To earn share of the profits, certain states lik Maharashtra, Bihar and Punjab intro duced an export pass in 1984-85, leviabl on any liquor leaving the state. Soo other states also introduced the fee.

Having exploited all other avenues o revenue generation, in 1986 states lik Bihar and Punjab slapped an import pas fee on all liquor arriving in the state ostensibly in a bid to encourage loca distilleries. Other states soon followe suit.

A bottling plant: the industry is an unfailing source of revenue

These two "passport taxes" soon encouraged "contract manufacturing" in the industry, whereby a manufacturer would ask a local distillery to produce IMFL under its label. In fact most of the manufacturers have already started the practice, though, as they admit, at the cost of quality. "When a local person is manufacturing, you cannot have strict quality control. And the taxes in some states do not leave you any other option," says a Jagatjit Industries manager.

Manufacturers' ploy

Apart from all these, there is the ubiquitious vendors' fee, separate licence fees for distilleries, distributors, wholesalers, retailers, and for bars. The octroi and other taxes levied by municipal bodies take their own toll in determining the price for a customer. "Such tariffs have not only led to a hike in the price of IMFL, they have also created a veritable cauldron of corruption," claims a liquor vendor.

It is also alleged that manufacturers, in order to promote their own brands, often influence state governments to levy one tax or the other. As a senior executive of the Himachal Pradesh-based Mohan Meakins, the oldest liquor manufacturing company in India, candidly said, "It's all a money game. If you want to have the edge on your competitor, then you go to the right people in the government."

A prime example is Tamil Nadu's liquor baron, Ramaswamy Udayar. Udayar first came to public notice when he set up Mohan Distilleries with Mohan Meakins. He soon became close to the late MGR. Today, Udayar is the liquor don of Tamil Nadu. In the city of Madras, no beer except Golden Eagle — a Mohan Meakins product — is available. During Janaki Ramachandran's 21-day rule, he managed to increase the price of his beer by Rs.10 a bottle, a feat no other brewery could match.

The prohibition tamasha

It is a truism to say that prohibition has never succeeded anywhere in the world. Despite all propaganda against "the demon of drink" and the imposition of draconian dry laws, prohibition has by and large failed to serve its purpose in India too. In Gujarat, which is supposed to be a dry state, the consumption of liquor is greater than in Rajasthan. In fact the Rajasthan government liquor policies invariably take cognisance of the smuggling of IMFL into Gujarat. "Every other car that passes the Rajasthan border at Chittorgarh, Udaipur and Sirohi carries 30 cases (360 bottles) of IMFL to Gujarat," says a manufacturer. In Tamil Nadu, despite partial prohibition being introduced in January 1987, the consumption of IMFL has increased enormously. While there were less than 1,000 liquor shops in early 1987, there are 2,300 shops selling IMFL today.

"When the stakes are high, anything and everything is possible," says M.B. Chobe, commissioner, prohibition and excise, Maharashtra.

Cratesful of revenue

According to sources, the states are losing a considerable income because of the ad hocism of their revenue policies. The governments are not equipped enough to keep tabs on all defaults by the traders Nor are they so inclined, it is alleged. For instance, Maharashtra loses approximately Rs.500 crores per year, according to Chobe. In Punjab, Bihar and Karnataka, the losses are estimated to be in the region of Rs.300 crores a year.

The real sufferer is the consumer — on price as well as quality. A bottle of IMFL that should cost Rs.30 including the manufacturer's profit is priced anywhere from Rs.80 to Rs.200. "Even then the quality is sub-standard, what with contract manufacturing and low-grade potable alcohol provided to the industry," claims one connoisseur.

As Chobe says, "You can swear by prohibition and excise in the same breath. Both are laudable. But what should be made clear by the liquor policy makers is whether their policies are consumer oriented, manufacturer oriented or self-oriented."

Meanwhile, the wheeling and dealing continues. As one dealer says, "Every one is on the make in the liquor market — from clerk to policy maker. It's happy hour all the time. The manufacturers are happy, the government employees are happy and so is the state exchequer."

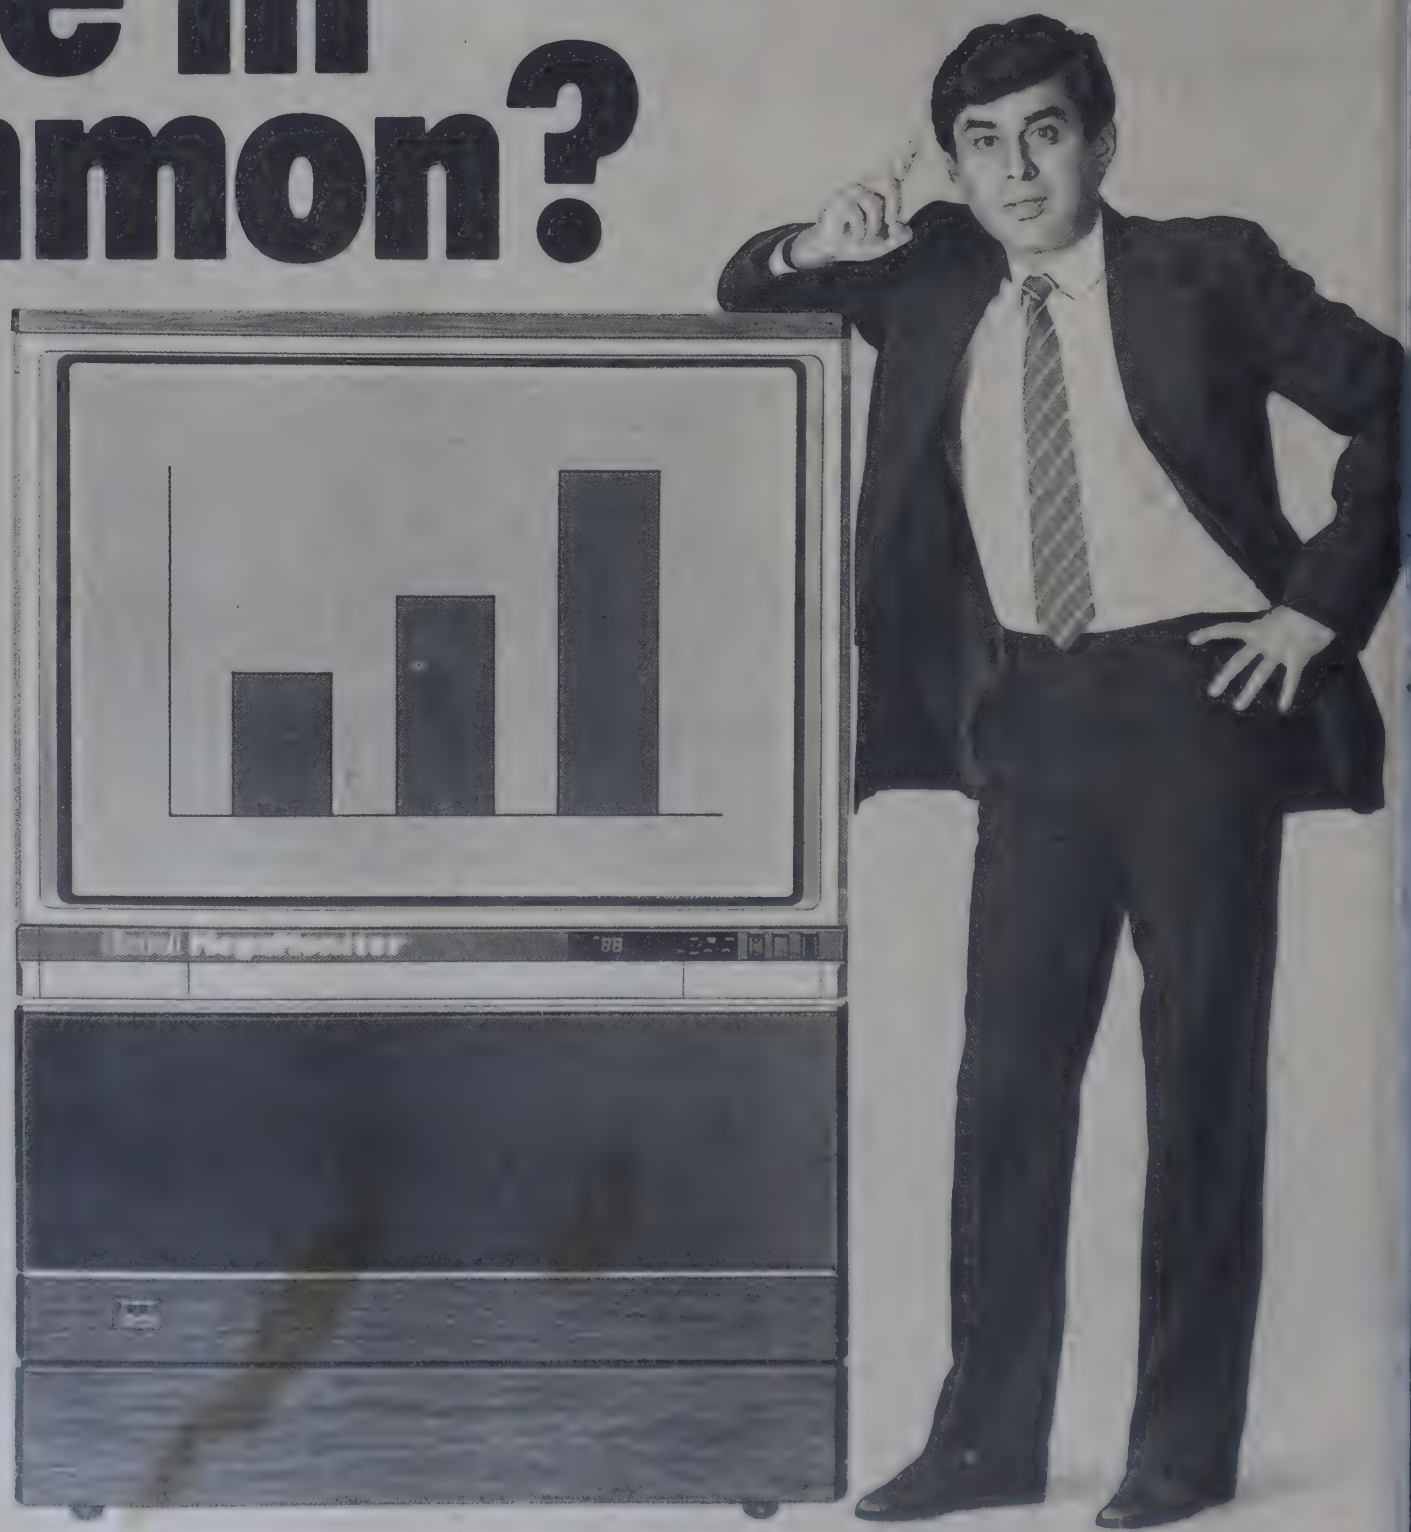
HERALD-R

What do Bajaj Auto and Hindustan Lever have in common?



The Impact of High Technology

NEC

NEC Corporation, Japan

Winning ways, you might say.

Quality to the customer. Achievement-orientation in the employee. Self-reliance through R & D.

And effective communication, one might add. From the organisation. And within the organisation.

May we then dare point out that both Bajaj Auto and Hindustan Lever have acquired the Entel MegaMonitor.

Just like over a hundred other fine institutions all over India.

And thousands more overseas, who use the Entel MegaMonitor's counterpart. From NEC, Japan.

The Presenter's Favourite. In Board Rooms, Training Centres and Conference Halls

Training Managers, Marketing Managers, Admin Managers. Smart managers love the big advantages of the Entel MegaMonitor.

But first, what exactly is a MegaMonitor?

It's a giant colour televiewer

With a flat screen that's 4 times that of the homely twenty-inch. With perfect picture clarity and brilliant resolution. And a complete set of video and audio terminals. For a VCR, video camera, video disc, antenna, etc.

It's an out-size computer monitor

With a built-in interface, computer data can be presented just as easily.

It's a live sound system

With a plug-in microphone, the presenter's comments can be interpolated at will. A second microphone permits audience participation.

The Entel MegaMonitor. You're in control

With a wireless remote control in hand, you are literally the boss.

Besides, all the controls are simple. There is no need to have a technician hanging around.

There are no wires to trip over. None of the inelegance of front-projection video. None of the clumsiness of a separate sound system. (And of course, none of the miniaturising of the domestic TV.)

The Entel MegaMonitor. It's state-of-the-art

Behind the simplicity, there's high technology. From NEC, naturally. Pioneers in professional communication systems.

You name it, and the Entel MegaMonitor has it. PAL and NTSC options. Channel coverage from VHF 2 to UHF 69. Direct access channel selection. Voltage synthesised electronic tuning. Woofers and tweeters. Provision for external speakers. And more.

Professional features, put together cleverly — for amateur handling.

The Entel MegaMonitor. Is it too big for me?

Despite the screen size, it can be viewed comfortably from as close as 1.8 metres.

And it's no deeper than the domestic TV. The Entel MegaMonitor can fit snugly into a small boardroom. (Just as it can cope with an audience of hundreds, across 30 metres.)

The picture is so bright, you don't have to dim the lights. The audience can take notes — and interact.

The idea, as you can see, is effective communication. A cornerstone of every successful enterprise.

Join the Successful Communicators

Don't wait. Come for a free demonstration of the Entel MegaMonitor. See what it can do for you, and your organisation.

In the best company

In electrical components the critical difference is the high quality

With a track record of over a decade for reliability. Here are the products of rare quality

KEN ELECTRICALS LIMITED

Now we introduce India's foremost silver bearing copper commutator blanks profiles & section and contact tips

Discerning consumers like BHEL have put their faith on our experience and proven reliability thus meriting us as the best producers of above silver bearing copper products thus making us virtually leaders.

Besides this leadership we are also ahead in quality or in reliability with other prestigious products like copper winding strips, copper bus bars, copper sections, commutator strips and segments, paper covered varnish bonded fibreglass covered aluminium/copper teflon/kapton/nomex/ asbestos covered copper strips and wires.

Our name is your guarantee and your satisfaction is our moto.

TUMUS ELECTRIC CORPORATION LIMITED

Transformer Laminations & Strip Wound Cores of all types viz. Toroidal and Rectangular Cores as well as 'C' & 'E' Cores and also E & I Laminations & Stampings from C R G O Steel. Manufactured to highly specialised techniques and under strict quality control.

VINDHYA ENTERPRISES

- Aluminium Alloy Wires & Strips.
- PTFE/Paper covered Aluminium / Copper Wires and Strips manufactured to highest precision standards.
- Varnish bonded Glass Fibre, Tape covered Copper Wires & Strips.

KEN ELECTRICALS

A.A.C., A.C.S.R. & A.A.A.C. Conductors of unmatched reputation.

MERCHANTS INDIA

- DPC & Multi paper covered Aluminium and Copper Wires and Strips.

XIMSCRIP

Tailored to Indian priorities

ne current balance of payments situa-on and even more so that expected in ne near future is cause for considerable vorry. Restricting imports has proved im-ractical and has even hampered na-ional development. The only practical olution, other than inviting increased oreign equity to provide these foreign-exchange funds, is to increase exports dramatically. This may necessitate a change in the business culture and think-ing so that exports become a way of life with business, rather than a rarity practised by a few of the brave or fool-hardy.

The current import-licensing mecha-nism is predicated on fairly automatic rights to import goods based on indus-trial licences for promoting domestic manufacture — because they are re-quired for an approved (say manufactur-ing) programme or because they are not made in India and are widely needed (OGL). The problem with this approach is that it encourages irresponsible im-ports (for instance personal computer clone components). In fact there is al-most a dichotomy of enterprises: a large number of enterprises primarily exploit-ing the domestic market, merrily expen-ding most of the nation's foreign exchange importing their requisites. And a much smaller number earning most of the foreign exchange for the country in export markets.

The key to dramatic increases in ex-ports thus lies in involving the larger number of enterprises who are today un-concerned about the export effort. In the process, there can be direct control over the quantum of foreign exchange spent on imports in terms of export earnings. Moreover the cost to the nation in admin-istering import licences to the large nu-mber of domestic-market oriented enterprises in delays, harassment and manhours of policing/checking can also be reduced.

Incentives better

Earlier experiments at forcing enter-prises to export through export obliga-tions have proved, not surprisingly, to be ineffective. Obligations, like other con-straints imposed by the Indian environ-ment, primarily invoke the vast creativity of the Indian entrepreneur. Incentives work much better; no penalty if you don't earn, but distinct advantages if you do. On the other hand, most monetary incen-tive schemes such as CCS to encourage exports (except to the extent they are only unrebated taxes) run the risk of retaliation as violation of GATT or other treaties/agreements or negation as a re-sult of shrewd bargaining by overseas buyers who are knowledgeable of these explicit incentives.

The concept of 'EXIMSCRIP' provides a strong and widespread incentive to all enterprises to export. It envisages substi-tuting automatic import rights by export-based import privileges (EXIMSCRIP). The mechanism serves to accomplish both self-restraint over imports, as well as provision of the requisite incentives to every enterprise to export in fulfilment of its own needs; in fact it even encourages exports in excess of these needs by offer-ing the enterprise the true opportunity-cost value of the dollars earned instead of a statutory low value. The mechanism proposed is flexible enough to handle the current as well as more fortunate future situations and also to effect national in-dustrial policies.

> As EXIMSCRIPs represent fiscal rather than physical control, administration is both simple and flexible. The cost of administration of import licences is avoided in the proposed scheme; the cost currently incurred in handling export related banking transactions, would be diverted to the granting of EXIMCRIPs

An EXIMSCRIP is a transferable scrip which permits the holder to import, sub-ject to the import tariffs set, any permiss-ible goods up to the value of the scrip. In a sense it is like a restricted foreign-exchange currency only available in the form of bank balances, whose use is re-stricted to India and to imports of per-missible goods. It is earned by exporting goods and services, and being a form of currency it is transferable to other eligi-ble persons.

The national ratio of total EXIMSCRIPs to be issued during the year to the value of exports anticipated is set each year on 1 April and is called the annual balance of trade target (BOTTARGET) which may well exceed 1, to permit imports to ex-ceed exports, as at present. Although the concept permits different ratios for dif-ferent types of exports, simplicity is the key to administration of the massive vol-ume of imports and exports and it is advisable to have a single ratio apply to all exports. Other than government's own purchases (departmentally), EX-IMSCRIPs would be the only currency with which imports of any goods can be paid for and would substitute completely for import licences as well as the OGL.

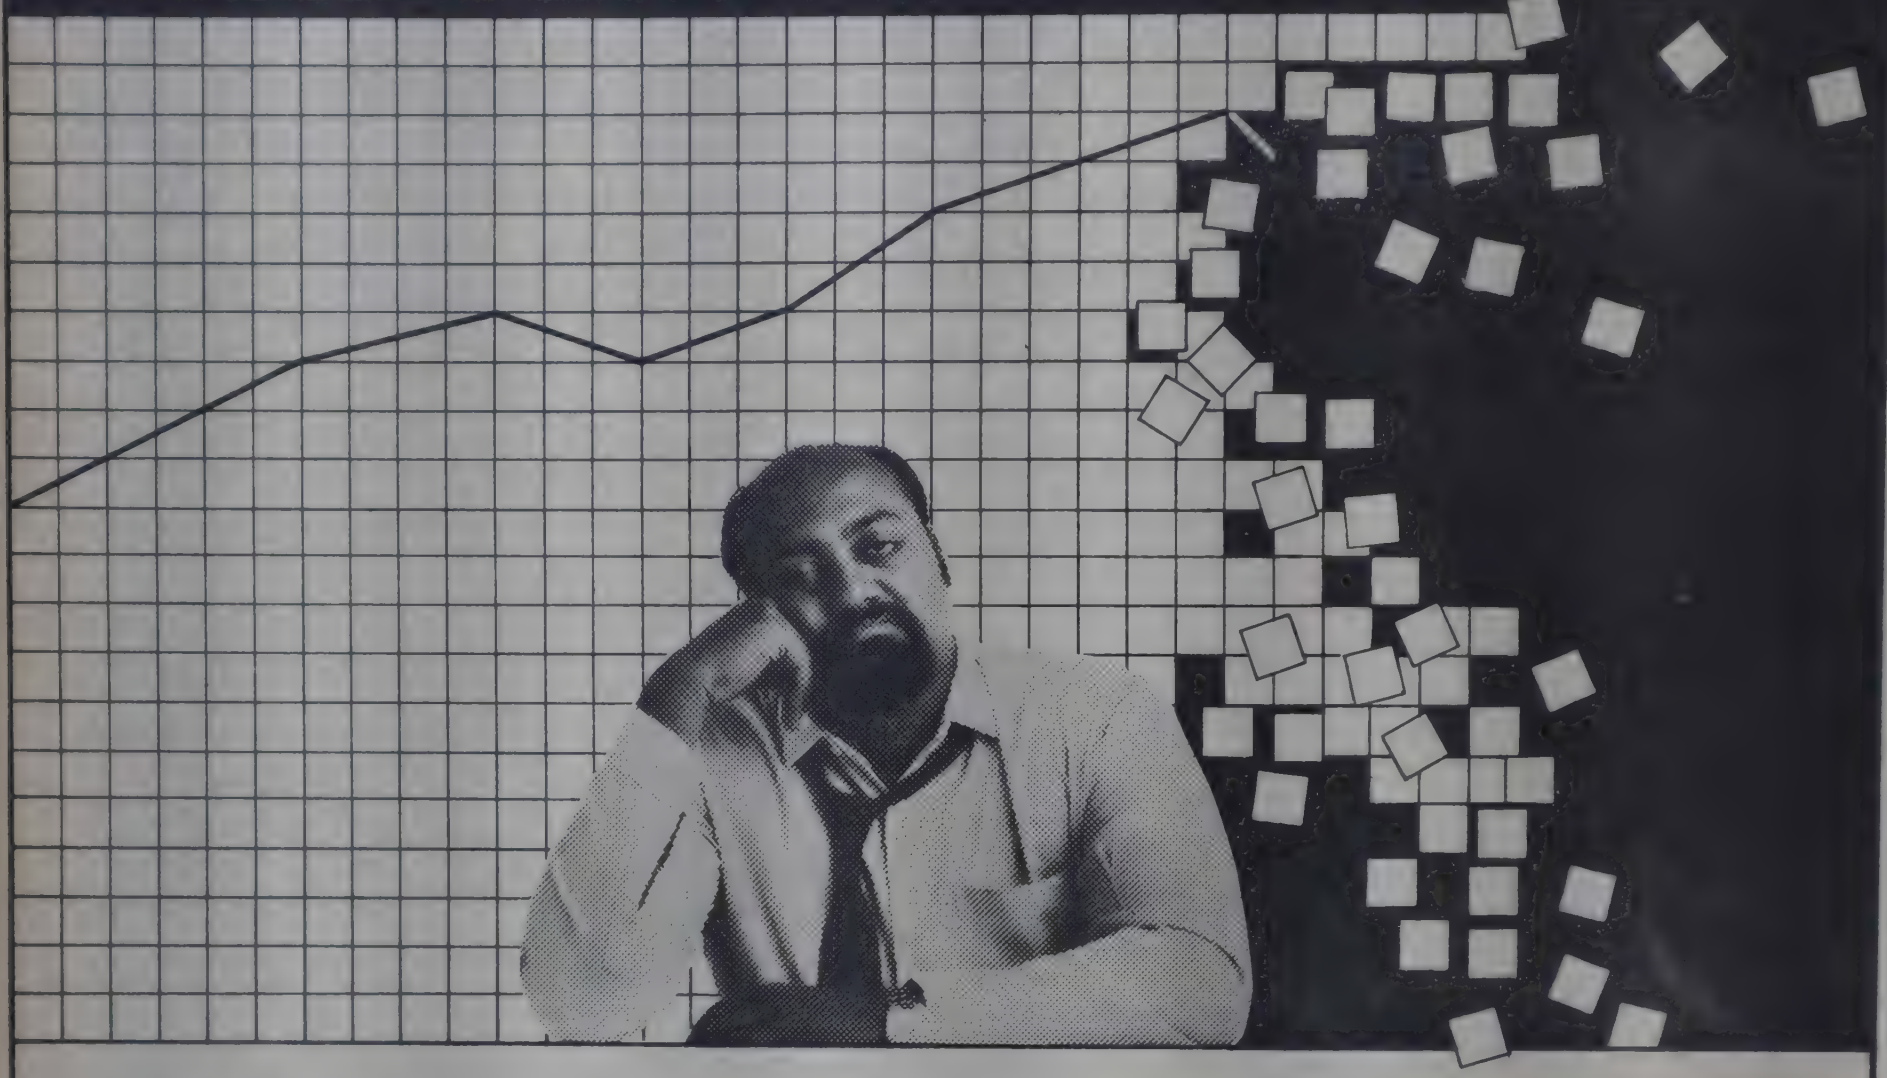
Transferable and flexible

As the scrips would be transferable, they can be given to other organisations to import their needs up to the value of the scrips; the monetary basis rather than physical-item basis of import licence permits this transferability freely. Of course, premia on transfers of EX-IMSCRIPs are both to be expected and encouraged. The government can exer-cise a fair degree of control over the pre-mium by controlling the BOTTARGET.

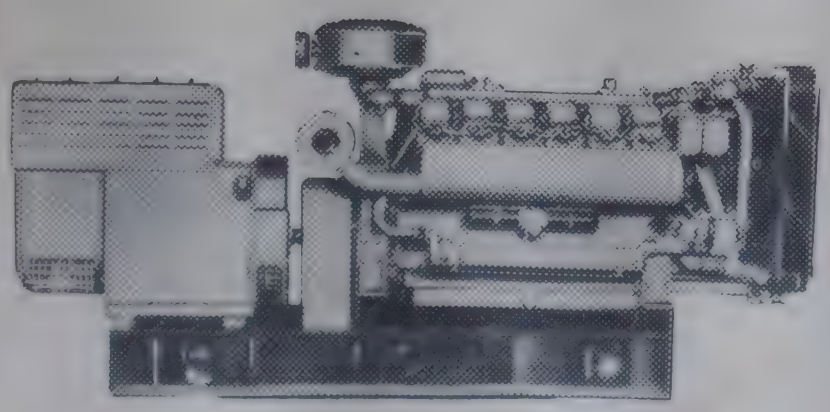
The entire process is quite indepen-dent of the mechanism of today's Re-Book, or the import tariff setting mecha-nism, to specify goods permitted to be imported at all, by anyone. It merely re-places individual detailed physical li-cences by broad value-limited impo-privileges. And unlike REP licences whic-are restricted in terms of shopping lists items permitted to be imported and thu-subject to cornering and other anti-com-petitive practices, EXIMSCRIPs are li-money and so quite general, permitti-say a shoe manufacturer to use an ele-tronic company's EXIMSCRIP to impo-his requirement of soles or other requi-ments. This generality also limits the pr-mium chargeable by an EXIMSCR-holder because there are many holde-that an importer could approach.

The non-specific and transferal properties of the EXIMSCRIP should a help reduce the inflexibility faced manufacturers when changing sources supply, model mixes and features acco-ing to market changes. Instead of go-back to the authorities each time to the item-list in the import licen-

"If only I had planned for an MWM DIESEL GENSET before production began..."



MWM DIESEL GENSET
Your guarantee for uninterrupted power supply



Make a wise investment. While setting up your manufacturing plant, install an MWM Genset – your security against production losses due to sudden power failures.

An MWM Genset undergoes rigorous tests at every stage of assembly. And is perfected for 'round-the-clock performance at full load capacity.

It is rugged, compact. Easy to operate and maintain. Extremely fuel efficient. And runs for longer periods between overhauls... The most reliable buy for captive power supply.

The complete genset is backed by a warranty period. And Greaves' nationwide network of 21 branches for prompt after-sales service and supply of spares.

mended in terms of descriptions, quanties or country of origin, the importer ow merely orders different components/ aw-materials from the most economical ource at the time and uses up his import rivileges to that monetary extent.

Implementation of phased manufacturing policies would be through the list of nationally permissible items for import and through import tariffs, not through individual company PMPs. The expected premium on EXIMSCRIPs would provide its own discouragement for unnecessary import, as does the tariff mechanism. Moreover, the BOTTARGET ensures that overall national imports do not get out of hand as the current PMP mechanism is unable to do (e.g. large personal computer component imports).

Ensures balance

As EXIMSCRIPs represent fiscal rather than physical control, administration is both simple and flexible. The cost of administration of import licences is avoided in the proposed scheme; the cost currently incurred in handling export related banking transactions, would be diverted to the granting of EXIMSCRIPs.

Unlike export obligations in which a manufacturer merely promises exports to balance his imports, the EXIMSCRIP would ensure that exports and imports are in reasonable balance. A manufacturer who might otherwise have been subjected to export obligations may now generate no exports; however someone or the other in the country has to generate those exports and EXIMSCRIPs for him to be able to purchase the scrips for his imports. The premium mechanism ensures that the exports that he generates always provide him his imported inputs at a much cheaper price than purchased EXIMSCRIPs do; this is incentive enough.

A major reason for not floating the rupee in relation to foreign currencies is the major impact on costs of imports, especially government imports. As government imports (not to be defined to include public sector corporations as well) would not be subjected to the EXIMSCRIP mechanism, the government would have to pay no premium on imports although all other importers do. This premium too can be varied by the government by control of the BOTTARGET from year to year, thus preventing drastic impacts on costs of imports.

No restrictions

Let us now answer some questions that will be asked about EXIMSCRIP. Is not the EXIMSCRIP like the IMPORT-EXPORT PASSBOOK? No it is not. Passbooks are private entitlements of individual exporters and do not convey any transferable privileges; thus a non-exporter involved in import-substitution activities cannot utilise the passbook privileges.

Is not the EXIMSCRIP like an REP licence? No it is not. REP licences primarily replenish the exporter's raw material requirements, and so comes with a restricted shopping list. In contrast, EXIMSCRIPS have no restrictions on what can be imported with them, other than the contents of the entire RED Book. Moreover, REP licences are a small fraction of exports in their value; in contrast EXIMSCRIPs are equal to or more than the exports in value in order to provide adequate resources for imports.

Is not the EXIMSCRIP idea like floating the rupee? No it is not. First of all, direct government imports do not need EXIMSCRIPs and so would not be at increased cost as would be the case if the rupee were floated. Secondly, if the rupee were floated, the price of a US dollar (say) would rise, to reflect the greater demand than supply, until imports were discouraged sufficiently for demand to fall to match exactly the supply of dollars. In contrast, the supply of EXIMSCRIPs at a macro level is controlled by the government through the BOTTARGET and can exceed the export value by any amount the government wishes, thus permitting a managed imbalance in the (import-occasioned) demand for EXIMSCRIPs and the value of export earnings. In this respect, EXIMSCRIP management is like money supply management inasmuch as it is to be managed at a macro level, while the micro-level activity is completely free.

Enough safeguards

Will not the EXIMSCRIP concept hurt import-substitution industries? No. It will not. EXIMSCRIPs earned by an exporter have only three uses — use for own imports, save for later imports (more on this later) and sale to someone who needs them. Thus EXIMSCRIPs that cannot be utilised by an exporter himself, must be sold for them not to be worthless. Through the BOTTARGET, the government can ensure at a macro level that the total supply of EXIMSCRIPs is adequate to service all imports, especially those of import-substitution activities. Thus there will always be scrips available to import the requirements of non exporting enterprises. Incidentally, what about EXIMSCRIPs saved, one might ask. These would earn no interest and would in any case remain with the banking system, providing a sort of forward cover of scrip-supply for the exporter against future needs; the zero interest would ensure that it is advantageous to the exporter to sell the scrip rather than keep it unutilised.

Would not there be a danger that EXIMSCRIPs could be forged? No. EXIMSCRIPs would be handled only as bank accounts and no more precautions are necessary than are already required to manage rupee accounts in the banking system.

There are schemes similar to EXIMSCRIPs in other countries, but most have disadvantages that EXIMSCRIPs do not have. Thus the French dual exchange rate mechanism for trade-related flows and capital-flows had some of the opportunity-cost-valuation characteristics of the EXIMSCRIPs but are messier to handle. Yugoslavia permits its exporters to import differing amounts of goods from different countries to which exports have been made, creating a more direct coupling of exports and imports as EXIMSCRIPs do; however their motivation appears to be more to implement modified rupee-purchase type buying preferences. Australia has an 'offset programme' that provides an incentive to export by similarly coupling import privileges to exports at least in some areas however their balance of payments situation is quite different from ours. Ultimately, our solution must of course be Indian one, tailored to Indian circumstances and priorities; this is what EXIMSCRIPs represent.

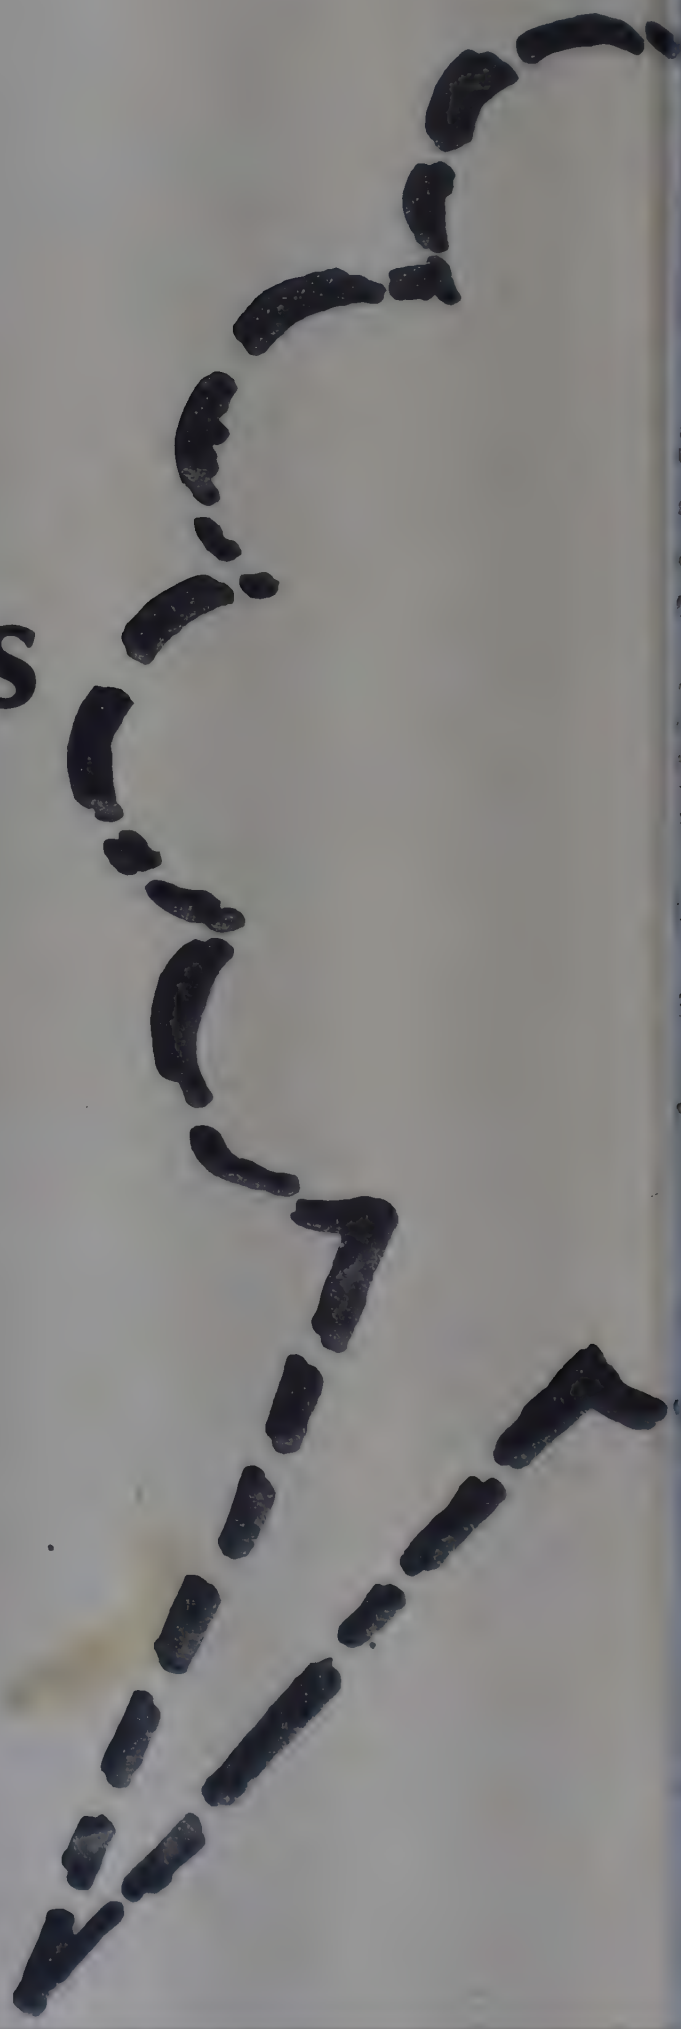
PERIWAL GROUP

How the country's premier cable company let the steam out of its system.



To bring you superior cables.

The process that makes the difference

The Cross Linked Polyethylene (XLPE) cables from Premier Cables are manufactured through a revolutionary process : the CDCC process.

This Completely Dry Curing and Cooling process, developed by Nokia of Finland, uses nitrogen gas as the curing and cooling medium.

And not the conventional steam used by other cable manufacturers elsewhere.

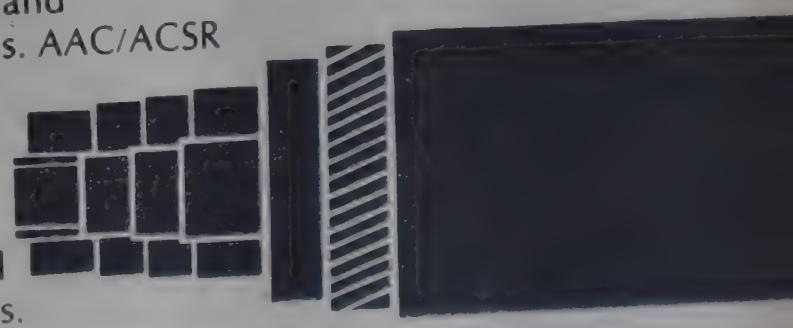
The advantages are several.

Homogenous insulation totally free from microvoids and water trees. Higher AC breakdown strength. Higher impulse breakdown strength. Smooth insulation, free from undesirable charges. Longer cable life. Low transmission losses. And virtually maintenance-free service.

From EHV downward, total capability in cables

For EHV applications, Premier Cables manufactures XLPE cables up to 132 KV.

Other cables include PVC, Power, Control and Signalling cables. AAC/ACSR and aluminium alloy overhead conductors. Cotton and paper-covered wires and strips.



Fire Resistant Low Smoke (FRLS) cables are manufactured with special compounds and smoke suppressants – the outer jacket resists even intense heat and helps contain the fire from spreading.

The latest additions to the range of Premier Cables are the Remote Temperature Detection (RTD) cables and Aerial Bunched Cables (ABC).

RTD cables are capable of measuring temperature remotely through resistance comparison bridge, enhancing safety.

ABC cables are the ideal solution for rural electrification projects in India offering several advantages like higher reliability, lower transmission losses and lower installation costs.

And now, turnkey projects

Premier Cables now offers you its cable-laying expertise through its Contracts Division. The services include pre-installation advice to selection of switchgear and transformers, on-site cable laying and jointing.

Making Premier Cables not only your prime source for cables but also for cable-laying expertise.

Cables that make all the difference.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

ADMISSION NOTICE

THE CFA PROGRAMME

(In collaboration with the Institute of Chartered Financial Analysts, USA)

The CFA Programme is designed to provide specialised training in Corporate Finance, Investment Management and Financial Services leading to the designation of '**Chartered Financial Analyst**'. More than 8000 candidates have already enrolled in the CFA Programme from all over the country.

National institutions like IDBI, ICICI, IFCI, UTI and many companies have approved the CFA Programme for reimbursing the fees.

ELIGIBILITY

Graduates (any discipline). Final year degree students may also apply. Exemption from the Admission Test is granted to certain categories of candidates like CAs/AICWAs/ACSs/MBAs/First Class Graduates etc.

For Prospectus and Application Form please write to The Admissions Officer giving your address and enclosing a DD for Rs. 50 favouring ICFAI, payable at Hyderabad.

The Institute of Chartered Financial Analysts of India
Road No. 3, Banjara Hills, Hyderabad - 500 034.

Can you spot Littlemore's Client?

The gentleman, sitting comfortably on the chair, is one of Littlemore's client. Today, he has very few worries and has all the reasons to smile.

Labour bites the dust

The trade union movement in West Bengal appears to have come full circle. The state's fiery trade unions which, during the late sixties considered 'gherao' their constitutional right, appear to have been tamed at last. The traditional call for a strike has now been replaced by requests for collective bargaining.

In the six prominent union-management disputes during 1988, the unions have come off worst. Whether it be in profit-making Bata and Dunlop or in sick Metal Box and Guest Keen Williams (GKW), the unions have just not been able to assert themselves during negotiations.

Metal Box: meek union submission

The union in Bata failed to call the management's bluff when it threatened to close down operations at the Batanagar factory employing over 9,500 workers; it meekly signed an unprecedented 230 point settlement considered historic in industry circles. The Bata Mazdoor Union had successfully picketed all Bata retail stores in Calcutta during the festive season when sales are at the highest. Even then, the management did not back down, and simply dismissed the union's demand for the lifting of the lockout as a precondition to any negotiation.

GKW: sick and closed

No major gain

Similarly, a strike by the Dunlop union at the company's oldest factory at Shahgunj since August this year had to be withdrawn, and the unions failed to wrest any significant gains beyond what was offered by the management prior to the strike. Corporate gossip has it that the Dunlop strike was prompted by the Goenkas once they realised they could not hold on to the company. The Chhabrias on the other hand were keen to resolve the strike once they took over Dunlop — hence the quick solution to the strike.

Both the Bata and the Dunlop settlements are being perceived as instances of failure of the trade union movement. Will a similar union debacle be witnessed in Pieco Electronics and Electricals also? On 15 December, a wholly owned subsidiary of Pieco, Electric Lamp Manufacturers of India Ltd, declared a lockout at its factory in Taratolla, which employs around 1,200 people. Its unit at the Salt Lake electronic complex is also in trouble. The unit is unviable and a drain on the company's finance. A labour settlement is a possible way out.

Managements look at the situation in a different light. "It is not a question of winning or losing, but a question of making the factory viable," says K.V. Shanbogue, general manager, corporate affairs, Bata. "The recent agreement would not have been concluded unless the logic of the management's stand was understood. From the outset it was never a negotiation but rather a straightforward discussion aimed at the survival of Bata through the restoration of manageability, viability and discipline."

Industry experts feel that the trade unions have far too long been entrenched in their traditional ways of thinking. The day of the strike is over and go-slows are no longer the best methods to extract optimum results.

"Trade unions are no longer keeping in tune with management practices," adds a senior official of Dunlop. Says Mani Shankar Mukherjee, vice president, corporate relations at Dunlop, "This is the era of productivity linked wages, and the workers must condition themselves to this."

The West Bengal government has come in for much criticism. Its mediatory efforts to secure a better deal for the workers have not amounted to much, it is said. There is a feeling that in its determined bid for industrial revival it has turned its back on militant unionism.

Shanti Ranjan Ghatal, minister of state

5 GOOD REASONS WHY YOU SHOULD TAKE THE MACHINERY BREAKDOWN INSURANCE POLICY FROM UNITED INDIA

1 The Production Reason

"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry. Targets can't be met. Downtime goes up. Everything goes haywire."

2 The Finance Reason

"Cash flow disruption. Short-term financing. Locked-up working capital. All this can make a big difference to profits."

3 The Personnel Reason

"Deployment of labour becomes a problem. Overtime later to make up for production loss. Employee morale goes down. If we can't manage machines, we can't manage men!"

4 The Marketing Reason

"Availability and flow of products into the market can make or break a company. Loss of credibility among distributors and customers will allow competitors to get their foot in. It'll be marketing suicide!"

5 The Maintenance Reason

"Turbines,compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses. I'm not God, I'm only a man. I'm not even a machine!"

Avoid management by crisis. Make insurance a part of your policy.

Any kind of mechanical and electrical machinery — at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

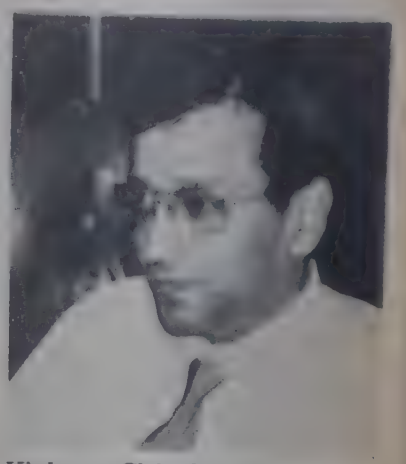
HTA 7014

or labour, however, says, "At least the West Bengal workers have been spared sweeping retrenchment as in the textile mills in Maharashtra and Gujarat." Calling the recent settlements "a temporary setback," Ghatak says that under the circumstances the unions have not done too badly in wage increases — especially in the case of Dunlop. The other wage benefits were already a part of a settlement negotiated by the labour minister and concluded before the strike. Ghatak does say disapprovingly, "After the state government's successful negotiation earlier there was no need for the unions to go on strike."

Ghatak: workers in Bengal better off

Mukherjee: for "responsible unionism"



Kishore Chhabria: keen to resolve issues

Financial failure

"The recent events are being falsely seen as trade union failure, when there has been no such thing," says Sabyasachi Sen, the West Bengal labour commissioner. "The present situation is more directly a result of management and financial failures, rather than any case of labour indiscipline."

Reactions from the trade unions vary. Says Monoranjan Roy, president CITU (Centre of Indian Trade Union), "It is not that the workers have become defensive. The recessionary economy, a result of faulty economic policies coupled with the mishandling of capital by industrialists, has perpetrated the present situation. The workers as usual bear the brunt of it."

Some consider the recent happenings as signs of an unequal battle, and rationalise their defensive stance as "responsible trade unionism".

Saugata Roy, a prominent Congress (I) leader and a well known unionist, is of the view that "workers, given the current economic situation, have become much more realistic. They have to stage a rearguard action in the face of the massive employers' offensive".

The change in attitude is clearly reflected in the sharp reduction in the number of mandays lost. In 1981, strikes contributed to about 27 per cent and lockouts 77 per cent of the total mandays lost. In 1987 only 6.8 per cent of mandays lost were on account of strikes and lockouts accounted for 93.2 per cent. The average duration of a strike, which in 1981 was for about 36 days, came down to 17 days in 1987, while the average duration of a lockout over the corresponding period increased from 69.4 days to 137.9 days.

Fate undecided

The fate of the two companies under lockout, GKW and Metal Box, is yet to be decided. Even the phased reopening hinted at is doubtful, unless the workers agree to accept the golden handshake offered. The funding agencies have said that voluntary retirement by a large section of the workers is a must if funds are to be pumped into the companies for revival.

Besides these large units, about 70 large and medium units in West Bengal in the organised sector are lying idle today; over 150,000 workers are jobless. And the number of small ancillary units which have closed shop runs into thousands.

Trade unionists don't quite know how to respond to the new management militancy. Unions in the state grew with the early days of industrialisation and were comfortable till the mid-sixties, when heavy investment in the core sector steadily created employment and the skilled labour market was buoyant.

The main thrust of the unions at that time was to wrest a better deal for the workers. The movement has found itself trapped by its inability to go beyond the "we want more" syndrome.

The late sixties witnessed a sharp rise in union militancy in the state with the communists coming to power. Also, it was around this time that jute began to lose out to synthetic packaging materials. Most of the engineering giants like Jessop and Texmaco, which had played a pivotal role in the state's economy, fell by the wayside for want of funds. The state witnessed a massive flight of capital.

All this upset the normal economic

Bata: the strike ended in a whimper

Dunlop: scene of a corporate battle

conditions in the state and the workers found themselves facing a tough situation. But right through the seventies the rigid labour laws made it difficult for employers to get rid of the workers and the state government's policy sheltered the agitating workers of a sick industry by nationalisation of sick units. However, both were artificial props, and in the eighties, when the 'state sector' became an unfashionable concept, the government woke up and decided not to resuscitate its terminally ill industries.

Prop removed

In West Bengal itself, Bengal Potteries and Sree Durga Cotton and Spinning Mills, previously protected by the government under the Industrial Development and Regulation Act (IDRA), have been denotified. According to Saugata Roy, it is the sudden removal of such props that destroyed the basis on which the workers were earlier fighting.

The managements on their part are realising the need for the flab to be trimmed and for modernisation of their plants to make them more competitive and commercially viable. And modern technology has little place for a large labour force.

It is against this backdrop that the unions are searching for a solution — and not finding any. Much rethinking is called for in the state today. There is a need for specialised advisors, trained business managers and accountants who know the ropes and can promote easier management-union relations. "The unions can afford to hire professional consultants which is much better than relying on politicians to solve their problems," says one observer. Monoranjan Roy of CITU, however, dismisses the idea of hiring professional consultants, saying that it could work in highly developed countries, but would be "impossible in an industrially undeveloped or developing country".

A more promising alternative is the Kamani way, where a workers' co-operative now runs the unit. But this example has by and large failed to inspire the workers in West Bengal. Some unionists feel that "in a market economy, mere ownership will not solve problems". Others like Saugata Roy say: "Our workmen do not seem to have enough confidence. We are not ready for it yet."

One thing is clear. The unions are unlikely to take the militant postures of old. As Subrata Mukherjee says, "Irresponsible trade unionism is a luxury we can't afford now".

The Unforgettable Twin

Presenting a track record of higher productivity.

The Hindustan D6H Crawler-Tractor. Elevated sprocket design, powershift transmission, sealed and lubricated tracks and redesigned push arms help it move material faster, better.

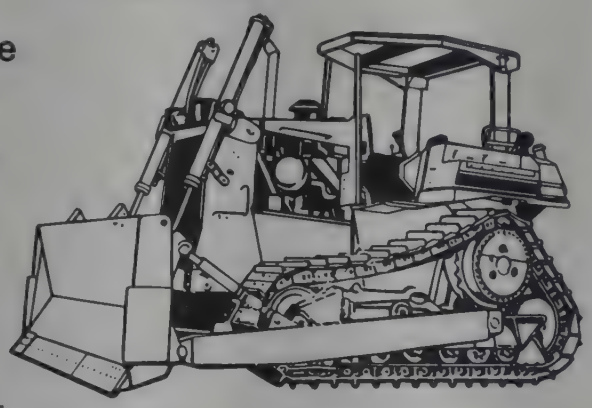
Better ground contact

The D6H has an elevated sprocket design. Among the many benefits: more track is on the ground at any moment improving flotation; the roller-frame mounting location has been shifted to optimise balance and centre of gravity is pushed forward, at a correct height. What's more, ground clearance is better, so the D6H Crawler-Tractor can work on terrain that would defeat any other.

38% more pryout force

Redesigned 'L' shaped push arms hold the blade closer to the body. This, in combination with the forward centre of gravity improves penetration. Pryout force is increased by making the lift cylinders nearly vertical. Control too, is superior because of very limited sideways blade movement.

Digging and moving out material can be done much more efficiently. Finishing too, is improved.



Electronic monitoring for safety

Vital functions of the D6H are monitored constantly. Three warning levels alert the operator well in time to take corrective action to prevent damage to the machine.

Frugal on fuel, low on maintenance

A direct fuel injection system with 'scroll type' metering enhances fuel efficiency. A high torque rise of 25% increases lugging power and speeds response to changing loads.

Maintenance gains by the modular design of the powertrain. Each major assembly can be removed independently of the others. Components can be assembled and tested before installation. ***Downtime is therefore reduced, significantly.***

Of course, Hindustan supports customers with better parts availability, service, tooling and training.

A range of equipment

The Hindustan range of earthmoving equipment comprises dumpers, loaders and crawler-tractors. It's a blend of Hindustan Motors' experience and Caterpillar technology.

The sum : productivity

Hindustan Motors stretches your investment to its fullest. It provides the best in technology. And offers a range of hard-working, reliable machines to choose from, whose performance has been proven in the toughest spots world-wide.

Get Hindustan. Get productive.

Disagreeing with the boss

A crucial question of managerial ethics is when to differ from one's superior or employer. An extreme form of this ancient problem was faced by Thomas Beckett. Those who saw the film starring Richard Burton or, better, read "Murder in the Cathedral" by T.S. Eliot, will recall that Beckett was King Henry's man. He had risen from humble origins to chancellorship; along the way, he had become Henry II's confidante and companion — even in adventures not fit for publication in this journal. But eventually, upon being made Archbishop of Canterbury, Beckett felt obliged to take a stand against his King. The rewards were death — and immortality and canonisation as a saint. In business life, we do not expect such drama though, for example, an audit clerk was murdered in Dhanbad, apparently because he was too diligent.

A boss has many claims upon one: he may be an elder, a relative, a guru, a protector. Usually, he has greater power, social standing and experience. A subordinate may feel uncomfortable even thinking at variance from his superior.

Didn't feel right

Robert McNamara, one of president John Kennedy's "best and brightest" as defence minister and still later head of the World Bank, was once president of the Ford Motor Company. He was member of a group of analysts who sold themselves to Henry Ford II to cure his giant, ailing business. Subsequently, to cut costs, large Ford plants in Massachusetts and Texas were shut down. McNamara called a meeting of top executives to consider further closures. No one could really fault the impressive recommendation before the even more impressive boss. But it did not feel right. Finally, a veteran joked, "Why don't we close down all the plants and then we'll really start to save money?" There were no more closures and the company went to a new peak of performance.

This illustrates not only when to disagree but how. There could be other times and ways. As a freshly articled clerk I was asked by a senior, under pressure of time, to sign off on my section of an audit before I was satisfied. "After all," he said, "I am finally responsible for even your work." The Eichmann trial being still fresh in our memory, my boss was shaken when told that the Nuremberg doctrine did not allow me to abnegate all responsibility on his instruction. (At Nuremberg international jurists condemned Nazis who had committed atrocities, rejecting the defence that they had acted on instruction from superiors.) In the event I got away by working all night to beat the deadline. And youth and cheek were mitigating factors. However, I believe the principle is defensible: one can never wholly avoid individual responsibility. The idea of "neutrality" in bureaucracy (ie policy is made at the top and faithfully executed at all other levels) is seriously in doubt.

The difficulty arises because organisations are set up to do that which cannot be done, or done efficiently, by individuals acting independently. Hence organisational rules and norms restrict independent action. They also restrict individual responsibility since otherwise no one would accept a constraint on action. However, this can go too far so that stupidities or atrocities are perpetrated.

Each player in an organisation could analyse each disagreement as follows. Firstly, is it a difference of opinion or a point of principle. For example, a difference of opinion might arise if the boss wants to paint all doors red whereas I think muted colours would be appropriate. In such a case, I might argue briefly and then drop the issue.

A matter of principle might arise if someone insisted that all painting contracts be given to a particular party ignoring the offers of others more competent and cost effective. I would be justified in giving battle in such cases, especially if substantial matters are involved.

Principled fight

It can be tricky deciding what is substantial, when the fight for principle is non-trivial. A new accountant once queried a Rs.600 taxi voucher. It turned out to be the claim of the chairman of the company, who brushed aside the query, publicly stating that he had hired the cab all evening to entertain a lady of easy virtue! Six hundred rupees was easily overlooked in such a large company. However, many such oversights may have conjoined and been compounded for, after a period of hubris, the chairman and other directors of the company were accused of fraud and crime (especially under FERA and COFEPOSA). Matters were hushed up, but not before the principal actor was found dead with a suicide note saying that he had lost control. Perhaps strong dissent after his early transgressions would have helped this chairman.

Even a significant single point of dispute may not be worth a serious fracas. I may, generally, enjoy my job, feel my organisation is worthwhile, have constructive relationships with my colleagues. So, if one of them has a serious disagreement with me, it may be undesirable to carry the conflict to the departure or incapacity of either of us.

Traditional advice

How then does one disagree with the boss? Humour, surprise and charm have been exemplified. Persuasion and tact would be the traditional advice. This would include the dicta that one may argue in private until a decision is taken: thereafter one must close ranks to implement the decision (theorists refer to this as the ethic of "structure") or resign where the occasion demands. In our *kalyug*, this seems unfit for universal application. If a chief minister resigns, a considerable point is made. However, the resignation of a middle manager usually passes unnoticed. So it may be necessary to battle the evil from within. How exactly that would be an issue of managerial politics rather than ethics is best left for another time. But simple tactics such as stalling or asking written instruction have proved remarkably effective. In extreme cases, persons have quit and continued the fight from the outside.

THE POWER OF

HEADING FOR THE TOP WITH

The fast changing world of computers now has a name with the power to take over the No.1 position. PCL Computers.
It's the one year old venture that's taken the entire Indian computer industry by storm.

Setting up an astounding installation base of more than 5500 computers in this short span. And today, increasing that figure at a monthly rate of virtually 500 computers!

That's an achievement born out of the people's faith in not just our hardware, but also our service and support systems that are unquestionably one of the best in the country.

Proof of which is PCL's exclusive uptime record of 99.8% on all machines, and repeat order track of almost 70%!

Here, take a closer look at all that PCL offers you :

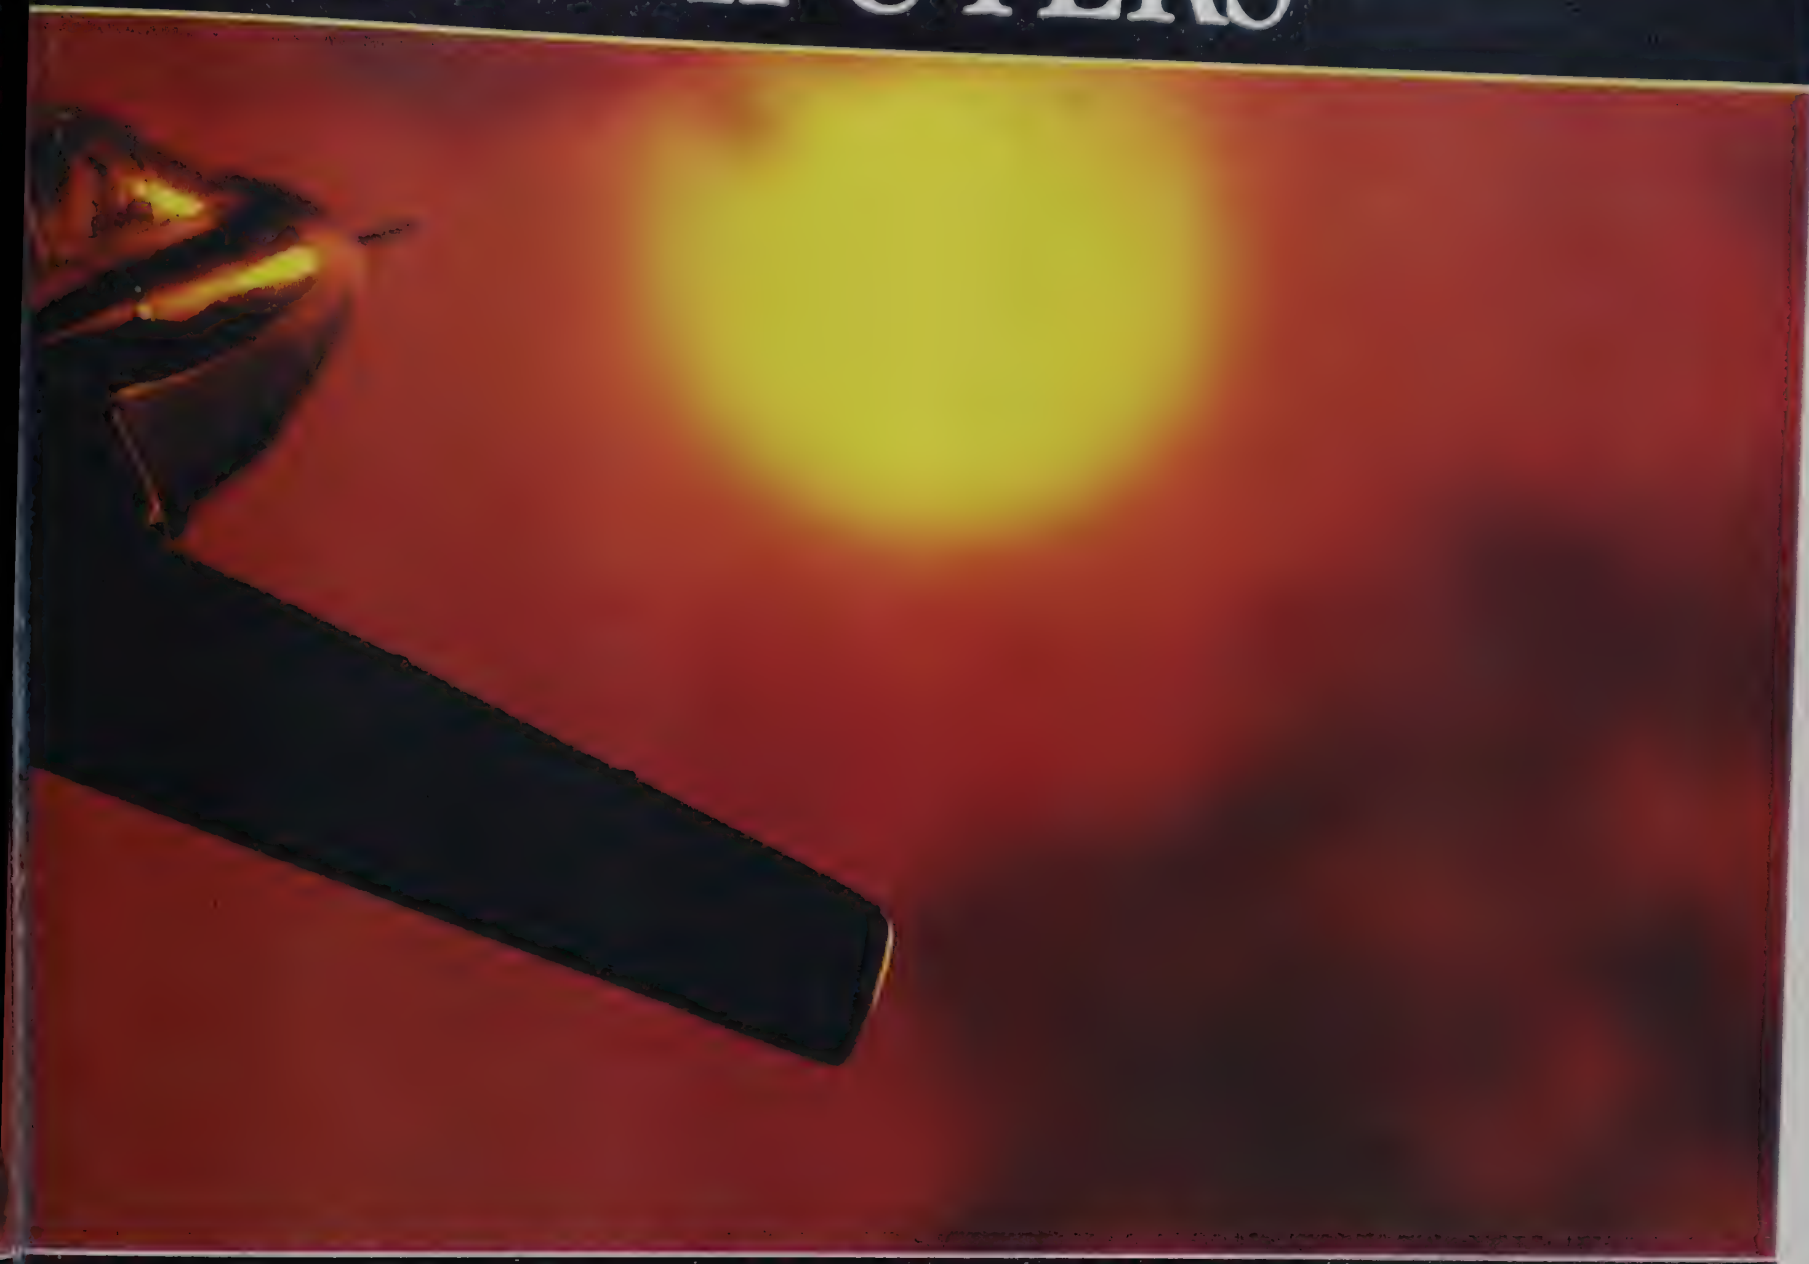
The fastest growing hardware range

Five years ago, PCL started by offering you basic office equipment like electronic typewriters. In July '87, after establishing the strong and efficient infrastructure absolutely essential for a service-oriented industry like computers, PCL launched its Computer Division. And now, within a year of its inception, it offers you a complete range of PCs, PC-XTs, PC-ATs, 80386-based systems, mini computers, office publishing systems, electronic telex systems, modems, CAD/CAM/CAE, LAN, EWS and printers. And of course, the whole host of peripherals ranging from special cards to plotters, digitizers and even constant voltage transformers!

The fastest growing support network

PCL has grown tremendously since it started with a small team of just 15 people; today it has a massive workforce of more than 800 people

PCL COMPUTERS



THE FASTEST GROWTH RATE

working with commitment in every part of the country, from PCL's nationwide network of 48 offices.

Each of our professionals has been carefully selected from India's premier technological and management institutes. Then, in accordance with their talents, inducted into specialised groups – Industry Marketing, Customer Services, System Engineering, Customer Engineering and Application Support.

And, with over 50,000 man months of industry experience, who better than them to advise you on everything, from site selection to choosing the right computer and software?

In addition, they will help you make optimal use of your computers and, as and when the need arises, upgrade them in the most cost-efficient way.

Of course, if it's special software you need, they will even develop customized packages for you!

Small wonder that the PCL promise is almost impossible for the others to match, leave alone beat!

PCL

India's fastest growing computer company.

Will the grey in a grown man's wardrobe die a silent death?

Sobriety and understatement. Virtues of the best-dressed men in every decade.

Virtues that a grown man will always find alive and thriving in a readymade package: Park Avenue.

From the fabric that has been subjected to 250 'Perfect Fabric' tests to the genuine horse-hair buckram interlining. And from the expensively hand-stitched look of the lapels to the superb notch collar. Park Avenue Suits, you discover, still emphasize the one thing that survives every antic of fashion:

Style.

Style ...
it never goes out of fashion.
The Park Avenue Collection.
Readymade for you:

Suits, Jackets & Blazers

Safaris
Trousers
Shirts
Kurtas
Jeans
T-shirts
Woollen Knitwear
Ties
Scarves & Cravats
Handkerchieves
Socks
Belts & Leather Articles
Men's Toiletries

E.A. RAMASWAMY

The price of appeasement

A strange coalition is emerging in segments of the public sector between top management and the trade union. The management is learning to cope with industrial relations without plunging into headlong confrontation with the union. The policy is simply to appease.

Together, the union and management keep up a facade of industrial harmony. There are skeletons in the cupboard, but the union and management are so much in it together that they strain every nerve to keep the skeletons from spilling out. It is a strategy which, in due course, evokes protest from both ordinary managers and ordinary workers, but who cares for them so long as appearances can be kept up?

Here is an interesting case: The scene is one of our largest and most successful public enterprises some years ago. So popular is the union president that graffiti extolling his virtues is scribbled on walls for miles around the plant. Union office bearers, some three to four hundred of them, punch in and out as they please. Proxy punching is a well developed practice.

The unit has a rather queer notion of production. The months from November to March are recognised as "production months". This is the time production shifts to top gear to meet targets. During the rest of the year, you wouldn't believe that the place really employs the thousands of people that it claims to. The few people who are around are sitting together in clumps and chatting away.

As the winter months approach, the union begins to bargain. It demands guaranteed additional payments to meet production targets. The demand has naturally escalated from one year to the next, but the management has always agreed to pay — overtime, production incentives, and other ad hoc or ex-gratia payments. It does not matter what the payment is called so long as it is made.

Demoralised management

There is a deep sense of demoralisation and frustration among managers. Their ability to manage is in serious doubt. Charge sheets invite threats and abuse. Workers have torn and thrown back charge memos. They have assaulted managers who pulled them up for proxy punching. Managers have jumped out of windows and run away to escape irate workers.

The managers have an association, whose primary objective is to give its members a modicum of protection from workmen. But the top management takes the view that executives have no right to form an association. They take no notice of the association, whether formally or informally. It is a situation where individual managers are fearful, and the collectivity of managers is ignored.

Interestingly, even the workers are not together in this game. Two other unions control nearly fifty per cent of the workers, but the management steadfastly refuses to deal with them. The unit has all kinds of participative fora. It is committed to quality circles. There are shop councils to discuss productivity, safety and so on. The firm even has a trade unionist on its board. But all these fora are restricted to the recognised union. The recognised union is seen by many workers as simply an instrument for the leadership to take care of its personal interests.

A journalist who did an article on this public sector behemoth for the *Far Eastern Economist* chanced upon a case study on industrial relations which narrated the above events. He had visited another unit of the same firm located more than a thousand miles away, but found more or less the same practices. Struck by the similarity, he wrote, 'The case may be an imaginary one but, at first glance, the unit at... bears an eerie resemblance to the scene described.' The case he had read was not imaginary, but real. What a fine art the business of managing industrial relations through appeasement has become!

The crowning irony is yet to come. In a situation where the top management stands emasculated, the majority of managers wish for open conflict instead of this humiliating acquiescence, and the workers themselves feel disenchanted, the union president has been collecting awards for leadership. And the recommendation comes from none else than the management. I quote from a letter written by the top boss to an awards committee:

'Dear Sir: I thank you for the letter regarding the award for excellence in public enterprise trade union leadership. I am proposing the candidature of Shri... Being the most popular trade union, the... has an enviable record of more than two decades and is extremely fortunate to have a man of vision, appreciation and involvement at its helm. Known for his leadership, workmanship, fairness, frankness, freeness, Shri... is the kingpin for patience, tolerance and right judgement for establishing excellent industrial relations and harmony throughout.

Is this good management or good trade unionism? Neither. It is an abominable apparition of both.

Hammered the ANVIL* Omega Designer

ANVIL 5000pc from the Computersmiths. Created in the 70's by the father of MCAE, Dr. Patrick Hanratty and refined over two decades by the technology leaders. Now, available from OMC Computers.

NVIL 5000pc is a high performance mechanical design software. It offers iperior facilities to model in space - designing in 3D,auxiliary planes, defined -ordinate systems, multiple view ports. Buttressed by fine tuned anufacturing drafting - unlimited conics, associative dimensioning, trimming, ometric tolerencing.

lodels can be built with revolved, ruled, lofted and developable surfaces. mplex shapes with Bezier and Coon's blend surfaces, curve driven and let surfaces. And NURBS for the exceptional user. All manufactured with bsolute integrity on the numerically controlled machine.

NVIL 5000pc, the ultimate in mechanical design. A software which is nown for its **power, compatibility, modularity** and **expandibility.** Yet nother, from the company that has offered so many innovative solutions in AD/CAM. With competence, reflected in its client list which reads like who's who of the Indian industry.

PERFECT DEBURRING IS AN INVESTMENT IN YOUR PRODUCT RELIABILITY.

MICO OFFERS TWO WAYS OF DOING IT.

Burrs in metallic components often choke your product's performance. As a quality conscious manufacturer, you are only too aware of the need for precision deburring. Imperfect methods push up rejection rates. And affect customers' confidence in your products. You need the right deburring solution for each situation.

THE ECM WAY

ECM (Electro Chemical Machine) is a technology from Robert Bosch GmbH, West Germany that has proved itself in applications worldwide. MICO-built ECMs, integrated with high production lines, have already established their efficacy.

If your search is for an objective deburring method that is free of manual or other influences, the answer is ECM.

Highly adaptive, ECM equipment configuration can be engineered to exclusive needs. The system is discrete and can deburr in precisely pre-selected areas. And it is effective on most metals.

ECMs have proved their reliability in over 300 installations worldwide. In a broad range of industries, where flawless components are vital to the final application.

THE MICO SPM RANGE

Also from MICO, who know microns better: High accuracy SPMs designed for low cycletimes. Auto part feeding and disposal. Pre-and post-process gauging. Multi-layer safety. Operator and Maintenance friendliness.

Technologies for precision fine boring, gun drilling and high accuracy grinding.

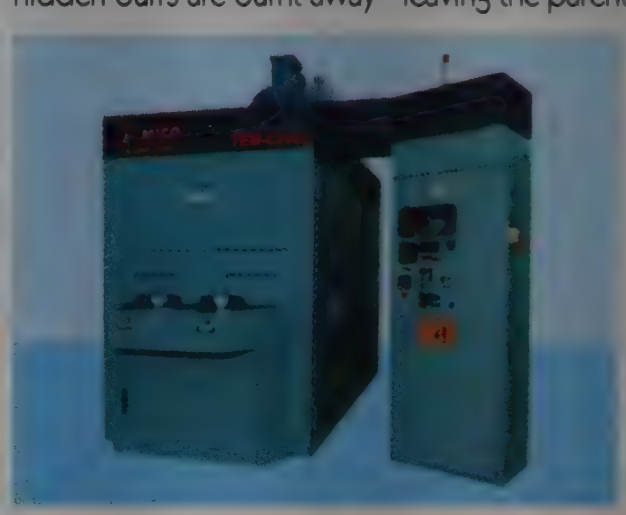
Manual and automated assembly stations. Modular in concept and fully ergonomic. For use in mass production industries.

Checking, measuring and classification automats. Indispensable for high volume inspection.

THE TEM WAY

TEM (Thermal Energy Machine), also developed and patented by Robert Bosch GmbH, West Germany represents by far the ultimate in critical and intricate deburring applications. In lightning quick time, TEM produces a flash of thermal energy which reduces burrs to a powdery residue.

In 20 milliseconds, internal, external and even hidden burrs are burnt away - leaving the parent



component intact. TEM offers one of the fastest set-up changeovers in flexible automation. And it accepts components of almost any metal, in any condition and of any profile.

TEM: It makes product excellence not a distant target but an instant reality.

The copier warriors

This marketing war might set standards for others to copy. And when it ends, the copier market in India will probably never be the same again. In a characteristic street smart blitz, HCL Ltd has launched a frontal attack on Modi Xerox's dominance of the copier market. The USP is a claimed Rs.30,000 difference in price, plus a boxful of trappings. Not surprisingly, observers are waiting for all hell to break loose.

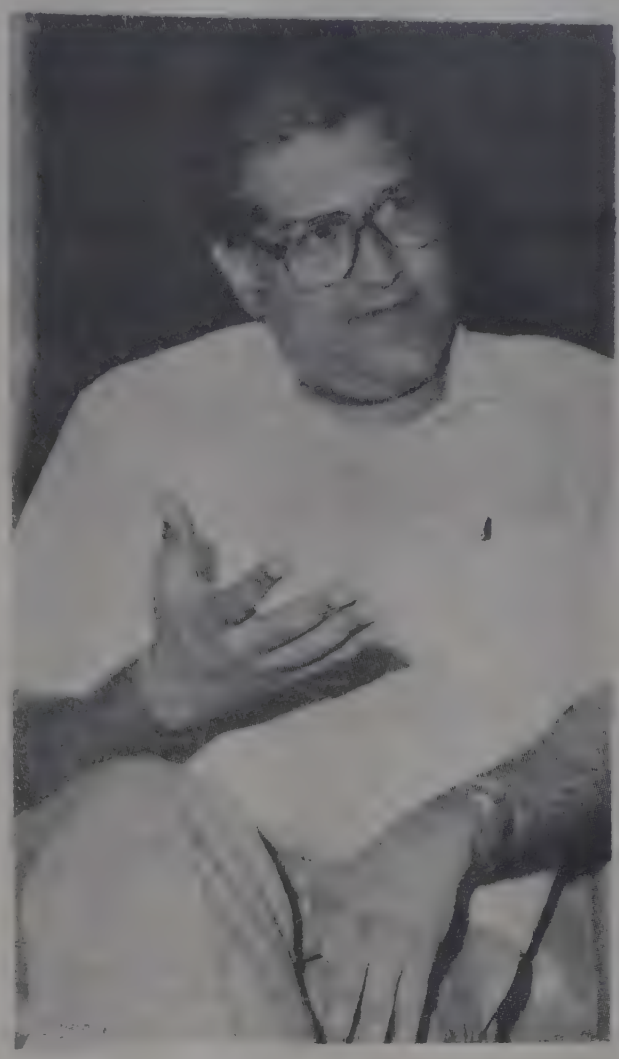
Modi Xerox managers don't seem to have lost their cool, yet. The chairman, B.K. Modi, is his usual brash and confident self. "Others have made claims before but where are they now?" he asks. But Arjun Malhotra, vice-chairman of HCL has other ideas. "Henceforth, we will drive the copier market," he asserts. The rest are keeping their fingers crossed.

Provocative ads

What triggered this storm in the hitherto somnolent copier market were four provocative ads in the dailies. The missile fired by HCL proclaimed that HCL had better technology, lower prices and a larger range to offer. If the campaign is to be believed:

- HCL has six varieties to offer as compared to Modi Xerox's two;
- A comparable HCL copier costs Rs.30,000 less than the one offered by Modi Xerox.
- HCL's heavy duty machine gives 120 copies a minute at 5 paise per copy. The Modi Xerox heavy duty machine gives fewer copies and that too at 17 paise per copy.

Modi: brash and confident



Malhotra: unfazed

Certainly the claims have been extravagant. "And why not?" asks an HCL spokes-person, adding that much is at stake here. There is. The copier market in India is worth Rs.200 crores now. And Modi Xerox is the undisputed leader with a hefty 40 per cent share — a fact which even HCL concedes. There are several other players in this game: Canon, BPL Sanyo, Kores, Gestetner for instance, but none have been able to withstand the Modi Xerox pitch: impeccable quality and service. And the Xerox pedigree.

But the big question now is: how will the latest HCL offensive affect the Modi Xerox market share supremacy? Despite adopting a public stance to the contrary, Xerox managers are definitely shaken and have been holding private strategy meetings.

A couple of years back a company had claimed that its copier could churn out 100,000 copies a month. But it has remained a small time player in the mar ket", says B.K. Modi commenting on the HCL campaign. "The consumer will now automatically compare the products. And I'm sure he will choose reliability an service over unproven claims" he adds.

On the contrary, HCL has set an annua turnover target of Rs.100 crores by 199 for its xerographics division. That's abou one third of the copier market and quantum jump from what HCL com mands today. While reliable HCL marke share figures are hard to get by, the hug gap between Modi Xerox and HCL is evi dent from sales figures. Modi Xerox sale crossed Rs.80 crores in 1987-88 while th xerographics division of HCL manage only a meagre Rs.17 crores.

But the equation is bound to change the crucial factor being price. Says Mal hotra, "If a consumer gets a workhorse copier for Rs.30,000 less, why should he go for anything else?"

However, according to Karl Kummer, resident director in India, Rank Xerox, consumers have preferred Xerox copiers despite the existence of cheaper competitors in the past. Besides, asserts Modi, "When we launch our low end copiers, they will be as competitive as HCL's". Xerox, which has had two low end copiers in the pipeline for two years, will now be forced to launch them fast. Advantage HCL and benefit; the consumer.

Stiff competition

The other copier manufacturers probably will soon find the pace getting too hot for them. One Modi Xerox was bad enough. Another major player might drive them away from the market.

Till then, Modi Xerox and HCL will fight it out to fault each others' claims. For instance, Kummer insists that the Risograph launched by HCL — the machine which will churn out 120 copies a minute at 5 paise a copy — is not a copier. "It's a modern version of an offset printing press. How can anybody compare that with a copier?" he says. Kummer also feels that the 5 paise per copy claim is dubious.

Malhotra is however unfazed: "Call it by any name, but our new machine does give more copies cheaper. This is akin to Hindustan Motors going about saying that Maruti is not a car," he says.

Who wins this copier war will be clear in a year's time. Without doubt it promises to be a photocopy of the computer wars fought earlier

SATANU GURU

Master of Finance & Control Programme

UDSC

UNIVERSITY OF DELHI SOUTH CAMPUS

Benito Juarez Road
Dhaula Kuan
New Delhi - 110 021

Applications are invited for admission to the third batch of the two-year full time professional course : **MASTER OF FINANCE AND CONTROL (MFC)** for the academic session 1989-90 beginning from July, 1989. The main objective of the course, offered by the Department of Commerce, University of Delhi at the South Campus is to equip the participants with requisite skills in financial planning, control and decision-making. It offers career prospects in corporate finance, investment management, financial services, and related areas.

Minimum Eligibility Requirements :

(i) Bachelors (Hons.) degree in Arts, Commerce, Social Sciences with 50% marks.
(ii) Bachelors (Hons.) degree in Maths, O.R., Statistics, with 60% marks, or any branch of Science with 55% marks.
(iii) Bachelors degree in Engineering and Technology with 60% marks.
(iv) B.Com.(Pass)/B.A.(Pass) with 55% and B.Sc.(Gen.) with 60% marks.
(v) CA/ICWA/ICSI with 50% marks in the Bachelor's degree examination.

NOTE : In the above categories Bachelor's Degree in subjects other than Engineering/Technology should be in the 10+2+3 stream.

Admission to the course shall be made on the basis of performance of the candidates in written test, group discussion and interview.

The prospectus and application form may be obtained from Prof. R.A. Sharma, Professor-in-charge, Department of Commerce, University of Delhi South Campus, Benito Juarez Road, Dhaula Kuan, New Delhi-110021 personally on payment of Rs. 10/- in cash or through post by sending a crossed Indian Postal Order for Rs. 10/- in favour of Director, University of Delhi South Campus alongwith a self addressed and stamped envelope (6"x9") bearing stamps of Rs. 2/-.

Applications duly completed should reach Prof. M.Y. Khan, Programme Coordinator, Department of Commerce, University of Delhi South Campus, latest by January 30, 1989.

The written test will be held on Sunday, 19th February, 1989 at 10.00 AM at the University of Delhi South Campus, Benito Juarez Road, Dhaula Kuan, New Delhi - 110021. Depending upon response, test centres can also be at Bombay, Bangalore and Patna.

Candidates appearing for the final year of Bachelors Degree examination may also apply.

SHARDHA NAND
Officer on Special Duty

MMG-147

A cure for hospital ills

Patients being admitted to Bombay's Breach Candy Hospital now don't need to sign cumbersome registers. Their names and deposit amounts are entered into a terminal at the reception desk itself. After that all expenses incurred by way of room rent, medicines, tests, etc are continuously posted so that bills can be presented within minutes of the patient being discharged.

At the more modest sized Cumballa Hospital, surgeons wishing to use the operation theatre call to check for time slots. The counter clerk at the reception has the OT schedule displayed on his terminal and can indicate the exact time.

It will not be long before that nurses at the Kothari Scientific Research Institute and Hospital (to open in Calcutta by the middle of next year) will be able to key in patient data on terminals placed in the wards for diagnoses and treatment during the patients stay and for retrieval later for research purposes.

Increasing efficiency

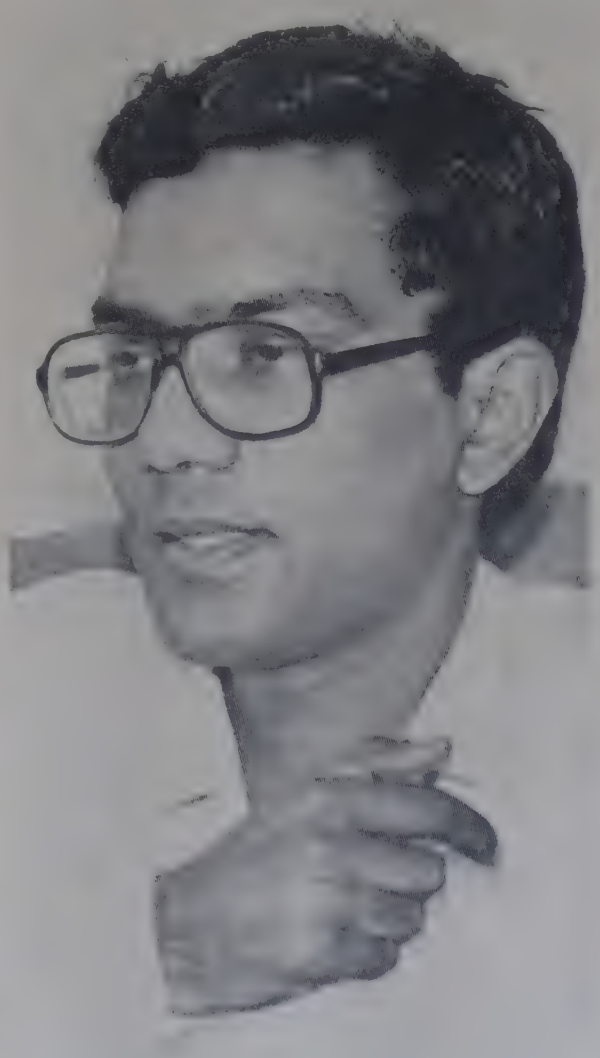
The common factor in all three instances is that of a management wanting to increase efficiency without proportionally increasing manpower and accepting computerisation as the only means of achieving it. "In 1983-84 when the load was getting difficult to handle manually we decided to computerise," says K.R. Coorlawala, chairman emeritus of Breach Candy and the first to push for computerisation in hospitals in his capacity as honorary chairman. Having decided to computerise, Coorlawala called upon the Bombay based Kale Consultants (set up in 1980, March 1988 turnover Rs.60 lakhs) to undertake a study.

Kale was chosen because of their experience in computerising the Taj group of hotels and because the company promised to complete the assigned work in considerably less time compared with other consultants Coorlawala had spoken to.

For Kale, the contract meant a hefty financial commitment. Says Vipul Jain, director of Kale Consultants and head of the hospital computerisation team, "We approached ICICI for venture capital (Rs.30 lakhs) and were the first company to get it." Having put in 30 man years of learning at Breach Candy, Jain says his team now has got the hang of basic hospital requirements, with every new contract since then adding to their experience and expertise in the field.

Consequently, Kale developed standardised modules of hospital computerisation based on their experience in Breach Candy. The basic module which both Breach Candy and Cumballa have in place currently is inpatient and outpatient management by which registration, admission and discharge is computerised. This is linked to pathlab and pharmacy — ie, as and when patients use these facilities, the relevant bills are posted on-line in the patients' file making billing quick and accurate. "Before we had this system in place, there used to be at least 2 to 5 per cent revenue loss because of late charges and collating errors," says an EDP person at Breach Candy, adding that such discrepancies have now been wiped out. Computerisation of the pharmacy and pathlab, besides being necessary for patient billing, also streamlines inventory control of these two important hospital facilities.

The second module is essentially for back office or for the hospital's own accounting purposes. Besides revenue audit and payroll computerisation, this module enables greater inventory control and better equipment maintenance. As Jain explains, a lot of the equipment in Indian hospitals is imported and obtaining spares is often a problem. A number of expensive machines gather dust for want of a small part. Computerised data helps in bringing these into focus. Also, for equipment which has recurring problems, a record of the number of times and occasions of breakdown can influence purchase decisions.



Jain: his team has the savvy

Most ambitious

The third module is by far the most ambitious — computerised nurse stations for inputting patient data. Case histories can then be retrieved if the patient returns to the hospital for tretment. Besides, medical records can provide useful data for research purposes.

The three modules comprising the total package can currently be in place for Rs.30 lakhs — including hardware and software. However, each hospital can start with any one particular stand-alone module which can be integrated later with others. "The module which a hospital chooses to begin with depends on priorities," says Jain. Hospitals can be divided into private or voluntary hospitals, government hospitals and teaching hospitals. In the first, where service and revenue are of prime importance, the patient administration and billing module is most appropriate.

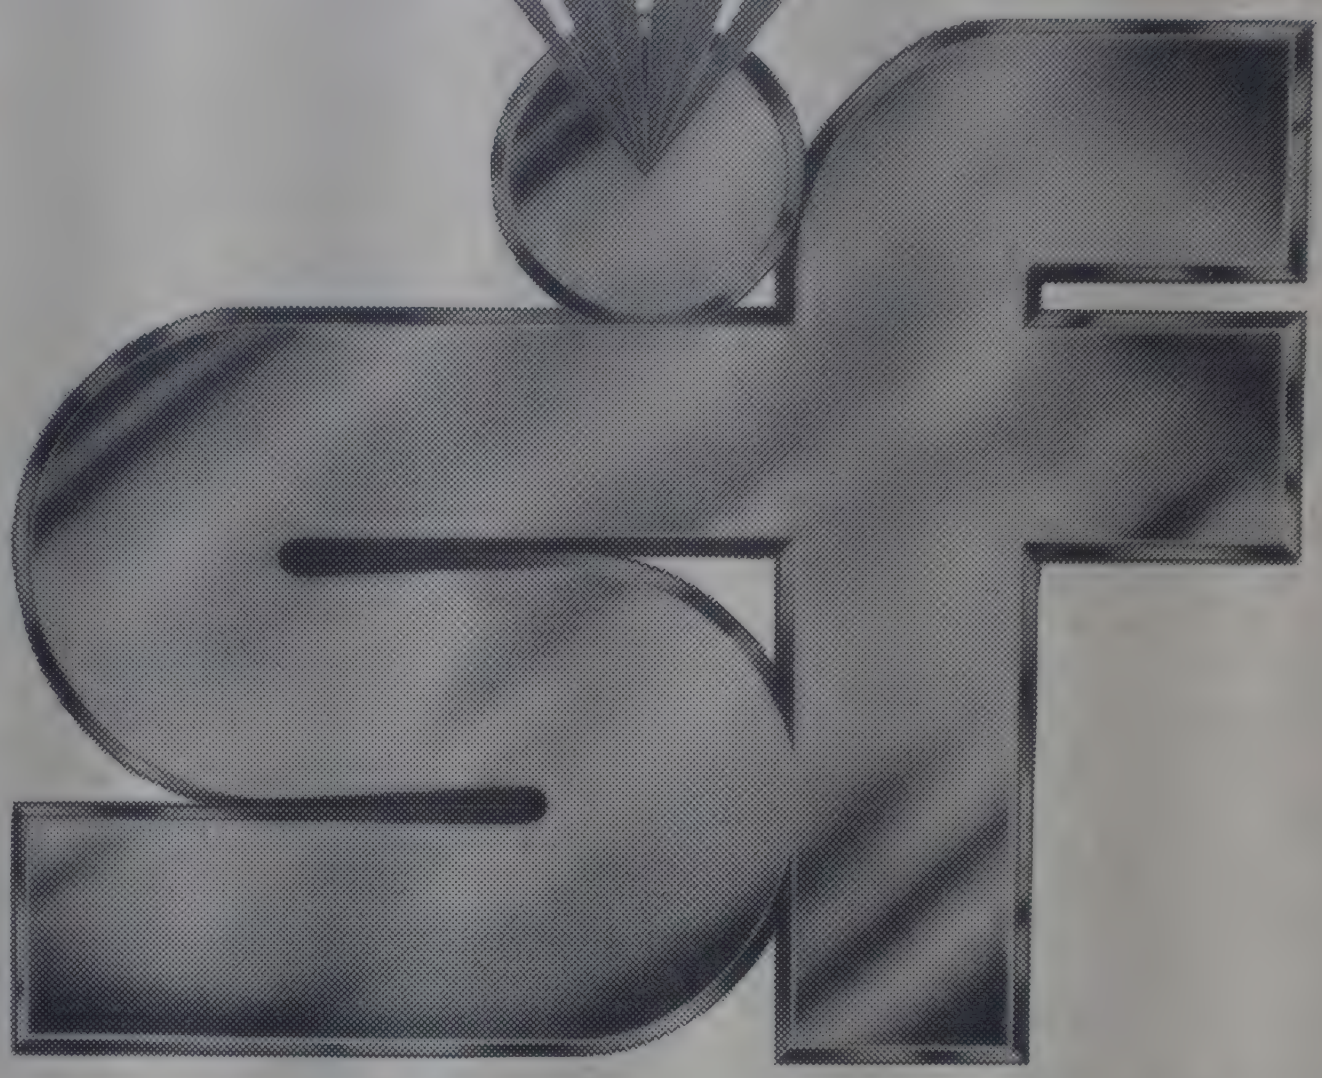
The back office module is most important for government hospitals while teaching hospitals will necessarily have recourse to the medical records module. "Our hospital will start with total computerisation including nurse stations," says Colonel D.B. Ray, medical director of Kothari Hospital, stressing its research orientation.

Breach Candy, Cumballa, Harkisondas, Nair, Kothari — the hospital contracts which Kale is currently implementing, are all within the 50 to 300 beds size. According to the latest (1983) data available, of the nearly 7,400 hospitals in India about 1,200 are within this size range. Other consultancy firms are also looking at this area, but as even they admit, "Kale understands hospitals". For Jain, his team's commitment over the last two or three years will now pay dividends.

KEYA SARKAR

Our latest honours ...

AAA



... your guarantee of the safest investment.

Sundaram Finance has been awarded the prestigious 'FAAA' (F Triple A) certification by CRISIL, the rating that signifies the highest safety for depositors' money ... the first finance company in the private sector so recognised.

CRISIL Fixed Deposit Ratings represent the degree of safety regarding timely payment of interest and principal by a company accepting fixed deposits. The ratings and their concise significations are:

FAAA Highest Safety ✓

FAA High Safety
FA Adequate Safety
FB Inadequate Safety
FC High Risk
FD Default

CRISIL may apply + (Plus) or – (Minus) signs for ratings from FAA (F Double A) down to FC to indicate the relative position within the rating category.

SUNDARAM FINANC

CRISIL — Credit Rating Information Services of India Limited — is promoted by the Industrial Credit and Investment Corporation of India Limited and the Unit Trust of India with the primary objective of rating debt obligations of companies.

The ratings, designed to guide the investor in determining the risk attached to any particular security — a practice in vogue in the US, the UK, Canada, European countries, Australia and Japan — take into account not only the financial health of an organisation but also its competitive position, strength and weakness, its management and business strategies.

The pillars of strength of Sundaram Finance

1. Sundaram Finance's total resources, built over the years by its prudent and dynamic policies, exceed Rs. 275 crores, the highest among Hire Purchase Finance Companies.

2. Its hire purchase portfolio consists mainly of road transport vehicles, which are easily marketable. It has an effective collection machinery which ensures good recoveries. Over 90% of receivables falling due in any year are collected within the same year.

3. Sundaram Finance maintains liquidity at 1/3rd of the total deposits, providing an extra margin of security for depositors, as against 1/10th of the deposits, statutorily required. This ensures prompt repayment of deposits as well as premature payments, whenever needed.

4. Its depositors now exceed 1,20,000. Over 90% of the depositors have placed their deposits for 3 years, the maximum permissible period under the RBI rules. More than 80% of such deposits are repeatedly renewed, reflecting the trust and confidence built up over three decades.

5. Sundaram Finance provides computerised and personalised service backed by a team of experienced and dedicated professionals.

No wonder, Sundaram Finance has met the rigorous standards set by CRISIL on every count ... The 'FAAA' rating is a sure proof that Sundaram Finance today is the strongest amongst the finance companies — and by far, the safest investment proposition.

Issued under the authority of and in the name of the Board of Directors of the Company who have by a Resolution dated 25th November 1988 approved the above text.

OVER THREE DECADES OF LEADERSHIP

India's largest joint sector integrated fertilizer and petrochemical complex takes deep root in excellence.

GSFC, India's first joint sector company has been for years a household name and a legend in Indian industry. As far back as 21 years, GSFC began with a unique product mix of vital fertilizer inputs for agriculture – Urea, Ammonium Sulphate and Diammonium Phosphate.

The fertilizer plants were initially set up at a cost of Rs. 63 crores and completed ahead of schedule and within the project cost. The GSFC SARDAR fertilizers have since been a heart's choice of the Indian farmers, because it was they who first heartily responded to the GSFC door to door public subscription call and enabled the Company to raise farmers' investment of over Rs. 1 crore in the Equity Capital.

GSFC today records its gratefulness for this overwhelming response. Over a period, the investment in GSFC has been profitable and rewarding for thousands of shareholders.

Since then the story of GSFC has been a growth of profitable diversification and expansion.
From Fertilizers to Petrochemicals, Industrial Gases, Plastics and Fibre.

GSFC – a triumphant

story of industrial growth

Unequalled achievements

GSFC has set up

- **India's first Caprolactam Plant (1974)**
- **the largest capacity Purge Gas Recovery Plant (1980)**
- **the largest capacity Nylon-6 Plant (1981)**
- **the first and largest capacity Melamine Plant (1982)**

GSFC has co-sponsored

- **Gujarat Narmada Valley Fertilizers Company Limited (GNFC)** – the world's largest single-stream Urea Plant.

GSFC has participated in a major way in setting up

- **Gujarat Industries Power Company Limited.**

GSFC has taken over

- **GIIC sponsored Polymers Corporation of Gujarat Ltd. (PCGL).**

GSFC has also been a major partner in the establishment of

- **a 55 km-long closed effluent channel scheme** as part of its commitment to cleaner environment.

GSFC has expanded its organisational infrastructure by adding new Institutions of R & D Centre, Training Institute, Applications Development Centre and Bio-Fertilizer Unit, offering a well-integrated package of human resource development, pioneering innovations, dynamic applications, and development of new products and services in diverse fields. With its reputation for quality and consumer service through a network of over 400 Farm Information Centres, and Sales & Service outlets, GSFC has won the prestigious ASSOCHAM Award for Consumer Service in 1983.

GSFC has thus grown into a giant multi-plant, multi-product, multi-technology and multi-service organisation catering to the needs of agriculture and industry and touching every aspect of the life of the people.

'Basic to India's progress' is the corporate motto of GSFC and in harmony with the spirit of this motto, GSFC has been trying to achieve the highest standards of excellence in various fields. The Company has maintained its leadership in productivity, marketing, quality, environment and safety. GSFC was established with the primary objective of achieving self-sufficiency in food production and acting as a catalyst for the industrial growth. In retrospect, GSFC feels proud to have achieved these objectives in full measure.

Concept

What makes BERGER PAINTS come out with flying colours?

Strong Brands

Strong brands are the surest proof of a Company's ability to feel the pulse of the marketplace,the best assurance of long-term growth.

With 60 years of experience in Indian paints, Berger has a whole array of strong brands spanning all application areas.

Its decorative paints include everything from distemper to acrylic emulsions. And they feature trend-setting products that have merited competition's sincerest compliment – swift imitation. Like Luxol Silk, the premium acrylic emulsion. Vinyl, the first economy wall-finish. Tartaruga, the first textured exterior-wall coating. And now Rangoli, the first acrylic emulsion with an ethnic identity.

Berger's industrial paints carry the pedigree of the finest technologies worldwide. From Herberts, Stolllack and Vianova of the international Hoechst group; from Valspar Corporation of the USA, and Teodur NV of Holland. Adding up to a huge bank of valuable know-how and ready advice on which Berger R&D can draw to develop its constantly upgraded, updated range of products, including the most specialised protective coatings.

Berger's brands have enabled it to take its place among the high performers of the UB Group, one of the fastest growing in the country. And at a time when the rest of the paint industry has been going through a pretty colourless phase, Berger has emerged with flying colours – registering the highest growth in profitability!

WEIGHING THE LEGACY

A world without Reagan

TO A BRITISH MP, he's a candidate for Mount Rushmore. A Japanese correspondent twice entertained at the White House takes the yin-and-yang approach, weighing his amiability against his tendency to bring the world dangerously close to superpower confrontation. A US expert concludes that the best thing that happened to him was Mikhail Gorbachev. And a French journalist decides that his successor has an even bigger job to do because of him.

Whom are they talking about? Ronald Reagan. His departure this month from the White House signals the beginning in this *WorldPaper* and elsewhere a flood of appraisals of the legacy this actor-turned-politician left the world after eight years as the US president.

A British nomination: Ron for Mount Rushmore

MP sees retiring president as one of the greatest

BY JOHN BROWNE
in London, England

AS THE WORLD prepares to bid farewell to President Reagan, people are beginning to realize what a very hard man he will be to replace.

When President Reagan took office, the United States economy was in tatters with both inflation and unemployment high and rising. Productivity and output were stagnant. What was worse, US morale was at an historically low ebb after a humiliating defeat in Vietnam and a more recent insult and ridicule over the Iranian hostages. East-West relations were dominated by Soviet advances. Strategic peace was threatened.

President Reagan has endured much criticism, even ridicule, in the Western media and yet after eight years as president of the United States and chief negotiator of the free world, he hands over to his successor an unprecedented level of peace and prosperity not only at home but throughout the West.

People have criticized his administrative abilities. Yet he hands over an economy where rising unemployment has been replaced by the record creation of new high technology jobs; inflation is under control and the economy has provided the engine for world economic recovery and the longest period of sustained economic growth in history. President Reagan has given the United States back its pride. What more could you ask from the leader of any great country?

President Reagan has peacefully reversed the imbalance of power and by negotiating from a position of strength, has instituted the first genuine strategic disarmament for decades. The key to this achievement was his handling of the Russian superstar—Mikhail Gorbachev. Had President Reagan appeared too hard or too arrogant, Gorbachev would not have negotiated. Had he been too soft or submissive, Gorbachev would have walked all over him.

I have met personally both Gorbachev and Reagan.

Gorbachev impressed me overwhelmingly as a potential superstar, capable of talking over the heads of Western leaders directly to people at the grass roots throughout the world. Today, he is known not just as Gorbachev but as "Gorby." From our first meeting in December 1984, I was convinced that Gorbachev would herald an era posing new challenges to Western leaders.

My overwhelming impression of Reagan, in the spring of 1985, was of a man of outstanding integrity with great powers of persuasion, a man of genuine, straight-up, James Stewart cowboy charm. When he winks and smiles at you at the same time, you feel yourself falling out of the tree.

From the outset, Gorbachev tested both Reagan's integrity and his power of persuasion. Who else would have refused the initial Soviet offers at Reykjavik and then been able to return to his electorate and successfully shrug off the media label of "warmonger?"

President-elect Bush's victory was no accident. It reflected both his own ability and a grass roots support for Reagan ethics. His greatest test will come in demonstrating his strength of will. First he must convince the US people and financial markets that he has a "safe pair of hands". He must then show that he has a "global" as opposed to merely "nationalist" view. This will be particularly important when he faces the problem of growing global trade regionalization. It will be fatal for long-term world peace if, in 1992, Europe becomes a fortress, and the United States-Canada and Japan form competing economic regions of privilege in a world where hundreds of millions of people still know real poverty.

Secondly, he must convince Gorbachev that he too can maintain continuing grass roots support for his ethical negotiating position.

The key test for Western leaders will be how to continue playing the Gorbachev card in a world without Reagan. They must ensure that an internal crisis of expectation does not overwhelm Gorbachev either by revolution or by a backlash from the *Nomenklatura*, the entrenched Soviet establishment. The Gorbachev card is awesome in both its power and delicacy. Initially, Bush will have the enthusiastic support of the American people and of key Western leaders. At "long-stop" he will have ex-President Reagan. That will be a cause for comfort. For the headlines of history will probably record President Reagan as one of the very greatest of US presidents and leaders of the free world.

Within 50 years, I fully expect to see Reagan's face carved in stone in a place of honor, alongside those other revered US presidents —on the cliff of Mount Rushmore.♦

John Browne is a Conservative member of the British House of Commons.

WORLD WITHOUT REAGAN

The yang and yin of Reagan legacy

Oriental view questions peacemaker role

By Akiyuki Konishi
in Washington, USA

IN ORIENTAL PHILOSOPHY, the yang is the positive, the yin the negative. As Ronald Reagan retires into history, his yang is at its most powerful. His immense popularity, coupled with his seniority in age to most active politicians in the United States and throughout the world, has made him a King President.

His popularity grew not only because as an actor he has mastered the art of TV politics more than anybody else, but because his humanity impressed those who met him. Having been received by him in the Oval Office twice for interviews, I can attest to his being a "great communicator."

Some call Ronald Reagan the greatest president since Franklin Delano Roosevelt a half century ago. Although they traveled in almost opposite political directions, FDR and Reagan both changed the course of history. By so doing, they restored the self-confidence of the American people.

Like a popular king, or even an emperor, President Reagan has not been held responsible for his mistakes. His subordinates instead were held responsible. Contrary to the experience of many monarchs, he has received ample credit for his successes.

• Indeed, his "peace through strength" policy succeeded in turning the Soviets around to a new detente symbolized by the INF Treaty. Soviet forces started withdrawing from Afghanistan. Peace erupted everywhere.

• Double-digit inflation was conquered. Interest rates were brought down into single-digit range. The US economy has grown for more than 60 consecutive months. The unemployment rate has recorded a 15-year low.

• "Big government" bureaucracy was jostled by a spate of deregulation which set the pace for other countries like Japan.

But amid the multitude of praise for the yang is the yin side of the Reagan legacy.

First, the legacy of peace. Although coming to terms with the Russians was an historic achievement, President Reagan's confrontational rhetoric while building up the US "position of strength" was far too scary for the innocent people around the world.

What if Russians had not produced Gorbachev? What if Mrs. Thatcher hadn't found out that "we can talk business" with Gorbachev? What if Nancy Reagan, as conservative Republicans suggest, hadn't talked her husband into the superpower summits?

The harsh "evil empire" rhetoric of his first term was a risky gamble that paid off. But it produced tragic victims—the passengers and the crew of Korean Airlines 007, shot into the Sea of Japan by a Soviet jet fighter in September 1985.

While the Russians were to blame, the Cold War atmosphere aroused by Reagan's rhetoric was also responsible.

The "Reagan Doctrine," designed to roll back Soviet influence in the Third World, was conducive to the eruption of peace in Afghanistan, Angola-Namibia, Cambodia, and to some extent in Nicaragua. While its emphasis on freedom had unexpected side-effects in the Philippines, Haiti, Korea and Chile, the Reagan obsession with Nicaragua produced the Iran-contra scandal and dirty dealings with drug traffickers.

Despite Reagan's strong rhetoric, actual use of mighty US military power was limited to Grenada, Libya, the Persian Gulf and to a tragic extent in Lebanon. They left serious doubts about whether the US adheres to international law.

The legacy of "prosperity" also has its yin side. The "Reagan Depression" at the start of his first term shot up interest rates. This ironically strengthened the dollar. The US public received the impression that the nation again was strong economically. The strong dollar annihilated the export industry and produced a "hollowed out" economy.

His second term witnessed a weaker dollar, especially against the yen. Economic growth is mainly supported by loans and investments from Japan, West Germany and other "surplus nations." During President Reagan's watch, the United States plunged from the biggest creditor to the world's biggest debtor nation.

Despite the pride they have about their country, most Americans remain insensitive to the homeless, the sick, and the poor. There are many reasons why Bush had to say, "I want a kinder, gentler nation."♦

New world looms during Bush's rule

By Jacqueline Grapin
in Geneva, Switzerland

IN FOUR YEARS, George Bush will have presided over changes amounting to the birth of a new world that will be partly the result of positive US influence and partly the result of US mistakes.

• European unification scheduled to begin in 1992 will have been carried out. The role of Europe will have become quite different, transformed more so by what has happened outside Europe than what has happened within.

• The great international trade negotiation called the "Uruguay Round" and taking place in the framework of the General Agreement on Tariffs and Trade (GATT) will also have ended. Depending on the US economic and financial performance under Bush during the coming months, this negotiation will lead either to the increase in free trade that most states say they desire or the return to a world divided by new forms of protectionism already looming on the horizon.

• Relations between the United States, the world's largest debtor state, and Japan, which has become the world's largest creditor, will probably have settled amidst increased cooperation. There can be no doubt about this trend.

• Although no one can predict now what will happen to the debtor states of the Third World, we know that changes in the Soviet world will have become more apparent. We may not know how these changes will evolve but we know that even if Mikhail Gorbachev's reforms fail, the Soviet world by the end of the century never again will be the same.

The political stakes in these changes are considerable. All the leaders of Europe nervously remember that at Reykjavik in 1987 President Reagan, in discussing with Gorbachev the elimination of all nuclear arms from Europe, all but abandoned the nuclear defense of Western Europe. In addition, US financial deficits make a major renegotiation concerning a redistribution of the burden of the Western alliance unavoidable. Such a negotiation may lead to a new definition of the role of the United States in European affairs.

In spite of Western Europe's difficulties in organizing its own defense and of a lingering mistrust of the Soviet Union, the West is ready for a more or less collective deal with the Soviet. Collective bargaining with the Soviet Union enables the Europeans to appear stronger and helps prevent West Germany from drifting away from the European Community in search of possible reunification with East Germany.

Unlike his predecessors, Gorbachev is taking advantage of this West European attitude to try to use the framework of the European Community to seek "Pan-European" cooperation. As a result, the next round of talks on disarmament will no longer be a bilateral dialogue between the two superpowers. It will include the 16 states of the North Atlantic Treaty Organization (NATO). Bush and Gorbachev will find that round more difficult to handle than the European "no man's land" of Ronald Reagan.

The difficulties are only starting to surface for the new president. The question Europeans ask is whether the domestic economic policy of the United States has become an international problem in itself? Traditionally, domestic priorities have determined US economic policy. But the country's deficits have poured excess liquidity into the world financial markets, which have taken on a life of their own, out of the control of their own governments. US economic policy now hurts everybody.

Europeans worry that conflict between the Democratic Congress and the Republican president will block a compromise on critical domestic issues such as reducing a deficit that the United States finances by selling 30 percent of its bonds outside the country, mostly to rich Japan. The weakening of US power and the strengthening of Japan really concern Europe.

Bush's electoral campaign failed to win him the confidence and the popular support of the people of Europe. Since his election, Bush has proclaimed a "desire to lead" that had not been apparent before. Europeans, who remember how little popularity President Reagan enjoyed at the beginning of his first term in office, wonder if Bush will become the great president that the entire world, not only the United States, needs and if the international changes that will occur during his presidential mandate will be for better or for worse.♦

Jacqueline Grapin is *WorldPaper* associate editor for Western Europe.

Harvard this summer

June 26–August 18
1989

Harvard Summer School offers open-enrollment in day and evening courses. The curriculum includes courses that fulfill college degree requirements and programs designed for personal and professional development.

Our international student body has access to Harvard's outstanding libraries, fine museums, well-equipped laboratories, and cultural activities.

We feature a college-level program for secondary school juniors and seniors,* as well as a Dance Center and special programs in Health Professions,** Drama, Writing, Ukrainian Studies, and English as a Second Language.

(*admission required; ** for minority and economically disadvantaged students)

For more information return the coupon below or call (617) 495-2494 (24-hour line). Please allow 4-5 weeks for delivery.

☐ YES, please send a 1989 Harvard Summer School PREVIEW BROCHURE and/or specific information about the following programs:

☐ Secondary School Program ☐ Dance Center ☐ Writing
☐ English as a Second Language ☐ Health Professions ☐ Drama

What's all this talk about *WorldPaper*?

As part of our 10th anniversary year, which culminates this month a decade after the appearance of the first regular edition in January 1979, we asked our readers around the world what they think of ***WorldPaper***.

Did *you* tell us off! In more languages than the four—English, Spanish, Chinese and Russian—in which ***WorldPaper*** appears this month in two dozen countries around the world.

Thousands took the trouble to fill out and mail—at their own cost—questionnaires in the 10th anniversary issue last May to tell us how we can be better and what we do right.

Taken together, the questionnaire produced a profile of the prototypical ***WorldPaper*** reader. Here's what *you* look like:

Job: Holding a middle-top-senior level position in the professions or in business and industry.

Education: A college graduate, with more than a quarter holding postgraduate degrees.

Age: under 50 years old, and probably under 35.

Sex: Three out of four readers are male.

From a modest beginning, WorldPaper has consistently improved its content, size and perspective. I have been reading it for years and hope to continue. It is a valuable part of the news world.

W. Rathzert, **Daily Journal (Caracas)** reader
Edison, New Jersey, USA

Better than Time magazine.

Gonzalo Nideas, **Philippine Daily Inquirer** rea
Makati, Philippines

Brilliant commentaries on current issues, with truly exceptional insight.

R. Poon, **Hongkong Standard** reade
Hong Kong

En su género es u excelente información, los col del más alto nivel intelectual Mis felicitacione

Carlos A. Rossie Paz, **El Cronista**
Buenos Aires, Argen

This paper opened my eyes to t future of the world. It enables me know what people in other countr think about the issues facing Japa I wish I could read it every day.

Kiyoshi Kawate, **Mainichi Daily News** rea
Kyoto, Japan

Excelente publicación, me agrada la variedad de temas que trata y la manera que los enfoca. Elegante diagramación y presentación.

Adriana Pena V., **Estrategia** reader
Bogotá, Colombia

A big *spasibo* from Gorby for US boost

How Reagan spurred Soviets

By Thomas H. Naylor
in Durham, North Carolina, USA

IN SPITE OF the Soviet Union's severe economic problems, most CIA reports indicate that, ironically, it is stronger economically and militarily than at any time in its history. And President Reagan played a key role in creating precisely the kind of psychological environment in the Soviet Union to make this possible.

President Reagan's March 1983 "evil empire" slur may have done more to pull the Soviet people together psychologically than any single event since the end of World War II. As the Soviets constantly remind us, World War II was very serious business for them. They suffered 20 million casualties in contrast to 300,000 for the United States.

Then in 1984, rehearsing for a weekly radio broadcast, Reagan said to a microphone he didn't know was open, "My fellow Americans, I am pleased to tell you I just signed legislation which outlaws Russia forever. The bombing begins in five minutes." Americans loved every minute of it.

What particularly enraged the Soviets about these events was their belief that Reagan was attempting to deny them the respect and influence to which they felt they were entitled by virtue of having achieved military parity with the West, an accomplishment the Soviets consider to be their single greatest.

Even before Soviet leader Mikhail S. Gorbachev came to power in 1985, the effects of Reagan's evil empire slur were already in evidence in Moscow. Once their anger had abated, Soviet leaders strengthened their resolve to prove to the United States and the rest of the world that the Soviet Union was indeed a global superpower.

Thomas H. Naylor, professor of economics at Duke University, is the author of *The Gorbachev Strategy*.

AP-WIDE WORLD

Giving Reagan the gate in a blaze of glory.

Although restrictions on the export of US technology to the Soviet Union are not new, the Reagan administration's export control policies knew no equal. A National Academy of Sciences panel concluded that the administration's technology transfer policy had essentially failed and was costing the economy over US$9 billion annually.

In fact, evidence increasingly suggests that Reagan's obsession with denying the Soviet Union access to Western technology inadvertently may have technologically strengthened the hand of the Russians. Scientists in Moscow routinely give highest priority to projects that are most closely related to the technologies that the Pentagon tries the hardest to deny them.

Reagan's effort to regulate, manipulate and control the Soviet Union has helped create in the United States one of the world's two largest and most unwieldy military bureaucracies as well as the largest budget and foreign trade deficits in history.

Reagan repeatedly says that Gorbachev has come to the bargaining table only out of fear of the Strategic Defense Initiative. Nothing could be farther from the truth. Soviet scientists, not unlike many of their US counterparts, know that SDI is a technological fantasy.

SDI is to Gorbachev what Sputnik was to John F. Kennedy in the 1960 presidential election. Just as Kennedy played on US fears of Soviet superiority in space, so too does Gorbachev use SDI to urge the Soviet people to make even greater sacrifices for the Motherland to close its technological and economic gap with the West. Gorbachev also used SDI as a ploy in depicting Reagan as an inflexible warmonger with an unyielding commitment to SDI at any price.

Everytime Reagan opened his mouth about SDI, Gorbachev's task of reforming the Soviet economy became a little bit easier. If Gorbachev had written Reagan's script over these eight years, he would not have changed one word. To President Reagan, General Secretary Gorbachev owes a very big *spasibo*.

But what, if anything, has President Reagan gotten out of all of this? A lot! Gorbachev may have single-handedly saved Reagan's presidency and paved the way for Vice President George Bush's election.

In November 1987, Reagan was in deep trouble—the Iran-contra hearings, the Oct. 19 stock market crash, and the Senate's rejection of Robert Bork had taken their toll. Not only did the INF Treaty and the Washington and Moscow summits save Reagan's presidency, they enabled Bush to project himself to the US people as a man of peace. What could be more ironic than the general secretary of the Communist Party in Moscow, providing the escape mechanism for the most fearless, anti-communist cold warrior of all time to leave office in a blaze of glory rather than in international disgrace?♦

OCON

A TRACK RECORD THAT SPELLS SUCCESS:
Videocon entered the highly competitive CTV market in 1982. And today, in just six years, it has become a market leader.

The Group introduced its Washing Machines, in 1987, in a market that was still infantile. And to the surprise of everyone, Videocon Washing Machines have more than succeeded. Leading with over 60% market share.

Videocon recently introduced Audio range which has been showing every sign of becoming a rage. As if to epitomise this spell of success, Videocon has been awarded this year the letter of intent to manufacture VCRs.

THE COMMITTMENT TO SHAREHOLDERS:
Videocon International Ltd., the flagship company of the Videocon Group, declared 18% interim dividend to its shareholders. In less than a year after going public. Also the share price has soared to Rs.70 (as on 2nd December, 1988 on Bombay Stock Exchange) as against the face value of Rs.10.

THE DYNAMIC MANAGEMENT:
The management has, time and again, exhibited its dynamism in every aspect of business. It stands apart because of its unique ability to read correctly the market situations. And act with precision. That's why it could render everybody happy. The Customers. The Dealers. The Investors.

VIDEOCON APPLIANCES LTD – ALL SET FOR SUCCESS:
Drawing confidence from such trail blazing performances, Videocon Appliances Ltd is now all set to capture the ever-growing market of Washing Machines and other home appliances. With the coveted collaboration with Matsushita Electric Industrial Co. Ltd., Japan, the brand name owners of **National**

CC

rginally higher income; profits ghtly better; the cost of critical inputs her; modernisation on to exploit the ning boom

C has recorded a slightly better perfor-nce during the year ended 31 July 88. Income has gone up only by Rs.0.50 res to Rs.6.86 crores mainly because of gher input costs. Power, coal, railway ight, royalties and the wage bill be-me costlier during the year. The com-ny constituted a separate task force der the R&D division, to reduce the use coal and power at the various plants. Of the two six monthly periods, the cond half performance was much bet-r. In fact all the profits (Rs.9.28 crores) ere earned in the second half, while the rst half ended with a loss of Rs.2.42 rores — an indication that the current ear will be much better.

There is a marked improvement in ca-acity utilisation. As a result of on-going odernisation, the company was able to stain the production of grey cement at .84 million tonnes (7.9 million tonnes) ven after selling three of its plants dur-g the year. Also the lowering of levy bligation and increase in retention price ave improved profitability.

While the production of white cement as increased, production of refractories nd refractory products has marginally eclined.

But grey cement constitutes a lion's hare (over 90 per cent) of the total sales. So the company still depends on its sales for profitability. The sales realisation per tonne this year was nine per cent higher at Rs.1000.72 (Rs.889) per tonne while cost increased by 20 per cent to Rs.807.64 (Rs.671.89) per tonne. But white cement showed improved profitability as sales realisation was 13 per cent higher at Rs.3171.70 (Rs.2811.50) per tonne and at the same time costs declined marginally by 1.5 per cent from Rs.2421.79 per tonne to Rs.2385.83 per tonne.

The costs of major raw materials, limestone, granulated clay and gypsum have increased. This has restricted the company's net profit to Rs.6.86 crores.

But for a non-recurring loss of almost Rs.4.5 crores on the sale of the plants, results would have been still better.

Deferred revenue expenditure of Rs.3.14 crores includes Rs.2.66 crores incurred in the current year on the voluntary retirement scheme, to be deducted over a period of time. Further, the company has not admitted claims against it ammounting to Rs.7.16 crores. It is encouraging to note that even after selling three of its plants (at a loss of Rs.4.5 crores) the company has managed to increase gross block to Rs.567.98 crores (Rs.551.91 crores).

The recent broadbanding of cement can be a boom, if the company grabs this opportunity to enter into speciality cements. Other areas open to it are sulphate resistant cement, portland cement, oilwell cement, waterproof cement etc.

The cement market has also shown revival and experts predict an emergence of a sellers' market during the early 1990s. So ACC with its on-going modernisation and cost cutting exercises would be well prepared to exploit the coming boom.

Ceat Tyres

Higher sales, combined with even higher profitability; company emerged as undisputed leader

The major tyre companies have performed exceedingly well and CEAT is no exception. Sales are 16 per cent higher at Rs.279.41 crores. Profitability is higher at 37 per cent, rising from Rs.37.88 crores to Rs.51.82 crores. The net profit looks even better at Rs.20.72 crores (Rs.12.30 crores), 68 per cent higher.

During the year CEAT manufactured 2.8 million automotive tyres and 1.42 million automotive tubes, against the last year's 2.43 million and 1.38 million respectively. It sold 2.63 million (2.44 million) automotive tyres and 1.48 million (1.38 million) automotive tubes. The closing stocks of both of these are substantially lower.

The wage bill and the raw material costs have increased. Selling and distribution expenses are marginally higher. The company also serviced a higher interest burden. The company has reduced its tax provision substantially to Rs.5.80 crores (Rs.7.29 crores).

The operating margins are higher, as they stand at 18.55 per cent (15.74 per cent of tax). The second half's performance has been better than the first half of the year and better than that in the corresponding period the previous year.

The sales at Rs.145.52 crores (Rs.133.89 crores) are one per cent higher. Operating profit is 47 per cent higher than the first half's figure of Rs.20.97 crores. The margins were 15.66 per cent and 21.20 per cent in the first and the second half respectively.

The company, with a production of 2.6 million tyres, has emerged as the undisputable leader in the Indian tyre industry. The new generation LCVs, cars and two wheelers has increased the demand for high performance tyres resulting in an excellent response to the company's Formula-I radial tyres for cars. Further, the company is finalising plans to introduce steel-belted radials for cars and light trucks.

The glass fibre division has shown a 5

The transport industry's most inexpensive business insurance.

Transport vehicles are hard workers. Heavy loads over long hauls are part of their daily lives. Over-heating and excessive wear are the major hazards they face.

That's why the lubricant in a heavy duty transport vehicle often spells the difference between up-time and down-time, between long life and early death.

Your vehicle is your investment. Protect it with the most advanced lubricant available – VEEDOL. From Tide Water. You can't afford anything less.

Performance Oils. Nothing less.

ARMS-TW-V

r cent increase in sales. Cost efficiency .s greatly contributed to the prof- ıbility of this division. The market for is product is expected to grow by 15 to per cent in the next few years. The ompany exported Rs.12.90 crores worth tyres during the year under review.

Mahindra Ugine Steel (MUSCO)

Silver jubilee dividend; bonus issue; lower interest burden with better inventory control; firming up of diversification plans

The company ushers in the twenty-fifth year with a maiden bonus issue in the ratio of 1:2 combined by an increase of five points as silver jubilee dividend for the year ended 30 June 1988.

The production of finished steel increased by 2,336 tonnes whereas sales increased by 3,684 tonnes. The value of gross sales moved up to Rs.93.73 crores (Rs.85.69 crores), an increase of Rs.8.04 crores. Of this, increased sales volume and price hike contributed Rs.5 crores and Rs. 3 crores respectively. The cost of raw material inputs, mainly melting scrap, ferro alloys etc has increased by 20 per cent at Rs.32.01 crores (Rs.26.61 crores) thereby reducing the operating profits marginally by 3 per cent.

The company has changed its basis of providing depreciation for the concern as a whole to depreciation based on actual utilisation of assets. This has reduced depreciation provision by Rs.1.90 crores, while increasing inflated profits by Rs.1.76 crores. The provision for tax has been higher at Rs.2.97 crores (Rs.0.63 crores).

Total investments have increased to Rs.4.24 crores (Rs.0.15 crores) with 2.8 million units and Rs.0.50 lakhs of low yielding Indira Vikas Patra securities purchased during the year.

Judicious control of inventories including finished stock coupled with close monitoring of sundry debtors has lowered the interest burden. The flexibility of changing the product mix in line with the market demand and quick response to customers' requirements has helped the company optimise its product-mix.

The company plans to expand the installed plant capacity from 75,000 tpa to 100,000 tpa by 1990 with a targeted turnover of Rs.150 crores. Besides, the company is entering into the hotel and real estate business to reduce dependence on a single industry. MUSCO has tied up with Days Inn, US, for managing and running two or three star hotels in the country. Initially it will set up hotels in the South, besides offering technical and management services for existing hotels which could become part of the Days Inn chain.

Lakme

Lower sales; improved export performance; lower interest burden; improved outlook

The year ended June 1988 has been one of mixed fortunes for Lakme. Sales have dropped by 16.8 per cent to Rs.45.52 crores although the drop in profits was not substantial.

But lower interest at Rs.1.34 crores (Rs.1.45 crores) and depreciation provision at Rs.0.79 crores (Rs.1.09 crores), has helped the company improve net profits.

This has allowed the management to increase dividend from 25 per cent last year to 27.5 per cent on an increased capital of Rs.2.10 crores (Rs.1.83 crores)

The company's performance was a mix — between dwindling sales in the medical equipment division and higher export sales. Sales realisation for perfumes, cosmetics and toiletries has improved dur

ing the year by 11.5 per cent. After three years of increased sales of medical equipment, they have suddenly fallen drastically to a mere 55 units, against the peak of 292 units achieved last year.

Major raw materials cost have decreased, as a result raw materials cost as a percentage of sales has been almost halved to 22.6 per cent from 40.30 per cent last year.

The major improvement has been due to exports of cosmetics, which have become highly remunerative. The company has during the year introduced several new products in the market.

Most of the company's formulations are now under price control, thanks to the new DPCO. Besides, the production of cheoroquin phosphate was at lower levels, due to restricted demand. The company hopes for a price hike, which last came in 1985.

TRENDS

Tata Chemicals

The company has shown remarkable improvement in sales and profitability. Besides the costs have been under control.

The turnover of the company in the first six months of the current year amounted to Rs.129.67 crores, which is 24 per cent higher than the corresponding period last year.

The profits have more or less kept pace with higher sales. The operating profit

RM SALES (%)	14.14	16.78	16.11

has risen to Rs.45.81 crores against Rs.37.81 crores. The net profit, too, is 30 per cent higher at Rs.16.03 crores.

Direct expenses have marginally increased. Raw materials costs have increased by a mere 5 per cent to Rs.18.34 crores, while the wage bill is higher at Rs.8.10 crores. The interest burden amounted to Rs.15.74 crores (Rs.15.11 crores). Depreciation has risen to Rs.9.97 crores and so has tax provision to Rs.4.07 crores (Rs.2.12 crores).

It is significant to note that raw materials cost was only 14.14 per cent of sales. This allows the company to enjoy a plum 35.33 per cent operating income. This has enabled the company to announce a 12 per cent interim dividend, which will absorb Rs.5.39 crores.

The company is implementing two prestigious projects — a refinery and a fertiliser project. The total investments required for this project will be around Rs.2,200 crores.

Remington Rand

The first half results announced by the company are at par with the results of the period last year. There has not been any major change, either in sales or in profitability.

Sales at Rs.6.96 crores are almost level with sales of Rs.6.94 crores in the corresponding period last year. The operating profit is Rs.108 lakhs (Rs.85 lakhs) and net profit stands at Rs.35 lakhs (Rs.32 lakhs). The bottom line is stagnant.

The raw materials cost have risen substantially. From Rs.1.17 crores it has shot up to Rs.1.74 crores, which is 25 per cent of sales, against 16.86 per cent during the corresponding period last year. In contrast, the other direct expenses (excluding salaries) showed a steep decline from Rs.2.04 crores in the corresponding period last year, to Rs.1.13 crores now. Besides, the company's interest cost has risen to Rs.14 lakhs (Rs.5 lakhs) and depreciation provision to Rs.19 lakhs (Rs.10 lakhs). Tax provision at Rs.39 lakhs (Rs.38 lakhs) is constant.

The company plans to manufacture around 1500 electronic typewriters. Its Rs.6 crore plant to manufacture electronic push button telephones in collaboration with Siemens of West Germany is expected to start commercial production in mid-89. The plant has a capacity for two lakh telephones but in the first year production will be of 50,000 only.

Bombay Dyeing

The first half of the current year has not been a good one for the company. Though sales have improved profitability has taken a beating.

			(Rs crores)
	Apr-Sep 1988	Apr-Sep 1987	1987-88
SALES	154.37	142.71	304.54

DEPRECIATION	9.71	10.94	18.80
TAX	1.04	1.69	3.59
NET PROFIT	5.59	9.01	19.35
GP/SALES (%)	16.49	22.18	19.76
RM/SALES (%)	54.18	42.15	41.03

The net sales of the company stood at Rs.154.37 crores which is 8 per cent higher than the sales achieved last year during the corresponding period. The operating profit slumped by as much as 20 per cent, to drop to Rs.25.46 crores (Rs.31.65 crores). The profits have further deteriorated, after making various provisions. The bottom line has eroded 38 per cent to Rs.5.59 crores (Rs.9.01 crores).

The costs have been on an upswing, due to the government's decision to raise the duty on paraxylene from 85 per cent to 110 per cent, on a substantially higher price of this imported raw material.

Raw materials costs rose to Rs.83.64 crores (Rs.60.76 crores). The wage bill is almost constant at Rs.16.97 crores. But the company has managed to reduce the selling and distribution expenses to Rs.25.46 crores (Rs.31.65 crores).

The interest burden has come down to Rs.9.12 crores (Rs.10.01 crores). Depreciation provision too is lower at Rs.9.71 crores (Rs.10.94 crores). Tax provision stands at Rs.1.04 crores (Rs.1.69 crores).

The operating margins have declined to 16.49 per cent (22.18 per cent) of sales. Raw materials, viz, methanol and paraxylene have also become more expensive.

This trend of lower profits has now been controlled to a certain extent because the company has been allowed to raise the prices of its DMT. So in August 1988 it raised the price by Rs.6,000 per tonne, and in October again by another Rs.3,700 per tonne.

TISCO

The company has shown a dramatic improvement in profitability, alongwith higher sales. During the period it managed to sell 776,000 tonnes (753,000 tonnes) of steel while, it also increased the production of saleable steel to 905,200 tonnes (900,700 tonnes). On this level of sales, it achieved a total turnover of Rs.804.09 crores (Rs.661.71 crores) — an increase of 22 per cent.

The company has managed to earn an operating profit of Rs.148.98 crores, which is 49 per cent higher — a substantial improvement in profitability. Thus, in this half the company has earned an operational profit of 18.53 per cent on total income, against 15.07 per cent in the corresponding period last year.

See Deepak shine on a profitable past, a dynamic present and a glorious future.

C.K. Mehta, the vision and force behind the Deepak Group started manufacturing industrial chemicals in 1972. His company Deepak Nitrite soon won rapid acclaim for quality products. For shareholders it was a goldmine – an appreciation of over 150% every year.

A new era begins

In 1979, Deepak Nitrite promoted Deepak Fertilisers and Petrochemicals Corporation Ltd. to convert Bombay High gas into profitable products.

DFPCL is the first and only private sector unit to own a gas pipeline.

The first to operate a merchant Ammonia plant consistently exceeding the national average for capacity utilisation.

The benefits flowed to all – consumers, shareholders & the exchequer.

Fast forward into the future

Now, Deepak is embarking on a Rs. 346 crores Forward-Integration-Programme that will propell the turnover to over Rs. 250 crores

Setting up 5 integrated plants to manufacture chronically scarce Petrochemical, Industrial Chemicals & Fertiliser products.

Methanol. Nitric Acids. Prilled Ammonium Nitrate. Ammonium Nitrophosphate Fertiliser.

Yes, the foundations have long been laid. The products well known. The markets growing. The framework fast taking shape. The future spells great wealth. Mahadhan.

Yours... for generations to come.

creased, the company has managed to earn Rs.53.94 crores as net profits, which is 88 per cent higher. Raw material costs rose from Rs.105.48 crores to Rs.136.02 crores. The wage bill at Rs.141.05 crores is also higher. Other operating expenses have also increased by 16 per cent to Rs.378.04 crores. The interest burden has increased to Rs.33.04 crores and the depreciation provision to Rs.44 crores (Rs.34.50 crores).

RESULTS ANNOUNCED

Greaves Cotton

The year ended June 1988 had been moderately successful for Greaves Cotton. Sales has grown by 17 per cent to Rs.154.42 crores (Rs.131.86 crores). Operating profit at Rs.8.30 has risen by 12 per cent (Rs.7.38 crores). Inflation, apparently, has hit the cost of manufacturing more than proportionately.

Provisions of Rs.2.02 crores (Rs.1.53 crore) for depreciation and Rs.2.70 crores (Rs.1.90 crores) for tax, 30 and 42 per cent higher, respectively, reduces operating profit to a post tax figure of Rs.2.66 crores. After adding the balance of Rs.2.90 crore brought forward Rs.1.51 crore (Rs.1.38 crore) and Rs.3.94 crore (Rs.4.25 crore) have been appropriated for dividend and general reserves.

The year had been kind to Greaves Cotton shareholders. The board of directors has recommended an increased dividend of 22 per cent (20 per cent) and bonus to the shareholders in the ratio of one share for every two equity held.

The directors expect a brighter performance in the current year (nine months from July 1988 to March 1989) after considering the general rise in the economy and the backlog of orders the company has at hand. Further, areas for new ventures are being actively explored, particularly in portable diesel gensets and industrial materials.

Sudarshan Chemicals

Sudarshan Chemicals reports improved performance for the year ended June 1988, with turnover increasing by 27 per cent to Rs.49.20 crores (Rs.38.65 crores) and gross profit by 18 per cent to Rs.4.43 crores (Rs.3.75 crores). After deducting Rs.2.48 crores (Rs.2.05 crores) as depreciation, the profit before tax is Rs.1.95 crores (Rs.1.69 crores), a respectable 4 per cent of the gross turnover.

After a provision of Rs.85 lakhs for taxes, the net profit after tax is Rs.1.60 crores (Rs.1.46 crores) and Rs.0.33 lakhs has been written back from investment allowance reserve. Of the total appropriable amount of Rs.1.93 crore, Rs.53 lakhs (Rs.48 lakhs) has seen set aside for dividend, Rs.63lakhs (Rs.19 lakhs) for general reserve and the balance transferred to various provisions.

The company has been able to make significant inroads in markets abroad and exports have increased by 72 per cent. A modernisation plan of Rs.7.70 crores is on the anvil to update plants at Pune and Roha.

Spartek Ceramics

Spartek Ceramics, has performed well and stepped up dividend by five points to 25 per cent for the year ended 30 June 1988.

The company logged a 12 per cent increase in net sales at Rs. 11.44 crores (Rs.10.21 crores) with an equal leap in gross profit before interest and depreciation to Rs.5.51 crores (Rs.4.95 crores). After providing higher interest, depreciation and tax, the net profit stands at Rs.2.85 crores (Rs.2.71 crores).

During the year 1987-88, the company expanded its capacity at a cost of Rs.7 crores. This was completed in mid-April 1988 and its full benefits will accrue in the next accounting year of nine months ended March 1989. The proposed investment of Rs.1 crore in Spartek Granites, a 100 per cent export-oriented unit is awaiting the central government's approval. This will enable the company t acquire controlling interest in Neiveli Ce ramics & Refractories.

Supreme Industries

Supreme Industries has maintained it dividend for the year ended 30 June 198 at 36 per cent on an enlarged equity bas after a liberal bonus issue of 1:1 issue during the year.

Although the turnover increased by 3 per cent at Rs.68.91 crores (Rs.51.2 crores), the profits after tax slumped t Rs.2.23 crores (Rs.3.39 crores). The com pany has provided for lesser tax o Rs.3.50 lakhs (Rs.35.93 lakhs).

During the year, the company spen Rs.6 crores on technology upgradation establishment of a modern tool room an addition of new capacities in existin product lines. The company expects t cross Rs.67 crores of turnover within th next nine-month period ended 31 Marc 1989.

IN BRIEF

Bajaj Auto Ltd expects to reach a turn over of Rs.650 crores during the curren nine-month period, against Rs.552 crore in the previous twelve-month financia year. The number of vehicles planned t be manufactured are 539,000 tw wheelers (460,995) and 51,000 thre wheelers (49,640). Further, three new models are being developed, and may b in the market sometime in 1989.

Approval from the government to ru its plant at Waluj at its full licensed ca pacity of 300,000 vehicles per annum pending clearnace of transfer of selected assets (and also corresponding lia bilities) of Scooter India, Lucknow, has been received. The application to expand capacity at Waluj from 300,000 to 1,000,000 vehicles is, however, still pending.

Carborundum Universal has recommended a higher dividend of 25 per cent (18 per cent) for the year ended 31 August 1988. Sales went up by 18 per cent to Rs.64.21 crores. Similarly, the profit before tax at Rs.9.32 crores and profit after tax at Rs.5.72 crores were substantially higher than the previous year. The progress of expansion activities and technical upgradation of bonded abrasives and new facilities for micro grit is satisfactory.

The Kirloskar Electric Challenge Series

Anybody who has even a passing acquaintance with electrics knows that Kirloskar Electric is a leader in specialist welding equipment.

But did you know that we are the first Indian company to design and develop a tyre flange re-building plant that increases the life of a railway wheel by at least a 100%?

Railway wheels account for a major part of the inventory of rolling stock as well as costs in the Indian Railways. The tyres of wheels are made from alloy steel, a substantial part of it imported. The cost of a wheel is thus very high. Because of the heavy load while negotiating curves, the flange wears out much faster than the tread. In the past the only method of salvaging such wheel sets was to give a substantial cut to both the tread and the flange and get the required profile. This not only consumed costly lathe-man hours but also reduced the life of re-profiled wheels.

In 1979, the railway authorities asked Kirloskar Electric if, based on the initial work done by RDSO Lucknow, we would design and develop a machine for re-building flanges. The process would use submerged arc-welding techniques and increase the life of a wheel from eight years to almost twenty. We were highly excited but the problems involved were truly daunting.

The welding knowhow required for the job was not only advanced but depended on a complex set of electrical and electronic parameters. The client wanted to maximise automation to ensure almost assembly line re-building speeds, as well as operator safety. Were we then rushing in where angels fear to tread? Quite likely. But, we reckoned, nothing ventured, nothing gained. We said yes.

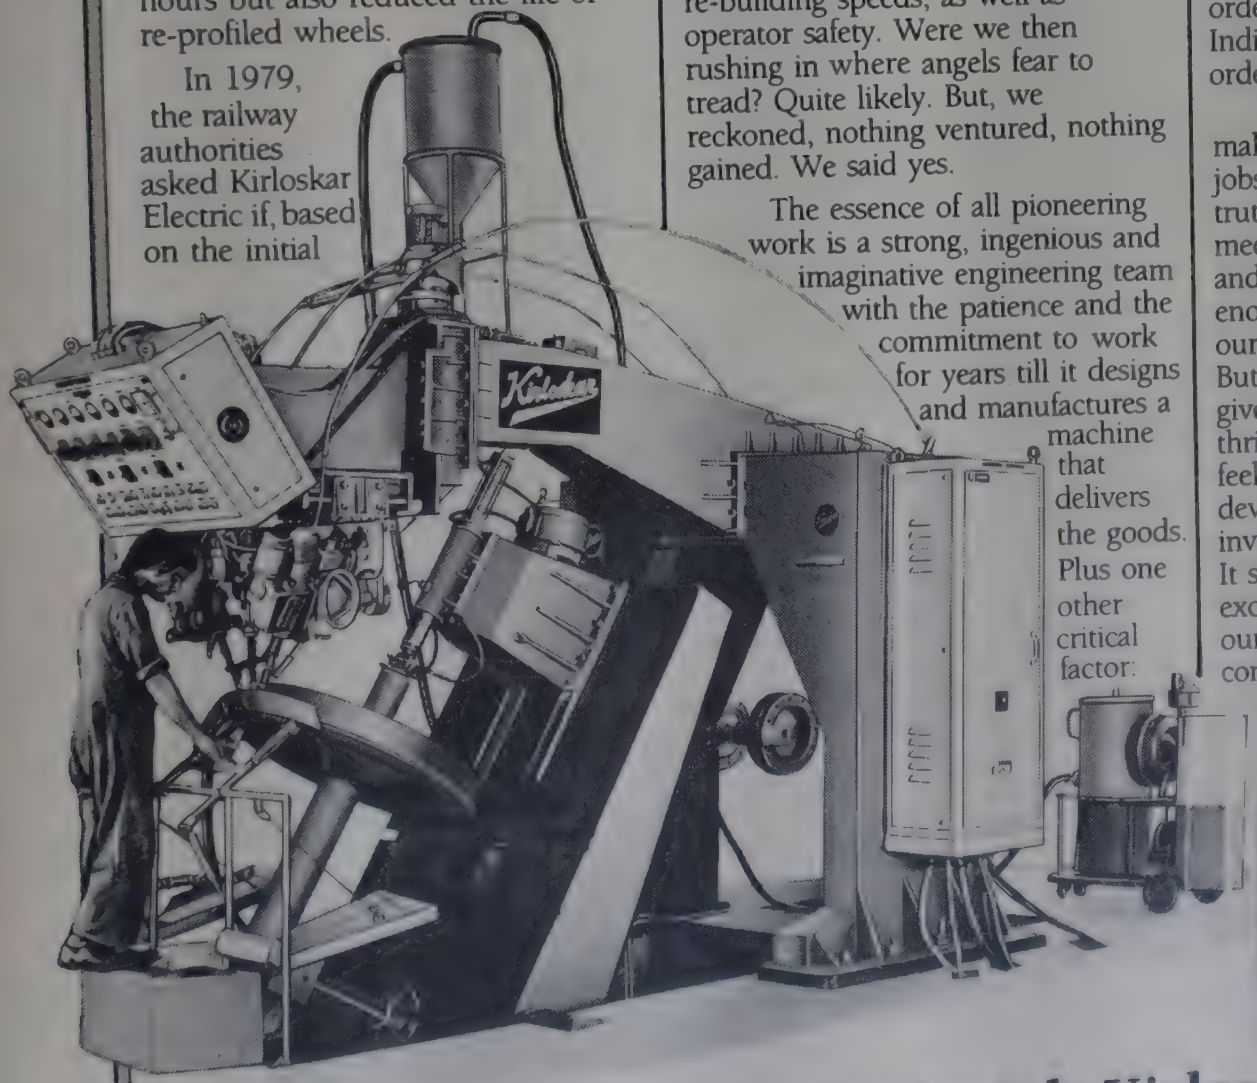
The essence of all pioneering work is a strong, ingenious and imaginative engineering team with the patience and the commitment to work for years till it designs and manufactures a machine that delivers the goods. Plus one other critical factor: the total involvement and continuous guidance and insights of the client. We were lucky. We had both.

Here are some examples of the special demands in this job:

- Difficulties involved in re-building flanges of special high carbon steel.
- Re-building flanges without preheating.
- Automating the entire process with electronic logic and also using three welding heads simultaneously for high productivity.

We must have done a pretty good job. Because after the trial order of 5 machines in 1979-81, Indian Railways placed another order for 13 more machines in 1984.

What, you may well ask, makes us take on such challenging jobs that others won't touch? The truth is standard motors — small, medium and large — are our bread and butter. We make them with an enormous amount of care because our livelihood depends on them. But it's the really tough jobs that give us our kicks. We don't just thrive on them, we need them to feel alive. What we are doing is developing technological muscle and invaluable expertise and experience. It saves the country crores in foreign exchange. And it does wonders to our self-confidence and the confidence our customers have in us. They know that when nobody else can do the job, Kirloskar Electric will.



KIRLOSKAR ELECTRIC COMPANY LTD

Regd. Office: Industrial Suburb, Rajajinagar Bangalore 560 010

When nobody else can do the job, Kirloskar Electric will.

THE ORIGINAL AMERICAN JEANS. NOW IN INDIA.

Slip into your Wrangler jeans. Feel it snuggle against your skin. Mould itself into your body shape. As only Wrangler can.

Simply because it's made so painstakingly. Thread by thread. So the special polyester core of the thread makes sure it doesn't shred for the entire life of the jeans. The button, the zipper, the rivets, the label are all pure, original Wrangler. Even the material is the same. As many as 70 cruel and minute checks precede any pair of jeans being branded Wrangler. From the classic regular 'Blues' to acid-wash to stone-wash jeans. After all, they are made for rather special people. People who would never accept second best. So when someone says you're looking so free, easy and extremely desirable in your Wrangler jeans, you know it'll stay that way.

SPEER 20 101 88 B

1 December 1988
eja Vu

know I've seen it all somewhere before
ut, somehow, I can't seem to quite put
y finger on it. This big empty ring was
ll of people a few minutes ago — full of
xpectations and hope. Unfortunately, he
idn't show up. But these brokers seem to
e getting used to it. I mean, there they
ere waiting for investors for two long
ears between 1986 and 1988 before some
uys finally decided to show up in the hot
ummer months of April and May and
ave some fun.

"Quantity in numbers", my paternal
ncle always warned me, "has no mean-
ng unless one is talking about the quan-
ity of money." I couldn't agree more with
hat grand old man, God bless his soul. I
mean, in this day and age, who cares
whether a bunch of misguided zealots
troll into the ring and begin buying ev-
erything that has the name "Limited"
attached to the end of it. But volume is
volume and brokerage income is broker-
age income and I would be the last person
o turn any of it away. Fulfil any order, is
what I always say, as long as it earns
commissions.

Of course, it does get irritating to re-
mind these cash rich customers — who
already have their share of cash stashed
away in Swiss bank accounts, and as-
sorted assets like real estate, diamonds,
and gold — that "87 limited" is a bus and
not a company and that any intentions
the government may have of privatising
the Bombay Electric Supply and Trans-
port company is a long way off. I mean,
just look at the flak they have got for
attempting to privatise a few defence
deals! Patience, my man, patience — it
will all be done in good time.

But there are many rumours floating
around the market and, if only there was
as much floating stock as floating
rumours we'd probably see a more grad-
ual appreciation in share prices.

Just this morning, a reliable rumour-
monger confided in me that there is more
to the decision of the FM not to attend
the inauguration of the National Index
than meets the eye. Apparently, when the
market had got wind of the fact that the
FM would be here on the 21st, they fig-
ured that the financial institutions would
not allow the market to decline but, in
fact, would make sure that the index
finally managed to catch up with Azhar's
feat of 100 runs in 62 balls.

"How would you feel", queried this rumour-monger, "if you were asked to inaugurate an index with a base of 100 in the year 1985 and, when you press the inaugural computer button — sprinkled with rose petals and holy water — to calculate the index on 21 December 1988 it flashes a paltry 34?"

Logic is sometimes difficult to argue against. Well, having established a correlation between the presence of the FM and the height of the index, the bull speculators apparently decided to ensnare their bearish rivals. However, not wanting to pay the price of being caught napping on the wrong side of the index, the bears decided to slap on new margins in retaliation against the bulls.

"Now which FM wants to get caught in any crossfire between two warring parties? Look, what happened to the other FM who, in his desire to play the lead roles in our very own modern day versions of Ramayan and Mahabharat, decided to carry the Resignation or Truth script in his pocket — he has now been reduced to the part of playing the lead role in Walt Disney's "Round the Mulberry Bush".

Apparently, when the market had got wind of the fact that the FM would be here on the 21st, they figured that the financial institutions would not allow the market to decline but, in fact, would make sure that the index finally managed to catch up with Azhar's feat of 100 runs in 62 balls

"But," the rumour-monger continued "There are other reasons — more important reasons — why the FM did not come. You see, it costs money to get an audience these days and with government deficits being what they are even the FM can't fritter away precious money."

"I am glad to note that budget deficits have finally become a source of concern in New Delhi", I remarked, glad to hear that someone had finally taken the introductory course in macro economics, "after all, there is a limit to the amount of money these public sector fellows can raise from investors to cover the gaping holes in their balance sheets."

"Oh, no no that is not the real reason." said the rumour-monger dismayed at my apparent lack of depth of understanding "Tell me if you had to attend an AGM on the 22nd where rumour has it that the company is going to announce record profits and a ribbon-cutting speech by the FM, which one would you attend?"

"I would have no choice", I declared.

"Exactly" said the rumour-monger relieved that I had finally got the whole picture. "And if people did not show up for the FM's speech but went instead to the AGM do you know what those rumour-mongers would announce?"

"No", I said rather intrigued by this whole affair.

"Well, they would go around chanting 'Guess who the real FM is? Guess who the real FM is? — and wouldn't that be a disaster?!? I mean, in an election year when the government has to worry about looking so socialistic they just cannot afford to be seen to be so close to these business people."

"Makes sense", I said, "Well, thank God the FM decided to stay in Delhi and enjoy the colourful winter sunrises."

"But that", said the rumour-monger, "is not the end of the story. You see the bears are so desperate that they are willing to say anything to get the index below the 400 level. A few days after the FM postponed his trip from the 14th to the 21st, they floated a rumour that the PM was going to visit the exchange!"

"Really, now, what a thing to say", I said sympathetically.

"These people rationalised their irrational expectations by spreading the word around that the PM had worn all kinds of headgear in every part of the world but he had never worn one of those black caps that the traditional brokers wore in the good old days. Sure enough, the market — always starved of news and information — devoured this explanation the way they devour those unaudited six-monthly results as if it is the gospel truth."

"Good Lord, no!" I exclaimed in disbelief.

"Oh, yes", said the rumour-monger gasping for breath, "and do you know what would happen if the PM came down to the ring and gave us brokers a talk sprinkled with 'hum dekhenge, humme dekhana hai'?"

"Pray, where would all this lead to?" I asked in ignorance.

"The rumour-mills", said the rumour-monger breaking into a tired smile, "would be working overtime chanting 'Guess who the PM is? Guess who the PM is?'"

TRADE ENQUIRIES SOLICITED

SALE SERVICE

INVESTMENT OFFER IN RAJASTHAN

RIICO offers investment opportunities to interested entrepreneurs, businessmen, investors who are in a position to invest Rs. 25 lakhs to Rs. 1 crore immediately in RAJASTHAN.

RIICO proposes to provide full support to equity investments made, as it has been doing before, in units closed or sick.

Among them are synthetic yarn units, process houses, marble sawing and processing units, chemical plants, paper plants, engineering units and electronic units at various locations in Rajasthan. RIICO shall mobilize support from State/All India institutions, including from RSEB to the entrepreneurial capital into our financed industries as industrial areas.

Interested parties may please write to or discuss with the undersigned.

Sobhagya/233/86

An uncertain outlook

(For the period 5 December to 17 December 1988)

SE Index on 17 December = 668.12; own 5.9 per cent. ET Index on 17 December = 356.30; down 5.0 per cent.

The past fortnight the market was in a epressed mood. Initially, equity prices oftened, but as the fortnight wore on, nstitutional support caused the BSE and T Indices to head higher. In fact, were it ot for the large scale institutional support for Reliance and Tisco the BSE Index would have probably sunk to the 650 evel.

The volumes on the BSE for the fortnight under review has declined sharply. On 9 December the volume in specified shares was Rs.68.86 crores and on 15 December the volume declined to Rs.35.94 crores. In the unspecified section, volume fell from Rs.18.28 crores to Rs.11.75 crores.

The markets seem to be confused over how to react to news — and what exactly to expect from companies. UTI's Rs.150-crore fund — Mastershare — announced good results for its second year in operations, with a dividend of 15 per cent. The net asset value of Mastershares has increased from Rs.11.00 to Rs.19.50 (Rs.10 paid-up) over the past 12 months and the share price has moved from Rs.11.00 in April 1988 to the present price of Rs.19.75.

No positive reaction. The market expected UTI to announce a rights issue at a premium of Rs.2 and many brokers felt that the price would move into a higher trading range of Rs.25 to Rs.30 upon declaration of the rights. However, when the rights issue was announced on 9 December on terms as expected by the market, the market failed to react positively. The price of Mastershares did cross the Rs.20.00 level for a while but then seemed content to trade in the Rs.19 to Rs.20 range.

In another rather strange response, news of a rights issue in Tisco sent the market tumbling down, causing anxiety at Bombay House and Jeejeebhoy Towers. The explanation for the market's ambivalent response to Mastershares's rights and Tisco's proposed rights offer could be that the premium for Tisco's rights may be higher (and hence less attractive) for investors. Or is it possible that the market expects a higher and faster appreciation for an investment in Mastershares than in Tisco?

Another reason for the adverse reaction to the Tisco rights could be that the market is just tired of the thought of having to subscribe to so many rights issues in the next few months and at the same time, continue investing in the secondary market to maintain the tempo of the last few months.

The smart investors are probably already considering moving out of the secondary market thereby generating funds that can be deployed in the primary market. Too much equity in the form of rights shares and convertible debentures from corporations eager to ride the back of the boom in the secondary markets is hitting the market in too short a time.

The period under review also brought to the forefront the dangers inherent in the present structure. If financial institutions had not propped up the market by their long-used "index buying" — purchasing shares that comprise the major portion of the BSE Index, the market would have fallen very sharply. Unfortunately, in the present structure all investors look to the financial institutions as a "safety net". They know that if share prices start falling, all they have to do is send out alarm signals to the financial institutions with the often-heard warning: if you don't buy, the market will collapse. And, true to nature, purchase orders are issued.

New risk dimension. Another major factor causing the recent downtrend in the market is the persistently high *badla* charges which are still in the 40 per cent to 48 per cent range. *Badla* financiers, worried over the continuing delays in settlement are unsure about how long their funds are committed and, hence, charge higher rates of interest to compensate them for the additional risk. Investors were so far undeterred by the high financing charges and continued to speculate on higher future share prices to offset these financing costs.

The outlook for the market is uncertain. Till the end of the year, the market will be ruled by the impending AGMs of ACC and Reliance. The outlook for cement companies is a great point of debate amongst analysts — some see the healthy cement companies making huge profits in the coming year while others see the industry as a whole swinging further downwards now that the cartel arrangement has reportedly collapsed

Reliance, in anticipation of its AGM on 22 December had a get together with some brokers on 14 December and conveyed to them the higher expected profits for the current year. Apparently, the profits they intend to report for the first 5 months of the current year will be equal to the profits for the previous 18-month period. The timing of this meet conference with brokers and the immediate support generated by the financial institutions indicates that the share is going to see new highs atleast before the year ends.

In the long term i.e., the next three months the market is going to be plagued by political uncertainties. The Tamil Nadu elections, the upcoming budget, and the persistent rumours of a mid-term poll will keep the market subdued. Corporate profits, however, are still looking good and share prices should move up again over a one to two year horizon, once the political uncertainties and fears of an election budget are out of the way.

PUBLIC ISSUE

Selective and mature investors

History is repeating itself albeit with a bit of a difference. The exploding secondary market has once again drawn companies to the primary market. In November and December over 20 companies entered the new issues market to raise over Rs.100 crores.

Unlike the historic 1985-86 boom when the investing public went about picking up corporate paper without batting an eyelid, investment analysts and merchant bankers agree that the current investment pattern indicates selectivity and maturity among investors.

Says R. Kannan, executive vice-president, Canbank Financial Services Ltd, Bombay, "There have been several issues of capital in these two months and there are many more to come into the market in January and February. The difference this time is that the companies are solid established ones or new ones promoted by well-known groups. And investors have reacted accordingly."

Trend confirmed. Indeed the list of issues that opened on 12 December confirms this trend. They include Grasim Industries (an Aditya Birla company),

The public response

Company	Month	Size of issue (Rs crores)	Response (No. of times)
TVS ELECTRONICS	NOVEMBER	3.50	14 O/S
MODI STEEL	NOVEMBER	0.70	30 O/S
NATIONAL AUTO	DECEMBER	N.A.	U/S
VENKATRAMA HOTELS	NOVEMBER	N.A.	U/S
NIPPON DENDRO ISPAT	DECEMBER	20.00	4 O/S
GRASIM INDUSTRIES	DECEMBER	65.00	6 O/S
ESSEN COMPUTERS	DECEMBER	1.25	6 O/S
K.G. GLUCO	DECEMBER	2.41	2 O/S
KANTHAL BIMETALS	DECEMBER	0.60	
CONTINENTAL PETROLEUM	DECEMBER	0.57	6 O/S
AMRIT PROTEIN FOODS	DECEMBER	1.80	

O/S: Over subscribed; U/S: Under subscribed

Solidaire Television and Essen Computers, existing companies and Kanthal Bimetals (promoted by the Swedish Kanthal Group) — all very heavily oversubscribed (see table). If the investment trend is any guide, investors have not plumped for every available issue. National Auto Accessories, Venkatrama Hotels, are examples of capital issues which did not close on the earliest closing date. "This indicates that these issues were largely ignored by the public mainly because the perception was that these companies did not offer as good an investment opportunity as many others," comments a broker.

After a trying time entering over two years, the new issue market has bounced back and this has given several companies the opportunity to raise money," says N. Venkateshan, group financial controller, Essar group of companies, "It's always good to have money in hand. This helps companies to speed up expansion projects. Essar (Gujarat) Ltd which proposes to double its upcoming sponge iron plant capacity has an application pending with the CCI to raise over Rs.200 crores of fully convertible debentures to finance the second phase.

The revival of the new issue market has brought to the fore mega issues by several companies. As corporate expansion plans become more and more ambitious and as the market becomes more responsive, company managements are now beginning to rely on equity and convertible debenture issues to finance projects.

Rushing forth. Oswal Agro Mills Ltd has, in its own fashion announced a Rs.309 crore fully convertible (3 months maturity) debenture issue which was cleared by the CCI in mid-December. This company has very successfully taken the equity route to finance major expansions and acquisitions. The proposed issue will finance the expansion plans in the company's newly acquired petrochemical complex at Chembur, Bombay.

And then there is a proposed convertible debenture issue (Rs.500 crores) by TISCO. As companies rush forth to the capital market in the new year, — particularly before the budget month — analysts expect that investors will continue to excercise more caution as the market becomes more crowded.

■ BASUDEV DASS

SECP

Investor protection at last

Last fortnight, the Bombay Stock Exchange (BSE) made the first lot of disbursements from its Stock Exchange Customers' Protection (SECP) Fund — Rs.3.29 lakhs was paid out to 46 affected parties.

Concern over protection of the rights of investors mounted in the aftermath of the 1985 stock exchange boom. The fund was established in October 1986 following recommendations made by the G.S. Patel Committee on stock exchange reforms. It is modelled on the Securities Investor Protection Corporation of the USA.

Who can make a claim?

The SECP will entertain claims of the following categories:

- Claims arising out of payments made to a member firm for securities which have been received from the market but not delivered by the broker;
- Claims arising out of securities delivered to the member firm by the client but in respect of which the sale proceeds have not been received;
- Claims arising out of money in the hands of the member firm pending investment or money in the hands of the member firm which has been improperly dealt with;
- Claims arising out of securities in the hands of the member firm which have been improperly dealt with.

Chipping in. The fund is financed by quarterly contributions from each member at the rate of Re.1 for every Rs.10 lakhs of turnover. The BSE chips in two per cent of the listing fees realised by it during the immediate preceding quarter (the government had suggested a contribution of one per cent from the BSE). The present corpus of the fund is Rs.8.5 lakhs — trustees expect this to grow to Rs.45 crores in a decade's time.

The trustees of the fund are the president, the executive director, the vice president, and the honorary treasurer of the BSE, besides a member from the BSE's governing board. It becomes operative when a member defaults (fails to meet market commitments), or when money or certificates deposited and receivable by the client at the member's office become unsecured.

Although the fund does not have seizure powers, the trustees do act immediately after identifying a defaulting member. "We lay our hands on whatever is readily available at the member's office," says BSE executive director M.R. Mayya. Barely three months after it was formed, the fund identified M/s S.M. Samant, a member of the exchange, as a defaulter who failed to meet the claims of clients. The member paid out Rs.9.8 lakhs in partial settlement of awards made in 62 arbitration cases.

The task of monitoring defaulters is getting increasingly difficult. The average number of transactions at the BSE has increased threefold from 1985 levels to over 100,000 a day, amounting to a turnover of almost Rs.125 crores.

BRICK BY SOLID BRICK BY SOLID BRICK...

See Deepak shine on a solid foundation and a dynamic future.

Consider the advantages DEEPAK enjoys because it made all the right moves.

By laying its own gas pipeline from ONGC, Uran to Taloja, it secured an uninterrupted source of raw material at cost-advantageous prices than others.

Locating its Ammonia plant close to its Fertiliser and Industrial consumers.

Managing the plant at a capacity consistently above the national average. Now to further capitalise on these advantages, DEEPAK is diversifying into three profitable industries – Petrochemicals, Industrial Chemicals and Fertilisers.

Rs 346 crores Forward Integration-Programme

From Gas, it will manufacture Methanol, a precious petrochemical. And by using its Ammonia production in-house, it will manufacture Nitric Acids, Prilled Ammonium Nitrate and ANP, a preferred fertiliser. All this in

The most energy efficient plants

To ensure state-of-art-technology DEEPAK has contracted with world renowned process licensors: ICI, Davy Mckee, UK; Stamicarbon, Netherlands; Humphreys & Glasgow, UK; Weatherley U.S.A.; and Plinke, W. Germany.

Yes, the foundations have long been laid. The products well known. The markets growing. The framework fast taking shape. The future spells great wealth. Mahadhan. Deepak Mahadhan.

DEEPAK MAHADHAN

Yours... for generations to come.

Deepak Fertilisers and Petrochemicals Corporation Ltd

- Petrochemicals
- Industrial Chemicals
- Fertilisers

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per shares for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share earnings. Yield: dividend as a percentage of market price

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable
* Maintenance - free * 100% Leakproof and Rustproof
* Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes.
* Backed by excellent installation and after sales service through a wide network of dealers.

Note: CD: convertible debenture; NCD: non-convertible debenture including debentures that were earlier partially convertible for which the conversion is over.
Debenture yield is calculated as a percentage of market price without adjusting interest due component. This can make a significant difference in actual return.
The fact that the debenture market is generally active can be surmised from the dates of last business done. Hence readers are advised to seek suitable professional advice before deciding.
All care is taken to ensure accurate and up to date information.

Better luck in the new year

The erratic stockmarket has caught contestants on the wrong foot. Three months have gone by and we have had no winners. In the contest under review, we had prices of two out of six scrips move up, leaving contestants far off the winning mark. Nevertheless, many participants were right in expecting a fall in IEL's price from Rs.56.00 (4 November 1988) to Rs.53.00 (9 December 1988).

We would be happy to ring in the new year with some winners.

How to enter

On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict the prices of each of these shares as on 13 January 1989, and send in your entry by 3 January 1989. The winner in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry which has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of 6 correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

Rules:

1 There is no entry fee.

2 The list has been selected on the basis of what we consider are actively traded and interesting scrips on Indian stockmarkets.

3 The price mentioned last in the official quotation list of the stock exchange (if there is a series of such prices against the name of the share) will be taken as the correct answer. The official list of the particular stock exchange, which will be referred to, is given against the name of each scrip. If for some reason the stockmarket is either closed on 13 January 1989, or there are no transactions for the six scrips chosen below, then the quotations for the nearest working day prior to 13 January 1989, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 3 January 1989.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of **the Business India group of publications** is entitled to enter the contest.

Name of scrip	Stockmarket official list to be used for comparing results	Prices as on Friday, 16 December 1988 (Rs)	Variations permitted from correct prices up to (Rs)	Prices as on Friday, 13 January 1989 (Please fill) (Rs)

INTRODUCING 1997. AND INDIA'S

That question mark is hope. Hope for clean air to be still around in 1997. So none of us would need a gas mask to breathe through.

Today, clean air is vanishing fast in our cities. And every badly maintained fuel driven vehicle spewing toxic matter is hastening its sad exit. And our lack of concern does not lighten our burden of guilt.

It's certainly true that we can't do without our vehicles. But it's certainly not true that we can't take better care of our vehicles. Or, control their toxic emission level.

To help you and clean air, MICO is organising Emission Checks in the following cities. For your vehicle. Free. Look up your local newspaper for

EW FACE ?

and venues. And drive in. To help bring back
air.
REE EMISSION CHECKS at Ahmedabad,
aneshwar, Calcutta, Chandigarh, Coimbatore,
, Ernakulam, Indore, Jaipur, Kanpur, Lucknow,
rai, Nagpur, Patna, Pune and Secunderabad.

LICENCE BOSCH

"By consensus, not diktat"

Colin Bamford *(46) is chief executive officer of Hong Kong Bank's India operations*

Stuck at the airport waiting to catch an Indian Airlines flight that was inordinately delayed, Colin Bamford counted his blessings: the plane would take off the same day; better than in China, he said, where bad weather can stall flights for two days.

Such light-hearted acceptance of an Indian reality is not surprising for a man who has had so much to do with this country. His grandfather came here in 1892, his father was born in Bangalore and he himself in Ooty. Three generations of exposure to India, is much more than any other foreign banker working in this country can boast of.

The 46-year-old Bamford holds a banking degree from King's College, London and is also a Fellow of the Chartered Institute of Bankers. He joined Hong Kong Bank as an executive trainee in 1962 and is now an expert in the field of corporate banking. He specialised in trade and industry during his four year stint in Hong Kong before coming to India in August this year. A chronic workaholic, he explains even his late marriage with: "I had no time before".

The priorities are clear for Bamford. With over Rs.600 crores in deposits, Hong Kong Bank is the third largest foreign bank operating in India, after Grindlays and Citibank. It is already financing export business worth Rs.200 crores annually and the new CEO feels that this area could be catalysed more effectively to help the country's export orientation.

"By apportioning a part of the resources to exports, you give up a measure of profitability. But the important thing is we want to increase the bank's participation in this area," says Bamford. His long experience in this area while in Hong Kong, an economy that survives on exports, should come in handy.

A second thrust area for Bamford is his merchant banking division. The bank, he says, has a wealth of expertise to be drawn upon. Its branches in New York, London and Hong Kong specialise in these activities. India's developing capital market can benefit considerably from this know-how, he says. But he is convinced that mergers and acquisitions can play only a limited role in making industries more efficient. "The present trend of corporate raiding is not healthy, he says. "The money made by merchant bankers is really obscene."

Hong Kong Bank was the first in India to introduce automatic teller machines. Already eight of its 22 branches in the country have ATMs; seven of these are in

Bombay and offer a network facility. Depositors in the city can bank at any of the branches.

Bamford hopes to bring all the branches in the country under the network, "to offer customers more flexible services". "Our aim is to expand our services to within the reach of the Indian middle class as much as possible. They are a hundred million strong and their need for sophisticated banking services should increase rapidly in the coming years."

Bamford is conscious of the fact that being a foreigner his style of management will have to be subtly different from that of his Indian colleagues. "My style is to act by consensus and not by diktat. There is a special need for this if you are a foreigner. Getting people on your side is important".

Bamford's insight into the country's economic and political situation is very sharp. "India is at a very interesting stage economically, a once in a lifetime state," he says. "You have survived three consecutive droughts. Wealth is trickling down to the middle class and more and more NRI investment is flowing into the country. And for us bankers no doubt these are challenging times."

■ PADMA RAMNATH

FRONTRUNNERS

Raghu Palat's appointment as the first Indian regional audit manager for South Asia of American Express Bank in May this year did not come as a great surprise to people who'd been watching his career closely.

A CA rank holder from England, the 40-year-old Palat was the first Indian to audit at the Bank of England while working for Deloittee & Co, the largest firm of accountants in the UK.

Back in India in 1978, he worked with the British-owned tea firm James Warren & Co, for three years, before joining American Express in 1981. Palat became the first Indian to be selected to participate in a year-long intensive study programme on advanced banking techniques at the bank's New York headquarters. Ever since, his rise in the bank's heirarchy has been rapid.

How has he adjusted to being the bank's troubleshooter and conscience keeper in the subcontinent? "Till such time as we established our credibility it was tough", he says, "Now things are much easier."

Luiz Moniz, the 32-year old, newly inducted assistant vice president of the Bombay-based forging company Amforge Industries has well-calculated career ambitions. A product of IIM Ahmedabad, he started out as an executive assistant to B.D. Garware, the patriarch of the Garware empire. His training here, he says, tested his skills to the hilt. Working with an old hand like Garware also complemented his lack of experience. He left two years later to join Ciba-Geigy first and 20th Century Leasing later.

He switched to Amforge, a Rs.50 crore company, because, according to him, in a multi-national your growth is fairly guaranteed. "I was bent on getting into the fast track," he says.

IF YOU USE SEWING THREADS THIS WILL INTEREST YOU

At Madura Coats we don't just make the best threads. As *the thread makers* we also assist you in selecting the right thread for each application. To help you understand and overcome thread and associated problems, we've set up the COATS THREAD ADVISORY SERVICE.

Our panel of experts will answer all your thread queries, from routine sewing problems to complicated ones. In addition, the COATS THREAD ADVISORY SERVICE also publishes papers on sewing and thread related subjects such as seam pucker, seam stretch, etc.

When technologically superior products are introduced, bulletins are prepared assessing their relevance to your needs and mailed to you if you are on our mailing list. These will help you improve your product quality and productivity.

It's so easy to be a part of the COATS THREAD ADVISORY SERVICE. Just write in to be on the mailing list. You don't have to pay anything for this service. All this comes absolutely free to you from Madura Coats, *the thread makers.*

Fill in the coupon below and mail it to: Thread Advisory Service, Madura Coats Threads, 144 M.G. Road, Bangalore-560 001. Or dial the Madura Coats office nearest to you.*

With the introduction of new speciality fibres

GRASIM

once again revolutionises the Indian Textile Industry

GRASIRIB FIBRE	GRASIBOW FIBRE	GRASINEP FIBRE

Sobhagya-B.GI.88

One of the world leaders in staple fibre production and technology, GRASIM, after relentless research has developed many speciality fibres. These are now revolutionising the textile scene in India.

Speciality fibres when blended even in small quantities of 5 to 20%, help spin versatile fancy yarns. These in turn, enable weavers to weave fascinating, trendy fabrics at an economic cost.

These fabrics are ideal for Indian climatic conditions and have a wonderful feel and captivating sheen. And they need no dyeing or finishing! Because of their inherent consumer appeal, these fabrics are helping rebuild the economic viability of the Indian Textile Industry.

Introducing

THE CERA BATHSUITE

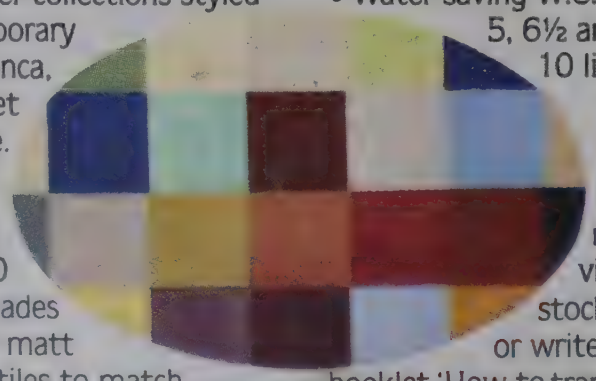
The Capri Colle

Because the way you live today makes yesterday's bathroom outdated

The Cera BathSuite is a new experience, as exclusive and individual as you are. It allows you to express yourself in ways you never thought of before. And it lends itself to new ways of designing your bathspace — large or small.

Take a look at the features that will help you get the best from Cera.

- Four designer collections styled for contemporary living — Conca, Capri, Cornet and Crowne.
- The largest colour range — 30 stunning shades in glossy or matt finish with tiles to match.



- Water-saving W.C. cisterns — 5, 6½ and the usual 10 litres.

To see what the Cera BathSuite can mean to you, visit any of our stockists' showrooms, or write to us for our free booklet, 'How to transform yesterday's bathroom into a Cera BathSuite' — it's almost as good as being there.

You'll never want to enter yesterday's bathroom again.

The Capri Collection

The Crowne Collection — Water saving W.C. cisterns available in 5 and 6½ litres

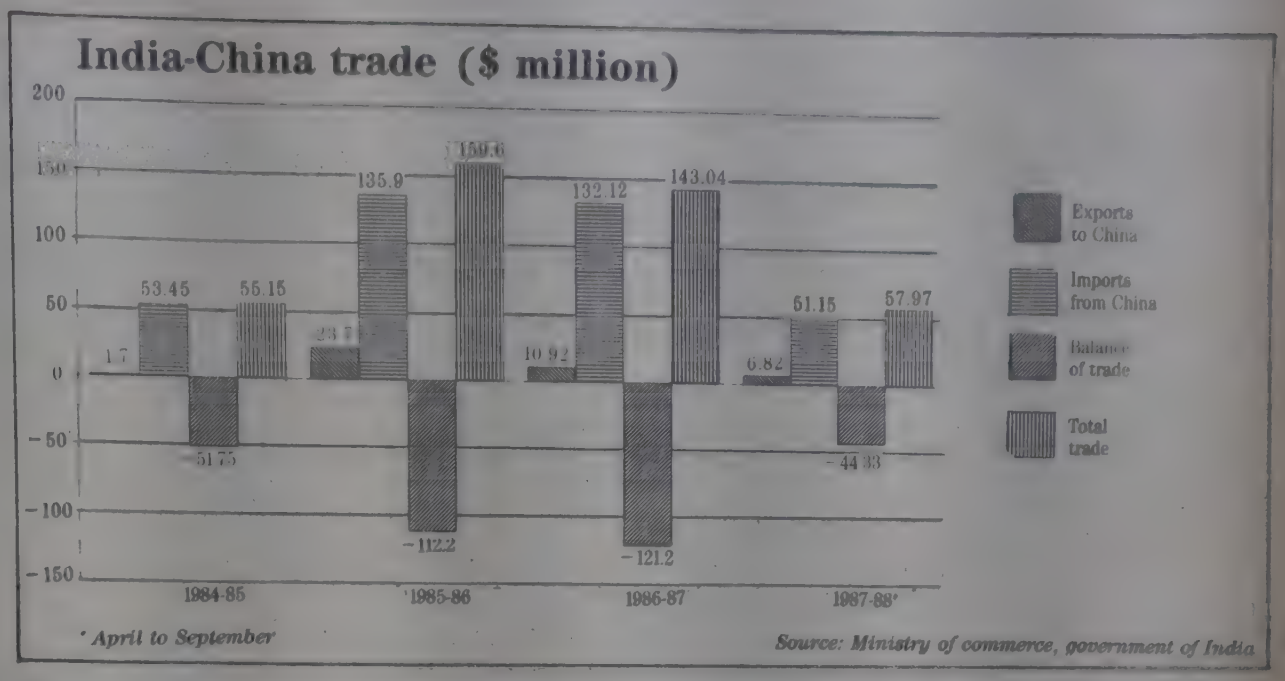
O-CHINA TRADE

n a slow boat



hard to believe that India and China, two most populous countries in the rld, both rapidly developing and with t natural resources, and potentially rmous markets, can muster up bilat- l trade that at best can be described as nuts. The total trade between the two ntries in 1987 amounted to $143 mil- n. Earlier this year, a South Korean poration delivered the first consign- nt of minibuses and pickup trucks to mainland — its estimated value: $100 lion! The irony here is that till two rs ago, China and South Korea did not e any official trading links for political sons equally severe if not worse than ones India faces with China, and de was through a third country.

A country that in the past few years has lised that self-sufficieny is an elusive l, China has thrown open its doors to "outside world". India's interest in sting trade with China comes at a e when China's own economic reforms ve reportedly faltered amidst rampant ruption within the party and double- git inflation, both at a level some ob- vers feel, rivalling that of pre-1949 ina.

ow on the uptake

continuing inflationary trend in China uld seriously end the experiment of nomic reform, a major bone of conten- n between reformists and conserva- es in China's leadership. In this ntest, some observers feel that India y have already missed the bus for in- easing trade with China.

"Out of a total of 10,000 foreign ven- res in China, with an investment of $22 lion, India's share is negligible," says mu Deora, chairman of the Federation Indian Export Organisations (FIEO), the chairman of Chemexcil, who was the People's Republic recently. Deora mits that a lot needs to be done by dia, particularly if we hope to reverse e trend of our trade deficit (*see chart*). A major hurdle that needs to be over- me is the total lack of awareness about dia. "We need to launch a comprehen- ve advertising campaign — not only in e large urban centres, but also in the ovinces, to tell the Chinese what we are about," says Deora.

Says one observer, "The awareness of dia as a potential trading partner in China is almost negligible. Why should China trade with a country that is not willing to make an effort, when it has ten countries knocking on its door?" M.P. Gupta, a large importer of sodium alginate, places the blame squarely at the feet of the government. Having made several trips to China, Gupta feels that the Indian mission at Beijing is not fulfilling its role of coordinating trade enquiries and exploring new trade opportunities.

D.T. Shah, a trader who has considerable links with China in silk, ball-bearings and pharmaceuticals, feels that more individual effort is required. He makes a bi-annual pilgrimage to China for the Canton Trade Fair and feels that India needs to step up its presence at such forums.

Better services

The other areas that need to be improved include communication, transportation and financial services. One trader claims that it is easier to ship goods to India via Hong Kong or Japan than directly to India. "Without basic services in place how can any trade flourish?" he asks. This seems to be the crux of the problem. Notes one industry source, "there is very little systematic ground work and infrastructural development done, which is necessary to facilitate easy trade."

One complaint that most Indian traders have while dealing with the Chinese is getting them to stick to a deal. Silk is a typical example. Raw silk and silk yarn will account for almost 33 per cent of imports in 1988-89 (approx $40 million), and yet the industry suffers from escalating prices and uncertain delivery schedules. Says one large importer of silk yarn, "in a one year period the price of raw silk has shot up from $18 a bale to $48 a bale To compound the problem we are never sure that we will actually receive the ship ment." He adds, "When you meet the Chinese face to face they will agree to a contract, and eight days later back in Bombay I receive a telex saying there is no deal on the rates agreed upon."

Strangely, while traders in India complain about the lack of interest on the part of the Chinese to do business, traders in the West have quite another story to tell. The manager of a large multinational trading corporation based in the US, which has extensive trading links with China, is all praise for doing business with China. He explains, "The Chinese will drive a very hard bargain, but once they have committed themselves they will never renege on a deal." He adds, "The people we deal with are professional traders and not bureaucrats and are fully aware of the market. What is very essential is that you instill a sense of confidence in them — that you are serious about doing business with them, and it is here I think where the Indians fail." And this manager should know — his company's steel division alone does about $50 million worth of business with the Chinese.

A great many traders and dealers hope that Rajiv Gandhi's visit to China will make the Chinese take India far more seriously in future. On India's part, the last minute decision to include the high-powered union minister for commerce, Dinesh Singh, is an indication of the serious intentions of increasing bilateral trade. But unless these high powered visits are followed up by a concerted effort on the part of the government and the trading fraternity, the levels of trade will contine to flounder at the pathetically low levels they are currently at.

■ SHIV TANEJA and COONOOR [illegible]

BUSINESS
IMAGES 1988

ECONOMY

On the economic front, gloom gave way to joy. Four successive years of drought gave way to bountiful rains in 1988. Food production is expected to touch a record 170 million tonnes which should add Rs.8,000 crores to the buying power of Indians. The on-going consumer boom, as a result, received a fresh impetus.

Industrial production rose by 11 per cent in the six months ended September. Real GNP is expected to be up by 9 per cent. Most companies reported better profits. The Bombay stock exchange index, which dived to an all time low of 390 points in March, recovered smartly to record its best ever high of 720 points in November.

Investors, led by the institutions, began to return to the stockmarket in droves. The largest ever capital issue of Rs.600 crores by Reliance Petrochemicals was oversubscribed twice.

The Ambanis asked for Rs.600 crores from the public for Reliance Petrochemicals and got Rs.1,200 crores

Bountiful rains and record crop production followed four yea of back-breaking drought

Consumer buying power should go up by Rs.8,000 crores

As the economy looked up, stock prices shot up

...ush of IA 113: political interference and shoddy management

Harsh Vardhan of Vayudoot: how best not to run an airline

Shivraj Patil: fantasising

...an Jetley and Ratan Tata: at loggerheads

AVIATION

The reputation of Indian aviation took a nosedive in 1988. The crash of Indian Airlines Flight 113 at Ahmedabad on 19 October killed 134 and demonstrated the extent to which political interference and shoddy management has turned the airline into a travellers' nightmare. Instances of aircraft wheels falling off, planes landing on their nose were all too common. Chairman Rahul Bajaj admitted that there were 'problems' with Indian Airlines.

Rajan Jetley, managing director of Air-India managed to stay in the news all through the year. First by making a Rs.43 crore loss in 1987-88, and then by being at loggerheads with many of his staff and sometimes with chairman Ratan Tata.

Vayudoot was even worse off. One of its Fokker Friendship aircraft crashed in Assam on the same day as IA 113, killing 34. Managing director Harsh Vardhan appeared to be demonstrating how not to run an airline. While suppliers stopped selling spares on credit to the airline, civil aviation minister Shivraj Patil boasted about Vayudoot entering the Guiness Book of World Records by bringing the country's 400 odd districts on to the airline map

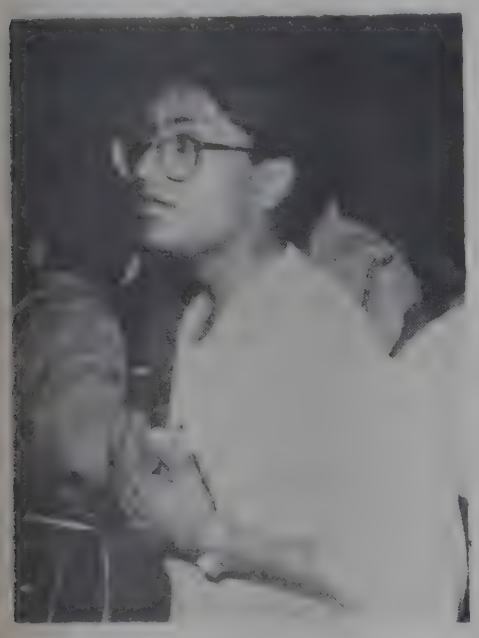
Compiled by N. Pathal Krishnan, Venkat Hosa

Lalit Modi, 26, president of Godfrey Philips, son of **K.K. Modi** and a regular on the Bombay discotheque circuit, was bilked off $ 20,000 by the agent of British singer Samantha Fox, who promised to bring her down to India and then backed out, so claimed a Bombay eveninger. Modi promptly issued a denial but admitted that he has indeed been trying to get the porn-star turned rocker to visit



the country. "We want to get her down as part of our company's promotion campaign," he says, "But she could not fit us into her schedule, that is why she could not come down this month. But we are still trying to get her and other popular rock stars to come and sing in India."

Industry people who were expecting to ask a lot of questions about the reduction in interest rates were met with a cogent and polite rebuttal from the government in the person of **P.D. Ojha**, deputy governor of the Reserve Bank of India, at a meeting convened in Delhi recently. They were pacified by Ojha, who said that the RBI has been trying to adjust rate structures on the basis of national perspectives and that industry will have to bear the cost.

Said he, "Whatever changes we wish to make, we can only make slowly. Some are already under way and a step-by-step approach is needed in this regard." With a gentle and dynamic spokesperson like Ojha, one can expect the RBI to play a more vital role in the future. And this should be good news for everybody if competence also has its say.

Do you want to meet **Obul Reddy**, chairman of Indo-Nippon, **T.T. Vasu**, chairman of Goodyear, **R. Seshasayee**, finance director of Ashok Leyland or NRI visitors like **Bhaskar Menon**, without an appointment in Madras? Just drop in at the nearest auditorium on any evening in Madras this month.

More than a dozen dance and music festivals, several of them patronised by the corporate sector are currently under way in the city. One can therefore be sure of running into the businessman of one's choice at any of these. For example T.T. Vasu, who is the president of the Music Academy can be seen sharing the same platform as governor **P.C. Alexander** at one concert. And at another one the same evening, president of Indian Fine Arts Society, **V. Emberumanar Chetty** of HOE can be seen rubbing shoulders with **G.V. Ramakrishna**, advisor to the governor.

When Madras giant EID Parry celebrated 200 years of its founding, a variety of events were planned over a period of six months. The Parry family decided sensibly to wind off the festivities in New Delhi with a memorial lecture that **Yoginder Alagh** of the Planning Commission delivered with the verve and polish he is well known for.

But, in what was a touching gesture to one of the great names of South India, former finance minister **C. Subramanian** was asked to make the final speech. Subramanian excelled himself and got to the heart of the problem of rural India straight away. In what was a dig at today's trend for loan melas, he concluded, "Charity may alleviate misery but will never remove poverty." Now that is what southern straight talk is all about.

The most talked about match of the season in Bombay was between **Prakash Melwani** and **Anjali Ramchandani.**

Not surprising. Prakash, an investment banker from New York, is hardly the stereotype of an uneducated Sindhi businessman, although he belongs to the Melwani clan, one of the leading Sindhi business families. With first in Economics from Cambridge, a stint at Rothschild and then a Baker Scholar from Harvard Business School, Prakash was amongst the most eligible bachelors.

The lucky girl, Anjali, is London based, and comes from well known family of lawyers from Karachi. Her father, Percy, apart from being a leading lawyer was also among Zulfikar Ali Bhutto's best friends. The celebrations included a grand party at the Taj and a wedding ceremony at the Turf Club. Among the guests was Mumtaz Bhutto, a former governor of Sind.

Head Office : 18-Community Centre, New Friends Colony, New Delhi-110065

Shri K.K. Modi

Speech of Shri K.K. Modi, Chairman, Modi Alkalies & Chemicals Ltd. delivered At 9th Annual General Meeting held on 29th Oct., 1988

Ladies & Gentlemen,

On behalf of the Board of Directors, I welcome you all to the 9th Annual General Meeting of the Company.

The year 1987-88 has been a difficult one for India on the economic front. The overall state of the economy was under unprecedented stress because of the countrywide drought. It is, however, heartening to note that the shortfall of the agricultural sector has been made up by the growth in the service and industrial sectors leading to a growth of 1-2% in the Gross National Product. Without going over board with the achievements of the Indian Government in drought management and steering the national economy, I would like to acknowledge the sensitivity of the Government of India in closely monitoring the economy through carefully designed fiscal policies. The Government's initiative in checking the non-plan expenditure has helped in containing the inflationary trends.

The importance of exports for the growth of Indian economy needs no emphasis. We are conscious of the industry's responsibility in contributing to the increase of exports for long range benefits to us and the Indian economy. It was on this aspect that we had applied for the increase in licenced capacity of the Caustic Soda Plant. The sales made by Caustic Soda Industry to the domestic units, who were otherwise importing these products should be eligible for benefits of deemed exports. This will go a long way in promoting the interest of the industry and help in saving the valuable foreign exchange.

Your Company is amongst the first to have started exporting Caustic Soda. On the export front, the Company has been able to show an increase of 48% by exporting goods worth Rs. 123 lacs during the year as against Rs. 83 lacs in last year.

Your Company has been allowed to increase its licenced capacity of Caustic Soda from 33,000 TPA to 41,250 TPA under Automatic Growth Scheme. In order to optimise overall capacity, an application for the financial assistance for putting up balancing equipments is pending with the Financial Institutions. This increase in overall capacity will help us to give further push to export efforts.

Turning to our own performance, the Annual Report of the Board of Directors together with audited accounts for the year ended 30th April, 1988 have already

been circulated to you and with your permission, I take them as read.

Your Company has been able to achieve slightly better results in the financial year 1987-88 despite continued depressed conditions in the industry and increased power-cuts in the State of Rajasthan. The turnover of the Company during the year has been Rs. 2364 lacs as against Rs. 2335 lacs during the previous year. The profit after interest and depreciation for the year has been Rs. 87 lacs as against Rs. 63 lacs in the last year. The Company has achieved utilisation of 83% of the installed capacity as against 67% average of the whole industry during the year under review.

The Company has achieved capacity utilisation of 109% of installed capacity during the period May —September, 1988 as against the industry average of 72%. During this period, the turnover of the Company has been Rs. 1297 lacs as against Rs. 883 lacs achieved during the corresponding period of 1987-88 showing an increase of 46%. In the same period, the Company has earned cash profit Rs. 220 lacs as against Rs. 83 lacs registering an increase of 165%. Consequently based on the current year's performance from May 1988 onwards, the profitability of the Company is expected to increase significantly during 1988-89.

The overall outlook in the industry since May, 1988 is better because of increased demand and indigenous off-take of Caustic Soda by big NALCO Project. Further there is good scope for export of Caustic Soda for which the Alkali Manufacturers' Association has made representation to the Government of India for fixing up cash compensatory support on export of Caustic Soda. This will substantially improve the performance of the Company.

Your Company has also got Letters of Intent for the manufacture of various down-stream products viz. Activated Earth, Aluminium Chloride, Sodium Hypochlorite, Monochloro Acetic Acid & Tri Penta Chlorophenols. An application for 6,000 TPA Activated Earth Plant is under consideration with Financial Institutions based on indigenous technology developed by I.I.T.

Your company is continuing to give top priority and utmost importance to the maintenance of the desired safety standards and pollution control measures at the Plant. For this purpose, from time to time, both in-house and outside expert agencies' views are taken into account.

Your Company has made concerted efforts in developing chlorine based ancillary units with the dual objective of generating more employment and sharing the technical expertise for greater economic growth of the region. In this regard, you would be happy to know that as many as 26 such new units have developed around the factory which will further ensure market for our products.

While concluding, I would like to record my thanks to all my colleagues on the Board for their invaluable counsel and guidance. I am also grateful to the Rajasthan Government, All India Financial Institutions, Commercial Banks and outside agencies for their continued support and invaluable assistance to the Company. My thanks are also due to our dealers and customers and it will be our endeavour to provide them with best quality products and services. I also record my sincere thanks to all the levels of staff for taking full interest and dedication in the growth of the Company.

Thanking you and wishing you a very "HAPPY DIWALI"

Note : This does not purport to be the part of the proceedings of the Annual General Meeting.

Senior executive positions

A compilation of executive positions advertised in **Business Indi** and other major publication from all over India between 5 and 2 December 1988

NATIONAL

- GENERAL MANAGER (Finance) * *Sal* RS.120,000 pa + car * *Age/Qlfn* 35-45 years * ACA and ACS * *Reqd* 10 years experience with 3 years at a senior level, knowledge of direct taxes, company law etc, knowledge of tax assessments, electronic data processing will be an asset * *Cont* Vice-President (Personnel), Godrej Soaps Ltd, Pirojshanagar, Eastern Express Highway, Vikhroli, Bombay 400079 (ToI—5.12)

PRESIDENT

Preferred Age: 35-45 **Remuneration: Rs. 3,00,000 plus.**

We were the first to introduce innovative chicken based products in India. We have captured a major share of the Bombay test market and have also established a high tech factory near Bombay.

We see a very large and untapped market for our branded chicken products in India. We have drawn up ambitious plans for growth through geographical expansion and introduction of new products. We are now looking for a PRESIDENT to take total charge and to herald us into the growth phase.

The ideal candidate would already be number one or number two in his current organisation. In addition, he would be a Marketing Wizard who has successfully launched a branded product in a commodity market. M.B.A./Engineer from premier institutes with experience in handling a profit centre or a factory will be preferred.

We belong to a group of highly successful and professionally managed companies which place a premium on initiative and freedom of operation. Hence only those candidates who can lead independently are likely to succeed.

Compensation package will not be a constraint and is likely to be in excess of Rs. 3.00 lakhs per annum. Stock options may be considered for the right candidate. Please apply within 15 days to:

Box No: AA/282/CS/1,
Business India,
Wadia Building,
17/19 Dalal Street,
Bombay 400 001.

USHA MARTIN GROUP OF INDUSTRIES

requires a

PRESIDENT

YOUNG VICE PRESIDENTS

FAST GROWING PHARMA CO.

BOMBAY & GUJARAT **Rs. 20-25,000 P.M. + Perks**

A fast growing and highly profitable pharma and bulk drug company with excellent product quality, which exports a substantial part of its production and has a current sales turnover exceeding Rs. 35 crores, is now restructuring, to take care of the rapidly expanding operations. Several new projects, at various stages of implementation, will be commissioned in the next 18-24 months and the projected turnover by 1991 is Rs. 100 crores.

VP – OPERATIONS (FINE CHEMICALS)

The position is located in Gujarat and reports to the Chief Executive. He will head the bulk drug manufacturing operations and will be responsible for all plant and related activities involving Production, Maintenance, Quality, Industrial Relations, Materials, liaison with local authorities, giving necessary inputs to management on all production matters etc.

We are looking for a young Manager, in the age group 35-40, with a degree in Chemical Engineering and around 8/9 years experience in handling fine chemical/Petrochemical plant operations. He must have operated as the head of a well run plant for atleast 2/3 years and should be well conversant with the use of cost effective and efficient management systems in all areas of plant operations. Code: VPO/HNK/1052.

VP – MARKETING & SALES (ETHICAL PRODUCTS)

The position reports to the Chief Executive and the incumbent will head the Marketing & Sales activity of the company for ethical products and prime responsibilities will be to: formulate marketing and sales plans based on a sound strategy and ensure effective implementation; build a strong all India marketing and sales set-up; provide effective leadership for achieving targets, etc.

We are looking for a Young Marketing Professional, in the age group 35-40, with 8/9 years similar, senior level, experience with reputed and well managed pharmaceutical companies. Additional experience in the marketing and sales of bulk drugs will be an asset. Code: VPM/HNK/1053.

VP – PROJECTS

The position reports to the Chief Executive and the incumbent will head the project department, which is responsible for all post-project identification activities till commissioning. This will involve, preparing project reports, site selection, obtaining clearances from relevant authorities, discussions and negotiations for technology tie-ups, appointing and monitoring engineering consultants, negotiating and finalising equipment purchase and ensuring erection and commissioning within the required time & cost parameters and to the required engineering standards.

We are looking for a Graduate in Chemical Engineering, in the age group of 35-40, with atleast 8/9 years similar, senior level, experience with well managed companies, preferably in the field of fine chemicals/Petrochemicals. Must be fully conversant with upto date project management techniques. Code: VPP/HNK/1054.

SALARY & PERQUISITES: BESIDES A SALARY OF RS. 20-25,000/- PER MONTH, PERQUISITES WILL INCLUDE FURNISHED COMPANY ACCOMMODATION, CAR WITH DRIVER, MEDICAL, PF, ETC.

AN ESTABLISHED NRI GROUP HAS ROOM AT THE TOP

THREE CORPORATE PRESIDENTS AT CALCUTTA FOR MARKETING FINANCE PROJECT

THE GROUP : The Group has been operating in ASIA at Thailand, Nepal, Singapore, Indonesia, for the last three decades with major manufacturing ventures in Textiles, Chemicals and Steel. The Group has a multi million US Dollar turnover and is professionally managed.
Now in a major diversification drive into India, The Group is setting up projects in textiles, consumer electronics, computers, software exports, chemicals, steel and food processing in many parts of the country. The targeted turnover for 1990 is Rs. 150 crores. For the corporate Headquarters at Calcutta, reporting to the CHAIRMAN, the group wishes to induct three PRESIDENTS in Marketing, Finance and Project Control arenas.

THE JOB : These Corporate Presidents, in each discipline, would be responsible for strategically planning, assisting, monitoring, coordinating and managing with the Heads of the various operating units to meet the corporate objectives. They would be responsible for the bottom line with timely strategic business management.

THE PERSON : A good basic degree in each discipline, perferably an MBA, with proven track record at senior management level, are some of the attributes of the person. The need is for independent performers with the ability for indepth analysis, sound strategy coupled with business acumen.
Preferable age group is between 40-45 years.

THE PACKAGE : The compensation would be in line with the best for such levels in the Industry but it would not be less than Rs. 2.0 lacs per annum plus house, car, etc.

Please write within 15 days in strict confidence to Box No. AA/282/KS/6
Business India, 59, Regal Building, Connaught Circus, New Delhi-110 001

Please mention on top of the envelope the position applied for.

THE NRI GROUP FURTHER HAS OPPORTUNITIES FOR THE FOLLOWING POSITIONS IN THE CORPORATE HEADQUARTERS AT CALCUTTA.

Manager Strategic Planning : Corporate Planning with business strategies for further expansion/ modernisation/diversification would be the job responsibility. A basic degree with an MBA and at least 5 years experience at senior management level in similar functions are the requirements. Age preferred is 35-40 years.

Manager Public Relation & Admn. : An experienced executive well versed with Government policies, Industrial licencing, Import/Export procedures is required. He would additionally look after Headquarters Administration. Age around 45 years.

Manager Corporate Informations : The job involves complete responsibility for corporate database as well as managing the interchange of information between Headquarters and operating units. A person with strong EDP back-ground at corporate MIS level, between 35-40 years is required.

Manager Corporate Personnel : The group believes that Human Resources are the most important asset and so the need is for a creative individual with the responsibility of motivating the employees. He should be experienced in drawing up and implementing various employee welfare schemes. He should also be well conversant with the applicable labour laws in the country and possess at least 10 years experience in a similar capacity. Age preferred is around 45 years.

Manager Exports : The group is looking for a knowledgeable person of around 40 years with experience in Government formalities, documentation, banking, incentives and drawbacks including export processing zones. An ideal candidate could be with a banking background and indepth understanding of EXIM policy. But this is not a constraint for aspirants with expertise who can effectively manage the job.

All these positions carry attractive packages for outstanding persons. The packages however would not be less than Rs. 1 lac per annum plus other perks.

Please apply within 15 days in strict confidence to Box No. AA/282/KS/7
Business India, 59, Regal Building Connaught Circus, New Delhi-110 001

Please mention on top of the envelope the position applied for.

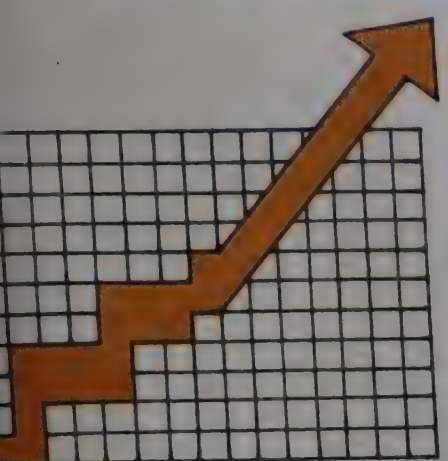
Inventive technology from Inventa... Development programme from Asian Development Bank...



Together they help spin success for DCL Polyesters Ltd.

The great alliance: This Rs.128 crore, 15000 TPA Polyester Filament Yarn project is promoted by Deccan Cements Ltd. and has the assistance of SICOM and Asian Development Bank, Manila. It is an alliance in which you can have full reliance. In fact, this is the first time ADB is financing a Private Sector Project in India. SICOM too is having its highest equity participation in any Private Sector Project. As for Deccan Cements, it has a great track record... returning to its shareholders over 100% of the capital invested by way of dividends in just 6 years.

The technical collaborator is EMS Inventa AG of Switzerland – a world leader in creating facilities for production of Polyester Yarn in over 70 plants worldwide.

Hi-promise field: Polyester's popularity and demand is soaring rapidly in India. The demand supply gap is widening, and DCL Polyesters will enjoy a tremendous market for its Polyester Filament Yarn of the finest quality.

Well on schedule: The DCL Polyesters project near Nagpur is racing towards completion. Most of the planned targets have been achieved in the civil, mechanical, electrical and spinning areas.

Commercial production is slated for mid 1989.

Promoted by:
Deccan Cements Ltd.
with assistance from
SICOM,
State Industrial & Investments Corporation of Maharashtra Ltd.
and
ADB,

EXIM BANK
EXPORT-IMPORT BANK OF INDIA

LEAD A TEAM ENGAGED IN OUR EXPORT MARKET DEVELOPMENT PROGRAMME

Annual gross salary upto Rs.80,000 (approx) + Car + Benefits

THE COMPANY
The Export-Import Bank of India is an apex financial institution. It finances, facilitates and promotes India's International Trade. The Bank operates in an international context, with offices in India and abroad. Its work environment is 'hands-on' and computer oriented, with stress on teamwork. The Bank seeks a professional to head its Export Market Development Programme. This is a Senior Management appointment.

THE PROGRAMME
The Export Market Development Programme is now about two years old. Through the Programme, the Bank has catalysed plans to export, upwards of Rs.300 crores, to Europe and the U.S.A. This has been achieved through aiding in and design of export marketing and financing activities. The Bank plans to strengthen the reach of the Programme with a Senior Management appointment to lead a small team of professionals. The aim is to accelerate export growth of select products in target markets which are Europe, North America, S.E. Asia. Target products are those in which India has present or potential comparative advantage.

THE ROLE
You will be responsible to develop new customers and expand business with existing customers under the Programme. This will involve considerable national and some international travel. You will relate with senior executives in Business, Multi-lateral Agencies, Trade Associations and Government Agencies. Your Key Result Area will be to make a lasting and substantial impact on firm level export performance through our Export Market Development Programme.

THE QUALIFIERS
To qualify, you must be an Engineering Graduate with MBA or a qualified Chartered Accountant with MBA or Economics Graduate with MBA, not above 40 years of age as of January 1, 1989 and have atleast ten years of work experience which must include a senior management level appointment in a business environment with exposure to design and review of marketing strategies, PC literacy and a proven capability to develop systems to support your work area, a high level of verbal and written communication skills and ability to relate to a wide range of people, particularly senior executives in Business, demonstrated problem solving abilityand the persistence to see a project through to completion.

Although you will have excellent prospects where you are, with a successful career to date, your leadership of our Export Market Development Programme provides you an opportunity to enhance your professional career.

GENERAL
1. The position is presently based in Bombay but Officers are liable to be transferred to any office in India.
2. Work experience in an industrialised country in marketing or corporate finance, will be a distinct advantage.
3. Customary relaxation and reservation available to candidates belonging to SC/ST category.
   SC/ST candidates should state this fact prominently in their applications. Upper age limit is relaxable upto five years for SC/ST candidates.
4. Residential accommodation will be provided, as available, according to Bank's norms.
5. Fringe benefits include HRA (in lieu Bank's accommodation), CCA, Medical, LFC.
6. Selected candidate will be on probation for two years, which may be relaxed in deserving cases.
7. No enquiry, written or verbal, on the progress of applications will be entertained. Selected candidate will be informed by post. Others will be intimated by a general advertisement.

APPLICATIONS
Applications specifying age, experience, qualifications, with a recent passport size photograph should be sent within fifteen days to:

Post Box No.11694 Bombay 400 021.

A FAST GROWING PROFESSIONALLY-MANAGED GROUP OF COMPANIES ENGAGED IN THE BUSINESS OF SCIENTIFIC POULTRY AND LIVESTOCK BREEDING, MANUFACTURE OF RELATED EQUIPMENT AND HIGH TECHNOLOGY AREAS IN AGRICULTURE REQUIRES:

The positions are in the Middle Management Cadre. Knowledge of the local language will be an added advantage. Salary package will be commensurate with qualification and experience.

Suitable candidates may apply with a detailed Bio-data within 15 days to:

Box No. AA/282/ED/2, **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001.

ARTEC ADVERTISING

The Computerisation Advisory Group has already taken the challenge of directing computerisation in many organisations.

Top Management in many companies has already met these men. And the computerisation in their companies continues to benefit from this interaction. Indian Oil, United Breweries, Glindia, CEI, Madras Cements, Hindustan Construction, Network and Sundram Fasteners are just a few.

These five men who constitute the Top Management at NIIT are a part of the Computerisation Advisory Group (CAG); NIIT's Corporate Computerisation Team.

Their experience is now available to your organisation through a short programme during which CAG and your Top Management explore and evaluate various issues related to computerisation. Issues like the potential impact of computerisation on your growth and profitability; the organisational restructuring that usually accompanies large scale computerisation; end-user resistance; low predictability of trends in Information Technology; the hidden costs of IT and so on.

All these are then reconciled within validated Planning Frameworks which are used to arrive at an Action Plan for your organisation.

To find out what CAG can do for you, write in for the CAG literature or get in touch with:

Challenge these minds!

CONSUMER FINANCE

MUSCAT **Around Rs. 20,000 p.m. plus perks**

Muscat Finance Company has been promoted with a capital of U.S. dollars 5,000,000 by the leading industrial groups and financial institutions of the country. It is engaged in the hire-purchase and leasing of automobiles and has developed a dominant position in this market in a very short period. The company plans to double its asset base and increase income by 200 per cent in the next two years.

The company now proposes to enter the challenging and potentially large market for the leasing and hire-purcahse of consumer durables and office equipment and the advertised vacancy has arisen as a result of this proposed diversification. The incumbent would report to the General Manager and be responsible for the structuring and marketing of suitable financing packages for individuals and corporations.

Candidates should be skilled at financial analysis, and have at least five years of experience in the marketing of consumer finance. Post-graduate qualifications in accounting or management would be an advantage. The preferred age is around 30 years.

In addition to the above salary, and the normal senior management perquisites like furnished accommodation, company car etc. the company offers considerable growth opportunities for the right candidate.

Please apply in strict confidence within seven days to:

A.F. Ferguson & Co.
P.O. Box 1786
Bombay 400 001

giving full details of age, qualifications, experience, salaries drawn along with a recent passport size photograph and contact telephone numbers. All applications and envelopes should be marked with the reference number "MS/5004"

SHYAM PRINTING AND MARKING DEVICES LIMITED

Requires:

Marketing Manager

We are a fast growing company engaged in the manufacture of pre-inked stamps — a new concept brought to India for the first time, with excellent potential. A part of the Savera Group of Hotels, Shyam Printing and Marking Devices Ltd. has successfully marketed 'Perma Stamp' for six years, with the support of 15 branch offices, each headed by a Branch Manager.

As a part of our expansion programme, we require a MARKETING MANAGER. The selected candidate would be responsible for all-India marketing of the company's products, meeting set targets and co-ordinating with the branch offices. Such a job involves extensive travelling.

The Marketing Manager would be stationed at the H.O. in Madras, and report directly to the Chairman. His salary will be commensurate with his experience and comparable to the best in the field.

Qualification: MBA with over 8 years experience/Non-MBA with over 12 years experience in marketing consumer durables.

CIL

CHOWGULE INDUSTRIES LIMITED

Challenging opportunities for Marketing Professionals.

The Office Automation Division is a major activity centre for the Rs.200 crores Chowgule Group. It has to its credit some world class collaborations and an existing turnover of Rs.20 crores, with products as well-known as 'Canon' copiers, 'Chi²' computers, EPABXs and 'Scantel' telephone monitors.

The Division has ambitious growth plans for both existing products as well as new launches — FAX Machines and Electronic Cash Registers from world leaders.

We require ambitious, talented and result-oriented personnel, who can work in a highly professional environment as part of a dedicated team. The locations will be Delhi, Bombay, Calcutta, Madras, Bangalore, Hyderabad, Pune and Ahmedabad.

Branch Sales Managers: Real go-getters, having excellent selling record and capable of organising and controlling effective distribution networks, formulating marketing strategies to achieve the Company's growth plans and profitability targets. Age group of 30-35 years. Graduation in a basic discipline (preferably Business/Marketing Management) with 8-10 years similar experience in a reputed Company is desirable.

Sales Executives: Dynamic applicants, possessing excellent communication skills and similar background as above, would be required. However, experience of 3-4 years will suffice.

Sales Trainee Executives: Fresh Graduates with outstanding personality and willing to work hard for building an excellent career. Must have demonstrable leadership potential.

Service Engineers: Applicants must have Degree/Diploma in Electronic Engineering. About 4-6 years of experience in maintaining reputed office automation equipment at component level. Those with lesser experience can apply for the post of Service Technicians.

If you would like to be part of a highly motivated, frontline team, then please apply immediately within 10 days, in complete confidence, superscribing the post applied for, and the location preferred, on the envelope. The salary and perquisite package are no constraint and will be commensurate with candidate's background and calibre.

Address applications to:

General Manager (Marketing)
Chowgule Industries Ltd.
75-77, Maker Chambers VI, Nariman Point,
Bombay 400 021.

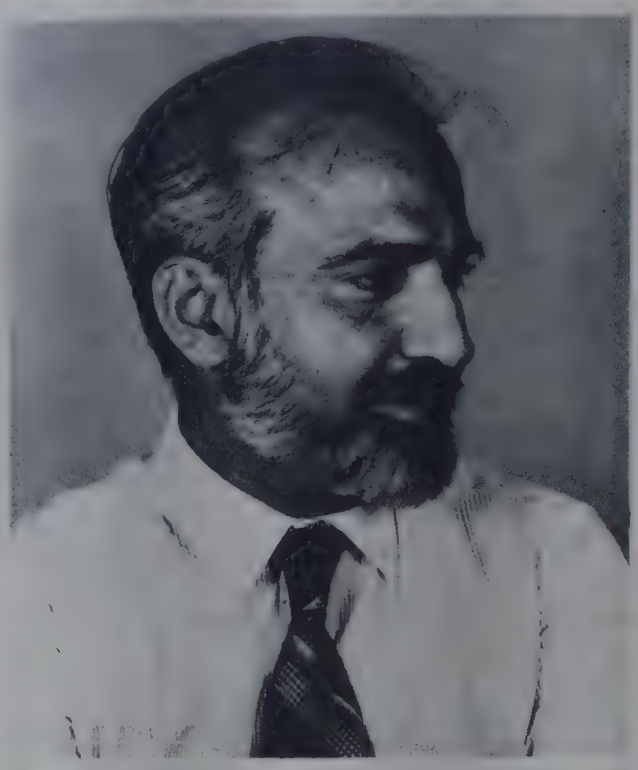
The promise and problems of packaging



Packaging is a nascent industry in India. Even as the necessity of packaging for consumer benefit and higher exports becomes evident, punitive taxes and obsolete laws are acting as brakes. On behalf of Business India S. Lalitha spoke to **M.R. Subramanian,** *director, Indian Institute of Packaging, on the promise and problems of packaging in India.*

As soon as anything is packaged, it attracts taxes. Doesn't that defeat the rationale of packaging?
Why should packaged food attract any excise at all? I see the role of packaging not as value addition but as conservation. Vegetables and fruits worth Rs.3,000 crores go waste in India every year. If someone is willing to preserve them, the government should provide incentives instead of imposing punitive measures in the form of taxes.

Packaging is not anti-consumer. It eliminates the problem of short weight and adulteration.

How do you think we should tackle the problem of sagging exports?
The problem is that our concept of a product itself is ambiguous. There is a functional concept and a value concept. We don't look at either.

When you design an export package you have to have a strong domestic base so that you can shift part of it to export at international prices. Do we also bother about international trends like sugarless preservation or labelling the quantum of energy units per portion? Even if someone is willing to give us this information we are not bothered to act on it.

There is no proper labelling and packaging according to international standards and part of the onus of perishability lies with the packager. Hence even if a product is good it loses out. We have to move with international trends for stepping up exports.

Do we need a change in packaging laws?
Definitely, to keep up with international trends. Drugs and cosmetics are well covered but food laws need to be looked into. The Food Adulteration Act has to be modified to strengthen the legislation to make people responsible.

The Indian packaging industry consumes more than one million tonnes of paper and 1.8 million cubic metres of wood. With the increase in packaging, what happens to the question of environmental safety?
I think we've been reading too many western magazines. We don't have such a danger. Calculate how many tonnes of wood have been lost in our *hastakala*, carving, furniture, wood panelling, burning our dead over millenia and for newsprint? Every industry has been responsible for this. The forest cover was denuded even before the packaging industry began. I feel the answer lies in recycling and reforestation programmes on a large scale and not in stopping packaging.

Many packaging materials like PVC film attract a high customs duty of as much as 240 per cent? What happens to product pricing?
Packaging has been a neglected area. There is virtually no R&D. We have to import. The primary packaging materials attract a tax, secondary packaging like laminated plastic also attracts a tax, the product packaged has its own tax. If you import plastic film you have an additional import duty and the product pricing goes haywire. Like the computer industry, packaging too should be regarded as a thrust area. I don't see any point in expecting to get into exports with a competi edge, if we have such heavy taxatio

We need a modified MODVAT wh we are able to take in all the eleme of excise, sales tax, etc.

With increasing tonnage of waste which is not organic or salvagabl don't we fall into the trap of a wasteful society?
No, we have a wonderful system of pickers unlike the West. Paper, pla glass, cardboard everything is recyc

Will this recycled material be of t same quality?
Yes, in certain cases. For instance i international packaging standards, has to use only a certain grade of made of pine wood, no mishmash bagasse, rags and all. But for so m other uses, we can recycle that woo paper up to another 8 times. Thirt cent of all glass and paper in this country is recycled.

Since packaging is a new indust and we are way behind internati packaging standards, how can th upgraded, especially with capital equipment attracting 85-90 per c duty?
I would suggest a five year tax hol Revenue from duty is anyway non-existent, because there is no mach coming in. It's time the governmen thought hard about doing away wi this duty. If they are interested in foreign exchange rolling in, they m do this or our exports have no wa to stagnate.

Would you say domestic packagi has a bit of a populist tinge?
For some people the consumer protection angle might be just pop We might not go in for a large spectrum of consumer goods; but country I think we might make packaging of a three pronged affai to save on time, avoid short weigh preclude adulteration. I envisage r shops, not supermarkets, having 8 gm packets of sugar. I think this i practical, not populist.

Worldwide, there are consumer protection oriented strategies for packaging. Only if we do that will exports take off in the right direct because the western world and Ja are very conscious of health and quality.

"Hello Jasras.
Can you change the sleigh to yellow,
remove the telegraph pole and give us
snow in the background
... by the 25th?

And oh yes,
in case we don't see you,
Merry Christmas!"

© Rafeeq Ellias & Associates

As you can see, we have some of the most demanding clients in the business... and we're not complaining.

Because thanks to them, there's never a dull moment at Jasras. Quite literally.

The demands are myriad.

They include the usual: remove the colour cast, enhance the warm tones, improve highlight detail, increase contrast in the shadow.

And the unusual: stretch the picture, posterise it, solarise it, combine pictures, change colours, give it a TV screen look, texturise it.

Jasras deliver both with unmatched precision and speed. By combining up-to-the-minute technology (on our new generation electronic scanners) with good old-fashioned human ingenuity.

Not surprisingly, it's been a colourful, exciting year at Jasras. Working with advertisers, advertising agencies and creative people countrywide.

In the single-minded pursuit of excellence.

In 1989, we have a lo more up our sleeves and look forward to working you.

And oh yes, we'd like take the opportunity to w you all the best in the Ne Year.

The very best.
